In Christian theological doctrine, Christians affirm in the Apostles' Creed their belief that Jesus descended into Hell (Gk. κατελθόντα ες τὰ κατώτατα; L., *descendit ad inferos*, or underworld), on the Saturday between the Crucifixion and the Resurrection. His descent is understood as an act of liberation of the unredeemed souls who had been banished to Hell from the beginning of time. It is believed by most Christians that Christ raised with him those from all previous times who were deemed by God to be worthy to enter the kingdom of eternal life. Although this declaration of faith is made in the Christian Apostles' Creed, there is no specific mention of the event in the gospels other than some inferences in Acts 2:24:

But God raised him up having freed him from death, because it was impossible for him to be held in its power.

Acts 2:31 further states that:

He was not abandoned to Hades, nor did his flesh experience corruption (The New Oxford Annotated Bible 1991).

John 2:6 describes Jesus' death as three days and three nights in the heart (*en te kardia*) of the earth. The apostle Paul draws in Romans from Deuteronomy 30:12–13 and Psalm 71:20 to describe the death of Jesus as a plummet into the abyss (*tis katabesetai eis abusson*) and the ascent of the Resurrection as a rising from the dead (*ek nekron anagein*). As forecast in the Old Testament, Hebrews (2:14–16), Jesus was to encounter the actuality of death as the only course by which his divine being could conquer evil.

In the Jewish tradition, beginning with the early Hebrew peoples, Hell was referred to Sheol [sh'ôl], the common place of the dead. Sheol was an underground abode comprised of numerous levels. The dead were tortured according to the degree of their earthly sins. There below was also Gehenna, the lake of eternal fire where the fallen were forever tormented by flames.

The theme of human descent to the underworld does not exist in the Old Testament except in how God rescued people from death (Psalm 9:13; 30:3; 86:13; Isa 38:17; Deut 32:39; 1 Sam 2:6; 2 Kings 5:7). For example, when Saul summoned the prophet Samuel through the witch of Endor to consult the dead (1 Sam 28:3–25), there is an indication of bridging the realm of life and death. In general, the notion of human descent was censured by Old Testament Law. In modern Judaism, an increasing distinction arose between the place in which the unrighteous dead dwelled (Hades) and a separate place in which the righteous dead resided (Luke, 16:22–23).

The late Hebrew literature of the apocryphal texts contributed to how the notion of descent was conceptualized in the Apostles' Creed. These included the apocryphal *Gospel of Nicodemus* and *the Acts of Pilate* (ca. 3 CE). The *Gospel of Nicodemus* prophesized that Jesus would raise the dead in Hell just as he had raised Lazarus. Apocryphal literature often referred to the *Descensus Christi ad Inferos* which portrayed a conflagration between Christ and Satan, the god Hades.

In the second and third centuries, the early church fathers Tertullian, Clement, and Origen treated Christ's descent as literal. Their

authoritative testimony anchored the event in Christian belief although it was not entered in to the content of the Apostles' Creed until around the seventh century.

The concept of the descent to the underworld derived from numerous oral traditions, legends, and literary forms borrowed from antiquity, which undoubtedly influenced the writers and redactors of scriptural literature. The myths recorded by Homer, Hesiod, Aristophanes, and Virgil featured a protagonist's heroic return from the underworld that involved transforming evil into good, death into life, and torment into faith in relation to a salvific figure. Many of these legends became living religions lasting thousands of years.

In the literature of ancient Egypt, Hades, or Amenti, pertained to the place of the hidden god. The Egyptian *Book of the Dead* attests to specific rites and rituals in which an initiate would venture into the underworld with the goal of transformed consciousness. The Egyptian rituals inspired the Greek Mysteries, Eleusinian Mysteries, and Mithraism, which were liturgies of symbolic death and rebirth that emulated the earlier worship of Osiris. The discourse in Colossians 2:9–15 of the New Testament pertaining to *The Lord's Descent into Hell* may imitate these earlier traditions. The ritual of baptism became representative of symbolic death and rebirth.

In ancient Greece Hades [Gk. unknown, unseen, hidden] became known in various cultures as Gehenna, Tophet, Abaddon, Naraka, Jahannam [Hind.], Aralu [Babylonian], Hel, Nuifhel [Norse], the inferno, the pit, the abyss, the nether world, the region of the dead, the abode of the damned, the place of torment, visitation with the shades (ancestors) below, or limbo, the realm of departed souls. The descent typically involved a confrontation or encounter with the god who ruled the terrain of the underworld.

One of the most celebrated initiates connected to the Greek Eleusinian Mysteries (seventh century BCE) was Persephone, the daughter of Demeter who was seized by the god Hades and taken into the underworld. The myth of Persephone and Demeter remained in the collective culture as a religion for over 2,000 years.

Another descent myth of the Greek Mysteries was the Orphic Mystery. Orpheus had a beautiful wife, Eurydice [Εὐρύδική, Ερδίκη], as well as a talent for playing the lyre. One day while dancing in the fields, Eurydice was bitten by a poisonous snake and died. Orpheus ventured to the underworld in an attempt to bring her back to human life. One version of this legend tells of Orpheus playing his lyre so enchantingly that Cerberus, the sentry of Hades, fell asleep. Orpheus then entreated the god Hades to return the soul of Eurydice to life. His wish was granted with the qualification that Orpheus must walk ahead of his wife and never look back until they had returned to the world of the living. Orpheus failed. He was never to see his beloved wife again (Guthrie 1993, p. 171 ff.).

Christ's descent into Hell and subsequent Resurrection corresponded with the rituals and themes of these ancient civilizations. In early cultures, the triumph over death often coincided with the harvesting seasons of the agricultural year. The Greeks understood Hades as fork in the road where one might enter *Tartaros* (an existence of endless punishments) or, at best, one could be ushered into a paradisaical existence where their loved ones awaited – the Elysian Fields.

Until approximately 500 CE, the descent ritual was an inherent part of a sect of secret teachings known as the Greek Mysteries. The initiate's descent was both symbolic and literal. One was isolated in an underground cave or hollow in order to confront an internal universe. Analogous to modern analytical psychology, the symbolic quest, like C. G. Jung's mid-life challenge, was a *telos* (Gk. *telete*), an end goal and ultimate completion of one's potential for psychological and spiritual development.

In every culture of ancient civilization, the collective psyche gave birth to initiates who made the descent and were magnified into the heroes of myth, for example, Gilgamesh, hero of the Babylonian epic; Ishtar who descended into Aralu; the goddess Astarte of Phoenicia and her consort Adonai who journeyed into the Akkadian Hades; and the Great Mother Cybele of Asia Minor with her consort Attis. Others included Dionysos, Herakles, and Krishna.

A consort, guide, master teacher, high priest, or priestess prepared the initiate for the journey, similar to the modern role of the psychotherapist where one descends into his or her unconscious, internal world and is accompanied by the presence of a therapist. The role of this consort was also to warn an initiate about the possible disintegration of the personality during the process and potential madness upon return.

There was an emphasis upon preparation for “going deeper” and a series of pretrials to pass successfully including fasts and purification rites. One needed a strong constitution, a sturdy ego, and a maturity of character. The initiate was trained to relinquish memory, desire, and will so that the physical self and personal psyche could succumb to a temporary deathlike state (Apuleius 1984, *Metamorphoses*, XI, 21, 23) which was often described as darkness. Plutarch, too, underwent an initiation ritual describing the proximity of *teleutan* and *teleisthai* – *to die* and *to be initiated* – (Plutarch 1987, *Fragments*: 178). In the depth of this slumber, the mysteries of life and death might also be revealed. In the Egyptian Mysteries, Apuleius exclaims this experience of illumination: “at midnight I saw the sun shining with a splendid light” (Plutarch 1987, *Fragments*: 23).

If not sufficiently prepared, the participant could experience a threshold of annihilation. Face to face with the god of the underworld – what in modern psychology C. G. Jung would call an encounter with the archetypal shadow – the individual only could endure only with the qualities of humility and willingness. If the seeker was able to make it beyond the more dangerous stages, the reward was a beyond death experience of immortality.

The Egyptian myths, the Mystery Religions, and the apocryphal texts of Early Christianity were sources for accounts that followed throughout the centuries in various genres, for example, the English Mystery Plays of medieval times, which centered on the theme of the Harrowing of Hell and of Dante's *Inferno* (Canto X. Circle vi).

Inspired by Virgil's *Aeneid*, philosopher Dante Alighieri wrote about the descent into

Hell in “The Inferno” from his *Purgatorio*. In this work he speaks of the lowest Hell replete with “malicious and furious demons” as the City of Dis. Dis is the most abyssal abyss of ultimate despondency. This underworld represents the bowels of the universe and the bleakest recesses from anything alive or life-giving. In Dis, there is no promise of hope or of a caring and sustaining divinity, only evil and despair.

As represented in Dante’s illustration of unconscious life, those who reside in the darkness of Hell are forever alive, yet spiritually dead. What greater cruelty to human consciousness and to the uniqueness of an individual than to be completely unknown, and unconscious. In the abyss of Dis, there is no possibility of the life of the soul without the redemption of another. For Dante, at the end of time, the forgotten non-souls who have not “known” Christ are lost forever to the possibility of being known within the unity of the divinity. These are individuals who have turned their focus toward the sterility of selfish egotism in contrast to offering gratitude for their very being. Control, power, greed, and envy relinquish them to an eternal Hell of nonbeing.

## Psychology

Analogous to the Nekyia, or night sea journey of Carl Jung, the descent into the underworld has powerful and purposeful psychological intent. The ego falls into the unconscious for an extended time to eventually emerge as a person reborn. The transformed individual seeks to “obey a higher will.”

Jungian analyst Edward Edinger concurs that this “fall” or plunge into the psyche represents the ego’s intentional descent into the unconscious because the ego has been “beckoned.” The awareness of the conscious ego is, in the interim, eclipsed and carried into the lower world where it rescues certain contents of the unconscious and even conquers death itself. For Edinger, the death and Resurrection of Christ is an archetype that exists in the collective psyche that is analogous to the process which lives itself out in the individual seeker (initiate). The collective God

image must necessarily undergo death and rebirth throughout certain periods of history; he tells us, thus, the continuing necessity of willing initiates to bring forth “the godhead.”

Jung views this prolonged “disintegrative” encounter as the psychological equivalent of the integration of the collective unconscious, which is “an essential part of the individuation process” (Brome 1981, p. 159). The unconscious underworld needs ego consciousness to raise it (Brome 1981, p. 39). What Dante called Dis represents all that is yet unknown to human consciousness. Dangerous components of the shadow aspects of human consciousness exist externally and dangerously so, as long as the projective nature of the psyche remains shut away within the crypt of the individual and collective psyche.

Drawing from anthropologist and scholar Mircea Eliade, Marie Louise von Franz (1975) likens Jung to the shaman whose “main function is the healing of personal illnesses and disturbances in the life of the collective” (Eliade 1964: 8 passim). Like the shaman or medicine man, certain individuals are forced into a particular inner way as a result of the collective culture around them. As the person feels summoned, “he sets himself apart, turns contemplative; often he receives his call through a dream experience” (Eliade 1964, p. 21). Readiness is crucial to survive the dying of the old self, the former ego, and the emergence of a new self.

The individual is carried off to the underworld where he or she is often dismembered or suffers other tortures. Like the duel possibility of the Greek path of the underworld, one may also be carried off to heaven where instruction is received from a divinity, a female figure, an invisible heavenly spouse, or a magical anima (von Franz 1975, p. 100). The central element is always the same: death and symbolic Resurrection (Eliade 1964, p. 5, 56).

Contemporary Jungian analyst James Hillman agrees with Jung in *The Dream and the Underworld* (Hillman 1979) that it is Psyche who beckons us into the depths. Being polytheistic in contrast to monotheistic, Hillman is more synchronous with the worldview of antiquity: there are many gods and goddesses in the psyche

personified as archetypal manifestations, but there is not necessarily anything divine or transcendent beyond the psyche. Spirit reveals itself in image from the depths of the soul, which Jung, Edinger, Dante, and the masters of the mysteries would agree with. Yet, for Hillman and the Greeks, images *are* the divinity.

In contrast to Jung, Freud's classical perspective views images, dreams, or waking dreams of descent into the underworld, as Oedipal themes related to castration anxiety. Freud emphasizes incestuous content with the repeated theme of the psyche's need to destroy phallic symbols (Boss 1973, p. 273). For instance, a patient might dream of a church tower, an image that dream by dream becomes more differentiated. A Freudian psychoanalyst working with such a dream most likely will interpret reductively the increasing specificity of the church tower as a collection of images that relate back in the patient's developmental life. The image becomes reduced to that of genitalia or "to a preconceived unconscious complex, thus paying a disservice to the spirit" (Robbins 2008).

What is crucial when working with the deeper layers of the psyche (the underworld), the patient, with the analyst's guidance, will begin to amplify dream images in a non-pathological manner, giving the individual the opportunity to dig more archeologically into the collective underpinnings of the psyche at large, which often not only produces religious or spiritual images but a feeling of confidence that one is connected to very deep roots with a suprapersonal divinity. One discovers that religious dreams and symbols have their fundamental origin in archetypal structures that are universal, timeless, and shared in common with all people.

Regardless of the psychological school of thought, the chthonic and instinctual of a psychological complex need to be given as much primacy as the spiritual and transcendent, therefore avoiding abstractions or overintellectualizations. A Jungian perspective can lean too far toward "spirit," with a tendency to universalize a patient's imagery. This inclination can be reductive in if there is an essentialism underlying the image.

A balanced discernment means that one truly descends into the depths of "pathos," or one's pathology, and yet does not remain imprisoned in the darkness, enmeshed with the god of Hades, Hell, or the archetypal shadow – for this would certainly flag a potential psychosis that would need spirit and sustenance to pull one out of this psychotic morass.

The word pathology is comprised of pathos and logos. The logos of pathos exists in an ever-precarious balance. One can succumb to the instinctual nature of soul but miss the logos of spirit. The logos of spirit pulls one back into the world of the living, into the light with a renewed sense of direction and purpose fueled by the experience of spirit *in* the body. This experience is shared by the ancients and the moderns – when it occurs, it will never be forgotten for one will be forever changed. The marriage of pathos and logos gives life to the soul which endures forever.

## Deus Absconditus

Meredith Lisagor  
New York, NY, USA

### Evolution and Variants of a Theological Concept

Ancient Egyptian and classical Western mystery religions can be said to rest upon the inscrutability of deity, but a concept of god as partially knowable yet ultimately inaccessible by any sort of mediation is the fruit of the Judeo-Christian tradition. Various detailed by different theologians as early as Clement of Alexandria (ca. 150–215), notions about god as hidden, or Deus Absconditus, generally take their biblical warrant from Isaiah 45:15, “Truly, you are a God who hides himself.” Old Testament injunctions against seeing or looking upon god and New

Testament recapitulations (e.g., “No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, hath declared Him.” John 1:18) may also have influenced discussions of deity’s purposeful invisibility. But the crafting of theology based on the hiddenness of God would not occur until the Protestant Reformation.

Cited chiefly in context of the indefinability of the one transcendent god in words, concepts, or images, *hiddenness* was significant to early Christian thinkers only as it was implicit to the direct self-revelation of a personal god. In short, while God had revealed something of His personal nature in Jesus Christ, whatever was not known he had chosen to hide.

Clement, a polite opponent of Gnosticism, proposed that through illumination by Christ as the incarnate Logos, humanity, being made in God’s image and likeness, could and was even meant to gradually understand God, the otherwise “Unknown.” For his pupil Origen (ca. 182–254), humanity’s likeness to the divine pointed to a kinship between them. And God’s Logos, revealed in Christ, then hidden again after the resurrection, was “an example,” imitation of which would make the faithful proper “partakers of the divine nature” (Origen 1979, p. 319) at Parousia.

However, John Chrysostom (ca. 347–407), in vehement rejection of the Anomean Arians’ presumption that they understood God’s very essence, proceeded from the conceit that God was in truth wholly other, utterly “unapproachable” as stated in 1 Timothy and “unsearchable in His judgments” as declared in Rom 11:33. In this, Chrysostom apprehended the psychic consequences for the individual in relationship with such divinity, and, according to theologian Rudolf Otto, spoke to the very core of the creature’s experience of the numinous, which is unrational, terrified, and yet drawn to it in fascination.

Augustine (ca. 354–430) engaged the idea of God as hidden and unknowable in His essence, but emphasized the way in which God’s visible miracles draw one toward Him through the love and faith they inspire. Pseudo-Dionysius (ca. fifth century), adumbrating the mature Christian

mysticism of the high Middle Ages, envisioned the possibility of ascending to the very “ray of the divine shadow” (Pseudo-Dionysius 1987, p. 135), however, only by “renouncing all that the mind may conceive [about God]” (Pseudo-Dionysius 1978, p. 137). Nicolas Cusanus (1401–1464) elaborated on the nature of such renunciation in his *Dialogue on the Hidden God*. But it was Martin Luther (1483–1546), driven by recurring bouts of self-doubt, guilt, and despair, who gave the most trenchant and exhaustive attention to the notion of Deus Absconditus.

Luther’s lifelong emotional and psychosomatic sufferings, which he termed *Anfechtungen*, made him question whether they were assaults by the devil or God Himself, who though all-loving had nonetheless subjected His only begotten son to the extremity of suffering. If the latter, Luther concluded, “God hides his eternal goodness and mercy under eternal wrath, righteousness beneath iniquity” (Luther 1972, p. 62). Thus, everyone will know periods of rejection by Him, as had Christ on the cross where God was simultaneously revealing His redemptive love. Indeed, the godhead embraces all contraries, and its justice – in wrath or grace – is hidden from reason. Only through faith in Christ crucified, insisted Luther, can one approach God’s true nature and “believe him merciful when he saves so few and damns so many. . .” (Luther 1972, p. 62).

With the Age of Reason, concern about God’s hiddenness waned. At the dawn of modernity, the last notable reflection on the topic is to be found in the *Pensées* of mathematician and Roman Catholic-convert Blaise Pascal (1623–1662). In these reflections he proposes that God hides Himself so that humanity might come to Him by an act of will; to be fully revealed would make Him a matter of fact, requiring no commitment from the believer.

### God and the Splitting Phenomenon

Among modern thinkers, Martin Luther’s doctrine has occasioned much critique, both

theological and psychological. Erik Erikson, in a definitive biography, sees Luther as achieving in the construct of institutional religion “a living reformulation of faith” that points one back to “basic trust” (Erikson 1962, p. 257), a feature essential to the healthy emergence of ego that is often impaired by the censure of the later developing superego. Luther’s *Anfechtungen* were, psychologically speaking, reactions to a highly charged superego forged in the milieu of a censoring father. According to Erikson, by conceding that behind God’s wrath and prior to it exists compassion, Luther not only approached a resolution to his personal struggles but also rehabilitated religion’s capacity to reaffirm the beleaguered “basic trust” of the faithful.

While theologians debate the nuances of Luther’s exact meaning in his highly varied use of Deus Absconditus, Rudolf Otto credits the reformer with revitalizing rational theology by identifying his personal terror and fascination with experiences of the divine. C. G. Jung, who asserted that the “only statements that have psychological validity concerning the God-image are either paradoxes or antinomies” (Jung 1953, p. 11n), affirms that Luther had grasped a critical nonrational truth when he spoke of God’s dark side: His doctrine can be said to hold up the numinous, disowned shadow material of the collective unconscious, which must always be considered the natural habitat of contraries.

A truth, then, that both Luther’s theology and personal history illuminate from the Object-Relational vantage point is the inherent – to be sure, essential – tendency of the human psyche toward *splitting*. Luther’s God could easily symbolize the psychic field on which an ego that cannot tolerate ambivalence keeps internal objects separated into good and bad, comforting and punishing – God as the compassionate beloved, a representation of the cossetting mother who reflects the infant’s goodness back to it; God as persecutor, hostility split off, and projected. Harry Guntrip, discussing the splitting of ego itself – into *libidinal*, *central*, and *antilibidinal* – notes how an individual will both repudiate (through the antilibidinal ego) and defend

a weak libidinal ego against “outer world pressures and inner world fears” (Guntrip 1992, p. 184) by hiding it behind central ego aggressiveness, obsessive self-mastery, addiction to duty, and physical illness. Despite Erikson’s characterization of his triumph, Luther – renowned for volatility, hyper-scrupulosity, and an assiduous work ethic – never overcame periodic depressions and psychosomatic crises.

It must be acknowledged that the phenomenon of splitting is implicitly central to any conceit of Deus Absconditus, for regardless of the interpreter – and whether or not God is envisaged as the thing of which humanity is Its image and likeness or a screen for human projections – God hidden represents half a perennial debate: the Godhead’s immanence versus Its transcendence. In their delineations of the ways in which the Hidden God might be known, Clement and Origin, Augustine, and the Christian Mystics all point to Christ as signifying a reconciliation of these modes and mooted, if not resolving, the issue of hiddenness. In psychodynamic terms, what they intuited was that Christ represents a well-integrated psyche, the still point at which good and bad objects stand in healthy tension. At the same time, he models the ways in which *introjection* and *projection* facilitate development and relationship: Where Jesus as human was awakened to his divinity, he may be said to have introjected the Father (divine or personal), making Him indeed immanent even immediate and available as a building block of ego and an internal-object world; while Jesus ascended becomes the projected image of an ideal, transcending (or eluding) the domain of the ego yet remaining in relationship with it.

### An Affect Regulation Take

A suggestive point arises at the convergence of Object-Relations and Attachment theories in recent discussions of neurobiology and affect regulation. The elusive-but-desired or (as in the case of Luther) unpredictably present-but-critical “God” might be identified with an unconscious internalized object

that resulted from neurologic imprinting caused by experiences of “self-interacting-with-a-misattuned-dysregulating-other” (Schore 1994, p. 473) – *mother or father*. That is to say, the consequences of a primary caregiver whose affect fails to reflect the infant’s enthusiasms at critical junctures (and/or meets the infant with impatience, disdain, or anger) are not only psychic storage of self- and other-representations corresponding to the misattunement, but also orbitofrontal cortex development primed for future affective replications: A psychobiological expectancy for consequent relations – unto a relationship with a God – to recapitulate the affective experience in the original misattuned dyad. Otherwise put, Deus Absconditus could be hardwired.

### Freudian and Jungian Takes

Perhaps nothing speaks more potently to the concept of the Hidden God than Freud’s theory on the origin of religion as the murder of the primal father by sons who wanted unimpeded access to the primal mother (*Totem and Taboo*, Freud 1957). The father’s elevation to the status of a god is a sublimation aimed at palliating guilt and eradicating the crime from racial memory. In this context, a fantasy of a Hidden God might be considered a redoubling of the sons’ effort to shield themselves from return of the repressed memory. And Isaiah’s assertion that God “hides himself” would be a disingenuous displacement of responsibility – since it is we who have done the hiding. Returning to Luther, his Oedipal conflict with a harsh and disapproving father, which lasted a lifetime, could be said to have made him less able to combat the repeated “return of the repressed,” and more highly identified with Christ as the son who suffered to atone for collective sin (the disguised primal murder). To go this far, however, is to be obliged to suggest Luther’s subjective identification with Christ as exalted in resurrection to equal status with the Father; which Freud could say any Christian does vicariously in the transformed totem meal, the Eucharist, where God is present but hidden.

The Christian, thus, stirs the repressed memory of an archaic crime in regular ritual; and, theoretically, we could say that he or she may never be able to fully outgrow the regressive ambivalence of the Oedipal drama.

In Pascal's contention that God is purposefully hidden, we also find classical psychoanalytic implications. Certainly, the thesis suggests the voice of the superego: God, or something higher in the human makeup, has expectations of the believer; and trust as an accomplishment of good ego consolidation is more valuable (to the internalized father and the ego) than an act of memory which does not engage the individual's value assessing capacity. Placing the thesis, then, in the context of the primal murder, Pascal may be thought to have unconsciously recognized that the internalized father wants the faithful to recognize the primal crime and to atone through an act of character, with consciousness and volition – and he is not going to make it easy. More practically speaking, the superego wants the ego to recognize its obligation to master the impulses of the id.

For C. G. Jung, the realm of the instincts, the unconscious, calls the ego to acceptance and humility. Its task is not so much to subordinate drives as to negotiate with them, and to learn as best as it can their symbolic language. Neither, however, is the ego to be subordinated by the unconscious. It should learn that it is itself archetypal and elemental of the greater psyche represented by the *Self* – the correlate of totality, wholeness, the impersonal God, whose center is everywhere and circumference nowhere, as St. Augustine observed. Augustine was also able to approach the idea that we shall not know God in His essence, but rather by as much of the instinctive numinosity as consciousness can metabolize. And such is the wisdom that informed the Pseudo-Dionysius when he saw that one might understand something of divinity only after one renounces what the mind (thinks it) knows. Jung would say, perhaps, that God's very nature is hiddenness and it is only through letting go of qualifying and quantifying intelligence that consciousness experiences the true intimations of wholeness.

## Deus Otiosus

David A. Leeming  
University of Connecticut, Storrs, CT, USA

In many religious traditions, the creator god essentially retires from the world he has created and leaves it to others to run – to humans or lesser gods. In short, he does not interfere with the world once he has created it. His mythological relative is the Deus Absconditus who more actively absents himself from his creation. For the purposes of psychological interpretation, the two types can perhaps be considered to be synonymous. Many African creator gods leave creation to tricksters or to their sons. Sometimes, as in Greek, Anatolian, and Indian mythology, the old high god is forced out and is replaced by young upstart deities. Christian theologians, such as Thomas Aquinas and Martin Luther, have used the hidden god concept to emphasize that God is unknowable but that we can know God through the tangible “living” Christ, Jesus. Deists, on the other hand, find in the Deus Otiosus – the

clock-make God who made the world, wound it up, and then left – simply a rational explanation for life as we know it.

The psychological importance of the Otiosus/Absconditus is complex. For some peoples it expresses a “family” that senses desertion by the father and the consequent trials and tribulations of life. For others – Aquinas and Luther, for example – it signifies the gift of the God revealed or embodied in the Christ with whom the worshipper seeks emotional and psychological unity. Mystics of all traditions would find positive psychological energy in the “hidden” god within with whom the individual achieves perfect union or self. For Deists the God who withdraws gives the gift of psychological and moral independence and self-reliance. For the atheist the Deus Otiosus is a myth used to excuse the evils of life. For those who doubt but long for a better life, the hidden god is an inner security longed for but painfully absent.

## Devil

Jeffrey Burton Russell  
Department of History, University of California,  
Santa Barbara, CA, USA

## Origins

The word “Devil” derives from Greek *diabolos*, meaning “adversary.” In Jewish, Christian, Zoroastrian, and Muslim traditions, the term applies to

a single spirit of evil whose function is to oppose the will of the good God. In Zoroastrian tradition, and in the Manicheism that derives from it, the Devil, named Ahriman, is a god of evil and darkness in opposition to the god of goodness and light, Ohrmazd. The two gods struggle against each other until the end of the world, at which Ohrmazd will triumph and annihilate Ahriman. In Jewish tradition the Devil is most often identified as Satan, though he also has many other names. In the Old Testament (Hebrew Bible), Satan's role is usually unclear, and often the term "Satan" is used as a generic term for an opponent. When the Hebrew scriptures were translated into Greek about 200 BCE, the term *diabolos* entered scriptural usage. Though only marginal in earlier Hebrew thought, the Devil, under various names, became of much greater importance in Jewish pseudepigraphical literature (materials falsely claimed to have been written by ancient Biblical figures such as Enoch) from about 100 BCE to about 150 CE. The mutual influence of Hebrew and Zoroastrian thought is still unclear, but in any case, the Devil was a hugely more sinister power in the pseudepigrapha than in the Hebrew Bible.

### Christianity

This is precisely the period in which Christianity arose, and the power attributed to Satan in the New Testament and in other early Christian writings, though less lurid than in the pseudepigrapha, and never as great as that in Zoroastrian texts, is nonetheless a huge threat to Christ, to the Christian community, and to Christian individuals. He is tempter, accuser, tormentor, and jailer of the damned in hell. In addition to the canonical Christian writings, a number of allegedly Christian but actually Gnostic texts, mainly from the second century CE, derived their ideas from the pseudepigrapha and took the power of the Devil to almost Zoroastrian extremes. For most of the Gnostic sects, the cosmos was a battleground between the God of light and spirit on the one hand and the Devil, lord of darkness, and matter on the other. Thus, the Gnostics

created a matter/spirit dichotomy, which they melded with the Zoroastrian good spirit/evil spirit dichotomy. Such a dichotomy was explicitly and firmly denied by orthodox Christianity, in which the Devil's power, though great and fearful, was always weaker than that of Christ. Anyone calling on Christ against the Devil would be saved, and at the end of the world, Christ would cast Satan and his fellow demons forever into hell. Belief in the existence of a Devil as the personification of evil has never been a necessary Christian dogma, but tradition, based on the New Testament, assumed his reality, and in certain periods of history, notably the second to fourth centuries CE and the fifteenth to seventeenth centuries CE, his power was widely believed to loom large. In the latter period, terror of the Devil was the motive force behind the witch craze.

### Islam

Muslims, unlike Jews and Christians, believed that their scripture, the Qur'an, was dictated word for word by God through an angel to the prophet Muhammad. Thus, no word of the Qur'an could be ignored, so the existence of the Devil (called Iblis or Shaytan) could not be denied. However, Islam differed from Judaism and Christianity in another important sense: the will of Allah prevails in every place throughout all time. This means that opposition to Allah either by humans or by spirits was limited entirely to what God wills to allow.

### Polytheism

As opposed to the religions above, most religions recognized no single spirit of evil. The problem of evil was solved in a number of different ways. Some religions posited deities combining good and evil in themselves, such as Quetzalcoatl in ancient Guatemalan religion and Vishnu in Hinduism, where he was both creator and destroyer. Another solution was "doublets," pairs of gods in which the good side has one name and the evil side another, as with Hathor/Sekhmet and

Horus/Seth in Egypt. Yet another solution was to have groups of generally constructive deities at odds with groups of generally destructive ones, as in the asuras and devas in ancient Persia and India. Another was to have gods who are amoral or at least very inconsistent in their morality, as in Greco-Roman religion, where the traits assigned to each deity were wide and varied. Artemis/Diana, for example, was patroness of childbirth and virginity, animals and the hunt, and the moon and the underworld. Still another way, in some Hindu and Buddhist thought, was to deny the existence of any real evil, considering good and evil part of *maya*, the illusion that anything in this world is real, an illusion that must be transcended in order to reach enlightenment.

### Romanticism

In the West since the nineteenth century, alternative approaches to the Devil multiplied. That century was marked by the esthetic movement known as Romanticism, which emphasized feelings over reason and rebellion over tradition. For Romantics such as Victor Hugo, the Devil became a hero symbolizing the revolt of the human spirit against secular and religious authority. The Devil as hero reemerged in the late twentieth century in Satanism, a cult whose followers tended not to take their beliefs seriously; those who did take Satan seriously held the meaningless view that a being whose concept was *invented* to represent evil is actually good.

### Modern Criticism

Much more dominant in the late nineteenth and twentieth centuries was the growth of physicalism, pragmatism, and deconstruction. These brought about a reevaluation of evil and thus of the Devil. Physicalism was the philosophical belief that only material things that can be quantified are real, and so the spiritual exists only as an illusion. In such a view, evil itself is only an outdated metaphor for antisocial behavior. Twenty-first-century psychiatry tended strongly

to the view that most, if not all, psychological problems are the result of genetic, hormonal, and even molecular malfunctions. Freudian psychoanalysis, which dominated from the end of the nineteenth past the middle of the twentieth century, held that evil sprang from the repression of sexual and other strong feelings into the unconscious, which distorted the repressed feelings into ideas and behaviors that the conscious was unable (without analysis) to deal with. Freud of course dismissed the concept of the Devil as unhelpful and even harmful, as people often projected their hateful feelings onto other people. Psychoanalysis was inherently pragmatic in its goal of helping people adjust successfully to their environment. Jungian analytical psychology took the Devil more seriously as one of the archetypes that the universal human mind invented (or perhaps inherited) as a way of understanding evil, which Jung took seriously itself.

Deconstruction, which dominated philosophy the last three decades of the twentieth century and the first decade of the twenty-first, maintained that every human concept was an infinitely malleable construct. There being no absolute truth or, indeed, any truth at all beyond what the individual constructs for himself or herself; each concept can be infinitely deconstructed. Thus, the Devil exists or does not exist depending on what you believe, and his characteristics were whatever you think they are. Along with the Devil, evil itself was deconstructed to mean whatever an individual found inappropriate or repulsive. No concepts, even scientific, logical, or mathematical ones, were excluded from deconstruction, so that, a fortiori, fuzzier theological and philosophical views such as the Devil were swept away. Deconstruction mated with pragmatism to produce the dominant view that no concepts were true, so that good and evil were merely constructs that those with power force upon those they dominate and manipulate.

Still, the first decade of the twenty-first century saw a large religious revival in many parts of the world, and Christians and Muslims who remained true to their theological traditions took the Devil seriously, as a supernatural entity or at least as a powerful metaphor of the existence of radical evil.

## Dionysos

Alexandra Krithades  
CG Jung Institute of New York, New York,  
NY, USA

Dionysos (*Bacchos* in Latin) is the son of Zeus and Semele. He was twice born, and the special circumstances of his birth indicate his unusual nature and the special place he occupies in Greek mythology and religion.

His mother Semele (possibly a goddess of Phrygian origin) was tricked by the jealous goddess Hera into requesting Zeus to appear before her in all his radiance. He reluctantly did so, and she was incinerated by the fire of his lightning. The baby, of 6 months gestation, was rescued from his dying mother's womb and sewed into Zeus' thigh to be gestated a further 3 months. When Dionysos was born, he was brought to the mythical Mt. Nysa to be raised by nymphs. This aspect of his history echoes his father Zeus' early origins. His life threatened by his devouring father Chronos, the infant Zeus was spirited away by his mother to be raised by nymphs on Mt. Ida in Crete.

The Orphic version of Dionysos' beginnings also includes a "twice born" element. According to this tradition, Dionysos was the offspring of Zeus and Persephone and became the fourth ruler of the world, after Ouranos, Chronos, and Zeus. The Titans were jealous of the child and plotted to destroy him, perhaps, with the incitement of Hera. They distracted the child with a mirror and other toys, then killed him and tore his body into seven pieces. Apollo, on orders of Zeus, collected his limbs and took them to Delphi. Athena saved the heart and brought it to Zeus, who then enabled Dionysos to be reborn. In a rage, Zeus killed the Titans with his lightning. They were burnt to soot, and from this soot, a substance was made from which humans were fashioned. Since the Titans had ingested some of the god, mankind is seen in the Orphic religion as part divine and part Titan.

His survival of fire and/or dismemberment points to a key psychological aspect of Dionysos. His myth expresses the inevitability, even necessity, of destruction within the psyche, as well as the psyche's ability to be reborn in the face of such destruction. The experience of dismemberment is something that most people who enter psychoanalysis or psychotherapy feel to some degree. In the beginning of analysis, analysands often have dreams with dismemberment motifs. The work of analysis involves the dismantling of personality structures, attitudes, and adaptations that no longer serve the individual or his/her life force.

Dionysos' survival of these experiences is an expression of the indestructible aspect of life

itself, not on the level of the individual but life as a force of nature, that is, larger than our egos alone.

Dionysos is seen as having both masculine and feminine traits. He is associated with various animals, including the bull, the lion, the snake, the leopard, and the dolphin. He is depicted as both young and old and is the most elusive of all the Greek gods. In the plant world, he is associated with the grapevine, ivy, the pine tree, and the wild fig.

His myths and cults are always a challenge to established social order and often have a violent or bizarre element. He effects radical change through his epiphanies. To the rational ego, he represents a magical, enchanted realm. He is depicted as being always on the move, revealing himself in many different epiphanies, more than any other god in Greek mythology.

Dionysos in antiquity was principally the god of wine and intoxication. In addition, he presided over ritual madness or ecstasy (*mania* in Greek). The mask was a significant symbol of his presence, and thus ancient drama was devoted to Dionysos. Dionysos' nature was to transcend boundaries. The normal, conscious identities of his followers are subverted. His presence is fluid, full of illusion, and contains the opposites. He effects transformation, both negative and positive, from the viewpoint of the human ego.

Though scholars for years thought that the cult of Dionysos originated in Thrace and was brought more recently into ancient Greece, the discovery of the name Dionysos on Linear B tablets from Mycenaean Pylos, dated circa 1250 BCE, indicates that he was present in mainland Greece well before. In Homer's *Iliad*, he is referred to as a "joy for mortals" (*Iliad*: 14.325). And in Hesiod's *Theogony*, he is described as "he of many delights" (*Hesiod's Theogony*: 941). Dionysos is seen in Greek religion as having invented or discovered wine, and given this "ambivalent" gift to mankind, much as Demeter gave the gift of the grain to mankind.

In ancient Greece, wine festivals were held in many areas. The oldest of these seems to be the *Anthesteria*, held in Athens each spring, when the new wine was drunk. It also celebrated the

mythic arrival of Dionysos from across the sea. Other festivals included the performance of tragedy and comedy. Festivals that celebrated Dionysos were characterized by revelry, which included licentious and obscene behavior, the reversal of social roles, and cross-dressing by males. Processions of phalluses were paraded through the streets, though there are no extant depictions of Dionysos with an erection, unlike Hermes or Pan.

While alcohol intoxication is one of the darker aspects of Dionysos' gift to mankind, the ritual madness associated with his myth and cult was not associated with drug or alcohol use. The initiates in his cult, the *maenads*, were "seized" or possessed by the god. They behaved ecstatically, dancing wildly on remote mountaintops, and their rites were seen as "mad" only by those uninitiated. Most of the participants were women. In vase paintings, Dionysos and his followers tear apart live animals with the bare hands and eat them raw. We do not know if this actually occurred as part of the cultic practice; however, it reiterates the tearing apart of the young Dionysos by the Titans.

The worship of Dionysos had a very important psychological function. It emphasizes the value and importance of excess. In allowing for the suspension of the structures of everyday life, it enabled individuals to contact the darker, more irrational aspects of their nature in a ritualized way; to let go of ego control and space/time constraints and engage in mystical experience; and thus to have access to the deeper nonego realms of the psyche, what Jung calls the *Self*, for the purpose of inner transformation. His rites promoted the dissolution of differences and the experience of a primordial unity with others, with nature and the mystical realization that life and death are one.

Thus, we see that Dionysos was also associated with death. Heraclitus, the fifth-century philosopher, famously said that Hades and Dionysos are one. His myth includes a story of descent to the underworld to bring his mother *Semele* back from Hades. Tombs were very frequently decorated with Dionysos and his *maenads* in the ancient world.

From a psychological perspective, it makes sense that Dionysos is associated with death, because the ecstatic, transgressive experience he brings happens through the temporary suspension of ego functioning and individual identity. Dionysos brings an otherness of experience. He is considered the most epiphanic of all the Greek gods, bringing metamorphosis and transformation. For those who bring a negative attitude, it is a dark, frightening experience, but for those who bring a positive openness, it is transcendent.

speaking, discernment, sometimes called discernment of spirits, means skill in discriminating between those influences that enhance or lead to a fuller relationship with God or transcendent reality or, where no belief in transcendent reality is held, to fuller appropriation and implementation of one's value system. Psychologically, discernment is an intentional practice which develops the ability to act in accordance with those agencies that are conducive to integration of the personality and which avoids or resists those influences that would bring about psychic fragmentation or disintegration. For the purposes of discernment, influences within the subject, such as dreams, images, and thought processes, or without, such as relationships with others and political or social context, are understood to have equivalent value and effect. Although meanings vary among traditions, discernment may be characterized as a process that encourages seeing clearly enough to make well-considered decisions which take into account and integrate the multiple dimensions of life, i.e., intellect, affect, body, relationships, principles, values, work, income, expenditures, play, creativity, and religious community, with a particular concern for God, transcendent reality, or a unique system of values. Moreover, discernment's clarity of vision is most often linked with detachment from the promptings of inordinate desire which muddy the waters and make clear discernment unlikely or impossible.

Research into discernment can play an important role in today's debates about the nature of religious experience, especially where a tension is felt between the individual and the collective, the mystical and the prophetic, or the personal and the political. Eschewing an isolating emphasis on personal experience, the process of discernment is understood to unite dimensions of the human witness that are, *at once*, objective and subjective, e.g., historical, textual, moral, theological, aesthetic, political, economic, and communal, *and* personal, psychological, visionary, spiritual, particular, and perspectival. The interpretative strategy called discernment predisposes individuals both to appropriate for themselves and to contribute to the meanings of the historical and communal realities of which they are a part.

## Discernment

Elisabeth Koenig  
 Ascetical Theology, General Theological  
 Seminary, New York, NY, USA

### Introduction

To discern means to separate or distinguish between or among things. In religion, generally

## Judaism

Discernment is a biblical term with a long and complex history. In the Old Testament (Hebrew Scriptures), King David was reputed to have a divine gift of discernment: a wise woman of Tekoa exclaimed of him, “The word of my lord the king will set me at rest; for my lord the king is like the angel of God, discerning good and evil” (2 Sam. 14: 17). Job claims discernment for himself: “Is there any wrong on my tongue? Cannot my taste discern calamity?” (Job 6: 30). The Lord, when worship of him has become superficial and empty, threatens to punish the people by taking away a self-professed but false ability to discern: “The wisdom of their wise shall perish, and the discernment of the discerning shall be hidden” (Isaiah 29: 14). Finally, and of great significance for our discussion, wherever several different Old Testament prophets professed to speak for God and disagreed with each other, the ancient Hebrews recognized that a moral and spiritual awareness which could distinguish between the authentic and the counterfeit was of utmost importance. Among the prophetic books, Jeremiah focuses the most on the problem of discernment because his witness to God was more directly contested than that of the other prophets. Thus the classic discussion of the criteria for critical discernment of prophetic authenticity is in Jer. 23: 9–32, where false prophets are identified by their worship of false gods, including Baal, their promise of good news rather than judgment, false claims to have received a word from God or to have had visions or dreams, immorality, and absence of counsel from the Lord (Moberly 2006).

## Christianity

Although the New Testament gospel narratives depict a process of discernment whenever a decision for or against God or Jesus is made and when demons are cast out by the power of God incarnate in Jesus (cf. *inter alia*, Mat. 8: 31; 12: 28; Mrk 3: 22; 16: 9; Luke 4: 33; 8: 2; 8: 35, etc.), they do not develop the meaning of the

term. However, there are passages, like Matt. 5: 8, “Blessed are the pure in heart for they will see God,” which suggest that the topic was uppermost in these authors’ minds. More to the point, the First Letter of John enjoins, “Beloved, do not believe every spirit, but test the spirits to see whether they are from God; for many false prophets have gone out into the world” (4: 1). But it is Paul, more than any other New Testament author, who explicitly engages the concept of discernment, and he does so for the sake of building up the community of the church. For Paul, discernment (he uses several different words to denote the process: *dokimazein* = test oneself out in practice; *diakrinein* = discern; *anakrinein* = discern, examine; *aesthesis* = discernment, perception) is a gift of God’s Holy Spirit (1 Cor. 12: 1–11). Paul makes a distinction between the “unspiritual” (*psychikos*) and the “spiritual” (*pneumatikos*), where the “unspiritual” would have natural abilities not specifically related to the agency of the Holy Spirit: “Those who are unspiritual do not receive the gifts of God’s Spirit, for they are foolishness to them, and they are unable to understand them because they are spiritually discerned (*anakrino*)” (1 Cor. 2: 14). Moreover, Paul links discernment with love: “And this is my prayer, that your love may overflow with knowledge and all discernment (*aisthesis*) to help you determine what is best” (Phil. 1: 9). (Loving as a prerequisite for accurate knowledge or discernment became a favorite theme among medieval theologians.) Finally, for Paul and the patristic authors who interpreted his letters, Christian discernment hinges on a felt participation in the paschal mystery: it is believed that true discernment only happens when a situation is viewed through the lens of the cross of Jesus. This ability is enhanced through dramatic reading of the gospel narratives and through participation in the Eucharist. Paul speaks of baptism into Christ’s death as the condition for Christian adulthood (Rom. 6: 5f.). Practically speaking, discernment as governed by the cross means that Christians try, by God’s grace, to neutralize the natural effects of envy and strife with a spiritual humility that graciously gives up its own will, desire, or honorific place to

the other. Moreover, there is a spiritual seeing, or discernment, that accompanies such submission (Johnson 1983; McIntosh 2004; Moberly 2006).

The patristic period saw a real flowering of the concept of discernment. *The Life of Antony* by Athanasius (c. 295–373) shows Antony out in the desert, struggling for decades with demons who have tried to compromise his relationship with God. In time, these external entities came to be viewed more and more psychologically as dynamics within the soul. For example, Evagrius Ponticus (346–399) in his *Praktikos* and *Chapters on Prayer* speaks of “eight evil thoughts” that afflict monastics and need to be overcome by prayer and other spiritual practices, such as fasting and vigils. John Cassian (c. 365–435), while believing with his predecessors that both good and evil spirits really exist, is more interested, in his *Conferences*, to teach his monks that the near objects of discernment are not actually external spirits, but movements within the soul, like thoughts, images, feelings, and judgments. For Cassian, discernment is a coming-to-terms with these inner movements that results in a state of equilibrium, as it did for Antony, Origen of Alexandria (c. 185–254), Evagrius Ponticus, Diadochus of Photike (mid-fifth century), and many others (Sweeney 1983). Theologians of the medieval period were also drawn to the discernment tradition. Julian of Norwich, for example, in her *Book of Showings*, correlates discernment with growth in contemplation (Koenig), and Catherine of Siena’s *Dialogue* is replete with teaching on discernment. For Thomas Aquinas, the concept of discernment gives way to an emphasis on prudence which relies more heavily on the rational faculty and is less integrative than discernment.

But it was left to Ignatius of Loyola (1491–1556) to gather together the patristic teachings on discernment and codify them in usable form. His *Spiritual Exercises*, which are decisional and concern the discernment of religious vocation, are the *locus classicus* for Christian training in discernment. In the form of a 4-week retreat, the training progresses through stages of purgation and sorrow over sin to the “Contemplation to Obtain Love” in the 4th

week where the retreatant sees all of creation as God’s expression of love to his creatures. With a profound sense of giftedness and acceptance of a God-given liberty or free will, that person is encouraged to return the gift to the giver through cultivating an attitude of magnanimity toward God who is dedicated to serving him. Most distinctive of Ignatius’ teaching on discernment are the two sets of the so-called Rules for the Discernment of Spirits, appended to his *Spiritual Exercises*, in particular the suggestions made their concerning the felt alternation between states of “consolation” and “desolation.” These are technical terms in Ignatius’ vocabulary, referring to the raw material that people must judge through if they are to make an appropriate choice. He describes “consolation” as “that which occurs when some interior motion is caused within the soul through which it comes to be inflamed with love of its Creator and Lord.” It includes “tears of grief for one’s own sins,” and “every increase in hope, faith, and charity, and every interior joy which calls and attracts one toward heavenly things.” “Desolation,” by contrast, Ignatius calls “everything which is contrary [to consolation]; for example, darkness of soul, turmoil within it, an impulsive motion toward low and earthly things. . . . These move one toward lack of faith and leave one without hope and without love. . . .” Discernment, then, is a process of keen observation of these affective states that leads to deep familiarity with both their energy for integrative authenticity and their potential for disintegrative deception. Most important, for Ignatius, discernment enables individuals to recognize and avert the beclouding influence of inordinate desires (*afecciones desordenadas*).

## Islam

Discernment is a central concept in Islamic tradition, although the term does not appear in English dictionaries and encyclopedias of Qur’anic terms and concepts. The word *furqan*, usually translated as “criterion” or “distinction,” conveys the notion of one thing as set apart from

another. Both the Hebrew *Torah* and the Qur'an are referred to as *furqan* (the former in *Qur'an* 2: 53 and 21: 48; the latter in 3: 4 and 25: 1) because each book was revealed in order to assist human beings in their judgment of the difference between truth and falsehood. Muslims believe that, at the last time, there will be a decisive victory after which truth will reign in a manifest and uncompromised form. In Islam, the concept of discernment is also conveyed by the notions of "guidance" (*huda*) and "misguidance" (*dalal*). God is the only source of guidance (2: 120; 7: 178) in that God shows the human being both the right and wrong paths, leaving him or her free to choose between them (76: 3). Guidance comes in three forms: *instinctual*, where God has given the human being an instinctual sense of "its evil and its good" (91: 8); *rational*, where God-given reason enables one to consider rationally one's place in the universe; and *revelatory*, an infallible guidance bodied forth in both the *Torah* and the *Qur'an*, although the latter is understood to provide the best guidance (17: 9). "Misguidance" also takes place at God's behest, but God only misguides those individuals who already have chosen evil. In a sense, they have asked for misguidance, and God obliges them by misguiding them in order to punish them for their sins (7: 155) (Mir 1987).

Sufi tradition especially emphasizes a process of discernment. Here human beings are viewed as microcosms of the cosmos so that there is a correspondence between them and all the levels of existence, including the Divine Reality beyond the cosmos. Muhammad said, "There are seventy thousand veils of light and darkness that separate us from God, and they constitute the universe," and "The person who knows himself/herself knows his/her Lord." Thus, the "goal of the spiritual life is to be able to lift up the veil of outwardness so as to behold the inward and subsequently come to know the outward in light of the inward" (Nasr 2007, p. 49). This is a process of ever-deepening interiorization, for the veils only will become transparent to the reality beyond them after a person has penetrated to his or her own center and lifted the veils within. The inner vision, which results from God's guidance

and one's faithfulness to devotional practice, ultimately will be able to distinguish the real from the counterfeit at every level of the cosmos.

Psychological critique. Psychologically, discernment denotes an intentional process that seeks to render unconscious material available to consciousness for the sake of making healthful and appropriate decisions. For example, it is possible to pose a series of questions about an issue to be discerned, or about a dream, to see what "comes up," thus becoming more self-aware and capable of making choices that suit who one really is, rather than what others expect one to be (Wolff 1993; Gendlin 1986). The result can be that energy is released, healing made possible, and integration facilitated. However, such a discernment process is never easy: one's conscious attitude dominates every effort to interpret anything. The unconscious always remains unconscious, and the capacity for self-deception is infinite. Therefore, most people interested in discernment these days speak of the need for well-seasoned spiritual directors, and communal discernment is preferred to a process undertaken in isolation. Moreover, increasingly, there are applications of classical discernment practices and traditions to political and corporate situations (Brackley 2004; Libanio 1982; McClain 1988; Urena 1979; Delbecq et al. 2002).

Various schools of psychology offer ways to evaluate what is going on in discernment. For example, the attempt has been made to correlate the Ignatian *Rules for Discernment* with stages of ego development, with highly suggestive results (Liebert 1992). Jung's notion of the progression and regression of psychic energy assists our understanding of consolation and desolation, the former signaling the uprush of energy and heightened awareness following successful appropriation of a previously unrecognized psychic content and the latter indicating the loss of psychic energy that occurs when there is a retreat into the unconscious in order to discover or retrieve hidden psychic potential. Desolation may be equivalent to psychological deflation when it provides a corrective to inauthentic consolation (i.e., inflation). Thus consolation and desolation operate in contrary or compensatory relationship and

in this way impel forward the process of individuation or spiritual development (Sweeney 1983). Cognitive psychology's labeling of cognitive distortions, such as "all-or-nothing thinking," "overgeneralization," "mental filters," and "disqualifying the positive" Burns (1980) has parallels with ancient and medieval descriptions of the effects of evil spirits, or thoughts, and its method of talking back to these and proposing alternatives has much in common with ancient practices (Ponticus 1981) and Ignatius Loyola's method depicted in his *Autobiography* and *Spiritual Exercises*. Self-psychology can make a very special contribution to understanding what is necessary for authentic discernment, especially in its insistence on full, conscious mourning for what has been lost in life as a prerequisite for "analytic access" to the dynamics of the unconscious and, hence, for a self-knowledge that approaches accuracy (Homans 1989). Finally, systems theory, with its insistence on grasping how the role one has been assigned by one's family of origin, conditions one's perception of all reality, its distinction between the "thinking process" and the "feeling process," and its strategies for encouraging differentiation, all offer clarification for undertaking a psychologically well-informed process of discernment (Kerr 1988).

## Dismemberment

Alice Mills

University of Ballarat, Ballarat, VIC, Australia

### Definition

Dismemberment means the taking apart of a body and the removal of one or more body parts. At one end of the scale is the tearing apart of a whole body, resulting in death, as in stories of the early Christians being fed to the lions and Greek myths about the tearing apart of Dionysus by the Titans. The other end of the scale is harder to determine. Forcible removal of eyes, as in St. Lucia's decision to take out her eyes to discourage her pagan suitor, probably counts, but does either castration, as in Origen's self-castration "for the kingdom of heaven's sake" (Matthew 19:12), or circumcision, as enjoined on the Jews in the Old Testament? Bodily injuries such as the piercings and flagellation wounds of penitents and the scarification of Australian Aborigines undergoing initiation do not involve the removal of a body

part and hence should not qualify as dismemberment nor should such phenomena as stigmata manifesting on the palms and feet of some saints.

### Bodily Wholeness

With the obvious exception of the loss of body parts that occurs accidentally, or for medical reasons, or in secular hostilities, dismemberment of the living is generally understood in a religious context as indicating the presence of a deity or dedication to the service of a god or a ritual of initiation. Opposing this tendency, however, is the emphasis on whole bodies without blemish where service to a deity is concerned. In the Bible, for instance, the Book of Numbers abounds with instructions that animals chosen for sacrifice must be "without blemish," and in Leviticus the same requirement is made for priests:

And the LORD spake unto Moses, saying,

Speak unto Aaron, saying, Whosoever *he be* of thy seed in their generations that hath *any* blemish, let him not approach to offer the bread of his God. For whatsoever man *he be* that hath a blemish, he shall not approach: a blind man, or a lame, or he that hath a flat nose, or any thing superfluous. Or a man that is brokenfooted, or brokenhanded. Or crookedbacked, or a dwarf, or that hath a blemish in his eye, or be scurvy, or scabbed, or hath his stones broken (Leviticus 21:17–20).

### Christianity

For Christians, the wholeness of the body has been important in the case as I had it of priests but also for each human being after death, as the body awaits its resurrection and the Last Judgment, hence the Catholic Church's centuries-long ban on cremation. As Michael Bryson points out, the biblically based Christian understanding of Jesus as head of the Church, which is the body, reiterates the great importance of wholeness. Schism and heresy function as the dismemberment of the body spiritual.

In this context, the fate of Christian saints both before and after death is paradoxical. After death, some saints' bodies have been dismembered to

provide relics for as many altars as possible – sometimes, many more substantial body parts than any human body could possibly provide. Before death, violent acts of dismemberment have become emblematic of sanctity for those saints who were also martyrs, as with St. Oliver Plunkett (whose head can be viewed in Drogheda) or St. Bartholomew, who was flayed. The bodily sufferings of the martyrs are considered an *imitatio Christi*, willingly undergone with Jesus' sufferings and death as their model. These sufferings of Jesus before and during crucifixion, including flagellation and the piercing of his side, do not constitute dismemberment. It is, however, theologically debatable whether, for those branches of Christianity that believe in transubstantiation, the breaking and eating of the host constitutes a form of dismemberment.

### Ancient Egypt

While Jesus' status as a dismembered god is disputable, there are abundant examples in other near eastern and classical religions. The most prominent of these deities is the Egyptian Osiris, whose body was taken apart by his jealous brother Set and pieced together by his devoted wife Isis (his penis was irrecoverably lost). The dismembered and re-membered god of fertility and civilization then became lord of the dead, and the mysteries of Isis promised their initiates a similar resurrection to eternal life. The practice of mummification in ancient Egypt was performed to ensure eternal life by keeping the physical body as intact as possible. While some mummified bodies appear to have been dismembered, interpretation of this procedure is much debated: were the spirits of the dead being urged to depart, was the mummification done poorly, or was this deliberate dismemberment in honor of Osiris' fate?

### Shamanism

The experience of being dismembered, though not its literal enactment, is a well-attested part of the Siberian shaman's initiation into spiritual

power as he gains access to the worlds above and below. To become a shaman is to experience, while still a living human being, the dismemberment and resurrection of a god.

### Punishment

Dismemberment before death, for a human body, is thus in a religious context usually a mark of closeness to the divine. Such closeness is not always a mark of divine favor, however. In Greek myth, offending a god can result in being torn apart by the god's possessed followers, as in *The Bacchae*, or falling and being dragged behind a hurtling chariot to one's death, as in *The Hippolytus*. Dismemberment after death is an indication of the deities' disfavor. For the ancient Egyptians, the sunboat carried the dead to the hall of judgment, but along the way the wicked would be taken, torn apart, and eaten by monsters. The carefully gradated horrors of Dante's Christian hell include the splitting apart of bodies that then grow back together, only to be resplit, and the incessant devouring of the skull's contents. Buddhist hells are similarly stratified with punishments such as having one's eyes gouged out or being disemboweled.

### Psychoanalytic Theory

Psychologically, dismemberment of the body, whether of oneself or another human being, or the urge towards dismemberment, is considered a symptom of serious mental illness. There is no scope for the interpretation of dismemberment as part of a spiritual ascent or as penitential self-sacrifice in current psychological models of the world. Psychoanalytic theory is more hospitable to the concept of dismemberment. For Melanie Klein, the infant splits the mother into "partial objects," representations that must be combined for the child's psyche to become whole. For Lacan, human beings' sense of their own identity is founded on a false equation in the mirror phase which entails that ego consciousness is always unauthentic. Psychic integration is thus

impossible, and early ego development includes fantasies of castration and dismemberment. While Klein and Lacan postulate a sense of the body as split in the young child's psyche, in *Totem and Taboo* Freud postulates the long-ago dismemberment of an actual body as the origin of human civilization. He asserts as literal fact the story of the primal horde in which the sons, eager to gain access to their father's women, slew him and ate the flesh they had torn apart. It is guilt at this primal murder and cannibal feast that still powers human civilization, according to Freud. The dismemberment that for many devout Christians and initiates into the mystery religions has borne a joyful message of resurrection to eternal bliss is for these psychoanalytic theorists in their different ways an uncanny substratum to all human beings' understandings of who we are and can be in this world.

## Dissociation

Jessica Mitchell

Private Practice, New York, NY, USA

## Introduction

Dissociation is a normal part of the psyche's defensive process, severing connection between categories of mental events that are normally integrated. Streams of thought or consciousness are kept apart and communication between them is restricted, resulting in a discernable alteration in thoughts, feelings, or actions.

Dissociation is an unforeseen partial or total disruption of the normal integration of conscious functioning, a means by which typically integrated streams of thought or consciousness are segregated and resulting communication restricted. This default defense can take place as a consequence of repeated or overwhelming trauma. The ability to dissociate can begin with self-hypnotic declarations such as "I am not here; nothing is happening to me. I am not in this body." This deceit then becomes a structuring dynamic within the personality (Mollon 2002).

Historically, dissociative states have been associated with psychological and physical trauma, healing practices, and religious experience in nearly every culture. Dissociative states have knowingly been reached by hypnosis, meditation practice, prayer, and shamanic practice. Ritualistic behavior during worship or meditative practice can allow the individual to enter into both overt and implicit dissociative states. Those held hostage or in captivity develop trance capabilities and become adept in the practice of dissociation during isolation and confinement (Herman 1992; Van der Kolk et al. 1996).

For more than a century, the effects of pathological dissociation have intrigued clinicians. The emergence of distinctive dissociative disorder diagnoses is closely intertwined with the development of contemporary psychiatry. More than a century ago, Janet (1889) is credited as the first to identify this essential pathology,

alternation in consciousness, as “dissociation.” Breuer and Freud (1895/1955) followed by defining these same altered states as “double consciousness.” Both Janet and Freud concluded that unbearable emotional reactions to traumatic events produced an altered state of consciousness, which in turn induced hysterical symptoms. Both recognized the essential similarity of altered states of consciousness induced by psychological trauma and those induced by hypnosis (Herman 1992).

Janet asserted that memory is an act of creative integration by which we encoded and characterize experience into preexisting cognitive schemata. When an event in the life of an individual is too overwhelming to fit into these already existing schemata, he believed that it was split off from consciousness into separate systems of subconscious “fixed ideas,” untouched by the rest of individual experience. Individuals with hysteria were those who had lost the ability to integrate the memory of overwhelming experience (Daves and Frawley 1994; Herman 1992; Janet 1889).

From an etymological perspective, the word dissociation is derived from “dis” which means split two ways or “in twain” and is comparable to the Greek “dia” as in “diabolic” – the opposite of “symbolic.” There is moreover an implication of negation or “reverse,” undo a spoil as in discount, disown, or disable, and the notion of “to strip off” or “expel from” as in disbar, disenfranchise, and disempower. In Latin compounds, “dis” was commonly the reverse of “com” or “con” as in concord versus discord. Another meaning is to render a whole into parts, therefore the sense of apart, away, and asunder, as in disperse, dissident, distance, and dispossessed. Association is derived from link, organization, connection, relationship, and bond (Kalsched 1996, 2005, p. 31).

Dissociation is the defensive process that typically results in the loss of interrelationship between various groups of mental processes with an ensuing, nearly independent, functioning of the one group that has been separated from the rest. Dissociative discontinuities can comprise a wide range of phenomena frequently found in both the immediate and long-term response to

trauma. Primary phenomena include depersonalization, derealization, identity confusion, and identity alteration. Individuals may experience bodily detachment, numbing, distorted time perception, fragmentation of the coherence of sensory experience, tonic immobility, forms of extreme passivity, disruption of memory, and amnesic states. Finally, in the case of severe trauma, all connection can be severed between an actual occurrence and permanent symbolic, verbal, and mental representation (Bromberg 1998; Daves and Frawley 1994; Mollon 2002; Van der Kolk et al. 1996).

Dissociation exists on a continuum including normal biological forgetting, daydreaming, and abnormal biological amnesia following a concussion to abnormal psychosocial dissociation that coexists with trauma including multiple personality disorder (Putnam 1989; Ross 1989). While this segregation of mental processes from the rest of the psychic apparatus is most often subtle and transpires unnoticed, other more dramatic manifestations of dissociation can occur among child and adult parts of the personality, between true and false self-structures, sane and psychotic parts of the mind, and different phases of life. Dissociation as a defensive strategy can obstruct emergence of coherent meaning in correspondence to the concept of “attacks on linking” (Bion 1959). Learned dissociation can be considered an internal flight response when external flight is not possible (Mollon 2002; Van der Kolk et al. 1996).

In direct contrast to repression, a horizontal division into conscious and unconscious mental contents, dissociative experience involves a vertical splitting of the ego that can be organized and independently functioning. Under dissimilar internal and external circumstances, two or more ego states alternate in consciousness. These dissociated states remain unavailable to the rest of the personality and, as such, cannot be subject to psychic elaboration (Daves and Frawley 1994, p. 31). However, dissociative states allow external life to go on but at a great internal cost. Psychological sequelae continue to haunt the inner world, making their presence felt in dreams and waking consciousness by way of

recurring intrusive images with violent or symbolic content, enactments, flashbacks, enigmatic somatic sensations, recurrent nightmares, anxiety reactions, mental images split from affect, and somatic conditions. Memory has holes; a full narrative history cannot be told by an individual whose life has been disrupted by trauma (Kalsched 2013).

## Dittes, James

Nathan Carlin

McGovern Center for Humanities and Ethics,  
University of Texas Medical School, Houston,  
TX, USA

James Dittes (1926–2009) was the Roger J. Squire Professor Emeritus of Pastoral Theology and Professor Emeritus of Religious Studies at Yale University. He wrote many books and articles. The major topics that he addressed in his work include the vocation of ministry, contemporary western male experience, and theoretical and empirical psychology of religion (Capps and Dysktra 2003). His major books include *The Church in the Way* (Dittes 1967), *Minister on the Spot* (Dittes 1970), *Bias and the Pious* (Dittes 1973), *When the People Say No* (Dittes 1979), *The Male Predicament* (Dittes 1985), *When Work Goes Sour* (Dittes 1987), *The Hunger of the Heart* (Capps and Dittes 1990), *Driven by Hope* (Dittes 1996a), *Men at Work* (Dittes 1996b), *Re-calling Ministry* (Dittes 1999b), and *Pastoral Counseling* (Dittes 1999a). Three of his articles have been particularly influential, two of which have been cited over 150 times: "Effects of Different Conditions of Acceptance upon Conformity to Group Norms" (Kelley and Dittes 1956), "Attractiveness of Group as Function of Self-Esteem and Acceptance by Group" (Dittes 1959), and "Typing the Typologies: Some Parallels in the Career of Church-Sect and Extrinsic-Intrinsic" (Dittes 1971). Perhaps his most interesting essay is a lesser-known book chapter titled "The Investigator as an Instrument of Investigation" (Dittes 1977). For a more complete listing of Dittes's publications and a guide to his

papers housed at Yale University, see “Books and Articles by James E. Dittes” (Capps and Dykstra 2003). Also see Volume 52, Numbers 1–2, of *Pastoral Psychology* for a tribute to his career, as well as Donald Capps’s (2010) “Notice of Death: James E. Dittes.”

Dittes was born on December 26, 1926, and he died on August 24, 2009. In 1994, he was diagnosed with Parkinson’s disease, which slowly progressed until his death. Dittes married Frances Skinner Dittes in 1948, and they had four children together: Larry (born in 1953); Nancy (born in 1954); Carolyn (born in 1956); and Joanne (born in 1958). Larry was born with Down syndrome and died of heart complications in 1959. Dittes and Frances divorced in 1983. Dittes married Margaret House Rush in 1984, and they divorced in 1986. He then married Anne Herbert Smith in 1987, and they remained married until his death in 2009.

Dittes was born in Cleveland, Ohio, and he was the only child of Mary Freeman Dittes and Mercein Dittes. While his father did not graduate from high school, he worked as a carpenter and later taught industrial arts in a high school. Dittes was baptized as a Presbyterian but grew up in a Baptist church because his mother, Mary, was a soloist in the choir. Regarding these biographical facts, Capps (2003) writes:

[i]t has probably occurred to the reader . . . that a December 26 [birth date], a mother named Mary, and a father whose profession was carpentry would send a powerful message to a young boy that he was predestined to walk in the footsteps of Jesus (Capps 2003, p. 18).

Capps continues:

That the ‘voice’ he heard in church each Sunday was not the authoritative thunderings of a pastor father but the hauntingly beautiful voice of a much-loved mother may also have led some readers to predict, had they known him then, that he would become what he *did* become, one who made a profession (in all senses of the word) of the ministry of care (Capps 2003, p. 18).

Dittes matriculated at Oberlin College in 1944. But he took a leave from college when he joined the Navy in 1945 to work as a radio technician in the Pacific Ocean during World

War II. He returned in 1946 and graduated from Oberlin in 1949 with a major in English and American literature. He matriculated at Yale Divinity School in 1949. After his first year at Yale Divinity School, he took a leave of absence and went to Turkey to teach English. Toward the end of his first year in Turkey, he decided to apply to the doctoral program in the psychology department at Yale University. He was admitted. He received his B.D. in 1955, and he finished his doctoral degree in 1958. Dittes was then appointed to a position at Yale as Assistant Professor of Psychology of Religion. Capps briefly summarizes Dittes teaching career, which spanned 47 years, all of which were at Yale:

From 1955 to 1968 he moved steadily through the ranks of Instructor, Assistant and Associate Professor, and became Professor in 1968 at the age of 42. When he became a full professor with tenure, he was appointed to the Department of Psychology and the Department of Religious Studies. He was Director of Graduate Studies in the latter from 1969 to 1975, and intermittently from 1985–2001, and Chair of the Department from 1975 to 1982. In 1984 his position was renamed Professor of Pastoral Theology and Psychology, and in 2001 was retitled Roger Squires Professor of Pastoral Counseling (Capps 2003, p. 19).

One can observe that Dittes was quite successful in rising through the ranks and handling the various kinds of demands of academic life.

In “Some Accidents, Coincidents, and Intents,” Dittes (2003) offers an autobiographical account of his vocational narrative. He begins by noting that he did not know the word “psychology” when he matriculated at Oberlin as an undergraduate student. When he finally did take a psychology class in college, it was during his last semester, and the course was taught from a behaviorist perspective (it was a little later until Dittes learned of psychoanalysis). Both behaviorism and psychoanalysis, Dittes notes, came to influence him a great deal.

This newfound interest in psychology prompted Dittes to pursue psychology at Yale Divinity School. But his eagerness for psychology – whether behavioral or psychoanalytic – was not shared by students or faculty when he began at Yale Divinity School.

He describes what psychology was like in those days in theological schools:

The psychology in seminaries during the first half of the twentieth century was not, as in the latter half, the psychology of the clinic, i.e., attentive, in the wake of a depression, a world war, and Sigmund Freud, to the deeper, darker parts of personality, past, individual differences, and individual extremes. It was the psychology of the classroom, educational psychology, i.e., optimistic, attentive to the emerging, the newly born, the grand future—what William James might have been heard calling the healthy minded, except that William James was not much heard or heeded either. Even William James was too probing and too dark (Dittes 2003, p. 6).

And so Dittes did not really know what to do with his newfound interest in psychology. His solution was, as he put it, to declare a “moratorium” (cf. Erikson 1962, pp. 99–104) – that is, he moved to central Asia Minor to teach English to Turkish boys and, in so doing, he put his vocational struggles on hold (cf. Dittes 1955).

After his two years in Turkey, he returned to Yale to finish his B.D. and began working on a Ph.D. in psychology. He found, to his surprise, that his psychological interests were now affirmed in the Divinity School upon his return. The psychology department applauded his efforts to “colonize” the Divinity School, and the faculty of the Divinity School, rather than being threatened, now asked him to become a faculty member. They saw him as a “scout” on their behalf.

Dittes began his career in psychology – both in terms of graduate studies and in terms of research – by employing empirical methods. In time, however, he gradually and reluctantly abandoned empirical research, because he became impatient with the amount of energy required to do empirical research, research, he felt, that offered very little insight. He embraced what he felt to be more meaningful psychologies, such as those offered by Sigmund Freud, C. G. Jung, William James, and St. Augustine. As he forged his new identity, he came to name his vocation as psychologist/religionist, a combination, as it were, of his training in theology at Yale Divinity School and his training in the psychology department at Yale University. This title – psychologist/religionist – was, as he puts it, “clumsy, but accurate” (Dittes 2003, p. 9).

He also came to refer to his vocation in various ways, such as “theological anthropology,” “pastoral theology,” and “pastoral psychology.”

In all his years of training, Dittes notes that he did not have a formal course in pastoral counseling, that he did not have any training in Clinical Pastoral Education (CPE), and that he had not even heard of Carl Rogers until he began teaching his own courses in pastoral care. He also recalls that although he gave the keynote address at the founding meeting of the American Association of Pastoral Counselors (which took place in Houston, Texas in 1966), he was not, at the time, eligible for membership because he did not have the appropriate credentials. And this seems to connect nicely with some of Dittes’s own convictions about psychology of religion and pastoral theology: Can one ever be “credentialed” to work in this area? Doesn’t the very idea of credentialing seem to assume that there is a standard body of knowledge that one needs to know? Dittes is skeptical of this point of view.

Dittes believes that there is no such thing as progress in psychology of religion, that there is, in other words, no accumulated knowledge. He writes:

There is no knowledge being accumulated. The occasional attempt to manufacture an accumulation or tradition only proves the point. I came to realize that this is not a collective flaw which we all should repent and correct. This is a merit and strength of those of us who work in some version of psychology and religion. This tentativeness, this everyone-needs-to-start-fresh custom, reflects the way things are (Dittes 2003, p. 13).

“It’s not just that there isn’t accumulation and tradition,” Dittes writes. It is that “[t]here can’t be” (Dittes 2003, p. 13). Why? Because in matters of religion and psychology, there cannot be closure and codification, for “[t]here is always more than meets the eye” (Dittes 2003, p. 13). He continues:

It is an important discovery that psychology of religion deals with matters that require—not permit, but require—regular return to the foundations of experience for correction and renewal and perspective. It is in the nature of things that meaningful psychology of religion requires—not permits, but requires—enfolded and unfolding of self throughout as part

of the study, so we can't do it for each other. Maybe in some endeavors such as carpentry or the poring over scriptures and Talmud by young rabbis, it is important to know first what tradition has accumulated, then build from there (Dittes 2003, p. 14).

“But not psychology of religion,” Dittes writes, “which is a personalized process regarding a personalized process” (Dittes 2003, p. 14). From a career spent studying and working in both theological and psychological circles, Dittes came to realize that “[y]ou have to plant and tend new seeds every year” (Dittes 2003, p. 14).

And perhaps this is Dittes's greatest legacy for the fields of psychology of religion and pastoral theology: He has liberated us all to begin our work anew. But, as younger psychologists of religion and pastoral theologians strike out on their own journeys and begin anew, I think (and I think Dittes would also think) that there is still much to gain from listening to the experiences and insights of our mentors, and the mentors of our mentors, not for the sake of progress but for the sake of perspective.

## Divination

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

Divination is the act of using contact between the supernatural world and the mundane world for the purpose of guiding human action. It is commonly

thought of as an act of foretelling the future, or even dismissively termed “fortune-telling,” but this view is simplistic and ignores the social context of divination. In all situations where divination is practiced, there is a person, a “querent,” who has a need for guidance about what course of action to take with regard to a particular situation. The occasion of the divination generally comes at a specific time for a specific reason. When proffered as an amusement, as in a boardwalk fortune-teller, it may be done with little commitment to using the outcome. But the skill of the diviner lies in finding something that the querent can take away from the encounter that makes them feel value was given for the experience, and most importantly some guidance in making a decision about a course of action.

The nature of divination is a spiritual process of obtaining some contact between the two basic orders of reality, the spiritual realm and the mundane one. There is an implicit assumption of some sort of “realm beyond” that speaks in the moment and reveals information not otherwise available to the querent. Usually, the medium is the messenger. That is, the person of the oracle uses a state of trance possession to contact a spiritual power or entity and convey a message to the querent. The classic example of that is the pythia, the oracle of Apollo at Delphi who spoke as the voice of the deity while in a trance. The oracle can also read portents in random events, this is termed sortilege (e.g. clouds) or outcomes of other devices (e.g., tarot cards, and runes). A modern psychological explanation would typically involve some reference to unconscious processes accessing archetypal images relevant to the question posed by the querent.

The Jungian analyst Marie-Louise von Franz (1980) uses the principle of synchronicity to explain why events which seem random and occur in the same time frame have significance at a psychological level. In Jung’s thought synchronicity is distinct from causation, but important nonetheless.

It is simplistic to think that people view the pronouncements of the oracle as predicting the future in a mechanistic way. People vary in the degree to which they view events as beyond their control, but

implicit in the social relationship between the diviner and the querent is the proffering of advice for a course of action in the face of the problem for which the divination is sought. There is nearly always a gap in time between the pronouncement and the ultimate outcome, time enough for the person to act upon the advice. If the feared outcome does not happen, the advice was helpful; if it comes about anyway, the person failed to heed the oracle’s warning. The critical feature is not whether the degree of certainty about the final outcome but to what extent counsel is taken and plans or actions initiated, changed, or aborted. Divination is action-oriented advice giving.

There are a variety of physical media of divination. Among the most popular in the west are the Tarot cards, the reading of lines on the palm, or the pattern of tea leaves in a cup. The Chinese oracle book the I Ching is also widely used. In previous eras animals were sacrificed for the occasion of the oracle, and the patterns in their entrails were interpreted. Among the oldest artifacts from Mesopotamia is a ceramic figure in the shape of a sheep’s liver with different areas marked out for their interpretive significance. There was probably an oral teaching or a cuneiform tablet now lost which catalogued the various meanings.

The interpretation of dreams is also a form of divination. The “incubation” of a dream by the god Asklepios was a major part of the ritual healing process in the ancient Greek world. The deity would come to the sufferer during a special sleep inside the inner sanctum of the temple, or abaton. The priests would interpret the dream the next day and prescribe the mode of healing to be undertaken. Both Artemidorus and the Sophist Antiphon are reputed to have authored a book of dream interpretation, with the title *Oneirocritica*. When Freud wrote about the value of dream interpretation, he was reviving an ancient tradition, albeit with a different theory of hermeneutics or interpretation.

In a more contemporary vein, divination is the old term for the act of diagnosis. In all clinical contexts one of the most important functions of the therapist is to provide an explanation for the troubles the client brings to therapy. We may use modern psychometric instruments, further dialog

or some combination of the above plus outside collateral information, but at some critical point early in the relationship, the professional presents the client with a summary view of the nature of their problems and the implications for course of treatment.

## Divine Child

David A. Leeming  
University of Connecticut, Storrs, CT, USA

The myth of the divine child is ubiquitous in religious traditions. The child is a potential savior for a society in need. He or she represents radical change, the possibility of a new beginning. As such, he is a threat to the status quo, and the representatives of the status quo – wicked kings and demonic monsters – therefore fight the child.

To represent the idea that the child is associated with divine intentions, his father is often divine. To emphasize that he is also of this world, he must be born of a human female. But the conception of the child is often miraculous – out of the ordinary – to signify his divine nature and to suggest that he belongs to the whole society rather than to any one family.

In ancient Egypt, the so-called Delta cycle of the Osiris myth contains the story of Isis

conceiving a son, Horus, by her dead husband, the god-king, Osiris. Isis flees the usurper king, Seth, the brother and killer of Osiris, and gives birth to Horus in the hidden swamps of the Delta. One day, while Isis is away in search of food for her child, Seth comes in the form of a serpent and attacks the child. But the divine child, stomps on the serpent, thus surviving to continue his father’s struggle against the forces of evil.

In a later tradition Gautama, the future Buddha, is conceived by a white elephant in a dream experienced by his mother, Queen Maya. The Buddha’s potential as a savior is challenged in his boyhood by his father, the king, who shelters the child to keep him from the harsh realities of life. And later, the youthful Buddha is unsuccessfully challenged by Mara, the fiend, who tempts him with the vanities of the world.

Moses, the Hebrew divine child and future savior, is threatened at birth with the other Hebrew children by the Egyptian Pharaoh and is hidden in bullrushes. He is saved and lives to lead his people out of Egypt to the Promised Land.

Jesus, the future savior, is miraculously conceived by God through the Holy Spirit which enters the Virgin Mary’s womb. Soon after his birth in a hidden place, the child is threatened with other Jewish children by King Herod and has to be carried off into Egypt.

The Hindu man-god Krishna, the most important avatar of the god Vishnu, who contains the universe and the possibility of salvation within himself, is miraculously conceived through Vishnu, with the help of Maya (“Divine Illusion”) in Devaki. But when the wicked king Kamsa learns that a child of Devaki will 1 day kill him, he orders that any child of Devaki be killed at birth. To prevent this tragedy, Maya removes the embryo of the divine child from Devaki’s womb and places it in the womb of Rohini.

These are only a few of the many stories of the divine child. Other examples can be found in the biographies of such figures as Herakles, Dionysos, Theseus, Zoroaster, Quetzalcoatl, and Cuchulainn.

The theological purpose of the divine child as future savior or embodiment of divinity on earth

is clear enough. But the archetype resonates psychologically as well. For Carl Jung, the divine child – as opposed to the regressive puer aeternus – represents the urge within us all for individuation. This drive can be confronted from birth by what to it can be negative forces – parents, school, religion, the status quo, and its expectations. And the drive for individuation is confronted within the unconscious itself. The divine child in the womb is the preconscious hero – the Self – waiting to be realized. Once born, he is the individual who enters the quest for individual wholeness.

## Doubt

Ingeborg del Rosario  
Emmaus Center, Quezon City, Philippines

The experience of doubt can be understood relative to faith and to belief. Doubt is commonly

perceived to be inimical and opposed to, even erosive of one's faith, as an absence or significant lack of affective confidence and trust in God, in the divine-human relationship and in divine nature and power. The one who doubts is seen to be weak in faith. Relative to beliefs, doubt can be defined as an absence or significant lack of assurance and certitude, even an active dissent and questioning of religious doctrines and practices that traditionally provide structure and meaning to the faith experience. The one who doubts is seen as an unbeliever, unwilling or unable to acknowledge, assent to and embrace the truth of religious tenets and teachings.

Religious beliefs provide a way of articulating, conceptualizing, and providing meaning to the faith experience, that is, to the individual's experience of God and their relationship. Beliefs are about putting the faith experience into words. While beliefs support and facilitate a deepening engagement in the faith experience, they do not constitute it. The faith experience is not primarily about beliefs, but about a vital relationship: trusting and believing *in*, relying *upon*, entrusting *to* an other. Being relational, the faith experience is not static but ever unfolding and developing, in need of an evolving process of understanding, interpreting, and speaking about this experience. Unfortunately, many religious communities and churches resist the maturational development of beliefs. Dissent and doubt of beliefs are often equated to a lack of trust and confidence in God: one who questions beliefs is perceived to be without faith.

The book of Job in the Old Testament or the Hebrew Scriptures is a classic scriptural illustration of how a believer is often perceived to be lacking in faith because of the doubt and questioning of traditional religious beliefs. Conventional Israelite wisdom upheld the doctrine of divine retribution: the one who does right prospers while the one who does evil is punished. A person who is afflicted must have sinned and so, suffers. The character of Job as a man who was upright and blameless, who did not sin yet suffered grievously, called this moral teaching into question. While Job's friends defended religious tradition as sacrosanct in their dialogues

with him, Job vigorously resisted and challenged this inviolability. While the friends chided Job for his lack of trust and confidence in God's power and the divine will, Job confronted the paradoxical nature God. In Job's experience, God was both enemy and friend, oppressor and redeemer, and adversary and judge. Following the God's speech out of the whirlwind that addresses Job, the book ends with Job acknowledging that he has "uttered what (he) did not understand, things too wonderful for (him), which (he) did not know" (Job 42:3) and God upholding Job for he had spoken about God what is right (Job 42:8).

This story provides an apt paradigm for reflecting upon the experience of doubt in relation to faith and belief. Religious beliefs function to provide order and structure, purpose, and meaning to life and relationships. As did Job, individuals often begin to call into question these deeply ingrained and cherished normative beliefs following an experience of trauma, grievous loss, life-threatening illness, unrelenting crisis, or some wanton encounter with violence and evil. In the face of tragedy, the faith questions of believers often revolve around a need to understand and make sense of the event ("What did I do to deserve this?" "Why did this happen?"), the presence, will and agency of God in this event ("Where is God?" "How could God allow this to happen?"), and the consequent dissonance between one's God-image and the occurrence of this seemingly senseless reality ("How can a loving God allow this suffering?" "What kind of God would let this to happen?") Certitude collapses and doubt ensues when beliefs about God's nature and power cannot contain and support, provide order and structure, nor give sense and meaning to the believer in the midst of tragedy's ensuing chaos and disorder, instability, and disorientation. Uncertainty and questioning of long-held beliefs might also occur in the face of less devastating personal experiences, with maturational challenges inherent in life-stage processes such as adolescence and midlife, as well as in times of critical social developments.

The place and function of doubt in one's life, faith maturity and personal development is more

easily appreciated with the understanding of how representations of God are formulated and internalized. Core metaphors and images of God are the foundation upon which religious beliefs are constructed. Religious traditions, creeds, and beliefs are built around God images and representations which originate primarily from parental sources or the impact of experiences with primary caregivers as well as from influences of social groups, peers, formal and informal religious education, and cultural conditions. The pioneering work of psychoanalyst Ana-Maria Rizzuto illustrates how representational traits attributed to God and the divine nature are shaped by childhood engagements, specifically by early parent-child relations and self-experiences. Images and metaphors of God as critical father, punishing judge, and distant deity or of God as loving and merciful, gentle and understanding, and compassionate and protective evolve for the child by way of transference as a function of projective identification, from idealized wishes and fantasies that stem from significant parental interactions as well as from the consequent introjection and self-mirroring images reflected by these experiences. With a growing self-image and individual maturation, increasingly expanding and intricate interpersonal and social engagements, challenges, and demands of life experiences, the deepening of self-awareness, and broadening of relational consciousness can come a corresponding evolution and refashioning of early God representations from childhood.

For many individuals, however, these God images formed from early on remain essentially static, rigid, and unchanged. Much psychic pain and emotional distress ensue when adult religious patients confront the complexities of crisis and tragedy with undeveloped childhood God representations and with religious beliefs and practices that are built upon these unexplored and unrefined divine images and metaphors. Doubt and questioning of religious beliefs founded on archaic God representations that are a result of early unprocessed transferential parent-child experiences can thus be healthy and growth

provoking, purifying, and transformative. Religious patients may be invited to inquire into how a particular belief or early God image had functioned for them and explore how it has promoted wellness or contributed to a lack of well-being. Similarly, the religious patient might look into fantasized consequences of doubting traditional beliefs or questioning deeply ingrained God images while the therapist might explore how inquiry and exploration, doubt, and questioning can also function to enable wellness as well as maturity in the life of faith.

The de-idealization of early God representations and working through of parental transferences onto the divine image in the therapeutic process, while difficult, painful, and grief filled, also enables a reflective challenging of religious conformity and compliance that are part of the false self and facilitates movement into greater spontaneity, freedom of self-expression, and creativity of exploratory play which constitute a release of and reconnection to the true self. As the sense of authentic self grows, expands, and deepens, so can the sense of God. The experience of God is released from restrictive and static constructs, freed from becoming a container of transference and projection material, and idealized wishes and desires. While creeds, traditions, and practices might remain unchanged, new and deeper levels of meanings may evolve. The adult believer becomes more open to the myriad possibilities of divine mystery and of encountering God as God, found in, yet always beyond, all form and image, concept, and representation. The adult believer is more able to hold and contain the awe-full prospect of a God who cannot be held and contained nor grasped with absolute knowledge and understanding.

As with Job, the mature believer is left with the terrifying yet liberating realization that, about God, one can only utter what cannot be understood and speak of things too wonderful that cannot be fully known. Profound confidence and trust in the divine-human connection, life-giving faith, and right speech about God imply the continuing need for doubt of limited, limiting divine representations and questioning of static, archaic

beliefs that cannot acknowledge the limitless breadth of the divine experience, the ensuing recognition of the vulnerability of words and language to articulate the creativity and mystery of divine-human relatedness, and the contemplative entry into reverent silence and reflective exploration of the God engagement which, like the true self, cannot be contained or confined by efforts to capture the radically free, ever-gratuitous process of unfolding and becoming towards a fullness of being.

## Dragon Slaying

Ronald Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

While dragons are imaginary beasts to be found in the mythology of cultures throughout the world, the concept of *dragon slaying* is unique to the myths of the West. From St. Michael in the book of Revelation in the

Christian New Testament, to Beowulf in the eighth century Anglo-Saxon epic poem of the same name, to Sigurd in Norse mythology (or Siegfried in Richard Wagner's retelling of the story), to Bard the Bowman in Tolkien's *The Hobbit*, dragon slayers engage in a heroic fight to the death with a large and powerful beast that threatens a community or the very balance of spiritual forces in the cosmos. These heroes become honored in the myths and legends of their culture and are symbolic of the victory of good over evil.

The word dragon comes from the Greek  $\delta\rho\alpha\kappa\omega\nu$  or *drakon*. Dragons appear throughout mythology as magical creatures with great physical and/or spiritual powers. Depending upon the culture, the dragon may be airborne – a great reptile with wings – or more worm- or serpentlike. In general, dragons of the East are powerful but benign creatures that are wise and revered by the people. In cultures of the West, dragons are often depicted as evil guardians of a treasure or horde which has been stolen from the people. The theft of this treasure has led to their decline, and the return thereof will reestablish their vitality and/or the spiritual balance of the cosmos.

It is perhaps not unsurprising, then, that the concept of dragon slaying is a singularly Western phenomenon and is to be found in that most enduring and powerful sacred scripture of Western culture: the Christian *Bible*. The following excerpt poses the dragon as the embodiment of Satan and St. Michael as the conquering hero in the name of Christ.

And there was war in heaven: Michael and his angels fought against the dragon; and the dragon fought and his angels, And prevailed not; neither was their place found any more in heaven. And the great dragon was cast out, that old serpent, called the Devil, and Satan, which deceiveth the whole world: he was cast out into the earth, and his angels were cast out with him. And I heard a loud voice saying in heaven, Now is come salvation, and strength, and the kingdom of our God, and the power of his Christ: for the accuser of our brethren is cast down, which accused them before our God day and night (KJV, Revelation 12:7–10).

With St. Michael as a prototypical hero, numerous Christian saints from the early church

have been depicted in legend as slayers of dragons (inter alia, St. Mercurialis, St. Margaret of Antioch, St. Clement of Metz, and St. Martha). St. George, probably the most heralded, killed a dragon who was terrorizing a city in ancient Libya. The people had been feeding sheep to the dragon to appease it, but when the sheep no longer satisfied the hunger of the dragon, they began to feed it their children. The victims were chosen by lottery and, one day, the daughter of the King was chosen. St. George happened by the lake where the dragon dwelled just as the daughter was being offered to the dragon and gravely wounded him with his lance. St. George and the princess led the dragon into the city and promised to slay him if the people were baptized into Christianity. Twenty thousand were promptly baptized and the dragon was slain (de Voragine 1993, pp. 238–240).

In the eighth century Anglo-Saxon epic poem of the same name, Beowulf traveled to help an aging king rid his kingdom of a terrorizing troll named Grendel and his avenging mother. Beowulf then returned to his people and reigned as king for 50 years until a dragon threatened to destroy his kingdom. The dragon guarded a rich treasure that was kept in a burial mound, but was angered when a single drinking cup was stolen from the hoard. Beowulf and a young chieftan attacked and killed the dragon as it sought to lay waste to the kingdom. Beowulf was mortally wounded in the fight, but, before dying, he bequeathed the dragon's hoard to his protégé, Wiglaf (Willis 2006, p. 205).

A prime example of the restoration of a treasure that had been stolen and guarded by a dragon can be seen in Richard Wagner's nineteenth century retelling of the ancient Norse legend of the hero Siegfried (Sigurd) and the dragon Fafner (Fafnir). The story is of a magical ring, forged of twice-stolen gold, all of which ends up as a hoard in the lair of the dragon and is eventually returned to its keepers, from whom it was originally stolen, after dragon is slain by Siegfried. This retrieval of the ring and the gold and its return to the rightful owners – the central plotline of Wagner's grand operatic tetralogy, *Der Ring des Nibelungen* – takes the

audience on a journey which restores the disrupted spiritual balance of the cosmos while at the same time destroying those who have stolen these precious and magical items, only to use them in a quest for their own greed and power.

In J. R. R. Tolkien's *The Hobbit*, the main antagonist is the dragon Smaug who destroyed the town of Dale and captured the mountain Erebor with all its treasure. Smaug's belly was encrusted with the hoard's "gems and fragments of gold from his long lying on his costly bed" (Tolkien 1984, p. 199), rendering him practically invulnerable to attack. When Bilbo Baggins, the main protagonist of *The Hobbit*, encounters Smaug sleeping in his lair, Tolkien (with a nod to *Beowulf*) causes him to steal a "great two-handed cup" from the hoard. One place on his left breast was left unprotected, allowing Bard the Bowman to slay Smaug with a black arrow when he came to destroy the lake-town of Esgaroth. The hero, Bard, was elevated to the first king of Dale, restored after its destruction by the dragon, Smaug.

In Western mythology dragon slaying represents the act of the questing and conquering hero to destroy an evil creature that guards a hoard or threatens people with its powers. Dragon slaying refers, then, to the act of killing this creature or subduing its power, so that life may go on. In a psychological sense, dragon slaying can be thought of as the subduing or integration of powerful internal forces of opposition which can tend to overwhelm the ego and destroy psychological and spiritual equilibrium; the repair of which is necessary to achieve individuation or wholeness.

In the realm of psychology, the dragon in need of "slaying" may be a constellation of unconscious, shadowy energies that have been rejected by the ego. Even though cast off, these energies may control the conscious life or may be projected outwardly onto others who then hold both our rejected parts and our rejection of them. This inner dragon "guards," or keeps from us, a treasure of wholeness which can only be realized by neutralizing its power. As C. G. Jung writes, "[t]he treasure which the hero fetches from the dark cavern is *life*: it is himself,

new-born from the dark maternal cave of the unconscious. . ." (Jung 1990, p. 374).

Slaying of this dragon constitutes making the unconscious parts of the ego conscious. Jung continues, "[t]he hero who clings to the mother is the dragon, and when he is reborn from the mother he becomes the conqueror of the dragon. . .[he] represents the positive, favorable action of the unconscious, while the dragon is its negative and unfavorable action-not birth, but a devouring; not a beneficial and constructive deed, but greedy retention and destruction" (Jung 1990, pp. 374–375).

The process of individuation, or achieving psychological wholeness, is not unlike the hero's journey. As Joseph Campbell describes in *The Hero with a Thousand Faces*:

the mythological adventure of the hero is a magnification of the formula represented in the rites of passage: *separation-initiation-return*: which might be named the nuclear unit of the monomyth. Prometheus ascended to the heavens, stole fire from the gods, and descended. Jason sailed through the Clashing Rocks into a sea of marvels, circumvented the dragon that guarded the Golden Fleece, and returned with the fleece and the power to wrest his rightful throne from a usurper (Campbell 2008, p. 23).

This formula is observed in myths and legends of the ancient past. It is seen in more contemporary retellings of hero journeys, such as *The Hobbit*, in which Bilbo Baggins descends into the dragon Smaug's lair and retrieves a treasured drinking cup. J. R. R. Tolkien subtitled his contemporary myth, *There and Back Again* (Tolkien 1984). Dr. Franz Winkler writes, each of us "has a dragon in his subconscious mind, which he must overcome lest he fall victim to the forces of darkness within" (Winkler 1974, p. 44). The inner voyage taken in depth psychology or spiritual direction, a descent away from a "false, exterior self," leading to the discovery of a "true, interior self," can be a treacherous night sea journey or *nekiya* wherein one or more dragons are confronted and conquered before coming "back again." As Jean Shinoda Bolen states:

The dragon fight can be with an addiction, regression, depression, or aggression, or any destructive complex in the psyche that keeps a person from

growing. The dragon fight can also be enacted with real people who are in intimidating, devouring, or abusive...Some inner dragons must be fought because we are already in their grip, some stand in our way and prevent us from growing, and others lash out through us at others. Even when the dragon seems to be a real person or a chemical addiction, it is the susceptibility to be overcome by this kind of person or substance that makes it dangerous (Bolen 1999, p. 115).

## Dreams

Louis Hagood

Oxbridge Communications Inc & MediaFinder.com, New York, NY, USA

Up until the time of Aristotle, dreams were divine – messengers from the gods or spirit world with the power of prophecy or healing. Priests or shamans were the intermediaries for these messengers, and in ancient Greece a network of temples, dedicated to the half God Aesculapius were popular sites for dream healing. Aristotle declared that dreams were not from the gods and were not prophetic but leftover sensory impressions from waking life.

At the beginning of the twentieth century, dreams were not only mortal but crazy as well. Freud published his *Interpretation of Dreams* in 1900 not only to distance dreams from the divine but also to rescue them from insanity. Dreams had meaning, and he demonstrated how the meaning was disguised. Freud was a product of classical science with its reductionism and determinism, and his dream work follows that tradition, one that, had no place for the mystical or the divine. His was a one-person model with forces both outside and inside creating dreams. As the twentieth century progressed, classical science was challenged by new physics and its theories of relativity and quantum mechanics, which challenged the old.

Jung analyzed the dreams of the physicist Wolfgang Pauli and found the new physics more compatible with his mystical inclinations. His theory that dreams were a compensation for an unbalanced conscious position coming from the collective unconscious was like the quantum concept of a particle emerging from the sea of infinite potential. The collective made Freud's one-person dream model into a group phenomenon.

The group phenomenon has been utilized by Montague Ullman in dream sharing. In a group

the dream is not interpreted as in Freudian or Jungian therapy, but responded to as if it were the dream of each respondent. Thus the dream is truly no longer a one-person experience but communal.

## Dreams and Religion

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

Does divinity appears in dreams? To answer this we must broaden our conceptions of “divinity,” and the scope of the term “dream.”

At the age of 31, I was wrestling with my soul’s desire to fly, to reach for a higher realm and find my authentic self, symbolized by flying. This urge appeared in several dreams, along with images of the opposite: fear of falling/failing. In one dream:

Finally I went to the center of my being, through a pool into two underground levels to a bird, still walking in its placenta, having not left this place. Then I saw the top pool drain, leaving a central hole and the problem of self-discovery. Very rich, warm, friendly dream.

At the center of my being, under the surface, was a bird, still in its placenta, but walking,

ready to be born. I knew that was in the center of my personal being, a piece of what Plato and others call “being” itself or ultimate reality: “*true being dwells, without color or shape . . . the soul’s pilot*” (Plato, *Phaedrus*, 247c). This is the mysterious depth of existence itself, the vast power behind the anthropomorphic God the Father, and Son, or Goddess the Mother and daughter. We need these personified images to feel this overwhelming power, but they are just earthly fragments that we make into “religions” while dimly sensing that being is all much more extensive. And Being is the soul’s pilot.

Psychologically, Carl Jung called dream images such as my bird in a placenta the Self, the image of divinity within. This image can take any form; he saw a sphere sparkling with lighting, a peaceful pool glowing with aqua light, and a circle mandala. Such a Self image is mysterious because earthly birds hatch in shells, not placentas. But both are wonders of earthly birth from a greater power. The placenta bird presents my archetypal drive to fly higher, like an eagle, and float amid the presence of Being to access my self-discovery. It needed only to be born, to fly, to take in a dream to my consciousness new guidance and courage for self-discovery – the power of the dream to bring my soul the psycho-spiritual energy it needs. It transformed me, and I am thankful for it.

The appearance of such broadly “religious” images and themes in dreams is ancient and widespread. But alien to ego, they are often surprising, requiring thoughtful interpretation of symbols. Indigenous peoples commonly saw dreams, especially “Big Dreams,” as communications from the Spirit world that surrounds them. A dead relative or ancestor could easily appear in a dream now seen scratched in code on a rock from the Australian Aborigine “Dreamtime” (Mudrooroo 1994). Dreams rarely portray divinity as a traditional image of an old man in the clouds. Rather, images such as animals, light, stars, and feelings such as hope, angels, cosmic

wonder, and spiritual peace are more common, even when conscious events seem hopeless. Dreams, sparkling and flying with surprises, baffle ordinary consciousness, sometimes bizarre or frightening, often psychologically transformative, occasionally magnificent.

## Interpretation

Critics will ask: but are dreams even meaningful? Dreams are studied in many ways, from the highly conscious neurological idea of meaningless “random neuron firings” to emotionally moving and transformative symbolic personal, collective, and religious meanings in depth psychology. Today, the influence of highly rational ego consciousness as the path of verifying “truth” produces meaningless or superficial “subjective” results about dreams. Ironically, Descartes, who firmed up the subject/object dichotomy, rejected the meaningfulness of dreams, even though his inspiration came from a dream. This expresses the rationalist attempt to deny the deep sources of dreamy feelings that lie under their own consciousness, as in the utopian fantasies behind technologies (Bailey 2005).

Sigmund Freud, although rooted in nineteenth-century materialism, opened the way for modern dream interpretation. He showed the meaningfulness of dreams and their healing power. He cracked open the dominant surface rationalism, descended into unconscious psyche, and focused on the Oedipal myth as his central theme – a son/daughter competes with father/mother for their love and feels guilty about incestual fantasies. He saw many dreams as wish fulfillments. Freud rejected religion as an infantile illusion rooted in a father complex. He helped deconstruct the Victorian era’s repression of sexuality, which of course triggered outraged reactions but eventually led to twentieth-century sexual liberation. Psychic transformation with openness to deep, meaningful imagery often accompanies sexual openness.

Carl Jung welcomed Freud’s opening up unconscious dynamics but rejected his narrow

focus on sexuality. He saw sexuality as just one of a vast number of archetypal complexes in dreams – shadows, lovers, prophets, and divinity. His astonishing *Red Book* shows the power of the unconscious psyche behind thinking. It also shows the numerous images that can convey sacredness. This book was the unconscious root of his influential archetypal psychology. Although as a psychologist he said he was not doing theology when discussing God images, in his early private *Red Book* he said: “I daily weigh up my whole life and continue to regard the fiery brilliance of the God as a higher and fuller life than the ashes of rationality” (Jung 2009, p. 339). Later the leading archetypal psychologist James Hillman pressed Jung’s thought further, pointing to the importance of polytheism and the need to expand psychology to include the environment.

## Dream Scope

In the 1860s the German chemist Friedrich Kekulé had a daydream of a snake holding its own tail in a circle (*Ouroboros*) that gave him the insight for his successful model of the important benzene ring (von Stradonitz). This not only shows how dreams can affect the material world but it raises the question of the scope of dreams: must only night dreams be considered? How are dreams related to waking life? The answers are many. The ancient Greeks spoke of “night visions” and “waking visions.” Jung used “active imagination.” Many today reject the idea that the unconscious appears only during sleep, thus theoretically leaving waking consciousness as a purely rational state. Rather, imaginative, dreamy visions occur on a broad spectrum with a fuzzy border, including consciousness, appearing as easily accessible feelings such as enchantment, trance, empathy, and intuition. Near-death experiences are well-researched intermediate states that also disclose religious themes (Bailey and Yates 1996). Dreamy visions can occur in altered states, waking visions, or twilight consciousness, as Kekulé’s daydream shows.

## Dreams and Reality

Mysterious and actually healing light suggests divine influence in dream visions. A woman told me that in her twenties in Central America,

she was dying – hemorrhaging dangerously one night, shivering cold, when a numinous shaft of light from above, which only she could see, thrust down into her body and filled it with light. She immediately recovered.

Dream visions can heal. Such encounters with the soul and being can bring out intuitive perceptions of various degrees of reality – hidden psychological patterns such as self-discovery, widespread archetypal themes such as flying, intuitive glimpses of life patterns, and physical changes, such as healing. These breakthroughs often happen in times of a crisis that overthrows rational self-control.

## Native Americans

The Native American Vision Quest is one of many dreamlike experiences among Indigenous peoples worldwide. Sometimes it is sought ritually, sometimes it comes unasked. Black Elk (1863–1950) was a Lakota Sioux whose people lived around the Black Hills. As a 15-year-old boy he fell sick.

He was carried up to the clouds, where thunder beings flashed. Then the boy saw horses with lightning manes and thunder in their nostrils, dancing all around. He was led to a teepee with a “rainbow entrance,” where he saw six Grandfathers, who looked older than men can be – “old like hills, like stars.” He shook with fear, since he realized that they were not old men, but “The Powers of the World.” These awesome Grandfathers each taught him Powers that he would need as a shaman or holy man (*wichasha wakon*). They gave him the Power of the Thunder Beings, who would take him high to the Center of the World so he could “See.” They gave him the power to make live, to grow, and to understand his relatives in nature and the stars. He saw himself grow into a Grandfather. After he returned to this world, each morning he rose before dawn so he could commune with the Morning Star.

He transformed his vision into a ritual to teach his people the Sacred Way that he had seen and healed many (Neihardt, Ch. 3).

## Judaism

In the Jewish *Torah*, Jacob had a dream important to Hebrew theology. After leaving home he put a stone under his head to sleep:

And he dreamed that there was a ladder set up on the earth, and the top of it reached to heaven; and behold, the angels of God were ascending on it! And behold, the Lord stood above it and said “I am the Lord, the God of Abraham your father and the God of Isaac; the land on which you lie I will give to you and to your descendants . . . And [Jacob] was afraid and said, “How awesome is this place! . . . this is the gate of heaven” (Genesis 28:11–17).

The Hebrew God (*Yahweh*) often spoke to humans in dreams and visions like this, such as Moses’ vision of the Burning Bush (Exodus 3:2).

## Greece

The ancient Greek word for a revelation received in a dream was *oneiraiteton*. In Homer’s *Odyssey*, grieving Penelope, worried about Odysseus and their son Telemachus, was sent a dream by the goddess Athena:

The dream figure went into the bedchamber. . . and came and stood above her head and spoke a word to her: ‘Penelope, are you sleeping so sorrowful in the inward heart? But the gods who live at their ease do not suffer you to weep and to be troubled, since your son will have his homecoming even yet, since he has done no wrong in the gods’ sight’ (Homer, IV, pp. 801–807).

In her *Dreams in Late Antiquity*, Patricia Cox Miller analyzes several important issues and cases, such as in Plato, who said:

No man achieves true and inspired divination when in his rational mind, but only when the power of his intelligence is fettered in sleep or when it is distraught by disease or by reason of some divine inspiration (Plato, *Timaeus*, 71E).

## Christianity

Among early Christians, Tertullian observed that *most people get their knowledge of God from dreams* (Tertullian 1947, 47.2, p. 65). During Tertullian's life the Roman woman Vibia Perpetua in March 203 CE in Carthage was a 22-year-old Christian martyr, married, nursing an infant, and imprisoned for refusal to renounce her strong faith and burn incense to Roman gods.

In a dream she saw a bronze ladder reaching to heaven. On its sides were fixed weapons of destruction. She stepped on a serpent/dragon/Devil's head. As she climbed she saw a garden below with a white-haired man milking, who said "You are welcome, child." He gave her some delicious cheese (Miller, 152). This seemed to prepare her for her coming suffering, affirm of her courage, and promise that God will feed her soul.

When Perpetua was actually sent into the arena, she sang Psalms ecstatically. Then she was knocked over by an angry cow, then stabbed with a sword (Von Franz 1980, p. 14).

In her *The Passion of Perpetua*, Jungian analyst Marie-Louise von Franz noted the parallel between Perpetua's bronze ladder and Jacob's ladder to heaven and its symbolism of attaining a higher consciousness (Von Franz 1980, p. 16). She saw the old shepherd as the divine Self and milk as spiritual teaching (Von Franz 1980, pp. 30–33). Like Christ, Perpetua had the courage and faith to endure suffering and death with the promise of eternal life.

## Islam

Muhammed was an unlettered man who went to a cave for meditation on Mount Hira, Arabia (610 CE). One night he was aware of the majestic presence of the angel Gabriel, saying "*Iqra!*" ("Recite!"). Muhammed was petrified, but the numinous power before him was compelling. He woke up and remembered the message written in his heart. He saw Gabriel spanning the horizon, saying: "*You are the apostle of God.*" For 22 years Muhammed continued to receive such revelations, as lights, auditory voices, or

a ringing bell. He lifted up Allah, and his revelations became the sacred *Qur'an* (Bulkeley 2008, pp. 193–194).

## India

Kelly Bulkeley, in his *Dreaming in the World's Religions*, concludes that "*Dreaming has always been regarded as a religious phenomenon*" (3) and that it is a primordial source of religious experience (6). In India, although some dreams are seen as demonic or illusory, religious dreams are common.

Once a man went to a Vishnu temple and dreamed that he would have a son who would be the avatar of Vishnu himself. The man's son became Sri Ramakrishna, a highly revered mystic with a large following (Bulkeley 2008, p. 41).

## China

Royal Chinese courts such as the Zhou dynasty (from c. 1100 BCE) relied on dream interpretation for political decisions by experts called *Tai Pu* and (usually women) *wu* (Bulkeley 2008, pp. 54–55). Kings were expected to follow the interpretation of dreams as the will of the Mandate of Heaven and the ancestors (Bulkeley 2008, p. 56). Confucius' dreams emphasized themes such as how the harmony of the state followed from the virtue of the ruler (Bulkeley 2008, pp. 61–62). The more mystical, paradoxical Daoists stressed individual self-awareness and the mysterious interplay of waking and sleeping consciousness:

Long ago, a certain Zhuang Zi dreamed he was a butterfly . . . happy and carefree. . . . Then all of a sudden he woke up to find that he was, beyond all doubt, Zhuang Zi. Who knows if it was Zhuang Zi dreaming a butterfly, or a butterfly dreaming Zhuang Zi? (Bulkeley 2008, p. 64).

This text raises the fascinating ontological question of dreaming: what is reality?

The conscious, logical ego deals with the physical world. But ego had no adequate reason to deny that a broader reality is revealed in dreams, symbolic as they may be.

## Buddhism

The Buddha saw dreams as potentially beneficial to Enlightenment, but no more than the highly refined mental state of meditation. One Chinese Buddhist painter, Kwan Hiu, combined meditation, visualization, and dreaming to create his art, saying “*I paint what I see in my dreams*” (Bulkeley 2008, pp. 93–94). Early Buddhist traditions saw dreams as authentic ways of communicating with the divine. A Japanese Buddhist Lady Sarashina had a “Big” dream.

Through the mist in a garden she saw the Amita Buddha. He glowed with golden light and was invisible to all but her. She was impressed but frightened. He said, “I shall leave now, but later I shall return to fetch you.” That dream gave her hope for salvation (Bulkeley 2008, pp. 95–96).

The *Tibetan Book of the Dead* is a powerful Buddhist text to be read to the dying in their dreamy, visionary in-between state (*Bardo*) of consciousness and to meditatively prepare any reader for death in the colorful Tantric Tibetan tradition. It absorbs the pre-Buddhist Indigenous Bon religion, full of demons and deities, and reframes it into a Buddhist world. Here the first thing a dying person can expect to see in their visionary state is the blazing luminosity or *Dharmakaya*, the essence, the isness of existence, and the body of truth or law. If, thanks to their education and meditative awakening to the Buddha mind, the dying one recognizes this as the Buddhist ultimate reality, he or she is freed from reincarnation to merge with the Light of Nirvana. If one fails to recognize this truth, he/she moves on to a series of dramatic psychic images or projections of colorful demons and deities. Here the opportunity to recognize the *Dharmakaya* and be liberated is repeatedly available. But if there is no recognition, one passes on to the next stage. First one sees the Bardo of the reassuring Peaceful Deities, then the Bardo of the horrifying Wrathful Deities, then the resigned Bardo of Becoming, or reincarnation, from higher to lower earthly beings, depending upon one’s life and awakens (Fremantle and Trungpa 1975).

Dreams and dreamlike states or visions glowing with divine power are common

experiences with powerful images that can heal the body and soul, prepare for death, and provide guidance and meaning. They can be life changing and culture changing. Today interpretive methods are still being explored by scholars such as Wendy O’Flaherty and Morton Kelsey and psychotherapists, notably Jungians. Kelly Bulkeley is engaging in dialogues with contemporary neuroscientists to find common ground for understanding dreams (Bulkeley 2005).

## Dreams in the Old Testament

Erel Shalit

Israel Institute of Jungian Psychology,  
Ra'anana, Israel

All in all there are about a dozen dreams in the Hebrew Scriptures, the Old Testament (of the dreams in the New Testament, five, in Matthew, pertain to divine guidance of the Holy Family; in Acts 2:17, Peter quotes Joel 3:1, and in Matt. 27:19, Pilate's wife shares with her husband a frightening dream and tells him to spare Jesus). However, what exactly constitutes a dream may be hard to tell. The distinction between dream and vision is not always apparent.

Besides Jacob's well-known dream of the ladder, we find the main elaboration on dreams

in the book of Daniel, with Nebuchadnezzar's two dreams, and particularly in Genesis, with Joseph's dreams and interpretations.

The attitude towards dreams in the Bible is ambiguous. While Daniel and Joseph are celebrated dream interpreters, in other instances warnings are voiced against the deceit and falsehood of dreams. In Jeremiah, God ridicules and warns, "I have heard what the prophets said, who prophesy lies in my name, saying, I have dreamed, I have dreamed" (Jeremiah 23: 25), a warning repeated in other instances as well, for example, in Zechariah, "For the family idols have spoken vanity, and the diviners have seen a lie, and the dreams have told falsehoods; they give empty comfort" (Zechariah 10: 2).

In spite of the relatively few dreams in the Bible, and the warning against dreams as possibly deceitful, their absence may be a bad omen. This is the case with Saul, the first of the Hebrew Kings, who in despair before the battle in which his three sons are killed and he commits suicide, cries out, "God has departed from me, and answers me no more, neither by prophets, nor by dreams" (1 Sam. 28: 15). Saul had expelled the sorcerers from the country and was now cut off from the mediums, the channels of unconscious and transcendent communication with him.

Two kinds of dreams can be distinguished in the Bible, those which sound a command, message, or guidance of the Divine Voice, as with Abram and Abimelech, and the more symbolic dream, as we find with Pharaoh and Nebuchadnezzar.

### Abram's Vision

In Genesis 15: 1 Abram, prior to God's changing his name to Abraham, has a nightly vision, which opens in a rather typical way for divine messages to prophets: "the word of the Lord came to Abram in a vision." Abram is bewildered, but God tells him, "Fear not, I am your shield, and your reward will be great." God then brings Abram out in the night and tells him to look toward heaven and count the stars, promising a large offspring.

While in the Bible this is called a vision, some authors believe it to be a dream theophany, i.e., the visible, embodied appearance of God in a dream (Bar 2001, p. 148 f.). After the sun has set, Abram makes a sacrifice and falls into a deep sleep. God then makes his first covenant with him. This is the first biblical instance of dream incubation.

### The Dream of Abimelech

The first reference in the Bible of a dream concerns King Abimelech. Abraham and Sarah had journeyed to the Negev, and Abimelech, king of Gerar, had sent for Sarah and “taken her,” believing her to be Abraham’s sister. “But God came to Abimelech in a dream by night, and said to him, Behold, you are but a dead man, because of the woman whom you have taken; for she is a man’s wife” (Gen. 20: 3). The king declared his innocence, not having been aware that Sarah was Abraham’s wife and, furthermore, he did not sleep with her. While still in the dream, God answers Abimelech, “Yes, I know that you did this in the integrity of your heart; for I also kept you from sinning against me; therefore I did not let you touch her” (Gen. 20: 6).

Abimelech listened carefully to what he was told in the dream and sent Sarah back to her (half) brother and husband, inviting them to live in the land. He was consequently rewarded with the renewal of life; the wombs of his house that previously had been closed up were now opened, and his wife and maidservants became pregnant.

### Jacob’s Ladder

The Bible’s perhaps most well-known dream is Jacob’s dream of the ladder (Gen. 28: 12). Jacob had set out on a journey to his maternal uncle Laban in Padan Aram. When night arrived he lay down to sleep and dreamed of angels ascending and descending a ladder that reached to heaven. Above the ladder stood God, promising to protect Jacob and to bring him back

safely. When he woke up, he decided to call the place Beth-El, the House of God.

The dream ladder may be a metaphor for the connection between heaven and earth, divine and human, or, within man’s psyche, the connection between the personal ego on firm ground and the sense of divine presence in man’s soul, the god-image, or the Self. The angels, as messengers and intermediaries, wander this vertical axis. In fact, ladder (*sulam*) is a *hapax legomenon*, appearing only once in the Bible, possibly originating in the Accadian word *simmiltu*, stairway, believed to be used by the gods to travel between different realms; at the top of the stairway was the entrance gate to the dwelling of the gods.

Jung referred to the theme of the ladder as pointing to “the process of psychic transformation, with all its ups and downs” (Jung CW 12, 1968, para. 80). Later, Jacob has another dream, in which he is told by an angel to return to his native Canaan.

### Solomon’s Dream of Wisdom

When inheriting the throne, King Solomon sets off to the sanctuary at Gibeon, northwest of Jerusalem. He presented burnt offerings and went to sleep to incubate at the sacred precinct, whereupon he dreamed a dream in which God appeared to him (1 Kings 3: 5 ff.). With Abram’s vision, this is the Bible’s most prominent case of dream incubation. In his dream, Solomon asked God to give him “an understanding heart to judge your people, that I may discern between good and bad.” It is worthwhile to notice that the Hebrew says “a hearing heart;” the root of the word “hearing” [sh-m-a] is also the root of the word “meaning.” That is, he asked for wisdom, and the wisdom of judgment, which he was granted. Immediately upon his return from Gibeon to Jerusalem, Solomon is asked to decide who of the two harlots is the mother of the living child, and whose is the child that has died. He judged wisely that the one willing to forfeit the child rather than have it slain by the king’s sword is the mother.

## Nebuchadnezzar's Troubled Dreams

Four centuries after Solomon built the Temple, the one hand of Nebuchadnezzar rebuilt the city and the civilization of Babylon, while with his other hand he destroyed the Temple and the walls of Jerusalem. He told his magicians, "I have dreamed a dream, and my spirit is troubled," and demanded they interpret his dream, without even telling it to them. Unable to do so, Daniel was called upon, and in a vision of the night God revealed the mystery of the dream to him. Daniel explicated the king's dream, in which he saw:

A bright, awesome statue, head of gold, chest and arms of silver, belly and thighs of bronze, its legs of iron, its feet of iron and of clay. And then, a stone was cut out, but not by human hands. It struck the statue and the iron, the clay, the bronze, the silver and the gold were broken to pieces and became like the worthless straw on a threshing floor in summer. The wind swept them away without leaving a trace. But the stone that struck the statue became a huge mountain and filled the whole earth (Daniel 2: 31 ff.).

Daniel told Nebuchadnezzar that his kingdom, his power, his strength, and his glory came from God. "You are the head of gold," he said. Then there will arise a kingdom of silver, inferior to yours, and yet another one of bronze, which will rule over all the earth, Daniel tells the king. A fourth kingdom, as strong as iron – strong, oppressive, crushing, and shattering, however "partly clay and partly iron, it will be divided" – powerful, yet frail, would then arise. At the end, the eternal, indestructible kingdom of heaven will crush and put an end to all these kingdoms, Daniel tells the king.

Daniel interpreted the four metals of the statue as four successive kingdoms. Nonpsychological interpreters have seen it as a dream that links the history of worldly empires, and it has thus been perceived as a prediction of the historical succession from the kingdom of Babylon to Medo-Persia and Greece, and on to Rome, from where the Kingdom of God would rise again.

Other scholars have compared the dream to Hesiod's stages in the moral decline of mankind. Psychologically, it may reflect the relentless process of increasing functionality, an increasingly

strong ego, until the ego swells and is overcome by the transcendent, as represented by the stone "cut not by human hands."

However, Nebuchadnezzar remains arrogant; a "classic case of megalomania," writes Jung (CW 8, para. 163). His second dream, in which the tree in the midst of the earth, reaching to heaven, is cut down and the king turned into a mad beast for seven years, may be considered as compensatory to this inflated condition.

## Joseph, the Dream Interpreter

The dreams of Joseph, the butler and the baker, and then Pharaoh, constitute the Bible's most prominent dream series. There are three sets of two dreams each. Joseph's second dream essentially repeats his first, and Pharaoh's dreams are identical to each other.

The doubling of dreams indicates the vital meaning ascribed to them, "that the matter is established by God" (Gen. 41: 32). While the dreams of the butler and the baker are similar and dreamed the same night, they are interpreted by Joseph as predicting their opposing destinies.

Joseph told his brothers that in his dream, their sheaves gathered around his and bowed down to it, and in his second dream, the sun and moon and eleven stars bowed down to him. He thus further aggravated his already angry brothers. From a psychoanalytic viewpoint, these dreams have been considered as a narcissistic manifestation of Joseph. Standing in the center of the earth's harvest and of heavenly counsel may then be understood as compensatory to his feeling of being rejected by his brothers.

The second set of dreams is those of his fellow prisoners in Egypt, Pharaoh's butler, and baker. The butler dreamed that he gives Pharaoh to drink from the grapes that he pressed from a three-branched vine. Joseph told him this means he will be restored within three days to his former rank. From the position of Pharaoh, which means "the great house" and has been referred to as a metaphor for the ego, whose spirit we are told is troubled (Gen. 41: 8), it may indicate a renewal of the flow of wine, a necessary rejuvenation of

spirit and consciousness. The positive interpretation of the dream makes the baker come forth, as well, to ask Joseph to interpret his dream as well.

In the baker's dream, the food for Pharaoh in the uppermost of the three baskets on his head is eaten by the birds. This time Joseph's interpretation is less agreeable, "The three baskets are three days; And within three days shall Pharaoh lift up your head off you, and shall hang you on a tree; and the birds shall eat your flesh off you" (Gen. 40: 18f). That is, in contrast to the flow of wine and the symbolism thereof, the produce of the earth will not reach the great house of Pharaoh.

Then, the meeting of the two protagonists – the Egyptian King who does not yet realize his kingdom is threatened by famine, and the Canaanite hero whose rise into royalty came to be followed by his people's fall into slavery – becomes the lysis of the dramatic series of dreams.

In his dream, Pharaoh saw seven thin and ugly cows come out of the river and consume the fat ones, without getting fatter, and seven thin and damaged ears spring up and replace the seven good ones. Prosperity is replaced by famine, like autonomous complexes may drain the ego of its resources (cf. Shalit 2002, p. 68 ff.). However, a conscious attitude may enable taking necessary precautions, as suggested by Joseph, who is appointed viceroy to prepare the land for the years of famine. Psychologically, an ego that attends to the manifestations of the soul by listening to dreams can apply conscious means of coping.

The name Joseph means "the added one." Besides interpreting Pharaoh's prospective dream, he added wise counsel. Pharaoh renamed him *Zaphnath-Paaneah*, understood to mean "through him the Living God speaks" or, psychologically, through him the voice of the self speaks. Literally, the name means the one, who "deciphers the encrypted message," thus acknowledging Joseph's gift of dream interpretation.

In summary, dreams are sometimes considered false and misleading (e.g., Jeremiah and Zechariah) in the Hebrew Scriptures; at other times they describe the vertical axis between man

and divinity (or ego and self; Jacob's ladder, or the statue and the tree of Nebuchadnezzar); sometimes Biblical dreams are divine visions, and sometimes they predict a person's fate or serve as spiritual guidance.

## Drewermann, Eugen

Matthias Beier

Christian Theological Seminary, Indianapolis, IN, USA

The primary function of religion is to be therapeutic. This thesis lies at the heart of the influential work of German psychoanalyst, theologian, and philosopher Eugen Drewermann. Widely read around the globe since the 1980s, he aims to free religion from its anxiety- and violence-producing projections and to interpret the rich symbolism of religions in ways that promote healing and wholeness for individuals and communities. Author of more than 80 volumes

revamping theology in particular and religious studies in general in light of psychological, neurological, ethological, sociocultural, and natural science research, Drewermann radically challenges the implicit and explicit use of traditional conceptions of God by religious, political, and economic authorities to justify psychospiritual suffering and sociocultural forms of violence. He argues that religion needs psychological mediation to free it from literalistic rigidity and objectifying coercion and that psychology, in turn, needs religion in order to safeguard the human person against behavioral, sociocultural, genetic, economic, and other forms of reductionism, dissolution, and exploitation.

Four basic interrelated ideas of Drewermann's work will be highlighted in this entry: first, that the purpose of religion is to calm uniquely human forms of anxiety and that the measure of healthy religion depends on whether it increases or calms human anxiety; second, that a hermeneutics of religious texts and experiences is needed which pays equal attention to the evolutionary roots of religious symbols and to the vicissitudes of the subjective, historical human experience of self-reflection; third, that healthy religion is essential to a resolution of the human propensity to inflict psychological and physical violence; and, fourth, an exploration of the emergence of the notion of God as a person and its relation to the emergence of the human experience of personhood.

Born June 20, 1940, in Bergkamen, then a mining town in the Ruhr area of Germany, to a nominally Lutheran father working as a mining official and a devout Roman Catholic mother working as a homemaker, Drewermann was the youngest of three siblings and exposed to lasting impressions of allied air strikes that destroyed most of his hometown in the final years of World War II. Ordained as a Catholic priest in 1966, he soon found himself confronted as a diocesan priest in a German spa town with congregants suffering from psychosomatic illnesses and ethical dilemmas for which seminary training had ill-prepared him. Thus motivated to enter psychoanalytic training at the Göttingen Psychoanalytic Institute, Drewermann's psychotherapeutic work confirmed the inadequacy of what he called

a superego-oriented form of religion (Drewermann 1989) and argued for a religion oriented around the person-based experience of the I (*Ich*) or self. Simultaneously he began doctoral studies in theology at the University of Paderborn and philosophy at the University of Münster, earning a doctorate in systematic theology in 1976 with a dense three volume interdisciplinary study of Gen. 2–11 (1977–1978). Upon *habilitation*, Drewermann taught as *Privatdozent* for systematic theology at the Catholic Seminary of the University of Paderborn while continuing to work as a priest.

Integrating exegetical, psychoanalytic, cultural-anthropological, ethological, philosophical, and systematic-theological methods, the multivolume works *Strukturen des Bösen* (1977–1978) and *Tiefenpsychologie und Exegese* (1984–1985) provide the methodological foundation for Drewermann's prodigious output of commentaries and interpretations of biblical texts and pieces of world literature are the following: more than two dozen volumes of depth psychological commentaries on biblical texts, including each of the four gospels (1987–1988, 1992–1995, 2003, 2008–2009), the book of Acts (2011), the Luke infancy stories (1986, Engl.: 1994a), texts for Advent and Christmas (1990, Engl.: 1991c) and Lent and Easter (1991a, Engl.: 1994b), and most books of the Hebrew Scriptures (1994c, 1998c, 1999b, 1999c, 2000b); popular depth psychological interpretations of two dozen of Grimm's fairy tales (1981–2007), Anderson's "Little Mermaid" (1997), and the Indian myth Milomaki (1991b); a historical novel on Giordano Bruno (1992), the Renaissance philosopher burned at the stake by the Inquisition; and interpretations of pieces of world literature such as Saint-Exupéry's *The Little Prince* (1984, Engl.: 1993b), Hermann Hesse's writings (1995), Dostoevsky's writings (1998a), Goethe's *Fairy Tale* (2000a), and Melville's *Moby Dick* (2004). His most recent series of volumes on the question of God in light of neurological (2006a, 2007), anthropological (1998b), biological (1999a), and cosmological (2002) research have made him a public focal point of the science and religion debate in Europe. A prolific author gifted with the memory of

a genius and the oratory skills of a Cicero, Drewermann is frequently featured on German-speaking TV and radio talk shows and presents some hundred lectures annually while continuing his clinical practice.

Turning to the first basic idea, Drewermann's synthesis of psychology and religion centers around the function of religion to calm uniquely human forms of anxiety. He distinguishes broadly three basic dimensions of human anxiety: the biological fear of death, the psychological/social fear of separation and insignificance, and the existential fear of nonbeing. In the face of the inevitability of death, existential anxiety raises biological and psychological/social anxieties through the self-reflective capacity of the mind to uniquely human absolute levels, as described by existential philosophers or psychologists from Kierkegaard and Sartre to Boss, Laing, May, or Becker. The human capacity for self-reflection consciously or unconsciously opens the abyss of nothingness to the personal ego, stirring absolute levels of anxiety the ego forever seeks to calm. Such anxiety often remains unconscious and may then manifest itself in character structures as petrified anxiety which, on the outside, seem socially adaptive to the group, e.g., the routinely obedient fulfillment of the duty of a soldier in World War II moving prisoners to concentration camps or of another soldier to engage in carpet bombing while calmly drinking a cup of coffee in the cockpit of his bomber plane. Since the abyss of nothingness is absolute and, Drewermann maintains in contrast to other existential writers such as Sartre, Camus, or Becker, can never be bridged by anything less than absolute, all attempts to bridge it with anything less than absolute, such as temporal achievement, relative cultural symbols, allegiance to institutions or leaders including religious ones, or clinging to self and others, inevitably fail to calm and, often, inadvertently increase absolute anxiety. Based on this analysis, Drewermann argues that interpretations of religious texts, doctrines, and experiences need to be guided by attention to the basic interpersonal alternative between anxiety and trust. In this context, he has developed diagnostic formulations of key theological dynamics in the experience of

depression, hysteria, obsessive compulsion, and schizophrenia (Drewermann 1982–1984, 1993a) and has provided a far-reaching critique of an alternative to the de facto voluntaristic bias in dominant conceptions of ethics in both Roman Catholic and Protestant notions of moral agency (Drewermann 1982–1984, 2001, 2006b, 2012a, b).

Drewermann's work is best known for his analysis of unhealthy forms of religion which led to his being officially silenced by the Roman Catholic church at the behest of then Cardinal Joseph Ratzinger, now Pope Benedict XVI, who wrote with alarm in a 1986 letter to the local archbishop that Drewermann's work had caused "grave concern" in the Vatican and instructed the bishop to take all "necessary measures" (Beier 2004, p. 17). Informed psychologically by Freud, Jung, Reik, Fromm, Kohut, Klein, Boss, Laing, Stern, and others, Drewermann expounds through interdisciplinary analysis dynamics that turn religious doctrines, beliefs, and institutions into the opposite of their original function: from calming anxiety and sublimating aggression to being the source of anxiety and violence, thus paradoxically blocking the way to a solution of both (Drewermann 1989, 1993a). "A reactive atheism due to disappointment" (Drewermann 1999a, p. 737, 2007, p. 425) is the inevitable and even necessary response to this poisoning of religion by fear. When Drewermann added to his depth psychological hermeneutic of religious texts an analysis of the Vatican's clergy ideal as practically requiring the sacrifice of the clergy's own personhood through complete identification with the office and called for radical therapeutic reforms of clergy training in his most controversial book, *Kleriker* (1989), he was, despite massive protests throughout Europe reminiscent of the Küng affair, stripped in 1991 of his license to teach Catholic theology and suspended in 1992 from his priestly duties. In the wake of a reunified Germany, Drewermann emerged as a cultural icon for a democratic and nondogmatic form of religion and has since been regarded in the public's eye as a "new Martin Luther" (*Time International*, August 24, 1992). Drewermann left the Roman Catholic Church on the day of his 65 birthday in June 2005.

The second aspect of Drewermann's work addresses the nature of religious symbolism and its relation to historical reality and truth claims. Historical criticism, comparative religious studies, psychoanalytic theory, and recent brain research provide insurmountable evidence that stories collected in sacred texts, for the most part, do not report objective "external" historical facts but rather poetic and narrative retellings of significant "internal" subjective experiences which, Drewermann, attempting to address the imageless Protestant vacuum created by the demythologization of the Bultmann school and dialectical theology, argues, are by no means less historical than physical events but rather more so because they transmit what a powerful experience meant to the people who experienced it or who were touched by it. The story of the virgin birth of Jesus, for instance, aims not to declare Jesus' mother Mary to be biologically a virgin but rather uses a motif resembling Egyptian mythology, where Pharaoh is declared as eternally being born of a virgin and son of God only from the day of his enthronement, to convey that the people who encountered Jesus experienced him as someone whose authority as a person was not born from humans but from God. As such, the symbol of the virgin birth became a democratic symbol expressing the belief that every person receives a place and right to exist in the world directly from God, thus relativizing all oppressive human authority, both internally and socioculturally. In the course of Christian history, however, this mythic symbol turned into the exact opposite when historicized and metaphysicized by Christian institutions as a "belief" to be accepted about the external historical state of Mary's sexuality and thus used to control the private lives of people.

While Drewermann's analysis focuses primarily on Christian symbols and dogmas, it always takes place within the comparative study of religions (Drewermann 2000c). Such study shows that the *content* of key symbols of Christianity, such as virgin birth, cross, resurrection, ascension into heaven, walking on water, or transfiguration is not unique to Christianity but is shared among the world's religions. The uniqueness of Christianity

must be sought not in the content of its symbols but in the *way* those symbols function(ed) to express the process of calming unique human anxiety through an encounter with the person of Jesus who, as evidenced by the signature phrase "Do not be afraid," portrayed God ultimately as the one who can be absolutely trusted and need not be feared. The Christian use of what Freud, Jung, and their varied followers recognized as universal images or archetypes of the psyche and what ethology terms "innate release mechanisms" is decisively therapeutic. The universality of psychic imagery, albeit in sociocultural variations, allows stories from the past to be read as personal stories in the present. Central to Drewermann's thought is that the message of Jesus aimed to heal religion itself from the ambivalent projections into the God image and from the violence so often done in the name of God intrapsychically, interpersonally, and between groups.

This leads to the third key aspect of Drewermann's work: his analysis of the violence of religion and of religious motivations involved in waging war. Following a scathing eco-theological critique of the exploitation of outer and inner nature due to the anthropocentrism of the Judeo-Christian world view (Drewermann 1981) and a radical critique of Christian ideas which inadvertently promote a culture of war (Drewermann 1982; 1991d), Drewermann emerged during the first Gulf War as the most outspoken German antiwar activist. He received the 2007 Erich Fromm Prize for his tireless efforts to fight war and anti-Semitism and to promote peace and social justice. He calls war a disease and sees it as an attempt to solve by material means conflicts that can only be solved by addressing the absolute fears around needs of recognition, existence, and shame that fuel wars and lead to compensatory cultural God-like claims to absolute moral superiority, truth, and power. In war, an abstraction from feelings of empathy takes place, and reason goes mad with fear while creating rationalizations for a supposed necessity to inflict violence in order to fight violence. In addition to the analysis of economic, historical, sociocultural, and political reasons for wars, an analysis of what is spiritually

at stake in violent conflicts is essential. Efforts at peace and social justice so often fail because they are guided by moralistic splitting of the world into absolute good and evil in which the “good” feel justified to use all means possible and thus inevitably come to perpetuate the cycle of violence by trying to solve it through further self-righteous violence. Jesus’ message of peace and Ghandi’s and Martin Luther King’s nonviolent calls for civil disobedience guide Drewermann’s own vision for an active and psychologically convincing form of conflict resolution (Drewermann 1996).

In a postmodern world leaving behind the early Christian councils’ Greco-Roman speculations about the divine cast within a type of thinking in terms of metaphysical being or substance as well as the Thomistic theological pseudo-rationalism, Drewermann argues in light of neurological, biological, and cosmological research that popular conceptions of the soul or spirit as a kind of substance or energy and of Christ as a being or substance ruling from above are no longer tenable (Drewermann 2006a, 2007). Similarly, tempting as it may be, God can no longer be thought of in natural philosophical terms of a principle of explanation for first causes nor for why the world is as it is. Modern sciences, as atheists like Dawkins or Dennett have argued convincingly, do not need the God hypothesis in order to explain anything in the universe. Religion, and specifically belief in God, does not *explain* the world, but rather emerged anthropologically and is needed existential-philosophically to *interpret* the world so that humans do not go mad in the face of the cruelty, indifference, and senseless suffering in nature (Beier 2010). Discussing the alternative approach of Buddhism on how to deal with suffering and nothingness, Drewermann argues based on neurological research on consciousness and self-awareness and on modern infant research conducted by Daniel Stern and others that the conception of the divine as a person is indispensable in a therapeutic form of religion. While Drewermann agrees with the analysis of existential philosophers and psychologists on the radical nature of anxiety, he argues that “ontological insecurity” (Laing) requires a genuinely religious answer in which

religious symbols become catalysts for a calming of existential anxiety in an unconditionally accepting encounter with an absolute person, called God in religions. This experience occurs through the interpersonal human experience of love and then extends to our encounter with the nonhuman world in the form of compassion. It need not necessarily involve God language to occur. Without an absolutely accepting person in the background of the world, all religious symbols remain open to ambivalent uses for purposes of oppression. The idea that God must be imagined as a person is not meant to make an objective statement that can be abstracted from personal, subjective experience. Applying the notion of therapeutic transference developed by Freud and his school (rather than Girard’s notion of mimesis), Drewermann holds that for humans any calming of personal anxiety at the deepest level inevitably occurs by means of the psychic language of the personal dimension. To humans, God becomes most personal in the form of a person. In this sense, the religious is always personal and the personal is always religious. It is religion’s function as a remedy for anxiety that requires humans to conceive of the absolute as an absolutely trustworthy person, God. Only in this context can the Cross, so often interpreted in sado-masochistic ways when conceived projectively as something God did to Jesus or as Jesus sacrificing himself to God for humans, become a symbol for working through human aggression by placing it where the cycle of violence can be broken: onto God who is conceived of as being able to suffer the aggression without feeding the cycle of retaliation and counterviolence. Though God, Drewermann argues with Kant, can never be proven to exist objectively as a person apart from subjective human experience of the divine but is in a way always bound to the projective mechanisms of the human mind and thus remains a postulate, the subjectivity of this experience does not exclude an objective reality corresponding to it, just as all of our experience is by definition subjective in the sense that we are the experiencing subject of it and yet can at the same time correspond to an objective reality beyond our senses. Religion only becomes mere projection in the sense of the

Feuerbachian critique when it is used by external religious or quasi-religious secular institutions to alienate humans from themselves rather than enabling them to truly unfold freely as unique persons in relation to each other. Experience of God, for Drewermann, is by definition poetic, and the attempt to explain the existence of God by objective means would be equal to confusing explanations about hormones with the ecstatic experience of love or explanations about syntax with the rapture experienced at the reading of a poem.

## Drives

Stefanie Teitelbaum

Faculty of NPAP (National Psychological Association for Psychoanalysis), IEA (Institute for Expressive Analysis), New York, NY, USA

## Introduction

Freud used the words *instinkt* (instinct) and *treib* (drive) seemingly without organized differentiation. Opposing forces or dualism characterized Freud's thoughts about instinct, in both the nature of the instinct itself and in the source of the force as being of the mind or the body. Freudian instinct differs from strictly biological instinct in the uniquely human consciousness to mentalize the pressure to respond to a sometimes consistent presence of an urge with or without identifiable stimulus. The vast variety of urges to act within the human species, sometimes deemed pathological, might also suggest forces not strictly rooted in the body.

Drive, as used in Freudian psychoanalysis, does not have a distinct role in religious/psychological literature. Religious texts referring to pressure to act generally speak of instinct or inclination, sometimes conceived as divinely implanted.

## Psychoanalysis

Freud conceived the instincts as amoral. The psychological forces taming, transforming, or renouncing the instinctual drives are (1) the death of the totem father, causing the internalization of the taboo against incest (Freud 1913/1962), and, more important, (2) the super ego. These forces of civilization might be viewed as more psychically determined drive within a dualistic framework as they are value-laden. Freud, however, considered the prohibition against incest to be phylogenetically determined, pre-dating the domestication of animals.

## Commentary

Kernberg (1992) summarized the differences of the terms: instinct is a biological force, and drive is a psychically determined force of human nature. The differences only exist in a schema wherein the mind and body are clearly separate. The instincts are proactive and reactive to the demands of the life and death of the body. The drives appear to take on a life of their own, related to the demands of psychical life and death (Kernberg 1992; LaPlanche and Pontalis 1973). The distinction between instinct and drive appears to be of interest to psychoanalytic theorists and, even in those circles, an arcane interest.

The concept of a frontier, an in-between state, is present throughout Freud's lifelong writings. He poetically positioned instinct as residing on the frontier between body and mind (Freud 1905). The great dualist struggled with his dualism, and the forces, on the frontier between mind and body, driving towards unity and destruction.

## Dualism

Hillary S. Webb  
Goddard College, Portsmouth, NH, USA

### Dualism Across the Domains

“Dualism” (from the Latin *dualis*, meaning “containing two”) refers to a philosophical system or set of beliefs in which existence is believed to consist of two equally real and essential substances (such as mind and matter) and/or categories (such as being and nonbeing, good and bad, subject and object). Dualism contrasts with *monism*, the theory that existence ultimately consists of only one thing or essence, and also with *pluralism*, the belief that existence is made up of many things or essences (Ajaya 1983; Gordon 2005).

Although the term can be applied to much earlier philosophical and religious traditions, “dualism” as an ontological designation was first used in 1700 by the philosopher Thomas Hyde as a means of describing religious systems that conceive of God and the Devil as coeternal (and therefore equal) principles. The term was later introduced into philosophical discourse by the German Idealist Christian Wolff as a way of categorizing philosophical systems that conceive of mind and matter as distinct and irreducible substances. Rene Descartes further separated mind and body within what came to be known as “Cartesian dualism.” After this, the term “dualism” as a philosophical concept became most frequently applied to issues surrounding the “mind-body problem” – a philosophical conundrum that considers how the seemingly distinct substances of the

immaterial mind and the material body causally interact (Gordon 2005; Stoyanov 2000).

While in Western philosophical dualism the fundamental debate centers on the primacy of mind versus body, when applied to the field of religious studies, “dualism” is most widely used in regard to belief systems that either conceive of two supreme and opposing principles such as “God” and “Devil” or those that create a sharp distinction between the “profane” (the world of day-to-day physical existence) and the “sacred” (an intangible, transcendent, and – in some cases – more “true” or “essential” reality). The Western world’s study of the human psyche has likewise created various splits or dualisms, including (but not limited to) the relationship between society and the individual, nature and nurture, and mind and body. In the seventeenth and eighteenth centuries, Wolff divided the study of the soul into “rational psychology,” which examined the human soul and argued for its immortality, and “empirical psychology,” which aimed to identify psychological principles on the basis of the soul’s worldly experiences. Later on came the division of psychological disorders into “organic” (biologically based) and “functional” (mental-emotional) pathologies, with the former orientation emphasizing the explanation, prediction, and control of behavior or cognition and with the latter focusing on the subjective experience of the individual as a means to understand and treat psychological distress (Teo 2007).

### A Preoccupation with Polarity

It has been argued (Levi-Strauss 1963; Maybury-Lewis 1989a; Needham 1973) that all cultures across time and space identify and make meaning of the world through “binary oppositions” – dyads of complementary or opposed elements such as male–female, good–evil, and spirit–flesh. Some (Levi-Strauss 1963; Maybury-Lewis 1979, 1989a, 1989b; Needham 1973) believe binary opposition to be the most fundamental category through which the human mind organizes itself and that the frequency with which this form of classification arises within and across cultures is

evidence that “bipartization,” or the impulse to conceive of the world as split into a duality, is hardwired into the human psyche. Given this “preoccupation with polarity” (Maybury-Lewis 1989a, p. 6), it has been suggested that much of human consciousness is devoted to trying to understand and mediate the relationship of the opposites.

The way in which a culture envisions the relationship between the polarities is one of the most significant and distinctive features in any ontological model. Within religious traditions exhibiting an *antithetical dualism*, one side of the pair is often seen as being responsible for the creation and preservation of the cosmos with its opposite being the “negative” or “evil” aspect that seeks to unmake creation. Stoyanov (2000) split religious systems of this type into several categories based upon the extent to which (and the ways in which) this opposition manifests. For example, he noted that within systems that exemplify an *absolute dualism*, the antithetical relationship of the opposites is, as the term implies, absolute, in that the opposing forces representing good and evil are believed to have originated from two independent, coeternal principles that always have been and always will be separate. Classic examples of *absolute dualism* are the “dualist monotheisms” of Zoroastrianism and Manichaeism, two early religious systems that made the antagonistic struggle between good and evil the fundamental principle of their religion. However despite both being forms of absolute dualism, Manichaeism and Zoroastrianism show significant differences in how this antithetical struggle is played out. For example, in Zoroastrianism, it is believed that the physical world, including the human body, is an expression of the positive aspects of the “good” principle. This belief is referred to as *cosmic dualism*. Manichaeism, on the other hand, as an example of *anti-cosmic dualism*, equates the profane world and its manifestations with the principle of evil (Stoyanov 2000).

In contrast, other systems exhibiting an *antithetical dualism* subscribe to a kind of *moderate dualism* in which one of the two opposites – typically the “evil” side of the equation – is

considered to be a secondary principle, one that has its origins in the primary and more supreme principle. Some of the classic Gnostic movements are included in the category. Despite these ontological differences, philosophies of *absolute dualism* and *moderate dualism* both share the fundamental belief that the aspect considered to be “negative” or “evil” should be rejected and/or destroyed. It has been noted (Ajaya 1983) that within this context, the human experience is perceived to be an unending struggle to distinguish that which is the “good,” “creative,” or “real” aspect and that which is “evil,” “destructive,” or “illusory.”

While a philosophical model based on an *anti-theoretical dualism* accentuates the struggle and antagonism between the opposites, other systems of thought perceive the polarities as being ultimately *complementary* in nature. Within a dualism of complementary terms, the underlying ontological belief is that everything has a counterpart without which it cannot exist. Philosophical and religious systems based upon forms of complementary dualism (e.g., Taoism and many indigenous, “shamanic” belief systems) maintain that existence is dependent upon the tension and balanced interchange between the polarities. Because they are interdependent and mutually supportive, resolutions or disturbances occurring in one side of the equation evoke a sympathetic response in the other. Therefore, if one side is destroyed or denied, the other will suffer to an equal degree (Hertz 1973; Maybury-Lewis 1979, 1989a; Needham 1973; Tuzin 1989; Watts 1969; Webb 2012).

While certainly acknowledging the tension created by the opposites, philosophical models based on a complementary dualism are marked by their dedication to maintaining an equilibrium and harmony between them. Maybury-Lewis (1989a) stated that, “[Complementary] dualistic theories insist that these antitheses do not tear the world apart, and humankind with it, because they are part of a cosmic scheme in which they are harmonized” (p. 14). Within these cultures, “complementarity” becomes the major organizing principle within all aspects of community life, from the social to the spiritual.

## Dualism in the Psyche

It has been noted (Jung 1953/1956; Myerhoff 1974; Tarnas 1991; Watts 1969; Webb 2012) that Western philosophical and religious systems have historically tended towards a dualism of antithetical terms, with a corresponding belief that the tension created by the polarities can be resolved only through an elimination of the undesirable aspect of the pair. Myerhoff (1974) reflected, “Unfortunately, we westerners have come to feel that enduring this sort of tension is not really necessary, but somehow it is possible to allow one pole to exist and prevail without its opposite. We see good without evil, pleasure without pain, God without the devil, and love without hate” (p. 102). Likewise, Watts (1969) noted that, “By and large Western culture is a celebration of the illusion that good may exist without evil, light without darkness, and pleasure without pain, and this is true of both its Christian and secular, technological phases” (p. 48).

The Western world’s devotion to what Jung (1953/1956) referred to as “neurotic one-sidedness” (p. 42) is evident in a certain intolerance of the complexity of the psyche, one that often results in a compulsion to eliminate all paradoxes and seeming contradictions of the human condition. A 2007 *Time* magazine article, entitled “What Makes Us Moral” gives an example of this. The article begins with the following sentiment:

“If the entire human species were a single individual that person would long ago have been declared mad. The insanity would not lie in the anger and darkness of the human mind – though it can be a black and raging place indeed. And certainly it wouldn’t lie in the transcendent goodness of that mind – one so sublime, we fold it into a larger ‘soul.’ The madness would lie instead in the fact that both of those qualities, the savage and the splendid, can exist in one creature, one person, often in one instant” (Kluger 2007, p. 54).

According to this article, it doesn’t matter which we choose – either the “splendid” or the “savage” – as long as we align ourselves thoroughly and completely with that one side without deviation. Only then can we be considered healthy and sane. While over the years there

have been a number of Western thinkers who have argued for the necessity of balancing the opposing forces within the psyche (Jung and Watts most notable among them), the dominant Western psychological perspective tends to be that the individual must choose between the opposites – either the splendid or the savage – and align oneself thoroughly and completely with it without deviation (See Webb 2012).

## Duende and Psychoanalysis

Claudia Bader  
Institute for Expressive Analysis, New York,  
NY, USA

Duende is a term used to describe artistry empowered by the awareness of death. It has

similarities to the idea of “soul,” in art and life, but although both share the sense of tragedy or pain moving the creative energies, duende is libidinally charged, having more fire and drama in it.

The term duende comes from popular Spanish culture, created from the phrase Duen de Casa – Master of the House. This refers to a poltergeist-like trickster figure that makes a general irritation of its self by hiding things, breaking china, and making noise. However, there was another usage of the term that comes from Andalusia, where great artists are said to have duende, inferring that they are in contact with this force. Great bullfighters, singers, and dancers are graced with this description. Duende becomes a personification of, and resonates to, daimons, muses, and/or demons; it is an energy that moves through the body and soul. It is described as a possession as much as a talent. In this guise, duende takes on a chthonic quality, pulling inspiration from the depths and bursting through the artist to the audience.

Awareness of death is an intrinsic aspect of duende. Destructive and creative energies are very close to each other when the duende is invoked. The whisper of death suffuses their art, and this awareness of it drives life. Thus, Manuel Torre, who was a great flamenco singer, can make the statement that “all that has black sounds has duende” (Torre, quoted by Lorca, p. 49, 1933). The thrill and terror of contact with death, the ultimate mystery and realm of the unknown, is what brings depth of expression and allows the performer and the audience to soar.

The person responsible for bringing the concept of duende out of Spain onto the international stage was the Spanish poet and playwright Federico Garcia Lorca (1898–1936).

A charismatic figure, Lorca was deeply involved in the intellectual and creative life of the time. He had close relationships with Bunuel and Dali and was an influence on Pablo Neruda. Lorca was obsessed with his death and would even stage mock funerals for himself with his friends.

The idea of duende as an artistic force was integral to his thinking from at least 1922 when he

gave a lecture, “Deep Song,” at a music festival for the musical genre called Cante Jondo – deep song.

His ideas about deep song became the foundation for his poetics.

The time in between 1922 and 1933, he was in New York writing “a Poet in New York”; listening to jazz, blues, and African-American spirituals; and studying English at Columbia.

In his contact with professional singers (cantaors) and dancers (bailaors) of Spanish music, Garcia Lorca came to appreciate the difference between a good and bad performer.

The difference was simple. . . he said that good performers have duende, and bad ones never, ever, achieve it. The good singers sing with their whole body, the sound moving from the chest, not the throat. Good dancers pull the energy up from the earth. These performers with duende have “black sounds.”

Black and its various symbolic variants are crucial for duende, and this relationship to the dark and its gifts and trials is crucial for psychoanalysis as well.

The source of the symbolism related to black is rooted in the fact that we are diurnal animals. We humans are most dependent upon our sense of sight. If we go back in time to our experience in nature before artificial light, night is the most dangerous time for us. We are at our most vulnerable in the night, for without light we cannot see. When we sleep, things go dark, and we are helpless at that time. We are unconscious and enter another reality. Additionally, the association of death with black comes naturally since in death we are unconscious permanently. As with all symbols, individual associations to black evolve dependent upon a combination of archetypal factors and a person’s individual psychic structure and experiences.

Duende’s relationship to death resonates with psychoanalytic concepts. Freud coined the term death instinct. He wrote about this in *Beyond the Pleasure Principle* (1920). The death instinct is more commonly called Thanatos.

Freud was always close to an organic orientation, and when he formulated the idea of the repetition compulsion and its stubborn adherence to early patterns, to NOT changing,

Freud came to the conclusion that the fundamental aim of all instincts is to revert to an earlier state, a regression.

He came to see a battle in the psyche based in biology; life, affiliated with libido, pitted against the drive to death and entropy, the death instinct. When Melanie Klein developed her ideas on the death instinct, these forces took on a different quality.

Melanie Klein was deeply influenced by the idea of the death instinct and saw it as an active, intense force in the psyche in contrast to Freud who saw it working in the background. In Klein's work with children, she observed intense destructive levels of aggression in their play that outbalanced the loving, joyous, positive libidinal aspects of play. She elaborated on the power of the death instinct by describing "envy," an early state in which aggression directed against the life of the subject is directed against anything that supports or is a source of life.

It is difficult to observe Thanatos in its pure form in reality, but art can create images where we might actually get some sense of what the pure form might look like. Mythological monsters and demons and crazed villains in movies and plays open us to the raw expression of the darkness.

A common thread in these villainous characters is their grandiosity and narcissism. They strive to annihilate all difference, because the only thing allowed to exist is themselves. Drenched in Klein's envy, they want to destroy life. This kind of character resonates to the myth of Saturn/Kronos, who, upon hearing a prophecy that one of his children would overthrow him, ate his children.

In a world that does not allow difference, there cannot be an other; without an other, there can be no relatedness and no object relations. When there is no relatedness, death can result. Spitz discussed this in relation to "hospitalism." He reported that infants did not thrive, and some died that were not cuddled, held, and related to, even if they were fed and changed.

The body is important in duende; Lorca quotes an unnamed virtuosic guitarist describing duende as climbing up from the soles of the feet. Resonating in the body, the singing comes from

the chest and belly, not from the throat. Duende's black sounds emerge from deep feelings. Mourning, rage, and love, the forces of destruction and creation, are closely connected. An artist with great duende contains and expresses these.

In psychoanalysis, appropriate mourning and grief are crucial in healing. Psychoanalytic work demands great presence in the face of extreme affect states. The analyst needs to create the container in the rhythm of time and contact in order to help negotiate and midwife real mourning.

Christopher Maurer describes four crucial elements identified as Lorca's vision of duende: irrationality, earthiness, a heightened awareness of death, and a connection to the diabolical.

In these four elements, more aspects of working psychoanalytically come up:

1. *Irrationality*: working with feelings and impulses.
2. *Earthiness*: as a recognition of mortality, that we are in a body that dies; then, the channel of expression through the body. The cantaor (singer) with duende sang from his chest and not his throat.
3. *The awareness of death*: the death instinct and the contrast of the drive for life. The importance of mourning in the process of healing.
4. *Connection to the diabolical*: allows for aggression, sadism, all the Thanatos-driven feeling states.

## Duende and Projective Identification

Another aspect of duende resonates with the psychoanalytic concept of projective identification, the condition where the patient, unable to tolerate their own feelings, cuts them off and projects them into the psychoanalyst. In this case, the psychoanalyst feels the feelings of the patient.

Duende, in its guise as a daimon/muse/demon, is described as seizing both the performer and the audience. It is a right brain experience, beyond intellect. This seizing is an excellent description of what projective identification feels like. However, in this case, the resonant effect is a result of the presence of duende, and the performer is not cut off from feeling.

## Duende and the Alchemical Mercury Archetype

Duende can be understood as an aspect of a larger archetype, mercury. As in all alchemical imagery, the symbols start with the actual chemical substances and processes used in alchemy. Mercury has a special place in these, for mercury is described as both the alchemical process and the goal of the process. Both duende and mercury are paradoxical: a “who” and a “what” destruction and creation.

In descriptions of mercury in alchemical texts, mercury is seen as a combination of substances, having many different qualities which all refer back to the properties of quicksilver. This is called “common mercury.” Chemically speaking, this comes from the fact that quicksilver served as a universal solvent.

However, mercury is often called “Our Mercury.” In this manifestation, mercury gains a capital “M” and takes on a different character. “Our Mercury” is a substance, source, and process all at once. “Our Mercury” is a substance, the source, and a process all at once. It is transformation its self, intrinsic, coming from the matter/substance that is undergoing the change. In the transformation, it devours its self and then recreates its self. The name, “Mercury,” is given to all stages of this death/rebirth cycle.

The juxtaposition of a destructive and creative process fits duende. Duende is referred to as both a presence, the duende, in its guise as daimon/muse/demonic earth spirit, and a process, what is being expressed emotionally and spiritually in performance or in creative process. This slippery quality that encompasses both process and presence is also a way of conceptualizing psychoanalysis. As psychoanalysts hold the space for patients with their therapeutic presence, they also facilitate process occurring. So there is both stillness and movement in the same space. This combination of process and presence resonates with themes from the alchemical mercury archetype as well as duende.

## Dunbar, Helen Flanders

Curtis W. Hart  
Weill Cornell Medical College, New York,  
NY, USA

## Dunbar's Life

Helen Flanders Dunbar was a medieval scholar, a seminary graduate, and a practicing psychiatrist

with an abiding interest in psychosomatic medicine. She was born into a well-to-do family in Chicago in May of 1902 and suffered from a variety of illnesses of unclear origin as a child. She was raised primarily by three strong women who invested a great deal in her. They were her mother, her aunt, and her grandmother, all of whom anticipated great accomplishments in her future. She graduated from the Brearley School in New York and went on to attend college at Bryn Mawr where she majored in both mathematics and psychology with an interest in psychology of religion in particular. Dunbar then undertook graduate studies in Comparative Literature at Columbia and attended Union Theological Seminary at the same time. At Union, she met Anton Boisen who engaged her interests in the clinical training program for clergy and seminarians that he was starting at Worcester (Massachusetts) State Hospital. Dunbar went to Worcester in the summer of 1925 where she worked tirelessly in the department of social work studying symbols and symbolization in schizophrenia. Her interest in the clinical training she received with Boisen and others at Worcester combined with her curious and idealistic nature led her to become the first Medical Director of what was then called the Council for Clinical Training for clergy, even as she went on to complete her medical studies at Yale.

A practicing Episcopalian, Dunbar retained a connection to both the church and the medical establishment. As a physician, she showed herself to be an adept institutional politician and an outstanding theorist in the area of psychosomatics. She had a central role in and became the founding editor of the highly esteemed professional medical journal *Psychosomatic Medicine*. She completed a major study *Emotions and Bodily Changes* (1935) that went through several subsequent editions. She held several prestigious positions in the dialogue between religion and medicine and maintained an ongoing interest in furthering the formal, scientific study of the relationship between faith and health. Never one to avoid controversy, Dunbar became involved in confrontations and controversies with male colleagues in both medicine and religion over issues

of gender, power, and authority as much as they had to do with theory and professional practice. Dunbar was not actively involved with the clinical pastoral movement and Anton Boisen in particular much after the late 1930s, but her commitment became rekindled just prior to her untimely death in 1959 from drowning in a swimming pool following a heart attack at her home in South Kent, Connecticut, in 1959.

### Dunbar's Legacy

Dunbar's legacy is complex in both medicine and religion. Her writing displays an erudite and sophisticated appreciation for the interplay of mind and body and psyche and soma. She was greatly interested and expended considerable effort investigating the role of symbols in explaining and understanding illness. Her own study of medieval literature, and Dante in particular, informed her therapeutic approach. The book she wrote arising out of her doctoral thesis at Columbia, *Symbolization in Medieval Thought and Its Consummation in the Divine Comedy*, was first published in 1927 and was republished at the time of her death in 1959 and remains a classic in its field.

It was out of her thinking and writing in theology and medieval studies that she came to understand the depth and power of symbols as they relate to medical and psychiatric symptoms. Symbols potentially provide structures for meaning about the relation of body, mind, and spirit. For Dunbar, symbols call attention to the whole that is always greater than the sum of its parts – a person with a family and a history or life narrative that develops or displays signs of dysfunction at a specific time in life and is under the influence of both inherent predispositions and immediate life stressors. Dunbar's views in these matters reflect a thoroughgoing sense of organic and holistic thinking, where for her the parts or dimensions of a person are not separate or discreet entities but interdependent and dynamically related components affecting one another. Her views on these matters anticipated by a generation in medical

education and practice what is known as the “biopsychosocial model.” Her understanding of healing in medicine and psychiatry was informed by what is often thought of as the property of a medieval world view known as the “organic functional ideal.” Dunbar’s views are at the same time a reflection of the powerful influences upon her of both John Dewey and Alfred North Whitehead. Dunbar was a challenge to the medical world as well as to those she encountered in the ministry and the religious establishment both because of her gender and for her highly original perspectives. She could persuade, charm, and confront others. She was known to be a gifted and much sought-after therapist. Her ideas were informed as much by her theological and medieval and literary studies as by her medical and scientific endeavors. Helen Flanders Dunbar thus remains a prophetic and intriguing figure in the dialogue between medicine and religion.

## Durga

Laura Amazzone  
Yoga Philosophy Program, Loyola Marymount  
University, Los Angeles, CA, USA

Worshiped in both orthodox Hindu and Tantric folds, Goddess Durga is a goddess of strength,

courage, and justice. She is the embodiment of Shakti, the creative dynamic energy or power that animates and pervades existence. While her myth, qualities and iconography do not radically change within the various sects in which we find her in South Asia, her Shakta Tantric expression as a Goddess of Paradox and Invincible Power and as the Remover of Fear and Difficulty can teach us much about navigating the complex terrain of emotions that are triggered through every encounter and experience.

Tantra is a living philosophy that has ancient roots in earth-based, shamanic culture. While there are over 64 schools of Tantra, we can look to tantric tenets; specifically, in the female-centered Shakta tradition (circa 1500 BCE–700 CE) that challenge the status quo, question authority, and teach us to draw from an internal sense of spiritual power in order to face and transform suffering. Ultimately, Shakta Tantrism is a path of empowerment and spiritual liberation. Tantric rituals and practices teach us to consciously engage with the paradoxical nature of life. Tantra invites us to go beyond dualistic black or white thinking and to take a tantric both/and approach to life. The mythology, qualities, and iconography of tantric deities like Durga model a more centered and composed approach to life’s difficulties. Durga’s seemingly contradictory nature is paradoxical: she is compassionate and wrathful, nurturing and fierce, independent and relational, and can serve as a useful spiritual and psychological guide.

### Durga’s Mythology and Qualities

Durga’s fifth century myth from the *Devi Mahatmya* can be read as an allegory for the suffering and afflictions in our minds. This epic narrative describes Durga engaging in a series of battles with *asuras* or demons that are destroying the equilibrium of the earth. From a psychological perspective, these “demons” are actually afflicted ego constructs: ignorance, greed, rage, fear, and doubt. Durga represents the invincible pillar of strength and divine wisdom within. Each battle between Durga and

**Durga, Fig. 1** Indian Goddess Durga, with ten arms riding her lion (Courtesy of the author)

various demons demonstrates how the proliferation of our negative thoughts can take over and govern our behavior in adverse ways. Despite the intensity of the conflict, we witness how Durga's strongest quality is her composure. She does not lose her temper, she does not expend extra energy, nor does she run away in fear. Instead her approach is measured and contained. Durga stays centered amidst the tumultuous battles. She displays the confidence and courage needed when approaching any problem that arises. Working with Durga energies teaches us to practice nonattachment and nonjudgement. Rather than trying to control, resist, or fight difficult or unpleasant situations and people, Durga and her myth remind us to release our expectations about how things should be or look. The annihilation of the demons is actually a metaphor for the slaying of the ego and a return to our divine Durga nature. Even when we are faced with the more difficult

life experiences, for example, loss, death, or illness, there is always an opportunity for spiritual and emotional growth and transformation. Durga's dynamic qualities and victorious defeat of the demons in the myth remind us to remain open to creative solutions (Fig. 1).

### Iconography

Durga rides on a tiger or lion wielding various weapons and tools in her 8–18 arms. She appears calm, yet ready to take on any and every experience. One of the meanings of the name Durga is “fortress.” Durga teaches us about psychological boundaries – who to let in and when; who or what to keep out. Sometimes we need to build a “fortress” around our self for protection, to focus, or to create peace. Other times this fortress can become a prison – especially when we

are withdrawing from life or our relationships out of fear of intimacy, failure, or whatever in our life and psyche is causing us to put up walls. Knowing when our own “fortress” is needed and when we are creating a prison and self-imposed limitations is one of Durga’s deepest teachings. Discernment goes hand in hand with her fiercely compassionate nature. Meditation and visualization practices are integral to Shakta Tantric practices. The iconography of deities serves as a guide for practitioners when working with psychological issues and emotional challenges. Durga’s arms hold different weapons and tools such as the sword, bell, spear, bow and arrow, club, trident, noose, and lotus. These can be understood as liberating symbols that help us transform and release negative emotional and mental afflictions.

Durga carries a sword, symbolic of severing our attachments, especially to unhealthy relationships, behaviors, and life situations. Often described as a symbol of discernment or discriminating wisdom, the sword can help us to be discerning in our relationships, to have better boundaries, to know when to say no and when we are being too rigid and inflexible. Durga’s bell is a tool to dispel negative energies. The resonance of the bell’s tones clear the air of negativity and summons peaceful and clarifying energies. Durga’s spear reminds us to pierce the heart of any matter – especially when it comes to getting clear on what our heart’s true desires are. Her bow and arrow are symbolic of focusing our minds, directing our will, and summoning the confidence to hit the mark of whatever we set our intention on. Her club encourages us to beat a new path, to tread where no one else has. Her trident points to the benefits of sharpening the mind so that we can be clear and direct about our many choices and decisions. The three prongs remind us of the essence of Shakta Tantra to look for opportunities to create synergy and integration rather than opposition and separation. Her noose helps us to reel in that which is needed along our journey. Her lotus is a quintessential tantric symbol along this paradoxical path of life. The roots grow out of the mud and upward through murky water till the lotus blossom pushes

through the water and rests peacefully on the surface. Despite our own and others’ ignorance symbolized by the muddy water, there is a force within us that will always propel us toward growth and liberation of heart and consciousness.

Durga is a Goddess of spiritual authority, deep embodied wisdom, and invincible power. Engaging in meditations, ritual practices, and studying the Shakta Tantra teachings around this Goddess allows us to work with her mythology, iconography, and qualities in order to deepen our relationship with ourselves and to live a more peaceful and balanced life.

## Dying and Rising Gods

Lee W. Bailey

Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

An ancient text says, as James Frazer worded it, “Heracles on his journey to Libya had been slain by Typhon and brought to life again by Iolaus, who held a quail under his nose: the dead god snuffed at the bird and revived” (Frazer 1922: section 224).

This is a short version of the many accounts of gods and semi-gods who were said to have died and been resurrected, well documented in the eastern Mediterranean region. This one is associated with the migration of quails that descend in hordes on Palestine/Israel in spring to breed.

### James Frazer

The classicist James Frazer (Cambridge University), in his 1890–1915 encyclopedic *The Golden Bough*, collected a mass of reports of ancient authors and nineteenth-century travelers about archaic rituals, myths, and traditions. It is a classic compendium of fascinating material, highlighting the dying and rising god theme, but he organized it according to lax, speculative nineteenth-century standards.

Frazer’s overall thesis was that archaic magic gave way to religion, which has now given way to science. This theme was soon proven wrong when twentieth-century religion continued to flourish alongside science. He also practiced the risky speculation of armchair scholars, by hypothesizing grand organizing themes without adequate study of the details of each culture (he traveled only to Italy and Greece). This conflict between those exploring large universalist themes and those restricting research to culturally unique specifics has continued and is active in the discussion of the “Dying and Rising Gods,” which was the most controversial schema that Frazer proposed.

Frazer reviewed the ancient texts and recent studies of eastern Mediterranean gods and

demigods such as Tammuz, Adonis, Dido, Hercules, Melquarth, Attis, Marsyas, Hyacinth, Osiris, Dionysus, Demeter, and Persephone. He interpreted their deaths and resurrections primarily as primitive magic carried over into religions of deities, having the purpose of assuring the fertility of the earth’s reproductive systems. Not understanding the natural processes of growth, he proposed, these ancients believed that they had to magically help fertility happen by imitating the seasonal process, thereby facilitating it. So the death (or descent into the underworld) of a god or goddess was symbolized in part by a ritual of planting seeds, and the resurrection was an image of plants sprouting and animals being born.

Many variations developed, including bloody sacrifices, such as the initiates into the cult of Cybele imitating her beloved Attis by castrating themselves and throwing their blood (life fluid) and testicles onto a statue of the goddess, apparently to assure her impregnation and subsequent fertility in the plant and animal world. Attis was said to be born of the virgin Nana, and initiates were said to be baptized with the blood of a bull (the *taurobolium*) (Frazer 1922, pp. 403–413). Frazer interpreted this all as promoting fertility among hungry people groping with agricultural practices in a world they saw as filled with spirits. The ancient high death rate may have also been in the background. Women were reported to grieve the death of Adonis, plant gardens of Adonis, and celebrate when the seeds sent up shoots (Frazer 1922, pp. 376–403). He notes an Egyptian inscription that shows the dead Osiris lying prostrate, rising up and standing with Isis (Frazer 1922, p. 436; drawings in Mettinger 2001, pp. 171–174). He also argues that in addition to vegetation magic (naturist), some resurrections were intended to be social, assuring the continuation of the life force of the king (euhemerist), and that some myths (e.g., Osiris) were intended to assure eternal life.

Now all this is fascinating, but Frazer has been accused of excessive speculation, especially in the category of the Dying and Rising Gods as symbols of vegetative growth. Several scholars have rejected his broad universalist category and stressed the particular differences among the

**Dying and Rising Gods, Fig. 1** Osiris rising from his bed in a floating position. His wife Isis standing on the left (From the Osiris temple at Dendara; see Mettinger (2001, p. 173) (Published originally in Mariette, A. (1870). *Denderon*. Vol. 4. Paris)

accounts of the gods, semi-gods, or humans and textual difficulties, although some scholars support the Dying and Rising Gods theme (Mettinger 2001, p. 215; Fig. 1).

### Jonathan Z. Smith

The critical particularist reaction by Jonathan Z. Smith (University of Chicago) in 1987 (2005, 2nd ed.), in Eliade's *Encyclopedia of Religion*, swept aside this Dying and Rising Gods typology as "largely a misnomer based on imaginative reconstructions and exceeding late or highly ambiguous texts" (Smith 2005, p. 2535). Smith holds the data to strict standards of empirical historical research and finds it lacking. He argues that some of these gods or semi-gods are said to disappear, not die. His typology is that some deities return but have not died and that other gods died but do not return. His thesis is that "There is no unambiguous instance in the history of religions of a dying and rising deity" (Smith 2005, p. 2535).

In one text about the Syrian/ Babylonian/ Greek god/ hero Adonis, for example, in Ovid's *Metamorphoses*, Adonis is killed by a boar, but does not rise from death [except as the anemone flower – Book 10: line 737]. Apollodorus' *Library* (III. xiv. 4) describes Adonis' alternation

between the upperworld and the underworld, but, Smith interprets, this offers no explicit suggestion of death and rebirth (Smith 2005, pp. 2535–2536). Smith (like some Christians) suggests that late post-Christian myths of Dying and Rising Gods were likely influenced by Jesus' resurrection. Attis, for example, in a late text, is said to be resurrected, but Smith says he is not here a dying and rising deity, nor is he a deity at all, but a human (Smith 2005, p. 2536). Other myths of resurrection, Smith argues, fail to fit his strict category, such as Baal and Marduk. He says that the text so-called *Death and Resurrection of Bel-Marduk* is most likely an Assyrian political parody (Smith 2005, p. 2537). Osiris, he argues, cannot be said to be risen, "in the sense required by the dying and rising pattern," since his resurrection after dismemberment sent him to be the Lord of the underworld land of the dead, imparting a new permanent life to the deceased (Smith 2005, p. 2538). Thus, he defines resurrection as literally returning to mortal earthly life, excluding continuation as plants or in an immortal state, and rejects the motif of going to the underworld and returning as symbolic of death and resurrection.

Smith is right in pointing out many discontinuities among the supposedly dying and rising gods. The vegetation gods, such as Adonis, differ from the royal kingship gods and the gods of

immortality after life, such as Osiris, who combines all three types. Smith's particular readings are rooted in his empirical hermeneutic and logically astute analyses, inspired by empiricism's distaste for speculation. But Smith's readings are selectively speculative and too literalist for such symbolic literature. This contrasts with a symbolic, more phenomenological hermeneutic, which would read important images differently. For example, the underworld is clearly the ancient abode of the dead, and Adonis is relegated by Zeus to spend half his year there with Persephone (goddess of death) and half above ground with Aphrodite (goddess of love) (Apollodorus III, xiv, 4). This seems clearly to symbolize a dying and rising god able to appear on earth, yet partake in immortal forces that overcome ordinary death (*athanatoi*), thus being able to be resurrected, although perhaps not in a literal earthly body.

Smith focuses on the male dying and rising gods and minimizes the importance of the goddesses. For example, an Inanna text that clearly states that *she* is a dying and rising goddess: "My father. . . He gave me descent into the underworld. He gave me ascent from the underworld" (Wolkstein and Kramer 1983, p. 16). Inanna/Ishtar is clearly the dying and rising goddess (c.f. Persephone) in this Sumerian/Akkadian tradition, and seeking evidence primarily among the male figures distracts from the feminine traditions. While she descended into the underworld, life above stopped ("Since Ishtar has gone down to the Land of no Return, The bull springs not upon the cow, the ass impregnates no the jenny. . ." lines 6–7), and when she returned, it began again with resurrection ("May the dead rise and smell the incense" last line, Pritchard 1958, pp. 80–85).

Smith seems loathe to accept the idea that return from the underworld is a meaningful symbol of rising from the dead. But in ancient myth, the underworld is commonly the abode of the dead, and rising from it commonly symbolizes return to life on earth or the place of immortality. "Rising" from death need not mean an empirical return to normal bodily life but could easily mean a more poetic, mystical passage of the spirit of the ancestors into the upperworld, which was a common theme in ancient Egyptian and many

other religions. Smith focuses on Ishtar's lover Tammuz and, with a reading claiming a mistranslation, says that "in the Akkadian version, Tammuz is dead and remains so" (Smith 2005, p. 2539). Yet the complete reference at the end of the Sumerian and Akkadian texts gives a different picture. When Ishtar returns to the upperworld from the land of the dead, she says:

As for Tammuz, the lover of her youth,  
Wash him with pure water, anoint him with sweet oil;  
Clothe him with a red garment, let him *play* on a flute of lapis,  
Let courtesans *turn* [his] mood. . .  
On the day when Tammuz comes up to me,  
When with him the lapis flute (and) the carmelian ring come up to me,  
When with him the wailing men and the wailing women come up to me,  
May the dead rise and smell the incense (Pritchard 1958, p. 85).

On the surface, Ishtar/Inanna's successful battle with Erishkigal, Queen of the Dead, and return to the upperworld with her deceased lover Tammuz/Dumuzi is the symbolic cause of the conquest of death resulting in resurrection. To focus on the death of Tammuz, saying that here he is only being "treated as a corpse," and to highlight the ritual wailing about his loss is to ignore this clear reference to his subsequent return to life, as in the reawakening the erotic instinct of reproduction. ("Let courtesans turn his mood.") Smith simply refuses to read numerous symbols of resurrection as meaningful. To privilege an earlier or later text over another version does not necessarily grant it more authority. Nor does it make sense to claim that Dumuzi/Tammuz cannot return to life, without sending a replacement to the land of the dead, refuting the deity's rising to life for half the year; it simply denies the importance of the "rising" in the life-half of the cycle of the deity's tradition (Smith 2005, p. 3190).

Smith's readings of the Dying and Rising Gods texts is a useful reexamination, but finally a one-sided, narrowly speculative, overly rationalistic hermeneutic, curiously suppressing the symbolic and poetic sensibility basic to religions. "Rising" may be read as a poetic expression of

some form of overcoming death, not just the literal return to a human body. The return of a god from the land of the dead to a spiritual realm associated with the resurrection of the human dead need not be discarded as irrelevant in contrast to a demand that the definition of a rising god includes returning to an empirical human body on earth. Smith does this with Osiris, who returns from death to become not a human, but the Lord of immortal souls, with the repeated ritual formula clearly indicating resurrection: “Rise up, you have not died” (Smith 2005, p. 2538).

### Tryggve Mettinger

A recent study by the Swedish Hebrew Bible scholar Tryggve Mettinger (University of Lund), *The Riddle of Resurrection: Dying and Rising Gods in the Middle East* (2001), does not accept Smith’s conclusions. In a careful textual and linguistic analysis, he accepts more images showing the validity of a variety of dying and rising gods. He does not want to hypostatize a specific type of deity but stresses the different types of gods with similar patterns (Mettinger, p. 218). He concludes, for example, as pictured in the Egyptian Dendara Temple of Osiris inscriptions, that Osiris “both died and rose . . . he rose to continued life in the Netherworld. . .” (Mettinger 2001, p. 175). In response to the idea that some ancient texts may have been read through a Christian lens as implying resurrection, he reminds us that several gods are said to die and return long before the Christian era: Dumuzi, Baal, Melquarth, Adonis, and Osiris.

### Christianity

The major question whether early Christians borrowed the theme of the dying and rising god in interpreting their experiences of Jesus is obviously the critical issue. Frazer puts the question in his boldly speculative way:

When we reflect how often the Church has skillfully contrived to plant the seeds of the new faith on the old stock of paganism, we may

surmise that the Easter celebration of the dead and risen Christ was grafted upon a similar celebration of the dead and risen Adonis. . . (Frazer 1922: section 217).

Now it is true that Christianity, like many other religions, did borrow many themes from other religions, such as baptism and virgin birth. But many religions commonly borrow themes from earlier faiths. The Hebrew term for “my Lord,” *Adonai*, is very similar to the name of the ancient Phoenician/ Syrian/ Greek divinity, Adonis, having the same linguistic root. Mettinger says that dying and rising deities were well known in Israel in New Testament times. Adonis was known in the Hebrew Bible to be “beloved by women” (Bible, Daniel 11:37). The earlier resurrection of Melquarth-Heracles was celebrated in Tyre (where Jesus visited – Bible, Mark 7:24–30).

But looking at particulars, there are some differences with Jesus. The earlier figures were legendary ancient divinities, whereas Jesus was a living human. For the disciples and Paul, Jesus’ resurrection was a one-time historical event, not an annual, mythic ritual tied to fertility or kingship. And Jesus was more an ethical prophet than the ancient vegetation or royalty deities. There is no evidence of the ancient dying and rising gods suffering to forgive sins, as was said of Jesus. There also is no specific evidence that Jesus’ resurrection account drew on ancient traditions (Mettinger, p. 221). Do such particulars negate the overlapping cross-cultural themes?

### Symbolism and Depth Psychology

Psychologically, resurrection is highly symbolic. It incorporates themes needed by many to deal with the terrors of death, as Carl Jung says, describing the [divine] hero who conquers death and brings back the promise of eternal life. Like Osiris, he/she psychologically becomes the “greater personality in every individual (like the Johannine Christ), viz. His *teleios anthropos*, the complete (or perfect) man, the self” (Jung, *CW* 18: para. 1567). In Jesus’ time,

the ancient gods had lost their power to the superficial, concretized state religion of Rome that divinized the Caesar for political reasons. A similar situation exists today, Jung says. The authority of traditional religions has been weakened by empirical science and power politics, and there is a need for a spiritual counterbalance to awaken the divine self in each person, a force that takes the soul beyond the vicissitudes of the life-death struggles of time and space. The Dying and Rising Gods theme must be read with depth psychology's poetic eye.

To deny the significance of this theme is to mistakenly restrict religious interpretation to the secular, rationalistic, calculating, logic-chopping hermeneutic. To affirm its poetic, symbolic, psychological significance is to recall the ancient assumption that dynamic infinity transcends worldly existence and can overcome earthly limits. We could also expand the dying and rising theme to embrace the "one deep river, many new springs" image of old religions as containers of transcendence that contain valuable archetypal themes and successful new "spiritualities" that rise with renewing archetypal themes, now blended globally with new relevance for a new era. We are seeing this with the expanding Western embrace of meditative Buddhism, the feminist and goddess movements, and the newly emerging ecological spirituality.

## East Asian Pastoral Counseling

Siroj Sorajjakool  
School of Religion, Loma Linda University,  
Loma Linda, CA, USA

East Asia is one of the most populated regions in the world with 1.5 billion people, approximately 133 people per square kilometer or 22 % of all the people in the world. It has a history that reaches back thousands of years containing narratives of people surviving trauma after trauma drawing on available resources from rich cultural and religious heritages such as Taoism, Buddhism, Confucianism, and Ancestor Worship. While there are multiple worldviews that guide social relations, most have their roots in Chinese traditions. East Asia has also witnessed a drastic

economic growth and permeating force of Western culture and ideology that changes family structure, social patterns, and the way of living. It is within this context that pastoral counseling in East Asia has to negotiate and find its place among the complexity of psychosocial, religious, philosophical, economic, and political world of East Asia.

## China

Prior to the People's Revolution in China, Western psychotherapy, particularly psychoanalysis, had already entered the world of the Chinese people through the work of German psychologists. With time, through academic institutions, other therapeutic theories such as cognitive/behavioral, humanistic, and existential psychotherapies became more prominent in China. While these theories were present, the growth of counseling did not start until around 2002–2003. Like many countries in the region, China went through a major transitional period relating to economic growth, stress of unemployment, migration, etc. China realized the enormous negative impact these stressors had on their society, and hence, the government initiated a very basic training program in mental health with different levels of certifications. It was an attempt at mitigating mental health issues. Christians were not immune to this epidemic of social stresses especially in view of the tremendous Christian growth in the country. It was around this period as

well that the church began to recognize the importance of addressing the issue of mental health among its members. Because most Christians sought professional help from Christians with clinical skill, the need for professional training in pastoral counseling became immediate. It was around this period that Professor Xuefu Wang, after graduating from Andover-Newton Theological Seminary in the field of pastoral counseling, returned to China and upon an invitation from Professor K. H. Ting, who at the time served as president of Nanjing Theological Seminary, taught pastoral care and counseling and psychology and religion. In 2002 Professor Wang initiated a psychotherapy institute called Zhi Mian Institute of Psychotherapy. This period could be named the official beginning of the profession of pastoral counseling in China. Around this same period Professor Wang became acquainted with Professor Alvin Dueck of Fuller Theological Seminary. Through numerous trips and support from Professor Dueck, many trainings sessions were conducted for the benefits of pastors and seminary professors including professors in secular universities. These visits of Professor Dueck helped to strengthen the work of Zhi Mian Institute of Psychotherapy.

After years of working with Chinese people dealing with psychological issues, Professor Wang came to the realization that psychotherapy, for it to be effective among Chinese people, needed to be baptized into Chinese culture and as an outcome came the concept of Zhi Mian. The need is to make use of local concepts and resources while maintaining original sources such as existential psychotherapy. Zhi Mian is a dialogue between local resources such as the work of controversial contemporary Chinese philosopher Lu Xun, Chinese medicine, Chinese folk stories, and other philosophers such as Lao Tzu and Chuang Tzu and at the same time the work of Frankl, May, Yalom, Tillich, Bugental, Schneider, Nietzsche, Heidegger, and Kierkegaard. Zhi Mian aims at helping people find authenticity by raising awareness of the self and learning to confront reality. It helps clients to find courage to face life as it comes and generate a sense of meaning for themselves.

Zhi Mian Institute of Psychotherapy has offered training to thousands of Christians and non-Christians in China through a designed curriculum. The curriculum is called the Extended Counseling Program with curriculum addressing topics such as introduction to counseling, developmental psychology, abnormal psychology, techniques for interviews, hotline counseling, group counseling, parenting, social adaptation, indigenous adaptation to Chinese psychological context, and counseling practicum.

Currently there are many Christian counseling centers in China that offer good psychotherapy and provide some form of clinical training. Many of these counselors are trained overseas such as the USA, Hong Kong, or Singapore. Most seminaries offer a course in pastoral counseling, while some designed a curriculum for pastoral counseling. However, there has not been a formalized way to provide clinical training for students. Some pastors seek training from the government's basic training program. There is no formalized training in pastoral counseling in China at this point although the Chinese Christian Counseling Club is working on forming a network of pastoral counselors. The Zhi Mian Institute of Psychotherapy has also initiated an Association of Chinese Pastoral Counselors as a place of conversation and dissemination of information relating to the field of pastoral counseling.

## Hong Kong

Like many countries in the region, Hong Kong experienced rapid growth economically, and this rapid change has altered traditional practices, culture, lifestyle, and ways of living thus increasing pressure for performance and restructuring relationship impacting mental status of the people of Hong Kong. Unlike the development of the discipline in Mainland China, the training in the field of pastoral counseling started much earlier in Hong Kong. In the early 1970s David McCormick, recognizing the growing prevalence of mental health issue in Hong Kong and the need to educate young pastors to be more informed in

order to provide better care, started teaching pastoral care and counseling. In 1987 after receiving further training, he started supervision for clinical training in the hospital setting offering CPE to chaplains in training. Since then the field of pastoral counseling has expanded with many trained professionals and academia in the field both from oversea and those receiving training in local universities and seminaries. Professor Simon Shui-man Kwan who is also a member of American Association of Pastoral Counselors, has been teaching pastoral counseling and practical theology at Chung Chi College, Chinese University of Hong Kong from the late 1990s with areas of research on topics dealing with postcolonial theology and hope-based approach to pastoral counseling. There are many seminaries teaching undergraduate and graduate degrees in pastoral counseling such as Bethel seminary, China Graduate School, Hong Kong Baptist Theological Seminary, and Alliance Seminary. There are seminaries that provide both academic and clinical training, while others offer academic program only. There is no accrediting body in Hong Kong in the field of pastoral counseling that articulates standard of practices and stipulates requirements and hence a variety of requirements in the practice of pastoral counseling with different level of intensity in training both academic and clinical are present. There are many counseling centers with Christian counselors practicing in these centers.

## Taiwan

Although the field of counseling is still in its early stage in Taiwan with not much restriction in terms of the requirements for practicing pastoral counseling, the training itself started in the 1970s with a missionary by the name Dr. Ted Cole who taught a course in pastoral counseling in Tainan while he was working in that region. His objective was to offer pastoral counseling skills to pastors. After his return to the USA, nothing much was happening relating to the field of pastoral counseling until Dr. Tai Chun-nan returned from the USA in the 1990s

after receiving extensive training in the field. Dr. Tai started teaching at Tainan Theological College and Seminary and soon after initiated a master degree in pastoral counseling under the umbrella of Asia Graduate School of Theology. In 1999 he established the Methodist Graduate School of Theology and served as its chancellor. The Methodist Graduate School of Theology offers master degree as well as a Th.D. in pastoral counseling. Core courses consist of courses such as basic counseling skills, basic counseling psychology, family cycle, developmental psychology, family pathology, research method, psychological assessment, counseling ethics, biblical counseling, premarital counseling, New Testament and Old Testament, juvenal counseling, spiritual formation, crisis counseling, integration between theology and psychology, psychopharmacology, grief counseling, or hospice counseling. In order to gain more recognition for the field of pastoral counseling, the Graduate School sought accreditation with Asia Theological Association. In 2004 Dr. Tai formed the Taiwan Association of Pastoral Counselors that was recognized by the Department of Internal Affairs. Hence, an accreditation with a recognized accrediting body was essential in moving the field of pastoral counseling forward.

The objectives of the association are to provide certification for those wishing to practice pastoral counseling and to provide training including clinical supervision. A few years later Dr. Eileen Yulin Lin, a licensed orthodontist who received a doctorate (Th.D.) in pastoral counseling from Methodist Graduate School of Theology, became chairperson of Taiwan Association of Pastoral Counselors.

There are three levels of membership: associate member, member, and pastoral counselor. To be a certified pastoral counselor requires a masters or a doctoral degree in pastoral counseling, passing an examination designed by the association, accumulating 150 client hours and pass and a case presentation. The process of certification was initiated in 2009. Currently there are 200 members with approximately 20–30 pastoral counselors. Although the association is encouraging certification, not all pastoral

counselors in Taiwan are certified. At current, there are approximately 100 pastoral counselors providing care on a part-time basis.

It is not uncommon to find pastoral counselors using theories such as psychoanalysis, cognitive/behavioral, solution-focus brief therapy, gestalt therapy, and existential therapy. There are pastoral counselors who formulate their theories in order to speak more meaningfully to the local context. One such approach is Trinity-Archetypal Counseling (TAC) formulated by Dr. Lin to address the feeling of shame often experience by clients. The theory and practice of this approach is published in the book "Finding True Self in the Bible: Understanding Archetypal Pastoral Guidance: Realizing God's Unique Blueprint." Trinity-Archetypal Counseling affirms clients where they are and helps them see value in themselves even in the midst of mental illness itself. This theory promotes the belief that who they are is a gift from God even if they may be in anxiety or depression. Good and evil are often constructed by the society and it is not how God sees his people. God values them where they are and the way forward is to recognize and learn to regulate issues they are facing instead of pathologizing them. This is a radical approach within the context of Confucian value system.

In Taiwan, due to the small Christian population, pastoral counselors provide treatment for clients from every religious backgrounds. Pastoral counselors also get referrals from other counseling centers and medical professionals. While there are limited personnel resources because it is a new field, there is a great potential for growth for pastoral counseling in Taiwan.

## Korea

According to Y. G. You, the history of pastoral counseling in Korea can be divided into three periods: the Era of Birth: Introduction and Translation Period (1950–1975), Era of Growth: Specialization Period (1980–1999), and the Era of Identity: Competition and Autonomy Period (2000–present).

The Era of Birth. The discipline of pastoral counseling in Korea was initiated during the Korean War. The need for soul care due to deep wounds caused by the war was a fertile soil for the seed of pastoral counseling. It was around this period that Rev. Hwan Shin Lee, who just returned from graduate study in the United States, taught the first pastoral counseling course at Yonsei University. The concept of pastoral counseling was also introduced through translations of some major works in the field into Korean language such as Carroll Wise's *Pastoral Counseling: It's Theory and Practice*, Paul Johnson's *Psychology of Pastoral Care*, Seward Hiltner's *Preface to Pastoral Theology*, and Carl Roger's *Counseling and Psychotherapy*. These books played a formative role in introducing the field of pastoral counseling to the church and the society. In the late 1970s Clinebell's *Basic Types of Pastoral Counseling* helped to raised interest for the field of pastoral counseling in Korea. Two books on pastoral counseling within Korean context were published: *Principles of Pastoral Counseling* by Euyong Hwang (1970) and *Introduction to Pastoral Counseling* by Peter Van Lierop (1978) who was serving as professor of Yonsei University. Professor Lierop also initiated a counseling center at Yonsei University and offered the first Clinical Pastoral Education program at Severance Hospital of Yonsei University. However, even with translations of major work in pastoral counseling, the field itself did not flourish during this period because the church was more focused on church growth than care of soul, and there was a lack of individuals professionally trained in the field during this period.

The Era of Growth. In 1982, *The Korean Association of Pastoral Counselors* (KAPC) was organized with the primary role of dealing with what it means to be professional pastoral counselors and the development of areas of specialization. To deal with these two issues, the association issues and maintains licenses for practitioners. Obtaining licenses in pastoral/Christian counseling, participants need to pass an exam, a graduate degree in pastoral counseling or related area, and clinical training. The association also hosts monthly clinical seminar and

annual academic conference. In 1997, *The Korean Society for Pastoral Care and Counseling* was formed and along with the formation of the society comes biannual academic journal, *Ministry and Counseling*. There are other organizations as well that seek to promote Christian counseling such as *Korean Association of Christian Counseling and Psychotherapy* (1999), *Korean Evangelical Counseling Society* (2000), and *The Korean Association of Clinical Pastoral Education* (2001).

**The Era of Identity.** This is the era of rapid growth and changes with many Korean scholars returning from the United States with doctorate in the field of pastoral counseling. Many seminaries and religious departments started hiring full-time professors in pastoral counseling and producing many graduates with professional training in the discipline. Many counseling centers were founded and numerous seminaries created their own counseling centers. The rapid growth in the field happened to coincide with changes in Korean society as well. Korean society was experiencing changes as a result of development. Economic changes affect society structure and cultural values where competition has become a new norm and this norm destabilized traditional family. In relation to economic change, the concept of “self” in Korean society has been altered by industrialization as well. Industrialization has replaced the communal self with individual/autonomous self thus creates further alienation within the community. It is within this context that the care for soul took on a significant role within Korean society.

Many Korean scholars recognized the need to rediscover their Korean roots, and certain Korean concepts were explored in relation to the field of pastoral counseling such as the concept of *Han* as a more relevant concept for pastoral counseling instead of sin while others looked at the concept of *Jeong* or shame. During this period pastoral counseling became the most competitive academic major entering graduate schools in Korea.

While the practice of pastoral counseling in Korea started in the 1970s, the proliferation of counseling centers takes place in the late 1990s and onward. The first Christian counseling center

to be established in Korea was Growth Counseling Center established in the 1980s by Dr. Jong Hun Lee. There are approximately 50 counseling centers approved by the Korean Association of Pastoral Counselors. However, there are more counseling centers in operation that have not received approval by the Association. There are three basic types of counseling centers: academic-based centers, independent centers, and church-related centers. Most centers focus their effort on education and training.

## Japan

In 1952 Carl Roger did a lecture tour of Japan and out of this visit came increasing interest in school and guidance counseling. W. P. Browning initiated pastoral counseling in Japan, an American missionary in 1953 with courses being taught at Tokyo Union Theological Seminary. The field expanded in the 1950s and the 1960s with Japanese pastors who received training in pastoral counseling returning to Japan. However, the term pastoral counseling only became more widely used after a visit by Paul E. Johnson who gave instruction to 60 pastors at Kyoto Baptist Hospital in 1964. In 1963 the Japan Institute of Pastoral Counseling was organized and began publishing translations of books by Wayne Oates, Seward Halter, and Howard Clinebell. During this period humanistic psychology and client-centered approaches were popularized. This individualistic focus could perhaps be the result of postwar’s struggle to find personal identity. Existentialism and the writings of Kierkegaard, Heidegger, and Sartre were a part of the quest for personal meaning in life. The other reason for the popularization of individualistic approach was the teaching of Zen Buddhism whereby the quest is that moment of enlightenment that transcends space-time history.

In the 1980s, Kwansai Pastoral Counseling Center in Kobe, Growth Counseling Center in Tokyo, and Christian Counseling Center were in operation. In 1984 the Second Asian Conference on Pastoral Care and Counseling was held in Tokyo with Clinebell in attendance. Out of this

conference the Pastoral Care and Counseling Association of Japan was organized with the aim of greater inclusiveness. There are seminars offering graduate degrees in pastoral counseling. While the Christian population in Japan remains small (less than 1 %), there are many Japanese Christians who practice counseling and who bring their spiritual knowledge into their interaction with clients without mentioning faith in their conversations.

This expansion of counseling practices is connected to the mental health status of Japanese within this industrialized society. According to a study in 2008 by the Ministry of Health, Welfare and Labor, 24 % of Japanese people suffer some form of mental health issue. The report further states that one in five adult Japanese contemplates suicide, while the actual suicide rate is 51 per 100,000 which is twice as high as the US rate. While the government recognizes the seriousness of this issue, the accessibility is still limited. Most Japanese still visit hospitals when experiencing emotional distress for diagnosis and medication. This situation in Japanese society reflects the growing need among Christian and pastoral counselors to address this increasing needs in ways that is adaptive to Japanese cultural and religious context.

## Eclipses

Jeffrey B. Pettis  
Department of Theology, Fordham University,  
New York, NY, USA

Pliny the Elder (23–79 CE) in his *Natural History* refers to the eclipse (Greek, *ekleipsis*, “abandonment, failing of power”) of the moon and the sun as “the most marvelous and indeed portentous

occurrence in the whole of our observation of nature” (1944, II.VI.46). He notes how the sun and moon “retaliate on one another” as they cross paths, the rays of the sun being taken away by moon and earth (1944, II.VI.47). Pliny says that for a long time people in the ancient world have dreaded an eclipse as a portent of crime or death and how the dying of the moon meant that “she was poisoned” (1944, II.viii.54). In his *Tetrabiblos*, the Greek astronomer Claudius Ptolemaeus (ca. 100–178 CE) refers to the eclipse as the first and most potent cause of the general conditions of countries or cities (Ptolemy 1940, ii, 75). He interprets the meanings of the colors of eclipses or formations such as light rays (*rabdōn*) and halos. Black colors “signify the effects” (*phanenta sēmantika*) of the cooling, drying influences of Saturn. White colors indicate the temperate powers of Jupiter, and red colors have a hot, burning influence. Color and illumination are predictive of events and earth conditions to occur in particular geographical locations (1940, II, 90), and the position of the eclipse on the horizon tells when and with kind of intensity an event will occur (1940, II, 77). In the Hindu myth of the primordial battle between the Titans and the gods, the eclipse represents Rahu’s inability to drink the elixir. Although he is able to steal a sip of the substance, the cup passes easily through his mouth and out again through his throat. The eclipse is also seen to represent apocalyptic events. In the Gospel of Mark, Jesus predicts that the sun will be darkened (*skotisthēsetai*) and moon will not give its radiance (*phēggos*) as a sign of the time of world tribulation (Mark 13.24; cf. Matt. 24.29–31; Luke 21.25–28; Isa. 13.10; Joel 2.10; 3.4; 4.15). In the Gospel of Luke, the sun “dies out” (*eklipontos*) at the death of Jesus on the cross (Luke 23.45), in this way marking the death of Jesus as someone who is significant and important. In his sermon at Pentecost, Peter speaks of the sun which will be changed into darkness (*metasraphēsetai eis skotos*) and the moon into blood on the day of the Lord (Acts 2.20). The sixteenth-century alchemical text “*Consilium coniugii*” speaks of the changing and thus corruptive nature of the moon and its pernicious relation

to the sun. The text refers to the poisonous quality of the moisture of the moon in its eclipse of the sun “when she [moon] receives his light and slays the sun” (Jung 1963, p. 28). At death the two parents [sun and moon] “yield their souls to the son, and die and pass away.” Symbolically this means that the moon as the feminine aspect receives the sun-masculine aspect through which dying and rebirth occur. Penetration into the unconscious world is both exhaustive and formative, and there is sacrifice involved to yield the New. The new creation – the birth of the son as hermaphrodite – resolves the conflict of the parents. According to the text, the son eats the parents who “are the food of the son” (c.f. the “god-eating of the Aztecs; the parent-eating soul of the Egyptian Pyramid text of Unas) (Jung 1963, p. 30).

## Ecology and Christianity

Kirsten S. Oh

Department of Practical Theology, Azusa Pacific University, Azusa, CA, USA

But ask the animals, and they will teach you;  
the birds of the air, and they will tell you,  
ask the plants of the Earth, and they will teach you;

and the fish of the sea will declare to you.  
Who among these does not know  
That the hand of the Lord has done this?  
In his hand is the life of every living thing  
and the breath of every human being  
(Job 12: 7–10 NRSV).

Recently, Christianity has reflected deeply on its commitment and engagement with the ecological quandaries and crisis of our modern, technological world. Environmentalists have opened up awareness of the negative impact Christianity has had on the environment through the interpretation of passages such as “. . . fill the Earth and subdue it; and have dominion over. . . every living thing. . .” as a license to harm the planet (Gen 1:28 NRSV). Christianity has been charged with contributing, actively or passively, to the ecological crisis including pollution, extinction of many plants and animal life, and climate change (Leiss 1994; White 1967). But other traditions in Christianity, such as those of St. Francis, support ecological responsibility (Sorrell 1988).

Richard Bauckham (2010, Preface) defines “ecology” as “The interconnectedness of all things, living and inanimate, on the planet.” With this definition in mind, three movements towards the current relationship between ecology and Christianity will be discussed as follows: (1) historical Christianity, (2) current debates, and (3) psychological interaction with ecology and Christianity.

## Historical Christianity

Throughout its history, Christianity had a close engagement with its theology and ecology. The premodern interaction of the Bible and Christian commitment to the care of the Earth can be found in God taking the Sabbath as an image of the profound relationship between God, humanity, and creation. How Christians hold in balance the tension between human dominion over creation and human accountability to God has had far-reaching implications on how believers treat the Earth. The need to temper license with accountability is becoming more paramount in light of the current ecological crisis.

**Ecology and Christianity, Fig. 1** St. Francis (Retrieved from <http://www.catholic-forum.com/saints/stf01026.jpg>)

The Bible, read through the lens of ecological responsibility, is replete with God’s desire for redemption of all of God’s creation: “In Christ, God was reconciling the world to himself” (2 Cor 5:19 NRSV). Christianity has had a long historical tradition of deep reflection dealing with human interaction and responsibility towards nature. For example, in St. Francis’ “Canticles of Creation,” he strongly emphasized the value of all living and nonliving things that make up the Earth’s environment, including the cyclical nature of seasons as well as all flora and fauna of the Earth. It is no wonder that St. Francis remains the patron saint of Christian environmentalists. St. Francis was not alone in his love for nature. Roger Sorrell writes, “Much of Francis’ outlook in this area [environment and nature] closely reflects earlier ascetic thought and is easily explicable in terms of the common experiences and ideals of the eremitic [hermit’s] life” (Sorrell 1988, p. 138) (Fig. 1).

However, starting in the modern Enlightenment era, Christianity had the unfortunate distinction of being “the most anthropocentric religion the world has ever seen,” due to the negative impact on ecology with the biblical claim of dominion over creation according to Lynn White, Jr.’s famous article “The Historical Roots of Our Ecological Crisis” (1967). White

critiqued and attributed the environmental problems, in part, to the Christian notion of “instrumentalist” view that permits the [mis]use of nature based on the understanding that humanity possesses dominion over nature.

The dualistic ideology of the Enlightenment era influenced Christianity’s engagement with the environment, which is evidenced in Ludwig Feuerbach’s statement, “Nature, the world, has no value, no interest for Christians. The Christian thinks only of himself and the salvation of his soul” (Feuerbach 1957, p. 287). The Neoorthodoxy of Karl Barth, though claiming a dialectical methodology, also perpetuated the either/or dichotomy between God and the world and humanity and nature. This dichotomy is recognized by evangelical biblical scholar Douglas Moo when he concedes, “The New Testament is heavily anthropocentric; the ‘world’ is often viewed negatively; little is said about the nature world; and what little is said sometimes suggests that it is doomed to an imminent fiery end” (Moo 2006, p. 453).

White’s article evoked anger on one side but also conjured enthusiastic production of articles, books, and conferences from numerous Christian thinkers addressing this very issue of ecological and nuclear crisis during the 1960s. Theologians like Alister McGrath redirected White’s accusation towards the “roots [that] lie in the Enlightenment of the eighteenth century and whose foundation belief is that humanity is the arbiter of all ideas and values.” He claimed that Christianity is not by definition antienvironmental; rather, “the critical role of Christianity [is] in emphasizing human accountability for the environment. . .” (McGrath 2002, p. 54). Reflecting through the biblical texts such as Job 12 (above) more carefully has yielded a plethora of correctives to the previous bifurcation that belittled the environment. Numerous groups have emerged with their own debates as a result of recognition of the environmental degradation.

## Current Debates

There are several different foci of effort in saving the environment summarized by John

Cobb (1992). There are those who focus on animal suffering like the Humane Society, while ecologists seek equality for all creation and call human hierarchy a sort of “speciesism,” not unlike racism or sexism. Social ecologists who place capitalistic greed as the source of the current crises encourage concrete human changes to turn the crises around (Bookchin 2005). Another group’s focus is on agriculture, soliciting traditions of wisdom and practices for sustainable farming (Cobb 1992, pp. 42–48, 63–65). Yet another’s focus is on using renewable energy by encouraging customers to use efficient buildings and technology to save both money and the environment (Ecotechnology).

Of these many groups and foci, there are several Christian groups. The most predominant of these groups is The Stewardship Group. This group continues the traditional Christian belief that humanity does indeed have dominion over creation, but the call is to act as good stewards who care for the Earth with understanding and wisdom of the model of God. The focus is on the preservation of the ecosystem for all living things to survive in a healthy planet by realigning the misguided notion of human domination.

## The Stewardship Model

The “the default position within ordinary Christian groups” (Attfield 2006) is the stewardship model. In the Christian sense of the word, a steward reports to God because every living thing ultimately belongs to God. In other words:

Stewardship implies caring management, not selfish exploitation; it involves a concern for both present and future as well as self, and a recognition that the world we manage has an interest in its own survival and wellbeing independent of its value to us. . . Good stewardship requires justice, truthfulness, sensitivity, and compassion (Attfield 2006, pp. 75–76).

According to the Bible, the Earth remains the Lord’s (Psalm 24:1) and belongs to God, while all humanity are foreigners and tenants (Leviticus 25:23). Moo suggests, “The hope for the liberation of creation that Paul expresses in

Romans 8 (For the creation was subjected to futility, not of its own will but by the will of the one who subjected it, in hope that the creation itself will be set free from its bondage to decay and will obtain the freedom of the glory of the children of God,” (vv. 19–21 NRSV) clearly implies that the destiny of the natural world is not destruction but transformation” (Moo 2006, p. 463). Theologian Douglas Hall takes the stewardship model a step further by redefining the words “dominion” and “rule” through the Christological lens of love: sacrificial, self-giving (agape) love (Hall 1986, p. 86).

However, Richard Bauckham points to problems with the stewardship model:

1. Stewardship as hubris – the Earth system itself regulates and automatically controls the global climate and the composition of the atmosphere.
2. Stewardship excludes God’s own activity in the world.
3. Stewardship lacks specific content – the term “stewardship” can denote the need for human intervention to tame the wildness of nature, while some define it more closely to the preservation of creation.
4. Stewardship sets humans over creation, not within it.
5. Stewardship tends to isolate one scriptural text, Genesis 1:26 and 28. Reflecting on the entirety of Scripture allows for a more nuanced look at God’s design of all of the creation (Bauckham 2010, pp. 2–12).

Despite these limitations, this model continues to be the primary view from which other views have risen in response to or reaction against it. Christian environmental ethicist Bill McKibben asserts that the “Bible actually mandated protecting the world around us (Noah: the first Green)” and denotes a significant overlap between Christianity and environmentalism, stating the Book of Job as the “first great piece of nature in the Western Tradition” (McKibben 2005). Nevertheless, the correlation between Christianity and environmentalism has been thin. Due to this lack, many Christian thinkers have contributed much discussion to the correlation between Christianity and the Earth. Of these, two major thinkers will be further discussed as follows: Rosemary Radford Ruether and Joseph Sittler.

## Rosemary Ruether and Ecofeminism

A feminist theologian, Ruether addresses ecological responsibility and gender suppression with one culprit: domination. Ruether sees the correlation between feminist theology and environmentalism in the double domination of male over female and human over nature. Ecofeminism asserts that the patriarchal bias of the Christian history has perpetuated a male dominance over both women and creation that subjugated these into a place of oppression. Hence, salvation will come to the entire creation through significant altering of the patriarchal institutions towards a reciprocal interdependent model (Ruether 2000, pp. 90–104). As such, for Ruether the biblical God and Gaia, Greek goddess of Earth, come together to make Christian ecological theology and ethics possible, calling for a cultural and spiritual revolution towards a post-patriarchal world (Bouma-Prediger 1995, p. 55).

## Joseph Sittler

Dubbed a “Pioneering Christian theologian of nature,” Sittler is one of the first Christian thinkers to address the issue of ecology and theology (Bouma-Prediger 1995, p. 14). Sittler broadens the scope of the theological enterprise of his day by including the ecological crisis and cosmic dimensions in a speech to the World Council of Churches in 1961 titled “Called to Unity.” One of Sittler’s most significant concepts is the Cosmic Christ: “He [Christ] is the image of the invisible God, the firstborn of all creation; for in him all things in heaven and on Earth were created, things visible and invisible, whether thrones or dominions or rulers or powers – all things have been created through him and for him” (Col 1:15–20 NRSV) as the biblical basis. By Cosmic Christ, Sittler means “only a Christ whose work is cosmic in scope is large enough to overcome the meaningless and the demonic” and “cosmic redemption entails a cosmic Christ” (Bouma-Prediger 1995, p. 66). In order for this cosmic redemption to be possible, Sittler also expands the doctrine of

grace of the Triune (Creator, Redeemer, and Sanctifying) God that is present in the redemption of all God's creation, rather than just for sin (Sittler 1972).

It is no surprise the historical Christian understanding and the current debates regarding ecology have intersected with the field of pastoral care and counseling. One such example is ecotherapy, the work Howard Clinebell.

## Psychological Implications

Understanding the interconnected nature of all creation, Howard Clinebell, who connected religion to psychotherapy and later ecology, recognized the healing of ourselves and healing of the Earth by interacting with the Earth in a more integrated, healthy manner through "ecotherapy." Under this umbrella term, some therapists use noncoercive "Animal Therapy," "Horticultural Therapy," or "Wilderness Therapy" to help people find their authentic selves in the lap of God's world (Clinebell 1996, pp. 220–230).

Ecotherapy is a result of three realities that constitute the "ecological circle": *Inreach*, *Upreach*, and *Outreach*. *Inreach* involves psychological receiving and being nurtured by the healing presence of nature and Earth such as feeling part of the wondrous mysteries of being nurtured by family and food, while *Upreach* involves phenomenological experience of the creative source by locating the self within the greater life of the natural world such as feeling part of the awesome majesty of the sky's billions of galaxies. Lastly, *Outreach* involves the care for the planet with others such as recycling, conserving resources, and preventing pollution (Clinebell 1996, pp. 8–9).

Within the ecological circle is ecological spirituality, which is a model for both nurturing nature and being nurtured by nature, another subset of ecotherapy. In other words, ecological spirituality is a circle of receiving and experiencing healing from nature, place, and Earth while giving back to the Earth for its healing.

## Ecology and Islam

Abdallah Kahil

Lebanese American University, Beirut, Lebanon

Ecology is a modern field of investigation that came as a result of the industrialization in Europe. The responses to the ecological issues are therefore modern responses; nevertheless, religious texts may provide further incentives to deal with these issues. Islamic texts that may be consulted to tackle ecological matters are divided into two categories: old and contemporary texts. The original texts consist of the Qur'ān and the saying of the Prophet Muhammad, *Hadith*, which forms the basis for legal jurisprudence for the Muslims. In addition, there are several Sufi treatises that approach issues of nature and the relationship between human beings and nature. The second category includes the recent work by Islamic scholars who are addressing the issues of ecology by way of rereading the original texts. The question of ecology in Muslim-majority societies is similar to all nonindustrialized societies; the question has been raised because of its weight in industrialized societies; thus, most of the ecological studies and environmental movements are associated with European and North American understanding to the ecological issues.

In Muslim-majority countries, contemporary dealing with issues of ecology is mostly Western influenced, and organizations are related to UN agencies, green movements, and other international organizations or are inspired by international ecological organizations. Studies about ecology and environment are mostly in English language, and their influence on the practical

understanding of ecological issues is practically absent. Nevertheless, as these studies and primary sources on ecology indicate, there are plenty of concepts and statements in the Islamic sources to lead to tackling ecological matters effectively.

Several of the issues related to the methodology of discussing religion and ecology were set by Tucker and Grim (Tucker and Grim 2001). These include that religion is as new to deal with ecology as science, with an edge for science in this matter. However, religions, including Islam, “have an important role to play in projecting persuasive visions of a more sustainable future” (Tucker and Grim 2001, p. 4).

The teachings of Islam are spread among the populations of Muslim-majority countries that developed with time, and since God is the provider (*Razīq*), there may be some laziness toward the environment. However, a modern reading to the Qur'ān and Tradition of the Prophet may reveal a more sympathetic rendering to the teaching of Islam toward ecology.

Contemporary authors about Islam and ecology concur that “1. Nature is sacred; 2. The central role of humankind is as earth's steward; 3. There is an urgent need for Muslims to modify their behaviors in order to live more harmoniously with the non-human world; 4. The moral and ethical dimensions of the non-human world need to be recognized” (Saniotis 2012, p. 167).

### Qur'ān

The defining characteristics of nature that may be deduced from the Qur'ānic discourse include “that natural phenomena have regularity; internal coherence, and elegance, and that they are self-sustaining” and “that nature is an embodiment of God's mercy or, more fully, that God's mercy is expressed through the creation of nature. These defining characteristics make a conceptual whole” (Haq 2001, p. 134). Nature is beneficial to the human being (Qur'ān 6:4–16; 55:1–12); furthermore, the elements of the natural world are signs for human being to interpret and understand (Qur'ān 13:3–4; EQ, “Nature as

Sign,” EQ). Thus, the relationship between man and nature is both physical and metaphysical. The Qur’ān states as well that nature praises God (Q 24:41), thus equating beings with the rest of creation and suggesting a state of unity, interdependency, and multiplication among the elements of creation.

The world belongs to God, and human beings were assigned several roles within this well-integrated world. On Earth, we were assigned stewardship or agency – the *kahlīfa* of God (Özdemir 2003). “It is He Who hath made you (His) agents, inheritors of the earth: He hath raised you in ranks, some above others: that He may try you in the gifts He hath given you: for thy Lord is quick in punishment: yet He is indeed Oft-forgiving, Most Merciful” (Q 6:165). In spite of this leading role for human beings, God equated all of his creation: “There is not an animal (that lives) on the earth, nor a being that flies on its wings, but (forms part of) communities like you. Nothing have we omitted from the Book, and they (all) shall be gathered to their Lord in the end” (Q 6:38).

God also urged human beings not to be wasteful: “O Children of Adam! wear your beautiful apparel at every time and place of prayer: eat and drink: But waste not by excess, for Allah loveth not the wasters” (Q 7:31). The Qur’ān reminds the believers that this earth is not for them forever, other generation will come by his will, and consequently they will be the stewards, in the same way they inherited it from earlier generations (Q 6:133).

## Hadīth

The sayings of the prophet are more straightforward about the action that human being should take toward nature. They include many statements about an ecological relationship between humans and natural resources. His teachings covered issues like water conservation (even during ablution), planting trees, cultivating barren land, admonishing against cutting trees, and kind treatment of animals. In addition, the Prophet established protected areas for natural

life (*hima*), “which may be considered Islamic prototypes for contemporary natural parks and nature conservancies” (Nasr 2003, p. 97).

In one *hadīth*, Muhammad’s guide to saving water was clearly stated: “One day, as [The prophet] was passing by Sa’d ibn Abi Waqqas, who was performing ritual ablution, the Prophet scolded him: “What is this waste, o Sa’d?” “Is there waste, even in ablution?” Sa’d asked. And the Prophet answered: “Yes, even when using the running water of a stream” (Ramadan 2010). As for planting trees, the Prophet said in one narration that “there is none amongst the Muslims who plants a tree or sows seeds, and then a bird, or a person or an animal eats from it, but is regarded as a charitable gift for him” (Bukhārī, n.d., Vol. 3, Book 39, No. 513). He also encouraged cultivating barren land; narrated by Abu Huraira, The Prophet said, “Whoever has land should cultivate it himself or give it to his (Muslim) brother gratis; otherwise he should keep it uncultivated” (Bukhārī, n.d., Vol. 3, Book 39, No. 533).

## Sufism

Sufis took the notion of the unity of the world with God to another level. For them all creatures worship God, including nature, as the Qur’ān states, and creatures should have close and kind relationships, including humans, animals, plants, and earth, in a cohesion of “biodiversity” and interdependence. Jalal al-Din al-Rumi, a thirteenth-century poet who lived in Anatolia and wrote in Persian, elaborated on this unity by citing many parables and stories. Rumi cites a story about King Solomon who asked several flowers and insects what they do: He saw that a new plant had grown there; then he would say: “Tell your name and use – What medicine are you? What are you? What is your name? To whom are you hateful and to whom are you useful?” Then every plant would tell its effect and name, saying, “I am life to that one, and death to this one. I am poison to this one, and sugar to that one: this is my name inscribed on the Tablet by the Pen of the Divine Decree” (*Masnawi*, 4.1287 ff., cited in Clarke 2003, p. 43).

“This led Solomon to teach the physicians, who then compiled their pharmacopoeia. Nature yields wisdom to those who understand and care to enquire. . .” Clarke adds: “We are able to speak of Rumi’s “ecology” because his mystical world view is, above all, holistic” (Clarke 2003, p. 43). Said and Funk stress that because spiritual growth requires a sensitivity to the environment, “Sufis therefore look for signs of God in humans and in nature, and contemplate the divine beauty in creation” (Said and Funk 2003, p. 174). Clarke suggests that in the work of Rumi, “nature should be understood as a system and process, with an overall meaning and end in which all parts have their place. The vision desired is, in a word, *ecological*—an ecology that includes not only biology and physics, but also metaphysics” (Clarke 2003, p. 54).

### Contemporary Situation

Taking into account that the ecological awareness throughout the world was generated in the industrialized world, environmental legislation in Muslim-majority societies is borrowed from the West (Llewellyn 2003). The contemporary ecological challenges led several contemporary thinkers from outside the religious establishment to address the question of ecology. They resorted to two major sources of Islamic ethics to find backing to their environmental concerns. In reading the Qur’ān and the Hadīth, they focused on nature as the creation of God and the idea of unity and the community. Most of these studies, however, are in English. Rarely do we find a text in the indigenous languages from cultures where Islam predominates, such as Persian, Arabic, or Turkish.

Contemporary authors about Islam and ecology concur that “1. Nature is sacred; 2. The central role of humankind is as earth’s steward; 3. There is an urgent need for Muslims to modify their behaviors in order to live more harmoniously with the non-human world; 4. The moral and ethical dimensions of the non-human world need to be recognized” (Saniotis 2012, p. 167). Whereas most environmental writers attempt to

link the teaching of Islam into the contemporary ecological concerns, Tariq Ramadan goes further and calls for considering deep “issues such as reflection over ways of life and modes of behavior and consumption” (Ramadan 2010).

### Psychological Dimension

The modern term for psychology in Arabic is *‘ilm al-nafs*, the science or knowledge of the soul/psyche. The word *nafs* has several uses in the Qur’ān, with several different meanings: one of them is the soul and another is the self. Three characteristics of *Nafs* in the Qur’ān form the basis of much of the later Muslim ethics and psychology; they are:

(a) It is commanding to evil (*ammara bi’l su’*,) (Q 12, 53); it is associated with desire (*al-hawa*,) (Qur’ān 50, 15), it must be restrained (Q 79, 40) and made patient (Qur’ān XVIII, 27) and its greed must be feared (Qur’ān 59, 9).

(b) The *nafs* is *lawwama*, i.e. it upbraids (Q 75, 2); the souls (*anfus*) of deserters are straitened (Q 9, 119).

(c) The soul is addressed as *mutma’inna*, tranquil (Q 89, 27).

Being a good Muslim requires struggling against the first two characteristics of *Nafs* in order to attain the third one. Taking this as a basis for a psychological approach to ecology brings beings to another concept in the Qur’ān. Several modern writers (Chishti 2003; Clarke 2003; Nasr 1996; Yaqoob 2003) relied on the Quranic notion that Islam is the religion of *Fitra*, “which means the religion that is in the very nature of things and engraved in man’s primordial and eternal substance” (Nasr 1996, p. 145). Being aware of the equal status of beings, animals, and nature as they are all the creation of God, and that they all participate in worshiping and praising God, may form a psychological basis for human ecological awareness. In this regard, it is important to cite the context in which the *Nafs* is characterized as tranquil (Q 89, 27):

(27) “(To the righteous [tranquil] soul will be said:) O (thou) soul, in (complete) rest and satisfaction”

- (28) “Come back thou to thy Lord – well pleased (thyself), and well-pleasing unto Him”  
 (29) “Enter thou, then, among My devotees”  
 (30) “Yea, enter thou My Heaven.”

It is in the context of God addressing the *Nafs* to return to the realm of God, and it should be tranquil after observing the rule of good religious practice; it is a return to its primordial state. These verses are often inscribed on tombstones as an invocation of the desire to have pleased God and satisfied the requirements of being a good believer.

## Ecotherapy

Linda Buzzell

Pacifica Graduate Institute, Santa Barbara,  
CA, USA

As an umbrella term for nature-based methods of physical and psychological healing, ecotherapy represents a new form of psychotherapy that acknowledges the vital role of nature and addresses the human-nature relationship. It takes into account the latest scientific understandings of our universe and the deepest indigenous wisdom. This perspective addresses the critical fact that people are intimately connected with, embedded in, and inseparable from the rest of nature. Grasping this fact shifts our understanding of how to heal the human psyche and the currently dysfunctional, even lethal, human-nature relationship. What happens to nature for good or ill has an impact on people and vice versa, leading to the development of new methods of individual and community psychotherapeutic diagnosis and treatment (Buzzell and Chalquist 2009, p. 18).

Ecotherapy is sometimes described as applied or clinical ecopsychology. If we define ecopsychology as the study of the human-nature relationship (or the study of the relationship between the human psyche and the rest of nature), then a simple definition of ecotherapy is that it is the field that concerns itself with healing the human-nature relationship.

Sometimes this involves conscious nature contact or nature connection for the purposes of healing people. Animal-assisted therapy, horticultural therapies, nature psychotherapies, wilderness work, outdoor activities, and other restorative modalities are common ecotherapies, backed by impressive scientific research attesting to their healing efficacy. In this sense ecotherapy is evidence-based medicine.

Research on the effectiveness of ecotherapy has tended to focus on specific modalities. Gardening therapy, exercise outdoors, and work with animals, to offer three examples, are consistently associated in study after study with lower blood pressure, diminished anxiety, higher self-esteem, more effective communications skills, development of empathy, and lower intensity of trauma

symptoms such as those of post-traumatic stress. Even simple acts like bringing flowers into a hospital room have been shown to speed recovery from surgery. People who have benefitted from these and other ecotherapy modalities include combat veterans, addicts, at-risk juveniles, autistic children, inner city children needing more nature exposure, and institutionalized dementia patients. Also, Richard Louv describes a condition he calls Nature Deficit Disorder that affects both children and adults, prescribing nature contact in various forms as the necessary treatment.

A summary of some of the growing body of evidence for the significant clinical effectiveness of ecotherapy practices is provided in *Ecotherapy: Healing with Nature in Mind* (Buzzell and Chalquist 2009).

But ecotherapy isn't just about humans healing themselves by reconnecting with the rest of nature. An equally important aspect of ecotherapy is the reciprocal process of humans adopting a more healing stance towards the rest of nature at a time when the rest of nature is in crisis due to human actions. Ecopsychologists like Sarah Conn have pointed out that in the absence of a healthy natural world, human health is impossible (Buzzell and Chalquist 2009, p. 112). So we can't just think of "using" the rest of nature for our own ends without concerning ourselves with the health of the whole of which we are a part. And we also need to take responsibility for our own destructive – even ecocidal – actions. Humans are in the process of destroying not only our own life support systems but also the life support systems of countless other species. In psychotherapy such behavior would be labeled as suicidal, fratricidal, and matricidal – in short, criminally disordered. Ecotherapy seeks ways of treating this collective insanity.

The word "ecotherapy" was coined by pastoral counselor and Civil Rights activist Howard Clinebell (1922–2005), who was born and grew up in Springfield, Illinois. "In the city," as he said, his exposure to the natural world was a constant influence. His parents converted their part of town into a garden (Clinebell's father was an

agriculturalist) in which the future ecotherapist worked throughout his childhood. The garden not only strengthened his emotional bond with nature, it fed his family through the Great Depression. Clinebell often visited his grandparents' farm, riding horses and milking cows and swimming in the creek.

Not all of his nature encounters were pleasant. Nearly drowning in a river when his boat capsized taught him that nature could be dangerous when treated without care; only an oar floating back to him saved him from going under. As an adult, seeing the Amazon River for the first time, and putting his soil-familiar hand into dirt destroyed by erosion and exploitation, convinced him that in his sorrow he could hear Earth crying out in pain. As a result of these events, Clinebell could not consider counseling or therapy complete if it ignored the social and environmental dimensions of life. The social dimension had opened for him while marching in Montgomery, Alabama, with Rev. Martin Luther King Jr. during the Civil Rights Movement.

After earning his PhD from Columbia University and graduating from seminary, he noticed that images of nature appeared to him spontaneously as he provided counseling. This convinced him to include nature in his work with people. He continued to do this after founding various counseling organizations, writing 20 books, and visiting every state in the Union, often pausing to hike and enjoy the scenery. His travels and career eventually brought him to Santa Barbara; from his home he could see the Channel Islands, places sacred to the indigenous Chumash people.

Although Clinebell's own spirituality was an earthy Methodism, he taught his students to allow the people they counseled their own values and beliefs without judgment. Clinebell looked upon spirituality as a basic human striving ultimately rooted in the natural world created by God. He did not expect others to share his belief, preferring instead to quietly observe how interacting consciously with nature so often developed one's capacity for transcendent experience and healthy joy.

Clinebell published *Ecotherapy: Healing Ourselves, Healing the Earth* in 1996. He described ecotherapy as "healing and growth nurtured by

healthy interaction with the earth" and gave numerous examples of how to use ecotherapy in a wide variety of counseling situations. However, like Sarah Conn, Clinebell also insisted that genuine ecotherapy always involves reciprocal relations with the natural world rather than exploiting the world, as nature cures tend to do. Recipients of nature's healing presences are encouraged to give something back to the world, thereby acknowledging the relational aspect of ecotherapy while evolving that relationship from one of exploitation or mere sightseeing to one of responsibility and care.

Currently, ecotherapists are increasingly addressing this reciprocal aspect of ecotherapy practice. British ecotherapists Mary-Jayne Rust and Nick Totton (2012), in their anthology *Vital Signs: Psychological Responses to Ecological Crisis*, point out that we must be cognizant of the historical moment at which the fields of ecopsychology and applied ecopsychology have arisen. We must be "aware of the extraordinary urgency of the external situation which it is one of the missions of ecopsychologists to address. While there would in theory still be an important role for ecopsychology [and ecotherapy] if we were not facing environmental meltdown – exploring the complex relationships between human and other-than-human, and the therapeutic value of bringing the two together – in practice ecopsychology [and ecotherapy] has been completely shaped by a sense of catastrophic loss, of the irreversible destruction of complexity and the impending threat to the systems that sustain life on this planet" (Rust and Totton 2012, p. xvii).

This understanding has led to the development of ecotherapeutic grief work, eco-anxiety treatments, and "waking up" practices by ecotherapists like Mary Gomes, Buddhist ecophilosopher Joanna Macy, Sarah Anne Edwards, and Linda Buzzell. There is also a developing literature on how to deal psychologically and spiritually with impending environmental collapse by writers like former psychotherapist and historian Carolyn Baker, ecophilosopher/ecotherapist Joanna Macy and UK ecophysician Chris Johnstone, M.D.

## Ecstasy

Jo Nash  
Sri Lanka International Buddhist Academy,  
Kandy, Sri Lanka

## Definition

The word ecstasy is derived from the Greek “ekstasis,” meaning “beyond or outside the self,” and has different meanings depending on whether it is used in a religious or psychological context. One definition that can be used to underscore these different ecstasies might be

“an experience of blissful non-duality.” This involves an experience of dissolution of ontological boundaries between an internal sense of self and external otherness, leading to an intense affective experience of oneness or union of rapturous intensity called *ecstatic*.

## Religious Perspectives

Religious accounts of ecstatic experience are present in the mystical wings of most major world religions, including the Abrahamic, Dharmic, and “indigenous” traditions (also known as shamanic or pagan faiths). Accounts of ecstatic experience are common to charismatic and contemplative Christianity, the Sufis of Islam, the Kabbalists of Judaism, the Vajrayana practitioners of Buddhism, Tantric Hinduism, and the mystics of Sikhism. Ecstatic experience in a religious context derives from the devotional practices and contemplative disciplines used to dissolve the boundaries between one’s sense of an enclosed separate “self” or “I” and the godhead (Yahweh, God, Allah, Brahman, Nam), omnipresent awakened mind (Buddha) or other divine source of being, such as the nature spirits of indigenous and shamanic traditions. Religious ecstasy may be evoked by the affective intensity of the practitioners’ devotional fervor, expressed in chants, dance, song, poetry, and other physical practices, such as fasting and ritual, or the cognitive space and stillness of contemplative discipline, comprised of meditation or prayer. In many cases, a mixture of both active devotion and contemplative stillness is used to achieve the dissolution of dualistic perceptions and evoke the non-dual experience of ecstatic bliss. This experience would be deemed desirable by most religious practitioners and indicative of spiritual progress. However, the understanding of ecstasy from a psychological perspective is somewhat different.

## Depth Psychology Perspectives

From an object relations psychoanalytic perspective, a loss of boundaries of this kind would imply

the dissolution of the ego and a possible regression to a manic defense against separation (Klein 1940), first deployed by the infant in denial of the absent breast, and so a kind of hallucination that defends against unbearable loss of original oneness with the mother's body. Re-experienced in adulthood, an unmediated, boundariless state of bliss could indicate at best a defensive denial of depression and at worst a psychotic mood disorder of the manic or bipolar kind. The one exception to this pathologizing of ecstasy would be the bliss of orgasm experienced during sexual climax with another person and the ensuing sense of intersubjective merging deemed necessary for a healthy intimate relationship.

From an archetypal psychology perspective, the understanding of ecstatic experience is different again. Jungian psychologist Robert A. Johnson's (1987) book *Ecstasy: Understanding the Psychology of Joy* proposes that Western civilization has repressed an innate human ability to experience this "oneness," due to guilt and alienation from our bodies at the heart of modern consumerist society, now harbored by the Western collective unconscious. He calls for us to return to the days of Dionysian celebration of the pleasures of the body and the senses and reclaim our birthright to a regular experience of cosmic bliss and ecstasy. This enables human beings to retain vitality, joy, and a sense of being alive that is absent in the lives of so many Western adults. A loss of ritual celebration has occurred with secularization, causing a kind of exhaustion at the heart of a culture that prohibits this need for periodic Dionysian play and wildness, says Johnson. This exhaustion may be partly responsible for the pandemic of depression and anxiety plaguing secularized Western societies.

### Neuropsychology Perspectives

However, a neuropsychological analysis of ecstasy uses scientific studies of brain activity to explain the phenomenon of blissful, non-dual experience. Neuropsychologists Newberg and D'Aquili (2000) write:

During certain types of meditation... We have proposed that as the hypertrophic state creates a state of oceanic bliss, the ergotropic eruption results in the experience of a sense of a tremendous release of energy... activity is so extreme that 'spillover' occurs... This may be associated with the experience of an orgasmic, rapturous or ecstatic rush, arising from a generalized sense of flow and resulting in a trance-like state (pp. 255–256).

This "spillover" is comprised of the co-activation of both hemispheres of the brain. Meditative techniques that deploy certain kinds of cognitive strategies alongside focused breathwork enable maximal simultaneous stimulation of the causal and holistic operators that then evoke an existential experience of non-duality, selflessness, or "oneness" with all that is conventionally experienced as "other." The result is ecstasy.

### Psycho-Spiritual Explanations

The above accounts have implications for understanding both the psychology and spirituality of ecstasy as an aspect of an experiential ontology of nonself. Far from being a grandiose, elated sensibility associated with the delusory highs and hallucinations of manic psychoses, rather it may indicate that a sense of a bounded self has been lost or relinquished. This may have both positive and negative results psychologically and spiritually. It may well indicate a regression has taken place but it may also indicate that egocentric object relations have been surrendered, as reported by mystics describing the experience of union with the godhead of monotheisms or merging with the deities or spirits of polytheisms. It may also indicate that the conceptual and ontological boundaries associated with doctrines of the self have been ruptured entirely, as occurs with progressively subtle realizations of "emptiness" or "sunyata" experienced by advanced Buddhist practitioners. Outside the context of religious experience, ecstasy may also be evoked by experience of pure immanence, a kind of blissful integration as depicted in nontheistic poststructural thought of Deleuze (1995/2001).

The key to assessing the function of ecstatic experience must be the observation of the effects. Whether it indicates a psychotic regression or a form of spiritual integration, or just a temporary “peak experience” (Maslow 1964), will be revealed by the longer-term effects on thought, affect, and behavior.

### Edinger, Edward

Lee W. Bailey  
Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Edward Edinger (1922–1998) was a preeminent classical Jungian analyst in New York City,

a very articulate author of many books explaining and elaborating on Carl Jung’s analytical psychology. He wrote insightful books on the psychotherapeutic process, such as *Ego and Archetype*, on Jung’s work, *The Mystery of the Coniunctio: Alchemical Image of Individuation*, and on Greek mythology and Gnosticism. He applied Jungian archetypal principles to cultural works, such as *Shakespeare*, Goethe’s *Faust*, Blake’s *Job*, and Melville’s *Moby Dick*. He was very interested in Christianity, and explored the Bible, the Prophets, the Psalms, the biblical Apocalypse, and The Christian Archetype.

### Jungian Psychoanalysis

Edinger’s classic elaboration of the heart of Jungian analytical psychoanalysis is *Ego and Archetype* (Edinger 1972). Here he explores the depths of the relationship between ego and the Self. The Self is the central archetype of wholeness and access to the transcendent that in childhood contains the dormant ego. As the ego develops consciousness, like a child growing up, it moves out of the Self’s embrace. There are positive and negative potentials to this development, but when the ego maintains its connection to the Self, it is most positive, and if it reaches fulfillment in individuation, it serves the Self in a state of wholeness, resolving positives and negatives into the paradoxical and healing conjunction of opposites (Edinger 1972, p. 3ff).

First, the stages of the ego’s development risk inflation, mythically portrayed in Adam and Eve’s bite into the apple that they thought would make them like God. The expulsion from paradise is the primal ego’s birth into the world of conflict, suffering, and uncertainty, forced to deal with instincts such as sexuality. The polarizations of conscious and unconscious, spirit and nature, emerge, challenging the ego to develop awareness and Self-control. From passive obedience, ego grows into greater consciousness, even if it means fighting with parents or God. Myths of encountering or being bitten by a snake express this transition into a new attitude. A snake, symbolizing the instinctive unconscious, stands

opposite the more mature ego. The danger is inflation, symbolized by unrealistic grandiose plans or flying myths like Icarus. It may enlarge into excessive *hybris* or pride, and fall, without proper taboos, restraint, or grounding in reality (Edinger 1972, pp. 27–30).

A healthy connection to Self's path to transcendence is essential to a healthy emergence of the ego, even if the youth becomes alienated. But if cut off from Self, the divine within, the ego will become alienated from Self and will suffer. Since children project Gods onto parents, parental rejection, expulsion, abuse, or abandonment ruptures the Ego-self axis and can deeply wound the child's trust and Self-respect (Edinger 1972, p. 39). The opposite, an excessively permissive parent who never says "no" to a child can breed the spoiled child, whose movement from Self is short-circuited, becoming unwilling to accept restraint of ego's desires (Edinger 1972, p. 42). This disconnect with Self may lead the ego to see life as nothing but random chance, dumb luck, or tragic despair, cold meaninglessness, and at worst, raging violence, psychosis, or suicide (Edinger 1972, pp. 43–46). Alienation is necessary to growth, but also reconnecting to Self in a new way is necessary to mental and spiritual health.

Individuation is begun with a return from ego's alienation to Self in a mature way. A mythic image of this theme is Moses, the fugitive rebel from Egypt, who experienced Self as the mystical burning bush, and thus began a new connection to transcendence. A woman's encounter with Self may be symbolized as impregnation with the divine, as with Mary, or ecstasy as in Bernini's statue *The Ecstasy of St. Theresa*.

The individuated life becomes not an ego's effort to dominate and control, but a quest for meaning in suffering and love, paradox, and mystery, due to ego's openness to transcendence. Thus ego becomes a mature individual oriented toward service to the greater Self. A unified mystical field is seen underneath earth's apparent opposites, such as matter/spirit, inner/outer, and male/female (Edinger 1972, p. 96). This field, Jung showed, is symbolized in the circular

Mandala that points to the transcendent center as a guide for the ego. Individuation is a process that is never complete, but is a constant life challenge.

Symbols of the goal in dreams, myths, philosophy, and religions, are as varied as metaphysics, the Blood of Christ (Edinger 1972, p. 259), and the Alchemical Philosopher's Stone (Edinger 1972, p. 260ff). In Analytic transference, the client typically projects the transcendent, the parent, or the lover onto the analyst, and the work is to help the client withdraw this projection into himself/herself, reintegrating the conscious ego into wholeness, now on an axis serving not Selfish egotism, but transcendent Self. Expanded consciousness sees into the depths, and death may even become a friend (Elder and Cordic 2009, p. 59).

## Jungian Theory

Focusing on Jung's achievements, Edinger sees Jung as a major historical turning point, offering a powerful method for increasing cultural consciousness. In *An American Jungian: In Honor of Edward Edinger*, we have an overview of Edinger's contributions. Like Jung, Edinger worked as an M.D. in psychiatry, so he could see that, in psychotic patients, ego is overcome and archetypal images are confused with outer reality. Ego may identify with archetypal themes of the prophet, the savior, cosmic dualism, death, and rebirth (Elder and Cordic 2009, pp. 100–106).

Jung also developed an influential theory of psychological types: introvert/extravert, thinking/feeling, and sensation/intuition, each pair needing balancing (Elder and Cordic 2009, pp. 80–83). Jung's major insight was to articulate the psychology of the archetypes of the collective unconscious, and their expressions in myth and dreams, beliefs, behavior, and cultural products like art, ritual, and music. This opening to the deep meaningfulness of both religion and myth are disclosures of the transpersonal collective depths of soul, thus expanding consciousness. Every athletic contest becomes a

passionate ritual combat, every film a dramatic myth, and every hero or heroine a numinous archetypal image.

Pathologies are complexes clustered around an archetypal image, thrown off balance by affects that disturb the ego, such as the “daddy’s girl” (Elder and Cordic 2009, p. 84). Major archetypes typically encountered early in analysis include the shadow, a cluster of unconscious negative psychic energies symbolized by flaws, beasts, enemies, horrors, and Satan, that are commonly blindly projected out into the world. Analysis seeks to withdraw these shadow images and find the hidden nugget of gold that it represents: Edinger said: “You know we get the truest appraisal of ourselves by listening to our enemies. My policy is to listen more to my enemies than my friends” (Elder and Cordic 2009, p. 226).

## Culture

Edinger also stresses Jung’s perception that the sixteenth century was the major turning point in Western history, when the Reformation, the Renaissance, printed books, Columbus’ explorations, and the rise of science and expanded commerce, pulled culture away from the faith, toward the modern individual ego, symbolized by the mythic *Faust*, who prefigured the shadow of modernity. He sold his soul to the Devil for unlimited mortal power and pleasure. But modernity’s positive side was to draw away from religion as obedience to authority toward experience of transcendence in one’s psyche, the Self. As the shadow of modernity developed, however, it shifted ego into a hostile, materialistic relationship to nature, and the current ecological and economic crises followed, symbolized in Melville’s *Moby Dick* (Elder and Cordic 2009, p. 59).

Jung also revolutionized religion by showing its psychological roots. He transformed the God image, Edinger said. Unlike Freud, whose nineteenth century materialistic atheism scorned religion, Jung opened the way to see that the healthy ego needs a proper relationship to authentic transcendence. This led to seeing that this numinous

power can be symbolized in many ways, so conventional religions came to be seen as full of mythic, not just literal, but poetic symbols of real transcendent powers. Miracles, such as Jesus’ healing the blind, conveyed the mysterious depth of transcendent power, beyond ego’s literal [blind] comprehension. To understand religion, the ego must hear poetically, symbolically the subtle mythic language of powers beyond its literalist ken. This shifted the entire hermeneutic of religious studies to a far more symbolic phenomenology, blended with history. Though Jung was primarily monotheistic in his thinking, he really helped undermine monotheism with his openness to the many images of transcendence. This helped open the door for feminists to reawaken the goddess archetypal images and give them a direct gender-friendly image of transcendence. It also helped open doors to the study of world religions, in search of a common global ground for all religious images of transcendence. This was a strong move. Edinger said:

The great service that Jung has performed by his discovery of the collective unconscious, and the archetypes, and the Self, is that he’s penetrated to the psychological basis that underlies all the world religions.... We’ve got the basis now for a unification of the factual divisions among the world religions (Elder and Cordic 2009, pp. 65–66).

Jung saw that psychology is not a religion, but it deals with the source of religions. Religion is not just translating and elaborating on pure revelations from above, but comes through the Self and blends transcendent power with very human constructs, thus obviating literalist interpretations (Elder and Cordic 2009, p. 69). Like the early Modern Paracelsus, Jung saw that the cosmic energy is not simply above, is it below: “the lower heaven,” and the “stars are in us” (Elder and Cordic 2009, p. 120).

Jung also struggled with the problem of evil, and concluded in *The Answer to Job* that the archetypal God has a shadow, a dark side, and a backside, like all archetypes. We see this now in other divinities, such as the Hindu goddess Kali, source of both life and death. Existence is not made to please humans or believers, nor is God

simply a pure cosmic spirit, separate from and high above the world. That mythic image simplifies faith in heavenly goodness overcoming evil in monotheism, but leaves victims struggling with problems such as the Holocaust.

The worldwide myths of Apocalypse, are not literal end of the world messages, but symbolic narratives of the end of historical eras, whether eras of imperial national power or eras of religious claims to unique authority (Elder and Cordic 2009, pp. 226–229). But the ends of eras do happen, hopefully without too much damage. But Edinger fears for the power of modern humanity and its technologies to destroy more than before. He liked Matthew Arnold, whose “Dover Beach” envisions the end of modern religious faith:

The Sea of Faith  
Was once, too, at the full, and round earth’s shore  
Lay like the folds of a bright girdle furled.  
But now I only hear  
Its melancholy, long, withdrawing roar...  
(Elder and Cordic 2009, p. 258).

Yet Edinger believes that, like the Second Coming, this dismal vision of archetypal apocalyptic forces set loose by modernity will be redeemed by Jung’s monumental discovery of the power of the increased consciousness brought by postmodern Jungian psychology. If religions can adapt to this new vision and increase consciousness over literalism and obedience, see through dogmas and mythic religious traditions to the truly powerful numinous transcendence found when the ego aligns with the Self, the spark of God within each soul, there is hope. Enlightened by Jung’s insights, world religions may see the common truth of love for enemies and justice for the poor, at the foundation of all their traditions. Scientific and technological egos may acknowledge their limits, the ecological damage done, and the enchantments in their own technological dreams [such as distant space travel and technological utopia]. Instead each may open their souls to deep transcendence within and without, whispering, with Wordsworth: ... trailing clouds of glory do we come/ From God, who is our home... (Elder and Cordic 2009, p. 257). But after Jung, that word “God”

will have an entirely different meaning – not a socially constructed angry judge or an authoritarian patriarch, but an ineffable experience of powerful and subtle numinous transcendence through the psyche’s Self, that through the Ego-Self axis, guides the ego’s struggles to personal and collective harmony.

## Ego

Benjamin Beit-Hallahmi  
Department of Psychology, University of Haifa,  
Haifa, Israel

In classical psychoanalysis, the human personality contains three parts: the id, ego, and superego. The id is defined in terms of the most primitive

urges for gratification in the infant, urges dominated by the desire for pleasure. Ruled by no laws of logic, and unconstrained by the resistance of external reality, the id uses what Freud called the primary process, directly expressing somatically generated instincts. Through the inevitable experience of frustration, the infant learns to adapt itself to reality. The resulting secondary process leads to the growth of the ego, which follows what Freud called the reality principle, in contradistinction to the pleasure principle dominating the id. Here the need to delay gratification in the service of self-preservation is slowly learned in an effort to thwart the anxiety produced by unfulfilled desires. What Freud termed defense mechanisms are developed by the ego to deal with such conflicts. These mechanisms are a set of unconscious ego activities aimed at maintaining an internal equilibrium inside the personality. Repression is the most fundamental defense mechanism, but Freud also posited an entire repertoire of others, including reaction formation, isolation, undoing, denial, displacement, and rationalization.

The ego is the central and the executive part of the personality. It is the only part which is in contact with reality, and one of its major tasks is reality testing. Moreover, it has to balance internal demands, coming from the id and the superego, with the demands of the outside world. The ego is the locus for our subjective consciousness and its operations. It thinks, speaks, sees, makes decisions, and controls our body. Through the ego, the personality deals with reality. But there is another level of unconscious processing, which really determines observable behavior on the part of the person. At the unconscious level, the ego copes with unconscious anxiety coming from within and caused by the id and the superego.

The imagination is a major area of the ego's activity. It creates the person's dreams, as well as art, science, and culture at every level. Religious beliefs are created by the ego's activity, prodded by internal anxiety and outside reality pressures. In psychoanalytic interpretations of religion, various defense mechanisms in the ego have been suggested as contributing to religion and to

religious experiences, such as splitting, denial, projection, and repetition compulsion. The ego creates religion and then uses it for its own support and adaptation to reality.

## Eleusinian Mysteries

David A. Leeming

University of Connecticut, Storrs, CT, USA

The mystery cult of Eleusis had roots in ancient initiation rituals of the divine child, in the person of the *pais aph'hestias* ("boy of the hearth"). In the myth of Demeter and Persephone, after Persephone is abducted by Hades, her mother, Demeter, allowed the earth to become infertile and barren as she searched everywhere for her lost daughter. In Eleusis she disguised herself as a nurse maid and cared for the child Demophon, son of the king there. When she attempted to give the child immortality by dipping him into fire, she was discovered and had to reveal herself as Demeter. A temple was built for the goddess at Eleusis and in time the mystery cult evolved there. By sometime in the sixth century BCE, the cult was taken over by the city state of Athens and involved secret initiation rites in an inner sanctum facing which was a magnificent hall. A priestess of Demeter lived in the sanctuary. The rites began with a ritual bath and 3 days of fasting, followed by a procession to

Eleusis led by a statue of the god Iacchos, a form of Dionysos. Rituals still essentially unknown then took place in the inner sanctum, rituals that in some sense signified or were meant to ensure fertility, in keeping with Demeter's role as the goddess of fertility. It seems that the initiate spent a night in total darkness and was finally awakened at daybreak by the light of a great fire.

Psychologically, the initiate is the divine child waiting to be released in each of us. Through the process of the Dark Night of the Soul, the journey into unconscious, we can achieve the illumination represented by the light of the fire that awakens the initiate, itself representing the fire into which Demeter dipped the child in the myth. So immersion in fire becomes a baptismal rite of immortality or rebirth, full initiation into the clan of those who have experienced the mysteries.

## Eliade, Mircea

Robert S. Ellwood  
University of Southern California, Los Angeles,  
CA, USA

Mircea Eliade (1907–1986) was a Romanian-born historian of religion who did much to shape that discipline and make it an intellectual force in the twentieth century. Eliade graduated

from the University of Bucharest in 1928 and then in 1928–1931 studied Indian philosophy at the University of Calcutta and yoga at an ashram in Rishikesh. Returning to Romania, he earned his Ph.D. in 1933 with a dissertation on yoga which, after later revisions and translations, became his *Yoga: Immortality and Freedom* (1958). Eliade joined the faculty of the University of Bucharest in 1933, where he taught history of religion and Indian philosophy, as well as becoming a widely-read author of fiction and journalistic commentary in the 1930s, something being spoken of as a major voice of the younger generation of Romanians.

In those troubled times for Romania and Europe, toward the end of the decade, Eliade became involved in the rightist politics of the fascist Iron Guard movement; when the King, Carol II, turned against that body in 1938, the young professor was arrested. After his release, well-placed patrons helped him to escape his increasingly desperate homeland in 1940 by securing his appointment as cultural attaché to the Romanian legation in London and, 1941–1945, in Lisbon, Portugal. After the Axis defeat, Eliade, unable to return home because of the communist take-over of his country, became a professor at the Sorbonne in Paris, and then in 1957 at the University of Chicago, where he remained until his death. His prolific postwar work, containing little overt political content, has been largely devoted to understanding the history and meaning of religion.

## Basic Ideas

Eliade's basic ideas are concisely expressed in *The Sacred and the Profane* (1959) and *Cosmos and History* (1954; also published as *The Myth of the Eternal Return*). In the former, the fundamental assertion is that, for *homo religiosus*, the traditionally religious person, reality is “nonhomogeneous,” split-level, divided into sacred and profane spheres. “Sacred space,” the space of the shrine or temple, the pilgrim's goal or the site of a divine “hierophany” or manifestation such as Moses' burning bush or an apparition

of Our Lady, has a distinct atmosphere or “feel” different from the ordinary, profane world. “Sacred time,” the hours of a festival or religious rite, likewise, is set apart inwardly and outwardly from the profane. Both sacred space and time are likely to be demarcated by symbols. One attuned to it is instinctively aware of the Sacred, likely to speak in a hushed voice and tread with reverent step in its presence.

Sacred space and time, in Eliade’s interpretation, are like recapitulations of *illud tempus*, “that time,” the primal time recited in the culture’s myths of creation and salvation, when divine powers were strong. Temple and rite provide memory of *illud tempus* and a means of access back to it. (For example, the sacred time and space of the Eucharist offers the Christian *homo religiosus* a way once again to be with Jesus and present on the night and day of salvation; cf. also Passover, Chinese and Japanese New Year’s, Wesak, etc.) Symbols of the *axis mundi* (pivot of the world), the sacred tree, pillar, or mountain which connects heaven and earth (the cross, the Christmas tree, Mt. Meru) are especially important.

The Sacred can also be “interiorized,” found within, and so it is in shamanism, yoga, and authentic mystical and religious experience generally. One finds ways to access inner space and time, even an inner *axis mundi* (e.g., the spinal column in some schools of yoga), through appropriate techniques, and often after appropriate initiations. These are discussed in Eliade’s *Yoga* and in *Shamanism: Archaic Techniques of Ecstasy* (1964), as well as elsewhere. In the latter work, the author presents a discussion, which has proved influential in psychology and literary criticism as well as history of religion, of the shamanic initiate’s passage through several stages of call, “initiatory psychopathology,” and interiorization of spirit guides before becoming a proficient.

## Cosmos and History

In *Cosmos and History*, Eliade proposes that traditional religious history presents two stages:

cosmic religion and historical religion. The former, essentially that of archaic hunters and farmers (Paleolithic and Neolithic humanity), though with some continuities down to the present, has little sense of linear, historical time but finds and expresses sacred meaning in aspects of nature – the turn of the seasons, sacred rocks, or trees – and in human life in the social order and the life cycle of birth, maturation, and death. Its festivals are those of New Year’s, recapitulating the creation, and annual seedtime and harvest. An “Other World” of gods and spirits stands over against this world here and now; shamans are especially adept at contacting it.

Historical religions, such as Buddhism, Judaism, Christianity, and Islam, differ in that the *illud tempus*, the “strong time” on which the religion is based, was not so much the creation as a moment *within* the stream of linear, historical time: the time of the Buddha’s Enlightenment, of the Exodus, of Jesus (“the hopes and fears of all the years/are met in thee tonight”), and of the revelation of the Holy Qur’an. While these faiths retain considerable admixtures of cosmic religion (Passover and Easter as Spring as well as historical-event festivals), the major focus is on religion and salvation as historically conditioned, and this greatly affects the nature of religion.

Eliade did not conceal his own “nostalgia for the sacred” and for the sacred world of cosmic religion, when the Sacred infused nature and the world could be renewed every year. He spoke of the “terror of history” wrought by the discovery, religious and otherwise, that we humans live in irreversible historical time, not cosmic “eternal return” time. Yet he was well aware that moderns cannot undo modernity; we can at best only complete our own humanity through awareness of that other human possibility which he hoped study of the history of religion could unveil; that was the import of the significant article, “The History of Religions and a New Humanism,” with which he inaugurated the journal he helped found, *History of Religions* (reprinted in *The Quest*, 1969).

Other important works of Eliade’s include *Patterns in Comparative Religion* (1958), *Myths, Dreams and Mysteries* (1960), *Rites and Symbols of Initiation* (1958), the three-volume

*History of Religious Ideas (1978–1985)*, and his editorship of the *Encyclopedia of Religion* (1987). There are also several volumes of fiction and of interviews and autobiography.

## Criticism

Eliade has been criticized for the selective use of data to support his models, for being an “essentialist” toward religion and the sacred (i.e., holding it has an objective, unchanging nature) and as an anti-modernist. Some have associated the last with his youthful political views. In response, one could say that he often tried to make clear that his accounts of the sacred are intended to show how the world *appears* to *homo religiosus* as an ideal type, or to put it another way that his model is what is “said” by the phenomena of religion in itself, whether or not most worshippers are an ideal *homo religiosus*; that he believed we need to understand and appreciate the religious past but not to live there; and that the universalism of his history of religions project would appear at odds with the fascist drive to sacralize just one nation and people.

In any case, there is much in Eliade that religious psychology can use: the “nonhomogeneous” character of experience of the religious world; the importance of finding inner and outer ways to get in touch with sacred space and time, whether through places, music, sacraments, or meditation; and the significance of initiatory experience. He has aided many estranged moderns in grasping the inner significance of archaic spirituality.

## Elixir

Jeffrey B. Pettis  
Department of Theology, Fordham  
University, New York, NY, USA

Elixir (Greek, *xērion*, “healing powder”) is a drug or substance which has life-prolonging properties. Throughout history, the elixir has been sought as an antidote to illness and the human desire for *athasias*, “immortality.” There are a variety of texts and symbols having to do with the elixir. In the ancient alchemical text “Isis to Horus,” the prophetess Isis procures what she calls the *pharmakon tēs chēras* (“drug of the widow”) (16). This is the secret revelation which she gives to her son for immortality.

The secret revelation consists of the regenerative potency of nature, *physis*: “nature enjoys nature and nature conquers nature” (*hē physis tēn physin terpetai, kai hē physis tēn physin nika*) (7). In ancient mythology, Isis herself is the arcane substance and elixir, glistening with the white of the moon, her crown bounded by serpents, and her cloak “deep black and gleaming” (Apuleius 1989, *The Golden Ass*, XI.3). She is the “dew” and “water of life” (*aqua permanens*) which heals and unites the dismembered parts (Jung 1959/1968, pars. 14). In the ancient Mithras Liturgy found in the Greek Magical Papyri, the supplicant speaks of the juices of herbs and spices and of the mysteries handed down to gain immortality for an only child (PGM IV.477). The sixteenth-century physician and alchemist Paracelsus taught that all substances – mineral, vegetable, animal – contain *quinta-essentia* or “virtue.” Even the smallest amount when extracted can be used for its life-giving, healing properties (Paracelsus 1951, p. 164). The alchemical symbol of the “fish” as the arcane substance becomes understood to be the *lapis philosophorum* – the *elixir vitae* – something going back to early Arabic alchemy. Senior (Zadith ben Hamuel), the tenth-century Islamic alchemist, identifies Christ with the *homo philosophicus*, the Microcosm and One who does not die and brings life to anything dead (1566, p. 71; Jung 1953/1993, p. 392). The first-century Christian martyr Ignatius of Antioch refers to the Eucharist as the *pharmakon athanasias*, “the medicine of immortality,” something perhaps reaching back to *kipsu* offerings of bread and water in the Mesopotamian cult of the dead. According to Ignatius, the Eucharist is an antidote (*antidotes*) “that allows us not to die, but to live in Jesus Christ at all times” (Eph. 20). Compare also the life-enhancing forbidden fruit (Hebrew, *pry*) in Gen. 3.2. Mandala centers containing figures such as the Buddha Amitabha or Avalokiteshvara are thought to have elixir properties according to the Taoist text, the *Golden Flower* (Jung 1968, p. 98). A certain life force may also be perceived to have generative potency such as the *Yesod* of the ninth *sefirah* of the Kabbalah tree in Jewish mysticism. It is the flowing together of all cosmic energies.

Compare the Astral Light in transcendental magic (Leví 2001) and also *chee* as the vital spark of life in Taoism. With all of these texts and symbols, the elixir is understood to result from unconscious processes being made conscious and involving the union of opposites which yields the regenerative New. The elixir as the quintessence of that processing is precious, valued, and guarded. It may be both life-giving and life-taking, healing or poisonous depending upon how it is used.

### Emergentism

Joe Cambray  
International Association for Analytical  
Psychology, Providence, RI, USA

In contradistinction to psychoanalytic theories and methods that are essentially reductive in

nature, Jung's approach attends to the whole person. The integration of the personality is the central feature of Jung's view of psychological health and maturation. His notion of individuation involves a lifelong dialectic process between conscious and unconscious dimensions of the personality. This goes beyond ego adaptation to reality as the goal of psychological development found in other schools of analysis but requires ongoing examination and even struggle with whatever aspects of one's personality are activated by inner and outer experiences in life. Over the long term, this results in a decentering of the personality with regard to the ego together with the emergence of a new center, the self, which includes transpersonal dimensions. The self is envisioned by Jung to encompass the whole of the personality, conscious and unconscious, personal and collective; it is center and circumference. As such, it does not lead towards perfectionism, but in striving for conscious expression, it necessarily remains unfinished; the approach is towards completeness, with its positive and negative features. It is the achievement of a lifetime. The vision here is radically holistic. What are the roots of this vision?

### Mythic and Historic Background

Prior to the advent of modern science, holistic perspectives were an integral part of cultural life. As a part of the prescientific worldview, the entire world was seen as animated and often so portrayed in mythologies. Within traditional cultures, tales of emergence are commonly featured in creation myths. Original ancestors are typically envisioned as emerging from earth or water, or the world itself emerges from the waters of chaos. Stories of this sort are found throughout history and across cultures. Examples are plentiful, as from ancient Egyptian and Assyrian sources, in tales from Melanesia and the indigenous peoples of the Americas, as well as the better known Norse, Greco-Roman, and Judeo-Christian variants. Mythically emergence displays a transcultural or archetypal pattern, symbolic of birth or rebirth. This mythic stratum

forms a deep background for subsequent elaborations of emergence on a more conceptual level.

During the seventeenth century, with the rise of the scientific paradigm, a new precision was brought to the concept of "emergence." The term began to appear in scientific language as when Newton described experiments in optics, e.g., referring to the refraction of light through a prism he notes "the incident refractions were...equal to the emergent" (Newton 1676, p. 555). Perhaps most interesting of the new conceptual use of terms related to emergence was that by G. W. Leibniz (the co-discoverer of calculus along with Newton). Leibniz was the first person to employ the term "supervenience" consistent with emergentist views in a way similar to its modern use by philosophers of mind (Kim 1993). For Leibniz, this indicated a synchronous, non-Cartesian relationship between bodies and minds, consistent with an emergentist perspective, as has recently been discussed (Cambray 2005). This view of the mind-body relationship, of a preestablished harmony, was the one Jung identified as the primary precursor for his idea of synchronicity.

Leibniz's insights into supervenience were so far ahead of his times that they languished in obscurity for almost 250 years before being revived by the emergentist movement of the late nineteenth and early twentieth centuries. Philosophically descriptive emergentism was seeking to reestablish a view of science based on holistic principles. One of the most significant figures in this movement for the development of Jungian thought was Conway Lloyd Morgan. His 1896 book *Habit and Instinct*, with its entomological examples such as the leaf-cutting ant and the yucca moth, was a major source for Jung's formulation of archetypal theory (Hogenson 2001). Morgan's 1922 Gifford lectures on *Emergent Evolution* included recognition of Leibniz's foundational role in this paradigm.

Due to the speculative, philosophical nature of this paradigm at the time (it lacked a more solid experimental base), it could not compete against the empirical data from the growing field of biochemistry and especially the finding arising from

the advent of molecular biology in understanding biological systems. With the triumphant articulation of the structure of the molecular base of genetics, in the form of the biopolymer DNA, revealed by crystallography in 1953, a more reductive, strictly deterministic philosophy came to dominate many of the biological sciences. There was a countermovement in general systems theory and cybernetics also developing during this era, but applications were limited. Jung himself was interested in cybernetic principles and saw the human psyche as a self-regulating system.

### Complex Systems

The study of systems has been greatly aided by the availability of high-speed computers. Remarkable breakthroughs in modeling systems that could not be analyzed by conventional, reductive means due to their complexity began to draw attention starting with the study of “chaos theory.” This was first popularly applied to the investigation of weather patterns. More general exploration of systems made up of numbers of parts capable of interacting with one another showed that certain kinds of interactive systems could produce aggregate properties and behaviors which were not discernable or predictable from the known attributes of the parts. These high-order, non-reducible traits are explored in the new science of “complexity.” Complex systems are nonlinear, small variations, as in initial conditions can generate large changes (the well-known butterfly effect).

A particularly important subset of these systems are those that open to the environment, under selection pressure, capable of dissipating energy and generating increased internal order – they have significant adaptive capacity and are referred to as complex adaptive systems marked by self-organizing properties. The higher-order phenomena associated with the self-organizing features of these systems are termed emergent. There are a number of traits generally associated with emergence: novelty, irreducibility, nonlinearity, unpredictability, and synergy; some researchers also include coherence and historicity.

### Emergence in Analytical Psychology

Emergent phenomena have become a distinct area of study for systems scientists. They have been shown to most likely occur at the edge of order and chaos and are seen as the site for coming into being of life, the psyche and the mind, remarkably consistent with and affirming of the mythopoetic stories referred to earlier. Emergence has been found throughout nature and the human world: from the organization within clusters of subatomic particle all the way to the clustering of galaxies; in biological systems such as the behavior of social insects, the organization of and interactions within the body and brain from which mind emerges; to networks of human interactions producing economic and cultural behaviors. Emergence spans, transgresses, and links the many disciplines studied by humans. In recent years, the study complex systems and emergence have been effectively used to reconsider a variety of Jung’s ideas: archetypes, complexes, the self, synchronicity, as well as his analytic methods (see Cambrey and Carter 2004 together with the references therein). Other schools of psychology have also begun to adopt systemic thinking to their approaches. Within the psychoanalytic community, the intersubjective and relational schools have been most active in developing applying these ideas to their analytic models. Dyads, such as mother-infant pairings as well as analytic couples, have been examined and discussed for their self-organizing and emergent properties.

Although during his lifetime Jung only had studies on self-regulation to draw upon (complexity theory had not yet been developed), he was able to intuit various principles of self-organization and emergence. In applying these ideas to psychological problems and their transcendence, he comments:

I had learned that all the greatest and most important problems of life are fundamentally insoluble. They must be so, for they express the necessary polarity inherent in every *self-regulating system*. They can never be solved, but only outgrown. I therefore asked myself whether this outgrowing, this possibility of further psychic development,

was not the normal thing, and whether getting stuck in a conflict was pathological. Everyone must possess that *higher level*, at least in embryonic form, and must under favorable circumstances be able to develop this potentiality (Jung 1967, para. 18, my ital).

Similarly Jung's theory of compensation with the importance that it stresses on the emergence of a "third" position as a transcendent reality that allows overcoming difficulty without attempting direct solution of problems can be seen as based on an emergentist perspective. This view also allows a reformulation of psychopathology in terms of fears of or resistance to emergence. For Jung then human suffering as well as its transcendence is embedded in a profoundly systemic worldview.

Because Jung's model of the self has an interactive, transpersonal dimension to it, the emergentist aspect of this has been noted. Similarly there is an inherent holism in Jung's self: "As an empirical concept, the self designates the whole range of psychic phenomena in man. It expresses the unity of the personality as a whole" (Jung 1971, para. 789). The spiritual features of Jung's archetypal model of the self have often been discussed; here it serves as part of the linkage between psychology and religion that has entered some of the emergentist literature. Thus, philosopher Philip Clayton's discussion of levels of emergence beyond mental causation associated with mind, derived from biological systems, seeks to make such bridges. In this, collective intelligences of various sorts are drawn upon to point towards phenomena of the spirit (Clayton 2004, Chap. 5: "Emergence and Transcendence"). The growing interest in emergentism in many fields of human endeavor will perhaps allow a deeper appreciation of Jung's psychological genius and a fuller reconsideration of his model of the psyche. In recent years, there have been a growing number of publications reframing Jung's views on archetypes in terms of emergent properties of the psyche providing a bridge to potential engagement with other psychological researchers using an emergentist paradigm.

## Emotional Intelligence

Ryan LaMothe

Pastoral Care and Counseling, St. Meinrad School of Theology, St. Meinrad, IN, USA

Emotional intelligence is a relatively recent term that has significant implications for understanding religious experience and faith. Before defining emotional intelligence and explaining its relevance to religious faith, it is important to first set the stage by offering a brief definition of the term emotion and an overview of how it has been understood and used in philosophical and theological thought, as well as in the human sciences.

## Defining Emotions

There is considerable debate among researchers, psychologists, and philosophers about what emotions are and how they differ from feelings, sentiments, and moods (see Frijda 2000). “Some researchers,” report Parrot and Spackman, “conceive of emotion in an undifferentiated manner, investigating the effects of overall arousal, excitement, agitation, or drive without any distinguishing among different types of emotional states. Others treat emotional states as varying along two or more continuous dimensions, such as arousal and valence. The third and most common approach to emotional states treats them as discrete categories” (Parrot and Spackman 2000, p. 476). For our purposes, emotion comprises (1) complex mental processes that are innate or pre-organized, which may not be conscious or experienced as distinct feelings, and (2) discrete categories of feeling states such as anger, sadness, fear, and hate. Moods are different from feelings in that they are global and not necessarily directed toward an object or result from a particular object or event (Jacobson 1957, pp. 73–113).

## Overview of Emotions in Philosophy and Science

The notion of emotion vis-à-vis reason, will, and religious faith has varied in meaning and significance in Western philosophy and theology (Solomon 2000, pp. 3–15). Aristotle, in his Rhetoric, recognized that emotions are necessary for rational appraisal and the good life (see Sorabji 2000, pp. 23–26). Rational appraisal for Aristotle includes a person’s ability to assess accurately a social context and to act with the appropriate amount of emotion. After Aristotle, the Stoics offered a slightly different perspective on emotions. Sorabji noted that the Stoics identified four emotions, namely, distress, pleasure, fear, and appetite (Sorabji 2000). They claimed that every “emotion involves two distinct value judgments. One that there is

a good or bad (benefit or harm) at hand, the other that it is appropriate to act” (Sorabji 2000, p. 29). Posidonius, a later Stoic philosopher, criticized the intellectualism of other Stoics, arguing, “that the examination of things good and evil, the examination of goals, and the examination of virtues depend on a correct examination of emotions” (Sorabji 2000, p. 95). Posidonius also said that there are occasions when we experience emotions that are not connected to value judgments (e.g., being moved by music), suggesting that there are irrational or unconscious processes at work; in modern-day parlance, there are emotional experiences that are tenuously connected to the prefrontal cortex. Emotions, for the Stoics, also involve imagination and attention. That is, we can increase the intensity of emotion by way of our imagination.

Solomon argued that, as the Hellenistic philosophers gave way to Christian theologians, several significant changes occurred regarding how theologians conceptualized the relation between reason and emotion. In general, emotion was split between those that led to vices and those that led to virtues. Desire and passion were seen as distorting the will and reason, which gained expression in the seven deadly sins. The good emotions were love, hope, and faith and these were “often equated with reason” (Solomon 2000, p. 6). Emotions linked to the passions and desires were suspect, needing to be eradicated or controlled through spiritual disciplines. The elevation of reason and suspicion of intense emotions were yoked to how theologians conceptualized gender and power. Men were viewed as having greater capacities for reason and women and children with less, making them more susceptible to emotions (passions).

Some modern philosophers have been critical of Cartesian and Christian philosophical traditions that elevate, if not glorify, reason and ignore or minimize emotions in reason and faith (Fiumara 2001; Furtak 2005). John Macmurray, who seemed to take one of his cues from Spinoza’s view that rationality and irrationality are qualities of emotions, was one of the first

modern Western philosophers to argue forcefully that reason plays a role in emotional life and that reason is contingent upon emotion. “Any inquiry,” he wrote, “must have a motive or it could not be carried on at all, and all motives belong to our emotional life” (Macmurray 1992, p. 3). Macmurray believed that we “can only begin to grow up into rationality when we begin to see our emotional life not as the center of things but as part of the development of humanity” (1992, p. 14). For Macmurray, a dynamic interdependence exists between reason and emotion. Thus, we must cultivate both.

While ancient and modern philosophers debated questions about the significance of emotions vis-à-vis knowledge and religious faith, scientists were interested in studying (1) emotions in humans and animals, (2) emotional expressions and meanings across cultures, and (3) emotion vis-à-vis the brain. In the nineteenth century, Charles Darwin studied emotions in human beings and animals (Darwin 1972). In the United States, philosopher-psychologist William James rooted emotions in human physiology, arguing that emotion is caused by physiological sensations (James 1884). He later explored the relation between emotions and religious experience (James 1958). His Viennese counterpart, Sigmund Freud, developed a complex theory of the mind and its relation to anxiety, a central emotion in human life (Roose and Glick 1995). More recently, there has been an explosion of research regarding emotions and intelligence in relation to psychosocial development, psychopathology, and neuroanatomy (Ekman 2003; Shore 2003). This research demonstrates the (1) existence of a feedback loop between physical expressions of emotions and a person’s conscious experience of emotion, (2) centrality of emotions in perceptions and the organization of experience (the interconnection between the limbic system and the prefrontal cortex), and (3) importance of parent’s recognition and appropriate responses vis-à-vis their child’s emotional assertions in his/her developing the capacities for emotional self-regulation, empathy, and social confidence.

## Emotional Intelligence

This research has increased interest in moving away from measuring intelligence solely in terms of cognition. The ideas of interpersonal and emotional intelligence have been proposed, not to replace the intelligence quotient but rather to deepen and expand our understanding of the complexity of intelligence in human life. Gardner argued that intelligence comprises interpersonal and intrapersonal intelligence:

Interpersonal intelligence is the ability to understand other people: what motivates them, how they work, how to work cooperatively with them. Successful salespeople, politicians, teachers, clinicians, and religious leaders are likely to be individuals with high degrees of interpersonal intelligence. Intrapersonal intelligence . . . is a correlative ability, turned inward. It is a capacity to form an accurate, veridical model of oneself and to use that model to operate effectively in life (Goleman 1997, p. 39).

Both interpersonal and intrapersonal intelligences, Gardner claimed, include the abilities to recognize, differentiate between, and appropriately respond to the desires, aims, emotions, and moods of other people. This requires a person’s ability to notice and respond appropriately to social-emotional cues, all of which may take place outside of awareness. Similarly, emotional intelligence, which has various definitions and emphases, refers to an array of cognitive-emotional capacities whereby a person is able to recognize, monitor, and regulate his/her own feelings, as well as the feelings of others. This is accomplished through awareness and appraisal of one’s own and others’ tone of voice, facial expressions, body posture, and gestures, as well as an individual’s and group’s ability to think about or reflect on their emotions (see Taylor et al. 1999, pp. 339–354).

Daniel Goleman has done much to popularize the term emotional intelligence. Citing and summarizing Salovey and Mayer’s, he identified five capabilities related to emotional intelligence, namely, (1) knowing one’s emotions, (2) managing one’s emotions, (3) recognizing emotions in others, (4) motivating oneself, and (5) handling

relationships (Goleman 1997, p. 43). In a later work, Goleman narrates the discussions between scientists and Tibetan religious leaders about destructive and constructive emotions (Goleman 2004). In these conversations, scientists identify research that points to the effectiveness of religious meditation practices in increasing the capacities of emotional intelligence.

### **Emotional Intelligence: Implications for Religion and Faith**

Since Goleman's book, there has been a rise in the literature on emotional intelligence, ranging from scholarly articles to popular self-help books for parents, teachers, leaders, and business people. Some of this has spilled over into the area of religious faith, though the implications of the idea of emotional intelligence for understanding religious faith development are still being realized, in part, because researchers and clinicians continue to rely on cognitive and psychodynamic theories and models of development (see Lyon 2004, pp. 269–284). These psychological perspectives tend to relegate emotions to the background, suggesting that the primary focus of faith development is the regulation of emotions. Instead of relegating emotions to an adjunct position, we might wonder how the notion of emotional intelligence alters views on faith, faith development, and religious experience. How, in other words, does the idea of emotional intelligence inform our understanding of religious faith and experience? Does faith depend on cultivating emotions? If emotional intelligence is necessary for individual and social health, do religious practices and beliefs contribute in any way to the development of emotional intelligence? By contrast, what religious practices and beliefs obstruct emotional intelligence?

While there is growing interest in addressing these questions more directly (Emmons 2000, pp. 3–26; Reich 2003, pp. 1–32), Goleman and others note that religious practices and beliefs can contribute to the development of emotional intelligence. Goleman points to research that shows how Tibetan religious beliefs in loving kindness,

gentleness, and compassion – coupled with the practice of meditation – contribute to emotional intelligence. Similarly, Christian beliefs such as loving one's neighbors, showing compassion for others, as well as religious practices that aim to embody these principles can lead to the development of emotional intelligence and a living faith. One may conclude that (1) the development of emotional intelligence is necessary for the development of a religious faith that embodies compassion, empathy, and loving kindness and (2) particular religious practices and beliefs can lead to the development of emotional intelligence. This said, faith researchers also recognize that human beings can be deliberately cruel and destructive. Traditionally, theological concepts such as idolatry, sin, and evil have been used to account for human destructiveness. The idea of emotional intelligence can be used to reinterpret theological concepts (e.g., sin and idolatry) and expand our understanding of maladies of faith or religious experience.

Research on emotions and the development of emotional intelligence adds to our understanding of human life. This offers theologians, researchers on religious experience and faith development, and ministers of all faiths opportunities to reconceptualize and expand upon their theological anthropologies, their theories on faith development, and their practices of care.

## Enlightenment

Wing-shing Chan

Faculty of Medicine, The Chinese University of Hong Kong, Hong Kong Special Administrative Region of the People's Republic of China, Shatin, NT, Hong Kong

Enlightenment generally refers to phenomena involving a significant change of consciousness regarding the self, others, and the universe with accompanying physiological, perceptual, and

conceptual changes that result in significant spiritual or moral changes. It is commonly used in Chan (Zen) Buddhism to refer to the experience resulted from accomplishment in practice, meditation, or insight that is synonymous as seeing the Buddha nature or self-nature or discovering the true or original mind.

That the experience of enlightenment is a critical step of spiritual change toward Buddhahood instead of exercising ritual practice, performing philanthropy, observing ethical disciplines, or merely cultivating calmness meditation had been an emphasis of the Chan school beginning from Bodhidharma. The emphasis on the practice and concept of sudden enlightenment began to gain ground and become the mainstream with the systematic and institutional propagation by the school following the Six Patriarch Huineng.

## Definition and Critical Stages

Enlightenment is an experiential realization of the Buddhist philosophy of no-self and the liberation from inner vexation leakages. The sense of self versus others is broken through with the dissolution of the subject-object duality due to the cessation of the mind's uncontrollable discursive and illusive thoughts. It is sometimes being described as the experience of the “shedding of the body and mind” or “the falling off of the bottom of a paint pail.” Whether there is any experience of light or some specific exalted blissful feeling is not its primary concern.

The development of enlightenment may be most easily understood through the Ten Ox Herding Pictures (Sheng-Yen 1988). They represent the successive stages from beginning practice to helping others after full enlightenment. The story describes the journey of an ox herder, a practitioner, looking for his lost ox, the enlightenment mind. Some milestones are the following:

- (1) the third picture – Seeing the Ox: It refers to the first discovery of the true mind with no illusive thoughts. This can be regarded as the initial enlightenment experience, seeing Buddha nature or kenso

- (2) the seventh picture – Ox vanishes and man exists: Gross practice is no longer necessary to sustain the enlightened mind but mindful awareness as subjective consciousness still exists
- (3) the eighth picture – Both vanishes: An empty circle is left without the ox and the man. Subject-object duality vanishes with the forsake of any minute effort of mindful awareness. This is usually regarded as great enlightenment
- (4) the ninth picture – Return whence they came: Water is boundless; flowers are red. The objective world is perceived same as before, but the mind is unshaken by the world in leaking vexations. This can be regarded as full enlightenment.

### **Cultivation, Gradual Enlightenment, and Sudden Enlightenment**

Meditation can be distinguished as mere cultivation or enlightenment prone by whether it is just an exercise of concentration or whether it is a universal mindful awareness without a fixed concentration focus (Chan 2004). Cultivation through concentration leads to calmness or samadhi. The release of concentrated contemplation as being crucial for attaining enlightenment is emphasized by Chan schools such as sects of Ox Head or Caodong (Soto) that employ mainly the method of meditation for enlightenment.

Enlightenment can be classified as being gradual or sudden. Meditation that works by concentration is not enlightenment prone and should be classified as being cultivation instead of the often misclassified gradual enlightenment. Gradual enlightenment practice should be capable of leading to enlightenment, although taking on a gradual unfolding path. The Ox Head and Caodong sects are examples of the gradual enlightenment schools. Sudden enlightenment schools, derived from the Huineng school, flourished with Master Mazu's masterful enlightenment initiation (see the entry on "[► Enlightenment Initiation](#)" in this encyclopedia) methods like twisting a disciple's nose or kicking down an enquiring disciple by the

chest, emphasized the attainment of sudden enlightenment instead of extended meditation cultivation. Sudden enlightenment can be understood as a sudden glimpse of Buddha nature when the barriers of illusive thoughts are suddenly dispersed. Often it is only available to people who have adequate preparation of practice and more often than not people need to continue practice, such as daily mindful awareness, after sudden enlightenment. There can only be differences in the comprehensiveness and stage of enlightenment experience, but there is not a priori difference between enlightenment reached by gradual or sudden approaches (Chan 2008).

### **Methods of Enlightenment**

Enlightenment may be set off by some environmental stimulus, or purposely being initiated by the act or speech of a Chan master when the person's mind is at a pre-enlightenment stage, often being still with little or no illusive thoughts due to practice or meditation. Systematic methods are employed for attaining enlightenment, like Silent Illumination or Shikantaza meditation and the practice of Huatou or gongan investigation. The meditation methods still the mind by universal mindful awareness without meditating at a fixed focus. The enlightened mind unfolds when the mind is emptied of all tiny dust of disturbance by illusive thoughts through mindful awareness meditation. The investigation methods use a phrase or episode of a former enlightenment case, and the practitioner repeatedly brings up mentally the phrase or episode and attends to the part of the mind before the case is raised. Continued practice of attending to the non-discursive part of the mind will lead to a conglomeration of the discursive thoughts to become what known as the "great doubt." When such great doubt bursts through, the enlightened mind clear of all illusive thoughts unfolds.

Intuitive insight is often enhanced in the enlightened mind that is unobstructed by discursive or illusive thoughts. However, conceptual and logical thinking are not in principle contradictory to the enlightened state. Only when enlightenment

is being examined, as by Chan masters, direct and spontaneous responses become more representative of a disciple's personal experience of enlightenment than prolonged conceptual investigation.

If attachments on the self and the world can be regarded in Buddhist philosophy as the origins of suffering and evil, then enlightenment that involves a dissolution of the self and hence a lessening of attachments will lead to spiritual goodness and salvation of the person and the world.

## Enlightenment Initiation

Wing-shing Chan

Faculty of Medicine, The Chinese University of Hong Kong, Hong Kong Special Administrative Region of the People's Republic of China, Shatin, NT, Hong Kong

Enlightenment initiation refers to the events, either natural or by human, that directly lead to a person's enlightenment. The Buddha is reported to be greatly enlightened when he

watched the appearance of a brilliant star while meditating. Throughout the history of Chan (or Zen), thousands of people were enlightened while triggered by some natural events such as kicking a tile onto a bamboo strip or seeing one's reflection on water or being initiated by their masters through being hit upon or reprimanded.

The mystery of these enlightenment initiation events can be understood if we understand what enlightenment is involved and the mechanism that may lead to enlightenment. Enlightenment can be analyzed to be the realization of our Buddha mind (nature) when the barrier of illusive and discursive thoughts in the mind is being removed. Enlightenment experience can occur when either the barrier of illusive thoughts in the mind is completely dissolved or when such barrier can be temporarily halted or bypassed. Sudden enlightenment as often represented in Chan consists of a temporary halting or bypassing of the illusive thought barrier of the mind. In some instances, enlightening experience can also occur when a significant part of a person's strong attachment of the self or of the world is being detached due to enlightenment initiation (Chan 2008).

Enlightenment can be broadly classified into two types (Chan 2004): (1) initial enlightenment – initial enlightenment occurs when illusive or discursive thoughts are either stopped, halted, or bypassed resulting in the revelation of the nondiscursive mind. (2) Complete enlightenment – enlightened mind is sustained indefinitely without any application of concentration and illumination effort.

### Common Techniques for Enlightenment Initiation

Common enlightenment initiation techniques are described in the following ways (cf. Suzuki 1949):

1. *A verbal or behavioral shock that bursts open a concentrated mind*

Meditation or practice generally leads to a concentrated mind devoid of discursiveness. Enlightenment takes a step further by dispersing the internal effort of concentration to

become a self-sustained enlightenment mind of no discursiveness. A verbal or behavioral shock or a natural-occurring stimulus applied at the appropriate moment can burst open a concentrated mind and reveal the enlightenment mind. Many gongan (koan) examples include Master Dahui initiated enlightenment in his students through shouting or hitting and Master Mazu enlightening Baizhang through twisting the latter's nose with pain.

2. *Entanglement or short-circuiting of the illusive mind*

Some of the illogical or incomprehensible verbal statements spoken by Chan masters to their students are not to be interpreted by either Buddhist or common knowledge; they are just meant to be a way of entangling or short-circuiting the conceptual or logical habitual thoughts that are often dominated by activities of the illusive thoughts. Enlightened mind can sometimes reveal when the illusive thoughts are being entangled to a halt.

It was asked: "Does a cypress tree have Buddha nature or not?" The master (Zhaozhou) replied: "Yes." "When will it become a Buddha?" The master said: "When emptiness falls onto the ground." "When does emptiness fall onto the ground?" The master replied: "When the cypress tree becomes a Buddha."

3. *Bypassing the illusive thought barrier by forcing the illusive mind with no way to turn*

Chan masters are commonly known to hit their students for 30 sticks for a yes answer and yet gain 30 sticks for a no answer to a question. By creating impossible positions on either side, Chan master forces the student to forsake the conceptual mind already defiled by illusive thoughts and passes into the non-illusive mind, which is the enlightened mind. Master Guishan once was given a test, his master Baizhang pointed to a cleaning vase and asked, "Do not call it a cleaning vase, what would you call it as?" Guishan kicked off the cleaning vase and went out. He received the confirmation.

4. *An apparent irrelevant or illogical answer that helps stop the illusive mind*

Chan gongans (koans) are known to be full of irrelevant or illogical statements. The function of many such absurdity or nonsense is to make the illusive mind impossible to carry out its thought process and being forced to stop, which gives a chance for the nondiscursive enlightenment mind to reveal.

A student asked, "What is Buddha?" Master (Zhaozhou): "That inside the sanctuary." "Isn't that inside the sanctuary a clay statue?" Master said, "Yes." Student: "What is Buddha?" Master said, "That inside the sanctuary."

Eventually, the querying of such puzzle had itself developed into a method of practice known as "cangongan" (querying a public enlightenment case) or "canhautou" (querying a phrase of an enlightenment case). A very popular method of gongan or hautou derives from the following gongan of Zhaozhou. It developed into the popular gongan method of querying "Why does dog have no Buddha nature?"

A student asked, "Does dog has Buddha nature or not?" Master said, "No."

5. *Directing the mind from conceptual reasoning to nonconceptual insight*

Ordinary people's conceptual thinking is defiled by illusive and discursive thoughts. It is not useful as a direct means to approach the non-illusive enlightened mind. Thus, nonconceptual insight is often adopted by Chan masters to help bypass the illusive thoughts into the non-illusive enlightened mind.

Accordingly, masters had adopted methods that are speechless but requires insight such as turning into complete silence, raising or lowering the master's stick, walking from east to west or vice versa, presenting a symbol of a circle, raising the eyebrow or blinking the eyes, and calling the name of the student. When these symbolisms are used in a suitable context, they may elicit insight from the student that resonates with the nature of enlightenment. An example:

Yunyan came to seek advice, Master (Guizhong) showed the gesture of drawing

a bow. Yan was motionless for a while and acted the gesture of drawing a sword. Master said, "It happened all too late."

6. *Pointing out the misapplication of the student's mind while seeking enlightenment*

Chan masters often point out the wrong direction or assumptions of the student's application of their mind in seeking enlightenment. When the student stops looking or going into the wrong direction, they may have a chance to encounter directly enlightenment in the appropriate application of the mind.

For example, a monk asked Master Yuanmen: "Not giving rise to one thought, is there still any fault or not?" The master said: "Mount Xumi!"

Mount Xumi, an extremely enormous legendary mountain in Buddhist literature, here refers to the extremely wrong position of equating enlightenment with complete dispense of thoughts, logic, or conceptual thinking. Enlightenment is the purification of the mind from illusive or discursive thoughts, not to arrive at a mind that cannot think.

A monk asked, "How is the state of quiescence with no reliance?" Master Xuefeng Yicun: "It is sickness still." "What becomes of after turning?" Master: "A ship down Yangzhou."

The state of quiescence with no reliance seems to be the meditative state with no discursiveness or concentration effort. This initial enlightenment experience is still sickness compared to great enlightenment, when enlightenment is completely self-sustained with completely no meditation or contemplation effort and when the mind can be vigorously functioning with no fixation and simultaneously without any discursiveness, likened to the ship that flows freely down toward the city of Yangzhou.

7. *Direct symbolic representation of the enlightenment realm*

Chan gongans are filled with symbolic representations of the enlightenment realm spoken by various Chan Masters. Because enlightenment cognition contains simultaneously unification and differentiation, it is

often not describable clearly in ordinary dualistically opposed logic or conceptualization. Symbolic representations are often used to express (1) the internal state of the enlightenment mind with regard to no illusive thoughts and (2) the enlightenment cognition of simultaneously unification and differentiation, which can be used to stimulate and induce insight from the students.

When the states of mind of the Chan students are close to the said symbolic representations, a resonance can occur that reveals the enlightenment mind and that becomes an enlightenment experience.

Example of representation (1) is "A sunny sky without a cloud in ten thousand miles" and (2) is like "Holding a plough with empty hand, riding an ox while walking; Man walks across the bridge, the bridge flows without water flowing."

8. *Display of speech and action in congruence with Buddhadharma truth, e.g., Middle Way or nonattachment*

Chan masters display Buddhadharma truth, such as Middle Way position or nonattachment, through their speech or actions. Middle Way position refers to the nonattachment of either the form or emptiness of things. Such speech and action coming from an enlightened mind can sometimes resonate and awaken another near-enlightened mind if that is about ripe. Examples of the Middle Way and nonattachment positions are listed as follow:

There is a gongan about an old practitioner believed to be a transformation of a fairy wild fox, came to Master Baizhang to receive instruction about the question of whether a great practitioner would fall into cause and effect or not. Baizhang replied, "Obscure not cause and effect!" By this the wild fox appeared and was transmigrated and liberated.

Patriarch Huineng was asked who could get the rope and bowl from Bodhidharma. Huineng replied, "Who he knows Buddhadharma can get it." And the question followed, "Do you know Buddhadharma or not?" Huineng said, "I don't know Buddhadharma."

### 9. *De-attachment of Buddhism and the Chan Master*

The vital theme declared by Buddha for liberation of suffering is de-attachment. The religion of Buddhism requires not only the de-attachment to the worldly cravings but also to the religion of Buddhism and the religious master in order to gain ultimate liberation. Thus, in Chan there are often themes about renouncing the Buddhist principles and the upsetting of the master by the student. A popular Chan saying says, “With seeing self-nature the Buddha remains not; in great enlightenment the Master exists not.” There are cases about burning a wooden Buddha statue to keep warm and the hitting back to his master by Linji. Chan master can also purposely create a situation for de-attaching the student’s residual attachments to Buddhism and the master so that the student can attain ultimate liberation.

For example, when his student Lingxun was about to graduate, Master Guizhong asked him to come to receive the teaching of the supreme Buddhadharma. Guizhong told Lingxun to come closer and he went closer. Guizhong said, “Season’s cold, take good care of your journey.” When Lingxun heard upon this, he forgot at once his previous (intellectual) understanding.

## Epiphany

Kelly Murphy Mason  
Psychotherapy & Spirituality Institute,  
New York, NY, USA

Epiphany is the ecclesiastical feast that falls 12 days after Christmas. It marks the arrival of the Magi in Bethlehem to behold the Christ child; it also marks the end of Christmastide. The weeks following it that lead up to Lent are called Epiphany season, which has a variable length in the liturgical calendar. Etymologically, epiphany is derived from the Greek term for “manifestation.” The holiday was originally celebrated by the Eastern Church, to commemorate the angelic announcement of the good news of Christ’s birth, but later focused more on Christ’s baptism. The Nativity came to be understood as one instance of Theophany, a showing forth of God. Accounts vary between the Gospels of Matthew and Luke, the only two gospels to include Jesus’ birth narrative, but in each, people are immediately led to understand the momentous import of the birth: “Glory to God in the highest heaven and peace on earth and God’s favor to men” (Lk 2.14). Much later, epiphany was used generically to describe instantaneous insight; it was a frequent literary device in modern English literature, where it usually featured as a formative experience in a character’s development. For the purposes of psychology, an epiphany signals a breakthrough that allows a person to apprehend something more fully than before. It has an almost mystical quality to it, an intuitive veracity.

## Erikson, Erik

Lynn Somerstein  
 Institute for Expressive Analysis,  
 New York, NY, USA

Erik Erikson (1902–1994) was a developmental psychologist and psychoanalyst whose theory presaged Ego Psychology and Interpersonal theories of psychology as well. Erikson emphasized the interaction between the individual and society, placing great importance on the positive influence that religious and cultural values exert on individual development. Religion and its associated rituals provide a pattern, goal, and ideal for the individual life cycle. In his view, a religious life is part of the successful, healthy development of the individual and begins during the stage of basic trust, when faith has its start. Erikson writes, in *Young Man Luther*, “One basic task of all religions is to reaffirm that first relationship” (1958, pp. 118–119).

His early life was difficult. He was born out of wedlock and raised by his mother as a single parent until she married his pediatrician Dr. Theodore Homburger. It is believed that Erikson’s real father was a Gentile, but Dr. Homburger and Erik’s mother, Karla Abrahamsen, were Jewish and led an active religious life together with their family. Although Dr. Homburger eventually adopted Erik, he was not able to convey his total emotional acceptance to Erik as his son.

Identity was an important personal question for Erikson. He never learned who his real father was, but he believed that he looked like him. Erikson was tall and blond. He was criticized for looking like a Gentile when he was in Synagogue and for being a Jew when he was in

school, so he effectively did not fit in anywhere. He solved some of his identity conflict when he became a Christian after his marriage to Joan Serson, whose father was a minister. His confusion about who he was and where he had come from may lie at the bottom of his belief that the “identity crisis” is a normal event.

He is also famous for his Epigenetic Theory, which uses the stages of fetal development as a template for personality development. Successful passage through the early stages of his Epigenetic Theory yields later success, but problems that begin early ineluctably affect later development. The stages and their associated tasks are as follows:

- *Stage one:* Oral-sensory: from birth to one, trust vs. mistrust, feeding
  - *Stage two:* Muscular-anal: 1–3 years, autonomy vs. doubt, toilet training
  - *Stage three:* Locomotor: 3–6 years, initiative vs. inadequacy, independence
  - *Stage four:* Latency: 6–12 years, industry vs. inferiority, school
  - *Stage five:* Adolescence: 12–18 years, identity vs. confusion, peer relationships
  - *Stage six:* Young adulthood: 18–40 years, intimacy vs. isolation, love relationships
  - *Stage seven:* Middle adulthood: 40–65 years, generativity vs. stagnation, parenting
  - *Stage eight:* Maturity: 65 years until death, integrity vs. despair, acceptance of one’s life
- His most important published works are:

- *Childhood and Society*, 1950
- *Young Man Luther*, 1958
- *Insight and Responsibility*, 1964

## Eros

Kathryn Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

*Eros* [Latin *Erōs*; Greek ἔρως *érōs*] refers to passionate love, sensual desire, and longing. In the personified form of Greek mythology ca. 1386, Eros was the god of love, related to desire of an unknown origin. In the early creation myth, the *Theogony* of Hesiod (700 BCE), Eros was a primal god, son of Chaos, the original primeval emptiness of the universe. Eros emerged from the primordial groundlessness of Chaos together with Gaia, the Earth, matter,

and nature and Tartarus the underworld, creating a dichotomy of being. Some legends attribute Eros as the scintilla of desire that united Uranus (Heaven) and Gaia (Earth) from whose union the entire material world came into being. In early legends, he was the firstborn Light that was responsible for the fertile and creative coming into being and ordering of all things in the cosmos.

Later tradition depicted him as the son and attendant of Aphrodite, goddess of sexual love. Together, as gods, they harnessed the primordial force of love and directed it into human beings. In Greek poetry, Eros was often portrayed as a willful, playful, charismatic, and often impish god. In later Greek thought, Eros as a primeval deity transformed into the one who embodied the compelling energies of erotic love as well as the urgent force of ever-flowing nature.

His Roman mythological counterpart was Cupid (Latin *cupido*), or Amor, meaning desire or love. In Roman literature and art, he became increasingly more youthful, eventually represented as the son and companion of Venus. Eros was portrayed as a handsome winged youth prepared to shoot into the heart of an unsuspecting victim with his bow and arrow. He carried two kinds of arrows: one was golden with dove feathers that caused instant love and the other was leaden with owl feathers and was purported to cause indifference in those it pierced.

In the early Greek and Roman civilizations, the phenomenon of love was commonly understood as a kind of madness from the gods that involved the sometimes reckless and careless aim of Eros' love arrows. His arrows were thought to not only pierce and wound the person's heart, overwhelming the individual with love at first sight, but often to promote the antithesis: pleasure accompanied by pain. The notion of passionate love at first sight was commonly believed to lead to unrequited love, impelling the lover into depression, pining, and sorrow.

## Eros in Psychology

Eros was initially defined in Sigmund Freud's *Beyond the Pleasure Principle* (1920) as a life

instinct, sexual drive, and unifying force. Eros referred further to the urge for self-preservation and the desire to create life and productive work. Freud conceptualized that all human beings undergo an instinctual dualism with Eros and Thanatos. Thanatos is the destructive force of the death instinct, the psychological polarity that can lead to the disintegration, dissolution, and negation of all that exists. The underlying force beneath both energies is libido.

Analogous to Hesiod's notion of Eros emerging from the nothingness of Chaos, Freud posits that Eros is present in incarnation of matter out of inorganic material (Freud 1920, p. 61). Freud does not reference the work of Hesiod but demonstrates familiarity with the doctrine of the Greek physician and philosopher Empedocles of Agrigento (ca. 490–430 BCE), for whom the production of all things results from the interaction between two primary instincts: attraction and repulsion and love and conflict. Eros represents an increase in tension. With Thanatos, we find an eradication of all tensions. For Freud, the domination of libidinal Thanatos can result in neurosis, the propensity toward masochism, and suicidal tendencies. The domination of Eros fuels our sexuality and promotes creativity. Ideally, we strive toward a psychological balance between the interplay of these two energies.

Freud revised his drive theory over his years of psychoanalytic practice. Eros became a fundamental concept referring to the life instincts of narcissism. The immature ego is relegated to isolated self-love. The libido of the mature ego is directed toward object relations, connection, and relationship. Eros is rooted and has "aim" that takes psychological work to get at. As we become more aware of the aim, we experience something moving toward us and we may feel this something pulling us toward it. At first, the aim may appear as a desire for food, sex, a professional position, a published book, finding a partner, becoming pregnant, and becoming closer to God. Eros leads us beyond ourselves to connect with the aim or goal that is trying to become conscious. At the level of society, Eros leads toward kinship between individuals, groups, and nations.

Freud's theory of mature love implied "the all-inclusive and all-preserving Eros of Plato's *Symposium*" (Freud 1925, p. 218). Plato's concept of Eros included initial desires toward a person but also an aesthetic and reflective appreciation of the beauty within that person.

## Eros and Carl Jung

Analytical psychologist, Carl Jung, understands Eros quite differently than Freud. Jung views libido as vital psychic energy that includes the body, sex, aggression, and also divine pneuma (spirit). More than our bodily desires, Eros has to do with our subjective being in a body and with something we must do before we die. Eros is full of sighs: sighs of relief, sighs of what we long to achieve, whom we wish to unite with or be closer to, as well as sighs of mourning.

Jung used the term *Eros* to represent his primary theory of feminine psychology, specifically the psychology of the anima or feminine soul. The anima (or animus as masculine soul) is the center of the archetype, a dominant image in the unconscious mind that varies for each of us. The anima or animus is a figure opposite to one's ego gender and position. Jung tells us it is an entry point to the deeper unconscious. The anima/animus is the mediator between the ego, the Self, the Self being the central archetype of the objective psyche. The Self is process and content, originator and goal of our psychological life. The experience of the Self for Jung is numinous and feels like a river flowing toward its source.

In contrast to Eros, Jung spoke of logos as the decisive principal ascribed to men. In modern culture, we could think of *Eros* as psychic relatedness and *logos* as objective interest (1959, CW X: 123, 255). In Jung's writings, he specifies gender in relation to these concepts, and yet, the feminine principle is relevant to men as well as women in terms of sexual identity. In fact, the notion of Eros of antiquity was revered by the name *Erotes*, the plural of Eros which pertained to all attractions that induced love and desire, whether heterosexual or homosexual attractions.

More often for the Greeks, Eros was the benefactor of masculine enticements.

Drawing upon the legend of Eros and Psyche, Jung applied these two opposites to his theory of the anima/animus syzygy, or conjunction, of male and female psyches. Jungian theory claims that men possess the anima in their unconscious (images of the feminine soul, breathe, inspiration). These are qualities and representations of the feminine *Eros*. Personal individuation, or the journey of integrative wholeness, requires male consciousness to confront their anima on many levels by accepting *Eros* not only at the projected ego level (i.e., the merely sexual and visceral object) but also by assimilating more mature layers of the feminine principle into conscious being.

Jungian analyst Eric Neumann explains the developmental integration of the anima in the legend of Cupid (Eros) and Psyche. The relationship of desire between Psyche and Eros begins in an uroboric state, as self-containment in which there is not yet individual unconsciousness. Psyche initiates an encounter with Eros and intentionally brings him into the light. Her act represents the undertaking of making the unconscious conscious. In this act, the unconscious bond between them is dissolved, transforming mere objective attraction to genuine love and promoting individuation – the ongoing incorporation of unconscious contents that occurs both in the development of the collective and the individual human being (Neumann 1956, p. 90).

Making the unconscious conscious has risks; yet, we need to bring our desires into consciousness. Eros wants to step over into visible life to be expressed. If Eros is not allowed to become visible and to incarnate, its energies will fasten onto any of a range of addictions or to a social cause that lacks the fullness of enfleshed foundations. Eros needs the body to express itself: through dance, art, music, writing, creative activity, and the love of children. Without such expression, we can fall into illness, somatization, or, on the religious side, fundamentalism or shallow and projective social justice righteousness.

Psychologically, Eros can lead us toward what is hiding in the lost parts of our selves that wants

to be found that wishes to act out to become incarnate. In psychological practice, we track these lost parts of the self, regardless of school of thought, by paying attention to the desire inherent to Eros and not necessarily to its object. We study desire and where desire leads, observing what it ruthlessly seeks, acknowledging what object it is projected upon or images that it is linked with. If we follow the red thread of Eros, we also may discover what object desires us.

At this juncture, we cross into the territory of religion or spirituality. Eros can be defined as desire in relation to spirit. Our personal desires and wishes collect around an obvious theme. If we pay attention to its movement and its images – its feeling tone and its colors – we take on a motif, a gathering together of something principle, a coloring. We begin to question who or what is pulling us toward this need for combining our energies, our self, our bodies, and our ideas, with another person, activity, or relationship.

Unfortunately, in the history of the Judeo-Christian tradition, biblical literature leaves the feminine presence of Sophia behind – a personified presence in the late Hebrew literature – and we find an increasingly exponential split between spirit and Eros. Instead, we find a predominantly male, rationalized emphasis upon the notion that somehow spirit is superior to desire when, in fact, prospective desire leads to spirit and spirit attracts desire. Inherent to an analogical reading of scripture is the lavishing of the “first thing,” about God. Eros, then, is about having a passionate, all-out loving. In the biblical book of Hebrews, such loving is described as “fire.” Eros also flows into the biblical second commandment in that it underlies the efficacy of how social justice works. Otherwise, we just try to fix the world.

In the analytical arena, Eros as passion grows bigger because it comes into a fuller reality as it meets its opposite. What becomes evident and necessary for passionate love to break through is the prerequisite of a weak spot, a vulnerability in us. Something happens that shakes us loose from settled attitudes and creates a response that transforms vague longing into intense passion.

The recognition may be so profound as to be ineffable and experienced as a gap or a void. Passion is the thrust that leaps across this abyss. Passionate love becomes so concentrated at the particular point where it strains against unknowing that it can break the defended barriers, ushering us into a new sphere of experience in which love is given and received. Received, it is returned in response, equaling an exchange. Such passion does not require knowledge and intellect, only willingness. This process is one of self-giving, across a gap of unknowing toward an intensely desired wholeness (Haughton 1981, pp. 18–46, 58–61).

Wholeness links us with spirit and brings the body into the spirit. This fact is what distinguishes C. G. Jung's analytical psychology: we need desire and Eros to find God. God incarnates in the flesh of the psyche. We are innately possessed with the capacity to be conscious of the deity. When Eros aligns with the right object, this connection can link us to a life of relatedness. From Jung's view, depth psychology intends to point us toward religion as a container for the life of the unconscious.

The syzygy of anima and animus is an important factor in an individual's faith tradition because the images and affect that these images carry participate directly in the actual process of the transformation of the God image (Jaffe 1999, p. 25). Out of this inner marriage that Jung speaks of come images of the Self. Self-material is shared; it is not personal. There is a social aspect: if we do not share it, we lose it. Eros can breed a rich sense of interdependence in our work and in our communities, as if we are all connected. Eros as it bridges soul to spirit inevitably includes other people and constellates a "body" evoking us to ask: Is there a God? What is it that we love and that we are living for? What are we really summoned to? Are we living as a carbon copy of someone or something else, or are striving toward being an original? In order to answer these questions, we need to listen in the desert-place, the place of the still, small voice. We have to internally address any conflicting desires we find inside and to really grind down on the marrow to find what is addressing us.

In both psychology and religion, our goal is to pay close attention to this inner movement. How is Eros manifest? In our relationships, our groups, our communities, our creative projects? What does it ask of us? What Eros asks of us in relation to spirit often has to do with what the entirety of our mature lives will be about. First, however, we must find soul in relation to spirit. Jungian psychology offers a map for religion to follow in light of this transformation. We take what images we find under the authority of the psyche seriously, follow the thread of Eros, and eventually find the meaning and intention of our individual lives. Then our desires lead us to the body and to the spirit and through the spirit to the body.

Eros, approached, amplified, and understood from the literal to the symbolic, without the negation of the bodily and the real can lead to the secret of transformation and renewal. From the perspective of religion, Eros has to do with the first commandment, putting the first things first and offering these things up to God. In our faith traditions and rituals, the giving of our desire and Eros is the giving of the most precious thing that identifies us as individuals. Transformation and wholeness requires of us that we sacrifice that which is most dear to us, offer it, give it up, and disidentify from *it*. We are yielding our ego-claims to the "beyond ego." Jung would say this is initiated by the Self. Something comes into our ego-neighborhood. We feel impelled by internal reasons.

As we offer up our desire, all the bits of ourselves begin to be collected and come into a more cohesive image. The Self too is changed, freed from unconscious projection into conscious focus. The Self sacrifices itself in the abstract to the ego. The unconscious Self becomes humanized just as the ego is spiritualized. Hence, the God image is transformed and changed, and we too are transformed by being taken into the center, the Self where we can live from. We can live from this center and the unconscious does not control us. In essence, if we pay attention to Eros, we arrive at where we belong.

## Eschatology

Emily Stetler  
 Department of Theology, Mount St. Mary's  
 University, Emmitsburg, MD, USA

The etymology of “eschatology” is ambiguous; the Greek root may be either *eschaton*, “end time,” or *eschata*, “final things.” Eschatology is more commonly described using the former understanding and thus defined as “the study of

the end time.” In practice, though, eschatology encompasses the latter sense, as well. Particularly in Catholic theology, eschatology has traditionally been defined as being concerned with the so-called four last things: death, judgment, heaven, and hell. (To these four are sometimes added Purgatory and the resurrection of the body.)

Beyond this, though, eschatology also provides the venue for religions to speak of their *hope* both for the afterlife and for the here-and-now. Increasingly, eschatology also has come to imply a theology of history, as well.

As a theological field, eschatology covers a wide array of topics, for it is concerned with the ultimate fate of the cosmos and of humankind. The unfolding of this drama varies widely, however, across and even within faith traditions. In general, though, two basic understandings of the eschaton exist: in one, the world comes to a culmination inherent in nature, and in other, the world ends violently, under assault by seemingly external or supernatural forces. The first is immanent, *within* history; the latter is an *escape* from history. This latter interpretation of eschatology is labeled *apocalyptic*. These distinctions are related, but not identical, to the further distinction between *realized* and *futuristic* eschatology. Futuristic eschatology looks toward fulfillment in some transformation – though not necessarily an apocalyptic one – at the end of time, whereas realized eschatology emphasizes that the present life has already been transformed through the sanctification of history.

A single faith can have both immanent and apocalyptic elements in its eschatology. For example, in Zoroastrianism, creation is oriented toward the *frashokereti*, the refreshment or renewal of the world, in which all is perfected; and devotees of the creator-god Ahura Mazda can precipitate this renewal through their actions. The prophet Zarathustra's emphasis on personal responsibility underscores that, through their own righteous behavior, individuals participate in the vanquishing of evil and restoration of the world to its right state. Ultimately, though, the final restoration must be accomplished by the divine himself; Ahura Mazda must enter into his creation from outside of it and direct the

final battle against evil, a cosmic liturgy in which the evil principle Ahriman is banished to hell.

Indeed, violence, war, and disturbance of the natural world often characterize apocalyptic eschatology, as both Jewish and Christian apocalyptic narratives demonstrate. Yahweh tells the prophet Ezekiel that he will manipulate Gog, king of Magog, and cause him to invade Israel. God, in his anger, will rain down destructive fury: the earth will quake; mountains will crumble; the sky will rain fire and brimstone. The war and tumult will culminate in the destruction of God's enemies and the exaltation of Israel (Ezekiel 38:1–39:29).

In the New Testament, Jesus informs his disciples that, during the end times, there will be wars and natural disasters and the persecution of Jesus' followers; the Temple at Jerusalem will be desecrated. Following these things, the Son of Man – a title found in the prophets, as well – will return, accompanied by cosmic disturbances: the darkening of the sun and moon, falling stars. The angels will gather the peoples, and the Son of Man will sit in judgment (Matthew 24:4–25:46, Mark 13:5–37). John's vision, as recorded in the book of Revelation, also includes wars and heavenly signs, but the battle is much more explicitly one between good and evil, at the end of which Satan is ultimately consigned to a lake of burning fire, while Christ, his martyrs, saints, and church (portrayed as his bride) rejoice in heaven for all eternity.

Apocalyptic accounts also typically feature a heroic figure that marks the penultimate stage of the conflict between good and evil. In Zoroastrianism, it is the final *saoshyant* who restores peace before Ahura Mazda returns. In Islam, Jesus (Isa) returns to vanquish Dajjal, the anti-Christ. In Shi'a Islam, he is accompanied by the Madhi, the twelfth Imam, who went into occultation as a child to return at the end times. In Hinduism, Kalki, the tenth and final avatar of Vishnu, eradicates the impiety that has infected the world in the Kali yuga (the dark age) in order to prepare for a repetition of the first age, the age of righteousness (the Satya yuga).

Eschatology, however, does not concern only narratives of the end times; it also describes the

objects of a religion's hope. Jewish eschatology, thus, relates fundamentally to the restoration of the kingdom of Israel and the Davidic dynasty (Jeremiah 33:14–18). This doctrine develops chiefly in the prophetic books of the Bible, attributed to the period leading up to and during the fall and exile of Israel and Judah. The prophets foretell a time when the Lord will lead the people back from exile; and Yahweh's anointed servant, the Messiah, will reestablish the Davidic line and usher in an era of everlasting peace (Isaiah 11:1–16, Isaiah 2:1–2, Jeremiah 23:1–8). The holy city of Jerusalem will be rebuilt, and true worship at the Temple will be restored (Jeremiah 31:38–40, Ezekiel 40:1–44:31).

Since Christianity assumes that Jesus is the Messiah, it looks, therefore, toward the Messiah's *second* coming and believes that, when he returns, Jesus will bring a spiritual rather than a political restoration. Christians look toward Christ's return – the *parousia* – as the time when the dead will be raised and they, along with the living, will be judged by him. Those deemed righteous will enter into eternal life in heaven, and those found unjust will be relegated to eternal damnation. Likewise, Muslims hold heaven, Jannah, as the object of their hope. Jannah is a place where the righteous both enjoy sensual delights – flowing rivers (Sūra 2:25) and virgins – and participate in glorifying God (Sūra 10:9–10).

Since Buddhism does not conceive of a permanent enduring self, its eschatology takes a different form. The individual concern is not the attainment of heaven, but rather release from suffering. The Buddhist hopes to extinguish desire and the passions and thus end suffering, ultimately breaking free from the cycle of *samsāra* – birth, death, and reincarnation – in the attainment of *nirvana*. Pure Land Buddhism differs, however; here, the person desires to be reborn in the Land of Bliss, a heavenly land created by the Amitābha Buddha.

To be sure, disagreement over eschatological details has resulted in doctrinal division within religious traditions. To take an example from Christianity, Revelation 1:1–10 tells of a 1,000 year period during which Satan will be chained in the abyss and the martyrs will reign. After these

1,000 years, Satan will be released and will once again lead people of all nations astray before his final defeat and his eternal torment in the lake of fire begins. Whereas Catholic and most mainline Protestant churches deny a literal millennium, other Christians affirm it. Within this latter camp, there is a division between those who believe that Christ's second coming will precede the 1,000 years (premillennialists) and those who believe the millennium will occur before his return (postmillennialists). In general, those subscribing to millennialist eschatologies have a strong belief that Christians must, during the reign of Christ, work to establish his kingdom on earth. Nonetheless, Christians are united in their belief in an afterlife, although even in this realm, there are debates. The Catholic Church holds that only saints go immediately to heaven; others must be cleansed in Purgatory before going to heaven. Protestants deny the doctrine of Purgatory, claiming that it is unbiblical and that it mitigates the salvific work of Christ.

## Commentary

Perhaps more than any other doctrinal category, eschatology has reflected the historical and scientific concerns of the time and, likewise, has absorbed its anxieties. Thus, in late antiquity, we see Christian theologians pondering the resurrection of the body, with their primary concern being *how*, precisely, God will reconstruct, at the resurrection, a body that has decomposed or even been eaten by another creature. While this particular question may strike us as naïve, it is certain that religious traditions that espouse belief in a bodily resurrection must wrestle with what the ramifications are for treatment of the human body, living and dead, and for the precise relationship of body and soul; for a religion's eschatology reflects, in many aspects, crucial aspects of its theological anthropology.

Following World War I, philosophers and theologians confronted a loss of optimism about history and its developments; World War II and the Shoah heightened this sense. In the wake of this pessimism, eschatology emphasized new themes as theologians attempted to reinvest history with

meaning. For some, including the Protestant Jürgen Moltmann and the Catholic Johann-Baptist Metz, both German, this meant infusing eschatology with a call for praxis. Both Moltmann and Metz were influenced by the revisionary Marxist Ernst Bloch and demanded concrete engagement with history in its actuality, rather than merely through theory. Moltmann has focused on the necessity of hope in the face of suffering. Metz has presented an extremely intersubjective eschatology; all persons must become subjects, he asserts. Yet one person's achievement of subjectivity does not compete with another's; rather, each person's subjectivity *depends upon* the actualization of every other person's subjectivity. Without explicitly engaging it, Metz theologically parallels social psychology's understanding of the self as at least partially socially constructed.

Rudolf Bultmann, on the other hand, developed his eschatology out of an engagement with existentialism. For Bultmann, humanity's orientation toward the future demands that the person resist the idolatry of security and instead embrace the freedom and risk of the present.

Beginning in the latter twentieth century, eschatology has increasingly entered into dialogue with science. This conversation has led, on the one hand, to a renewed emphasis on the significance of the environment in the eschatological process. Additionally, the introduction of neuroscience into the eschatological discussion has raised the question of what, precisely, *is* the soul that endures beyond death and how much of it is reducible to the brain.

Additionally, in the latter twentieth century, psychologist Robert Jay Lifton has engaged depth psychology to suggest that the human search for immortality need not imply an actual life beyond death. Instead, Lifton suggests, immortality can also be achieved biologically (living through one's descendents) or through the production of enduring creative works.

## Esoteric Buddhism

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

Esoteric Buddhism is better known as Vajrayana Buddhism, from the Sanskrit meaning

“Diamond Way.” This is the major form of Buddhism in Tibet, Mongolia, in the Russian states of Buryatia and Kalmykia. It is also a minority group within Buddhists in Japan (Shingon school). This is generally considered a third “yana” or “vehicle” in Buddhism. The other two are the Hinayana (“lesser vehicle”) and the Mahayana (“greater vehicle”). Most of the earlier forms of Hinayana have died out, though the stream that has continued into the present is now termed ‘Theravada’ to avoid the somewhat pejorative implication of a lesser vehicle. All of the varieties of esoteric Buddhism share much doctrine with the other two schools, especially the Mahayana schools, and to that add influences from the Pan-Indian spiritual movement known as Tantrism.

Tantrism was a development in Indian spirituality that came in reaction to the asceticism and restraint of typical Hindu or Buddhist practice. It is sometimes known as the left-hand path for its use of activities or symbolic activities that are normally prohibited, especially sexuality. Snellgrove (1987) discusses how early and literal enactment for forbidden dietary practices, intoxication, and sexual activity was used as a way of breaking out of the dialectic of moral categories and using pure experience as a vehicle for direct gnosis. Over time, the degree of actual enactment diminished and was replaced by symbolic enactment. Westerners have been particularly attracted to the sexual aspects of Tantrism in either actual practice or imagery work. Numerous popular redactions of Tantric practices in the West tend to pitch it as a way of heightening one’s sexual pleasure through withholding orgasm, among other techniques.

It can be said, however, that Tantrism is one of the few places where the sexual act itself is sacralized and used as a vehicle for spiritual development. In most religious contexts, sexuality is seen as a rampant desire that needs to be controlled in order for spiritual development to proceed. This stems from a root philosophy common to both East and West that the body and the material plane of existence are inferior to the mental, psychic, and spiritual planes, which being nonmaterial are therefore higher in the spiritual nature. This idea is not inherently

anti-sexual, though it lends itself to that emphasis. There are examples within both Indian and classical pagan spirituality of positive views of sexuality in moderation and restraint, while still recognizing the superiority of the spiritual realm.

Be that as it may, sexual imagery is a foundational aspect of Tantric practice. The divine is typically portrayed in physical forms of both male and female and often in sexual union. If one chooses not to use a physical partner, Tantric practice involves generating imagery, identifying oneself with one aspect of the deity and visualizing various manipulations of spiritual energy in that form. At the conclusion of the practice, the image is dissolved and one sits in meditation. In Buddhist forms of Tantrism, this is linked to the basic Mahayana doctrine of emptiness (Skt. “*shunyata*”).

At its heart, Tantric practice is the working of high magic. There is a great deal of similarity between techniques used by Tantric adepts and those who are initiates in Western occult or magical traditions. That is, the basic spiritual practice involves generating spiritual energy and in a disciplined manner going through several transformational rituals that manipulate that energy and put it to one or more usage. Thus, meditation practices in esoteric Buddhism make extensive use of multisensory phenomena in trance work. Visual imagery; use of physical gestures (Skt. “*mudras*”); chanting either aloud or silently, mantras, or verbal formulas; repetition of a variety of prayers; and the invocation of divine presence (similar to “drawing down the moon” in Western occultism) are all found in the various “*sadhannas*” or sequence of events that are made part of daily spiritual practice.

The ability to draw down the divine force into direct embodiment goes back to the earliest shamanic practices before the evolution of larger world religions and spiritual movements. In this sense, Tantric practice makes connection to the earliest layer of human spirituality while filtering it through a more evolved theology. Magical practices continued even as civilizations resulted in the bureaucratization of religion and the development of theologies with elaborate logical and explanatory structures.

Because of the intense nature of the imagery and/or actual practices, as well as in keeping with the elaborate formalism of ritual, a direct connection between a student and a practitioner is emphasized. The “guru” and “chela” relationship found in both Hindu and Buddhist traditions is deepened by the requirement of secrecy of teachings and the rite of initiation into a set of mysteries and practices through a gradual and sequential curriculum. The instruction in correct practice of the meditational and ritual practices is a key element. The many texts of Tantric practice were originally kept secret, but now one can find most of them published in both the academic and popular press. Initiates are still generally instructed to keep things like mantras and detailed instructions private, to not disclose to those not initiated in the tradition. To support this privacy, there are often admonitions about the hazards of unauthorized practice.

Shingon Buddhism in Japan began in the 8th century led by Kukai (774–835 CE) and was influenced by Tantrism through Nagarjuna. Many of the beliefs and practices are congruent with the other Tantric forms of Buddhism found in Tibet and Mongolia.

In Tibetan Buddhism, these initiations are termed “empowerments.” Each of the many deities has their own particular “*sadhanna*” or practice. A qualified lama will generally give empowerments as well as less ritualized and more public talks about Buddha Dharma (Buddhist teachings and practice). Disciples accumulate several or even many empowerments over the course of their involvement in the spiritual community. Each empowerment comes with its own commitments to develop the practice and integrate it into one’s daily spiritual work, though the more one takes on, the less it is possible to pursue any one in depth.

Esoteric Buddhism emerged in the first millennium of the Common Era. It was heavily influenced by teaches from Nalanda, the greatest Buddhist monastic and scholarly community. This was the principal school for Buddhist from the seventh through twelfth centuries in India. Its destruction in 1193 presaged the disappearance of Buddhism from its native soil until the late nineteenth century, when a Buddhist revival

began, and the twentieth century, when the Tibetan diaspora fed the growth of Buddhism in India. Among the most influential teachers was Nagarjuna (150–250 CE). He expanded on the doctrine of emptiness as found in the Perfection of Wisdom sutra (Skt. “*prajnaparamita*”), one of the earliest Mahayana sutras. That doctrine is a healthy counterpoint to the heady mixture of imagery and concentration which is part of any ritual-based practice; realizing that, in the end, one has to come back from the “high” of the energy at its peak to the same dispassionate awareness of momentary experience, including suffering which is part of mindfulness practice common to all forms of Buddhist meditation.

## Esotericism and Psychology

Matthew Dillon  
 Religious Studies: Gnosticism, Esotericism,  
 Mysticism, Rice University, Houston,  
 TX, USA

Similar to the affiliated term “Gnosticism,” Western Esotericism is a scholarly term with taproots

dipping back into Late Antiquity that has only recently been recognized as an independent subject in religious studies. After presenting the classic definition of Esotericism, this entry will trace the etymology of the term and the subject matter typically found under its umbrella. The second half of the entry will broadly outline the historical relationship between esotericism and the psychological sciences beginning with Franz Anton Mesmer and culminating in the contemporary New Age.

## Meanings of Esotericism

Antoine Faivre, the father and leading figure of Western Esotericism as an academic discipline, defined Western Esotericism as a “form of thought” that can be recognized by the presence of four intrinsic characteristics in a thinker, movement, or text:

*Correspondences*: Symbolic and real correspondences are understood to exist between various levels of physical reality, history and the unseen or divine. For example, the cards of the Tarot deck may correspond to the Sephiroth of the Kabbalistic Tree of Life, or various body parts may correspond to the planets and their influences.

*Living Nature*: Nature here is not merely a collection of physical phenomena but is a nature seen, known, and experienced as *essentially* alive in all its parts. Earlier views may see a hidden fire beneath material manifestations, while later esotericists may refer to ether, astral light, or even consciousness.

*Imagination and Mediations*: Largely derived from the work of Henry Corbin, Faivre sharply distinguishes the notion of “imagination” from the realm of “fantasy,” or mere mind play in the form of images. Imagination here is rather an “organ of the soul” which allows humans to enter into a visionary relationship with angels and demons inhabiting the *mundus imaginalis* between the physical and spiritual worlds. Furthermore, this organ of the soul is precisely what allows the esotericist to decode the significations and correspondences

of nature, as well as to simultaneously participate in multiple planes of reference so that myths, magic, and rituals in the physical realm operate on the higher planes.

*Experience of Transmutation:* Faivre uses this characteristic to separate true esotericism from mere speculative philosophy. Transmutation consists of a form of illumination knowledge, or *gnosis*, which leads to the second birth.

These four intrinsic characteristics are often, but not necessarily, found with the following two characteristics:

*The Praxis of Concordance:* Most commonly understood as *philosophia perennis*, esotericists may look to establish common denominators between two or more traditions in the hopes of gaining illumination or gnosis.

*Transmission:* Faivre's sixth characteristic refers to the practice whereby esoteric knowledge should only be transmitted from a master to a disciple within a preestablished channel. This characteristic is most commonly found in initiatory societies (Faivre 1994).

## Etymology and History

The term "esotericism" is derived from the Greek adjective *esoterikos*, "inner." Early in its recorded usage, it was adopted by Patristics such as Origen and Gregory of Nyssa to refer to secret teachings reserved for the mystical elite found in a variety of philosophical schools and mystery cults. The substantive "esotericism" is of comparatively recent origin. The German noun *Esoterik* appears to have been coined in a critical commentary to Christoph Meiners' *Revision der Philosophie* by Johann Gottfried Eichorn as a reference to the domain of "inner" philosophy in 1792, therefore carrying much of the connotations of "secret" and "hidden" found in the adjective (Neugebauer-Wölk 2010). It was only through the nineteenth-century French occultist Eliphas Levi that the French cognate *l'esoterisme* expanded in popularity and geography, as occultists on both sides of the Atlantic used the term not merely in the sense of "hidden knowledge" but

also to refer to a Tradition of such knowledge and practices stretching through Western history that they saw themselves belonging to.

While scholars recognize an actual tradition of secret knowledge is historically implausible, the family resemblance of these figures, movements, and texts has helped identify a terrain of scholarly inquiry that reflects the emic religious construction at many points. These figures and currents commonly include Gnosticism, Hermetism, Theurgy, ritual magic, astrology, and alchemical experimentation as sources of and precursors to the birth of Western Esotericism proper in the Renaissance. Due to the translation of the *Corpus Hermeticum* into Latin by the magician and philosopher Marsilio Ficino in 1471, alongside of several other Platonic, Theurgic, and Neoplatonic texts, the European intelligentsia produced a staggering number of magical and philosophical works, the resulting fruits of which are broadly defined as the "occult philosophy." Moving forward from the Renaissance, the category typically includes Christian Kabbalah, Paracelsianism, Jacob Boehme and Christian Theosophy, organized esoteric organizations such as the Freemasons and Rosicrucians, Louis-Claude Saint-Martin and Martinism, French Illuminism, Franz Anton Mesmer and Mesmerism, and Eliphas Levi and the birth of the modern occult.

With the establishment of scientific materialism during the Enlightenment as the dominant cosmological paradigm culminating in what Max Weber referred to as a "disenchantment of the world," each of Faivre's four intrinsic characteristics of Western Esotericism must typically be considered implausible or scientifically untenable. Esotericism beginning with the occult is therefore understood as qualitatively different due to its need to respond in some way to this disenchanted worldview, and adoptions of and participation with psychological discourse have been the primary new mode of legitimization (Hanegraaff 1998). Later manifestations of Esotericism such as the Theosophical Society and the Hermetic Order of the Golden Dawn, up to and including the New Age and Neopaganism, exhibit this cross-fertilization of

esotericism and psychoanalysis, while psychologists themselves have interpreted elements of historical esotericism – such as magic and alchemy – psychologically, often having their interpretations reincorporated into the understandings of practical occultists.

## **Eighteenth to Mid-Nineteenth Century**

Although historically earlier esotericists have been read for psychological insight, the inception of psychology into esoteric thinking lies in the experiments of Franz Anton Mesmer. In his 1766 dissertation, the French medical doctor argued for the influence of planets on human maladies. Mesmer hypothesized that an invisible fluid permeates the physical universe and that illness was caused by imbalance of this fluid within the patient. In 1773, Mesmer began his experiments with one Miss Osterlin in order to test this hypothesis, and the resulting trance state of the patient and his practice of healing through magnetic shifting of the fluid became known as animal magnetism.

A cultural fashion in its time, animal magnetism attracted the attention of many intellectuals of the late eighteenth and early nineteenth century. One in particular, Marquis de Puységur, began his own experiments in 1784. While magnetizing Victor Race, he discovered astonishing phenomena that Mesmer left unreported: the patient exhibited an entirely new personality, showed a capacity for clairvoyance and mind reading, and was able to diagnose his own malady and prescribe his own cure. De Puységur was able to reproduce this state in his patients with some consistency. Despite early sympathy from the medical establishment in France, by 1842 the Academy of Medicine denied any validity to animal magnetism.

Exiled by medical science, the theorization of this trance state often fell to esotericists. German *Naturphilosophers*, with their theologies of light and electricity behind “living nature,” easily incorporated magnetic phenomena into their systems. In particular, the physiological hypothesis of two distinct nerve systems – the cerebrospinal

system, which was responsible for diurnal, rational thought, and the ganglion system that was responsible for phenomena and perceptions of the “night side of life” – became an early prototype for theories of mind that give independence to the unconscious.

Across the Atlantic, animal magnetism helped to catalyze a variety of religious movements that can be defined as esoteric. In 1837, Charles Poyen went on a lecture tour of the Eastern coast of the USA to demonstrate animal magnetism. Although Poyen departed in 1839, he recruited dozens of “lieutenants” to continue the lecture tour. One of them, J. Stanley Grimes, would introduce and inspire Andrew Jackson Davis to magnetism. Davis proved especially prone, and his visionary experiences and the accounts of conversations with his control spirits provided the most sophisticated and elaborate cosmology of American Spiritualism. Phineas Quimby, another trance subject of Poyen, founded “New Thought” based on his realization that patients could cure themselves by recognizing the superiority of mental operations over material causes.

## **Mid-Nineteenth Century to Present**

James Braid, suspicious of the metaphysical trappings of animal magnetism, invented the technique of hypnosis as an attenuated form of Mesmer’s practice in 1843. In this form hypnosis would reenter the medical establishment proper through the researches at the *Salpêtrière* in France by Pierre Janet and Jean-Martin Charcot. Janet’s major thesis *L’Automatisme Psychologique* detailed his researches with the hypnotized subject Leonie. His work on multiple personality disorder, as well as Charcot’s on hysteria, would help institute a theory of mind where the “night side of life” was associated with physiological disease and mental illness.

Other early professional psychologists offered reductive readings of spiritualist and mesmerist trance as well. The French psychologist Theodore Flournoy’s (1900/1994) *From India to the Planet Mars* interpreted the hypnotic subject Catherine-Elise Muller and her accounts of past

incarnations and the life on Mars as proof of a poetic, creative faculty in the subconscious capable of distinctive cerebration. Carl Jung's (1902/1978) own dissertation, *On So-Called Occult Phenomena*, interpreted the mediumistic trance phenomena of his cousin, Helene Preiswerk, as repressed complexes of the conscious personality activated in trance and acted out through personalities assembled through memories of former relations. While less reductive interpretations of hypnotic phenomena could be found in the work of William James and Frederick Myers, their voices were marginalized in later psychoanalytic discourse.

Practicing occultists at the turn of the twentieth century, many of whom were familiar with the researches of Janet and Freud, utilized techniques similar to animal magnetism for achieving self-trances in order to activate "night-side" powers of the personality and travel astral realms through the imagination. These magical efforts were dedicated towards transcending one's ephemeral ego awareness and communicating with one's "Higher Self" or "Genius," through whom one could come to know the divine. This threefold anthropology corresponded to their three-part cosmology, where the material universe could be transcended to navigate the "Astral Light," the fine-material substance occluded by physical reality which held within it infinite imaginal territories. Unlike their psychological counterparts, these realms and beings were given ontological reality, but like the psychologists they now placed access to them within the mind of the magician and theorized a fragmented and multiple self with conscious and unconscious dimensions (Owen 2007).

Psychoanalytic readings and adoptions of Esoteric thought in the early twentieth century helped facilitate the transition to a more fully developed psychologization of magic and esotericism. Herbert Silberer, the Freudian psychoanalyst, was the first to analyze alchemical and Rosicrucian texts from this angle (Silberer 1914). He concluded that while these texts could be read as Oedipal wish fulfillments, their meaning pointed to the use of introversion to release libidinous energy into mystical states. Jung's own

experiments with active imagination, later captured in *The Red Book*, were one of the sources he used in developing his phenomenology of the self in terms of the anima, shadow, and Self archetypes (Homans 1979). Jung's later writings on alchemy also provided a robust theoretical language that practicing occultists could adopt in order to understand their practice as a form of self-development without necessarily denying ontological dimensions to their experiences. In turn, by the mid-twentieth century, major figures in magic such as Dion Fortune and Israel Regardie had become practicing psychotherapists themselves.

By the late twentieth century, the New Age and affiliated currents had become so thoroughly imbued with psychological discourses that analytically separating "esoteric" from "psychoanalytic" discourses in the occult literature was impossible. Later developments in the psychological sciences such as transpersonal and alchemical psychology were eventually incorporated into the occult bricolage alongside the early adoption of Jungism. Although the contemporary occult literature is too vast to make uniform claims, in general the psychoanalytic discourse provides a framework for conceiving magical practice as a technology for psychological expansion, while the choice of psychological frames adopted allows a pragmatic attitude towards the ultimate ontological source of the experiences themselves (Hanegraaff 2006; Luhrmann 1989).

## Ethics and Ethical Behavior

Claudia Nagel  
Nagel & Company Management Consulting,  
Frankfurt, Germany

## Introduction

Human beings are constantly judging their own actions and those of others. Good and evil, moral

and amoral, and conscienceless are the respective judgments whereby we implicitly assume that “one” knows the basic difference between good and evil. Moral conduct is thus always attributed to an individual, who is regarded as being responsible for his actions and held accountable for these, i.e., he has to answer to himself, his own conscience, or an external authority or institution. Moral behavior therefore presupposes the concept of voluntariness and freedom. Conscience, freedom, and responsibility are central concepts of moral behavior and ethics as the philosophical doctrine of morally relevant behavior (Moral Philosophy).

Ethics as a philosophical discipline dates back to Aristotle, who also pursued earlier approaches, as those of Plato and Socrates. The term ethics is derived from the Ancient Greek “ethikos”: custom, habit, or tradition. Although the adjectival or adverbial forms of moral and ethical are frequently used synonymously, here the following differentiation – outlined by Anzenbacher (1992a) based on Kant’s definition – is made: an action is moral if it is judged in dependence on the individual conscience of the agent, while ethical also means according to convention and is thus placed in a social context. It is therefore open for discussion, on the basis of which norms an action is ethical.

Guided by the idea of a meaningful human life, i.e., a morally good and just life, philosophical ethics attempts to make universally valid statements about good and just behavior in a methodical manner – without reference to political and religious authorities or the well tried. It is primarily concerned with an answer to the questions “What shall I do? Who do I want to be, how do I want to live? What is a successful, succeeding, and happy existence?” complemented by questions like “In what kind of social and political environment do we want to and shall we live?” (Höffe 1999).

## Major Contents and Methodological Positions of Ethics

The Ethics of Morality was first defined by Aristotle. It describes the respective historically

and socially relevant norms and values as the basis for virtuous moral conduct; these shall be realized sagaciously.

The autonomous Ethics of Reason is subject to a rigorous principle of morals and posited primarily by Kant. Norms have to be verifiable with the aid of a procedure which claims universal and categorical validity. The categorical imperative is of the highest order and demands with consideration of our respective subjective maxims (life principles) to “Act only according to that maxim whereby you can at the same time will that it should become a principle of general law.” The decisive factor is alone the individual’s good will guided by reason. This approach has therefore also been discussed as an Ethics of Conviction. Kant asks for the conditions of the possibility for moral action.

Utilitarian Ethics, an approach posited by J. Bentham and J. St. Mill, is concerned with “the greatest happiness of the greatest number” and serves as a guideline for weighing the utility of an action and its consequences. As a result of the utility principle, the well-being of the individual comes after that of society as a whole, and a rational examination of the action is performed against the background of its concrete, foreseeable results (Lang 1992).

In Scherer’s phenomenological approach to Value Ethics, a hierarchy of tangible values which possess an objective quality (pleasure/pain; approve/disapprove; love/hate) is developed, where an action is described as moral when the respective highest-ranked value is realized (Pieper 2007).

In contemporary philosophy the *Discourse Ethics of Habermas and Apel* (developed as Ethics of Reason) plays an important role. They attempt to determine a rational foundation of reason by asking what we need to presuppose to conduct meaningful argumentation. The starting point is the discourse, the argumentation in speech. Everyone who argues has always implicitly committed himself to uphold four validity claims: understandability, truth, rightness, and truthfulness/frankness. These commitments are moral in a twofold sense: In the sense of an ethics of truthful communication, they commit the

subject to reason and represent a criterion for the negotiation and evaluation of moral norms. All norms upon which an agreement is reached by common consent in a discourse without constraints are morally binding (Lang 1992).

Alternative contemporary approaches to Discourse Ethics are anti-universalistic and relativistic as, e.g., the *Usualistic Ethics of Odo Marquard* (1981, 2007). His position is characterized by a skeptical stance and the renunciation of an ultimate moral standard and is oriented toward the concrete moral horizon of the “usual.” He thus arranges himself in a skeptical position between absolute knowledge and absolute ignorance in the sense of the Aristotelian doctrine of mesotes (extremes are to be avoided) (Lang 1992).

In addition to the described differences in terms of content, systematic differentiations also have an important role regarding the question as to the content of ethics. Differentiations are made between Descriptive Ethics, which is concerned primarily with the examination, description, and explanation of the phenomena of morals and conventions; Normative Ethics, whose principal concern is the critical analysis of prevailing morals and the reasons for forms and principles of right and good actions; and Metaethics, which attempts the critical analysis of linguistic elements in moral statements.

Based on the Ethics of Responsibility, the individual considers all possible consequences of a specific action in the evaluation of his decision to perform this action, while Ethics of Conviction is oriented alone toward the good intention, the good will.

The differentiation between Formal and Material Ethics, which is related to the differentiation between Deontological (obligation oriented) Ethics and Teleological (goal oriented) Ethics, is indebted to Kant. Formal Ethics (Ethics of Reason) is based on the universal idea of duty and moral laws. These have the character of unconditional, universally valid claims based on the transcendental view of obligation “from the universal concept of the reasoning being as such.” Exclusively applied are the precepts of rationality and the respective test procedures. It is the self-willing and determining reason which

constitutes morality. Material Ethics bases the concept of morality on the understanding, willing, and pursuit of good purposes or values (e.g., Virtue Ethics, Value Ethics). Material Ethics is frequently viewed as a complement to Formal Ethics in as far as it holds the criteria which serve to examine the moral value of goals and contents (Höffe 2002).

## Central Questions of Ethics

Despite the different approaches and groupings, ethics is essentially concerned with three different topics, which are also significant from a psychological perspective, because they are of basic relevance to all human experience:

1. Happiness
2. Good and evil
3. Freedom (Pieper 2007).

It is in the nature of most humans to strive for happiness. Ethics expounds on this natural striving of man for happiness and asks if and how this can be morally justified. While one school of moral philosophers claims that happiness represents the highest normative principle (Hedonist, Utilitarian, Eudemonistic, Egoistical Ethics), another puts the principle of duty before happiness; the striving for virtue, morality, and reason are given priority (Plato, Spinoza, Kant). It is, however, crucial that happiness cannot be achieved directly, but only through concrete goals, whose attainment holds the promise of satisfaction and thus of happiness. Furthermore, happiness does not simply occur but needs to be actively pursued in a practice, which contributes to a meaningful life when successfully accomplished.

The Good in itself is one of the central principles of ethics. In Greek philosophy and metaphysics, the Good is the essence of all being, the goal toward which all striving is directed, and through which man becomes wholly himself (Plato, Aristotle). Something is morally good, which is good in itself and not with regard to something else or for something else. Kant states, “Nothing can be thought anywhere in this world, or even outside the same, which can unreservedly

be regarded as good, except the good will alone . . . The good will is not good through that which it effects or accomplishes, nor through its usefulness in achieving a certain purpose, but it is good through the willing only, good in itself” (Kant 1995b – *Groundwork of the Metaphysics of Morals*: 180f).

Joined in the concept of the highest Good, in which consummate personhood is reflected, are the three topics of ethics: happiness, freedom, and the Good (Pieper 2007). “It is a priori (morally) required to achieve the highest Good through the freedom of will, . . . In the highest for us practicable – i.e., realizable through our will – Good, virtue and happiness have to be thought as necessary and connected” (Kant 1995b, p. 173).

The term freedom has repeatedly occurred above and is, in fact, of even greater importance to ethics, because it implies both precondition and goal. Today the question arises based on recent findings from neurobiology, attachment research, and psychoanalysis of how free the human being is in his actions. Were behavior – as it is understood by some behaviorists and neurobiologists – completely predetermined, there would no longer be a need for a science of morals.

While freedom was seen as self-evident in antiquity, it has assumed great importance in the reflections of modern ethics since Kant. As a “natural being” man is other-directed as a result of his sensuality, i.e., his drives, instincts, feelings, passions, needs, and interests (heteronomy). Even if he cannot invalidate the laws of nature, he can decide what he can want, shall want, or not want, i.e., he can act self-determinedly (autonomy). Because he can free himself from the constraints of nature and determine autonomously what he can want, he uses his moral freedom. In contrast to unconstrained freedom, arbitrariness, moral freedom refers to the freedom of others and acknowledges this as a principle. The contradiction between unconstrained, absolute freedom and freedom which delimits itself with consideration of the freedom of others characterizes moral freedom. Moral freedom is the basis for freedom of action. Freedom of action, which means not merely to

want the Good but to do it, is always limited by the prevailing circumstances.

Inherent in the concept of freedom is also one of the limits of ethics. As a theory it cannot be its own practice, because the realization of freedom lies outside itself. The individual is moral through will; it is not ethics that renders him moral. In addition, because freedom is one of its presuppositions, ethics cannot develop a material catalog of norms. It can, however, substantiate formal norms whose critical application functions as a standard for material norms. The critical evaluation and application is ultimately left to the acting individual (Pieper 2007).

The goals of ethics, which are of importance to humans from a psychological standpoint, may be summarized as the reflective enlightenment of the acting individual in regard to the moral conditions of his actions. With comprehension of freedom as an essential element for the human being, the critical power of judgment of moral actions, i.e., the critical differentiation between good and evil before the background of freedom as an unconditional principle, has to be practiced. A third crucial element represents the acquisition of moral competence and social responsibility (Pieper 2007).

### **The Psychic Development of Moral Competence as the Basis for Moral Conduct**

Two significant directions can be identified regarding the development of moral competence: the psychoanalytical view of Freud, complemented by several aspects from Jung, and the theories of developmental psychology ranging from Mead to Piaget and Kohlberg to Gilligan.

Kohlberg’s theory of moral development (Kohlberg 1984) is based on both Piaget’s stages of cognitive development and his division of moral development into a premoral, a heteronomous, and an autonomous stage analyzing the child’s changing awareness of rules. Founded on the results of his empirical research, Kohlberg

**Ethics and Ethical Behavior, Table 1** Stages of moral development

Level	Stage	Moral orientation
I. Pre-conventional level	1	Obedience and punishment orientation
	2	Self-interest orientation
II. Conventional level	3	Interpersonal accord and conformity
	4	Authority and social order maintaining orientation
III. Post-conventional level	5	Social contract orientation
	6	Universal ethical principles orientation

From Garz (2006, p. 102)

added three additional stages to those of Piaget and summarized these in three levels (Table 1).

These described stages of moral development may also serve as an indication of current social and historical development where moral conscience increasingly appears to be moving toward the discourse today (Lang 1992).

Kohlberg's stages of moral development are based on the conception of a moral of justice as proposed by Carol Gilligan (1982). She has elaborated Kohlberg's theory of moral development by introducing the concept of moral of caring, starting from the premise that both attitudes to morality are in a dialectical relationship. This approach is of particular interest because it complements the so-called "male" abstract moral with a "female" moral of human caring (Garz 2006, p. 117).

## Freedom and Psychoanalysis

Prior to Kant, psychology was a branch of Special Metaphysics. In contrast to General Metaphysics, i.e., ontology (science of the nature of being), psychology was regarded as Special Metaphysics concerning itself, as the "science of the soul," with questions of self-knowledge, identity, and oneness of consciousness. The focus of psychology has since then been on concrete psychic experience (Pieper 2007).

In addition to the development of moral competence, the question as to where the conscience

or morality can be located in the human psyche is of interest from a psychoanalytical perspective. In his theory of psychic structure, Freud names the superego as the judge or censor of the ego. The superego's functions comprise the conscience, self-observation, and ideal formation. This term therefore designates the presence of internalized values, commands, and prohibitions. The superego develops in the child after an extended period of need for support with the Oedipus complex and as a result of the fear of loss of paternal love. From a philosophical viewpoint, this would be expressed as follows: "The demand of the conscience (superego) may thus be seen as the advice to act wisely: Act in conformity with your conscience or you will lose the goodwill of the one whose protection and help you need" (Anzenbacher 1992, p. 207). Freud (1999) views morality as a strategy, in which culture, indirectly also serving the pleasure principle, attempts to defend itself against the destructiveness of aggression. Culture virtually installs the superego in the individual to serve as his conscience which constrains the ego; this leads to the development of a sense of guilt and the need for punishment and thus to the diminishment of aggression.

Freud considers the quest for the highest Good, the purpose in life, as emerging from the pleasure principle, which takes priority over everything else. This would, however, completely instrumentalize reason and cannot become practical as pure reason in the sense of Kant. This, in turn, would form the first result in the leveling of an independent meaning of morality (Anzenbacher 1992).

Jung (1995, § 825–857) asserts that ethics and moral are innate, because without the ability of the psyche to experience guilt there can be no sense of guilt. Furthermore, the omnipresent opposites are thereby raised to conscious awareness. Ethos is thus understood by Jung as a "special case of the transcendent function" which connects the unconscious with the conscious. Only in the conscious, reflective examination of one's own actions can what appears to be moral conduct be changed into ethical conduct. From a religious standpoint he

defines this as the establishment of a connection between reason and grace.

In relation to the principles of ethics, psychotherapy and psychoanalysis as applied psychology also have an important role. Psychotherapeutic and psychoanalytic methods essentially consist of the dialogical working-through of the patient's emotional history. It is the aim of the therapy to free the individual from psychic constraints through the bringing to consciousness, emotionally working through and processing of complex- and conflict-charged events that prevent him from living life as a truly human being liberated on to himself. This is a moral aim in a twofold sense, as it also requires the analyst to be conscious of his own responsibility. However, in contrast to ethics, psychology does not aim to reflect on the conditions of moral conduct but wants to enable the human being to act morally. Through cognitive insight and emotional experiences, i.e., through self-knowledge, the individual shall recognize and integrate the constraining factors to achieve the capability of interaction. The discourse ethicist Habermas connects morality and psychoanalysis as follows: "Since the analysis imposes the experience of self-reflection on the patient, it calls for a 'moral responsibility for the content' of the disorder. Because insight as the aim of analysis is only this, namely that the *ego* of the patient is to recognize itself in the other represented by the disorder as his alienated *self* and identify with it. As in Hegel's dialectic of morality, the offender recognizes his own destroyed being in his victim, an act of self-reflection through which the abstractly separated entities perceive the devastated moral totality as their common ground *and through this* are able to return to it. Analytic knowledge is, at the same time, moral knowledge" (Habermas 1968, p. 288).

In contrast to Habermas, Drewermann (1982), who as a moral theologian, church critic, and psychoanalyst attempts to establish a connection between religion and the unconscious, describes psychoanalysis as inherently amoral. Psychoanalysis is essentially concerned with the confrontation with never questioned, internalized contents of the superego and so to decide against

prevailing norms. "Every psychotherapy renders a bit more conscienceless, egomaniac, unscrupulous. Every psychotherapy is therefore a kind of seduction, a lesson in immorality" (Drewermann 1982, p. 83). While he views this in one respect as positive in that it implies an increase in individual freedom, it is also from a Hegelian perspective a risk, because self-consciousness can be achieved only in a life and death struggle. At stake in this struggle are the concepts of free or not free, self-determined, or other-directed, but not of good or evil. In the course of the struggle the Old has to be cast off and combated, the subjectively accomplished acknowledgment of morality, i.e., the awareness of morality through a process of becoming conscious gained against the background of personal freedom can be reintegrated only in a second step according to Hegel. The New is then frequently identical with the cast-off Old, although now it is chosen self-determinedly and consciously. In the sense of Hegel, the moral dilemma would then be resolved. It remains, however, open to question if in the phase of self-discovery of the analysis, the second step is actually taken, i.e., if the reconnection to the prevailing morality is achieved or should even be achieved. This, in the sense of the goal of freedom, shall not be the aim of psychotherapy or psychoanalysis. If ethics were "repealed" and humans in their being good or being active would no longer find a justification for being or developing, there would nevertheless need to be another reason for the justification of being. Drewermann's stance is that this can be found in man's being held in the grace of God. For him it is God who is the ultimate reason for man's being, while the Moral is not the definitive measure of humanness. The aim of psychotherapy would then be the – humble – acknowledgment of one's own being and the assumption of responsibility for one's own life as a gift of God. His position is thus contrary to the basic principles of ethics, to find determinants for moral conduct outside of (religious) authorities.

## Ethics in Counseling

Wayne E. Gustafson  
Susquehanna Family Counseling Ministry,  
Ithaca, NY, USA

A parish minister “reminds” a presurgical patient to be “right with God” in case death results from the surgery. Or a psychotherapist insists that a woman leave her abusive husband without considering how her “faith” might inform her decision. Professional counseling, particularly when religious/spiritual elements are present, can be both a powerful and dangerous resource in the healing process. Think of *religion* as a conscious and socially organized expression of spirituality, based on a formal belief system about divine presence. And think of *spirituality* as a person’s unique relationship with whatever is beyond human experience. Because the temptation is always present for professional helpers to impose their conscious or unconscious values, ethical practice can limit the chances of inadvertently harming their clients.

To help protect both counselor and client and to promote healing, this entry considers:

1. *Context* – how religious/spiritual elements affect the ethical dynamics of the professional relationship
2. Recommended *safeguards* for counselor and client
3. Useful *resources and approaches* that promote ethical practice

## Context

Spiritual/religious elements appear in two different settings:

1. When counseling parishioners, the pastoral role of the *religious professional*, such as a minister or priest, affects therapeutic transference including the counselee's projection of divine authority onto the counselor. The counselor's projection onto the client (e.g., This is the helpless person I am required to heal or save) is called *countertransference*. Both transference and countertransference are unconscious and, therefore, can only be utilized appropriately when brought to consciousness.

Example: A well-integrated religious professional would accurately identify and address the unavoidable dual relationship (pastor and counselor) affecting the counseling process and the exercise of the pastoral role. A poorly integrated religious professional might inadvertently use the power of the pastoral role to interpret the psychological frailties of the client (e.g., as "sinful") or clumsily psychologize the client's spirituality (e.g., as merely an attempt to explain the Divine Mystery), in either case potentially doing great harm.

2. *Secular counselors* who make use of religious/spiritual elements must understand the power of *spiritual/religious content* in the counseling relationship.

Example: A well-integrated counselor would possess a sufficiently broad understanding of the dynamics of religion/spirituality to assist a client in using them appropriately while honoring the client's religious/spiritual orientation. A poorly integrated counselor would purposefully (or inadvertently) impose the counselor's own religious/spiritual or secular framework onto the client's issues.

In both cases, the quality of integration between psychological and religious/spiritual concerns and roles necessarily affect *professional identity*. Furthermore, the well-integrated professional must understand the power of both

the pastoral role and the counselor role, including the heightened power of the combination and its consequent tendency to increase potential danger to the client. *Rather than indoctrinating or judging the client, ethically based counseling assists the client in self-exploration that makes use of psychological and/or religious perspectives.*

## Safeguards

Some ethical and practical considerations follow:

### Hippocratic Oath: "Do No Harm"

When a religious or secular professional engages in a counseling relationship with a client/parishioner, the potential to cause harm by overwhelming the client's healing process with the professional's expectations and unconscious agenda always exists. In a strictly *secular setting*, an example of harm is violating the client's personal boundaries, but *spiritual/religious* counseling can also play the needs of present life against the requirements of "salvation" (e.g., the Christian psychologist whose purpose for counseling is "soul-saving" rather than psychological healing). In these examples, religious/spiritual counselors must attend consciously to the conflict that may exist between present and eternal concerns.

### The Power of the Divine to Impose Eternal Judgment

The client's projection onto the dually equipped counselor/minister may include the idea of divine reward or punishment. To be answerable to God is hard enough, but projection of the divine can interject enormous *judgmental power* into the identity of the professional. When the professional can recognize the nature of the projection, then client is then protected from the fear of eternal harm (e.g., the woman wanting to leave her abusive husband hears the religious professional telling her that divorce endangers her eternal soul, so she believes she must remain in the situation).

### **Ministerial Access to More Areas in Parishioner's Personal Lives**

Professional counselors/psychotherapists are trained to create a safe counseling space, and professional literature and codes of ethics address safety issues. A religious professional, however, may have broader access to a parishioner's private world where appropriate professional boundaries may be less distinct and more difficult to maintain. Religious professionals must, therefore, adhere to clear ethical boundaries appropriate to their unique situation (e.g., counseling in the office, not the home).

### **Spiritual Intimacy**

While counselors and ministers are usually trained to be aware of the depth of *intimacy* in a counseling relationship, such intimacy in relationships around matters of spirituality may be less obvious and potentially more dangerous for client and counselor alike. Spiritual language can carry a subtle sexualized meaning that can easily lead to boundary violations (e.g., spiritual intimacy may invite inappropriate touching). Professional supervision/consultation serves to protect against the danger by providing a more objective perspective.

### **Maturity of the Individual Versus Reliance on Religious Strictures**

Many professional codes of ethics rely on prohibiting particular behaviors in the counseling relationship (e.g., sexual touching or economic transactions.) These useful guidelines do not replace the need for personal and professional maturity. Unexamined unconscious contents can too easily lead to violation of ethical boundaries, so supervision and the developing *maturity* of the professional remain essential. Professional maturity might include the following: attention to the potentially dangerous elements in counseling, awareness of one's own unconscious issues, and awareness of one's own needs and the ability to meet those outside of the counseling relationship. Maturity can also lower anxiety, helping the professional to be more intentional and thoughtful in the counseling relationship.

Professional maturity is more ethically reliable than rule-based obedience and compliance.

### **The Temptation to Impose One's Own Belief System onto the Client**

Every counseling professional runs the risk of imposing his or her personal and often unconscious worldview and/or theology onto the client with potentially dangerous consequences. For example, either a secular or religiously based counselor could, even inadvertently, impose the idea that a married couple must have a particular kind of relationship, for example, a hierarchical power structure or a completely equal relationship, rather than helping them make an informed choice and help them develop the kind of relationship they desire.

### **The Unexplored "Shadow" of the Religious Professional**

Codes of ethics for psychotherapists typically require significant self-examination so that unconscious issues are not projected onto clients. Self-examination, perhaps including personal psychotherapy, becomes particularly essential when religious content is the focus of the counseling. Good intentions, even when grounded in images of a benevolent divinity, do not eliminate the need for professional self-examination (e.g., a counselor who grew up with a judgmental parent could unconsciously impose the demands of a judgmental God onto clients).

### **Supervision and Consultation**

The standards of practice for psychotherapy and ministry at one time required supervision of clinical work only for those still in training and not yet fully authorized. The emergence of many professional ethical violations, sometimes resulting in expensive litigation, caused most counseling organizations to require all clinicians to get regular supervision in order to protect against ethical violations. Many religious organizations still need to update their ethical requirements to include ongoing supervision for ministry. Supervision helps keep both professional and client safer in the more flexibly structured parish environment.

### **Awareness of the Presence and Effect of Any Dual Relationship and the Resultant Power Imbalance**

Dual relationships, such as pastor/counselor or counselor/friend, are rare in some clinical settings and practically unavoidable in others. The ethical counselor will learn to be aware of dual relationships and how to manage them in the best interest of the client. An example comes from the Code of Ethics of the American Association of Pastoral Counselors (Principle III. E):

E. We recognize the trust placed in and unique power of the therapeutic relationship. While acknowledging the complexity of some pastoral relationships, we avoid exploiting the trust and dependency of clients. We avoid those dual or multiple relationships with clients which could impair our professional judgment, compromise the integrity of the treatment, and/or use the relationship for our own gain. A multiple relationship occurs when a pastoral counselor is in a professional role with a person and 1) at the same time is in another role with the same person, 2) at the same time is in a relationship with a person closely associated with or related to the person with whom the pastoral counselor has the professional relationship, or 3) promises to enter into another relationship in the future with the person or a person closely associated with or related to the person. In instances when dual or multiple relationships are unavoidable, particularly within congregations or in family or couples counseling, we take reasonable steps to protect the clients and are responsible for setting clear and appropriate boundaries (e.g. It would not be ethical for the counselor to sell a car to the client. Fair bargaining would be impossible to achieve in light of the power imbalance.).

### **Evaluating Ethical Dimensions in Any Professional Counseling Relationship**

Professional codes of ethics often contain detailed lists of behaviors that support or detract from the ethical boundaries of the professional relationship. These behaviors might include rules about touching, appropriate settings for counseling, and adherence to particular religious beliefs. While these lists can be useful, they are limited by their specificity. Often these lists of prohibited behaviors do not fit the specifics exactly. Therefore, a framework for ethical analysis, like the one below modified from the *Faith Trust Institute*, provides an approach to identifying the

ethical elements of the professional relationship that can be readily applied to counseling relationships and other pastoral care situations.

### **Resources and Approaches**

The elements of the following ethical analysis can be used either by oneself or with a supervisor to help promote safe and ethical counseling practices.

#### **Violation of Role**

In a counseling relationship, the counselor is the one held accountable for ethical behavior.

*Does your behavior violate the role you are called to assume as a minister/counselor?*

Is your professional/pastoral role clear and generally affirmed by all concerned parties? Do you understand the legal and moral responsibilities of your position? (e.g., the responsibility to maintain appropriate *boundaries*).

Do you understand and know how to work with the unavoidable power imbalance in the professional relationship? (e.g., A person seeking help will usually feel less powerful than the professional helper. Identifying the power imbalance openly gives counselor and client the opportunity to minimize its effects).

#### **Misuse of Authority and Power**

*Do your actions constitute abuse or misuse of your authority and power as a minister/counselor?*

Are you aware of the power and authority you carry in your ministerial/professional counselor position and of the expectations that your congregation and/or clients have for you? (e.g., A parishioner may believe that the pastor knows precisely what God expects in the immediate situation. The pastor must be honest with self and parishioner alike about the appropriate limits to that professional power).

#### **Taking Advantage of Vulnerability**

*Do your actions violate the trust that your "relatively" vulnerable congregants/clients place in you?*

Do you understand that context and relationship strongly affect a congregant's/client's

experience of vulnerability and power and that the professional, too, can be affected by these? (e.g., When counselor and/or client believe that God will provide the necessary guidance, feelings of attraction can be misinterpreted as encouraging a sexual relationship).

### Meaningful Consent

*Do your congregants/clients have sufficient information and power to be completely responsible for the decisions they make in relating to you (and vice versa)?*

What congregant/client decisions are affected by a power imbalance in your relationship and how free are congregants/clients to say “no” to requests from the pastor/counselor? Also, how free is the professional to say “no” to requests from parishioners/clients? (e.g., A client may believe that the counselor’s suggestions must be followed rather than taking his or her own responsibility for choices.)

### Summary

Clearly, the presence of spiritual/religious elements in a counseling relationship can increase the power for and danger to the client. Professional Codes of Ethics are essential for client protection, but professional awareness of dual relationships, attendance to personal maturity, sufficient respect for the power of the spiritual, and the use of proper assessment tools for ethical and boundary evaluation are also necessary for appropriate care of clients.

## Ethics of the Fathers

Lynn Somerstein

Institute for Expressive Analysis, New York, NY, USA

“Ethics of the Fathers,” called, in Hebrew, Pirkei Avot and more properly translated as “Chapters

of the Fathers,” is known as “Ethics of the Fathers” because of its content – a collection of laws, aphorisms, and guides to ethical behavior – wisdom literature that is over 2,000 years old. It asks and tries to explain what makes a good person and how to get along with family members, teachers, and the neighbors. *Pirkei Avot* is concerned with down-to-earth, hands-on, practical living – like an early self-help book.

The emphasis is on doing, embodying the religious life even in everyday actions. This accessibility makes it very popular, so it is included in many prayer books. Some famous teaching examples are:

- Shammai: “Say little and do much” (Shapiro 2006, p. 15).
- Hillel: “Don’t judge your fellowman until you are in his place” (Shapiro 2006, p. 21).
- Ben Zoma: “Who is wise? He who learns from every man. . . . Who is a hero? He who controls his passions” (Pirkei, Ch 4, Minsha 1).
- Hillel: “If I am not for myself, then who will be for me? And if I am only for myself, what am I? And if not now, when?” (Shapiro 2006, p. 15).

Hillel’s question, “If I am only for myself, what am I?” (Shapiro 2006, p. 15), underlies individual human development – the search for the self and understanding who the self is in relation to others. Psychotherapeutic interaction concerns itself with searching deep within to find what is true for the individual and then finding ways for the individual to make contact with others, a process leading from a narcissistic engagement with the world to a fuller, open, mature being, whose everyday life embodies a full engagement with God and the world.

## Etiological Myth

Alice Mills

University of Ballarat, Ballarat, VIC, Australia

Etiological myths are those myths that explain origins and causes. Creation myths are etiological, explaining how the universe or the world or life in the world came into being. Etiological myth does not have to situate itself at the beginning of all things; it can account for the creation of a new entity or activity within the established order of creation, just as much as for the creation of an ordered world out of primal chaos.

## Religion

Religions can be set along a spectrum from those primarily focussed on beginnings, on events within an established universe, and on endings. Although “etiological” is a term derived from classical Greek (*aition* meaning cause), the belief systems of classical Greece were oriented more to the afterlife, and most of their etiological myths concerned particular places and rituals. The Roman poet, Ovid, collected a large number of etiological myths of transformation in his long poem, *The Metamorphoses*. Such myths as Daphne’s transformation into the laurel were popular material for medieval and Renaissance writers and artists to interpret allegorically as intimating Christian truths. The Bible stories span the whole spectrum from creation to last things. The first part of the Bible, *The Book of Genesis*, offers etiological explanations for the creation of the world and its inhabitants, the origin of death, fear and hatred of snakes, and the pangs of childbirth, and the Noah story explains the origin of the first rainbow. An example of a religion tilted almost totally towards etiology is the Australian Aboriginal people’s Dreamtime, whose stories provide explanations for the origins of features of the landscape, its inhabitants, and their behaviors. While Dreamtime stories speak

of a time outside chronological time, those who still hold them sacred believe that the beings of which they speak still inhabit the land. Dreamtime etiological belief is taken into serious consideration by contemporary Australian Governments in legislating for commercial and recreational use of the land.

## Science

While the origins of the universe are currently not fully explicable in scientific terms (and perhaps never will be), such phenomena as the rainbow, geological features of the earth, and lunar eclipses have been well understood scientifically, so much so that scientific explanations have long been used as weapons to discredit myth in general via its etiological function. Romantic poets such as Keats and Wordsworth bewailed this triumph of the rational mind over what the poets saw as the truths of the imagination and soul. In the nineteenth century, believers in the literal truth of the Bible struggled with the challenges offered by science. The battle between proponents of the Darwinian theory of evolution and the creation story in Genesis still rages.

## Psychology

Psychologists who claim that their discipline belongs among the sciences have no interest in exploring etiological questions about the psyche, preferring close observational and experimental scrutiny of the ways in which children develop. Most psychoanalytic theorists also focus on the development of the individual psyche rather than its mysterious prehistoric origins. Post-Jungians tend to ignore Jung's own speculations about the prehistoric development of human consciousness. With the exception of Julia Kristeva, who terms this part of his work the "Freudian fable," post-Freudians say as little as possible about Freud's own etiological mythmaking in *Totem and Taboo* and *Moses and Monotheism*, where (with some proviso about the difficulty of

exactitude) he offers as literal truth a tale about the primal horde, the first slaughter of a father by his sons, and the guilt-ridden origins of sacrifice. Freud regards all later religions as attempting to resolve the filial sense of guilt. His primal horde tale offers an etiology not only for world religions but also for all human civilizations and the neuroses that afflict the human psyche.

## Evangelical

Elisa Bernal Corley  
Castaic, CA, USA

The term evangelical is a derivative of the Greek word *euangelion*, which literally means "good news" or "gospel." It is used to identify the four books of the New Testament that narrates the good news of the life, death, and resurrection of Jesus Christ. The earliest usage of the term "evangelical" seems to be from Tertullian's writings (c. 155–222), where he referred to the

“evangelical and apostolic writings” as authoritative for the life and practice of the church.

Historically, the term evangelical was first used to refer to those who were part of the reforming parties in Europe before 1529. In the 1520s, it became popular in the polemical writings of early Reformers. During the Reformation period, an evangelical is one who believes that the Catholic Church should return to the beliefs and practices supported by New Testament Christianity. An evangelical emphasizes piety and righteous living, expressed in strict ethical codes, instead of adherence to external legal rules enforced by the Church.

Contemporary evangelicals share basic convictions inherited from their Reformation family, including the authority and sufficiency of the Scriptures, the necessity of salvation in Jesus Christ because of human sinfulness, the doctrine of the Trinity, belief in the resurrection and divine judgment, and the urgency of evangelism.

While the face of Christianity is rapidly changing, with the center of evangelical Christianity moving towards Asia, Africa, and Latin America, perhaps the strongest expression of modern-day evangelicalism is found in the United States. Because of the swift transplantation of evangelical beliefs and practices to the colonies, in Anglo-American history, the term evangelical now refers to a wide variety of groups, ranging from the major Protestant denominations like the Baptists and Presbyterians to Roman Catholics and to evangelical associations like the Billy Graham Association. In many parts of Europe, Asia, and Latin America, the word is often used synonymously with Protestant groups as distinguished from Roman Catholics.

## Commentary

While present-day evangelicals share basic beliefs, interpretations may vary depending on where they locate themselves along the evangelical spectrum. When nineteenth-century science began to challenge the authenticity of the Bible

and the credibility of Christian teachings, evangelicals found themselves divided. In response to what was perceived as a scientific onslaught on the Christian faith, traditionalists separated themselves from those who adopted a critical approach to the study of the Bible. Those who tried to adapt to the larger and more pluralistic culture, believing that there is no quarrel between the truth of religion and the discoveries of science, were considered liberals and modernists.

Each group adopts a distinct approach to answering the question of how one enters into and remains within the Christian life and communion. Although they share the belief that entrance into the Christian life is through faith in Jesus Christ, within the conservative branch, especially among the self-described “born-again Christians,” a conversion experience is the definitive moment of entrance into the Christian life and the Kingdom of God. Conversion happens through repentance of one’s sins and the acceptance of the forgiveness through Jesus Christ.

A definitive conversion experience meant that a person’s identity is changed by God’s grace. It is reshaped and transformed from the “old” into the “new.” With the new identity comes the adoption of new ideals and practices, which are often expressed in strict moral lifestyle, immersion in the life of the community, and fealty to religious teachings. Furthermore, this transformation of identity is accomplished through continuous participation in the ritualized practices of the local community like prayer, bible studies, small-group fellowships, and corporate worship.

Even though conservative evangelicals are found to hold disparate, nuanced, and diverse views on political and social issue, in general, they view the teachings of the Bible as sufficient to answer life’s problems and questions. The believer recognizes and submits to the authority of the Bible and the ordained leaders of the church. Because biblical teachings are authoritative for Christian life and practice, and because of the belief that the Holy Spirit guides the believer into obedient faith, conservative evangelicals are distrustful of any naturalistic explanation of

human experiences. If human psychology could explain and improve human behavior without the need for spiritual intervention, then belief in the power of God to influence human life becomes expendable.

The authoritative and supernatural place of the Bible and the role of the Holy Spirit in the life of the community also serve as inoculation against outside criticism. Since there is an external source of authority to which members defer, the believer tends to have a diminished sense of personal autonomy and power. Questioning a belief or doctrine using other intellectual tools may also produce guilt. Finally, even though there is evidence that active participation in church life and commitment to religious tradition promotes a believer's psychological well-being, adherence to the prescribed moral code of the community could make it difficult for a believer to adapt to situations or subcultures that do not share her beliefs.

Meanwhile, evangelicals who had been influenced by the American civil rights and antiwar movements, as well as the advances in higher education, had come to adopt liberal views on political issues. Evangelical scholars who are interested in engaging the human sciences can also be found in some evangelical colleges. Many of these modern-day evangelicals have assimilated several central features of the dominant American culture, especially those pertaining to individual autonomy and tolerance of diversity. With a more positive view of cultural and other human disciplines, they are therefore more comfortable with engaging the broader culture while at the same time maintaining close communion with their religious communities.

Within this multivocal evangelical community, there are those who welcome the use of cultural and scientific approaches in the examination of their faith. In exploring the Christian life, evangelicals with liberal leanings accept the complexities of human personality and development. Although the Bible remains authoritative, they do not expect it to provide the solutions to all of the unique challenges of modern living. They feel free to evaluate life choices using other tools for analysis and moral reasoning that extend

beyond obedience to religious authority or tradition. They welcome the help of clinical therapists, for instance, with difficult issues like abortion, marriage, sexuality, work, and various psychological illnesses. Attempts toward the integration of theology and psychology reflect the openness of modern evangelicals to a progressive approach to the study of human development. Examples of such undertakings are expressed in publications like the *Journal of Theology and Psychology* and the *Journal of Psychology and Christianity*.

## Everson, William

Steven B. Herrmann  
Oakland, CA, USA

After leaving St Albert's Dominican Priory, a Catholic monastery in Oakland, California, where he had practiced as a lay monk, poet, and spiritual counselor, under the name "Brother Antoninus" for 18 years, William Everson disrobed himself of his religious habit after an electrifying reading at the University of California at Davis (UCD) campus and donned the mantle of a traditional Native American buckskin vest and Lakota bear claw necklace, and when I took his celebrated course, "Birth of a Poet," in 1979 at the University of California at Santa Cruz (UCSC), this is the way I first experienced him: a *poet-shaman*. It was Everson's humility, I believe, as a post-Christian monk that enabled him to wear this sacred mantle with an attitude of reverence, an attitude of modesty.

I say this in my opening statement of this entry because it is important to provide for the reader a sense of the poet's *presence* when I knew him. By the time I set eyes on him, Everson had already gone through two religious conversions: the first when he found his master, Robinson Jeffers, and the second when he had his experience of spiritual conversion to Catholicism. The third conversion, which I will speak about later, is his change into a poet-shaman following a dream that called him to wear this new regalia. It was in the Dominican Order, as "Brother Antoninus," that Everson learned the art of silent meditation and its importance in evoking the call to vocation, as it is "voiced" through dreams, visions, and ecstatic experiences.

After divesting himself of his friar's robes after the UC Davis reading, Everson began to pay careful attention to his dreams and visionary experiences. During his period of change from Catholic lay brother to University professor at UCSC, he heard a calling from the Self and surrendered to its powerful summons; new rhythms of the American earth were summoning him to

provide an answer to the world on the verge of spiritual rebirth at the cusp of the new millennium: to respond to a problem of how to live more harmoniously with the earth. Everson would play a pivotal role in helping to usher a new way of living in. (Today, we would call him an ecopsychologist). Everson's response to his inner/outer summons was to teach his celebrated course "Birth of a Poet" on the UC Santa Cruz campus, between the Fall of 1971 and 1981, where he taught on the "vocational archetype" – a destiny factor in the dreams and fantasy thinking of his students. Everson's way into this dimension of the psyche was mythopoetic. In 1980, Bill asked me to be his Teaching Assistant and lead dream groups for his course, where the aim was to help students locate their calling to vocation. This is the way I got to know Everson personally. I remained his close friend, until his death in 1994.

Everson was born in 1912, so the year 2012 happens to be his centennial year, the 100th anniversary of his birth, an occasion to rejoice and give praise for his life and work. I write this entry from my home in the wooded hills of Oakland, on the edge of Joaquin Miller Park, above the Dominican priory where Everson lived as a monk, before moving to Stinson Beach with his wife Susanna, and stepson Jude, where he wrote wild poetry on the Pacific coast. Everson found his final quaint home in the mountainous terrain of Davenport, California, near Big Creek where steelhead still run today, where there are plenty of hawks, right beneath twin towering *sequoia sempevirins*, two redwood trees he dearly loved.

From Everson's empirical research into the nature of dreams on the UCSC campus, he arrived at a place of personal and cultural transformation, from whence he could see across the vast course of human evolution in a new way; from a vista in the Native American cultural psyche, where the drumbeat and rattle of the shaman are experienced as the heartbeat of the nation. From this vantage point, he set out to chart a Post-Jungian Journaling method that could lead University students to discover the central factor of religious experience: the Self. His notion of the

vocational archetype provided the way in. Out of his spiritual center – the calling – Bill spoke to students at UCSC in an effort to reconnect them again to the creative element in everyone: the earth, the air we breathe, forests, our national parks, and the great solitude of Nature. Everson taught students that we have to follow the “star” of our destiny to our place of emergence, our place of manifestation as human beings, our place of *visioning*, if we are to survive as a species.

As his Teaching Assistant, I would observe students coming in to the class somewhat sleepy-eyed and they would either sit or lie down on mats around Everson in the center of the room. He was always standing upright and pacing about, with his hand beating against his blue jeans in a rhythmic motion (he had Parkinson’s disease); he would speak, read, and recite poetry at the center of the assemblage with the large circle around him. Often students were in half-dream states. Mainly they would be in a relaxed state, so that the psyche could have an opportunity to be stimulated by whatever he was saying. Sometimes, during his reading of poems, you would get this feeling of an incredible electrical current, an energy charge, coming right out of him. It was quite extraordinary, what Rudolph Otto called the “numinous” feeling state.

Everson had tremendous integrity and he held an empirical attitude towards the dream journals and the final essays of the students. He and I would read them together and they were sometimes quite eloquent. Language was Everson’s way to approach the unconscious. Journaling was his method. As a Post-Jungian, who was “analyzed” by Father Victor White, in the Dominican priory in Oakland, he looked at dreams from an in-depth religious angle. Vocational dreams hold a potentiality, he taught, and have a *telos*; they are goal directed. He learned this from Jung. It is the student’s task to discover what the vocation to Selfhood is.

Many students had vocational dreams, but how to bring the *calling* forth, to birth it, was the big question Bill left students with. How does one manifest one’s vocation in one’s life and bring it to birth? “Birth of a Poet” is the

name he selected for his course and the confirmation of the call was its central aim.

As I have said, Everson was very modest about what he was observing. It takes a long period of time to do deep psychological work and to manifest its fruits, its alchemical gold. But Everson did most of his work himself, without an analyst. He was basically self-analyzed. Victor White merely led him to Jung’s work. Despite his being virtually unanalyzed, it is my view that Everson made a significant contribution to Post-Jungian theory and to the new religion of the West. He did this from the literary angle as a poet, writer, fine press printer, and teacher. I view Everson as a Post-Dominican/Post-Jungian teacher, really, who contributed to our understanding of the *vocational archetype*, which he, and the Post-Jungian Journal workshop guru, Ira Progoff, developed primarily as a way to apply analytical psychological techniques to work with large groups of people, outside analysis.

Everson and I held office hours together, and sometimes students would come in on their own initiative and speak about their dreams with one or both of us and I learned a great deal from him. Everson was a vocational counselor, a spiritual counselor, and a Post-Jungian teacher. He distinguished between vocation and career in the following way: *vocation is where your motivation is, career is the impact of your vocation on the world*. Vocation is where one’s deepest source of motivation is and it comes from the Self (that part of one that allows one to truly expand and experience the cosmos), with a capital S. “Where is the expansion point in your personality, the point of transcendence?” Everson asks us to consider. This is what he was seeking.

When Everson spoke about the vocational archetype and its impact on individuals and the world, he was really speaking about that innate expansive potential in each of us. The important distinction he made between vocation and career is the impact of vocation on the world. Career has to do with one’s relationship to collectivity, group consciousness, culture, and the nation in which one lives; it is the impact of one’s work on the outside. It is not an occupation.

An occupation is really what we do for a living. It may not coincide with vocation, but it may be how one makes money. Vocation on the other hand relates to the notion of psychological and spiritual transformation because this is what vocational dreams do for us: they transform consciousness by *electrifying* us!

This electricity metaphor is basic to psychic energy, which, now with modern physics, we see that electromagnetic energy is present in atoms. Everson taught that one can access this source of psychophysical energy through writing, if one can find a way to tap into it. Everson's genius is that he had the intuitive insight to structure his course at UCSC so that he could open the way up for students at the early adult career transition to experience this. I experienced it first hand: Everson had an ability to activate the vocational archetype in student's dreams, in a way that was delightful. He had a unique ability to lead the active listener – the student – into a state of trance, or active visioning. As a Post-Jungian poet, Everson made transubstantiation through the vocational archetype transparent for us.

If one wants to know what one's vocation is, Everson instructed, look to the archetype. It is the archetype of vocation that makes all work sacred. All the great world religions and philosophical systems have their unconscious source in this archetype. Psychology is no exception to this rule, he taught. And all vocations, concerned with the preservation and protection of life on our planet, are ultimately united in a shamanic ground of existence, an indigenous source. Whether in the field of politics, agriculture, or art, Everson believed all vocations are concerned with maintaining a connection to a shamanic mode of existence.

Everson maintained a Christian attitude of humility under the mantle of poet-shaman, yet, as I said, when he read poetry on platform, he was a lightning shaman (Herrmann 2009). I don't say this lightly! The presence of the man, when he stood on platform, was simply awe inspiring! I can only speak from my personal experience here: his voice was spellbinding. During such moments when he read the envoys of divinity

spoke through him, I *felt* it in every fiber and fabric of my being. Everson was not only a religious poet; he was a teacher, who advanced Post-Jungian notions, based on his direct empirical experience, as an instructor and dream researcher. Some of his classes had 400 students enrolled at a time and by the time I took his course in 1979 I had to grab a class card from his hand so I could enroll. If I had not done that, my life would have taken a different direction.

I can remember, while sitting in a circle on the mats, with 100 students (UCSC eventually limited the number of students to 100) and hearing him read his poems, one in particular lit me through. This one was written during his Catholic period, and it is called "The Encounter." It describes his second conversion experience. Part of it reads like this:

... My Lord came to me in my depth of dross;  
I was as woman made and hung with shame.  
His lip sucked up the marrow of my mind,  
And all my body burned to bear His name.  
Upon my heart He placed His pouring pain;  
I hung upon him as the albatross  
Hangs on the undering gale and is sustained.

My Lord came to me and I knew, I knew.  
I was a uselessness and yet He came  
Shafted of the center of the sun.  
I was a nakedness and was of shame;  
I was a nothingness and unbegin.  
The look He leaned upon me lit me through.  
(Everson 1998, p. 80).

The idea of being "shafted of the center of the sun" suggests an experience of being burned pure with the brilliant shaft of psychic energy, and this I took to be equivalent to an experience of being struck internally by lightning, a direct experience of the Self.

This was Bill's second conversion. His first conversion came to him while he was a student at Fresno State University and pulled down by chance or meaningful coincidence (Jung's notion of "synchronicity" to which Everson ascribed) a book from the shelf, by the Carmel poet Robinson Jeffers. Everson speaks about this experience in depth in his book *Fragments of an Older Fury* as a type of "spiritual osmosis" that came over him suddenly, "something like the Oriental relationship of the sybarite to the *guru*":

What I sought was a presence, a spiritual and psychological substance. The force from his pages hit me as something almost physical... When I encountered Jeffers it was essentially a religious conversion, my first one. Not only so, it was the intellectual awakening. For the first time I grasped the corruptness of man and the reality of an Absolute against which that corruptness must be measured. For the first time I knew there is a God, and I knew where I was going to find Him—before my very eyes, as He is bodied forth in prime Nature. And I knew that place no longer had to be the Lake Country, or Nantucket, or fish-shaped Paumanok, or the Mississippi. The place was California, the coast. I saw that he was intensely, incredibly alive in my own region (Everson 1968, p. 4).

Everson's work in "Birth of a Poet" became his laboratory for an investigation into the nature of the vocational archetype. His research led him to make some chief discoveries, particularly in the area of one's spiritual calling. Today, looking back at his life 100 years after his birth, I would venture to say that after Whitman, Melville, and Dickinson, he was one of the most important poets America has yet produced. In many ways, Everson caught the spirit of Whitman's vision of the "poets to come" in "Song of the Redwood Tree" and created a sacred ritual for students to realize Walt's dream, each in one's own way. By recourse to the dream life and by listening, in silence, to the sequence of his meditations on the Santa Cruz campus, overlooking the Monterey Bay, beneath giant redwood trees and the open sky, students were open to a direct experience of the cosmos. What gave Everson the power to transmit his notion of vocation as a way to God so clearly was the power of the West Coast as a region.

*Archetype West: the West Coast as a Literary Region* was written at Stinson Beach between February of 1970 and February of 1971. The reason this book is so significant for purposes of my entry is that it was written just before he taught "Birth of a Poet" in the fall of 1971. His idea of the Western archetype is a fascinating notion as it unites his views on Post-Jungian psychology and religion: what it *means* to be a Pacific Coast poet. *Archetype West* was not published until 1976, and Everson asks certain questions in it that are quite illuminating.

Basically, he asks the following: "What does it mean to be a Western writer?" "What is the archetype of the West that is dreaming us?" "Who are its greatest literary exponents in California and Oregon?" and "What role has depth psychology, primarily the psychology of C. G. Jung, played in helping to define it?"

Everson wrote the book at the same time he wrote two pivotal poems: "Black Hills" in May 1971 and "The Scout" in June of that same year. This is an important period, because this was right before his teaching of "Birth of a Poet," and as I say in our book (Herrmann 2009) this Post-Jungian course was essentially structured upon the pattern of the Native American *vision quest*.

Everson felt that his situation and that of other California writers, at the far end of the West, was the term of the Westward migration, which "places him [Western writer/poet/printer] at the center, rather than on the periphery, of the American experience" (Everson 1976, p. xiii). And pantheism "is not only the basic Californian or Western point of view, but is essentially American, is indeed *the* characteristic religious and aesthetic feeling" (Everson 1976, p. 7). Everson makes another point that is vital here in considering his contributions to this Encyclopedia of Psychology and Religion and, that is, that the Western writer is "more in line with the perspectives of the American Indian and hence closer to the roots of the land" (Everson 1976, p. 8). This explains Everson's adoption of Native American artifacts in his religious persona – his bear claw necklace was quite impressive and the buckskin vest that he wore was also a beautiful artifact to behold. Everson told me that after a dream, which took place in the Black Hills and forms the background for his third conversion experience – his calling to shamanhood – he went to a little shop in Mill Valley, after finishing *Archetype West*, and found these artifacts there and decided he was going to wear them during his teaching at UCSC. The calling to wear Native American regalia is something that was "in the air" in the collective psyche, as Everson pointed to Gary Snyder as perhaps the most popular California writer who answered the shaman's call for a new breed of earth poetry.

Although Everson modestly claimed to have been unread on the subject of the Western American novel, he welcomed the publishing venture to write *Archetype West* as a personal opportunity for him to recover “taproot.” While living on the edge of the Pacific Basin, he says the root energies of his vocation as a Western poet were unleashed out of his instinctive foundation and what followed is some of the best writing America has produced. The essay claims to be nothing more than a tentative probe into the underlying ethos of the Western locale, after two centuries of national experience on this continent. The book proves, however, to be much more than that. I view *Archetype West*, now long out of print, as one of the most important literary documents in American literature; it defines the central characteristics of the Pacific Coast like no other book of its kind. In Everson’s attempts to define what is unique about the Far West as a literary locale, he chose the most powerful centering device available to him at that time, namely, the “symbolic configuration of archetypal force” (Everson 1976, p. x), C. G. Jung’s hypothesis of the *archetype* (p. xi).

*Archetype West* was Everson’s first significant book of prose signaling his emergence as a Post-Dominican/Post-Jungian writer. Everson was introduced to Jung’s writings in the 1950s. This was a time of momentous change in American poetry. Allan Ginsberg published his masterpiece “Howl” in 1955, during the centennial year marking the publication of Whitman’s *Leaves of Grass*, and the beat generation was about to emerge onto the San Francisco literary scene, with Everson as the movement’s most prophetic figure.

As I noted above, it was Robinson Jeffers who gave Everson his pantheism. “I thought: My God! How *pre-Christian* his mentality is!” (Everson 1968, p. 27) Everson hypothesized that the Western archetype can be *experienced* best by way of its emotional resonance, *energy*, radiance, or soul power (Everson 1976, p. xiii). Grasping the *root* forces of this realization he began to speak forcefully out of what he calls the “mystery of place” (Everson 1976, p. xiii), and this is the kind of root energy he brought to his teaching in “Birth of

a Poet.” California writers feel their situation at the far end of the West, he says as the “*term* of the westward migration” (Everson 1976, p. xiii). Although *Archetype West* positions Whitman and Jeffers to appear as if they were opposites, Everson nevertheless reconciles their apparent contradictions by asserting: “Both in cosmic outlook and in originality of style they stand shoulder to shoulder, or rather back to back, since they look in opposite directions” (Everson 1968, p. 37). Everson viewed Jeffers’ apotheosis as the secret quest and inner impulse of democracy itself (Everson 1976, p. 15).

In literature, Everson wrote the archetype “is always trying to find its vehicle, its voice” (Everson 1976, p. 23). His intuition is that the Western archetype found its first voice in the epic poetry of Herman Melville’s *Moby-Dick* and Walt Whitman’s *Leaves of Grass* (Everson 1976, p. 23). In some ways, he writes, the Western archetype spoke in Melville and Whitman “more evocatively than it would ever speak again” (Everson 1976, p. 25). Everson’s central thesis, however, is Whitman’s vision of the “poets to come,” and he includes the writings of John Muir in this. It was “Muir fighting for the preservation of the Hetch Hetchy,” he says, “that elevated the implicit recognition of the divinity of nature to the most explicit testimonial.” “Dam Hetch Hetchy?” Muir asks in a widely quoted document that struck a keynote in the spiritual and psychological conscience of the nation, “As well dam for watertanks the people’s cathedrals and churches, for no holier temple ever existed in the heart of man” (Everson 1976, p. 53).

This is the historical moment, according to Everson, that marks the “main turning point in the spiritual life of the nation, perhaps the chief turning point, as far as the future was concerned” (Everson 1976, p. 53). For, according to Everson, this battle enabled Jeffers to take Muir’s intuitions about the divinity of Nature further. In Everson’s words: “he [Jeffers] assails all the American assumptions with the massive right of his invective consciousness—American optimism, American service, American wealth, American power” (Everson 1976, p. 69).

In concluding I do feel, as Everson's friend and colleague and collaborator, that the most precious gift he left us with, as a nation and a world on the cusp of ecological spiritual awakening, is a method for realizing the Self, as an immediate religious experience, via the keeping of a dream journal. No doubt, Ira Progoff played a role in popularizing Post-Jungian Journaling techniques in America and across other nations of the globe, and he came to his hypothesis of the *dynatpe* (or vocational enacting image) before Everson did, but Everson's way of evoking this central archetype of totality in the personality was more immediate, more forceful, and more psychologically alive, in the sense that his presence on platform, while reading poetry, was more electrifying. Let us celebrate, in this 100th year of his birth (1912–2012), then, California's great poet.

When I helped carry his coffin, at the Dominican cemetery, in Benicia, California, in 1994, with his brothers, students, friends, and family of all walks of life, hand in hand, I sensed, deep down in my bones, that I was walking in the living memory of a Holy Man. The great Oglala Sioux shaman, Black Elk, would have found in him a brother.

## Evil

Lorna Lees-Grossmann  
Department of Psychosomatic Medicine,  
Klinikum Rechts der Isar, Munich, Germany

There are two commonly accepted types of evil: first, the cosmic or natural evils such as fire, flood, earthquake, hurricane or epidemic, the sort discussed in the Biblical *Book of Job*. Secondly, there is interpersonal evil, man's inhumanity to man, on an individual or a large scale, murder or genocide. The first sort has a metaphysical cause and blame cannot be ascribed: these things happen and one must accept them. The second has connotations of innate malignancy and is bound up with theology and psychology and is the one under discussion.

Evil has an archetypal quality: theistic religions have an inherent dichotomy between good and evil. Loki's malice brought down the Norse gods; Lucifer's hubris brought about his expulsion from heaven and man's expulsion from Eden. What characterizes the religious explanation of evil is that the agent chooses the course of action that leads to whatever undesirable result awaits. Evil requires deliberate choice and action, whereas accidents are caused by an unwitting, nondeliberate agent. We can see this echoed in legal circles today in the distinction between murder and manslaughter and the relative leniency of sentencing for the latter.

## Relativism

The modern convention is that evil is relative. As Hamlet says, "There is nothing either good or bad, but thinking makes it so" (Shakespeare, *Hamlet*,

Act II, Scene 2). The question is whether evil is a necessary or a contingent attribute. Is it the person, or the action, which is evil? The social construction of evil permits anyone to perform an evil act, but whether that action renders that person irredeemably evil is open to debate. From social experiments like Milgram's experiment and the Stanford Prison experiment, we can see that ordinary people have the capacity to perpetuate evil acts and that the likelihood that they will do so is increased if they are given implied or articulated assurance that they will not bear responsibility. Authority may be diffused so that the giver of the order takes sole responsibility and thus absolves the actual agent of blame or the target group may be deindividuated ("the prisoners") or dehumanized, as with Rwanda's "cockroaches," as the Tutsis were labeled during the genocide. On the macroscale, genocide can be perpetuated through the socialization of the next generation to hate the target group and the dissemination of propaganda to ensure that hatred is continuous.

### Necessary Evil

M. Scott Peck articulates this non-equation of evil actions with necessary evil. He defines evil not by the committing of evil actions – because if this were the case, he argues, we would all be evil – or by the magnitude of evil committed. What makes a person inherently evil is self-deception and a lack of self-control; in psychiatric terms – pathological or malignant narcissism – evil is a form of mental illness. It is doubtful whether evil can be so neatly pigeonholed, and there is an obvious case for labeling all psychopathology as entailing evil because it also entails deliberate and serious human suffering. The other problem with this interpretation is that it does not allow for the possibility that a person who performs repeated and deliberate acts of evil may also be capable of performing repeated and deliberate acts of good.

A more humanistic interpretation can be found in Rollo May, who offers a construction of evil in terms of agency. There are contributory factors

such as war and interpersonal relationships or pressure at play, and there may indeed be an inherent evilness in each human – Jung's "shadow" or the daimonic – but what is key is the role the individual takes in choosing to perform the act. While psychopathology might entail evil as a necessary feature, human psychology allows for contingent, temporary evil.

## Evolution and Religion

Zach Simpson

Philosophy and Religious Studies/Religious Reconciliation, The University of Science and Arts of Oklahoma, Chickasha, OK, USA

For many, the relationship between evolution and religion is either antagonistic or quietistic (cf. Barbour 1997). In the former category, individuals and groups from both the sciences and religion treat the other as participating in a form of discourse that violates a core principle of either science or religion. Examples of such a relationship in popular discourse are sundry: from the outright dismissal of religious claims found in individuals like Sam Harris (2005) or

Richard Dawkins (2008), to the dismissal of evolutionary theory or its foundational empiricist monism, found in, for example, the Southern Baptist Convention (1982). The latter category, quietism, draws on Stephen Jay Gould's conception of religion and science as "nonoverlapping magisteria," wherein both fields of discourse are seen as separate and distinct levels of inquiry, one metaphysical and one staunchly empiricist. Variants of such a relationship are found in thinkers as diverse as the German-American theologian Paul Tillich (2001), philosophers of religion such as D. Z. Phillips (2001), or many believers themselves. Either form of relationship, though, does not see the interaction between science and religion to be either fruitful or desirable.

Insomuch as the antagonistic or quietistic models foreclose discussion between evolutionary theory and religion, they also do not provide constructive or interesting models for a possible relation between the two fields. In this spirit, many have proposed that there are at least two other potential modes of relation between religion and science, namely, those of appropriation and mutual dialogue. Both categories are capable of capturing a number of interesting and novel forms of dialogue between evolution and religion, either in the form of scientific explanations which include religion as their chief source of inquiry and data or religious explanations which employ scientific data (namely evolution) for religious reflection. These two forms of dialogue are given in the discussion below.

### Evolutionary Accounts of Religion

In the past decade, considerable research has been undertaken to examine the evolutionary status of religious beliefs. Research from anthropology, sociology, neuroscience, game theory, and psychology has attempted to explain both the individual and social role religion has played in human evolutionary development.

Paradigmatic individualist accounts of the evolution of religion can be found in the work of Pascal Boyer (2002), Scott Atran (2002), and Jesse Bering (2011). For both Boyer and Atran,

religious beliefs are tied to the psychological capacity to imagine other agents which are both causally related to the world around us as well as possess the capacity to know relevant social information. In this way, religious belief acts in both an explanatory and socially significant way, altering the behavior of individuals in both small and large groups. This is reinforced by the way in which certain beliefs have "traction" with our brains; in a study conducted by Atran (2008), those beliefs which were "minimally counterintuitive" were found to have the greatest resonance in both memory and salience over time in small children. It is worth noting that, for both Boyer and Atran, religious beliefs did not evolve to meet an evolutionary need per se; rather, religious beliefs take advantage of evolved mental characteristics such as theory of mind and social transmission. This explanatory direction is furthered in the recent work of Jesse Bering, who examines the ways in which theory of mind allows for the formation of God concepts, the attribution of agency to otherwise banal events (he cites, for example, the French movie, *Le Ballon Rouge*, where the protagonist, a little boy, and the audience imbue a red balloon with mental characteristics), the creation of a narrative psychology, and the discovery of purpose within existence. As in Freud's *Future of an Illusion*, God concepts – such as explanations for traumatic events – are seen as a form of wish fulfillment in the work of Bering, as they co-opt certain evolved mental capacities and the desire for explanation.

In these and other more individualist approaches, certain themes emerge regarding the interaction between science and religion. First, though with some differences, researchers see religious beliefs as stemming from, or dependent upon, evolved mental characteristics responsible for agent attribution, theory of mind, or anthropomorphism. Secondly, the beliefs generated through such mental processes generally serve the more existential and epistemic functions of self and group enhancement, explanation, and narrativity.

Alongside such accounts are found hypotheses which examine the social dimension of religious

beliefs and the ways in which religious ideas generate prosociality, solve problems of cooperation, or enhance in-group/out-group tendencies. A thought experiment using economic game theory conducted by Dominic Johnson and Jesse Bering (2006), for example, concluded that the concept of divine punishment may promote cooperation and prosociality in large groups, as God concepts provide the specter of both unlimited observation and punishment. Similarly, experiments by Norenzayan and Shariff (2008) found that individuals given religious cues in economic games were more likely to give money to others than participants given nonreligious cues. The same study also found that religious concepts often promote trust and cooperation between unrelated individuals.

Other prosocial aspects of religious beliefs, particularly with respect to group persistence over time, have been extensively examined by Richard Sosis (2004). In one study, Sosis found that groups with greater religious demands (e.g., prescribed prayer, dietary restrictions, sexual abstinence), which he terms “costly signals,” increased religious group persistence over time relative to groups with fewer or nonreligious ritual demands. In other work, Sosis found that the group performance of prescribed rituals, such as prayer, promoted cooperation and giving in economic games (similar to those performed by Norenzayan and Shariff) between members of Jewish *kibbutzim* (Ruffle and Sosis 2007).

The physiological dynamics of these collective aspects of religious belief are exemplified in recent studies which examined a fire-walking ritual in Spain. There, researchers demonstrated a phenomenon known as “collective effervescence,” wherein both spectators and participants experienced synchronous arousal (i.e., elevated heart rate) and common memory recall of the event (despite initially differing accounts; see, for example, Konvalinka et al. 2011). This research demonstrates that there is likely a physiological foundation for collective religious rituals which strengthen group dynamics and forge a common identity amongst participants.

Taken together, recent research on the collective value of religious belief demonstrates that religious concepts may have evolutionary utility insofar as they promote group cohesion, cooperation, cost-free detection of free riders, community persistence, and even outwardly directed violence. Taken alongside the more individually oriented evidence presented above, the relationship between evolution and religious belief appears to be one in which religious beliefs depend upon certain physiological and cognitive adaptations, which in turn confer positive social and selective benefits upon both individuals and groups.

### Religious Interaction with Evolutionary Theory

Interesting forms of dialogue between evolutionary theory and religion can also be found within theology and the exploration of religious experience. Within the Abrahamic traditions, there is a clear history of theological reflection on the natural world, wherein natural phenomena are seen as indicating the goodness and providence of God. St. Thomas Aquinas, in his *Summa Contra Gentiles*, for example, made one of his “five ways” to see the existence of God dependent upon the revelation of the natural world, a proof he inherited from Muslim thinkers such as Ibn Sina (Aquinas 1999). Later, early modern scientists such as Robert Boyle saw the natural world as revealing of God’s handiwork (Boyle 1691/1692).

Though heavily politicized, I would argue that the recent intelligent design movement (e.g., Dembski 2002) draws on this natural theological tradition, insofar as it attempts to use evidence from the natural world to argue for the immanent creative activity of God. Similar to the natural theological tradition seen in Aquinas and Boyle, intelligent design does not deny evolution on the micrological or macrological scale; rather, it attempts to show that certain body forms could not have been created without divine influence, as they are “irreducibly complex.” This form of religious appropriation is consistent with much of the Christian theological tradition.

There are numerous other approaches, however, which have given even more epistemic ground to the sciences. Recent work by Sarah Coakley (2008, 2009), in conversation with evolutionary game theory, examines the evolution of cooperation in animals and humans throughout evolutionary history. This history, she posits, shows a minimum providential plan for creation in which prosociality, love, and altruism are allowed to develop naturally over evolutionary time. Coakley's theology (much like Aquinas), while clearly conceding considerable ground to the sciences, attempts to show the ways in which data from the sciences, particularly the evolutionary modeling of cooperation in large groups over time, points to the beneficent creative process envisioned by God.

Perhaps the clearest example of granting epistemic primacy to the sciences can be found in recent "emergence theologies," exemplified by theologian Philip Clayton (2008). For Clayton, evolution is to be seen as revealing various scales of irreducible complexity, such that chemistry is irreducible to physics, biology is irreducible to chemistry, and so on. In this way, the natural world consists of multiple levels which are both dependent upon each other and yet also independent. Each level also exhibits causal agency. Clayton, employing this model, sees God as a "level" of emergence analogous to human consciousness. Or, in other words, God emerges out of (and is prior to) the world just as cells emerge out of complex chemical interactions.

Clayton's theology represents an extreme along the continuum of theological reflection as it not only uses scientific data for theological reflection, but gleans the primary theological metaphors and intuitions from the sciences themselves. In this way, evolutionary theory becomes both the datum and foundation of theological reflection. As a result, and as Clayton concedes, as evolutionary theory changes, so too does theology.

There are, of course, other theologies which deal explicitly with the sciences, either through appropriation or mutual dialogue. Arguably, though, each exists along the continuum traced here between (a) the revelation of God in the

operation of nature, (b) the use of evolutionary theory as evidence for God, or (c) the use of evolutionary theory as a store of metaphors through which we can understand God. Each differs in the degree to which it accepts or allows for evolutionary theory to dictate the language and conclusions of theological inquiry.

Finally, the epistemic openness exhibited in the work of Philip Clayton can also be found in recent accounts of religious experience by Wildman (2011) and Taves (2011). For both figures, religious experience is no longer seen solely through the lens of either firsthand accounts or religious institutions, but is treated through a variety of perspectives, including phenomenology, sociology, and neuroscience. Such approaches, as Taves notes, contest the self-evidence of religious experience and open such experiences to multiple forms of interpretation, including evolutionary psychological accounts.

## Conclusions

The relationship between evolution and religion is often seen as contentious or indifferent. Though for many this may be the case, there is considerable contemporary research which benefits from a mutual dialogue between the sciences and religion. In the sciences, research which takes seriously both reported beliefs and the perceived benefits of religion has allowed for religious belief to be seen as a multifaceted way of being that draws upon physiological, neurological, and social inputs. In religion, those theologies and accounts of religious experience which take seriously both the methodology and conclusions of the sciences have a greater store of forms of interpretation upon which they can draw for religious reflection. For both fields, an increase in what constitutes evidence has allowed for new insights into both evolution and religion.

## Existential Psychotherapy

Stephen A. Diamond  
 Center for Existential Depth Psychology Los Angeles, Los Angeles, CA, USA

Existential psychotherapy is based upon the principles of both humanistic and existential psychology, the latter being a movement with roots in the existential philosophy and writings of Heidegger, Husserl, Merleau-Ponty, Ortega y Gasset, Dostoevsky, Kafka, Camus, Kierkegaard, Nietzsche, Sartre, Tillich, Marcel, Buber, and others. Otto Rank, Medard Boss, Ludwig Binswanger, Karl Jaspers, Eugene Minkowski, Ronald Kuhn, V. E. von Gebattel, J. H. Van Den Berg, H. J. Buytendijk, and G. Bally were among the first to apply existential principles to the practice of psychotherapy (calling it *Daseinsanalyse* or existential analysis) in Europe, followed prominently by Viktor Frankl (Vienna), R. D. Laing (London), and Rollo May, J. F. T. Bugental, Thomas Szasz, Frederick “Fritz” Perls, and Irvin Yalom in the United States. It was psychologist Rollo May along with psychiatrist Henri Ellenberger who, in 1958, introduced the European existential

analysts to American clinicians in their groundbreaking book, *Existence: A New Dimension in Psychiatry and Psychology*.

Existential therapy is often misperceived as some morbid, arcane, pessimistic, cerebral, esoteric orientation to treatment. But in fact, it is an exceedingly practical, concrete, positive, and flexible approach. On any given day, an existential therapist might deal with mundane matters such as the patient's financial crisis, marital problems, health issues, addictive behavior, or psychopharmacological needs, while at other times working with dream material, archetypal motifs, spirituality, grief, anger, or the patient's creative process – all depending on the practitioner, context, and what seems most existentially pressing in the moment. Existential psychotherapy, despite its popularity in the decades following importation to the United States, declined dramatically toward the close of the twentieth century, a victim of the psychopharmacological, cognitive, and managed care revolution in mental health. But as consumers are increasingly confronted with the very real limitations of what managed mental health care, psychopharmacology, and cognitive-behavioral treatment can provide, existential psychotherapy is quietly enjoying a recent renaissance.

While existential psychotherapy is commonly seen as synonymous with the brooding, dark, despairing, nihilistic, atheistic intonations of European existentialism, it is crucial to differentiate the two: Existentialism is a philosophical movement, whereas existential psychotherapy is a psychological treatment. Existential psychotherapy was never intended to be a specific school unto itself, but rather a pragmatic, humanistic, holistic, corrective orientation to psychotherapy in general. "Existentialism," explains Rollo May (1986), "is not a comprehensive philosophy or way of life, but an endeavor to grasp reality" (p. 59). The existential movement in psychiatry and psychology arose as a reaction against the reductionism, determinism, dogmatism, and hyperrationalism of both psychoanalysis and behaviorism. As May (1986) indicates, whenever you perceive a person merely as a particular diagnostic disorder, biochemical imbalance,

genetic predisposition, or "as a composite of drives and deterministic forces, you have defined for study everything *except the one to whom these experiences happen*, everything except the existing person himself" (p. 25).

The objective and subjective revelation of one's own existence, the "I am" experience or sense of self, is an integral part of the process of existential psychotherapy. While the techniques of existential psychotherapy can include Freudian, Jungian, Gestalt, cognitive, behavioral, or other methods, the fundamental technique shared by all existential therapists is *phenomenology*. Phenomenology is based predominantly on the philosophical work of Husserl and Heidegger and refers to the setting aside or bracketing off of preconceptions, interpretations, expectations, bias, and rote intervention in an effort to discover the patient's actual, unadulterated subjective experience, his or her being-in-the-world, and existence or *Dasein* (being there). It is through this phenomenological refraining from forcing the patient onto a Procrustean bed of preordained theory or methodology that the true experience of the patient at any given moment can be understood and appropriately responded to by the therapist. In its purest form, "the existential-phenomenological view does not construct any explanatory models but tries to understand situations by exploring the immediate experience [of the patient]" (Cohn 1999, p. 43). Dogmatism and doctrine are excluded as much as possible, and the focus of treatment is primarily on the present, the here-and-now, and the current circumstance rather than on past traumatic or other formative influences, as in Freud's psychoanalysis.

Choice, personal responsibility, integrity of the personality, and authentically facing rather than habitually avoiding existential or ontological anxiety and guilt (which results in what Sartre termed *mauvaise foi* or "bad faith" with oneself) are central features of existential psychotherapy. The existential therapist is not limited to the passive and interpretive role of the psychoanalyst, though such a stance may be taken when called for. But the *courage* and *commitment* to truly and genuinely *encounter* each unique patient is required by the therapist, who must

not defensively avoid his or her own anxiety by hiding behind a rigid professional *persona* or distancing screen of therapeutic technique. Carl Jung, who was quite existential in his own approach, acknowledged the inherent mutuality and crucial role of the therapeutic relationship, recognizing that “in effective therapy a change occurs in *both* the therapist and the patient; unless the therapist is open to change the patient will not be either” (cited in May: 22). In existential therapy, the human relationship between patient and therapist takes precedence over technical tricks and, as now confirmed by research, is the primary healing factor in any psychotherapy.

### Existential Depth Psychology

Over the years, there has been a gradual theoretical trifurcation in the evolution of existential psychotherapy. Existential and humanistic psychology (sometimes so closely affiliated they become conjoined as “existential-humanistic”) developed simultaneously in America, under the influence of Abraham Maslow, Carl Rogers, and Rollo May, among others. Both humanistic and existential psychology object to the dehumanizing and reductionistic application of the psychiatric medical model in the diagnosis and treatment of so-called mental disorders, proposing a less mechanistic, biological and deterministic, more positive, humanistic paradigm for personal growth and psychotherapy. But Rollo May’s own philosophical worldview and depth psychologically informed psychotherapy differs fundamentally from the rabidly anti-psychoanalytic, overly optimistic, perhaps even naïve “human potential” movement embodied by Rogers and is best described as an *existential depth psychology*.

Otto Rank, a close disciple of Freud and one of the seminal figures in the development of existential depth psychology, “accepted the categories of Freud, Jung, and Adler – mechanisms, patterns, and types – but found them useful only up to a point, after which they impeded therapy and even theory” (Lieberman, cited in Diamond 1987, p. 10). “Depth

psychology” (*Tiefenpsychologie*) addresses the phenomenology of the “unconscious,” the “not known” contents of the psyche. Existential and depth psychology seem antithetical and incompatible to some (especially certain members of the Society for Existential Analysis in London, a third tributary led by Emmy van Deurzen-Smith, Ernesto Spinelli, and the late Hans Cohn, who practice a purist version of “philosophical counseling” or “clinical philosophy”), but are reconciled as complementary in existential depth psychology. The Freudian notion of the unconscious is eschewed and rejected outright by many existentialists as a fragmenting, reified doctrine that diminishes integrity of the personality, free will, and personal responsibility in ways inimical and antithetical to existential therapy. However, while fully cognizant of these legitimate theoretical and practical dilemmas, existential depth psychology recognizes the clinical necessity of acknowledging the phenomena of repression and unconsciousness. Therefore, the phenomenological fact of the *unconscious* is retained, albeit in modified form, by American practitioners of existential depth psychology such as May, Bugental, Yalom, Perls, Schneider, and Diamond.

For Rollo May, the *unconscious* is existentially redefined as “those potentialities for knowing and experiencing which the individual cannot or will not actualize” (1983, p. 18). Moreover, May, unlike Rogers and others in the humanistic movement, held that “constructiveness and destructiveness have the same source in human personality. The source is simply *human potential*” (in Diamond 1996, p. xxi). This conception of human potentiality as a double-edged sword informs May’s controversial theory of the *daimonic*: his own phenomenological interpretation of the unconscious, similar though not identical to Freud’s “id” or Jung’s “shadow,” and eminently useful for comprehending the inherent human potentiality for psychopathology, destructiveness, spirituality, and creativity (see Diamond 1996). The *daimonic*, as May (1969) defines it, “is any natural function which has the power to take over the whole person. Sex and eros, anger and rage, and the craving for power are examples.

The daimonic can be either creative or destructive and is normally both” (cited in Diamond 1996, p. 65). In existential depth psychology, the daimonic is an existential reality, the dynamic ground of being or existence, the indivisible source of vital, life-giving psychobiological energy or power. When chronically repressed, the daimonic becomes pathological but, when properly related to, contains valuable positive potentialities. Existential depth psychology embraces and makes therapeutic use of May’s model of the daimonic, encouraging its constructive integration into consciousness, *but never to the point of dogmatism*, and is not “defined by duration of treatment, technique or frequency of sessions *but rather by the degree to which it directly addresses the daimonic and the various other existential elements of life*” (Diamond 1996, p. 219).

As May, who was briefly a Protestant pastor prior to becoming a clinical psychologist explains, “I do not believe in toning down the daimonic. This gives a sense of false comfort. The real comfort can come only in the relationship of the therapist and the client or patient” (in Diamond 1996, p. xxii). Indeed, “it is only by moving through this suffering consciously, willingly, and developing a more philosophical or spiritual stance toward it, that patients approximate anything close to a ‘cure’ in psychotherapy” (Diamond in Hoffman et al. 2005, p. 197).

### Nihilism, Anxiety, and Spirituality

Spirituality entails the capacity to see life as it is – wholly, including the existential realities of evil, suffering, anxiety, and the daimonic – and to love life nonetheless. This *amor fati*, as Friedrich Nietzsche phrased it, “is a spiritual achievement of the highest magnitude” (Diamond in Hoffman et al. 2005, p. 197). It is in this regard, and in some of the striking parallels between phenomenology, Taoism, Hinduism, and Zen Buddhism, that existential depth psychology can be correctly called a secular spiritual treatment for the postmodern *condition humaine*. While not inherently a religious approach, and indeed in some

ways antireligious, existential psychotherapy addresses many of the basic questions and problems that concern traditional religions of all kinds: death, meaninglessness, loneliness, loss, suffering, imperfection, finitude, insecurity, anxiety, guilt, freedom, responsibility, evil, etc. These are the bare existential facts of life, what existential theologian Paul Tillich called “ultimate concerns.” *Nihilism* – the rejection of religion, spirituality, meaning, purpose, and value in life due in part to the presumed negating finality of death – is often associated with existentialism. Yet, nihilism is clearly neither the goal nor intended consequence of existential psychotherapy but, on the contrary, its starting point.

Equally important to the practice of existential therapy in general is the phenomenon of anxiety, in both its normal or ontological and neurotic or pathological aspects. Kierkegaard (1844) called anxiety “the dizziness of freedom” that inevitably accompanies recognizing our human potentiality and responsibility. Following Kierkegaard and Tillich, May defines anxiety as the “*experience of Being affirming itself against Nonbeing*” (1977, p. xxi), positing that when we chronically avoid existential anxiety, it only becomes more neurotic, destructive, and debilitating. In existential psychotherapy, *neurotic anxiety* is a pathological product of *normal anxiety*, and both are utilized in the therapeutic process rather than merely chronically suppressed psychopharmacologically or otherwise. To a significant extent, existential psychotherapy is the psychophilosophical treatment *par excellence* of post-modern nihilism, anxiety, and existential crisis manifesting as depression, stress, addiction, anger, rage, and other all-too-ubiquitous symptomatology. Viennese psychiatrist Viktor Frankl’s idea of neurosis resulting from an “existential vacuum” which human nature abhors due to a deeply rooted “will to meaning” is particularly relevant here. Fulfilling the will to meaning is one way of counteracting nihilism: “Meaning – given, found or created – enables one to love life and live it. We create meaning because we cannot exist without it” (Lieberman, cited in Diamond 1987, p. 2), thus the strong emphasis on the sense of *meaning* and *purpose* in existential therapy.

## Creativity, Courage, and Acceptance

Creativity can be another antidote to the toxicity of nihilism and provides a constructive channeling of anxiety. Hence, the purposeful focus in existential psychotherapy on creativity and the creative process: the creation of meaning, the creation of art, and the creation of self. The existential spotlight on “will” as central to the creation of self and a constructive, meaningful life was presaged by Rank, who held in his notion of the *artiste manqué*, that “the individual creates his own personality by creative willing, and that neurosis is due precisely to the fact that the patient cannot will constructively” (May, cited in Diamond 1987, p. 2). And, whether or not one concurs with Yalom’s (1980, p. 482) premise that “meaning, like pleasure, must be pursued obliquely,” his clinical focus on *engagement*, encouraging the patient’s commitment to and investment in life, is well taken: “Engagement is the therapeutic answer to meaninglessness regardless of the latter’s source” (Yalom 1980, p. 482).

Finally, existential therapy encourages the patient’s heroic acceptance of life’s inevitable tragedy, anxiety, suffering, and death’s inexorable reality. “Courage,” writes Paul Tillich, “is the power of life to affirm itself in spite of... [its daimonic] ambiguity, while the negation of life because of its negativity is an expression of cowardice” (cited in Diamond 1996, p. 309). Sigmund Freud’s own existential (but not traditionally religious) attitude can be seen in his misunderstood, seemingly cynical, pessimistic comment that the goal of psychoanalysis is to transform neurotic misery into common unhappiness: like death, some suffering in life is existential, ontological, and inescapable. “Nowhere in religious... [symbolism] is this spiritual principle of accepting life’s suffering and acceding to one’s divine destiny more dramatically, movingly and elegantly illustrated than in the Crucifixion” (Diamond in Hoffman et al. 2005, p. 199). But, with or without religious faith, whether like Kierkegaard or Sartre, one can still freely choose the attitude taken toward such stark existential facts of life, a “willing affirmation of the must” to employ Rank’s felicitous phrase,

which is itself a type of spiritual transcendence. “It is,” says Tillich (1952), “the happiness of a soul... ‘lifted above every circumstance’” (cited in Diamond 1996, p. 292). Paradoxically, along with the courageous affirmation of existence and its vicissitudes, including anxiety, alienation, insecurity, suffering, finitude, meaninglessness, and death, comes a deeper appreciation of life; a fuller capacity to care, feel, and love; and a heightened sensitivity to joy, awe, and beauty.

## Existentialism

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

### Early Foundations

Existentialism began in the early nineteenth century with the writings of Søren Kierkegaard (1813–1855), though forerunners of existential themes can be traced centuries earlier to Sumerian mythology, Judaic wisdom literature, and early Greek philosophy. Existentialism arose and continues to address and challenge dualisms,

abstract, and mechanical ways of addressing human concerns, as it focuses on agency, accountability, and the discovery and/or creation of meaning. Although many histories have been written about existentialism, in this entry I will focus on the religiosity inherent in the tradition that extends beyond the typical differentiation between theistic and atheistic existentialism. I argue that even within atheistic existentialism lies the religious question as disclosed in the dance of nihilism and meaning.

Søren Kierkegaard proposed the rallying flag for existentialism with his pronouncement and commentary on truth as what is experienced, not systematically thought out, when living subjectively in the world. Addressing the experience distant abstraction of Hegelian systemics, as well as the institution of the church, Kierkegaard called for more authentic accountability for one's beliefs and comportment in everyday existence. What matters, for Kierkegaard, is the lived experience of individuals in their lived situations, rather than any presumptions about life discerned through abstract objectivity, particularly those of rationalism, empiricism, and/or speculative metaphysics.

These themes were furthered by existentialists too numerous to cover completely. One of the difficulties presented to any researcher in this field is that existentialism is notoriously slippery when one tries to define it as a movement. Walter Kaufmann, perhaps the most well-known commentator on existentialism, aptly noted that by definition existentialist resist collapsing or subsuming uniqueness into generic systems of creeds and other canons of civility (Kaufmann 1975).

Kierkegaard (1813–1855), Friedrich Nietzsche (1844–1900), Martin Heidegger (1889–1976), and others warned against the fade into an undefined existence, co-opted by the crowd, the “herd,” or the “They.” One escapes to the crowd to avoid facing the call of existence to define oneself, to “stand out” in Heidegger’s language. Standing out in existence includes face-to-face encounters with dread, boredom alienation, the absurd, nothingness, as well as freedom, and commitment. Through such encounters one comes to understand the significance of one’s life, not an

easy task, and either accepts or rejects calls to more meaningful and fulfilling relationships and projects in life. Life is meaningful as we live it out. We do not first find meaning and then decide to live out our lives. Our “essence” is discerned only in our “existence,” as Jean-Paul Sartre (1905–1980) noted (1943/2003).

Existentialists are divided among themselves as to the authenticity and legitimacy of belief in God as well as to what one means by the term “God.” Theistic existentialists highlight the inevitability of our inherent tendency toward Otherness and understanding of ourselves in our situations in life in light of those encounters. Atheistic existentialists argue that displacement of one’s responsibility onto an external entity in hopes for deliverance from the complexities of contingent existence is a manifestation of moral cowardness.

### Existential Approaches to Psychology and Religion

Existential approaches to the field of psychology and religion have attempted various ways of resolving what they see as an unnecessary antagonism between atheism and theism. Paul Tillich (1886–1965), known primarily as a theologian, wrote extensively on the existential condition as well as on the psychotherapeutic care within those conditions (1952, 1957, 1966). Most particularly, Tillich called for our “courage to be” in spite of anxiety or our impending nonbeing and call to freedom. Erich Fromm (1900–1980) and Rollo May (1909–1994) furthered these concerns, albeit in different ways (Fromm 1941; May 1972). Viktor Frankl (1905–1997) established Logotherapy as a result of his own lived experience within a concentration camp in which he saw how the power of the will to live if there were a reason or person for whom to live. Karl Jaspers (1883–1969) wrote of “boundary situations,” “the Encompassing,” and communication almost in a sacramental way. R.D. Laing (1927–1989) brought the insights of existential phenomenology to humanize modes of psychiatry’s more instrumental qualities.

Contemporary existential psychotherapist, Emmy van Deurzen (1998), has written of the *Überwelt*, or the spiritual and encompassing world in which we discern our meaning. One could say that each one of these individuals above addressed the notion of “God” in less than orthodox ways; they all nonetheless saw the centrality of spirituality as essential to a meaningful life, albeit a spirituality that found within existence, rather than as an escape from it.

### Commentary

One of the misconceptions to clarify about existentialism is the claim that it is too individualistic. No doubt schizoid ways of being-in-the-world have bolted onto the existential tradition, which is understandable given a central theme of inherent loneliness. When existential thinkers refer to such concepts as subjectivity, loneliness, “standing out,” and so forth, one must understand these concepts as calls to distinctiveness and ownership of one’s lived, conditioned existence and comportment in the world rather than as statements about physically measured isolation. Subjectivity does not mean an isolated privation of existence, but a committed risk of being “all in” a particular situatedness, exercising agency amid and released by inherent limitations. What truly matters is experienced when taking this stance in relation to others. A true and authentic encounter comes from shared “all-in-ness” that is nonetheless respective of the incomparable stances taken by communal participants. A call to living a distinctive, differentiated, and accountable life is not an opposition to living a relational life. The existential position is not opposed to the sociology of others, but warns against a qualitative erasure of unique “callings to be” amid the counter pull to forfeit one’s incommensurability. In fact, we are ontologically relational. Our existence is foremost and forever a “being-with-ness.”

Another issue meriting commentary is the apparent antagonistic relationship between existentialism and religion. The relationship between

existentialism and religion is more integrated than one may presume. Certainly the Nietzschean hammer against slave morality, as he saw reinforced by Christian morality, and even the theist Kierkegaard's attack on Christendom have led to suspicion of the institutionalization of the spirit.

Theistic or not, however, freedom, transcendence, and meaning are cornerstones of this tradition. In spite of theistic existentialists throughout the history of this philosophical position, this approach to human meaning and significance is seen by some readers of this tradition as carrying an inauthentic and irreconcilable oxymoron. One can point to the broad strand of atheism or emphasis on the human person's responsibility to create his or her own meaning, so often expressed in existential literature, as cases in point. Yet, theistic and atheistic existentialists would agree that transcendence is not an escape from existence and impossible to accomplish anyway. The project of doing so discloses a "bad faith" (Sartre 1943/2003), "inauthenticity" (Heidegger 1962), and foreclosure on accountability for the burden of one's existence. Nevertheless, the counter challenge has its legitimacy as well: movement into the mystery of Otherness, even if paranormal, may be the most challenging Kierkegaardian leap of faith. Not being open to what is beyond our comprehension and control is another form of retreating into anonymity or herding.

I suggest an existential understanding of psychology and spirituality holds possibilities for the field's deepest foundation and most promising future. As human beings we are *homo religiosus*, or inherently religious, in which life *is* transcendence, meaning, purpose, and significance. Doctrinal and creedal statements of belief and ritual practices found in religious traditions are expressions of, or creations of, such experiences of meaning (Gilkey 1976). The absence of propositional assent to God as an entity need not nullify atheistic intentionality and "about-ness" that motivates movement through situations in one's daily existence – a secular faith. Moreover, an existential-phenomenological understanding of Otherness is nonetheless still an existential

*human* experience. This point grounds an understanding of existentialism as religious. This is an experience that is neither otherworldly nor merely created by the "thrown" person in the situation; we find ourselves in situations partly due to our agency and mostly a convergence of an infinite number of decisions and comportments beyond our control (van den Berg). Furthermore, emphasizing Otherness as the context of meaning and relationship as the necessity of self-understanding incarnates Otherness within existence. An existential-phenomenological understanding of religious experience as encounters with Otherness from situated stances testifies to the radical immanence of transcendence (Driver 1985). Transcendence, then, occurs with each possibility of transformation within the graced limitations of our coexistence.

## Exodus

Ingeborg del Rosario  
Emmaus Center, Quezon City, Philippines

*The Exodus* is the second book of the Jewish Torah and of the Old Testament of Christian Scriptures. From the Greek word *exodo*, which means “a road out,” the Exodus refers to the journey of the Israelites who were led out of Egypt by Moses after many years of oppression and slavery. While rooted in historical events, the Exodus story is primarily a foundational faith

experience, the core memory upon which the spiritual identity of the people of God is formed. Crucial to this testament of faith are the experience of a living, liberating God who hears and answers the cry of the poor, enslaved and oppressed, and the faith commitment of a people who live in remembrance of the divine redemptive activity.

The story of Exodus as a journey of moving away from enslavement and oppression into greater freedom and fullness of life also provides a template and guiding narrative for the individual in the continuing process of a search for identity and authenticity of self, wholeness and integrity, and healing and transformation. The beginning of the journey is marked by the recognition of the magnitude of suffering, the coming to consciousness of the intolerability of the anguish and agony of enslavement, and the deep longing for an end to its ruthlessness and devastation. In the *Book of Exodus*, the story of divine activity begins with the cry of the Israelites, who “groaned under their slavery and cried out” (Exodus 2:23), and of the divine response, God who “remembered . . . looked upon . . . and took notice of the Israelites” (2:25). The experience of enslavement can be external in nature, of an economic, political, social, or cultural dimension. Enslavement can also be internal, intrapsychic, and relational in nature. Depression and anxiety can enslave. Inadequate developmental environments and neglectful or erratic attachment dynamics in childhood can create psychological impoverishment and hardship in adult life and relationships. Trauma and abuse can grossly impede freedom of self-attunement and quality of engagement with others. Individuals can live many years without a conscious awareness of their being constricted by significant formative experiences in the past. They are unfree, estranged, and alienated from a sense of their true self, reacting from the protective defenses of the false self, relating consistently from a place of pain, an internal space of emotional vulnerability, psychic distress, and spiritual emptiness. The process of beginning the exodus journey of self-transformation involves the emergence of this pain and distress into consciousness, the

“groaning and crying out” that expresses an overwhelming longing to be freed from this enslavement, thus signaling the genesis of a commitment to the process of inner change and liberation.

The process of moving towards freedom, authenticity, and transformation will naturally meet internal resistance, especially after years of having lived with restrictive yet familiar dynamics and behavior patterns. The Israelites, after leaving Egypt and wandering through the wilderness, expressed this longing for the familiar ways of enslavement. When faced with fear and anxiety that accompanied the unknown, they complained to Moses: “What have you done to us, bringing us out of Egypt? Is this not the very thing we told you in Egypt, ‘Let us alone and let us serve the Egyptians’? For it would have been better for us to serve the Egyptians than to die in the wilderness” (14:11–12). Relational ways are long standing, habitual, and familiar. Even if they have become maladaptive and self-damaging, they had provided a sense of security and comfort. New ways of perceiving, feeling, and doing involve venturing into a space of uncertainty. While health sustaining and life nurturing, these ways may paradoxically feel frightening and disorienting, seemingly overwhelming and out of control. The desire for newness and freedom can meet repeatedly with the yearning for the old and familiar. The pull to authenticity and health can oscillate with the wish to return to what is accustomed and habitual.

While the process towards freedom and wholeness involves ongoing inner work and effort towards engaging newness, it also presumes the need for active waiting that allows healing to happen. The words of Moses to the Israelites respond to their fear and anxiety around the demands of the exodus journey: “Do not be afraid, stand firm, and see the deliverance that the LORD will accomplish for you today; for the Egyptians whom you see today you shall never see again. The LORD will fight for you, and you have only to keep still” (14:14). The exodus journey calls for determined movement and committed effort towards greater freedom and authenticity of self. At the same time, the exodus

journey necessitates the capacity for steadfast and quiet presence, the strength of reflective stillness that enables insight to be internalized, change to be metabolized, and self-transformation to take root. The process of healing from inner enslavement and oppression to authentic freedom and liberation of self happens with both movement and stillness, the dual dynamic of active and passive strength that both enables change and trusts the healing process to evolve, allowing transformation to happen in oneself.

The Exodus story teaches that the journey out of enslavement into freedom does not happen with immediacy. Traumatic wounding is multidimensional and extensive. The movement from psychic oppression and constriction takes the gentle respectfulness of time and patient hopefulness in the promise and imminence of newness and liberation. This process of healing from brokenness towards living from a space of authenticity and coming to a firmer sense of self-identity and fulfillment unfolds over one’s years. The Israelites, freed from slavery in Egypt, travelled for 40 years, wandering in the wilderness and sojourning to the land promised them. Their evolution of spiritual and communitarian identity as a people began with the liberation from slavery. Its shaping, consolidation, and development continued over time.

As the myriad challenges of journeying with hope towards wholeness and freedom are faced, the role of remembrance is essential. The story of Exodus began with the Israelites crying out to God who remembered the covenant and heard their cry. With their liberation from Egypt, their spiritual identity as God’s people is grounded in their remembrance of this saving act. The commandment and laws of the covenant have their wellspring in this redeeming memory: “I am the LORD your God, who brought you out of the land of Egypt, out of the house of slavery; you shall have no other gods before me” (20:1–2). The act of forgetting, of denying this foundational experience, creates internal fragmentation and spiritual disconnection from the space of self-authenticity and identity. When the Israelites did not remember their redemptive experience

and their liberation by God from slavery in Egypt, they fashioned a golden calf (Exodus 32). Remembering the experience of redemption keeps alive hope and enduring trust that one's cry will not go unheard, that the suffering from one's past will not eradicate the promise of change and newness in the future. Forgetting brings a loss of trust in and connection to one's self and the consequent despair when journeying through the demands and challenges of life. Remaining connected to the integrity of the true self and holding on to the belief that healing into life and authentic relationship are possible, in spite of the bondage of internal oppression and psychic enslavement, is the contemporary psychological echo of the redemptive memory that is the heart of the Exodus story, the pulse and energy that fuels the human journey to freedom of life.

## Extrasensory Perception (ESP)

C. Harry Hui  
 Department of Psychology, University of  
 Hong Kong, Hong Kong Special Administrative  
 Region of the People's Republic of China,  
 Hong Kong, People's Republic of China

Extrasensory perception refers to the alleged processes of precognition, telepathy, and

clairvoyance that take place via channels other than the sensory system that biologists and psychologists have been researching with scientific means. Precognition is the knowledge of future events obtained not through logical reasoning but through dreams or other psychological awareness. Telepathy is the sending and receiving of message over a distance, through nonphysical means. Clairvoyance is the perception of an object that is out of normal sight. Some records exist of people who have such experience of anomalous information transfer. Goulding and Parker (2001) claim that 25–45 % of the western population may report some form of ESP or other paranormal experiences.

Some clinical psychologists regard such experiences as delusion and therefore associate them with mental disorder, while the more new-age-oriented psychologists do not agree with this correlation (Targ et al. 2000). Besides the psychopathological explanation, some cognitively oriented experimental psychologists attribute the experience to the experient's cognitive bias or defective probabilistic reasoning. Biological psychologists, on the other hand, search for brain dysfunctions. Needless to say, the ESP experience can also be veridical.

Besides anecdotal evidence reported in the popular press, empirical evidence of the phenomenon is being gathered in more rigorously controlled conditions (Bem and Honorton 1994). Using the “ganzfeld procedure,” the researchers shielded participants from visual and auditory stimuli. They then asked some to “send” to others one of four images, which was correctly received about one-third of the times. Bem and Honorton (1994) regarded this as better than chance, which is 25 %. However, a more recent meta-analysis that included additional studies suggests that the effects are small or statistically nonsignificant (Milton and Wiseman 1999).

Déjà vu experience is sometimes included in the class of ESP. This strange sense of familiarity with a place or event apparently new to a person (“been there before”) is regarded by some as evidence that people have previous lives before

the present one (an idea that originated from eastern religious beliefs in reincarnation). According to some psychologists, this phenomenon can be explained naturalistically. Brown (2004) listed at least 34 psychological explanations that are rested on neither parapsychological nor psychodynamic presuppositions. These explanations include subliminal exposure (in which a person had actually been there before but was never made aware of that) and differential neural transmission (in which there is a slight separation between two messages of the event received through two channels).

Besides investigating ESP in its own right, some researchers are interested in measuring people's belief in ESP. Paper-and-pencil instruments have been developed (see, e.g., Goulding and Parker 2001; Tobacyk and Milford 1983). We do not, however, know much about how belief in ESP might correlate with other psychological constructs. Future research may examine Myers' (2006) suggestion that the belief in ESP despite the lack of evidence could be due to flawed processing of information and a hunger for wonderment.

## Extraversion

Adele Tyler

Life Journeys, Nashville, TN, USA

A psychological term formulated by Carl Jung in his book *Psychological Types* to describe the flow of psychic energy toward the outer world of people and things or “object.” The word extraversion comes from the Latin words *extra* and *vertere*, meaning to turn outward. Jung theorized extraversion and its opposite, introversion, as two fundamental, innate, and equally valid attitudes of people toward the outer world. Extraversion and introversion describe theoretical polarities on a continuum, with all persons using some degree of both attitudes in reality. Jung defined extraversion as a movement of psychic energy, or libido, outward from the subject to the object, with one's energy and interest being drawn as if by magnetic force from oneself to the outside world. People with a preference for extraversion both use and renew their energy by focusing outward and can feel drained by too much time alone or in reflection. Some general characteristics of an extraverted attitude include talkativeness; speaking quickly and with confidence; being demonstrative, expressive, and gregarious; and a tendency toward boredom and distraction. Extraverted forms of religious expression seek God in communion with other people through practices of group worship, oral teaching and study of the spoken word, discussion of religious concepts, and acts of service. Extraversion, like

introversion, offers both gifts and challenges, and self-awareness of one's preferred attitude can enable a person to function more in accordance with his nature and better achieve his potential.

## Faith

Philip Browning Helsel  
Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

Faith, *fides* in Latin and *pistis* in Greek, can be understood within a spectrum ranging from the content of a particular set of beliefs to the act of trust, usually in a particular community, doctrine, or Deity. In fundamentalist religions, the understanding of faith leans toward an emphasis on the content of belief, especially one's assent to a certain set of *beliefs*. In these contexts, faith has a noetic quality and is fixed within boundaries to define what is inside or outside its scope. To assent to the appropriate propositions of religion means to have faith, and to be outside these limits is to be unfaithful (or an "infidel," a term which derives from the Latin root of *fides*).

On the other side of the spectrum, faith is simply characterized as synonymous with trust, an attitude of believing, and thus refers more to the act of trusting than to the specific content of one's beliefs. Within this pragmatic emphasis, the psychological effects of comfort and release from anxiety and insecurity seem to be highlighted, even to the extreme of a marked absence of noetic content.

Most expressions of faith seem to exist in the middle, including an act of trust, with the

corollary of the promise of hope, and some particular content in which one's trust is placed (i.e., Deity, religious community, and sacred text). For both religion and spirituality, faith seems to have some particular, specific content that is reflected in the trust of believers. In Buddhism, the believer takes the "refuges," stating that "I take refuge in the Buddha, the *dharma* (Buddhist teaching), and the sangha (the community of monastics)." This tri-fold affirmation of faith points to the importance of the divine figure, the doctrine, and the community as the component location of spiritual strength and protection. In this affirmation, the individual/community dichotomy is addressed, in that the individual makes the affirmation of faith, placing trust in that tradition, in the midst of the tradition and in continuity with it.

## Commentary

Freud explained belief in a Deity as meeting the needs for a projected father figure, in service to cultural ideals of control and manipulation (Freud 1928/1961, pp. 21–22; Freud 1957). Freud was critical of the potential for faith to be used as denial and suggested that the more mature person would face fate (which he personified as the Greek goddess *Ananke*) without recourse to divine escapism (Rizzuto 1998, p. 170). Jung more positively identified with faith, but without an emphasis on its social or

doctrinal aspects. He understood it primarily in terms of *gnosis* (literally “knowledge”), as directly apprehended spiritual knowledge which the individual encounters and which brings about psychic healing through reconciliation of the opposite poles of one’s experience (Melanson 2002, p. 168). Object relations theorists modified Freud’s theories about projection and understood faith as arising from the liminal space between the mother and child in which the child creates and is grasped by transitional objects.

Perhaps no one used Freud’s theories with a more sympathetic eye to faith than Erik H. Erikson, whose developmental theories, formulated from his work with children and based upon a revised Freudian schedule of child development, led him to conclude that basic trust was the result of a positive resolution of the first childhood developmental struggle, between trust and mistrust. He concluded that an adult who had developed basic trust in this first stage would be more likely to have faith than one who did not. Therefore, the early experience of a child set the stage for a positive experience of religious faith in adult life.

Understood as a transformative experiential encounter of the individual, faith had strong significance in William James’ influential *Varieties of Religious Experience*. He suggested that persons who were divided, or troubled by psychic conflict, were more likely to experience surrender of oneself to an outside “something MORE” (James 1902/2007, p. 441). Faith can be seen, in Jamesian terms, as a resolution of a divided self through self-surrender, and thus a source of contentment and joy.

However, faith often occurs alongside doubt, and it could be suggested that the two belong in a dialectical tension. If these are seen in fruitful tension, faith can often be an expansive, life-giving experience. However, faith can also include a great deal of anxiety, about the potential for continuing in the faith and about being outside the limits of faithfulness. The Protestant Reformation can be seen as a way that this anxiety was addressed historically, with profound cultural and religious implications.

## Faith Development Theory

Curtis W. Hart  
Weill Cornell Medical College, New York,  
NY, USA

### Faith Development Theory: An Overview

Faith Development Theory is an interdisciplinary approach to understanding the evolutionary process of the development of religious/spiritual values and behavior in the human life cycle. The articulation of faith development theory began in the 1980s with the work of James Fowler and colleagues, and it has found a significant place in theological discourse and in some cases cultural studies as well. Its genesis took place when Fowler was involved in his doctoral studies and was immersed in the work of theologian and ethicist H. Richard Niebuhr. Niebuhr’s prototype

of a faith development paradigm had in turn been stimulated by his contact with a portion of the work of Alfred North Whitehead. Fowler's theory is typically taught to theological students and is shared with practicing clergy and interested laypersons as a means of providing a process-based understanding of the way that faith changes and transforms in the lives of individuals. Feminists and others have criticized Fowler's theory for its perceived patriarchal bias and its dependence of on an exclusive Christian framework and anthropology. Application of faith development theory arose originally in the analysis of important historical figures and the life narratives of individuals who undertook to describe how their own religious/spiritual perspectives, values, ideals, and ethics had evolved over the course of time. Faith development theory has also been the subject of cross-cultural study investigation and comparison as well. It has been of considerable value to religious educators and pastoral supervisors for seminarians, both of whom are engaged in offering guidance and promoting insight in matters pertaining to spiritual formation.

### Framework of the Theory

The framework of faith development theory is organized along developmental lines and phases. It actively employs Erik Erikson's epigenetic principle, Lawrence Kohlberg's theory of moral development, and Piaget's theoretical observations regarding cognitive function and development. Briefly stated, the process of faith development must be understood both theoretically and functionally as different from "belief" as that term denotes assent to propositions, traditions, rituals, ways of thinking, and hermeneutical approaches to sacred texts of a more or less consistent and often sectarian character. Faith, according to Fowler and colleagues, is a process that may or may not draw on a number of resources within and outside a tradition. It may have a traditional theistic focus or it may not. Faith development theory may be understood as a highly naturalized

concept of revelation that attempts to describe how a person moves through a series of psychospiritual conflicts and challenges needing to be engaged, if not resolved, and sometimes revisited. It is best understood as fluid and organic as it evolves over time in the direction of a nonstatic, though coherent, whole. While not teleological in a formal sense, faith development theory retains a retrospective epistemological methodology that may sometimes uncover patterns and intentions that are at once illuminating and may also be viewed as ontologically significant.

It is important to note that Fowler's theoretical framework has been modified over the years and yet has maintained its essential character. The theory begins with what Fowler calls "undifferentiated faith" that occurs in infancy. It is felt to be a pre-stage in that it is pre-conceptual and largely pre-linguistic. Fowler here relies on Ana Maria Rizzuto's description of the way self knowing first experienced in infancy shapes the information of consciousness and awareness of the other. Its conceptual value lies in its locating the basis of mutuality, strength, autonomy, and hope or their opposites that underline or undermine what takes place later on in the life cycle. It mirrors Erikson's understanding of *basic trust* and Winnicott's notion of *transitional space*. Stage 1 in the faith development paradigm is called Intuitive-Projective faith (ages 3–7) and is a fantasy-filled period whose emergent strength has to do with imagination. Stage 2, Mythic Literal faith, is identified with childhood until adolescence and is the occasion for the enhancement of the child's imagination through storytelling. It often demonstrates a tendency toward literalism and a moral sense that sharply divides "good" from "bad." Stage 3 is called Synthetic-Conventional faith and is identified with growth into adolescence. In fact, some individuals may not progress much beyond this point. Here persons form an individual "myth" in self-understanding in relation to both self and world. It is understood as a "conformist" phase where a person becomes more or less comfortable and avoids looking critically at their motivations, attitudes, values, and religious/spiritual

commitments. Stage 4, Individuative-Reflective faith, describes the transition from late adolescence to young adulthood. Here relationships to others and commitment to vocation become central, and there may be a necessary reevaluation of values and attitudes rooted in the thinking and behavior of adolescence. Perspectives of other traditions on matters of spiritual and ethical significance may likewise become important. Conjunctive faith (stage 5) represents the potentially transitional experience of mid to late adulthood where one reviews, reworks, and rediscovers one's past. There may emerge, according to Fowler, what the philosopher Paul Ricoeur calls a "second naivete" which requires a fresh look at symbols and stories formed during earlier periods of life. It is highlighted by an opening to the voices of a deeper self. This review and reworking of symbolic meanings and commitments resembles some of what William James meant by one's becoming "twice born." It results in a willingness to expend oneself in actions and relationships that embody the ethical norm of "respect for persons" and in an overarching responsibility in the caring for others. The last phase is what Fowler calls "universalizing faith" (stage 6) and it is extremely rare. Persons who reach this stage become "universalizers" of ideas and movements that come to have lives of their own. "Universalizers" become persons endowed with a "special grace" that makes them even more revered once they have died or passed from the world scene. And they often die or are eliminated by those they most wish to save or help. Their number might include such persons as Malcolm X, Dietrich Bonhoeffer, and Martin Luther King.

## Conclusion

Even though faith development theory is transparently psychological, it remains possible to connect Fowler's stages to religious/spiritual terms, ideas, symbols, texts, and historical figures outside the boundaries of its Protestant and Christian origins. The challenge to faith

development theory is to help persons from a wide variety of backgrounds and traditions make these connections. The theory is both pragmatic as a tool or "map" though the life cycle even as much as it is a methodological and theoretical challenge to more traditional and academic theological anthropologies.

## Faith Healing

B. A. Mulemi

Department of Social Sciences; Anthropology Unit, The Catholic University of Eastern Africa, Nairobi, Kenya

Faith healing refers to processes of restoration of well-being through religious rituals and submission to divine intervention. It involves the conviction that mystical power can remedy mental and physical affliction either through material medicines or without them. Private or communal rituals and devotion intended to influence supernatural beings to miraculously counteract affliction are key features of faith healing. However, the afflicted may or may not actively solicit the mystical healing as their faith makes them take for granted the solicitude of God or other divine beings. Believers may expect divine

beings to reciprocate people's trust, faith, and obedience with compassion and well-being. Similarly, human agents such as doctors or faith healers may not necessarily mediate the healing process (Dickinson 1995, p. 97). Faith healing is therefore a type of religious, magical, or symbolic healing resulting from direct or indirect ritual manipulation of supernatural forces (cf. Dow 1986, p. 57). Faith in an authority within a religious system defines quests for wellness and confidence in divine intervention (Sykes 1976). Faith has mental (cognitive) or intellectual and emotional or affective components that compel afflicted people to engage in religious actions to protect or restore their health (Levin 2009). The relationship between faith and expected positive health outcomes may be unintelligible, uncertain, and not be easily knowable (Clarke 2003). However, faith underpins the conviction that something ordinarily incomprehensible, such as miraculous healing, can materialize.

## Healing

Healing denotes a process of restoring and sustaining wellness (Mulemi 2010). The process reestablishes physical, psychological, social, and spiritual health and growth. It repairs and regenerates body organs and neutralizes forces that may undermine soundness or normal function (Dickinson 1995). Beliefs and religious practices related to healing shape the complex interactions between lived experiences of suffering and faith in mystical restoration of health. Therefore, healing provides a means for expression of suffering and hope, which may elude articulation in ordinary language. The expression brings to the fore concrete, physical, psychological, and social effects of therapeutic practices. Therefore, healing processes may help in determining what counts as illness requiring treatment and when health restoration has been effected (cf. Csordas 2002, p. 11).

Healing practices and beliefs manifest the reality of health as both a subjective and objective reality, which goes beyond wellness of the body to include vitality of the psyche.

These aspects involve psychological dimensions in conceptualization of *salutogenesis* (Antonovsky 1979; Levin 2008). Salutogenesis constitutes a paradigm for comprehending and harnessing underlying causes of comprehensive health and well-being, with regard to the body, soul, and spirit. Salutogenesis may account for why some people fall ill under stressful conditions while others do not (Billings and Hashem 2009). In this sense, healing provides coping resources that people may effectively use to prevent or deal with a variety of subjective psychosocial and objective physical stressors.

Belief in the agency in faith healing practices of divine forces and entities is ubiquitous because many forms of healing across cultures are religious (Csordas and Lewton 1998). This implies that healing is a prominent universal aspect of religious experience, and it is the most significant symbol in any religion (Sullivan 1987, p. 226). However, both religious and secular belief systems in most cultures primarily attribute a natural capacity for healing to biological processes in organisms. Cure of the body and the quest for wholeness through healing is an important expression of beliefs and attitudes about the invisible powers of the universe (Sullivan 1987). Adherents of religious traditions often extend beliefs about therapeutic power to ordinary agents and institutions associated with representation and transmission of supernatural healing power.

Where people anticipate or perceive delays in objective natural healing processes, they actively or passively pursue divine intervention. The quest for expedited healing and cure shapes people's patterns of resort to different forms of healing, including faith healing. However, medical reference to healing restricts its meaning. The biomedical use of the term refers to empirical signs of wound recovery and granulation of lesions. In this sense, healing denotes the biomedical perspective of treatment; attempts to stop the pathogenic process and the quest to prevent further tissue and organ damage (cf. Levin 2009). However, healing per se entails comprehensive restoration of health by reversing or neutralizing the pathogenic process, restoration

of prepathogenic states of health, or attainment a complete state of physical, psychological, and spiritual wellness. This constitutes the milieu in which faith healing as a process of reestablishing holistic equilibrium is embedded.

### Faith Healing and Equilibrium

Belief in miraculous power intrinsic in both medical and nonmedical resources characterizes faith healing. For Christian faithful, for example, a doctor may draw on God-given and divinely effective resources of wisdom and skill. Healers and patients use the resources to restore or preserve bodily or mental health and vigor necessary for active and purposeful life (Dickinson 1995). Faith healing thus provides an opportunity for people to assign meaning to their experience of suffering and recovery. In relation to this the inexplicable hidden power of healing and curing mechanisms are often the subject of faith and religious awe. Believers attribute the power of both medical and nonmedical processes to definitive divine sources. Curing results from technical work drawing on the esoteric knowledge of how to harness and utilize medicines. The medical expert – a physician, surgeon, or traditional herbalist – may enjoy divine favor of privileged access to cure and healing power, and this may present their work as an aspect of faith healing.

Faith healing is a long process involving interaction between human beings and among individuals with the community, environment, and divine beings. This implies efforts to reinstate stability in strained relationships between humans and fellow humans, environment, ecology, and the supernatural. The equilibrium people seek in healing activities includes physical, emotional, social, and spiritual dimensions (Appiah-Kubi 1981, p. 81). Belief and trust in as well as commitment to safeguarding health through the agency of supernatural beings, environmental elements, and fellow human beings typify faith healing. The putative power that underlies healing derives from belief in invisible therapeutic energy in the universe, which flows through and is mediated by mind-body

interactions. Hope about the efficacy of faith healing derives from the convergence of belief, trust, and submission to God or the authority of a mystical entity.

### Faith Healing Behavior and Activities

Rituals of communal or private prayer, offering, sacrifices, laying on of hands, and ecstatic chanting characterize faith healing. These activities produce possibilities of healing through suggestion, which may counteract health inhibitions in the body or mind. The healing activities may also induce varying degrees of altered states of consciousness. The hypnotic effect, for example, contributes to self-sooth psychological adaptation, which mitigate pain and malaise. Healing activities affirm the conviction that participants can increase contact, communion, and personal relationship with supernatural beings that protect health and counter illness. Healing rituals reflect the belief that patients and their caregivers can effectively harness mystical power to restore health. The faith healing practices may also enhance believers' resiliency in the face of daily life stressors that burden and drain the mind.

Faith healing sessions and practices grant an afflicted person the opportunity to resolve issues that affect mental stability, body function, and immunity to illness. Communal faith healing sessions may facilitate disclosure of personal needs, pent-up emotions, and experiences to God or other divine beings and fellow believers. Healing communities, such as Pentecostal Churches, emphasize the practice of claiming healing. Believers not only experience healing privately but also have the obligation to testify about it publicly (Peacock 1984, p. 41). The declaration of healing reinforces it; hence faith healing activities may be expressions of psychological dispositions.

Transactional symbols such as sacred ideas, divine beings, and objects mediate faith healing. This relates to the belief that mystical entities can bestow different agents including human beings – with power to promote health miraculously. Faith particularizes the symbols from generalized

figurative media in cultural mythic worlds that link the social and the self-systems (Dow 1986, p. 63). Religious symbols shape hope and positive illusions that enhance health. The illusions affect physical and mental health through faith and their ability to control undesirable events through submission to supernatural authorities (Taylor 1983). In this sense faith healing practices contribute to composure that facilitates behaviors that improve both physical and emotional well-being in spite of stressful events.

Faith healing practices produce expected results through behavioral events (Kleinman 1980). Perceived efficacy of healing events materializes by uniting individual (psychobiological) and collective (sociocultural) aspects of the healing process (Peacock 1984). Consequently, faith heals through at least five mechanisms. First, it induces behavioral or conative processes that stimulate health promoting behaviors, such as therapeutic acquiescence. Second, an interpersonal mechanism ensues to connect the sufferer to people who encourage him or her and offers material and emotional support. By involving other participants apart from the patient, faith healing transforms private experience of affliction into collective experience (Peacock 1984). This results in action that partakers of the healing events believe can expedite healing. In the third place, a cognitive mechanism establishes a mental framework that strengthens the natural ability of the human mind and body to heal through self-renewal. Fourth, the affective mechanism links faith to healing by stimulating self-soothing emotions, which may prevent or ease pain and negative effects of stress. Finally, faith contributes to healing through a psychophysiological mechanism, which underpins hope. The psychosocial mechanism is an important aspect that defines resilience and endurance that make health-seeking behaviors meaningful and beneficial.

## Conclusion

Faith healing connotes processes, actions, and experience of health restoration drawing on

religious rituals and belief in divine intervention. The congruence in faith, trust, and hope in the power of the supernatural and its agents motivate adherence to faith healing practices, behavior, and beliefs. This facilitates subjective experiences of health restoration, which essentially materialize by psychophysiological means. However, the Supreme Being and other divine agents demand believers' submission in exchange with the promise of mystical or miraculous healing. Faith healing is in effect consistent with the notion of "healing of the whole person" (Berg 1980). It addresses the complex interdependence among mental, social, spiritual, and physical aspects of well-being.

## Fall, The

Jill L. McNish  
 Union Theological Seminary, Swedesboro,  
 NJ, USA

### Orthodox View

The term given to the mythical event described in Genesis 3:1–24 in which God cast Adam and Eve out of the paradisaical Garden of Eden because they had disobeyed God in eating the fruit of the tree of the knowledge of good and evil. In casting Adam and Eve out, God said that in so eating the forbidden fruit, humankind had become “like one of us, knowing good and evil.” Although God had told the primal couple that if they ate the forbidden fruit they would die, instead God banished them from the Garden of Eden declaring that thenceforth Adam would have to work hard to produce food from the earth and Eve would be subservient to her husband and undergo great pain in producing offspring. The orthodox Augustinian interpretation of this event is that

Adam and Eve’s condition in the Garden of Eden was one of paradisaical perfection but that their rebellion against God led to a separation from God and hence a “fall” into sin, pain, and death. This theology understands the present reality of sin, evil, suffering, and death as flowing from this first dramatic rebellion – the exercise of the first humans’ God-given “free will” in disobedience of God. In a related line of thought, Augustine also developed the theology of Original Sin, contending that sin was transmitted from generation to generation through the act of procreation, beginning with Adam and Eve. It is often contended that Paul’s writings (Romans 5:12–21; 1 Corinthians 15:21–22) lend scriptural support to Augustine’s understanding of the fall of humankind.

### Feminist Reframing

Because Eve was first tempted by a serpent to eat from the tree of the knowledge of good and evil, with Adam eating the fruit only after Eve had already done so and offered it to him, ancient Christian fathers blamed Eve – the first woman – for original sin and hence all evil, sin, suffering, and death since the Fall. This reading of Genesis 3:1–24 has been zealously contested by contemporary feminist theologians who contend that this is a misogynist reading of the story of the primal couple. Rosemary Ruether lambasts Augustinian theology of the Fall and Original Sin as “patriarchal anthropology” (Ruether 1993, pp. 94–99). Reframing the story of Adam and Eve has sometimes led to an understanding of Eve’s action in eating the fruit as being a sign of creativity, curiosity, and initiative and the beginning of culture (see generally Susan Niditch 1992, p. 14 or Mary Daly 1973, pp. 44–68).

### Other Views

Although the orthodox theology of the Fall and original sin have descended from Augustine through Aquinas to Catholicism and into Protestant orthodoxy, there have been many other detractors and alternate lines of thought.

For example, Irenaeus, the second century Bishop of Lyons (c. 130–202) saw Adam and Eve not as perfect beings who “fell” into sin, but rather as imperfect, immature creatures who were at the very beginning stages of a long process of moral development which would eventually be brought to perfection by God. This approach was later developed by the German theologian Friedrich Schleiermacher who believed in a progressive development of God-consciousness in humankind from a mere potentiality to a reality in the future. A prominent contemporary proponent of this line of thinking is John Hick (1977), who contends that humankind, “created as a personal being in the image of God, is only the raw material for a further and more difficult stage of God’s creative work. . . God’s purpose for [humankind] is to lead [it] from human *Bios*, or the biological life of [humankind], to that quality of *Zoe*, or the personal life of eternal worth, which we see in Christ. . .” (pp. 256–257).

Paul Tillich saw the mythical eating of the fruit by the primal couple as the end of “dreaming innocence.” Prior to the Fall, he contended, “freedom and destiny are in harmony, but neither of them is actualized” (Tillich 1957, p. 35).

### Psychological Perspectives

Harold Ellens points to the array of Freudian symbols in the story of the Fall: “the serpent, virgin, flaming sword, nakedness, anxiety, shame, the phallic deity, and the initially nonphallic humans.” However, Ellens’ primary interest is in the use of developmental models of Piaget, Kohlberg, Erikson, and Fowler to understand the story of the Fall as paradigmatic of “human growth from the childlikeness of Eden to mature kingdom building and cultural responsibility. In that growth process, the story plays the role that has equivalents in the human growth process of birth and adolescent disengagement from parents, both inherently healthy processes, and the subsequent independent adulthood” (Ellens 2004, p. 32).

Another line of thinking regarding the mythical significance of the Fall is that the mythic episode of Genesis 3:14–24 represents the

developing human animal’s first experience of the *shame* affect which, through the process of evolution, became part of humankind’s hardware script (McNish 2004).

### Family Therapy and Pastoral Counseling

Loren Townsend  
Louisville Presbyterian Theological Seminary,  
Louisville, KY, USA

Every religious tradition attends to family life through sacred texts, codes of behavior,

community memory, and practices of spiritual care. These organize gender roles, sexual practices, intergenerational relationships, and how power and resources are allocated. How a religious tradition understands “family” is dependent upon its history and its perceived social problems, social and economic structure, and local mores. Historically, religious and spiritual care of families has taken the shape of moral instruction to reinforce a tradition’s ethical vision for family life. This pattern changed in the early twentieth century, particularly for Jewish and Christian traditions in Europe and North America [The pastoral counseling movement emerged primarily as a North American Christian and Jewish phenomenon in the twentieth century (Townsend 2009)]. New knowledge from social sciences provided religious leaders with expanded knowledge about families that informed religious care of families. In the mid-twentieth century, family therapy was an important part of this new knowledge. Pastoral counseling developed as a professional specialty during the same time and benefitted from family therapy’s concepts, theories, and treatment methods. Contemporary pastoral counseling embraces family therapy as a significant model of treatment. It is common today for pastoral counselors also to be licensed as marriage and family therapists.

Contemporary professional pastoral counseling developed as clergy counselors pursued training in psychiatric contexts influenced primarily by psychoanalysis (see Supervision in Pastoral Counseling). For much of the twentieth century pastoral counseling was defined as theologically informed individual psychotherapy (Townsend 2009). In contrast, family therapy evolved as a dissident movement within the medical psychiatric establishment. Prevailing psychoanalytic and early humanistic models of treatment assumed that psychological problems often were related to neurotic conflicts and subjective beliefs patients had about their families. However, psychotherapeutic orthodoxy required that therapists follow Freud’s dictum: treatment is always an individual process. Therapists must have no contact with a patient’s family. Between 1930 and 1960, this insular

paradigm was challenged by “pioneers, iconoclasts, and great originals who somehow broke the mold of seeing life and its problems as a function of individuals and their psychology” (Nichols and Schwartz 2001, p. 13). Examples include Paul Popenoe (family planning specialist, Los Angeles), Emily Hartshorne Mudd (social worker, Philadelphia), and physicians Abraham and Hanna Stone (New York), all of whom opened counseling centers for married couples in the early 1930s. By 1940, child psychiatrist Nathan Ackerman was attending to family emotions in treatment and later experimented with therapist-family contact (Ackerman 1958). In the early 1950s, psychologist John Elderkin Bell developed a model of therapy that regularly included family members in treatment. Research in schizophrenia (1950s) prompted anthropologist Gregory Bateson to question the epistemological foundations of psychoanalysis. In its place, he proposed an ecological, interdisciplinary approach to psychological problems and their treatment based on communication theory and cybernetics. Research in schizophrenia also led psychiatrist Murray Bowen to develop natural systems theory as a replacement for psychoanalysis.

By 1970, family therapy represented a substantial paradigm shift away from traditional psychoanalysis and individual therapy. Family therapists rejected traditional views that (1) psychological problems are internal and personal, (2) relational problems are a result of individual pathology acted out in relationships, and (3) individual psychotherapy is the treatment of choice for most problems in living. Instead, family therapists claimed that problems must be evaluated and treated in the context of family and other human relational systems. All treatment – whether a single individual or an entire family was present in the therapy room – used and influenced relational systems. Family therapy rested on a multidisciplinary foundation that produced new models of therapy, strong leaders, and several influential training centers. Gregory Bateson, Jay Haley, and others founded the Mental Research Institute in Palo Alto where they applied communication theory and

cybernetics to brief psychotherapy. Murray Bowen taught natural, intergenerational family systems at Georgetown University's medical school. Child psychiatrist Salvador Minuchin developed structural therapy at the Philadelphia Child and Family Therapy Training Center and highlighted the importance of family organization in human problems. Carl Whitaker (Emory University and University of Wisconsin-Madison) taught symbolic-experiential family therapy. Ivan Boszormenyi-Nagy (Philadelphia) developed Contextual Therapy based on intergenerational relational ethics. Through the 1980s and 1990s, family therapy became a vigorous discipline maintained by accredited academic programs and regulated by state licenses. Family therapy theory has evolved to accommodate new research, changing social conditions, multicultural understanding of the family, postmodern epistemology, and integrative theoretical models. Today, family therapy is a licensable discipline, an interdisciplinary approach to human problems in a relational context, and a constellation of diverse treatment methods.

Pastoral counselors have a history of concern for marital and family problems. However, prior to 1980, most central teaching texts interpreted pastoral counseling exclusively as individual therapy guided by variations of psychoanalysis (Wise 1951, 1980), Rogerian client-centered therapy (Browning 1966; Oates 1962, 1974), or humanistic growth therapies (Clinebell 1966). Premarital counseling, marital counseling, and intervening with family problems were based on models of "enrichment" suggested by these individual therapies. One exception was Clinebell's (1966) *Basic Types of Pastoral Counseling* which described new resources emerging from the family therapy movement that might be helpful to pastoral counselors. By the end of the 1980s, most pastoral counselors were aware of family therapy. Many saw it as a helpful secondary method of counseling, useful when counseling couples or families with problems. Pastoral counselor training programs began to require at least rudimentary knowledge of family theory and couple or family intervention. Some pastoral

counselors enrolled in family therapy training programs mentioned in the previous paragraph. For these pastoral counselors, family therapy became a primary commitment rather than an occasional alternative to individual therapy. This paradigm shift was not universally welcomed by the pastoral counseling community. First, it challenged a theological preference for individual experience found in the liberal protestant theology that supported pastoral counseling theory (particularly Tillich and Niebuhr). Second, it questioned the ethics of a theology and psychotherapeutic approach to care (psychoanalytic and Rogerian) that prioritized depth, individual psychological analysis available only to the socially and economically privileged and which tended to ignore relational systems. Though willing to use some family therapy techniques for specific couple or family problems, most pastoral counselors resisted this significant shift from their historic and theological roots.

For pastoral counselors, interest in family therapy as a paradigm shift increased with publication of Rabbi Edwin Friedman's book *Generation to Generation: Family Process in Church and Synagogue* (Friedman 1985). Friedman's elegant application of Bowen's intergenerational family systems theory to congregational life showed that family systems theory could be a sophisticated, theologically informed alternative to individual psychological models. This text quickly became a standard for clergy training. It provided pastoral counselors an accessible introduction to "systems thinking" and lent legitimacy to assessment and treatment that was not based in depth psychology. In the 1990s, systemic epistemologies gained enough momentum to challenge long-standing preference for individual psychological paradigms. For example, feminist and LGBT pastoral counselors found contextual, systemic models helpful for evaluating power structures, challenging patriarchal systems, and deconstructing pathological concepts like the "schizophrenogenic mother" (Fromm-Reichman 1948). Multicultural family therapy (Hardy and Laszloffy 1995) offered pastoral counselors new

ways to interpret gendered, racial, class, and sexual orientation differences in social context. Systemic family theory also began to influence the pastoral theologies that supported pastoral counseling (Graham 1992).

Since 2000, pastoral counselors have constructed important integrative connections between postmodern family therapy and postmodern theologies. These theological and therapeutic models pay careful attention to how all social meaning, including family interactions and beliefs, are constructed in specific social contexts. Instead of universal principles of counseling that fit all people or families, these postmodern integrations use, for instance, narrative and collaborative family therapy to interpret care of women (Neuger 2000, 2001), stepfamilies (Townsend 2000), and lesbian couples (Marshall 1997). They also directly critique pastoral counseling's historic bias toward long-term and individualistic models of therapy (McClure 2010; Stone 2001).

Perhaps the greatest stimulus to connect family therapy and pastoral counseling was political. As healthcare changed in the mid- to late 1990s, payment for services required that a counselor be licensed. In all fifty states, family therapists lobbied successfully for licensure. Pastoral counselors gained licenses or certifications in only five states, which meant that most pastoral counselors needed a license in another discipline to qualify for jobs in interdisciplinary counseling centers or to receive payments from health insurance companies. Many sought training that would allow them to obtain a marriage and family therapy license. Several theological seminaries and freestanding pastoral counselor training programs developed educational models that were theologically integrated and license eligible in marriage and family therapy. Increasingly, pastoral counselors are finding a vocational home by integrating pastoral values in their work as licensed marriage and family therapists.

Professional pastoral counseling is a discipline that has always borrowed psychotherapeutic theory and reflected theologically on its application to ministry (Townsend 2004). Today, pastoral counselors may choose a family therapy

technique as an auxiliary to individual-oriented therapy practice or see marriage and family therapy as their primary theoretical commitment. In either case, theological or spiritual integration will define the pastoral counselor's work. Pastoral counseling guided by family therapy will at minimum: (1) frame individual life in a family context; (2) assess and treat problems as systemic (a product of family and social systems) rather than individual psychopathology; (3) observe how families and problems are structured and maintained through intergenerational patterns, repetitive interactional sequences among family members, organizational/structural patterns, or the shape of family narratives within specific cultural contexts; (4) attend carefully to the family life cycle in assessment and treatment; (5) consider the entire family as the unit of treatment in counseling; (6) describe change as ecological – that is, it is intricately related to changes and influences in the whole family, community, and cultural system; and (7) expect the therapist to be a facilitator of systemic change rather than a psychological healer.

## Fate

Todd DuBose  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

The concept of fate is as old as there is recorded literature about human interactions with the gods, crossing multidisciplinary boundaries. Whether natural phenomenon is anthropomorphized as shapers of life directions, or belief in supernatural providence as an explanation for wonders and woes, the experience of how one's life unfolds and of who or what (if anyone or anything)

orchestrates it must certainly rank as the most primary of questions for human beings across history and culture. Embedded in any account of fate, Homeric, Shakespearean, sacred literature, or otherwise, is an accompanying declaration or puzzlement about fate's relationship to choice, agency, and freedom (Anonymous 2150 BCE/1960; Eliade 1959; Homer 600 BCE/1999; Shakespeare 1623/1937). Moreover, fate is usually discussed with a melancholic intonation signifying the limitations of averting tragedy, perhaps a hasty conclusion that could overlook liberating factors that ease the burden of existence when fated in the world.

Fate was originally understood as the pronouncements of the gods about how one's existence was to proceed. Along with this preordination of task and vocation came a melancholic resignation believing that fate equaled doom. Fate was either discerned through premonition, such as in dreams, or was an interpretation of one's life offered retrospectively, the latter process, of course, establishing a frame of reference for understanding future projections of existence.

There are several important points to explore about fate that are central to the field of psychology and religion. Some of these points of discussion include the place of freedom in fate, the possibilities of alternative views of fate other than despair over impending doom, and the relationship of ancient understandings of fate to more contemporary expressions of fate. The latter issue necessitates addressing whether or not existence is fated by macrosystemic, biochemical, or genetic determinants: our postmodern pantheon of gods.

An original pondering on whether or not we have freedom in the face of fate is what the ancient world considered as the "idle argument" in relation to illness and remedy. One can seek the care of a physician by choice, but if one recovers or not, the seeking of the physician is irrelevant. Recovery or illness is fated, no matter what one does in response to it. The same conundrum can be found in various theological positions related to predestination and providence and in how one views developmental theory. Are events the result of random chance or are they predetermined? Are they *absolutely* determined,

even if one's development includes tragedy and suffering, and, if so, what would this imply about the gods? Is development and the place of divine – read as Otherness in various ways – intervention in that development a compromise between moderate determinism and free will?

These are ancient questions. Wisdom literature, Homeric literature, the Muslim will of Allah, Shiva's dance or Vishnu's Maya, ever-present and directing God, and the will of God the Father are only a small list of fateful descriptions that include wrestling with what seems to be fated. Struggling with what seems to be fated presupposes, as disclosed by the struggle itself, that one can argue with God, disobey the gods, or accept one's fate. The latter advice is what came to be known as *amor fati*, or the admonition to love one's fate. Acceptance, though, is a choice, even if the aftermath of one's choice is inevitable or not. Fate, though, need not be explained as the effects of historical causality and, instead, can be described as the factual givens of our "thrownness" in any given situation, to use Martin Heidegger's (1889–1976) language (1962). Our existential givens as human beings situate us in each moment of our lives.

One may think that since the rise of scientism and logical positivism, and thus, the jettisoning of imaginal worlds populated by the gods as dictators of our daily happenings, we must be rid of external controls of freedom. On the contrary, causal displacement continues in full force. We are who we are as a result of our neurochemistry, our familial upbringing, our social construction, and our unconscious, among other unmoved movers and newer gods in our present situation. Moreover, there are fated aspects of choice itself. Jean-Paul Sartre (1905–1980) speaks of the condemnation to choose and the inescapability of deciding (1943/2003). Martin Heidegger (1962) wrote of the omnipresence of the call of conscience and the necessity of response, even if the response is an inauthentic privation of our projected being-in-the-world. Most importantly, for Heidegger, we are fated to die, which paradoxically invites a choice to live more fully. Life becomes full in our embrace of our situatedness.

It is paradoxical indeed when that which is given brings forth one's ownmost possibilities. Hence, despair need not be the only attunement to one's limitations and doom need not be the only outcome. Situatedness relieves us of our aspirations to be as the gods, which may be where most of the frustration lays for those whose like in kind projects are frustrated by fate. Even the gods fated to be as gods struggled with wishes for "more than" what was available to their situation. The irony, then, is that perhaps the most fated aspect of our lives is the inescapability of our freedom.

Resoluteness, for Heidegger (1962), is a comportment of agency within fated thrownness. Yet, fate, from this perspective, is not a causally driven phenomenon. It is created in my very resoluteness. I commit with openness, thus authentically embracing my historicity. We are fated by our thrown situations in history, but we are also "fating" in our decisive and authentic commitments to and Sartre allegiances with our given *existentialles* as human beings. This kind of *fait accompli* is not merely an acknowledgment of where I find myself as a recipient of thrownness but also as one called to respond and thus historicize ones accomplishments. To be fated is to be historical, and to be fating is to be free and able to own our ownmost possibilities amidst our limitations as well as to co-create our situatedness through our resoluteness.

## Commentary

The central aspect of discussions about fate related to the field of psychology and religion rests on the ancient understanding and critical redaction of how fate is a quality of relationship between the gods and humankind. Misunderstanding the meaning of being in this mythology and reducing these interactions to bicameral mindedness, as Julian Jaynes (1920–1997) (1976/2000) saw it, have not ceased politics with the gods – now understood as any external force that is presumed to determine one's destiny – neurology and macrosystemic influences being the two most prominent gods today.

We now know of the plasticity of the brain and that its dendritic branching rewires itself throughout our lives, particularly in dialogue with how we make sense of situations. As much as we find ourselves fated by existential givens, we can also create fate that is not there, as when we disown accountability for our moment to moment decisions in co-construction of our various situations. Liberation from oppression would not occur at all without the capacity to descend, overthrow, or cease participation in hegemonic patterning.

Therapeutic responses to fatalism need not find themselves pinned between the false dilemma of free will versus determinism. Theologically, those in therapy speak of providential intervention in their lives and most often not explicitly using that word. Instead, we hear statements signifying varying degrees of providential influence with comments such as “there is a reason for everything,” or “why did it have to happen this way, and why me?” or “this is simply not fair,” and, finally, “it’s all my fault.” We are still talking with the gods. When all is said and done, however, we are recipients of fate as much as we shape it. One could say that fate is surely co-constructed, even in each novel occasion’s invitation to create life as Alfred North Whitehead (1861–1947) would put it (1929/1979). Moreover, there are more available responses to us regarding our situatedness and historicity than hopeless resignation to impending tragedy, an interpretation made by our ancient predecessors to retrospectively make sense of traumatic experience. Even in the worst of traumatic experiences, we still have the burden or beauty to respond, and in doing so we find ourselves phenomenologically – though paradoxically – fated with freedom.

## Ancient Significance

Symbols of male and female parentage have been connected with the structure of the universe in religious and mythical imagination. In the understanding of many ancient cosmologies, the sky is seen as the father and the earth the mother, corresponding to the impregnation of the ground

with rain and the earth's generative capacities in producing plants (Jackson 1983, p. 88). In other ancient mythologies, the sun represents the male figure, while the moon represents the female (Jung and Kerényi 1949, p. 130). This identification of the terrestrial and heavenly forces with parental figures shows the importance of the original imprint of the parent upon the psyche of the culture.

However, the influence of the father has also come under close scrutiny. In discussions of prehistorical understandings of parenting, the debate has centered on questions about the father's role in procreation. On the one hand, some scholars suggest that the father had no understanding of his role in the conception of children, and women were seen as having mythical powers which sustained humanity, and that "man's part in this process was not as yet recognized" (Stone 1976, p. 11). Such a perspective is reflected in the Christian narrative about the birth of Jesus, in which the ostensible human father plays no procreative role. On the other hand, some scholars insist that the lack of understanding about biology in ancient times lent itself to the interpretation that men were the sole progenitors of children, women being simply receptacles for the man's creative powers (Morton 1985, pp. 35–36). This interpretation is reflected in Zeus' conception of Athena from out of his head or the birth of Aphrodite from a severed phallus. As speculative as these debates have been, they reflect the ambivalence surrounding the relationship of the male parent to his progeny.

### **The Changing Images of Fathering**

In modern times, the father's role in the family has been equally uncertain. Moving away from a unified idea of masculinity, the current period is experiencing flux as traditional patriarchal societies around the world come under challenge (Morgan 2002, pp. 280–281). The significance of the father has changed with the shifting involvement of fathers with their families and the cultural conditions in which the father interacts with a particular family. Psychology and culture are interrelated, as repeated patterns of

fathering have psychological effects that produce sons who father in similar ways (Chodorow 1978, p. 36). Nevertheless, significant shifts have also occurred over the last several centuries in how men in the United States father their children (Lamb 2000, p. 338).

In the early history of the United States, the father's primary responsibility was "moral oversight and moral teaching," namely, the cultivation of education for the purpose of studying of Scripture (Lamb 2000, p. 338). Many Asian cultures continue to retain the image of father as moral guide and authority, with strong meanings associated with fatherhood and obedience (Zhao 2007, pp. 72, 128). In the United States, this vision of fatherhood changed as industrialization moved fathers out of the home with their primary role becoming that of providing financial support. As many Black American men had to travel long distances to work in northern cities, this created a "father absence" for the sake of this breadwinning role (Lamb 2000, p. 338). The 1940s brought a new understanding of fathering which depicted the necessity for fathers to be a "sex-role model, especially for [their] sons" (Lamb 2000, p. 338). This interpretation, and the literature which it spawned, highlighted the "presumed or declared inadequacy of many fathers" (Lamb 2000, p. 338). Finally, as a result of the feminist movement, there has been a stronger emphasis on the nurturant roles of fatherhood. This has corresponded with more actual involvement of fathers in the lives of their children, especially when both parents work outside of the home (Lamb 2000, pp. 338–339).

All four of these images of fatherhood continue to play significant and often interchanging roles in the actual practices of fathering. Fathers often feel pressure both from within themselves and from the wider culture to exhibit aspects of these fathering styles that are consistent with cultural expectations of fatherhood.

### **Psychological Views of Father and Religion**

Freud believed "God" reflected the projection of a wished-for father figure, so that "the longing for

the father was the root of the need for religion” (Freud 1927/1961, p. 28). Freud calls God a “father substitute... a copy of the father as he is seen and experienced in childhood,” before one’s ideal image of one’s father is challenged (Freud 1923/2001, p. 46). This need for a father substitute came with a great deal of ambivalence, as can be seen in the mythology that Freud proposes. He suggests that in ancient times the “primal horde” of brothers conspired together and killed the father and that his power entered a totem animal that was sacrificed and shared so that his power could be distributed to all participants (Freud 1927/1961, pp. 28–29). In a similar vein, Freud suggested that Moses, as the father figure of the Jewish faith, was actually murdered by the Israelites and that his invention of monotheism was the great act of religious genius through which the image of the “repressed” primal father who had been killed could again be returned to consciousness (Rizzuto 1979, p. 20). This theory was a direct reflection of the oedipal drama, a “competitive sexual and aggressive conflict” in which the boy desires to take the place of the father in the family constellation (Mitchell and Black 1995, p. 47). The ambivalence which attended the psychic representation of God the Father required that the “Devil” appear to absorb those qualities of envy and fear which were not adequately addressed in worship of a single God (Rizzuto 1979, p. 20).

Freud’s original hypothesis has been revised in a variety of directions by subsequent psychoanalytic thinkers. Most agree that the father becomes represented in the psyche in an important manner which is reflected in the person’s image of the Divine. In one case, David Bakan highlighted the father’s ambivalence about his children, including his fear of being rejected by them, suggesting a hidden theme of infanticide in the book of Job (Bakan 1968, pp. 110, 116). Ana-Marie Rizzuto claimed that Freud’s religious ideas were based upon the projection of his own disillusionment with his father and described how the God representation should be able to transform beyond the image left by a particular parent (Rizzuto 1979, pp. 46–47; Rizzuto 1998, pp. 51–52). In a quite different

approach, Jung saw the male element and female element as universal oppositional principles within the personality that needed to be reconciled (Jung and Kerényi 1949, p. 130). For Erik Erikson, the absence of a father to idealize led to his emphasis upon identity and the challenges that interfere with its formation, a theoretical agenda which found its fullest expression in his treatment of Martin Luther’s father complex (Capps 1997, p. 210; Erikson 1958, p. 70).

With the advent of ego psychology and object relations theory in the middle of the twentieth century, the emphasis within psychoanalytic psychology shifted from the oedipal phase to the preoedipal, and increasing significance came to be placed upon the mother (Mitchell and Black 1995, p. 47). The significance of the shift cannot be separated from the sociocultural factors of the postwar period, in which the enshrinement of “motherhood” was connected with an effort to preserve the stability of the nuclear family within society (Chodorow 1978, p. 5). One result of this was that fathers were seen to have little place in actual caregiving but were a “third” element, which introduced the child to the outside world, establishing the gender identity of sameness with the boy child (Mitchell and Black 1995, p. 257). Recent psychological discoveries have shown that fathers may have a more important role in the development of children, even in the preoedipal period (Phares 1999, p. 26; Lamb 2000, p. 340).

### Implications of Changing Views of Father

The Judeo-Christian religions have traditionally portrayed God as a male father figure, but the hegemony of this imagery is breaking up. Accordingly, fathers are in the midst of a shifting position, both in terms of their gender roles and self-definitions. As cultural trends continue to move toward equality between genders, fathers are increasingly providing care for children (Lamb 2000, p. 339).

The historical legacy of fatherhood has emphasized competence and power outside the home but

immaturity, weakness, and volatility at home. Fathers are frequently portrayed as incompetent in their fathering by the media, and they often seem to struggle with an internalization of this image (Mackey 1985, p. 126). Fathers also contend with issues of rage and abuse, as the cyclical patterns of violence are handed down disproportionately by men (Cooper-White 1995, p. 165).

With all of these indictments admitted, not enough attention has been paid, especially in depth psychology, to the significance of the father's expanding caregiving role in the lives of his children or the manner in which this caregiving becomes a part of the father's identity (Lamb 2000, p. 339). Positive psychological outcomes are associated with high involvement of fathers in caregiving practices (Lamb 2000, p. 340). With the increase of caregiving behavior among men in our society, along with a refashioning of traditionally patriarchal religions through an encounter with feminist thought, it remains to be seen whether the personal influence of fathers in the home will lead to a transformation of both psychoanalytic theory and the forms and symbols of religion.

## Fear

Glenn H. Asquith Jr.

Private Practice, Bethlehem, PA, USA

After a brief definition of fear, this entry will explore functions of fear, spiritual and psychological meanings of fear of God, and religious responses to fear of death. It concludes with a summary of how religious ritual addresses fear.

## Definitions of Fear

The medical dictionary definition of fear is "an unpleasant often strong emotion caused by

anticipation or awareness of danger and accompanied by increased autonomic activity” (Merriam-Webster.com 2012). This raises several concepts that require further examination and discussion. The first is that there is a difference between fear and anxiety.

Fear is a normal and healthy response to a real threat to one’s life or well-being. If I am walking in the woods and I am confronted by a bear, my aroused alertness allows me to make a response for survival or protection. Anxiety is the fear of something that may or may not happen. If I never go hiking in the woods because of the fear of confronting a bear, I am controlled and limited by my anxiety.

Fear is processed in the human brain’s amygdala, which controls memory and emotional reactions. This means that fear is a learned or conditioned response; certain stimuli raise the emotion of fear based on past associations with those stimuli. We learn what is dangerous to us, and certain events, objects, and situations become associated with fear. If fear of a certain stimulus is a conditioned response, it can be reduced or extinguished by techniques such as systematic desensitization.

A frequent goal in pastoral counseling is helping persons to discern the difference between fear and anxiety and to decide upon a healthy response to each. A person might be afraid of the reaction of parents, spouse, siblings, or co-workers to their opinions, decisions, or behavior. The task is to move toward a realistic perception of these threats and thus be less controlled by unnecessary fear in living their life.

Another example is the fear experienced by persons with posttraumatic stress disorder (PTSD). A post-combat soldier with PTSD reacts with fear at the sound of hometown holiday fireworks because the sound takes him or her back to the battlefield, with all of the attendant feelings and fears associated with that experience. A person who has been physically or sexually abused will react to an aggressive individual with the feelings associated with the abuse instead of the present reality that is faced. A goal of therapy is to help the person develop skill and perception in staying “in the present”

and thus make a realistic distinction between present situations and situations that trigger fear based on past experiences.

## Functions of Fear

As suggested above, fear, like anger, can function as a positive emotion. Anger that is not managed well becomes destructive to relationships and health, but it also functions as a motivator to correct an injustice. Likewise, overwhelming fear can cause paralysis and an inability to act, whereas healthy fear is necessary in order to function effectively and decisively in the face of real danger; it is a necessary component of survival.

Austrian skydiver Felix Baumgartner, nicknamed “Fearless Felix,” recently completed an 18-mile skydive in which he reached a free-fall speed of 536 miles before deploying his parachute and landing safely. This was done in preparation for a 23-mile jump from space that will break all records for skydiving, including reaching a free-fall speed that will break the sound barrier with his body. To complete this, he will be using a newly developed space suit that must remain completely airtight in order to prevent his blood from boiling in the rapid descent. Baumgartner, a very experienced skydiver, is fully aware of the dangers and risk of life involved in this dive. When asked if he was afraid, “Fearless Felix” responded that of course he is afraid but that healthy fear is necessary in order to properly prepare. He went on to say that his fear is overcome by courage – the courage to contribute to the successful development of a suit that will make space travel more safe for future astronauts (ABC News 2012).

## Fear of God

In psychology of religion, “fear of God” might be seen as the same positive force in one’s life as Baumgartner’s healthy fear that literally spurs him to greater heights and contributions in life. Wisdom literature in the Hebrew Bible viewed

fear of the Lord as the source of wisdom and knowledge; it leads one to depart from evil (Prov. 1:7, Job 28:28). In Christianity, the Apostle Paul used this phrase in 2 Corinthians 5:11 to refer to the believers' faith and devotion to God in the same way that it was used to describe the postexilic faithfulness of the Israelites. It reflects a full awareness of the majesty and power of God, who promotes justice, opposes wickedness, and expects accountability. Like Baumgartner, living "in fear of the Lord" means respect for the power of God that motivates one to do the right thing and take seriously what is required of us.

German theologian Rudolf Otto (1958) was among the first to clearly articulate the relationship between nonrational feeling and ethical practice in religious experience. He referred to the nonrational awareness of the tremendous, the awful, and the mysterious as the *numinous*, the *mysterium tremendum*. *Tremendum* (tremor or fear) contains the element of awe or dread of the demonic-like wrath of God that can destroy enemies or those who disobey God; this is the primary basis for the Hebrew understanding of "fear of God" as described above. *Tremendum* also involves an overwhelming sense of the majesty of God as described in Psalm 8. Otto (1958) notes that this is akin to Schleiermacher's understanding of "creature-feeling" or feeling of dependence upon the Creator for one's very being and existence. It is the mystical awareness of the self in relationship to a transcendent reality. It is an awareness of a divine Energy that can powerfully love or powerfully destroy in the same fashion as Goethe's view of the demonic.

A primary dimension of Otto's view of *mysterium*, or mystery, is God as "wholly other." This wholly other is a divine being, a divine presence that is beyond human rational comprehension. That which we don't understand invokes fear in the negative sense; the phrase "knowledge is power" infers that we are less afraid of that which we understand. Especially in the Western world, any supernatural power, involving spirits or "ghosts," is feared for its possible connection to evil or the demonic. Christianity reframed the cultural view of "spirits" with the concept of the Holy

Spirit as an aspect of the nature of God. The Holy Spirit functions to defend one in time of trial or danger (the Paraclete in John 14:26) or to empower individuals or the body of believers (Acts 4:31). The transcendent but empowering nature of this wholly other God is felt but not fully understood; it inspires ethical practice in the positive meaning of "fear of the Lord" (Otto 1958).

## Fear of Death

A primary fear in human experience is fear of death or, perhaps more accurately, fear of one's mortality. Fear of mortality can cause compulsive work or activity, with the mistaken assumption that the more we do or produce, the more we have discounted the power of our mortality. Compulsive work is fueled by a religion that believes in salvation and righteousness only through works, through which one can maintain an illusion of omnipotence. Wayne Oates pointed out that this illusion "tends to erase awareness of personal death and leaves us with the assumption that we are not only all-powerful but immortal" (Oates 1971).

In psychology of religion, religious ritual and practice serve as a buffer against the fear of death. Wink (2006), in a study of 155 Christian men and women in their 80s, found that traditional, church-centered religiousness, as opposed to deinstitutionalized spiritual seeking, served to allay fear and anxiety about death. This raises the question debated in psychology of religion as to whether fear of death brings people to religious belief. Citing several studies on this question, Fontana (2003) concludes that "there is no strong evidence that religion is particularly sought as a defense against fear of death, even by those who have been or currently are close to death."

Related to fear of death is fear of eternal damnation as a basis for religious practice. The Roman Catholic Church developed an elaborate doctrine related to the fate of souls after death. Catholics were required to receive the sacrament of last rites before death as a last chance to repent and receive forgiveness before their postmortem

journey. However, this practice still did not guarantee direct entry into heaven; most souls would spend time in a state of purgatory to expiate their sins. The faithful would gather after death for a mass of Christian burial, asking God to mercifully shorten this purification period (Garces-Foley 2010). In the Middle Ages, the misrepresentation and selling of indulgences to speed this process was one practice that led to the Protestant Reformation.

Following the Reformation, the Puritans who settled the early colonies of the United States lived in anxious fear of eternal damnation, fueled by the Calvinist teaching that all humans are utterly depraved and only the elect would be saved. Because no human knew who the elect were, vivid teachings of hellfire and damnation dominated religious practice in the early colonial period as people made every effort to be spiritually prepared for death, still uncertain of their ultimate fate. The evangelical revivals of the early nineteenth century proclaimed that salvation was available to all who repented, not just the elect, and death became seen as a homecoming, where all could enjoy the presence of the Lord and other loved ones who had died before them (Garces-Foley 2010).

## Fear and Religious Ritual

Although Freud famously proposed that religion was a neurotic defense against fear and other feelings and impulses, Fontana (2003) cites other evidence to show that “far from being neurotic, ritual is an inborn psychological propensity, shared by all cultures, to mark life’s transitions, to strengthen social relationships, to cope with misfortunes, and to respond to life’s mysteries.”

This conclusion is reinforced by multiple studies of the use of religious ritual across cultures and faith traditions. In the Jewish tradition, life’s passages as well as a person’s relationship to God and to family are celebrated with careful observance of regular rituals such as the Sabbath, Passover, and Yom Kippur, the Day of Atonement. Yom Kippur is the holiest day of the Jewish calendar, in which Jews prepare for the

inevitability of death by taking account of their life and making restitution with God and with other persons for misdeeds of the prior year (Alpert 2010).

In the Hindu tradition, the death ritual is considered the most important life cycle event. The death ritual confirms the Hindu belief that death is a part of life that happens to everyone. These rituals facilitate the deceased soul’s transition from this world to the next and ensure the continuity of family lineage. As in other traditions, the rituals are performed for the living as well, so that they can go on with their lives in the assurance of this continuity and transition. Finally, the rituals allow Hindus to maintain their cultural identity, even in the midst of primarily non-Hindu societies (Murata 2010).

## Feeling

John Ryan Haule  
C.G. Jung Institute Boston, Chestnut Hill,  
MA, USA

The conscious registration of an emotion or affect. Emotion is a physiological state of arousal governed by the brain's limbic system that places the body in an attitude of fear, rage, lust, disgust, etc. Emotions are automatic responses that occur before an individual has a chance to think about what is going on. Feeling occurs as the conscious recognition that an emotional state is already in effect.

In Jungian psychology, feeling is – along with thinking, sensation, and intuition – one of the four “psychic functions” for apprehending the two worlds: inner and outer. While “sensation” (the five senses) determines that something is there before me and “thinking” determines what it is, feeling *evaluates* the people, situations, and objects that I meet. Feeling establishes that something is attractive or disgusting, benign or threatening, gratifying or enraging, etc., and it does so on a hierarchical basis, determining which object is more lovable or inspiring than another. Because it sets the world in order, Jung calls feeling a “rational” function, along with thinking. Sensation and intuition are “irrational” in that

they only register the psychic facts that come before one, establishing no order among them.

In using the rational, ordering capability of feeling, an individual may remain self-possessed and take charge of the circumstances that present themselves in the moment. By contrast, emotion occurs as a psychological “shock” that lowers the level of mental functioning and narrows the field of awareness. Adequate everyday living, therefore, requires a capacity to use one's feeling in order to survey in detail the full world picture unfolding before one without the distortion of an overwhelming emotion. A differentiated and dependable “feeling function” is essential for satisfying and nuanced interpersonal relations and for social behavior, in general.

All schools of mysticism devote significant attention to training their students in differentiating the “introverted” aspect of the feeling function – that is, in applying the feeling function to make accurate assessments of one's own states of consciousness. Eastern schools take prominent note of the fact that an unmitigated emotional response always involves an attachment to a certain outcome or favored states of affairs. In training for detachment and the cultivation of equanimity, they make the differentiation of the feeling function possible. Meanwhile, most Western mystical traditions place “discernment” among the most valuable tools for advancement. For example, St. Ignatius of Loyola's “Rules for the Discernment of Spirits” employs a detached feeling evaluation of one's own recent mental states – whether they are relatively “consoling” or “desolating” – to assist one in removing obstacles to advancement and in determining “the will of God” for one in the present moment.

Feeling is arguably the most important psychic function for every religion, from the decisive experiences of its founders to everyday decisions in the lives of its adherents. Longing for succor and transcendence; awe, fascination, and trembling before that which is wholly other; bliss in union; and abasement in shame, guilt, and unworthiness – at bottom, it is feelings like these that characterize religious attitudes and inspire mythic narratives, theological constructs, and ethical codes.

## Female God Images

Annette Peterson  
Riverside, IL, USA

Female God images can serve to balance the predominantly male God images of Western monotheism. Women who have not been equally supported to see themselves in personal relationship with the divine may need to express anger at the dominant religious paradigm and explore alternative images that express their sense of connection to the divine as female.

The lack of feminine God images in contemporary Western society is a common stumbling block for women's spiritual development. Religious historians wonder why God is so commonly depicted as male when feminine God images are as prevalent throughout history and may actually precede masculine ones (Baring and Cashford 1991; Leeming and Page 1994; Billington and Green 1996).

Those who seek images of the feminine divine discover an abundance of goddesses and female archetypes in the historical record. Ancient images of the divine are frequently primitive art celebrating generativity and birth. Archaeologists have uncovered pottery and cave art of the round fecund female figure, earthy and full of life. In countless early paintings, a pregnant female body gives birth to the family tree. Finds like these substantiate the claim that the divine feminine was worshipped prior to a shift towards masculine images of God (Edinger 1996).

In Eastern religious traditions, goddess images are still abundant. In Hinduism, there is Devi, Shakti, and Kali. In Buddhism, the goddess Tara has a variety of faces and traits. In the ancient West, the Egyptian goddess Isis and Sophia, the Gnostic goddess of wisdom, enjoyed popular appeal. In the modern West, female God images have dwindled. As the West coalesced into the major monotheisms, Judaism, Islam, and Christianity, God became a unified male figurehead.

The lack of female God images in the Judeo-Christian West dates back to Biblical times. Female references to God in the Bible never occur as names or titles for God. They occur only in the form of similes (Isaiah 66:13), metaphors (Numbers 11:12; Deuteronomy 32:18), analogies (Isaiah 49:15), or personifications (Proverbs 8).

It appears that although the goddess Sophia had a rich lore surrounding her, Jesus and the male Logos later supplanted her identity and role. In *Mirror of His Beauty: Feminine Images of God from the Bible to the Early Kabbalah*, historian Peter Schafer (2002) asserts that both Jewish and Christian traditions have wrestled with the question of God's feminine nature from the time of the Scriptures throughout the Middle Ages. Schafer argues that Jewish mystical conceptions of wisdom and God's femininity share attributes with Gnostic Christian writings and even reveals cross-pollination of ideas between the religions. He identifies similarities between the Christian cult of Mary and the Jewish Bahir, which stresses the feminine nature of Shekhinah, God's earthly presence.

Female God images tend to focus on the maternal role, rather than other sexual/personality gender differences. Propagation and nurture are emphasized. For example, Virgin Mary is preserved as a maternal rather than a sexual female figure. Erich Neumann (1955/1963), a Jungian analyst, believed that there were two major characteristics intrinsic in the archetype of the Great Mother: the elementary (belly/womb) and the transformative (breast). These images call to mind the fertility icons of ancient civilizations and do little to bring sources of feminine identification outside the traditional role. Women have been traditionally linked with the body and the earth, thus representing humans' lower functions. Because of this, women have often been associated with the dark, irrational, or corruptible aspects of our personalities, such as the Genesis story depicting Eve's role in the Fall of Man. Yet it seems appropriate and natural to link feminine images to the earth and to God's indwelling presence in the world. Fecund and sensual, women and earth share generative capabilities in acts of creation and renewal, giving birth and bearing fruit.

Although feminine God images have likely existed for as long as religion itself, in Western culture they represent an undercurrent rather than the mainstream. Cults of the Goddess thrive in pagan or nature religions. Goddess imagery is willing to acknowledge the sexual power of women and the sex that leads to motherhood.

Feminist authors have provided resources for the exploration of the divine feminine in books such as *The Feminine Face of God* (Anderson and Hopkins 1991) and *A God Who Looks Like Me* (Reilly 1995). These authors challenge our indoctrination into a masculine theology. Reilly proposes that the masculine God image, culturally dominant for centuries, leaves a damaging legacy for women. That legacy is a learned belief in the exclusion, inferiority, and dependency of their gender. Girls imprint these cultural mores at an early age: Boys can be like God; girls cannot. Girls can be part of mankind, but not the part that is mentioned. Without available identification with God, girls can grow up feeling second rate. This legacy of male religious privilege enjoys

mutual reinforcement with patriarchal political and familial power dynamics, perpetuating a culture of gender inequality.

For example, in the Catholic Church, where exclusively male priests preside over the Mass, girls and women are deemed unfit for the Church's highest calling. Traditions of male leadership serve to reinforce the maleness of Jesus and God the Father, who together are the ultimate creator, authority, and redeemer. In contrast, the female Catholic icon, Virgin Mary, is in a comparatively peripheral support role, valued mostly for her maternal function. Since both the Father and Son of the Holy Trinity are male, girls may learn to believe that females need men to save them. When these girls become women, they may chafe under these gender dictums and seek the balancing, corrective experience of female God images.

Many find that female God images offer a warm acceptance that sets them at ease, feeling cosmically protected and cared for. Good mothering makes children feel nurtured and accepted, and as adults, we can derive a sense of safety and security from a protecting maternal God. Some people have replaced the doctrinal male God with a warmer, more maternal personal God. Perhaps surprisingly, this shift often occurs without leaving the community offered by their organized religion; instead, a quiet internal knowledge of the feminine nature of God is carried within. This occurs either consciously, for women who are tired of bearing an indirect image of God, or unconsciously, as men and women call upon God for maternal comforting and understanding.

## Commentary

When a person cannot feel a sense of identification with her God image, her sense of self is weakened. Many women have been raised with a masculine God image that may have felt patriarchal, distancing, and demeaning. A God image with characteristics of both genders is part of a healthy, balanced spirituality. The preeminence of masculine God images can be dangerous and

destructive to religious culture as well as our larger society.

While a man can relate to a male God by identifying with an idealized God image, a woman's relation to the deity is more indirect and even implicitly sexualized. There is a once-removed complexity to being a woman in relation to God when God is a gendered male, requiring a mother, daughter, or lover relationship instead of a simple identification. In the Gospels' Jesus narratives, women such as Mary Magdalene are hailed for their support roles, but not for their leadership. These traditional examples are offensive to many contemporary women for the way they influence current and future gender roles.

It is interesting to examine the roots of this gender inequality. In *The Alphabet versus the Goddess: The Conflict between Word and Image*, author Leonard Shlain (1998) proposes that the written word is essentially a masculine enterprise, based on its "linear, sequential, reductionistic and abstract" characteristics; thus, all "writing subliminally fosters a patriarchal outlook." In contrast, our mental images are perceived wholly all at once, as a synthetic gestalt, which Shlain identifies as essentially feminine. Evidently, our methods of perceptions and communication are as influential as its content.

Do writing and the alphabet cause or reflect the masculine skew of the collective psyche? Shlain argues that his causal theory is the most plausible explanation for the correlations he reveals between alphabetic writing and patriarchy. Although it would be extreme to suggest that language is a tool of the patriarchy, Western language patterns reflect a clear masculine skew that affects all people's psychological constructs.

In therapy, if gender issues are behind a woman's negative relation to her God image, it is helpful to examine the sources of this alienation on the larger culture. The therapist can then point out some alternative images, examples of the divine feminine that are present in the culture of the individual experience of the client.

Culture and religion, whether consciously or unconsciously, are engaged in mutually reinforcing gender bias. Influences of the ambient culture shape

the individual's religious expression. This helps us understand why many Christians unconcernedly attribute feminine traits to the male-gendered God images, subsumed under a masculine Godhead. A common example is the tendency to credit a masculine God for acts of creation and generativity, ignoring the feminine nature of these important roles. Rather than subsuming feminine traits within the masculine identity of God, it is psychologically healthier to acknowledge and celebrate the presence and contribution of both the male and female aspects of the divine.

## Femininity

Elizabeth Welsh  
Fuller Graduate School of Psychology,  
Pasadena, CA, USA

### Introduction

Femininity or womanliness refers to the physical and behavioral qualities characteristic of and considered appropriate for women. In recent years, these attributes have fallen under the label of socially constructed “gender” and as such have been distinguished from the biologically determined features of the female sex. This view has attempted to argue for an androgynous psychosocial quality of human nature and to relocate masculine and feminine functions in all human persons. However, in Western cultures femininity and masculinity have been treated as the two opposite ends of the spectrum of human personality and furthermore that the former resides in females, while the latter resides in males.

### Current Views on Femininity

In general, the popular understanding of femininity is made up of an amalgam of factors. In the biological category, femininity or femaleness consists of genitalia, high voice, less body/facial hair, less muscle mass and more fat (though thinness has become a new desired characteristic), and more estrogen than testosterone. In the category of parenting roles, femininity is associated with mothering which consists of providing nurturance, warmth, and care. In the social sphere, femininity is associated with the public role of worker (as opposed to boss) and the private role of wife and mother. Finally, in the personality category, feminine behavior has been associated with emotional expressiveness; feminine attributes have been generally classified

as soft, tender, and vulnerable; and feminine attitudes have been characterized by more subjectivity than objectivity. While these comparative differences between femininity and masculinity are relative, Western cultures have generally reinforced conformity to these dichotomous norms.

The fact that some of the above characteristics of femininity are purely biological, while others have clearly been socially designated, has had a confounding effect on colloquial designation of what is female (or male). Thus, beginning in the 1970s, the term “gender” has been used in psychological and sociological research to refer to the nonbiological traits, norms, and stereotypes that are considered typical and desirable for those who are designated as female or male. Since then, the academic literature has made efforts to clearly separate the terms “gender” and “sex” although colloquially they frequently continue to be used synonymously. While it may not be possible to fully separate the biological aspects of human identity and experience from the social, cultural, and psychological ones, many attempts have been made to discriminate between them so as to understand the relationships between them and to correct the misrepresentations of women and men that have been at the root of much of history of oppression and violence towards women.

While some of the representations of femininity can vary from culture to culture, such as the specific physical features as well as behaviors that are considered desirable, certain common themes, such as beauty, gentleness, and nurturance, appear to underlie its diverse expressions. In recent years, the concept of femininity has come under the close scrutiny of feminists who have pointed out that the cultural prescriptions for ideal feminine qualities have been carefully scripted to serve the perpetuation of the patriarchal order. As such, the complex aspects of the feminine gender which appear to be mysterious and threatening to the established male order are split off and rejected and replaced with seemingly benign ideals of feminine docility, domesticity, and conformity. However, such restrictions have

in fact been violently suppressive and have engendered oppressive attitudes towards women as well as men who do not conform to the traditionally patriarchal stereotype of masculinity. More recently, feminists have sought to challenge any universal definitions of femininity since no matter how empowering they may seem to be, they can always be turned into oppressive labels and scripted roles that ultimately restrict women's freedom.

### The Role of Religions in Shaping Femininity

Since religious beliefs and rituals have always played a crucial part in the formation and transformation of culture, their influence on sex and gender roles cannot be overstated. In the ancient polytheistic world, goddess worship was widely practiced. Some scholars have argued that goddess worship began much earlier, during the prehistoric era when matriarchal social systems are also believed by some to have existed. However, while there is not any clear evidence of a single "Great Goddess," in cultures outside the Judeo-Christian traditions, the Feminine Divine was an intuitive and prevalent concept and some cultures have maintained it to this day under different names and shapes (Schaup 1997).

A cult of a prominent goddess as well as her loving union with a male god was present in all ancient Oriental religions. In ancient Egypt, the Goddess Isis was the creator of the world, and her sacred wedding with the male god, Osiris, was believed to hold the secrets of life and death. In the southern Mesopotamian civilization of Sumer, the goddess Inanna was worshipped and her union with son-lover Dumuzi and later the Assyrian-Babylonian Ishtar and Tammuz. The goddess Kybele was revered in Asia Minor and in Rome under the name of Magna Mater, the Great Mother. The main goddess of the Phoenicians, Philistines, and Moabites was Astarte or Asherah whom some of the Israelites worshipped as well. The Greeks had the powerful goddess of

fertility and transformation, Demeter; the Greek Goddess of Wisdom, Pallas Athena; and the jealous and vengeful goddess of marriage, Hera.

The goddesses worshipped represented a myriad of associations which indicates that the ideas about femininity in the ancient world were quite diverse. One goddess alone could serve a variety of functions. For example, in Egypt, the goddess Isis was the goddess who gave birth to the heaven and earth, the source of pharaoh's power, and patron of nature as well as magic; the goddess of orphans, slaves, and the downtrodden; as well as the goddess of simplicity. Corresponding to these powerful and influential goddesses, women appeared to have the opportunities to hold positions of honor such as in ancient Egypt where women could be traders, crafts-women, priestesses, and queens.

The semblance of a goddess appears in the Old Testament as the concept of Wisdom – Chokhma (Hebrew) – Sophia (Greek), an autonomous female figure which emerges in the books of Proverbs, Ecclesiastes, Job, as well as the apocryphal books depicting the Wisdom of Solomon. The Wisdom tradition featuring this female figure developed after the Babylonian captivity which seems to support the view that she was an adaptation of the foreign customs of the cult of the Goddess practiced in Babylon. This Divine Wisdom is depicted in the biblical text as authoritative, gracious, lovely, powerful in action, and a beloved of God and of mankind. At times she is portrayed as a divine person in her own right (Proverbs 8, Wisdom of Solomon, 7–8), but at other times she represents instruction, admonition, and fear of the Lord (Proverbs 2). Although the Old Testament authors could not conceive of a distinct Feminine Divine as in the old religions, they did however apprehend of a certain feminine Divine Wisdom which was close to God, sat besides God's throne and would decide for him what to do, was implicated in creation, loved human beings, and bestowed bountiful gifts on them. Overall, one may observe that this feminine figure wavers between a godlike figure endowed with attributes of regal

power and loftiness and the image of a homely housewife, virtuous and industrious, a model faithful fulfillment of the law. Some have pointed out that a split took place; on one hand the idea of Great Goddess of the ancient religions, the source of all life and wisdom, continued to exist in the biblical figure of Wisdom, but on the other hand she was modified and reduced by Old Testament authors to narrow morality, submission, and prudence. Furthermore, in an implicit fashion, on one hand the feminine idea depicted in the Wisdom literature has divine qualities, but on the other she is depicted as rotten, the beginning of all sin (the "foreign woman," the harlot, the idolatress, the temple prostitute, and other derogatory terms that were used for the priestesses and other female worshippers in the temples of the pagan goddesses).

The case of Lilith is a possible illustration of this split. Lilith, Adam's first wife, was the woman who rejected her position of sexual and social subjection to man. While originally she represented female strength and autonomy, over time, Lilith incorporated a myriad of dreadful qualities and thus became the shadow of the feminine which Israel was no longer able to integrate because it had split off and rejected along with the entire cult of the great pagan goddesses. Lilith became the antithesis of Eve, the submissive helpmate of Adam, and the positive model of a Jewish wife. From an interpretive standpoint, for the Jewish men in captivity, Lilith raised potency fears and threatened to endanger the physical survival of the nation in exile. She was henceforth transformed from a figure of female autonomy to one of purely evil qualities so as to make her abhorrent to women (one who murdered children and pregnant women) as well as men (the woman who withholds herself and causes semen to be spilled). The myth of Lilith entered many cultures under various forms from a witch to a beautiful seductress.

The split between an ideal virtuous femininity and a sexual, desiring, mysterious, and powerful woman was perpetuated in Christianity through the veneration of the Virgin Mary. As various

feminists have pointed out, the image of the desexualized, suffering, and silently loving Virgin Mother who is lifted into heaven continued to pose problems for ordinary women since it constituted an ideal that alienated women from their real selves and from the realities of the misogynistic cultures in which they lived. The mild, gracious, and ethereal Madonna could only offer women redemption and access to heaven through suffering motherhood, suppression of all negative emotions, and complete disembodiment of sexuality.

### Commentary

From a psychological standpoint, the patriarchal disparagement of the feminine figure in all of her complexity reveals a deep-seated male fear of the mysterious and uncertain aspects of female sexuality and personality. The archetype of the "evil anima" as well as the subdued "Mater Dolorosa" (suffering mother) reflects the disturbed relationship between man and woman. This alienation and hatred is explained in part by the historical suppression of the pagan goddess through monotheism as well as by the cultural subjection of women through the establishment of patriarchy. The evil anima archetype is an expression of man's fear of the feminine revenge, a fear that may be rightly justified, while the altruistic, asexual mother poses as the benign ideal of femininity that provides for the emotional needs of men but has no life of her own and as such poses no threat to the established patriarchal order.

For contemporary women, the psychological implications of the culturally inherited constructions of femininity have led to the dilemma between their desire for societal competence and their fulfillment of the feminine roles expected of them in their personal lives but devalued in society. Those who attempt to juggle the demands of both competence and sex-role identity are met with the burdens of physical and psychological burnout that accompany the

efforts to embody the colloquial “superwoman.” Feminists have argued that women need a redefinition of femininity (some have proposed a plurality of meanings, of “femininities” and “sexualities,” rather than any one universal definition) as well as of cultural expectancies for competence which will necessarily have ramifications for definitions of masculinity and societal expectations of male competence. Finally, since cultural concept of God has been shown to form the underlying connection between patriarchal religion and a society of violence, many have argued that no social, scientific, or ecological paradigm shift can take place unless the theological shift occurs which moves away from exclusively patriarchal images of God and includes the feminine aspects of the divine.

### Folk Magic

David Waldron

Department of Social Science and the Humanities, University of Ballarat, Ballarat, VIC, Australia

Common to most, if not all preindustrial cultures, is a vibrant tradition of folk magic and ritual tradition closely linked to established mythology, folklore, and archetypal associations. These traditions vary enormously and are closely linked to a variety of social, historical, cultural, political, and economic factors. The many and complex networked structures of belief, ritual, and mythology that coalesce in magical traditions have long been studied and documented by anthropologists and folklorists.

From an analytical psychological perspective, one of the key ingredients of folk magical practices and rituals is that they serve as *prima facie* expressions of emotion. Malinowski, in his analysis of folk magic in Melanesia, argues that magical ritual is invariably constructed in patterns that evoke emotion and resonate symbolically within a culture. In this sense, emotion, and thus psychology, is at the heart of magical ritual (Malinowski 1948). The ritual serves as a symbolic representation of the desired ends, and the emotions that led to it are rendered symbolically through powerful and pervasive archetypes in that culture and thus directly relate to the social, cultural, and political issues that led to the rituals perceived necessity. Subsequently, each type and form of folk magic is derived from its own network of social formations and cultural forms and is fundamentally integrated with localized politics, social structures, conflicts, and economic uncertainties. This localized experience also serves to distinguish folk magic from ceremonial magic in that it is not born of an attempt to create abstract structures granting access to divine power, in a philosophical manner, but is an

### Femme Fatale

- ▶ [Monomyth](#)

organic socially derived network of practices and beliefs relating to deeply felt anxieties (Jung 1964).

However, while there are a vast array of bewildering forms, rituals, and beliefs surrounding folk magic practices, it is generally accepted that there are certain universal features and commonalities between varying magical traditions. One key issue identified by Frazer is that folk magic practices are often *sympathetic* in nature. That is to say, the items and rituals used in magic typically either symbolically resemble the target of the magical practice (*law of similarity*) or have come into contact with them and become ritually polluted with their essence (*law of contagion*) (Frazer 1922). From a Jungian perspective, these forms also relate closely to symbolic archetypes, whereby the symbols, the target of the magic, and its ritual practice are linked through archetypal association in the collective unconscious. Subsequently, these magical rituals also serve as a means to grapple with complex psychological issues and serve as an avenue into the unconscious (Jung 1938).

In this sense, folk magic is both derived from the heritage of past traditions and mythology and is also a living tradition which creates its own body of myth and folklore. Thus, folk magic is an intrinsically organic construct that both shapes and constructs its own mythology and folklore, yet is profoundly influenced and shaped by its contextual mythological base, politics, and culture. Consequently, the rituals, symbols, and cultural artifacts of folk magic serve as a powerful avenue into the complex interconnections of the conscious and unconscious aspects of the psyche as manifested in lived experience within the social, cultural, and physical worlds.

## Forgiveness

Everett L. Worthington<sup>1</sup>, Don E. Davis<sup>2</sup>,  
Benjamin T. Wood<sup>2</sup> and Jennifer S. Ripley<sup>3</sup>

<sup>1</sup>Richmond, VA, USA

<sup>2</sup>Virginia Commonwealth University, Richmond, VA, USA

<sup>3</sup>School of Psychology and Counseling, Regent University, Virginia Beach, VA, USA

Every major religion endorses forgiveness as a virtue. The religious perspectives have brought forth numerous practical and theoretical understandings of forgiveness for centuries. In the last 20 years, the field of psychology has pursued the scientific study of forgiveness (Fehr et al. 2010). Can this study add to what millennia of religious thought and practice has taught humankind?

## Science as a New Tool

Peter Galison (2003) has put forth an understanding of scientific revolutions that attributes the seeds of change to the development of new tools. The invention of the telescope paved the way for observing phenomena that were not observable in Newtonian physics. The new data eventually created problems for the old paradigm. According to Galison, a revolution in a scientific field is due more to applying new tools to a phenomenon than simply to providing a reconceptualization of the phenomenon.

The study of forgiveness has brought a new tool to its study and practice – the method of careful, analytical science. Science forces us to define variables precisely and then subject the understanding of relationships among variables to empirical testing. Whereas theology and philosophy are likewise careful at defining concepts and test their definitions against logical criteria, authoritative texts, and teachings, science relies on a different source of authority – empirical observation.

### Basic Definitions

The results of the scientific study of forgiveness have been astounding. From 58 empirical studies identified in a review of the literature in 1998 (McCullough et al. 1998), the studies have grown to over 1800 by 2012 and continue to proliferate (see [www.forgivenessresearch.com](http://www.forgivenessresearch.com)). Our understanding of forgiveness has become more precise as science has focused on it. Transgressions (i.e., violations of psychological or physical boundaries) are appraised as to the amount of injustice inflicted – called the injustice gap. The injustice gap (Worthington 2006) is the difference between the way a person would like to see a transgression resolved (i.e., “I’d like to see her come crawling on her knees begging my forgiveness”) relative to the way the situation is perceived to be currently (i.e., “She’s so cold. She seems to have no remorse at all, and I’m afraid she’ll betray me again”). Bigger injustice gaps are harder for the person to resolve and are related to more unforgiveness. Unforgiveness is a complex combination of negative emotions, like resentment, bitterness, hostility, hatred, anger, and fear, rolled into an emotional experience interpreted by a person’s working memory as feeling unforgiving.

A person can reduce the injustice gap (and hence reduce unforgiveness) in many ways that do not include forgiveness (for a summary, see Worthington 2006). The person might inflict vengeance (i.e., a kind of vigilante justice), see justice done societally, observe a person getting her

just desserts, or see an authority like the courts administer justice. Or the person may reduce the injustice gap through passive acceptance. For example, the person might also simply accept that “stuff happens” and move on with his or her life. The person might forbear, suppressing negative emotions, or turn the matter over to Divine justice or simply relinquish the matter into God’s hands.

Forgiveness is one way of reducing the injustice gap and unforgiveness. Forgiveness involves internal changes that recognize the offense but choose not to hold it against the offender and (perhaps) to seek more positive feelings and motivations toward the offender (Fehr et al. 2010). There may be related interpersonal experiences around forgiveness, such as the offender asking for forgiveness, the victim communicating forgiveness to the offender, or either party telling others of the forgiveness. Thus, the context of transgressions is intrapersonal, but forgiveness is intrapersonal. Forgiveness is often confused with reconciliation, but forgiveness occurs within the skin of a person, while reconciliation is the restoration of trust between two people, through trustworthy behavior by the parties.

Forgiveness is of two types (Worthington 2006). *Decisional forgiveness* involves making a decision to change behavior intentions from negative to positive. It is not motivation, for the person can be motivated for revenge but still adhere to behavioral intentions to treat the person positively. Likewise, decisional forgiveness is not actual behavior, for a person could forgive a dead parent but no longer has the option to act directly with benevolence or conciliation toward the parent. *Emotional forgiveness* involves the experience of replacing negative unforgiving emotions with positive other-oriented emotions toward the offender. The replacement emotions most commonly discussed among forgiveness researchers are empathy, sympathy, compassion, and love. The replacement emotions begin by neutralizing unforgiveness, gradually reducing it. Usually, that is where people stop trying to forgive, especially in unilateral forgiveness, which is forgiveness where the transgressor is

either dead or no relationship continues. However, when a relationship is expected to be ongoing (i.e., interpersonal context), then people often continue to seek to experience more positive emotions in the relationship in order to make it “stronger in the broken places.” Decisional and emotional forgiveness may occur independently, but generally they affect each other. Thus, it is possible to forgive decisionally but not experience full emotional forgiveness and to forgive emotionally but never to have made a conscious decision to forgive. However, usually the two are psychologically linked.

Full forgiveness is usually better talked about as full decisional forgiveness, which usually occurs at a moment of decision. The person might ponder, for minutes or years, whether to make a decision to forgive, but usually the decision is dichotomous, like switching on a light. Or a person might experience full emotional forgiveness, which might involve merely getting to a place of neutral feeling toward the offender (in unilateral emotional forgiveness) or getting to a net positive experience toward the offender (often in interpersonal forgiveness). In contrast to decisional forgiveness, emotional forgiveness happens piecemeal, or more herky-jerky, as emotions are gradually replaced and influenced by the ebb and flow of any ongoing interactions with the offender. There is a time course within which most emotional forgiveness occurs. Usually, much forgiveness occurs early after a person begins to try to forgive, and then the rate of emotional forgiveness tapers off.

### Self-Forgiveness

When concepts of forgiveness are applied to the self, self-forgiveness often does not parallel forgiveness of others (Fisher and Exline 2006; Hall and Fincham 2005, 2008; Worthington 2013). When one transgresses and experiences shame, guilt, and self-condemnation, typically, one sees oneself more as an offender or dissembler of oneself instead of as a victim (in forgiveness of others). Namely, before dealing with

self-condemnation, people should seek to make things right with the Sacred (as one understands the Sacred). Then, one needs to try to make restitution with those harmed. It is necessary to curb rumination and deal with unrealistic expectations. Then, the person might forgive himself or herself for the wrongdoing. However, forgiveness might still not take care of the self-condemnation because self-condemnation might be due more to a failure to accept oneself as a flawed person than to guilt for a specific wrongdoing. For example, if a person steals money from the coffee room at work, the person might confess the crime to God, make restoration to the coffee fund, and forgive the self. However, even though self-forgiveness is complete, the person might still be self-condemning because before committing the theft, the person was not a thief. Now, the person is. Accepting a new self-definition might lead to self-condemnation even though the person has forgiven himself or herself for the actual theft.

### Religions and Forgiveness

The various religions treat forgiving differently. These cultural differences affect how forgiveness is understood and practiced.

In Judaism, forgiveness is usually seen within the context of *teshuvah*, or repentance of the offender (Rye et al. 2000). If an offender demonstrates true repentance – usually undergoing a series of demonstrations of sincerity of change and return to the path of God – then a victim is obligated to forgive. One tenet of Judaism is that victims must grant forgiveness, and forgiveness cannot be granted on behalf of the victim. Thus, logically, one who has murdered will never obtain forgiveness from the victim.

In Christianity, forgiveness is the centerpiece of the religion. Jesus’ crucifixion is said to have paid the full demands of justice for the injustices against God, and God compassionately and lovingly forgives a person who accepts that forgiveness (Rye et al. 2000). This is usually termed as Divine forgiveness, and it refers to the adoption

of a person as a child of God. Jesus tied Divine forgiveness of individual sins to a person's forgiveness – probably what we now think of as decisional forgiveness – of the transgressions experienced at the hands of others. In Christianity, God requires decisional forgiveness and desires emotional forgiveness.

In Islam, God is seen as the all-forgiving God, and forgiveness figures prominently in the Qur'an (Rye et al. 2000). However, generally justice is seen as one's due, and forgiveness is seen as virtuous. It is reward worthy if one wishes to forgive instead of exacting the justice that is one's due from a transgression.

In Buddhism, there is no explicit word for the concept of forgiveness in original Buddhist texts (Rye et al. 2000). Nevertheless, the notion of forgiveness is inherent in compassionate responses to wrongdoing or mindful responses to wrongdoing. Forgiveness is also a concept that is employed in order to help promote loving-kindness during meditation.

In Hinduism, forgiveness is valued (Rye et al. 2000). While there are a variety of understandings of forgiveness, it is generally seen as in line with dharma, the path of right living. It is often associated as a means to drive away sin and transgression.

Thus far, we have focused mostly on forgiveness within the bounds of organized religions, briefly alluding to the largest religions. Many people, however, consider themselves as spiritual and not religious (Zinnbauer et al. 1997). Spirituality can be rooted in an elevated view of humanity or attunement with nature. Thus, transgressions against oneself or perpetrated by oneself can disrupt the person's sense of harmony. This disrupted sense of harmony can motivate a drive for forgiveness or seeking forgiveness to restore a sense of positive spirituality.

A curious finding has been uncovered in the relationship of religion and forgiveness. People who are more religious, as a group, report themselves to be more forgiving than do people who do not endorse religion. However, when asked to recall a transgression, they often are not much better at granting decisional

forgiveness or experiencing emotional forgiveness than are people who do not endorse religion (Davis et al. in press). There are methodological reasons that such a finding occurs. Generally, people are asked to recall a hurt and they most easily recall one that is still an open transgression. It has been shown, however, that if people are asked to recall several hurts and the amount of forgiveness is aggregated over the variety of hurts, then the more religious a person is, the more likely he or she is to forgive individual hurts deeply and quickly (Tsang et al. 2005).

## Promotion of Forgiveness

Applied psychological science has shown that people who struggle to forgive can be helped to forgive faster and more deeply by participating in individual forgiveness therapy, couple therapy to promote forgiveness, or psychoeducational groups to promote forgiveness (Wade et al. 2005). Most interventions have been aimed at experiencing empathy and greater understanding of the offender's perspective. The more deeply empathy is experienced, the more deeply emotional forgiveness is experienced. Effortful thinking about forgiveness is generally needed to forgive, which puts some due stress on the self. In examining over 40 groups that sought to promote forgiveness, there was a strong dose–response relationship between the mere amount of time trying to forgive and the amount of emotional forgiveness a person actually felt (Wade et al. 2005).

Forgiveness is truly a concept that now can be claimed by both religions and psychology. The tool of psychological science has provided more nuanced understandings of forgiveness than was available a quarter of a century ago.

## Forgiveness and the Brain

James G. Emerson  
San Francisco, CA, USA

The decade of the brain in the United States, 1990–2000, unleashed remarkable work on the dynamic of brain activity. It has remained for those in England to focus on the implications of brain studies for the dynamic of forgiveness. A major center for this work is the Sheffield Medical Center in Sheffield, England. Key names in this work are those of Thomas Farrow, Ph.D., and Peter Woodruff, Ph.D.

The development of brain studies moves at a pace that one can hardly keep up with it. Although one could reference books, the Internet appears to be the best resource for keeping in touch with the discussion.

Common to all these studies is first the discovery that the act of forgiving involves certain areas of the cerebral cortex – mostly in the left side of the brain. In what might be called the “executive” section of the brain, there is action that deals with feelings and dynamic activity in all of the brain – including healthy brains or brains afflicted with problems such as schizophrenia. The particular area where there appears to be the most activity when forgiveness becomes active is the left superior frontal gyrus, the orbitofrontal gyrus, and the precuneus.

Also common to all these studies is the discovery that the dynamic of forgiveness leads to certain degrees of health or improvement.

Across the world spectrum of religious or theological writings on the area of the brain and forgiveness, case after case has developed of the positive effect of the teachings of Jesus and Paul.

From a theological standpoint, two cautions, however, need to be noted in relation to these studies: the first is the fact that Paul seldom uses the word “forgiveness” and more often speaks of “freedom in Christ.” The second is that there are cultures in African and south Asian parts of the world that do not have the word “forgiveness.” Therefore, when talking about the experience of

forgiveness, as Feldman of the University of California has observed about all neurological discussion, precision is required. For the purpose of discussion, this entry recommends the view of Dr. Farrow that we follow the definition of the Oxford Dictionary: “Forgiveness is ceasing to feel angry or resentful to another.” To this we also do well to add, “forgiveness of self means a ceasing of being angry with oneself.”

Today, some of the most profound work in relating brain studies and religious practice is that guided by the current Dalai Lama. In that work, guilt and forgiveness get little if any mention. Yet considerable attention is given to meditation and processes that contribute to our understanding of the use of forgiveness in such matters as forgiving oneself and accepting the forgiveness of others – including God.

### Fox, Matthew

Richard Townsend  
College of St. Scholastica, Duluth,  
MN, USA

Matthew Fox (b.1940) is a preeminent creative American spiritual theologian who cuts a bold swath through thickets of rigid religious

opposition to create “Creation Spirituality.” He is a leader and shaker in awakening Christianity to a renewed ecumenical spirituality that puts human beings in touch with their deepest cosmic souls, free of stifling religious traditions, patriarchal domination, and mechanistic industrialism and open to the wonders of creation. He was influenced by Leo Tolstoy, Thomas Merton, Teilhard de Chardin, and others; he studied at the Dominican Aquinas Institute of Theology, then the *Institut Catholique de Paris* (1967–1970) (Fox 1996).

To Fox, the mystics resonate with his own insights. In Thomas Aquinas, Fox found support for his creation-centered theology. In Meister Eckhart and Teilhard de Chardin, Fox found a mystical connection with nature and science. In Hildegard of Bingen, Fox found feminism, music, art, healing, ecological spirituality, and courage to stand up to oppressive church authorities.

Fox was drawn to the writings of the post-Freudian psychologist Otto Rank. In Rank he found a profound connection between art, creativity, and spirituality. As Rank explored the intimate relationship between human creativity and psychological wholeness and well-being, he articulated a deep and powerful spirituality that Fox uncovered (Fox 1995).

With the help of Meister Eckhart (Fox 2000b), Fox developed a framework for an articulation of Creation Spirituality in *four paths*, elaborated in *Original Blessing* (Fox 1983/2000):

- (a) The *Via Positiva* is the path of awe, wonder, joy, and praise. This path celebrates the beauty and sensual delights of creation, nature, food, dance, and sexuality. In this experience and celebration of creation through our human senses, we experience ecstasy and the divine.
- (b) The *Via Negativa* is the path of letting go and emptying, of silence and of darkness, suffering, despair, and grief. The *Negativa* includes silence, the peace in meditation, stargazing, the dark womb before birth, and the soil where seeds sprout.
- (c) The gestation period of the *Via Negativa* gives birth to the *Via Creativa*, the path of

creativity. In their creativity, humans are closest to God/Goddess and most in touch with their own divinity. God is divinely creative, humans are creative, and the Universe is creative. When humans forget or deny their divine nature, they become destructive (see Rank on the *artiste manque*).

- (d) The Via *Transformativa* is the path of justice, compassion, and coming home. The *Transformativa* fosters community and calls us to action in creating environmental, economic, and social justice. The *Transformativa* is where we express the prophetic “No” to injustice that defends our mystical “Yes” to peace, compassion, and justice.

Matthew Fox is known for his theology of *Original Blessing* (Fox 1983/2000), a direct counter and biblical alternative to Augustine’s doctrine of original sin. He criticizes the flawed doctrine of original sin as a means to keep church members in line, shamed, guilt ridden, and afraid by making the Church into the indispensable dispenser of grace.

Fox sees the relationship between science, religion, and Creation Spirituality a creative path for knowing nature and ourselves fully and embracing the interconnectedness of all that is, including cosmic spirituality. He sees in the scientific story of evolution our own postmodern creation story, The New Cosmology, and has worked with scientists Thomas Berry, Brian Swimme, and Rupert Sheldrake (Fox and Sheldrake 1996).

Fox has brought fresh vision with new language such as:

- Deep ecumenism – All the religions of the world, as well as art, science, and all manners of creativity, are born of our common experiences as human beings on the planet Earth. World religions do not need to be *bridged* as much as simply returned to the common source of our origins, as explained in the deeply ecumenical *One River, Many Wells: Wisdom Springing from Global Faiths* (Fox 2000a).
- Reinventing work – In *The Reinvention of Work: A New Vision of Livelihood for Our Time* (1993), Fox invites us to find work that

is not simply industrial cog-in-the-machine “jobs,” but meaningful work big enough for our souls, our Great Work. Those doing good work in the world constitute a “priesthood of all workers.”

- Reinventing education – Education cannot be narrowed down to the “mind.” If the body is sacred, education must include the body and touch all the chakras. *Body prayer*, which includes dancing, drumming, Tai Chi, Yoga, chant, song, prayer, is playful meditation and celebrates the body while stimulating both sides of the brain, facilitating full engagement of academic material. Fox founded the Institute for Culture and Creation Spirituality (ICCS) at Chicago’s Mundelein College in 1976. In 1983, he moved ICCS to Holy Names College in Oakland, California. In 1996, he founded the University of Creation Spirituality in Oakland that includes Masters and Doctor of Ministry programs. Fox’s current educational project is YELL AWE (Youth and Elders Learning Laboratory for Ancestral Wisdom Education), a program for inner city youth where kids learn about meditation, martial arts, and creativity. See *The A.W.E Project: Reinventing Education, Reinventing the Human* (Fox 2006a).
- Art as meditation – Art requires focus that all meditation does. Thus, Art as Meditation can give access to deeper levels of creativity for doing study and work in the world, whether it is in theology, mathematics, and science, fighting injustice, or peacemaking and community building. *Creativity: Where the Divine and Human Meet* (Fox 2002) develops this theology of spirituality and art.
- Feminist theology/feminine images of God – Fox spent much of his time as a Catholic priest answering to authorities for his bold use of feminist images of the divine, primarily God as Mother. His use of “Kingdom/Queendom of God” in *Original Blessing: A Primer in Creation Spirituality* was an example of Fox’s constant attention to gender-inclusive language and balanced images of the divine.
- Men’s spirituality – As each wave of the feminist movement serves to reorient the world to

what it means to be female and feminine and empower women anew after centuries of destructive patriarchy, men must reinvent themselves also. This requires exploring new, postmodern mythologies of manhood/masculinity. Fox does this in *The Hidden Spirituality of Men: Ten Metaphors to Awaken the Sacred Masculine* (2008).

- Reinventing worship – Fox has taken issue with what he deems boring worship and ritual by rote. To counter the failings of ritual to keep up with the needs of modern/postmodern communities, Fox created the Techno Cosmic Mass (TCM), combining worship with rave-style dance and a multimedia visual experience. Later called simply the Cosmic Mass or Cosmic Celebration, this exciting, dynamic, and constantly evolving form of ritual includes projected imagery representing the theme of the Mass which has as a structure of the *four paths* of Creation Spirituality; intense “techno” dance music associated with rave culture; and representation of various religious traditions, music and drumming, rap, poetry, and grieving together. For many participants, the Cosmic Mass was their first experience of feeling a deep spiritual connection with any form of religious ritual or celebration. (<http://www.thecosmicmass.com>)
- Ecology and Cosmology – Fox’s Creation Spirituality is necessarily protective of the planet, because it is about resacralizing our relationship with nature and recognizing how it is through this relationship that we experience the divine. The New Cosmology – the 13.7-billion-year Universe story as told by science – provides a cosmic context from which humankind is invited to be as creative as the great universal mystery, a passionate panentheism, that gave birth to us. Cosmology, ecology, and theology/spirituality are intimately related in *The Coming of the Cosmic Christ* (Fox 1988).

Fox’s most profound theological contribution is overcoming the stale subject/object dualisms and naming of the interconnectedness of humankind with all of life on the planet and with the great divine mystery of the entire Universe.

In Fox’s case, once we have seen, named, and experienced the intimate relationships between what were previously considered separate categories, such as gender, science, cosmology, religion, art, and spirituality, we come to understand them as a complex, interrelated ecosystem. The disciplines are not separate pieces bridged by long-winded philosophical arguments; rather they are elements of a healthy, balanced spirit-body ecosystem that cannot be separated without causing harm to the whole.

Fox has endured much criticism for his activism in the world. Cardinal Ratzinger silenced Father Matthew Fox in 1989 for a year from teaching or writing because of Fox’s teaching on God as Mother. Fox saw this year as a welcome sabbatical and visited liberation theologians in Latin America who were similarly silenced. After 1 year, Fox published prolifically and began his popular lectures saying: “As I was saying 14 months ago when I was so rudely interrupted...” The standing ovations that Fox so often inspires in his audiences are testaments to the hunger for his message of spiritual activism and the mission to return deep communal and individual spirituality to religious life. In 1993, Fox was dismissed from his Catholic Dominican order. Fox came to see that “the Vatican had made me a *postdenominational priest in a postdenominational era*” (Fox 1996, p. 246). In 1994, Fox was welcomed into the Episcopal priesthood at Grace Cathedral in San Francisco (Fox 1996, p. 250). In 2005, Fox and friends went to Wittenberg, Germany, where Martin Luther nailed his inflammatory 95 Theses to the door of the Castle Church calling for a New Reformation, including No. 11: “Religion is not necessary, but spirituality is” (Fox 2006b, p. 65). He continues his challenge to the Roman Catholic Church, as in *The Pope’s War: Why Ratzinger’s Secret Crusade Has Imperiled the Church and How It Can Be Saved* (Fox 2011). In Spring, 2011, he nailed the 95 Theses in Italian to the door of Basilica di Maria Maggiore in Rome, overseen by Cardinal Law, formerly of Boston, and notorious for his role in the pedophile priest scandal.

Matthew Fox continues his work as a visiting scholar with the Academy of the Love of

Learning in Santa Fe and as author, freelance speaker, educational innovator, and social activist, connecting with the growing Occupy movement. His social activism includes inviting spiritual seekers into exciting new possibilities as a relevant postmodern spiritual force. Fox validates what many people intuit to be good, true, and beautiful, and he invites them to make positive, healing changes in the world. Matthew Fox's spiritual activism is the monumental work of a spiritually devoted, exceptionally gifted thinker who dares to cut through the museum-like institutional rigidity of a past era's remnants of religion and generate central elements of an exciting, bold new visionary era of cultural renewal.

## Frankl, Viktor

Haddon Klingberg Jr.  
North Park University Chicago, Evanston,  
IL, USA

Viktor Emil Frankl, M.D., Ph.D. (1905–1997) is founder of logotherapy – meaning-centered psychotherapy. He is best known for his short book, *Man's Search for Meaning (MSFM)*. It was released in 1946 by Deuticke, Freud's Viennese publisher. It appeared in English in 1959 as *Death Camp to Existentialism*, and for more than half a century, it has remained an international best seller, published in over 30 languages, numerous English editions, audiobooks, and Braille. In 1991 the United States Library of Congress/Book-of-the-Month Club survey of lifetime readers named it one of the ten most influential books in America. Karl Jaspers labeled it “one of the great books of mankind”; Gordon Allport called it “a compelling introduction to the most significant psychological movement of our day.” Of Frankl's 32 books, others have been translated into multiple languages, including English.

Frankl first visited the United States in 1954 at the invitation of Norman Vincent Peale. Frankl lectured at Marble Collegiate Church, New York, where Peale had arranged for Christian symbols

to be covered with drapery out of respect for his Jewish guest. From that beginning, Frankl made 92 speaking tours to the United States and lectured worldwide – at 209 universities and to large public audiences on all five continents.

## Life and Context

Viktor Frankl was born March 26, 1905 at Czerningasse 7 in Leopoldstadt, the mainly Jewish quarter of Vienna. His parents were humble, pious Jews. At that time, the city was seat of a great empire and an international wellspring of music. The University of Vienna was a hub of creativity and at the forefront of medical science. But there was also a strong and longstanding current of anti-Semitism in the city.

In the year of Viktor's birth, 50-year-old Sigmund Freud was living near the University. Alfred Adler (1870–1937) was a founding member of Freud's inner circle and was living and practicing medicine at Czerningasse 6, right across the street from the Frankl home. Today tablets on the two buildings note the famous former residents.

When Viktor Frankl was a little boy, an obscure Adolf Hitler – in his 20s – was living in a men's hostel in the next district. No one could have imagined the future for Jews in Vienna, certainly including the Frankls and the older Freuds. Both lost close kin and friends to the Holocaust.

Sigmund Freud, Gabriel Frankl (Viktor's father), Alfred Adler, and eventually Viktor himself all attended the same high school in Leopoldstadt. Viktor was captivated by Freud's theories and writings, even introducing his classmates to psychoanalysis. All four of these men, in turn, attended the University Medical School; only Gabriel could not afford to finish. Though Viktor met Freud only once, they did corresponded with one another; and when Viktor sent one of his high school papers, Freud published it in the *International Journal of Psychoanalysis*.

While still a medical student, Frankl almost joined Freud's Vienna Psychoanalytic Society,

but already he was becoming disillusioned with psychoanalysis. Freud became intolerant of Adler's criticism and inventive ideas and had excluded him from the Society. The young Frankl joined Adler's new Society for Individual Psychology. But in the end, when Frankl expressed his own novel ideas, Adler expelled him. So Jung (who had parted with Freud in 1913), Adler, and Frankl started their own rival psychological movements. But of course the creative influence of Freud on them, on psychology and psychiatry, and on Western civilization was enormous.

By the time Hitler and National Socialism seized Austria and engulfed Europe, Frankl already had established his practice in neurology and psychiatry. But for the Frankls and for millions, life as they had known it came to an end. In September 1942, Viktor and his wife Tilly, his father and mother, and mother-in-law were forcibly deported in one of the ongoing trainloads of Jews from Vienna. During 2 years in the Theresienstadt ghetto, Frankl's father died from illness. The rest of the family were transferred to Auschwitz in October 1944, where Viktor and Tilly were separated and where his mother Elsa was sent immediately to the gas chambers. Viktor's brother and other family and friends met their deaths in the camps. He did not know the fate of his mother or of Tilly, who died at Bergen-Belsen, and he held out hope that he would be reunited with them after the war.

Frankl spent 3 days at Auschwitz (in Poland), then 7 months at Kaufering and Türkheim in Germany, where he nearly died of typhus. After two and a half years in the four camps, he was liberated from Türkheim by American forces in April 1945. On his return to Vienna, he learned that his loved ones had perished.

Now alone, Frankl threw himself into reconstructing his first book, *The Doctor and the Soul*, and wrote his second, *MSFM*. These tasks kept him going for a time. Then he married a young dental assistant, Elly Schwindt, at the Polyclinic where he had become chief of neurology. For more than 50 years, Viktor and Elly lived as spouses, parents, and colleagues in logotherapy, corresponding, writing, traveling the globe, and seeing the endless stream of

visitors coming from around the world. Viktor died in Vienna following open-heart surgery in September 1997 at the age of 92.

## Logotherapy and Existential Analysis in Context

Frankl's thought was shaped not only by the psychologists of Vienna but by great philosophers – the ancient Greeks, Nietzsche, Kierkegaard, Heidegger, Marcel, Jaspers, Buber, etc. – and a number of the contemporaries he knew personally. What Frankl created, starting in the 1930s, is what he eventually called “logotherapy and existential analysis” (Frankl 1986, 1992; Frankl 1997a, 2004; Gould 1993; Klingberg 2001). “Existential analysis” in his scheme referred to its philosophical foundations in contrast to psychoanalysis and “logotherapy” to its therapeutic methods. When the term existential analysis was adopted by others and used more widely, Frankl simply used logotherapy to identify his body of work.

The Greek *logos* connotes, among other things, *meaning* – hence, therapy through meaning. By 1948 Wolfgang Soucek had identified logotherapy as the third Viennese school of psychotherapy, a designation that endures. The first school is Freud's psychoanalysis, marked by the “the will to pleasure” and by Freud's ingenious expedition into the unconscious and its sexual and aggressive forces – “depth psychology.” The second is the individual psychology of Adler, distinguished by the “will to power”, striving to overcome feelings of inferiority in our relations with other people, to achieve success and status. While Frankl acknowledged the work of Freud and Adler as foundational to his own, he asserted that the unique and most significant human motivation is the *will to meaning* – “height psychology.” Frankl was fond of quoting Nietzsche: “He who has a *why* to live can endure almost any *how*” (Frankl 1992).

This cornerstone of logotherapy was tested in the crucible of the death camps. Frankl never claimed that simply having a reason to live

could keep a prisoner alive against the odds. In *MSFM* he identifies many factors in his own survival in addition to his desire to see his loved ones again, to write his books, and to lecture again on logotherapy (Frankl 1992; Klingberg 2001). But he did insist that having a reason to live helped to keep up one's spirit and finding meaning in suffering could help one to bear it. Meaning was necessary but not sufficient for survival and could – all other things being equal – make the difference between life and death.

Logotherapy aims to help by assisting people in finding meaning in their lives. Frankl identified three primary ways to discover personal meaning. The first way is by *doing a deed*. This may include creating art or music, nursing a child, baking a pie, accomplishing a task, or loving another person. The second way is by *experiencing life*. One can enjoy the art and music of others, witness a sunset, accept kindness from someone, or rest in the affection of a loved one.

The third path to meaning is an anchor point of logotherapy: *meaning through suffering*. To suffer for nothing or to suffer when there is no point to it is unbearable. But if one can find a meaning in unavoidable suffering, it becomes possible to bear it, even to rise above it (Bulka 1998; Frankl 1978, 1992; Klingberg 2001). This helps to explain why so many people in life-threatening circumstances turn repeatedly to *MSFM* and give copies to others who are suffering. Logotherapy is complementary to other psychotherapies and fills a gap for people who no longer can take action to change their circumstances or who face an unavoidable fate.

*Transcendence* is a unique aspect of human nature, making it possible for us to rise above ourselves and our circumstances. Logotherapy has techniques that may apply to particular psychological disorders and mental illnesses (Frankl 2004). But it directly addresses the despondency of living life without meaning, especially amid setbacks and disappointments. The emptiness experienced by many in our time is what Frankl called “the existential vacuum.” And he insisted that despondency over the

meaninglessness of life is no mental disorder at all, but rather a sign that one is truly human, by nature summoned to tasks, causes, and relationships beyond self. This, then, is the opening for faith.

## Logotherapy and Religion

Logotherapy has a distinctive affinity for religion and for people of faith. But Frankl steered away from the sectarian, striving to make logotherapy useful to all people, religious or not, since the quest for meaning characterizes human nature. Individuals find meaning for themselves in many ways, and faith in a Supreme Being or adherence to a particular religion may be paths to meaning. So psychotherapy should respect this, as well as other paths to what he called *ultimate meaning* (Bulka 1979; Frankl 1997; Tweedie 1961). It never prescribes a particular meaning for another person but rather assists and encourages each person to pursue and discover both ultimate meaning and the moment-by-moment meanings of life.

Early on, Frankl identified the characteristics of being human: spirituality, freedom, and responsibility. Frankl clearly intended that those who choose faith in God be affirmed and assisted in bringing religious resources to bear upon their lives and struggles. Frankl's own writings reflect his openness to religion, though he remained steadfastly private as a person of faith. (Only a few very close to him knew of his daily prayers – without fail – from the time of his liberation from the concentration camps to the day of his death.)

Regarding human nature, Frankl rejected the negativity of psychoanalysis. He also criticized the unbridled optimism and self-centeredness of the American “human potentials movement” inspired partly by Adler. Ever since the Holocaust, Frankl has been reproached as too forgiving of the perpetrators and for his repeated assertions that good people and bad people are found in *every* race, *every* nation. All individuals and all groups are capable of great good and great

evil, and we must be on guard against all evils, holocausts and “ethnic cleansings.”

Frankl stands out among European psychologists of religion for placing *transcendence* at the center of logotherapy. Erich Fromm (1950), himself a Marxist atheist, asserted that both Freud (1961) and Jung (1938) had missed the point on religion. For Freud, the unconscious is the worst that is in us; for Jung, the unconscious is the best that is in us. For Fromm, the unconscious is simultaneously the best *and* worst in us, neither “a God whom we must worship nor a dragon we must slay” (Fromm 1950). In contrast, Frankl's insistence on transcendence leads away from unconscious processes toward the human ability to take a stand toward circumstances and to rise above them, as well as to address faith in transcendent terms. That is, the fact of transcendence in human nature points away from self and circumstances toward something or someone, some cause *other* than oneself, *beyond* oneself, and *greater* than oneself.

Thus, from Frankl's perspective it can be said that Freud, Jung, as well as Fromm – and William James (2002) and others, for that matter – *all* miss the point. Frankl might characterize them as reducing religion to merely psychological phenomena, to experience, conscious or unconscious, and ignoring the transcendent nature of human spirit, which may address or apprehend – or be apprehended by – a transcendent God existing in reality beyond. Frankl insisted that to find meaning, a person *must* go beyond oneself to a purpose to fulfill, a cause to serve, a person to love, or a God to trust if they so choose. And in transcending ourselves we become fully human and find meaning in our lives that carries us even above suffering.

## Freud, Sigmund

Benjamin Beit-Hallahmi  
Department of Psychology, University of Haifa,  
Haifa, Israel

Sigmund Freud (1856–1939) is most often mentioned today in relation to psychology and psychiatry, but he had little no training in these fields. In reality he was a well-respected neurologist who developed an approach to human behavior known as psychoanalysis. Freud was a man of enormous learning and huge capacities and talents. His writings, which fill up about

30 volumes, cover all aspects of human experience, culture, and history.

The creation of psychoanalysis offered at once a theory of the human psyche, a proposed treatment system for the relief of its ills, and a method for the interpretation of culture and society. Despite repeated criticisms and rejections of Freud's work, its influence remained powerful well after his death and in some fields far removed from psychology as it is narrowly defined.

Freud was trained as a physician and was drawn to neurology and psychiatry, but he was always more interested in theory than in practice. After starting his work with neurotic patients, he came to believe that many mental disorders are the product of unconscious conflicts. Freud suggested that humans are born with sexual and aggressive instincts, but starting early on in life, they must repress such desires, driving them away from conscious awareness. Some repressed desires do not disappear but unconsciously haunt our behavior and thoughts. Dreams, slips of the tongue, and neuroses are, Freud argued, distorted reflections of repressed desires that originate in childhood. Psychoanalytic practice aimed to uncover such hidden mental processes. Thus, dreams are the disguised expression of wish fulfillments. Like neurotic symptoms, they are the effects of compromises in the psyche between desires and prohibitions in conflict with their realization. Slips of the tongue and similar everyday errors, Freud claimed, had symptomatic and thus interpretable importance. But unlike dreams they need not betray a repressed infantile wish yet can arise from more immediate hostile, jealous, or egoistic causes.

Another kind of everyday behavior Freud analyzed was humor. Seemingly innocent phenomena like puns are as open to interpretation as more obviously tendentious, obscene, or hostile jokes. The powerful and joyful response often produced by successful humor, Freud contended, owes its power to the release of unconscious impulses, aggressive as well as sexual.

Two assumptions were suggested by Freud to characterize his approach. The first states that all psychic processes are strictly determined (no accidents, chance events, or miracles can be referred to as explanations), the second that

unconscious mental processes exist and exert significant influences on behavior. These unconscious forces shape much of the individual's emotional and interpersonal experiences.

We all are ready to admit momentary, fleeting, childish, and irrational thoughts, but we consider these experiences marginal. Psychoanalysis claims that they may be much more than trivial or marginal and that unconscious processes are possibly the main determinants of observable behavior.

The emphasis on unconscious processes in personality can be summed up as follows:

1. Large parts of the personality are unconscious, and these are the more important ones.
2. Unconscious memory is the repository of significant early experience.
3. In an adult, unconscious ideas are projected, creating severe distortions of reality, especially interpersonal reality.

Freud did not invent the idea of the conscious versus unconscious mind, but he certainly was responsible for making it popular. The conscious mind is what you are aware of at any particular moment, your present perceptions, memories, thoughts, fantasies, and feelings. Working closely with the conscious mind is what Freud called the preconscious, what we might today call "available memory": anything that can easily be made conscious, the memories you are not at the moment thinking about but can readily bring to mind. No one has a problem with these two layers of consciousness. But Freud suggested that these are the small and marginal. The largest part by far is unconscious. It includes all the things that are not easily available to awareness, including many things that have their origins there, such as our drives or instincts, and things that are put there because we cannot bear to look at them, such as the memories and emotions associated with trauma.

According to Freud, the source of our motivations is unconscious, whether they be simple desires for food or sex, neurotic compulsions, or the motives of an artist or scientist. And yet, we are often driven to deny or resist becoming conscious of these motives, and they are often available to us only in disguised form.

Freud devoted much attention to the development of sexuality in the individual. He described how this development is prone to troubling maladjustments if its various early stages are unsuccessfully negotiated. Confusion about sexual aims or objects can occur at any particular moment, caused either by an actual trauma or the blockage of a powerful urge. If this fixation is allowed to express itself directly at a later age, the result is what was then generally called a perversion. If, however, some part of the psyche prohibits such overt expression, then, Freud contended, the repressed and censored impulse produce neurotic symptoms. Neurotics repeat the desired act in repressed form, without conscious memory of its origin or the ability to confront and work it through in the present.

One great insight we were led to by classical psychoanalysis is that the child is totally confused by the notion of parenthood and family relations. Learning that we have two parents and that father and mother are also man and wife is beyond the child's comprehension at first blush. This Oedipal confusion stays with all of us forever, processed, accepted, and sometimes denied. The denial of birth is no less important than the denial of death in the making of cultural fantasies. Both lead to much psychic tension and sometimes to real violence.

Focusing on the prevalence of human guilt and the impossibility of achieving unalloyed happiness, Freud contended that no social solution of the discontents of mankind is possible. The best to be hoped for is a life in which the repressive burdens of society are in rough balance with the realization of instinctual gratification and the sublimated love for mankind. But reconciliation of nature and culture is impossible, for the price of any civilization is the guilt produced by the necessary thwarting of man's instinctual drives. Psychoanalytic ideas have been immensely influential in Western thought over the past 100 years, since the inception of this intellectual movement by Sigmund Freud.

Psychoanalysis is a theory of struggle, conflict, and compromise, assuming the dynamic nature of human behavior, always resulting from conflict and change. Additional assumptions

reflect the idea of overdetermination and the multiple functions of behavior. The overdetermination assumption states that any segment of behavior may have many preceding causes. This is tied to a developmental or historical emphasis, leading us to seek first causes in any individual's personal history and unique experiences.

Psychoanalysis proposes a universal sequence of psychological development, which becomes a basic epistemological ordering of the world and of individual personality, culture, and humanity. The universal experience of the human infant includes a developing awareness of three realms, always in the following order: first, one's body and its experienced needs; second, awareness of the existence of another human; and third, knowledge and emotional investment in relations between itself and other humans. All further experiences must be based on these early experiences, acquired in that order, and will be assimilated into that order. The existence of such a universal sequence cannot be challenged, and therein lies the attraction of psychoanalysis for those wanting to understand not only the human personality but also human society and culture.

The problem of childhood is a central issue defining psychoanalysis. The infant's unrealistic drive for wish fulfillment is supposed to be left behind by the adult, but childhood is always alive behind adulthood facade. The legacy of childhood is far from marginal, and it is coexistent with adult functioning. We can observe it on both the individual and the cultural levels.

Freud's ideas about development focus on what has come to be called psychosexual development, that is, the transformation, molding, and sometimes perversion of biologically determined erotic drives in early childhood. The focal point of psychosexual development is the Oedipus complex, woven around the child's attachment to its parents as love objects or identification models between the ages of 3 and 6. Early childhood experiences serve as historical precedents in every individual's life, and in the life of every human culture.

The psychoanalytic view of human motivation is often regarded as utterly pessimistic, but we

have to admit that it is realistic. Judging by their conscious and unconscious drives, humans are undeniably nasty and brutish, aggressive, and infantile. However, beyond this bleak picture of immorality and perversity lies the capacity for sublimation, love, and cultural creativity.

The psychoanalytic view of maladaptive behavior emphasizes its continuity with adaptive behavior and leads to viewing pathology as a useful analogy of cultural structures. Moreover, maladaptive behavior is analyzed through the detailed recognition of defensive sequences, that is, not only the final outcome – symptoms – but the internal sequences leading to it are carefully outlined.

The theory presents us with an ideal of flexibility and moderation which is presented, as opposed to rigidity which is pathological but inevitable. Rigidity in the form of rituals and ritualized defenses become one the sources of analogies for religion. The analytic starting point of symptom and syndrome, and their unconscious background, serve as the model for looking at religion.

Psychoanalysis assumes the psychic unity of mankind, which is significant when we deal with cultural traditions. Universality is found at the most basic level of body, birth, sex, and death. This working assumption has a particular relevance to the phenomenon of religion. Universal themes in religious mythology are the result and reflection of the psychic unity of mankind, which in turn is the consequence of common psychological structures and common early experiences shared by all mankind. The same basic psychological processes and complexes are expressed in individual products (dreams, stories, daydreams) and in cultural products (art, literature, folklore, wit, religion, law, science), because these complexes are basic and central to human experience.

Freud's writings are among the most ambitious attempts in history to present a comprehensive interpretation of religion. The topics Freud dealt with include, first of all, a developmental theory of religion, for humanity as a whole and for each individual. Freud also attempted to explain the functions and consequences of religion, for both society and the individual.

Freud's theoretical explanation for the origin and existence of religion is based on certain presumed universal psychological experiences and processes: the universal experience of helplessness, the tendency for compensation through fantasy, and the experience of early relations with protective figures. Every individual is psychologically prepared by these universal experiences to accept religious ideas which are obviously culturally transmitted. The question about the world of spirits is: Does this world exist "out there" and if it does not where is it. The psychological answer given by psychoanalysis is that it exists within, in our own mental apparatus and our own mental abilities to fantasize and project. The world of spirits, the supernatural world unseen and somehow felt in religious experience, is a projection of the internal world. Psychoanalytic theory explains both the origin of supernaturalist ideas and their specific contents.

Freud's theory does not suggest that the individual creates his religion on his own, out of nothing, but that childhood experiences within the family prepare the individual for the cultural system of religion. Belief in omnipotent gods is a psychic reproduction of the universal state of helplessness in infancy. Like an idealized father, God is the projection of childish wishes for an omnipotent protector. If children can outgrow their dependence, he concluded with cautious optimism, then humanity may also hope to leave behind its prevalent and immature fantasies.

Psychoanalysis has had more to say about religious actions than any of the various traditions in academic psychology. It is the one psychological approach to the understanding of religion which has had a major effect on both religion as an institution and on the study of religion. Psychoanalytic approaches to the question of culture and religion, and to the question of individual integration in society, have affected all social science disciplines. The psychoanalytic study of religious beliefs and institutions has drawn considerable attention on the part of scholars in the fields of religion, history, sociology, and anthropology. Psychoanalysis is the only major psychological theory which offers an explanation

of religion as part of a comprehensive theory of human behavior, in which religion is presented as an instance of general psychological forces in action.

In this area, as in many others, Sigmund Freud's writings offer a rich variety of hypotheses regarding various religious beliefs and practices. Some of the better-known hypotheses derived from psychoanalytic theory are the father-projection hypotheses, i.e., the idea that the images of the gods are derived from childhood experiences with paternal (and maternal) figures, and the superego projection hypothesis, i.e., the idea that the gods are a reflection and echo of the unconscious and severe conscience which all humans share.

Judging by their immense influence in all the academic fields which study religion, psychoanalytic ideas seem to be of truly enduring value for the psychological understanding of religion. We really have no other theory that matches the scope of psychoanalytic interpretations of culture and religion. Enlightening, that is the greatest compliment we can pay psychoanalytic ideas and that is exactly what psychoanalytic approaches wish to be. They represent the continuation of Enlightenment tradition in regard to human activities around ideas of spirituality and the sacred.

## Freud, Sigmund, and Religion

Lorna Lees-Grossmann

Department of Psychosomatic Medicine,  
Klinikum Rechts der Isar, Munich, Germany

Freud was notorious for his antireligious stance. He seems to have gone out of his way to offend believers, referring to the “barbarous god of volcanoes and wildernesses whom I grew to dislike very much” (Freud 1970, p. 102). Despite this, he accepts that in some cases the mild neurosis of religion was preferable to a more complex and distressing disorder and argues the parallels between religion and psychoanalysis are striking.

### Neurosis

Religion itself for Freud is a form of madness (Freud 1995a SE XII: 269). He draws an analogy between the faith-based belief of the religious believer and that of the paranoid, who clings to his or her paranoid delusion in spite of any and all evidence to the contrary. He draws another between the ceremony and ritual associated with religious practice and the obsessive’s need to engage in repetitive behavior. Religion can

rescue people from an individual neurosis, although it does not cure them: it merely substitutes a universal neurosis for a personal one:

In view of these similarities and analogies, one might venture to regard obsessional neurosis as a pathological counterpart of the formation of religion and to describe that neurosis as an individual religiosity and religion as a universal neurosis (Freud 1995a SE XII: 11126–11127).

The distinction between religion and what is commonly accepted as neurosis is merely in the numbers of participants involved: the paranoid indulges in a *folie à un(e)*, the religious in a *folie à tous*. The ritual inherent in religion makes it an obsessional neurosis: as a result of the unresolved Oedipus complex in the adult, the rituals of religion are aimed at propitiating the father and preventing his anger. Alternatively, religion can be seen as illusory: a wish fulfillment through projection. A strong desire can be externalized and become a belief in the same way that, when we sleep, a strong wish fulfillment is projected as a dream. In the case of Christianity, the prospect of eternal life is a fulfillment of the wish not to die.

Freud’s assertion is that the Oedipus and Electra complexes are at the psychological core of all human beings. This sort of incestual tension necessarily has a negative effect on the family, and so the tension is neutralized through the transference of the desire for the parent onto a less divisive recipient.

In Christianity, God replaces the father figure and Mary the Mother of Christ the mother. The desire to kill the parent and thus escape the threat of castration is also accounted for in Christianity, argues Freud, through the crucifixion of Christ as part of the Holy Trinity. Christianity also allows for the expiation of guilt through its transference onto Christ, the perpetual sacrificial lamb. Religion is a sign that the Oedipus complex has not been successfully overcome.

### Transference

The key issue at hand here is that of transference: it is the mode of healing in both psychoanalysis and religion. Jung wrote of his first meeting with

Freud: “Suddenly he asked me out of the blue, ‘And what do you think about the transference?’ I replied with the deepest conviction that it was the alpha and the omega of the analytic method, whereupon he said, ‘Then you have grasped the main thing’” (Jung 1954, p. 8).

In transference in psychoanalysis, the analyst takes on the role of the parent, which is the role taken on by God in religious belief. This parallel was not lost on Freud, who despite his avowed disdain for religion recognized its potential as a healing mechanism as well as a symptom of neurosis.

Freud’s letters imply an uncertainty in his criticisms of religion that are not reflected in his work: he comments in a letter to Ferenczi that “I regard [*The Future of an Illusion*] as weak analytically and inadequate as a self-confession” (Jones 1962, p. 587). Also, when he found analogies to be insufficient proof against religion, he searched for historical proofs and delayed the publication of *Moses and Monotheism* because he was unable to find them and was therefore displeased with the work: “there is also the consideration that my contribution does not seem to me well founded enough nor does it please me much. So it is not the right occasion for a martyrdom. Finis for the time being” (Jones 1962, p. 622).

Freud attempted to dismiss the historicity of religion a priori with no regard for any information he might have received suggesting alternative theories to his already-concluded conclusion. For Freud, the belief in God is understandable to an extent, although he considered the belief to be unworthy of modern human beings and “to be understood on the pattern of the individual neurotic symptoms familiar to us” (Freud 1995b SE XXIII: 58):

We understand how a primitive man is in need of a god as creator of the universe, as chief of his clan, as personal protector . . . A man of later days, of our own day, behaves in the same way. He, too, remains childish and in need of protection, even when he is grown up; he thinks he cannot do without support from his god (Freud 1995b SE XXIII: 128).

What he found objectionable was not that these early and primitive people chose to accept the existence of a powerful God who would

protect them, but that the character of that God was changed to suit their own changing purpose:

[T]he Persian government of Egypt (of the fifth century BCE) conveyed information to them of the new rules of worship issued from Jerusalem. Going back to earlier times, we may say that the god Yahweh certainly bore no resemblance to the Mosaic god. Aten had been a pacifist . . . No doubt Yahweh was better suited to a people who were starting out to occupy new homelands by force (Freud 1995b SE XXIII: 63).

## Friedman, Edwin

Loren Townsend  
Louisville Presbyterian Theological Seminary,  
Louisville, KY, USA

Edwin Friedman (1932–1996) broke new ground in pastoral counseling by using Murray Bowen’s theory of intergenerational emotional family systems to explain complex interactions between religion, politics, and psychotherapy. Combining Bowen’s theory with his own rabbinical

experience, Friedman developed a model of congregational analysis and leadership that was broadly embraced by American church leaders.

A native of New York City, Friedman earned a doctorate of divinity from Hebrew Union College where he was ordained as a rabbi in 1959. During his distinguished career, he acted as Community Relations Consultant for the White House on desegregation issues (1964–1966), founded the Bethesda (MD) Jewish Congregation where he served as Rabbi until 1979, established a postgraduate training center for clergy and mental health professionals (Center for Family Process), and maintained a practice as a marriage and family therapist. Dr. Friedman was well known for his workshops for clergy, businesses, political groups, and military leaders.

As a family therapist, Friedman trained with Murray Bowen, a family therapy pioneer and professor of psychiatry at Georgetown University Medical Center in Washington, D.C. His landmark book, *From Generation to Generation: Family Process in Church and Synagogue* (Friedman 1985), is based on his observation that clergy stress is related primarily to family dynamics. He observed that clergy are involved simultaneously in three families: families within the congregation, the congregation as family, and the clergyperson's own family. These systems interlock and are governed by identical emotional processes that can be understood using concepts like differentiation, homeostasis, and triangulation drawn from Bowen's theory of family therapy. Friedman applied these concepts to clergy self-understanding, congregational life, and leadership.

*From Generation to Generation* (Friedman 1985) became a standard for clergy training and a platform for extending Bowen's theory through workshops and lectures. *Friedman's Fables* (1990) is a collection of stories that highlight family emotional dynamics in problematic human interactions. In his book, *A Failure of Nerve: Leadership in the Age of the Quick Fix* (1997, published posthumously), Friedman integrated Bowenian theory with 40 years of observations about American politics and organizational systems. He proposed a universal

principle: all social and organizational pathology is related to denial of emotional processes. This denial results in a widespread, regressive, counterevolutionary trend that is countered only by differentiated leaders who understand emotional process. Such leaders manage their own anxiety while taking unpopular stands that are automatically resisted by others' reactivity. Friedman's model is sustained through the Center for Family Process, Healthy Congregations, and a host of books and workshops based on his work (Richardson 1996; Steinke 2006).

Friedman's work has been widely embraced by church leaders. However, his model faces at least three substantial critiques. First, Bowen and Friedman's concept of differentiation can be interpreted as an embodiment of masculine values rather than a universal emotional principle (Leupnitz 2002). Second, Bowenian theory overvalues culturally specific nuclear family emotional process. Third, Friedman's model assumes that universal nuclear family processes can be generalized beyond family functioning to organizational and societal functioning. There is little empirical research to support either universal nuclear family processes or generalization of principles to organizations and society.

## Fromm, Erich

William D. Roozeboom  
Fuller Theological Seminary, Pasadena,  
CA, USA

Erich Fromm, though one of the most prolific authors of social psychology and psychoanalytic theory, is oddly less well known than others of this period. This is largely due to Fromm's multifaceted, interdisciplinary approach, which makes it challenging to locate him within a particular camp of thought. Fromm brought together Freudian theories with humanism, existentialism, Marxism, neo-Kantian thought, elements of Biblical prophecy, Talmudic writings, mysticism, and Zen Buddhism (Burston 1991). Nevertheless, Fromm is most simply known as a sociopsychological theorist and analyst, who combined Freudian psychoanalytic thought with Marxist social critical theory.

Fromm's intellectual interests and pursuits were likely influenced by his upbringing as the only child in a pious, orthodox Jewish home, where he received extensive Jewish religious education. Although Fromm did not remain active in his Jewish faith, its imprint remained as he studied sociology at the University of Heidelberg (receiving his Ph.D. in 1922).

After his studies at Heidelberg, Fromm underwent psychoanalytical training in Frankfurt, Munich, and Berlin and then helped form the Frankfurt Psychoanalytic Institute. In Frankfurt he became acquainted with the Frankfurt Institute for Social Research and later was an early leader in "The Frankfurt School," a Marxist and Freudian influenced group of social scientists who developed social critical theory.

Fromm emigrated to the United States in 1934 and taught and worked with others who were critiquing and expanding Freud's thought – particularly in terms of interpersonal or social psychology – such as Karen Horney, Harry Stack Sullivan, Clara Thompson, Frieda Fromm-Reichmann, and other "neo-Freudians." Following this he moved to Mexico City and taught the first courses of psychoanalysis as a part of the medical faculty at the National Autonomous University of Mexico.

Fromm defined himself as a nontheistic "radical humanist" yet acknowledged religion as a universal in human life (Fromm 1967). He did distinguish between authoritarian and humanistic religion but also asserted that religion in general has admirable goals for life and standards for living, such as truth, the decrease of suffering, autonomy, responsibility, the unfolding of human powers of love and reason, and the development of the higher nature or "soul" (Fuller 2008). Therefore, psychological disturbances occur because persons neglect the demands of the soul (Fuller 2008). Additionally, Fromm touched on similar existential tensions as theologian Paul Tillich and the ethical implications of Martin Buber.

Fromm's contributions were vast. First, Fromm was one of the first theorists to assert that the psychoanalyst is not a blank mirror as Freud believed; rather he or she must engage one's self and one's passion for his or her life and have the capacity for genuine empathy for the client in order to be helpful. Second, Fromm stated that self or "character" is developed and/or constructed socially and not merely via libidinal forces. Third, Fromm taught that a critical (social) theory is a prerequisite for contextualizing care for its hermeneutic of suspicion and

deconstructive impetus towards meta-discourse(s). All of these elements were very early forms of what are now common features of a postmodern psychological theory and practice.

## Fundamentalism

Louis Hoffman<sup>1</sup> and Erica Palmer<sup>2</sup>

<sup>1</sup>Colorado School of Professional Psychology, University of the Rockies, Colorado Springs, CO, USA

<sup>2</sup>Center for Growth, Colorado Springs, CO, USA

The term fundamentalism has been associated with a variety of meanings since its inception into the English language during the early twentieth century through Christianity. At the outset, it was intended to convey a belief in the need to return to *the fundamentals of faith*.

Increasingly, fundamentalism has been associated with a narrow, rigid approach to religious belief across various world religions. Fundamentalism, once a Christian term, can now rightly be applied to Islamic, Buddhist, Jewish, Hindu, and other forms of fundamentalism. When used in popular culture today, it often is intended to have a pejorative connotation to it.

### Fundamentalism as a Reaction to Modernism

Fundamentalism has often been understood as a response to modernity and the secularism that accompanied it. Several threats to religion accompanied modernity (Hoffman and Kurzenberger 2008). First, religion was displaced from its privileged position. In premodern times, the church and religious authority retained the most influential positions of power in shaping the masses. As modernism emerged, scientists, academics, and politicians emerged as the new sources of influence. Fundamentalism, in part, can be understood as an attempt to reclaim an authoritative place for religion.

Second, religious ways of knowing, which were generally based in claims of revealed knowledge from God or an ultimate authority, were called into question. In premodern times, religion did not need to defend its ways of knowing; they were a given. Fundamentalism served as a way of clearly defining what should be a given, or a fundamental of faith, that does not need to defend itself against scientific scrutiny.

Third, religion was changed by modernity. In premodern times, faith was sufficient. However, in modern times faith needed to be supported by science and rationalism. Systematic theology was replaced by apologetics. During modernity and into postmodernity, there was an increasing popularity in creationism and popular books, such as *The Case for Christ* by Strobel (1998), which claimed scientific evidence of the truth of religion. Although fundamentalism often incorporates selectively chosen scientific evidence to support its position, it also generally claims that there is no need for such evidence.

## The September 11, 2001 Terrorist Attacks and Fundamentalism

Although fundamentalism had already begun accumulating many negative associations, the terrorist attacks on the Pentagon and World Trade Center Towers in the United States on September 11, 2001, powerfully impacted the way fundamentalism was understood. The terrorists were labeled “Islamic fundamentalists” and “Islamic extremists” by many in the news media and academic community. Through this, extremism and fundamentalism united as synonymous terms. The number of individuals who would self-identify as fundamentalists since this time has decreased.

The contemporary usage of the term fundamentalism is often used to distinguish a particular way of being religious or type of religiosity. Psychological measures, such as Fundamentalism Scale-Revised and Religious Fundamentalism Scale, have been developed to identify fundamentalism (Hill and Hood 1999). In these, fundamentalism is conceived as more absolutist and rigid. Fundamentalism is defined as being related to a less critical and more literal interpretation of sacred texts, more antagonistic and critical views of other religious groups, defensive of the correctness of a particular religious group or belief, and increased evangelistic fervor.

## Research on Fundamentalism

Since September 11, 2001, psychological theory and research attempting to understand and explain fundamentalism has become prolific. Most of this research can be seen in two broad categories: social-psychological research and personality research. Common to both approaches is the assumption that fundamentalism is often personally and socially dangerous and that fundamentalism often is a product of social and psychological forces more than religious factors.

Social psychological research emphasizes the role of the group or culture (Rogers et al. 2007). Terror management theory, one

social-psychological approach, suggests that mortality salience (i.e., reminders of death) increase in-group identification; these in-groups are often conservative or fundamentalistic. Friedman (2008), for example, found an increase in fundamentalism associated with mortality salience. Self esteem, however, is conceived as an intervening variable. Low self-esteem increases the influence of mortality salience, while high self-esteem serves as a buffer therefore lowering the impact. From the social psychology perspective, various personal factors such as psychopathology, tendencies toward conformity, and self-esteem may interact with contextual factors, such as mortality salience, to increase the likelihood of one developing a fundamentalist perspective.

Hood et al. (2005) represent one of the most thorough perspectives from the individual or personality side of fundamentalism. This is a more balanced perspective on fundamentalism, recognizing both the positive and negative sides of fundamentalism. From a more sympathetic viewpoint, fundamentalism often is part of a search for meaning and community. In general, however, fundamentalism has been associated with more negative concepts including authoritarianism, a rigid cognitive style, narrow-mindedness, and defensiveness against doubt (Spilka et al. 2003).

Empirical research has also associated fundamentalism with a number of outcomes. For instance, it is generally thought that fundamentalists have more oppressive patriarchal worldview, increased likelihood of prejudice, and domestic violence (Spilka et al. 2003). As has already been discussed, there is also a frequently hypothesized link between fundamentalism and terrorism.

## Conclusion

A complete understanding of fundamentalism must take into consideration the personal, social/cultural, historical, and religious factors that contribute to the development of fundamentalism. From scholarly and ethical viewpoints, it is necessary to take into consideration both the positive aspects of fundamentalism as well

as the potential dangers of fundamentalism when associated with more extremists and militant groups.

## Gardens, Groves, and Hidden Places

David A. Leeming  
University of Connecticut, Storrs, CT, USA

Gardens, groves, and other such “hidden” places are often sacred in religious stories. Gardens and groves and other hidden places can represent an earthly paradise, as in the Garden of Eden of the Book of Genesis in the Hebrew Bible. Like temples and walled cities, they are protected places, metaphors for cosmos, against ever threatening chaos. They are places of birth or rebirth. Jesus is born in a humble stable; the Buddha is born in a grove. Muhammad receives revelation in a cave, the Buddha finds enlightenment under a tree in a grove, and Jesus prepares for his passion in the Garden of Gethsemane.

Psychologically, the sacred space in question may be said to represent the preconscious mind, the center of the world for the individual, and the place where the ego resides and in which it achieves revelation or awakening to Self. It is also the place that can be threatened by outside forces such as those represented in the Abrahamic tradition by the Devil, who, in a sense, shares the garden – the psyche – with the individual.

## Gayatri

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

Gayatri is one of the most ancient of Hindu goddesses, known to have been worshipped as “the Mother of the Vedas.” She is extremely powerful and is depicted with five heads (for the five elements of creation: earth, water, fire, air, and ether) and ten arms. In Hinduism goddesses are important because they represent the power (*shakti*) of their male counterparts.

The mantra dedicated to *Gayatri* is said to be the most potent of all *mantras*. It is a 14-word prayer for enlightenment and is also spoken whenever a devotee is endangered. Because of its power, the *Gayatri mantra* should not be treated casually.

Psychologically, *Gayatri* and her *mantra* can be beneficial for twenty-first-century spiritual feminists both as a feminine god image and as a source for prayer and/or meditation.

## Gender Roles

Philip Browning Helsel

Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

Gender roles refer to the social roles with which a person identifies relating to their gender. As social roles, they are “shared expectations that apply to persons who occupy a certain social position or are members of a particular social category” (Eagly 2000, p. 448). Gender roles exist at the intersection between subjective experience and cultural understandings of what it means to be a man or a woman, referring to a set of conditions that are broadly consensual within a culture. As such, gender roles are “injunctive norms” which depict how persons should behave, “[producing] social disapproval and efforts to induce compliance” if they are broken (Eagly 2000, p. 449).

However, gender roles imply more than rational self-conscious participation in societal patterns. They also include “general mannerisms, deportment and demeanor; play preferences and

recreational interests; spontaneous topics of talk in unprompted conversation and casual comment; content of dreams, daydreams, and fantasies; replies to oblique inquiries and projective tests; evidence of erotic practices, and finally, the person’s own reply to direct inquiry” (Rudacille 2005, p. 105).

Gender roles have a close but not equivalent relationship to gender identity. Gender roles fluctuate between the poles of identity and action, self-identification, and the way one is defined by others. The concept of gender roles refers not strictly to whether one thinks of oneself as male or female, but the way this conviction is played out in the cultural arena, including “situational constraints” that can maintain behavior that “seems fitting” to men and women (Rudacille 2005, p. 56). These cultural patterns tend to reinforce the needs of a particular society. Societies frequently cultivate “natural” explanations of gender which can be seen to shore up certain social practices. This tendency has been called the “sexual division of labor” and has been linked to wider economic needs and interests (Chodorow 1978, p. 3).

“Natural,” or essentialist, explanations of gender tend to describe men and women as possessing fixed qualities which inevitably lead to certain kinds of behaviors. In this “sex/gender scheme. . . [people] identify sexual difference with both biological/physiological dimensions (sex), and dispositional/psychological and social characteristics (gender)” (Jones 2000, p. 27). The common epigram “anatomy is destiny” is a well-known distillation of this concept. The primary challenge to this view has come from the feminist movement in Western societies at the end of the nineteenth century and beginning again in the 1960s (Rudacille 2005, p. 43). The critique of gender has varied in degree, with some suggesting that the “raw material” of biological sex is the fundamental baseline which is then shaped by culture and circumstance. According to these theorists, the biological basis remains an “unalterable. . . given” that is fixed at a “chromosomal and genetic” level (Jones 2000, p. 35). Others suggest that the cultural construction of gender is even more thoroughgoing than this and that on an epistemological level, culture determines everything

we know about being man and woman. At this level, the self is seen as a “space through which cultural constructs move...are contested and changed” (Jones 2000, p. 37).

## Commentary

Psychoanalysis has placed a strong emphasis on the psychic impact of the memory traces of parents upon the development of the child. These memory traces are laid down through the activities of care for children and maintenance of the home, a province of activity that is adjudicated by gender roles (Bollas 1987, p. 24). The traditional oedipal story, which involves a boy’s desire for his mother and rivalry with his father, has been expanded in a variety of directions as gender roles have become more flexible, with the understanding that this earlier model depended upon the father as the breadwinner and the mother as full-time homemaker (Mitchell and Black 1995, p. 257). More recent psychoanalytic explorations of oedipal conflict and sexual orientation have suggested multiple permutations of this myth, based in part upon rapid changes in gender roles in Western societies (Chodorow 1994, p. 42). Psychogenic explorations have demonstrated the manner in which gender roles are internalized through the “production” of men and women by the kind of parenting that they receive as children (Chodorow 1978, p. 36).

The parents’ practical activities of childcare contribute directly to their child’s image of God. In Freud’s projection theory, the image of God arises out of our experience of an ongoing need for the idealized father of childhood. Freud calls God a “father substitute...a copy of the father as he is seen and experienced in childhood,” before one’s ideal image of one’s father is challenged (Freud 1923/2001, p. 46). D. W. Winnicott shifted the psychic weight from father to mother, suggesting that religious belief was created in the same environment of care that transpired between the mother and child (Winnicott 1953/2005, p. 18). Ana-Marie Rizutto agreed that attachment to one’s parents is reflected in one’s images of God but insisted that Freudian theory must leave

room for religious images to develop as one’s understanding of one’s parents changes (Rizzuto 1979, p. 43). Scholars such as Diane Jonte-Pace and Margaret Hebblethwaite have contributed to the understanding of God that derives from the experience of motherhood, in direct contrast to Freud’s emphasis on the Divine Father (Miller-McLemore 2001, p. 453, 466).

It seems that further work must be done, following feminist thought, which would take into account the impact of shifting gender roles upon the psychological health and religious beliefs of modern persons. It has been demonstrated that mothers are spending more time away from the home, with fathers increasing their active care of children, even if not enough to compensate for the absence of the mother (Lamb 2000, p. 339). If mothers are less involved in childcare and fathers somewhat more involved in both childcare and caring for the home, what might be the psychological and religious consequences for the development of children? Recent research points to the fact that children who are raised in more androgynous environments experience “increased cognitive competence, less sex-stereotyped beliefs, and a more internal locus of control” (Lamb 2000, p. 340).

As guarantors of societal order, traditional religions have frequently reinforced gender roles through appeals to the authority of tradition and scriptures. In such mythology, men have been deemed as spiritual, while women seen as carnal, with bodies that need to be managed and controlled by religious authority (Hawthorne 2007, p. 1255). Women have only begun to be allowed into leadership positions in these religions in the last half of the twentieth century (Hawthorne 2007, p. 1254). In recent decades, “smaller religious bodies with more conservative convictions about the roles of women (such as the Jehovah’s Witnesses, some Reformed churches, Anabaptists, and Mormons) [have been] marked by the greatest inequality between men and women” (Christiano 2000, p. 53). At the same time, in Mexico, religion has been an avenue for freedom from abuse and exploitation, as women have found an opportunity in religious communities to develop identities separate from their alcoholic

or abusive husbands (Fortuny Loret De Mola 2000, p. 365). Furthermore, women have frequently been involved from the inception in new religious movements and invited to take quite active roles within them (Hawthorne 2007, p. 1255).

Gender roles are changing in many societies around the world, with women experiencing more freedom and education and men more involved in activities such as childcare and the maintenance of the home. These changes lead to a sense of uncertainty, especially since gender roles reflect deep-seated beliefs about the nature of reality. It has been argued that for men and women, more gender flexibility means an increase in mental health and well-being, as well as a decrease in involvement in fundamentalist religion. At the same time, even in societies where women have increasing rights and responsibilities, they are often faced with “different expectations” than men even in the “same workplace role” (Eagly 2000, p. 448). While fathers are becoming more involved in the care of children, they still often take less responsibility for children than mothers, placing women in the difficult position of juggling responsibilities at work and home (Lamb 2000, p. 339). It is still far from clear how these changes will be adjudicated in a rapidly shifting society.

## Genesis

Ingeborg del Rosario  
Emmaus Center, Quezon City, Philippines

*The book of Genesis* is the first book of the Jewish Torah and Christian Scriptures. The word “genesis” is of Greek etymology, meaning origin

or birth, and refers to the first verse of the book: “In the beginning, when God created the heavens and the earth. . .” (Genesis 1:1). *The book of Genesis* has 50 chapters, which are generally divided into two sections: primeval history (Genesis 1–11) and the narrative cycles of Abraham, Isaac, Jacob, and Joseph (Genesis 12–50). Genesis 1–11 contains the well-known accounts of the creation story (Genesis 1–2), the fall of Adam and Eve (Genesis 3), the murder of Abel by his brother Cain (Genesis 4), the story of Noah and his ark, the great flood and the divine promise against destruction of every living creature symbolized in the rainbow (Genesis 6–9), and the confusion of languages around the building of the tower of Babel (Genesis 11).

While authorship of the *book of Genesis* was popularly attributed to Moses, biblical scholars recognize it as a redaction from four different sources or traditions. Taken as a whole or a single work of literary unity, the *book of Genesis* encompasses universal themes of creation, the existence of envy and hatred, sin, and strife, violence and evil, wholeness and brokenness, intimacy and isolation, independence and reliance, work and rest, call and response, security and sojourn, conflict and resolution, faith and doubt, hope and despair, the sacrifice of life and the promise of life restored, the destruction and fecundity of generations, and birth and death. The existence of the *book of Genesis* acknowledges the totality of universal experience, the breadth and depth of human reality. It embraces the presence of the Divine who creates and sustains, accompanies and wrestles with, is angered but yet remains constant and faithful to humanity that is formed in godly image and likeness.

The recognition of origins and beginnings in the *book of Genesis*, of creation from chaos, of evil, sin and destruction, and the divine promise of faithfulness, resonates with the deep understanding of human dynamics as shaped and rooted in early personal history and developmental origins. While some therapeutic interventions may focus on the here and now of current thoughts, feelings, and behaviors, the psychoanalytic perspective recognizes the fundamental importance and value of encountering the genesis of the individual and

attending to sources of childhood wounding and root experiences of trauma, noting how these contribute to the complexity of the dynamics of the individual’s life experience. The *book of Genesis* focuses primarily on the story of one lineage, recounting the history of first generations and their descendants. A psychodynamic orientation to treatment regards the historical dimension of self with comprehensiveness and depth, considering family of origin influences on the formation and development of the individual. It also acknowledges the reality of trans-generational and intergenerational transmission of trauma, addictions, psychological wounding, and illness. The *book of Genesis* presents the Divine Being neither absent nor distant but present, at times in the space of silence and attuned rest yet always creatively emotionally and relationally engaged in the journey of the spiritual ancestors. The *book of Genesis* also recognizes the interweaving congruence and evolution of the past, present, and future. Movement and progression in psychoanalytic treatment involves often intense and complex processes of working through transference and countertransference in the safety of the holding environment and consistency of frame of the therapeutic relationship. The space of silent yet attuned presence held by the analyst holds and receives communication that is verbal, at times nonverbal, with unsymbolized expressions often reenacted from unconscious or fragmented relational dynamics of the client’s past. Analytic listening is creative and engaged, relationally sensitive, aware of and wrestling with varied nuances and symbols, dreams, fantasy and imagery, the multiple layers of meaning and yet unformulated experiences, all the while attuned to the being of the client, past unfolding into present, and the limitless play and possibility of the self-becoming in the future.

## Genetics of Religiosity

Gilbert Todd Vance  
Department of Psychology,  
Virginia Commonwealth University,  
Roanoke, VA, USA

The field of behavior genetics is concerned with identifying genetic and environmental effects, which are sources of individual differences in behaviors and traits. While it may at first appear that religiosity would not be influenced by genes, studies have shown that genetic effects contribute to individual differences in a wide array of traits and behaviors, including social attitudes, personality, vocational interests, IQ, and religiosity. The idea that religiosity is a heritable trait is not a new one. In his 1869 book *Hereditary Genius*, Sir Francis Galton wrote that "... a pious disposition is decidedly hereditary" (Galton 1869/1978, p. 274).

Twin studies, which are one method of observing genetic and environmental effects, take advantage of the fact that monozygotic (MZ) twins share 100 % of their genes, while dizygotic (DZ) twins share on average 50 % of their segregating genes and are no more alike genetically than non-twin siblings. Therefore, differences in MZ twins provide evidence of environmental effects, whereas differences in DZ twins can result from the effects of genes or the environment. A greater similarity in MZs than DZ twins is generally seen as evidence for a genetic contribution to the observed behavior or trait. In twin studies, the variance observed in a trait can be partitioned into the latent variables' additive

genetic effects, common environmental effects, and unique environmental effects. Common environmental effects are those environmental effects that make twins more similar (e.g., a shared upbringing in the same household), while unique environmental effects make twins different from one another (e.g., an experience had by one twin but not the other).

Behavior genetic studies have shown that nearly all psychological traits, including religiosity, are moderately to substantially heritable. A small number of twin studies to date have shown that the degree of observed genetic influence on religiosity is affected by variables such as age, sex, and what aspect of religiosity is being measured. Specifically, at least one twin study has found less genetic influence on religiosity at younger ages and a larger genetic influence on the expression of religiosity in adults. Several twin studies have reported differences in the magnitude of genetic effects on religiosity in females compared to males. Unfortunately, there are not enough twin studies to make definitive conclusions about the relationships between additive genetic effects and age and sex on the expression of religiosity. The degree of genetic influence on the expression of religiosity also appears to be influenced by what specific aspect of religiosity is measured. Studies examining certain single-item measures of religiosity such as religious affiliation (i.e., whether one is Protestant, Catholic, Jewish, Muslim, etc.) have found little or no evidence for genetic effects. On the other hand, studies that have used multiple items to more broadly measure the religiosity construct have typically found evidence for genetic effects.

These findings must be viewed within the context of the limitations of twin studies. First, very large sample sizes are typically needed to detect common environmental effects, that is, the effect of those experiences that make twins similar, also called the family environment. Most twin studies are underpowered to detect the influence of the family environment. Furthermore, two twins may experience the same environmental event but respond differently to the event. This event would be represented in a twin study as

a unique environmental effect, although it was experienced by both twins in the same environment. Despite these limitations, a small number of studies to date suggest that certain aspects of religiosity are influenced by additive genetic effects.

## Gimbutas, Marija, and the Goddess

Maureen Murdock  
Pacifica Graduate Institute, Carpinteria,  
CA, USA

The work of Marija Gimbutas has been crucial to the growth of feminist spirituality, feminist religious scholarship, feminist psychology, and the liberating implications that the existence of a goddess tradition can bring to women everywhere. Whatever the reactions to Gimbutas’ theories, it is important to acknowledge the larger implications of the idea of an embodied Sacred Feminine that preceded patriarchy (Fig. 1). As Charlene Spretnak writes:

Gimbutas’ work, which was illuminated by her sensitivity to spiritual matters and to sculptures of all eras, has radical implications for the history of both Western religion and Western philosophy. In each of those fields, the early belief systems and schools are not seen to be *bridge* traditions. That is, the attention in both the Greek “mystery cults” (demeaned as pre-Christian pagan irrationalism) and the pre-Socratic philosophers to unitive dimensions of being and a cosmological wholeness was an attempt to preserve the remnants of Old European wisdom (Spretnak 1997, pp. 403–404).

Gimbutas’ work helps us entertain the hope that the oppression of patriarchy did not always exist. If a culture did exist in peace approximately 8,000 years ago, prior to the Indo-Europeans, that would certainly be a model of a mythos and psychology for the twenty-first century.

**Gimbutas, Marija, and the Goddess, Fig. 1** Owl, Fig. 300, *Language of the Goddess* illustration materials (boxes 252, 253). Marija Gimbutas collection, copyright OPUS archives and research center, Santa Barbara, CA

From her excavations in 1973 and 1974, she found temples and sculptures that began to influence her views that the sculptures represented goddesses. She and her associates discovered certain bird head sculptures in the temples and sculptures of pregnant females in the courtyards. There were neither weapons in the graves nor fortifications in the villages. From this, she concluded that this was psychologically and ethically a very different culture from that of the later Indo-Europeans: it was peaceful.

Citing evidence from her excavation of cemeteries, settlements, the historical records of the continuance of a matrilineal system, from portrayals in frescoes and from folklore and similar evidence in the Minoan culture of Crete, Gimbutas concluded that Old Europe was a matrilineal society with a female deity. “Motherhood determined the social structure and religion because religion always reflects social structure. Old Europe was a matrilineal society where the queen was on the top and her brother next to her” (Gimbutas 1990).

In *The Gods and Goddesses of Old Europe*, Gimbutas (1974) writes:

The Fertility goddess or Mother Goddess is a more complex image than most people think. She was not only the Mother Goddess who commands fertility, or the Lady of the Beasts who governs the fecundity of animals and all wild nature, or the frightening Mother Terrible, but a composite image with traits accumulated from both the pre-agricultural and agricultural eras. During the latter she became essentially a Goddess of Regeneration, i.e., a Moon Goddess, a product of a sedentary, matrilineal community, encompassing the archetypal unity and multiplicity of feminine nature. She was giver of life and all she promotes fertility, and at the same time she was the wielder of the destructive powers of nature. The feminine nature, like the moon is light as well as dark (p. 152).

The ancients knew and accepted this cycle of death and rebirth central to Goddess spirituality through their physical observation of nature and their seasonal observations of death and regeneration. For example, the Greeks celebrated this in ritual of the Eleusinian Mysteries honoring the return of Persephone each year bearing a single ear of wheat, symbolically reassuring the people that life endures beyond death. At Eleusis, Kore came in answer to the call. She rose from the dead. She appeared. In the Eleusinian Mysteries, the people participated in making the gods come alive and partaking of their gifts (Downing 2010, p. 27). At this time in the twenty-first century, we are also asking Kore, as symbol of the sacred feminine, not only to ascend from the underworld and bring us a symbol of civilization but also to be present for us in the moment of our death, to give it meaning and comfort us.

Through her archeological discoveries and deciphering of the artifacts, Gimbutas reimagined what might have been a culture that was not afraid of death, but instead honored the divine powers that oversaw death and regeneration. Death was seen as just a transition immediately followed by regeneration. Through the archeological work of Gimbutas, as well as the interpretation of the myth of the Greek Demeter and Persephone by Downing, we are drawn to the Eleusinian Mysteries to remind us that the psychology and spirituality of the sacred feminine continue through the centuries to bring back the life force.

As Marija Gimbutas has said in many interviews, it was her “fate to do this work” because of her family background and the pagan heritage of her country (Gimbutas 1990). She grew up in Lithuania, the last country in Europe to be Christianized – it did not take root until the sixteenth century – and as a child she experienced respect for Mother Earth. Each day she saw people kiss the earth in the morning and say prayers in the evening. She experienced the sacredness of wells, streams, water animals, and trees, all of which were considered to have healing power. Hers was an embodied psychology and spirituality from her earliest memory.

Gimbutas was raised in an atmosphere in which family spirits and the spirits that infused folk art were respected. Her family collected thousands of folk songs and examples of folk art. She studied Indo-Europeans at Harvard University as a visiting scholar and wrote a book on the Bronze Age, but the militaristic patriarchal psychology of the era disturbed her. “I devoted at least 10 years of my career studying Indo-European war gods and weapons and that was too much for me” (Gimbutas 1990). Her life changed when she moved to California and taught at UCLA. This was the beginning of her exploration of the culture that preceded the Indo-Europeans.

Between 1968 and 1980, Gimbutas directed four excavations of Neolithic cultures (7000 BCE–2000 BCE) in southeast Europe in Sitagroi, Greek Macedonia; Anza, Macedonia; Thessaly, Greece; and Manfredonia, Italy. She found thousands of Neolithic artifacts throughout eastern Europe that spoke of an ancient aesthetic different from the material culture of the Bronze Age. Gimbutas determined a “culture existed that was opposite of all that was known to be Indo-European and this led me to coin a new term ‘Old Europe’ in 1968” (Marler 1997, p. 15).

In 1979 Gimbutas organized the first interdisciplinary conference in Dubrovnik, Yugoslavia, to stimulate new research on the radical shift of economic, religious, and social structures that took place between the fifth and third millennia BCE. She became convinced that the art of Old Europe reflected a sophisticated psychological and religious symbolism (Marler 1997, p. 16).

She developed an interdisciplinary mode of inquiry she called “archeomythology,” a union of archeology and mythology. She stated, “They cannot be separated because this helps us reconstruct the spirituality of our ancestors” (Gimbutas 1990). She wrote, “interdisciplinary research requires the scholar to view a problem with an entirely different mental focus, which means learning to assemble the data with a goal of seeing all details at once, in situ” (Marler 1997, p. 21). Her work drew from mythology, linguistics, ethnology, folklore, comparative religion, and historical documents.

Her work on the Bronze Age was accepted by archeologists because it had nothing to do with religion or symbolism, but they did not accept her deciphering of a goddess religion because they rejected the notion that a religion could be extrapolated from the artifacts. Yet, she felt it was important to move beyond the limits of scientific materialism alone and use all possible sources to understand the ancestors (Gimbutas 1990).

In an address in 1992 at Interface in Sudbury, Massachusetts, Gimbutas said, “If you say anything about the ritual side of the culture they will say you are cracked. You cannot say anything about the spiritual side of the culture. I don’t care if I will be accepted or not accepted. I care only for the truth. What is the sense of being a scholar if you have to be afraid of some other forces?” (Gimbutas 1992).

Gimbutas’ work in both *The Language of the Goddess* and *The Civilization of the Goddess* has been criticized by archeologists because of her insistence on her interpretation of the figurines as objective evidence of the existence of a goddess religion and on her “lack of precision, and uncorroborated speculations, particularly in view of her earlier esteemed scholarly work” (Long 1996, p. 16). In a 1993 review, in *American Anthropologist*, Ruth Tringham criticized her for stating there is unequivocal evidence to support her psychological interpretation of Goddess symbology and for denying the validity of alternative interpretations. She writes:

Feminist archeological research is based on a celebration of the ambiguity of the archeological record and a plurality of its interpretation, and the subjectivity of the pre-histories that are constructed

is a part of its discourse. Gimbutas, however, has mystified the process of interpretation and has presented her own conclusions as objective fact (Tringham 1993, p. 197).

On the other hand, Tringham and her colleague, Margaret Conkey, feel that Gimbutas' work reviving goddess religions provides important new perspectives on archeological concerns and challenges the androcentric structure of archeology viewed by many of its professionals. They write:

We have come to see that our enquiry is just as much about key issues in contemporary archeological interpretation as seen through the topic of the Goddess as it is about how the Goddess movement uses archeology (Conkey and Tringham 2000).

Even though they take issue with many of Gimbutas' assertions, they find the paradigm shift to which she contributed to be valid and forceful (p. 200). Feminist archeologist Lynn Meskell questions Gimbutas' use of an archeological past – convinced that there was an egalitarian culture prior to the Indo-Europeans – to bring about social, psychological, and political change in the twentieth century. But she gives credence to Gimbutas' work as a form of “mythopoetics whereby a cultural identity is constructed or reconstructed” (Long 1996, p. 16). This is the psychological part of Gimbutas' hermeneutic – mythopoetic images are highly psychological – as Jung and Jungians have shown repeatedly.

If we believe, as Jung did, that the whole history of the human race is in some ways always alive in the psyche, we can reclaim images of the Sacred Feminine. The Sacred Feminine, or the Mother Goddess, is an eternal archetype in the human psyche. She has shown herself to us from the earliest times of our civilization in cave drawings and primitive sculpture, in the great mythologies, and she appears in many guises in our present cultures. She is part of the very fabric of our being. Whether or not an individual grew up in a tradition that honored an image of the sacred feminine, she is part of the collective unconscious accessible to everyone. Jung assured us that nothing which is part of the psyche is ever lost.

It took Gimbutas 30 years of research and deciphering to understand the symbology in

excavated places; her background in myth and folklore helped her see the symbology in the sites and figurines she excavated. In *From the Realm of the Ancestors*, Joan Marler (1997) writes, “Joseph Campbell said that if her work had been available earlier he would have written things differently. He neglected goddesses because there was no way to find out more about them” (p. 19).

Gimbutas knew that to reconstruct the social structure of a culture, researchers had to look at cemeteries and study burial rituals to discern how people were buried and with what kind of gifts. In the tombs she excavated there was no hierarchy of males over females; the burial sites showed an equalitarian society. From this, she extrapolated that men and women lived in harmony with each other without one having power over the other. She revolutionized the field by demonstrating that Neolithic settlements of Europe prior to Indo-European influence (around 4400 BCE in eastern Europe) were radically different than later societies. It is Charlene Spretnak's understanding that this is now accepted by most archeologists (Spretnak 1997, pp. 401, 2011).

Villages from 7000 BCE had workshops and a temple proper. In the temple the people prepared pottery for rituals. Gimbutas found in many female graves “cult objects filled with red ochre buried next to houses. These houses were the core houses of the village where the main family lived” (Gimbutas 1992). She found “middle aged women and girls richly equipped with beads, figurines and a model of the temple.” She speculated that these girls might have been in the line of priestess showing a matrilineal system. In contrast, no cult objects were found in men's graves. Men's graves were “equipped with craft tools, axes, hoes, trade objects, obsidian for knives, some stone or flint. Clearly men were in trade, which was very important” (Gimbutas 1992). This gender burial difference must have shown the esteem and honor afforded to the feminine.

Finding thousands of female figurines, female-honoring ritual artifacts, and temple models, Gimbutas concluded that women were highly respected in the cultures of Old Europe. The feminine was revered psychologically and spiritually

as the giver and nurturer of life. Gimbutas speculated that the female figurines were used in ritual: some standing on altars waiting for a ritual to begin and others found around bread ovens. “In northern Greece in Thessaly they had rituals before the baking of bread and during the baking of bread. Women made small figurines at the same time they were making the bread; bread was sacred” (Gimbutas 1992).

Gimbutas found 100 pregnant goddess figures in Achilleion in an excavated area little more than 100 m<sup>2</sup> and more than 200 clay figures in northern Greece. “This site revealed that certain types of female figurines (bird goddess, snake goddess, nurse) were temple or house gods. Others, such as the pregnant goddess, were worshipped in the courtyard at specially prepared platforms with offering pits near bread ovens. These pits were for sacrifices and we found organic remains of plants or grains that were sacrificed. From the 200 figurines found at Achilleion, only two fragmented ones represented a male god, seated on a stool with hands on his knees” (Tringham 1993, p. 22). Gimbutas found a ratio of 98 % female goddess figurines to male gods.

Gimbutas did not use the term “matriarchy” but rather “matrilineality” because unlike women in patriarchy, men were not suppressed. Men were very important in society in trade, architecture, shipbuilding, and crafts. There was no marriage; the mother had a consort but no husband. From the Sumerian and Egyptian myths that were subsequent to the society of Old Europe, we know that this practice existed in many cultures. Until men discovered their biological contribution to the fertilization of new life, women were free to propagate, and their ability to give birth was viewed as sacred.

Gimbutas became convinced that the art of Old Europe reflected a sophisticated religious symbolism, and she categorized the energies of the goddess in terms of life-giving, death-taking, and regeneration. She identified life-giving goddesses such as the bird goddess, snake goddess, and the bull; death-taking goddesses such as the vulture and owl and symbols such as the tomb/womb; and goddesses of transformation such as the egg and the frog. Gimbutas’ find of the

thousands of archaic goddess figurines calls for an important hermeneutic shift, because it has serious psychological implications for the interpretations of archaic history and human nature: women have had esteemed roles in history that refute long-distorted patriarchal arguments against female equality with men.

## Girard, René

Curtis Gruenler

Department of English, Hope College, Holland, MI, USA

The wide-ranging work of René Girard (1923–) has led to a theory of culture, often called the mimetic theory, that understands the development of religion through the implications of two ideas about human psychology and behavior: *mimetic desire* and *the scapegoat mechanism*. The two are related through the story they tell about the origins of violence and its significance in the formation of society, including religious institutions.

### Mimetic Theory

Girard holds that human desire is fundamentally imitative, or, to use the term he prefers because it suggests the lack of conscious intention to imitate, mimetic. Many, he notes, have treated the importance of imitation in human development, but few

have included desire as imitative, and modern individualism, which links desire closely to self-hood, is especially allergic to this claim. Yet beyond the most physiological appetites, and even shaping the way one chooses to satisfy those, desire is formed through imitating the desire of others. Advertisers know that showing an attractive model of desire for an object is more powerful than showing the object itself. In a world of finitude and scarcity, however, mimetic desire leads to conflict and rivalry. The fundamental means for managing the violence that ever threatens to erupt is the scapegoat mechanism.

Girard imagines a heuristic primal scene in which mimetic desire pits all the members of a community against each other. Suddenly, triggered by an essentially random mark that differentiates one member of the community from the rest, the crowd's violent energy is mimetically directed against that one, who is expelled and collectively murdered, as by stoning. In the peaceful but temporary unanimity that results, the community misremembers the victim as a savior who delivered the community from a mysterious crisis, thus concealing memory of the murder beneath the seeds of mythology. Sacrificial rituals emerge in order to repeat the scapegoat mechanism in more controlled ways in order to keep violence in channels. Prohibitions are made in order to deflect desire from the objects most prone to rivalry. Thus, management of mimetic violence through scapegoating accounts for the most basic elements of religion. Legal systems, judicial rituals, and the entire universe of symbolic representation can also be seen to a large extent as outgrowths of concealed and forgotten scapegoating.

### Career and Works

After receiving a degree in medieval history and paleography from the Ecole des Chartes, Girard earned a Ph.D. in history at Indiana University in Bloomington in 1950. It was through teaching French literature, however, that he discovered *mimetic desire*. In his first book, *Mensonge romantique et vérité romanesque* (Girard 1961/1965), he argues that the great novels of

Cervantes, Stendhal, Flaubert, Dostoevsky, and Proust portray the many permutations that mimetic or mediated desire leads to in triangular relationships of desiring subject, model of desire, and desired object. He makes a basic distinction according to the relative status of subject and model. If they are of different status or operate in different domains, he calls their relationship *external mediation*. In this case, imitation does not lead to conflict because the model and object are out of the subject's reach and the model is an insurmountable obstacle: Don Quixote can imitate Amadis of Gaul without conflict because Amadis is fictional, and Sancho Panza's imitation of Quixote is also external because they are of different social classes. When subject and model are similar in status, Girard calls their mimetic relationship *internal mediation*. Then imitation leads to conflict and rivalry (Girard 1965, pp. 1–10). Subject and model tend to become doubles of each other: "Eventually, the subject will become the model of his model, just as the imitator will become the imitator of his imitator. One is always moving towards more symmetry, and thus always toward more conflict, for symmetry cannot but produce *doubles*, as I call them at this moment of intense rivalry" (Girard 2007, p. 57). Intense rivalry becomes contagious as others find themselves attracted to the same object of desire. Many literary works merely portray what Girard calls the romantic lie that desires are spontaneous, but the great literary works reflect a conversion on the part of their authors to the insight that desire is mimetic. Girard has returned throughout his career to literary works that he argues disclose the mimetic theory, above all the works of Shakespeare (Girard 1991).

The implications of the mimetic theory for religion begin to emerge in *Violence and the Sacred* (Girard 1977). There Girard looks at evidence of sacrificial ritual and myth and explains their origin through a crisis of mimetic violence resolved through *the scapegoat mechanism*. He finds mythological narratives to have the primary function of both concealing and justifying violence toward scapegoats. At the same time, he explores Greek tragedy as a partial bringing to light of the reality of human violence behind

the forms of religion. The myth of Oedipus, for instance, conceals the scapegoating of a victim marked as different by his limp behind a story of persecution justified by the guilt of patricide and incest. The Oedipus tragedies of Sophocles, while maintaining the protagonist's guilt, also begin to make visible the structural symmetries between the communal crises which demand a scapegoat and the familial crises of which Oedipus is accused. Similarly, Euripides' *The Bacchae* shows Dionysus to be the symbol of successful collective violence, but dramatizes this myth coming under suspicion, such that violence, when it is no longer accepted as transcendent, breaks out of its channels and threatens to engulf the community (Girard 1977, pp. 68–142).

Girard's interpretation of Oedipus leads him also to a reappropriation of some of Freud's theories as specific instances of more general patterns. The Oedipus complex is not unique but rather a basic example of mimetic rivalry, and patricide is an instance of scapegoating (Girard 1977, pp. 169–192, 208–209).

In his pivotal *Things Hidden Since the Foundation of the World* (Girard 1987a), made more accessible by its interview format, Girard summarizes and extends his previous work into a full theory of human origins, including religion, before offering a reading of the Judeo-Christian scriptures as an unveiling of the mimetic mechanisms behind mythology. While biblical stories share much in common with other myths, they are decisively distinguished by telling these stories from the perspective of innocent victims rather than their persecutors. Cain and Abel is a typical story of founding violence, like that of Romulus and Remus, yet the victim's blood, rather than being condemned as guilty or concealed by divinization, cries out from the ground (Girard 1987a, pp. 144–149). The story of Joseph, while it has many similarities to that of Oedipus, shows him to be the innocent victim of his brothers and again of Potiphar's wife, and his story ends with staging a potential scapegoating of Benjamin in order instead to reconcile with his brothers (Girard 1987a, pp. 149–154, 2004, pp. 107–113). The Ten Commandments, which

resemble other religious prohibitions, end with one that forbids desire for a neighbor's possessions and thus implies the mimetic origins of the violence proscribed in those that come before (Girard 2001, pp. 7–18). Above all, in what he calls this anthropological rather than theological interpretation of the Bible, the Gospels provide fullest possible exposure of the dynamics of mimetic desire and scapegoating. Yet, he argues, historical Christianity has often misunderstood this part of its revelation, in particular by reading the atonement as a sacrifice needed to appease the wrath of God (Girard 1987a, pp. 158–262).

Much of Girard's later work has added to his anthropological interpretation of the Bible in contrast to myth. He reads the book of Job as primarily a rehabilitation of a potential scapegoat, yet framed by a mythologizing preface about Satan (Girard 1987b). In *I See Satan Fall Like Lightning*, he interprets Christ's discussions of Satan and miracles of casting out demons as symbolic of intense mimetic rivalry and victimage and explicates the closely related language of scandal or stumbling block as identifying how a model of desire becomes an obstacle and a focus of both fascination and hatred (Girard 2001, pp. 32–46). In Girard's reading of the story of the woman caught in adultery (John 8), to take another example, Jesus writes in the dust in order to avoid the eye contact that would allow her accusers to project onto him a mirror of their own aggression, brings to recognition the problem of the first stone that could become the model of those that would mimetically follow, and begins instead a contagion of nonviolence (Girard 2001, pp. 54–58). In *The Scapegoat*, Girard introduces the idea of *stereotypes of persecution* used to justify collective violence, such as that against the Jews in the late Middle Ages, which he argues are transmitted by myths and provide a key to demystifying them under the guidance of the biblical revelation (Girard 1986). In *Sacrifice*, he finds traces of an unveiling of the mimetic origins of sacrificial ritual also in the Hindu Vedas (Girard 2011).

After teaching at various universities in the United States, Girard finished his career at Stanford University, where he retired in 1995.

He was elected to the French Academy, the highest honor for French intellectuals, in 2005.

## Reception and Influence

While Girard's reception among biblical scholars and theologians has been controversial, it is perhaps here that he has gained the most influence, at least in the English-speaking world. A practicing Roman Catholic, Girard has refrained from writing as a theologian and left open questions about the degree to which his anthropological interpretations of the Bible are compatible with theological interpretations (Kirwan 2009). He is acknowledged as a source for much recent work on atonement theology in particular (e.g., Heim 2006). The most prolific and widely read theologian working under Girard's direct influence is James Alison (<http://www.jamesalison.co.uk/>).

While Girard's work depends primarily on the interpretation of texts, he has invited collaboration with empirical science and claims scientific reliability for his theory. Jean-Michel Oughourlian, one of his interlocutors in *Things Hidden*, has extended the mimetic theory to major issues in psychotherapy (Oughourlian 1991) and applied it to marital counseling by way of a mimetic reading of the opening chapters of Genesis (Oughourlian 2010). The discovery of mirror neurons, which establishes a physiological basis for mimetic desire, has stimulated attempts to combine mimetic theory with the results of psychological and sociological studies of imitation (Garrels 2011).

An international organization for those interested in pursuing the implications of his work both in academia and beyond, the Colloquium on Violence and Religion, was founded in 1990, and a foundation dedicated to furthering the mimetic theory, *Imitatio*, in 2007.

## Glossolalia

Kenneth L. Nolen

Salinas Valley Memorial Healthcare System,  
Salinas, CA, USA

Glossolalia is derived from two New Testament Greek words: *glossai* meaning “tongues” or “languages” and *lalien*, “to speak.” Glossolalia or speaking in tongues has most often been identified with Pentecostal and Charismatic faith traditions. Glossolalia is usually but not exclusively a religious phenomenon. Glossolalia consists of words and utterances made by an individual that resembles a language unknown to the person speaking. Individuals practice glossolalia in private or public worship settings in which the speaker may also be in an excited psychological state or may enter into a blissful and peaceful meditative or prayerlike stance. Groups within Pentecostal and Charismatic movements agree that glossolalia is a manifestation or gift of the Holy Spirit, but disagree as to whether or not it is the certifying initial evidence of baptism in the Holy Spirit.

Pentecostals and Charismatics believe that through the influence and direction of the Holy Spirit, they are speaking a spontaneous and unpremeditated heavenly language praising God or giving a prophetic word. They teach that glossolalia or speaking in tongues is a distinctive gift as a result of the baptism in the Holy Spirit. What they do not agreed upon is whether glossolalia is the initial evidence proving baptism in the Holy Spirit or if it is a distinctive and desirable gift but that other manifestations may indicate that a person has been baptized in the Holy Spirit.

Glossolalia and the doctrine of the baptism in the Holy Spirit are based on events occurring on Pentecost as recorded in Acts 2:1–4. This event was predicted by Jesus to the assembled men and women in the Upper Room (Luke 24:49) and again just before he ascended into heaven (Acts 1:4–5 and Acts 1:8). When the day of Pentecost came, the disciples were meeting together when the foretold event occurred. The author of Acts states that “Suddenly a sound like the blowing of

a violent wind came from heaven and filled the whole house where they were sitting. They saw what seemed to be tongues of fire that separated and came to rest on each of them. All of them were filled with the Holy Spirit and began to speak in other tongues as the Spirit enabled them.” (Acts 2:2–4).

Glossolalia and the charismata, spiritual gifts, of the Holy Spirit were paramount in the birth and growth of the fledgling church during the first and second centuries. By the time of Origen in the third century and Augustine in the late fourth and fifth, it is clear that church leaders considered the charismata as attributes only for the early church. Augustine established the belief held by many today that the charismata, including glossolalia, ended with the deaths of the original apostles.

Notwithstanding Augustine’s belief, there is evidence of the continuation of glossolalia and the charismata of the Holy Spirit throughout the more than 2000 years of Christian Church history. However, the start of the modern Pentecostal movement is generally credited to Charles Fox Parham and the students of Bethel Bible College in Topeka, Kansas, in the early 1900s. From Topeka across the United States including the Azusa Street revival held by William Seymour, a new Pentecostal revival had begun.

The most significant tenet of faith derived from the revival at Topeka and reaffirmed at Azusa was the verbalization that glossolalia or speaking in tongues was the biblical initial evidence of Holy Spirit baptism. This monumental doctrine offered an objective criterion for the seeker of the baptism in the Holy Spirit and others to determine whether that event had occurred or not. This doctrine shaped the modern Pentecostal movement as it spread across denominational lines, establishing new denominations and nondenominational faith groups until it is now the largest and fastest growing Christian religious movement worldwide.

## Commentary

Glossolalia is not limited to Christianity or to religion. Ecstatic utterances similar to those used in the

first century church at Corinth were also found at the oracle of Delphi, a shrine of the Greek god Apollo. Some consider the chants of voodoo witch doctors, African animists, and the Tibetan Buddhist monks; the prayers of Hindu holy men; and the basic primeval sounds produced by others in their religious setting as glossolalia. Many of these worshipers make sounds and utterances that approximate purported languages found in the glossolalia of Pentecostal and Charismatic worship services. The difference is source and content. Pentecostals and Charismatics believe that any glossolalia not originating from the Holy Spirit and not worshiping God and Jesus is a demonic counterfeit.

Glossolalia can occur in some known psychiatric conditions such as schizophrenia and manic-depressive psychosis or as the consequence of neurological disorders. Earlier psychological studies viewed glossolalia as a by-product of an unhealthy mind or a personality disorder. Some researchers viewed glossolalia as hysteria, mass hypnosis, regression, an altered state of consciousness, or a learned behavior. Recent psychological studies have successfully challenged these views and have shown that glossolalia is a legitimate religious activity and not psychopathological. Generally, Pentecostals who speak in tongues have a healthy and normal personality, and speaking in tongues may be conducive to good physical as well as mental health. Some practitioners claim that glossolalia may relieve psychopathology. However, a major study of religious glossolalia concluded that there is no consistent evidence supporting curative effects.

Linguists in recent years have made studies of glossolalia with some claiming that Pentecostal glossolalias are languages that can be understood by anyone who knows the language. Other linguists maintain that the sounds and utterances of glossolalia are actually unrelated syllables of the speakers’ own known language and are not a true language. Early Pentecostals believed that glossolalia was given to the church for the purpose of world evangelism. Many of them left for foreign mission fields fully expecting the Holy Spirit supernaturally to give them the language of the native peoples. This initial

expectation and the resulting experience was a bitter disappointment to aspiring missionaries who did not want to invest years in language study. Most Pentecostals have come to the realization that it is not God's divine purpose to bestow languages for missionary work and have had to reevaluate the biblical understanding of glossolalia. Glossolalia is not a human language and cannot be interpreted or studied as a human language. Glossolalia is a language of faith. The person speaking in tongues is speaking in an unknown language from the soul or spirit directly to God.

## Gnosticism

Marta Green  
New York, NY, USA

### Origin of Gnosticism

The word “Gnosticism” derives from the word *gnosis*, the Greek word for knowledge. Gnosticism has its roots in pre-Christian Jewish and Hellenistic pagan thought that emerged around the Mediterranean in the first centuries CE. Christian Gnosticism is based on the belief in secret knowledge as a means to salvation, not the death and resurrection of Jesus. This belief made Christian Gnostics heretical in the eyes of the early church.

When the Gnostics spoke of knowledge, it was specifically the knowledge of God to which they were referring. They refer not to an objective knowledge of God, but a profoundly subjective knowledge in which the knower is radically transformed both by God and by the very experience of knowing. German philosopher Hans Jonas (1903–1993) wrote one of the first texts on Gnosticism, *The Gnostic Religion* (1958), written before he had access to the Nag Hammadi scrolls. He writes:

“Knowledge” is not just theoretical information about certain things, but is itself, a modification of the human condition, charged with performing a function in the bringing about of salvation. . . the ultimate “object” of gnosis is God: its event in the soul transforms the knower himself by making him a partaker in the divine existence. Thus in the more radical systems like Valentinian the “knowledge” is not only an instrument of salvation but itself the very form in which is the goal of salvation, i.e., ultimate perfection, is possessed (Jonas 2001, p. 35).

## Theology of Gnosticism

The main theological tenet of Gnostic thought is the radical separation of the all-good, all-light transcendent God from the dark, evil world. The transcendent God did not create the world, nor intervene in it. The cosmos was instead made and governed by rulers or Archons who ruled humans, body and soul, entrapping them in natural passions so that they would never escape their power by returning to the Transcendent God. Archons were often named by the Hebrew names for God: Iao, Sabaoth, Adonai, Elohim, El Shaddai. The name of their leader was the Demiurge, who was “often painted in the distorted features of the Old Testament God.” The name for the tyrannical world-rule is *heimarmene* (Jonas 2001, pp. 44–45).

Such a theology could not help but lead to a radical dualism. Though the Archons ruled humans, body and soul, making them unconscious of their true nature, there was the chance that humans could be enlivened through a *pneuma* or spark from the Transcendent God. The spark could not leave the Transcendent God directly because this God does not intervene in human life, but the Gnostics believed there was a messenger able to leave the Transcendent and plant a spark in the human soul. This is a Being of knowledge and light, in existence even before the beginning of creation that is able to enter the world as a messenger, outwit the Archons, and bring knowledge to slumbering humanity. We see references to this concept in the personification of “Sophia” (Proverbs 3:13–20) in the Hebrew Scriptures, the hymn of “The Word” in the prolog to the Gospel of John (John 1:1–18), and, of course, in the person of Jesus of Nazareth. When humanity receives this knowledge, then they are able at death to escape the powers of the Archons and to rise to the Transcendent God (Jonas 2001, p. 44).

As Gnosticism was a theology of emphasizing how the evil gods governing this world separate humans from their true home with the Transcendent God, much of Gnostic literature was concerned with the question of how humans got separated from the Transcendent God in the first place. One of the best-known pieces of Gnostic

literature is the *Hymn of the Pearl* which describes the journey of the soul as a royal child’s journey from heaven to retrieve a pearl in the bottom of the sea. The pearl is round and thus whole, luminous and created by layering over an irritant, thus the perfect symbol of the self. When the child retrieves the pearl, he returns to his true home in the sky where he is lauded and given his rightful place.

## The Gospel of Thomas

For centuries Gnostic literature was known mostly through early Christian polemics against it, but in 1945, 12 jars containing scrolls were found in a cave in Egypt. These texts have come to be called the *Nag Hammadi Library*, written about 350–400 CE and probably hidden in the cave at a time of persecution. The library contains a number of theological texts, alternative gospels, and poetry such as “Thunder Perfect Mind.” The best-known writing from the Library is the Gospel of Thomas, a gospel purportedly written by Jesus’ twin brother. There is some debate if this is actually a Gnostic text, because it contains no cosmology, which dominates many Gnostic writing, but the Gospel of Thomas does proclaim salvation by knowledge and never mentions the passion and death of Jesus. The gospel includes much material found in the synoptic gospels, plus additional material, often about knowledge. For example: #5 “Jesus said, Know what is in front of your face, and what is hidden from you will be disclosed to you. For there is nothing hidden that will not be revealed.” Probably the best-known passage from the gospel: #70 “Jesus said, ‘If you bring forth what is within you, what you have will save you. If you do not have what is within you, what you do not have within you [will] kill you’” (Robinson 1990).

## Gnosticism and Psychotherapy

Gnosticism is no longer an active religion, but the search for the secret knowledge that will transform informs studies in philosophy, theology,

and psychology. Gnosticism holds in common with psychotherapy the belief that meaning is internal, that words of themselves can alter the human condition, and that secret knowledge, be it spiritual or psychoanalytic, transforms. Both Gnosticism and psychotherapy undertake the inner journey to find the self.

## Gnosticism and Psychoanalysis

Matthew Dillon  
 Religious Studies: Gnosticism, Esotericism,  
 Mysticism, Rice University, Houston, TX, USA

## Introduction

Gnosticism and psychoanalysis, more so than many within this Encyclopedia, requires a multifarious entry. Attention must be given to

the ancient sources of modern terminology, the rise of psychoanalytic – particularly Jungian – interpretations of Gnostic texts by psychoanalysts, the adoption of psychological approaches by scholars of Gnosticism themselves, and the blending of psychoanalytic approaches to gnosis and Gnostic religion in contemporary forms of Gnosticism itself.

## Gnosis, Gnostikoi, and Gnosticism

In ancient Greek, *gnosis* referred to a form of knowing akin to a personal acquaintance or relationship in contradistinction to the more common term for knowledge of facts, *episteme* (Filoramo 1993; Liddell and Scott 1889; Pearson 2007). Gnosis, and its opposition to *pistis*, faith, was a dominant theme in the religious discourses of the first centuries CE, with *gnosis* of divine secrets seen as a possession of those with special religious knowledge – the Gnostics, or *gnostikoi* in the Greek. These *gnostikoi* claimed that the revelation of gnosis was a personally transformative experience, most often through the transcendence of materiality (*hyle*) and the soul (*psyche*) to the realm of pure spirit (*pneuma*) (Culianu 1983). As such, adoption of doctrines of gnosis within the psychological realm carries a significant linguistic and conceptual disconnect despite the notable resonances between soteriology and therapeutic healing.

Although no ancient linguistic counterparts exist for the neologism Gnosticism, a term first used by Henry More in the context of interdenominational polemics in the seventeenth century, at the Congress on the Origins of Gnosticism Messina in 1966, the term was adopted to represent a set of movements within the Ancient Near East in the second and third centuries CE that claimed access to saving gnosis (King 2003; Rudolph 1977). This umbrella term now refers primarily to movements such as the Naassenes, Ophites, Simonians, Valentinians, Sethians, Carpocratians, Manichaeans, and Mandaeans, as well as singular figures such as Basilides of Alexandria or Simon Magus. Both the Manichaeans, who eventually dispersed as far as China and survived through

the seventeenth century, and the Mandaeans, who still exist today in both Iraq and diaspora factions in the United States, remained in existence long after Late Antiquity. Moreover, a number of Gnostic churches have arisen in the last two centuries that claim an unbroken succession going back to these original Gnostics or a doctrine of saving gnosis akin to them (Hoeller 2002; Puma 2011; Smith 1995).

### Carl Jung and Gnosticism

Carl Jung is the first psychologist to conduct a significant study of the ancient Gnostic literature, and his influential interpretations have guided most later psychoanalytic and religious approaches to Gnosticism. Although there are no references to Gnostic literature in *Wandlungen und Symbole der Libido*, his first foray into a psychoanalytic interpretation of religion and mythology published by 1912, he did begin to carefully read the Gnostics available in Patristic sources by 1915 (Jung 2009). His paranormally inspired *Septem Sermones ad Mortuos*, or “Seven Sermons” given pseudepigraphically by Basilides of Alexandria, as well as sections of the *Liber Secundus* of the recently published *Red Book*, exhibits this initial acquaintance with these Gnostic writings. Additionally, secondary literature by early scholars of Gnosticism such as Albrecht Dieterich, Charles King, and G. R. S. Meade was available in his personal library at this time (Jung 2009; Noll 1994).

It is not until significantly later in his life that Jung would conduct a formal, systematic reading of Gnostic texts. In *Aion*, specifically “Gnostic Symbols of the Self,” Jung offers an interpretation of various Gnostic writings from the Patristics, particularly the “Naassene sermon” (Jung 1951/1978). Jung interprets the immaterial Godhead as the unconscious in its primordial form, while various key symbols of the Gnostic cosmology – Christ, the Son, Primordial Man, Anthropos, and God – all represent his psychological doctrine of the Self. Conversely, the Demiurge, as well as the matter which he creates and presides over, comes to represent the creation

of the ego followed by the latter’s ignorance of the collective unconscious. The common appearance of the higher God to the Demiurge, then, comes to represent the call of the ego to reengagement with the unconscious contents in order to form the Self (Jung 1951/1978). Elsewhere, Gnostic tales of the Godhead’s retrieval of the divine sparks in matter are read as the ego’s engagement with the collective unconscious towards individuation (Jung 1955, 1968). Jung also read the exile of the spirit in matter as a prefiguration of the psychoanalytic doctrine of projection (Jung 1968).

Yet Jung did not think that the Gnostics of old had a doctrine of the unconscious or archetypes as they exist in his psychology, but rather argued that these writings projected the individuation process in terms of a drama of redemption as enacted with reified metaphysical concepts (Jung 1971). As such, Jung supposed that these Gnostics had practiced something similar to his own practice of active imagination that had furnished the visionary narratives he captured in *The Red Book* (Jung 1968, 2009). Much as he did with alchemy, Jung approached the Gnostic writings as a valuable comparative material in proving and amplifying his doctrine of the collective unconscious (Jung 1951/1978, 1963b).

### Psychologists Interpreting Gnostic Texts

Most psychological approaches to Gnostic texts have followed the Jungian hermeneutic outlined above. After the translation and publication of the Nag Hammadi Library, major figures in the Jungian community such as Marie-Louise von Franz, Murray Stein, and June Singer each published such interpretations of texts Jung would not have had access to, such as the *Apocryphon of John*. Singer’s work expanded the Jungian hermeneutic in offering feminist and postmodern psychoanalytic readings of *The Exegesis on the Soul* and *The Gospel of Philip*, although her works were generally written less for academic than popular audiences (Singer 1990, 1992).

Robert Segal has pointed to the shortcomings of this hermeneutic in approaching Gnostic texts.

Segal has specifically questioned how the equation of individuation and Gnostic soteriology can be accurate when the primary motivation behind many of these myths is to disengage from materiality and return to the Pleroma. Read in Jungian terms, this regression of the ego to the unconscious would be seen as inflation. He has suggested that Jung's misreading of Gnostic texts could perhaps be attributable to Jung's tendency to read these texts as related both historically and motivationally to alchemical texts, where readings suggestive of unconscious and conscious integration have better support (Segal 1992, 1995).

### Scholars of Gnosticism Using Psychological Hermeneutic

Jung's close associate Gilles Quispel was one of the foremost scholars of Gnosticism in the twentieth century. Having met at the famed Eranos conferences after Quispel sent Jung his study of the second-century Alexandrian Gnostic Valentinus, Quispel eventually enlisted Jung in 1953 to help purchase Codex I (later known as the "Jung Codex") of the Nag Hammadi Library in order to ensure that the other 12 codices would be released for serious study by the Egyptian government (Quispel 1978). Throughout his career, Quispel would write appreciatively of the perspicacity of the Jungian hermeneutic in approaching Gnostic texts, albeit with the important caveat that the reading not be seen as psychologically reductionistic (Quispel 1972). Insofar as Jungian psychology is one of the personal, transformative experiences within the psyche – whatever ontological ground that it may point to – Quispel sees it as capable of elucidating Basilidean and Valentinian gnosis, as belonging with a tradition of western gnosis that comprises much of what later fell under the umbrella of western esotericism (Quispel 1949, 1968, 1972, 1978).

Jungian readings fell out of fashion within the scholarly community by the 1980s. Since then, psychological approaches to the Gnostic texts have been performed through various appropriations of cognitive psychology. Ioan Couliano, the

Romanian historian of religions, utilized the theories of Howard Gardner as well as early theorists of artificial intelligence to support his theoretical position of historical morphodynamics. Relying heavily on Levi-Strauss's Structuralism, Couliano posited that the human mind could process an "ideal object," such as dualism, in only a limited number of ways due to our cognitive limitations, and that the interpretations that result from acceptance of a such an ideal object lead to predictable, if elaborate, systems such as Gnosticism (Culianu 1992). Gnostic mythology is then read as the result of human minds cognitively engaging Genesis 1–3 having accepted the ideal object of dualism.

More recently, scholars of Gnosticism have looked to cognitive linguistics in order to more fully explicate Gnostic myths and the world in which these figures participated. Hugo Lundhaug has approached the images of birth and rebirth in *Exegesis on the Soul* and *The Gospel of Philip* from the perspective of "cognitive poetics," essentially a reading through the twin lenses of cognitive blending and conceptual metaphor theory. April DeConick has also turned to cognitive linguistics, particularly conceptual blending and frame theory, in the creation of her Network Criticism method. Critiquing earlier models of Historical Criticism for ignoring issues of embodiment and attempting to construct linear descriptions of how sources came to be in particular texts, DeConick takes biblical and Gnostic texts as cultural productions that serve as capital within in a conversation cloud, shifting the historical emphasis from historical sources in a text to the web of interacting interpretations both within the text and of the text in the larger cloud. In practice, this method attempts to situate groups who have evaded clear understanding via Historical Criticism, such as the Naassenes and the Ophites, within a particular historical-temporal conversation (DeConick forthcoming).

### Modern Gnostics and Psychoanalysis

Contemporary Gnosticism and Jungian psychology are common bedfellows, illustrated most

clearly in the *Ecclesia Gnostica* as presided over by Bishop Stephan A. Hoeller. Born in Hungary in 1931, Hoeller fled the country during the Nazi occupation of World War II, immigrating and studying over the continent while getting his Ph. D. in Comparative Religions and training for the Catholic Priesthood. Hoeller encountered a private edition of Jung's *Septem Sermones ad Mortuos* as a young Catholic priest, an event that kindled a lifelong passion for Jungian psychology. In 1958, Hoeller became Bishop of the Pre-Nicene Gnostic Church in Los Angeles, subsequently renamed *Ecclesia Gnostica*, where he presides to the present day.

Hoeller's presentation of Gnosticism is almost identical with those of Jung himself, and several of his books, as well as lecture series, have been dedicated to explicating the Nag Hammadi texts from a Jungian perspective (Hoeller 1982, 1989, 2002). Hoeller presents Jung's doctrine of individuation as coterminous with Gnostic soteriology, with the individual ego striving to regain its authenticity from alienation through recognition of its true self – the spark – and the withdrawal of projections leading to a relationship with the collective unconscious, or Pleroma. However, Hoeller departs from the Jungian psychologists above in arguing that Jung was not denying the metaphysical potential of his psychology, but rather than he persisted in being open to the possibility that the psychology could open up into metaphysics (Hoeller 1982, 2002). Hoeller has argued that Jung is the latest “prophet” in the tradition of Gnosis, a stream flowing from historical Gnosticism through figures such as Ficino, Blake, and Helena Blavatsky (Hoeller 1982, 2002). As such, modern Gnosticism can be seen as appropriating psychology as religion in much the same way as modern New Age and Metaphysical religions (Hanegraaff 1998; Jonte-Pace and Parsons 2001).

---

## God

David M. Moss III  
Atlanta, GA, USA

The word "god" is an Anglo-Saxon term of Teutonic origin meaning "one who is greeted" as the object of religious worship. The conception named God is an analogical expression pointing directly toward incomprehensible mystery. That mystery is to be greeted as the inconceivable ultimate Being who ignites all life. God is the creative source of existence within and beyond time and space. God is self-sufficient, absolute spirit, eternally transcending, and pervading every dimension of reality.

## Philosophy

In Western philosophy there are three classical arguments for the existence of God. (1) The

Teleological Argument asserts that the universe exhibits both design and purpose. Objects, persons, and events have an aim or goal. Their relationship is fashioned by God who guides and directs them toward the fulfillment of their natural directions. That is to say, God exists as the purposive cosmic designer of all that has been, is, and will be. (2) The Cosmological Argument contends that the universe could not have come into existence by itself. There is a first cause of all existence, a cause that is uncaused. This primary cause must be God because nothing but God could exist without being caused. (3) The Ontological Argument insists that God is the most perfect being possible, and since that which is perfect but lacking existence is less than perfection that does exist, God exists. Barrels of medieval ink have saturated countless volumes on each of these arguments – many in refutation. In general, modern philosophy believes that the existence of God cannot be proven or rationally demonstrated.

## **Anthropology**

The discipline of anthropology studies religion as belief in a supernatural or nonempirical force and the action patterns related to that belief. God, as an object of religious worship, is evolutionary. Anthropology, with the support of archeology, suggests that the basic conception of God lies in the awareness of numinous which developed into primitive tribal animisms and sympathetic magic. These tribal beliefs and practices became more articulate as polytheisms developed. The Graeco-Roman pantheon is a prime illustration of the view that there are many gods affecting human history. Henotheism is a species of polytheism exemplified by ancient Judaism. It is the belief in one God in the presence of many others. The worship of such a god is monolatry.

Monotheism developed as a reaction to polytheism. For instance, classical Jewish monotheism developed out of henotheism as did its derivatives, Christianity and Islam. The foundation of Islam is a conviction that there is no God

but Allah and Muhammad is his prophet. Muhammad drew upon Jewish and Christian resources in the design of a monotheistic belief system for Arabia to spread worldwide. He differed radically from Jesus the Nazarene in that Muhammad never claimed to be God or expected that he would be resurrected by Allah. On the one hand, Islam claims Muhammad, though not divine himself, was divinely inspired more than anyone in human history. He was also the driving force of jihad (an internal effort of reform) and, most importantly, Allah's secretary for the Koran. On the other hand, Christianity claims that the God of the Jews was physically articulated in the historical Jesus whose resurrected personality or Holy Spirit became a Real Presence directing people toward the mindfulness of love, as well as the value of collective worship in the assembly called church – the metaphorical house of God. Conceptually, this monotheistic Trinity was strongly enabled by Greek philosophy which clarified "substance," or *ousia*, so that a model of three persons of the same property or nature reveals God, like expressions or manifestations of water in liquid, ice, and steam. This unity of Three-in-One and the One-in-Three is eternal and immutable. Christianity claims that Jesus' relationship with God and the Holy Spirit is a monotheism of metaphysical unity. God became a specific man who lived through and beyond death, leaving his Holy Ghost or personality to guide disciples into the mindset of God's will or kingdom.

## **Psychology**

Philosophy and anthropology are components of psychology, a science that concentrates on the mind and behavior of living beings. As a perspective and a discipline, psychology centers on the mental and behavioral effects of believing in God. In this instance, it is the conceptual reaction or belief that matters and not the reality or nonexistence of a deity. For Freud, the founder of modern psychology, belief in God could be explained via problematic

relationships with father figures. His argument rests on an illusionary model of God growing out of the Oedipus complex. Many depth psychologists disagreed with this reductionism. In general, psychiatry, psychoanalysis, and psychology now agree that God concepts develop out of a matrix of intrapsychic and interpersonal components. As a result, most social sciences approach the subject of God with less anthropomorphism than ever before. This is most evident in the growth of spirituality as a dimension of strength and comfort embraced by modern health-care services and contemporary pastoral theology.

## Theology

The current emphasis on spirituality is not a unique insight of postmodernism. In many respects it is a consequence of God being the object of intractable religious customs and symbols. When religion attempts to define God literally, faith is subordinated to reason. Anthropomorphism and idolatry are common results, as well as descriptions of God that may or may not be logical. God, in such instances, is usually portrayed as a noun who sustains mankind in the face of threats and tragedies. This mindset commonly fails to recognize God as a verb revealed in ethical mindfulness and humane behavior.

Theology, as a discipline, seeks to articulate dynamics, properties, characteristics, or attributes of God that personally involve human beings whether they know it or not. However, these divine traits are not definitive. To acknowledge God as the “creator,” “redeemer,” and “sustainer” is a descriptive interpretation but not a definition in any complete sense, for God cannot be comprehended. Yet there are characteristics of God that are absolutely central to traditional theology.

For a theist, the three essential characteristics or properties of God are (1) omnipotence or God’s infinite power to create, conserve, and destroy anything, anywhere, at any time;

(2) omniscience or the knowledge of all that is possible to know; and (3) omnipresence or being everywhere without spatial necessity. These absolute properties, along with God’s timelessness and perfect freedom, naturally raise questions around events of tragedy, illness, and death. Such queries are the focus of theodicy, a dimension of Natural Theology that attempts to justify God’s benevolence and justice in a world where misery and evil exist as constant challenges to human development and moral growth.

The fundamental component of theodicy is Providence, a belief system that confronts the tension between ideal good and the ever-present reality of evil. God, in this sense, can be recognized as evil turned against itself. Such recognition offers faith that mankind is not a natural accident in a purposeless universe. For God is to be greeted as the essential vitality of all existence – physically, psychologically, and spiritually.

## God Image

Bernard Spilka

Department of Psychology, University of  
Denver, Denver, CO, USA

To the best of our knowledge in all cultures, supernatural beliefs occupy a central and extremely important place in the lives of the overwhelming majority of people. Apparently, only scholars in Western societies have attempted to understand and study the beliefs, behaviors, and experiences of those who accept such views. A basic, apparently innate, feature of our mental apparatus is the formation of images of reference objects wherever possible. More specifically, research indicates that a probable genetic component is part of such religious systems (D'Onofrio et al. 1999). Though these do not explicitly identify God images as part of this complex, many scholars imply that they are part of such a mental framework (Ellis 2000).

Research in this area concerns two idea patterns: a descriptive set of images and certain cognitive and behavioral characteristics. Strictly speaking, God image refers to the former; the God concept is the latter. Concept also includes divine intentions and purposes. These generalizations have unclear limits. Hence, serious overlap is present. Commonly, writers indiscriminately mix the two realms. Where relatively little study has been conducted on the images, most has been directed at God concepts for over a century. Certain widely employed terms seem to share both concept and image features. For example, God as male or God as Father brings to the fore physical and psychosocial traits. These also vary by age of the respondent (Harms 1944).

Attention to the gender of God really began with the woman's movement of the 1960s and appears to have stimulated a number of ingenious researches involving female development (Randour and Bondanza 1987; the differential influence of God language on the sexes McMinn et al. 1993) and related considerations (Foster and Babcock 2001). God images have also been

related to aspects of personality such as self-esteem and locus of control (Benson and Spilka 1973; Saussy 1991). The objective assessment of God image has also been attempted via the construction of an inventory (Lawrence 1996). Again, we encounter the problem of overlap between image and concept.

Another conceptual avenue that ties image and concept together derives from Freud (1928) and his psychoanalytic successors. Even though these ideas are popular, hypotheses about parental roots have not always eventuated in God-father associations. This literature has also yielded God-mother and God-self imagery. Strong cultural influences obviously enter into and muddy this research.

A fine overview of research in the area up to 1977 is Pitts bibliography, the God concept in the child. More exacting but still inclusive of both realms is the work of Ladd et al. (1998) which deals with the God image drawings of almost 1,000 children.

Though a few projective image analyses stressing personality have been attempted, exacting, reliable treatments of God drawings are largely yet to be reported. Piedmont and Muller (2006) have, however, opened that door conceptually and methodologically. They tie God image to object-relations psychodynamic theory and God concept to cognition. Though they appear to have derived many direct God image measures, these are not discussed in relation to their indices of God concept. Still, indirectly, they claim a moderate relationship between the two. This is an area that requires further conceptual clarification.

## God Image and Therapy

Annette Peterson  
Riverside, IL, USA

The God image, rich in myth and symbolism, is a door to the unconscious, providing a wealth of material for the psychotherapist. At face value,

a client's God images reveal his or her relationship to transcendent reality and are a factor in psychological stability. By examining God images in depth, a therapist can symbolically interpret a client's religious projections as expressive of psychological needs. As a diagnostic tool, God image can be useful for therapy. Therapy can also help a client's God image by disabling a limiting God image or regulating an imbalanced God image. The consideration of God image in therapy can help mental health professionals and their clients gain valuable insight into the client's inner psychological and relational world and can lead to improved intrapsychic and interpersonal functioning.

God images are strongly influenced by early parental relationships. Therefore, they have a vast therapeutic relevance and potential. God images can be explored for insight into a client's self-image and early relational environment.

God images can have a positive or negative psychospiritual function. Psychotherapy can draw upon the strength of a beneficial relationship with God or address negative, conflicting or one-sided God images in a variety of psychotherapeutic forums. It is important to work with the God image according to the client's particular relational matrix, developmental history, and level of psychic balance and integration.

Every person has internalized images of God that undergo developmental changes over the life course based on individual, cultural, and spiritual influences. Our God images are mirrors of ourselves. Clinical studies reveal that a person's experiences of God and self are related and mutually influential (Benson and Spilka 1973; Francis et al. 2001; Greenway et al. 2003). Therefore, it makes sense to use the God image in the psychotherapeutic effort to understand and improve the self.

The God image occupies a transitional space between the internal self and the external other. In this transitional space, God is both found and made. Martin Buber's *I and Thou* (1970) recognizes the relational space between self and other as a spiritual place, where God exists in "the between" of relationships, and seems to be at once both self and other.

In *Playing and Reality* (1971), Donald W. Winnicott implied that God could be seen as a transitional object that changes with a person's needs and desires. Winnicott's theory of transitional objects has become a core component of the object relations theory of God image. Winnicott advises the therapist to "play" with the client by joining in exploration of the intermediate space between reality and fantasy. Similarly, Moshe Spero (1992) states the importance of being able to find a way to buy into a client's God image, thus preserving the therapeutic alliance and allowing God image to be a part of the treatment process and opening pathways to greater understanding of the God image and its psychic functioning.

Our relational expectations limit our experience of God and our ability to live full, balanced lives in harmony with our environment. By expanding our relational paradigms, therapy can alter God image without being an overt topic of treatment. The therapeutic relationship offers an affirming self-object function that is paramount to the success of therapy, resulting in a realignment of the personality's deep relational structure. In the course of treatment, the client's interaction with the therapist affects the client's other relationships. Due to the strong interdependence between the client's relationships with therapist, God image, and self-image, a successful treatment will improve all aspects of the client's relational matrix, including the God image, without direct focus on the God image.

Therapeutic methods that incorporate direct access and conscious exploration of God images can facilitate the process of psychospiritual insight and maturation. Interventions may seek to strengthen positive God images and improve or limit the damage done by negative God images. The current use of God image theory in psychotherapy is mostly focused on mitigating damage of negative God images, but it is also used in identifying and improving relational patterns – with others, self, and God.

God images can first be evaluated during psychotherapeutic assessment. "[C]areful exploration of the subjective description of an individual's God representation and the vicissitudes of the relationship with God may reveal

precious information about the type of psychic and interpersonal events that led to the particular characteristics attributed to God. In this sense the God representation has the potential of a projective test" (Rizzuto 1991, p. 56).

Even if the relationship with God is not a presenting problem or an easily identifiable source of distress or impairment, ambivalent or conflicting God images exact a psychic toll on the whole person. Strongly negative God images exacerbate psychological problems and inhibit recovery and therefore require clinical intervention. Healthy and helpful God images are a powerful source of psychological resilience and can be drawn upon to enhance coping and facilitate healing.

Psychotherapists can look for the source of God images in early parental relations, other significant relational experiences, religious history, and religious paradigms shared by the larger culture. God image, self-image, and world view are all developed in the context of our early relationships and continue to be mutually influential throughout the life course. The relationship between God image and the client's relational patterns can be explored in therapy for their mutual influence on a client's current relational functioning. Interpretive gains may be made "by concentrating on a person's felt bond with the sacred and conceptualizing that bond as a reflection of the inner object world and by listening through that bond for echoes of internalized affective patterns of relationship" (Jones, 1991, p. 110).

The work of therapy often brings the client's adult understanding to attend to the repressions of his or her inner wounded child. Similarly, when images of God are openly discussed, a current mature understanding can shed light on past and present relationship with the divine. Therapist and client may identify multiple or conflicting God images that cause enduring psychospiritual conflict and/or distress. Conscious beliefs and unconscious expectations of God may collide. The damaging weight of repression and its dangerous backlash can result in an underlying suffering that is not understood. This may mean that early religious images and beliefs should be unearthed, even if a client believes they are

irrelevant and no longer believes in them. Therapy can examine the implicit assumptions we have about God and facilitate greater balance and individuation.

The therapist invites the client to be curious about the psychological function and/or fallout of his or her God images. By taking a religious history and attending to religious associations, the therapist may identify a pattern of psychodynamic motives. The God image can be used in the service of regression, progression, avoidance, resistance, companionship, or as an Oedipal object (Rizzuto 1993, pp. 27–29). The God image can be a link to a sense of divine mystery or an obstacle/false idol that prevents a healthy and helpful relationship to God. Disavowed God images may indicate the existence of restrictive or implausible God images that preclude the possibility of spiritual experience. Dysfunctional God images need to be examined and deconstructed to make room for healthy God images that are relational and dynamic, balanced, functional, and relevant.

God image therapy can take place in a religious or secular therapeutic environment. There are situational advantages to each, and both seek to promote self-reflection and insight, healing and development. People often take religious problems to religious counselors because they feel more understood by someone with a similar background or belief structure. When an insider may be too close to a problem, an outside perspective can be helpful. A secular therapist with no religious predispositions may offer a client more freedom for doubt and exploration.

Spiritual counselors have the unique benefit of clients who are interested in working directly on their relationship with God. Spiritual counseling and spiritual direction focus primarily on the client's relationship with God, whereas secular therapy will examine a client's inner psychic structure and ways of relating to God, self, and others. Both techniques will affect a client's God image and self-image by altering the client's sense of place and purpose in the world, as derived from his or her relation to God.

Mary Lou Randour notes, "But not all religious and spiritual experiences are God-centered,

although I would argue that all are object relational" (Randour 1993, p. 4). Sometimes a client is faith-based or spiritual without being God-centered. In this case the client's object relations with spiritual reality or background of faith can be examined for the client's underlying existential safety net or for the conflicts or dilemmas that prevent its formation. In clinical cases where it is evident that the concept of God is a central guiding cognitive structure, God images are clearly worth examining directly. However, focusing on religion in therapy could worsen emotional crises if a client has a strongly negative God image. Alternatively, if a parental interpretation of a client's relationship with God is felt as explaining away a deeply held religious belief, the clinical relationship could be jeopardized.

The respectful consideration of God image in therapeutic assessment and treatment requires the therapist to maintain neutrality and prevent his or her own beliefs from interfering with the client's. The therapist needs to inquire into the dynamic meanings of God images and conflicting images without attempting to modify religious ideation.

Spiritual and psychological experiences are linked because they share the goal of integration, the coming together of the fragmented self. Psychological and spiritual development can occur in tandem, mutually aiding or hampering each other. In therapy, as images of self, others, and God are examined, rethought, and rearranged, it becomes difficult to ascertain whether psychological health influences perceptions of the divine or vice versa. In some cases, increased self-acceptance permits the belief that God also cares, and a new sense of self demands a new God image to go with it (Jones 1991, pp. 73–85). In other cases, new possibilities for whom or what God is can loosen the hold of a judging, rejecting God image from early childhood that restricts adult development.

## Commentary

Just like religion, the God image is neither good nor bad but depends on how it is used. It can be the source of problems or their solution.

By recognizing what is helpful and harmful about our God images, therapy can work through psychological issues from our religion, improving relationships with God, others, and ourselves.

Some may question whether religious beliefs and/or spiritual practices are within the purview of the psychotherapist and may argue that God should be left in the hands of religious leaders. However, traditional religious instruction may not foster a progressive developmental direction and can create a one-sided religious faith that results in psychological imbalance. Organized religion tends to resist a dynamic God image, preferring a stabilizing one. With its emphasis on goodness, religion can shame and vilify lesser impulses, exacerbating psychic rifts. Religion should not be an escape from the unconscious, seeking to focus on the good and repress the undesirable aspects of our psyches. At their best, religion and spirituality represent the culmination and completeness of life. Healthy God images are relational and dynamic, functional and mature, balanced and unified, and integrated and encompassing. These God images stabilize and perpetuate psychospiritual health and well-being.

A therapist's neutrality can aid a client in the exploration of his/her own beliefs, providing a therapeutic environment for rediscovering and strengthening or for questioning and reformulating the client's theological system. In any work with the God image, it is important to balance psychological attention to the God image with the spiritual reminder of God's transcendence of our understanding. Our God images are not God, but they mediate our ability to experience and relate to divine reality. "Much can be learned from our particular route to or away from God, from our projected images, as well as about the God we let reach us through our projections" (Ulanov 2001, p. 105).

## God Image in Dreams

Annette Peterson  
Riverside, IL, USA

Dream characters and images are reflections of ourselves and our images of God.

Sleep gives the brain the opportunity to process and store information from the day. It also provides the opportunity to anticipate the future and practice behavior and decision-making in a variety of contexts.

According to Freud, dreams provide wish fulfillment of impulses left over from conscious waking life. Freud wrote that dream material is based in “residues of daytime life. . .struggle for expression during the night” (Freud 1965, p. 593). These residual impulses come from what we have failed to deal with consciously, due to circumstance, our own limitations of capacity or capability, or our unconscious struggles that are rejected or suppressed in the daytime.

God images, like self-images, are ubiquitous in the form and frequency they take in dreams. The dreamer may encounter a dream character, object, or place that evokes the sublime, an experience of awe, or a sudden epiphany of peace or understanding. God may be directly called upon in dreams, with miraculous results.

Dream images of a cosmic struggle between good and evil reflect internal discord and existential fear. In nightmares, dreamers frequently report being pursued by an evil person or entity, bent on hurting or destroying the dreamer. Although the dream image may be that of an anti-God, or demonic figure, the dream content is still religious in essence, in that it seeks to come to terms with our unconscious demons and the presence of evil in the world.

In psychotherapy, dream images are examined and interpreted for symbolic significance and the thoughts and feelings they evoke. Cultural archetypes are explored for personal resonance. Scriptural parallels may be discussed. Connections are drawn to the present context in order to widen the client’s understanding and deepen the personal meaning of his or her God images. When the dream image is considered in light of the client’s present situation, client and therapist become aware of significant patterns or underlying conflicts that can now be consciously explored.

Frequently, clients report dreams in which they felt surprised by God. Some dream material did not reflect the client’s conscious God images, and they felt disturbed enough to bring the dream into

therapy. The dream image can provide the opportunity for the examination and expansion of consciously held God images, furthering the developmental maturation of the client’s God images.

## Commentary

Dreaming “changes the channel” of our particular everyday reality; therefore, dreaming expands our personal horizons and may even be practice for death and what may exist beyond this life.

## Goddess Spirituality

Mara Lynn Keller  
California Institute of Integral Studies,  
San Francisco, CA, USA

Goddess spirituality is the reverential experiencing and expressing of divine female energies within the universe. It emerged among our early human ancestors in Africa during the Paleolithic Age, and it continues to the present in societies around the world, because it meets profound needs in the psycho-spiritual life of adherents.

**Goddess Spirituality, Fig. 1** Artemis, Goddess of Ephesus, many-breasted Mother of Heaven and Earth, Mistress of Animals, wearing necklace of zodiac signs and costume of sacred animals, bees, and flowers. Votaries called her “Great, Magnificent, Queen, Commander, Guide, Advisor, Legislator, Spreader of Light, Savior, and Controller of Fate.” Ephesus Archaeological Museum, Selçuk, Turkey. Photo courtesy of Diane L. Martin (2001)

Goddess spirituality played a major role in the Neolithic Age with its agrarian revolution and emphasis on the fertility of the Earth, perceived as Great Mother, Bearer of all Life. Artemis of Ephesus is a late expression of this Goddess, here wearing a necklace of zodiac signs and costume of sacred animals, bees, and flowers. Votaries called her Great, Magnificent, Queen, Commander, Guide, Advisor, Legislator, Spreader of Light, Savior, and Controller of Fate (Fig. 1).

This kind of multi-faceted Great Goddess continued to be worshipped into the Bronze and Iron Ages, although Goddesses generally became subordinated by male-dominant societies that worshipped male Gods as supreme. Goddess spirituality has persisted in most indigenous cultures

of Africa, Europe, Asia, and the Americas. But the male-oriented monotheistic Abrahamic religions of Judaism, Christianity, and Islam have extensively suppressed Goddess spirituality in regions they came to dominate, due to superior military might and sometimes through brutal tactics such as the witch persecutions in medieval and early modern Europe, in the Christianized Americas, and in Africa.

How is it that humans can imagine, feel, and relate spiritually to a Goddess as symbol, metaphor, psycho-spiritual energy, cosmic and ontological reality? For much of human history, people believed they were created by deities and so invoked their powers and gifts through religious rites. Modern secular psychologies and philosophies have reversed the causal relationship by claiming that humans created deities – as the “projections” of human ideals (Feuerbach), “wish fulfillment” (Freud), or the “opiate of the masses” (Marx). Yet, the epidemics of violence, despair, and apathy afflicting even the young in contemporary cultures point to the emotional and spiritual need of individuals to find a spiritual and moral compass and to celebrate aspects of life that offer love, companionship, family, health, well-being, community, ecological balance, and purpose. Goddess spirituality offers these benefits through the prism of divine feminine energies, energies of the cosmos that generate female beings and the capacity to bear and nurture female and male offspring.

Goddess traditions around the world have guided persons transiting the most intensely intimate passages in the human life cycle – birth, sexual initiation, procreation, disease and death, and the prospect of rebirth. Goddess religion (like other religions) prescribes rules and regulations regarding the everyday necessities of food and nurture, survival, and healthcare. It provides answers for perennial questions about the meaning of life, our place within the cosmos, and our relationship to the Source of all being and becoming. Sacred stories and myths about Goddesses portray their interactions with humans, giving divine meaning and inspiration to key life experiences. Generally, Goddesses and their priestesses provide archetypal energies and role

models for women and girls, while Gods and priests provide archetypal energies and role models for men and boys. However, many scholars argue that evidence shows that Goddesses sometimes presided over whole cities and civilizations and were worshipped as the primary deity by men and women alike (e.g., in Anatolia, Crete, Old Europe, India, Japan, Hawaii, Brazil, and numerous North American Indian tribes) (Allen 1991; Biaggi 2005; Gimbutas 1991; Goettner-Abendroth 2009, 2012; Monaghan 1981; 2011).

Beginning in the 1970s in the United States and Europe, there rose a great popular returning toward the Sacred Feminine, mostly but not exclusively by women – in Goddess circles, neo-pagan groups, scholarly studies, and the arts – as a way to access the psycho-spiritual and political empowerment that accompanies the affirmation of the Divine as female. Mary Daly's work *Beyond God the Father* (1973) catalyzed the desire of many women in the North/West to come to terms with the male centeredness of the religions in which they had been raised. Marija Gimbutas' archaeological study of *Goddesses and Gods of Old Europe* (1974/1982) and her subsequent books provided a window into Neolithic European societies that worshipped a Goddess or Goddesses of birth and nurture, death, and regeneration as their primary deity – as immanent within the procreation of all life, a transcendent principle of the cosmos, and sometimes accompanied by a stimulating and fructifying Sacred Male God. A sharp debate continues in academia about the significance of Gimbutas's discovery of a "Goddess Civilization" in Old Europe and her groundbreaking interdisciplinary archaeomythological methodology (archaeology, linguistics, mythology, and folklore) for interpreting ancient religious symbolism (Spretnak 2011).

In 1975, 1,800 women attended the first women's spirituality conference in Boston. Ntozake Shange's 1976 Broadway play, *for colored girls who have considered suicide / when the rainbow is enuf*, dramatized women's embrace of a female God for the sake of survival and strength, with the exuberant exclamation,

"I found God in myself and I loved her fiercely!" Also in 1976, Merlin Stone gathered scattered fragments of evidence for ancient Goddess worship, *When God Was a Woman*, tracing changes in religious symbolism from matrilineal or mother-centered cultures to patriarchal father-centered cultures. Stone relied on archaeological studies such as those of James Mellaart at Çatalhöyük and Arthur Evans at Knossos, Crete; and ancient literatures such as the *Enuma Elish*, the Babylonian myth of the primordial Goddess Tiamat being defeated by the young God Marduk, and the account in *Genesis* 3 of the Hebrew Bible of Adam and Eve in the Garden of Eden, where the snake in the tree is interpreted as representing knowledge of the early Goddess-centered culture being rejected by promulgators of the new Yahweh-only religion, with the cultural shift during the Bronze Age toward patriarchy and male dominance. In 1978, Charlene Spretnak published *Lost Goddesses of Early Greece*, reconstructing the Hellenic Goddess myths from a pre-Olympian, pre-patriarchal point of view, portraying Greek Goddess archetypal qualities free from androcratic distortions.

At the conference on "The Great Goddess Re-Emerging" at the University of California at Santa Cruz in the spring of 1978, Carol P. Christ delivered the keynote address, "Why Women Need the Goddess: Phenomenological, Psychological, and Political Reflections." Christ proposed four compelling reasons why women might turn to the Goddess: the affirmation and legitimation of female power as beneficent, affirmation of the female body and its life cycles, affirmation of women's will, and affirmation of women's bonds with one another and of positive female heritage (Christ 1979).

Present-day Goddess priestesses began creating community rituals and publishing books about how to create personal and communal ceremonies that invoke the Goddesses: Z Budapest, Starhawk, Luisah Teish, and the antinuclear activist women of Greenham Common in England. In 1987 Monica Sjoo and Barbara Mor produced *Great Cosmic Mother: Rediscovering the Religion of the Earth*. Many Goddess spirituality activists and authors emphasize that the multicultural women's

spirituality movement is not an escape from political engagement with urgent social and environmental issues, as critics argue, but a way to connect with them in deeply personal and powerful ways.

Building on earlier Goddess studies by Arthur Evans, Jane Ellen Harrison, G. Rachel Levy, Martin P. Nilsson, Robert Graves, Eric Neumann, Carl Kerényi, N. N. Bhattacharyya, and others, many feminist scholars formed powerful arguments for the existence of pre-patriarchal Goddess-worshipping cultures that had been subsumed by male-dominant cultures: Riane Eisler, Patricia Monaghan, Gerda Lerner, Elinor Gadon, Paula Gunn Allen, Mara Lynn Keller, Anne Baring and Jules Cashford, Asphodel Long, Cristina Biaggi, Lucia Chiavola Birnbaum, and Max Dashu. A deep and rich history of Goddesses was being resurrected. For example, the myth and ritual of Demeter and Persephone in Greece comprised a popular mystery religion celebrating the birth, sacred marriage, death, and rebirth of all life; it is again infusing seasonal Goddess rituals with its affirmation of the mother-daughter bond and its sense of the kinship of all beings (Fig. 2).

Inspired by Goddess spirituality's embodied sense of self, nature, and cosmos, many artists created paintings, poetry, songs, novels, and films about Goddesses, such as Judith Anderson, Jennifer Berezan, Susan Seddon Boulet, Janine Canan, Meinrad Craighead, Rose Wognum Frances, Tricia Grame, Vijali Hamilton, Sue Monk Kidd, Audre Lorde, Mary Mackey, Alexis Masters, Burleigh Muten, Mayumi Oda, Donna Read, and Lydia Ruyle. Some curated Goddess art exhibits or published magazines, encyclopedias, or beautiful collections of Goddess scriptures and sacred art. Others made pilgrimages to ancient Goddess sites or devoted themselves to Goddess avatars. More and more Jewish and Christian women explored the feminine aspect of God and invoked the Feminine Divine and Sophia/Holy Wisdom.

In ancient cultures, religion and psychology were conjoined. The Greek word *psyche* means *spirit* and *soul*. The ancients conceived of Spirit as a dynamic life force or essence manifest in particular material forms, including male,

**Goddess Spirituality, Fig. 2** Demeter, Persephone, and Ploutos (Plenty) sharing the gift of grain for feeding humanity, from the Eleusinian Mysteries that celebrated the birth, sacred marriage, death, and rebirth of all life. female, and androgyne genders. In the modern era in North/West sectors of the globe, psychology has to some extent supplanted religion, addressing the emotional well-being of individuals who in many cases no longer (or never did) turn to religion for sustenance, solace, or significance. Freud's secular approach to psychology was countered by Jung's spiritual approach called archetypal psychology, which named *sacred feminine* and *sacred masculine* aspects of the human psyche and theorized that both were to be found in individual women and men – undercutting the extreme dualism of masculine vs. feminine entrenched in European and Euro-American societies. While acknowledging the valuable contributions these two fathers of psychology made to

a deeper understanding of modern human emotions and behaviors, feminist psychologists critiqued the patriarchal bias in both theorists. Others criticized the use of notions of gender altogether.

Goddess spirituality can be understood psychologically in the concepts of conscious and unconscious gestalts that result from personal experience, family interrelationships, and transpersonal constellations of behaviors as mother, father, daughter, son, spouse, lover, healer, oracle, wise elder, etc. Archetypal energies may have been repressed from conscious memory but remain encoded in psycho-spiritual patterns, having profound influences on the choices of one's day-to-day life. Many spiritual feminist psychologists, including Jean Shinoda Bolen, Kathie Carlson, Virginia Beane Rutter, and Tanya Wilkinson, build on the work of Jung, using mythic archetypes of the ancient Goddesses to assist contemporary women in developing a deeper sense of self, spirituality, and fulfillment.

Key themes debated within *Goddess theology* reflect the psychological, religious, and political diversity among Goddess-spirituality people. Is the Goddess one and/or many? Is she immanent and/or transcendent? Is she only of the female gender, bi- or multi-gendered, and/or beyond gender? Is she metaphor, symbol, and/or reality? Is she anthropomorphic (having human form), therianthrope (having animal-human form), and/or aniconic (without an image)? Is she knowable and/or mysterious and ineffable? Is she all-inclusive (encompassing good and evil, sacred, and profane) or all-good? Is Goddess spirituality political or apolitical? Many Goddess devotees hold a *both-and* epistemology that accepts (linguistic) contradictions and embraces the paradoxical nature of the Female Divine with her multiplicity of attributes and unitary Oneness. This inclusive and pluralistic understanding offers complexity and expansiveness, affirming diversity as limitless as nature itself and seeing humans embedded within the Great Mysteries of life.

The tremendous resurgence today of Goddess spirituality has grown in tandem with the worldwide women's liberation movement. Both seek to

meet the material and psychological needs of peoples and the planet to redress the over-masculinization of cultures and associated fundamentalist patriarchal religions, stresses, and devastations from overly aggressive ways of life. This is reflected in mass phenomena such as devotional festivals to Goddesses attended by millions in India or Brazil, the globally popular movie *Avatar* with its Earth Goddess-centered spirituality, and the best-selling Dan Brown novel *The Da Vinci Code* with its themes of the Christian Church's suppression of the Sacred Feminine and the Sacred Marriage, and the irrepressible yearning for their return.

Despite ongoing efforts by androcentric and thea-phobic religious traditions and sectors of academia to denigrate or deny Goddess spirituality, it continues to blossom in Goddess Studies (notably at the California Institute of Integral Studies in San Francisco), Goddess conferences (the Association for the Study of Women and Mythology), Goddess-related journals (*Goddess Theology Journal*, *OCHRE Journal of Women's Spirituality*, *Journal of Archaeomythology*), and the closely related field of Matriarchal Studies, advanced by Heidi Goettner-Abendroth and Peggy Reeves Sanday, that documents matriarchal cultures where Goddess spirituality has persisted through millennia. All this affirms the continuing presence of the Goddess in the hearts and minds of millions of adherents around the world.

## Golden Bough, The

Lee W. Bailey  
 Department of Philosophy and Religion,  
 Ithaca College, Ithaca, NY, USA

### James G. Frazer

*The Golden Bough: A Study in Magic and Religion*, written by the Scottish anthropologist and classicist James George Frazer (1854–1941) at Cambridge University, was a culminating comparative study of world religions seen through the eyes of major themes in nineteenth-century European scholarship. Macmillan published it in two volumes in 1890, in three volumes in 1900, and expanded it in the third edition into 12 volumes by 1915. Due to its wide popularity, a one-volume condensation has been published since 1922. Frazer's originality is that no one before him had ever dug up so many of the "primitive" elements of the religions of Greece, Rome, and the eastern Mediterranean. More boldly, he first compared these on a global scale with the religions of "savages." His work was part of the Enlightenment project of studying one religion not as self-evidently true, but as one of many religions uncovered since the world expanded after Columbus. From the start, *The Golden Bough* was generally a critical and popular success, yet it expressed the sunset of the confident European speculative, imperialistic view of superiority over earlier world cultures. The Greek and Roman classics, long the core of European education, were soon dethroned and world cultures were slowly admitted to the academy via anthropology.

The title "Golden Bough" is taken from the small evergreen plant mistletoe, which, when dried, turns a golden color. It seemed magical to ancients because it grows on the branches of other trees, high above the ground, green when the host tree is bare in winter. Its seeds are carried from tree to tree by birds and grow as parasites on the branches of larger trees. According to classical authors such as Pliny and Virgil, mistletoe, believed to hold divine fire sent from the gods by lightning, was carried by Aeneas to the underworld and was cut from oak trees with a golden blade by Druid priests for magical purposes (Frazer 1922, Chap. 68).

### Science and Primitives

The *Golden Bough* is a leading exponent of the naturalist, empiricist, skeptical philosophy of the Enlightenment, led in Scotland by David Hume. Its avowed purpose is to treat religion in a "scientific" way, seeing it as part of the evolutionary view of the crude, ignorant savage society over the centuries evolving into an enlightened rational Victorian culture. In a positivist fashion, Frazer reduced religion to a kind of deluded intellectual speculation, but he was often really doing psychology, as when he saw terrified fear leading even to bloody sacrifices as major motives for magic and religion (Frazer 1922, p. 111). This was unlike others, such as William Robertson Smith, who saw in religion the work of more benevolent emotions, such as love and gratitude (Smith 1889/2002). Frazer sought evidence for the emotions and motives of ancient prehistorical peoples, and his psychology was rather individualistic rather than social. In nineteenth-century fashion, Frazer assumed the heroic great-man principle of historical change. He assumed that humans seek primarily to control nature and have, throughout history, tried three major methods.

Frazer's cultural development scheme has three stages: magic, religion, and science. Each was essentially an intellectual system, the first two clumsy and superstitious and the last triumphant. But evolutionary theory dictated that each

corrected some errors and built on other surviving elements of the earlier one, notably the annual quest to assure the continuing fertility of life. The *magical* cultures, which Frazer thought were illustrated by the Australian Aborigine cultures, he proposed, evolved elsewhere into *religious* cultures, characterized by gods and goddesses. This was not enough, however, for as each system's flaws in dealing with nature and society emerged, *science* was bound to replace the earlier, outdated systems (Frazer 1922, Chap. 69).

The colonialist reports of global indigenous cultures brought back to Europe gripping accounts of practices and beliefs that challenged Western cultural assumptions and stimulated many scholars like Frazer to seek to explain these strange cultures to a fascinated audience, condescending to relegate the stranger customs to an inferior, barbaric position, a "low mental stratum" (Frazer 1922, p. 64). Frazer's Victorian goal was to explain how "primitives," desperately seeking food, health and security, terrified of death, childbirth, and destructive weather, badly misunderstood the world. The logic of religious evolution in this schema is not valid, however. The priest and ethnologist Wilhelm Schmidt (1868–1954) argued that religion was earlier in evolution than magic, and he saw in primordial high gods the seeds of monotheism (Schmidt 1926/1935). And today, amid a largely scientific culture, we see hints of "survivals" of magic in rituals such as video games, the continuation of religion in mega-churches, and new age spiritual developments. And even behind the intellectual principles of science, we can find psychological roots, such as the belief in domination over nature, that have led to the ecology crisis. As we are seeing in the effects of global warming, one-sided industrial "progress" was blindsided by the neglected environmental factors that are now biting back. Frazer's view that the purpose of these three systems is to dominate nature is flawed; while magic and science may seek this goal, religion has other purposes, such as ethics, morality, social cohesion, refining instincts, and beliefs about life after death.

Early anthropologists like Frazer called their method of comparative religion "scientific," meaning a neutral approach to religions not favoring their Christianity, and the method of

hypothesis-testing with empirical data. But, by later standards, their early efforts at applying scientific principles to religion, and its social and psychological meanings found in global societies, were sloppy. Frazer's idea of the comparative study of religion was to make wild leaps to similar practices in other cultures around the world, but without carefully examining the cultural contexts that might have shown a different interpretation. Plus, his theories were not always consistent. He waffled on the question of whether ritual precedes myth and the question whether myths are diffused from one source or spontaneously arise in many locales. But his themes were captivating, as belief in "progress" peaked before World War I's devastations.

His encyclopedic collection of "savage" practices, blended with accounts from classical literature, was pulled together in a grand theory that followed in the tradition of comparative religion. This method of comparing the religions of different cultures was as old as Herodotus' (c. 484–c. 424 BCE) *Histories*, where he compared the Egyptian and Greek religions, arguing that the Greeks had borrowed many Egyptian religious themes (Herodotus 1954, pp. 116–135). After Columbus, this method exploded as local doctrines lost their certainty, and by the nineteenth century, grand theories of comparative religion had developed, such as those of Tylor, Müller, and Mannhardt.

Edward Tylor (1832–1917) developed comparative anthropology along the lines of a theory of a cultural evolution, "animism," or the belief in soul in nature. He also assumed the idea of "survivals" of archaic practices still present in tribal cultures and the global uniformity of human nature. He explored the question of cultural diffusion versus independent origins of similar themes. He viewed myths as crude efforts at reasoning, rather than symbolic expressions, and tried to extract historical nuggets from their narratives (Tylor 1994). Frazer adopted these general themes.

Max Müller (1823–1900) virtually created the newer discipline of comparative religion, aided by his remarkable 50-volume collection of translations of *Sacred Books of the East*. He stressed

philology or a linguistic basis for comparative religion, showing how the words for common things such as numbers were very similar from India to Europe. For example, he says that word for “one” in Sanskrit is “*ekas*,” in Greek “*eis*,” and in Gothic “*ains*” (Müller 1869, Vol. 1, p. 51). He interpreted myths and religions as personifications of natural forces, especially the sun (Müller 2002). Frazer’s version of comparative religion was not linguistic, but rather focused on rituals, followed by myths, that he saw as intellectual, rather than symbolic, and euhemeristic, or revealing factual historical events, rather than psychological. Both of the latter are largely flawed assumptions.

Wilhelm Mannhart (1831–1880) was a folklorist who studied archaic tree and grain cults whose indwelling spirits (*korndämonen*) had to be annually helped in producing fertility by magical and religious practices, which was a key theme adopted by Frazer (Mannhart 1868/1978).

The general shift in the academic effort to understand world religions was away from the dogmatic, exclusivist certainties of familiar faiths and toward evolutionary theories and sociological analysis. Today, we view these theories as early, hasty generalizations of “armchair” anthropologists, rather than the careful field studies characteristic of current anthropology. Indeed, the overzealous generalizations of these Victorian theorists, while popular, stimulated twentieth-century anthropologists such as Franz Boas (1858–1942), although friendly with Frazer, to reject hasty, broad generalizations in favor of living among the people he studied and limiting his theories to the cautious boundaries of observed societies (Boas 1994). In view of such critiques, we see today that the themes explored in Frazer’s work still have some explanatory value, but not the universal implications that he proclaimed.

## Blood and Fertility

From his chair at Cambridge, Frazer mused over a riddle that had long fascinated classical scholars. The Greek geographer Strabo told of a

temple near Rome where a runaway slave who killed the former priest-king became the next priest-king. Macaulay’s poem “the Battle of Lake Regillus” tells the riddle:

From the still glassy lake that sleeps  
Beneath Aricia’s trees –  
Those trees in whose grim shadow  
The ghastly priest doth reign,  
The priest who slew the slayer,  
And shall himself be slain – (Fraser 1990, p. 33).

Frazer devoted most of his life to collecting parallels from travelers, mentally leapfrogging around the world, seeking to make sense of this nugget of mystery. His theory turned into a major popular epic that concluded the Victorian era’s bold but reckless efforts to sweep world religions into a single dustbin of superstitions that fall before the powers of science. Nevertheless, this kind of work was a beginning for the study of world religions with a neutral eye.

If you follow Rome’s Ancient Appian Way out of the Porta Sebastiano southeast out of the city for about 10 miles, passing through a dry land with ancient Roman gravestones lining the road, you will come to a hill on the left. At the village of Genzano, you can follow the road around the base of the hill and ascend to the settlement called Nemi. Here, classical scholars knew, from classic texts such as Strabo and Ovid, that this place long ago was a sanctuary of Diana. Now, a few remaining columns overlook a lake nestled in a volcano’s remains, called “Diana’s Mirror.” Beneath the surface of contemporary small farms of olive, grapes, and strawberries was once a sacred shrine where have been found numerous votive statuettes and an image of a goddess, including one with an inscription to Diana: “as blessing men and women with offspring, and granting expectant mothers an easy delivery” (Fraser 1990, p. 5).

With a flourish of imaginative rhetoric, Frazer undertook to explain the meaning of what he thought took place long ago on this site: a “barbaric” custom in the sacred precinct related to a goddess-queen, in which a priest-king, once a runaway slave, must constantly carry a sword and be on the lookout for attacks. Any man who can pluck a bunch of mistletoe high in the sacred

tree, then kill the ruling priest-king, can assume his role, but he will then be doomed to the same fate. Frazer argued that similar rituals were practiced far and wide, expressing patterns of human nature and society, sinister, sensuous, and bloody. His psychology was an empiricist, rationalist effort to reduce passionate themes to past nonsense, but ironically, the undertone was psychological: an unconscious collective fascination with these passions – killing the king, mating with the queen (Oedipal), and mingling with the natural world.

Frazer's thesis unfolds as he conjectures that the King of the Wood at Nemi, Virbius, was likely the mortal lover and king of the goddess Diana (Artemis in Greece), whose spirit was to be found in the tree he guarded. Comparing this pair to other mortal men and goddesses such as Adonis and Venus, Hippolytus and Phaedra, and Attis and the Cybele, Frazer proposes that the ritual at Nemi recapitulates the known mythic accounts of the goddess of fertility taking a lover who dies as in the annual death of planted seeds and is magically reborn in their rebirth as new vegetation. His theory is that the ritual led to myths about the annual cycles of vegetation, its winter death and rebirth in the spring that needed to be magically helped along by bloody and erotic human rites. The sacred marriage custom of priest-kings mating with priestess-goddess figures was the ritual of ensuring the fertility of the land. Diana was not known as a goddess of fertility, however. Her predecessor in Greece, Artemis, was a virgin huntress, but other more fertility-related goddesses such as the Greek Demeter and Gaia, the Babylonian Ishtar, Egyptian goddesses, notably Isis, and others that Frazer describes, he offered as testimonies to this practice as characteristic of archaic societies.

From the writings of world travelers, Frazer assiduously tried to link all this to other strange, faraway customs, such as those described by Captain James Alexander, Fifth Duke of Hamilton, an adventurous Scottish sailor who had wandered from the Cape of Good Hope to India and Japan for 35 years. In 1728, he published his *New Account of the East Indies*, where he reported kings committing suicide before their term of

rule had expired. Another king at the end of his 12-year reign would throw a jolly feast for 12 days. If any of the guests could fight their way through his thousands of guards and kill the king in his tent, they would become the new king (Fraser 1990, pp. 50–52). This apparent parallel to the Roman conundrum excited Frazer and became one of his many examples of what he claimed to be widespread practice of slaying the king and thereby grabbing his throne (Frazer 1922, Chap. 24; Hamilton 1728). Just under the surface of the supposedly rational concern lurk psychological fascinations with fear and blood, political rule, religious sacredness, and erotic fertility.

## Taboo and Totem

Frazer elaborated on the reports with the concept of taboo, the sacred or cursed thing or person, like an electric force field, for example, possessing a king that spreads from his person to whatever he touched, sending divine power that promotes the growth of life on earth (Frazer 1922, Chaps. 19–22). Taboo was a concept fascinating to nineteenth-century anthropologists that Frazer used to help unify his collection of cases of “the king must die, long live the king.” It first appeared in English in the journal of Captain Cook, who stumbled onto the exotic practice of forbidden things in the Tongatapu Islands in the South Pacific (Cook 1785, Vol. 2, pp. xi, 410). Soon “taboo” came to describe many things, found also in the Bible, that were sacred and cursed, both unclean and untouchable, strong yet vulnerable, such as kings, blood, and corpses. Taboo was expanded to explain several practices, including the biblical scapegoat (Leviticus 16), used to ritually expel threatening evils from a community.

The totem was another recently uncovered practice that fascinated Europe. In 1885, John McLennan, the Scottish author of *Patriarchal Theory*, having discovered totems “thick under the feet” in the Arabic peninsula, lectured at Cambridge. Frazer was in the audience, and he quickly integrated totemism into his theories. He saw it in various ways as this thought developed.

In his “depository theory,” he interpreted totems as containers for one’s soul that kept it safely separated from the body that might be killed. This was expanded into the chapter on the External Soul (Frazer 1922, Chaps. 66–67). He saw the mistletoe, or “golden bough,” as a totem hanging high in the oak tree above the king who was defending his rule from attack. His view of the golden mistletoe as a totem he connected to the reports of the Celtic Druid priestly ritual of cutting the plant with a golden sickle. But it is an imaginative stretch to portray the same sense of mistletoe, or any mistletoe, in an Italian shrine.

Studies of the Australian Aborigines shifted the interpretation of totemism toward the idea of a totem as an image of a clan’s founding ancestral spirit. It was used in the initiation of young men into adulthood in the outback and was part of the emphasis on exogamy, where a man could only marry outside his totem’s social group. A man might say of his totem that it is his brother, meaning his eternal soul participates in the same species as that totem animal, thus defining what he can kill. Hunters are typically forbidden to kill their totem animal, since it is a relative, except for special sacred occasions, Frazer explained (Frazer 1922, p. 799).

## Fertility Religion

Frazer’s vegetation deity theory agreed with that of William Robertson Smith (1846–1894), coeditor of the ninth edition of the *Encyclopedia Britannica*, who had a large impact on Frazer, and invited him to write articles for it. Smith saw primitive religions as social institutions for the preservation of society, not as individual creeds for the saving of souls. This debate between those who see myth and religion as primarily social or as more psychological continued between the anthropologists (Boas 1994) and psychologists (Jung 1979). Smith also stressed the literalism of primitive religions, where tribal beliefs believed the people to be literal descendants of a fatherly god in whose blood his descendants participated. He believed that primitives saw gods not as remote and transcendent, but as

limited to specific earthly places – grand trees or mountains. Such gods need not be anthropomorphic, but could be portrayed as plants or animals. Smith envisioned religion developing from demons to totems (such as the Semitic Arabic *jinns*), to local gods, to national gods, to universal gods. Smith’s use of the comparative religions method was to take a specific example, such as the *jinns*, and then draw on other, perhaps far-reaching, parallels to confirm his theory (Smith 1889/2002).

Smith saw ancient sacrifices as the food of the gods. He insisted that sacrifices are not gifts to bartering gods, but communion between people and spirit beings. Quite unlike Freud, he saw this communion unstained by notions of moral and psychological sin or guilt, but as positive relations with a spirit. Unlike Hume, Frazer, and others, Smith argued that religion is not based on psychological fear, but on a happy sharing of the sacrificial food with the spirit being and with the community. The notion of sacrifice as atonement for sins developed later, he thought, when sacrificial animals (or humans) came to be seen as property to pay a divine debt (Smith 2002).

The priest-king was a role known to classicists such as Frazer for some time. Greek kings in Homeric literature were seen as sacred or divine, Frazer says, and that the rule of a good, healthy, strong king would bring fruitfulness to the land – wheat, sheep, fish, and babies would multiply plentifully. The principle was that if a king lost his virility, became sick, or unable to father children, the land’s fertility would suffer. The next step was the belief in the need to kill a weakening king and transfer his power to a stronger successor before the power faded. Frazer believed this to be illustrated in the riddle of the priest at Nemi, anxious to protect his life from attackers (Frazer 1922, Chap. 24).

Now we approach the core of Frazer’s theory. As he expanded his research and the number of volumes of *The Golden Bough*, he increasingly strengthened his central thesis that the core of “savage” magic and religion was the obsession with assuring the continuing cycle of divine powers for the growth of vegetation and animal reproduction (Frazer 1922, Chap. 28, p. 349). His thesis

was centered on a vegetation religion – not a tribal totem religion, not a spiritual, transcendent god of morality religion, but the first rituals he thought to be repeatedly enacted to assure the fruitfulness of life on earth by keeping strong the divine powers of the priest-king. Frazer amplified his argument with similar cases worldwide, as well as the development of the sacrifice of a substitute for the king – humans, animals, plants, or other valuables. The divine energy could be shared in the people’s feasts following the ritual, which came to be called sacramental meals:

The worshipful animal is killed . . . that each of his worshippers may receive a portion of the divine virtues that are supposed to emanate from the dead or dying god (Frazer 1922, p. 623).

This suggests that the “other” religions who sacrificed and ate foods such as pork, opposed by “our” religion, might give our priests a way of forbidding us from joining them by making their sacramental foods psychologically taboo for us. Thus, Jewish and Muslim taboos on eating pork, for example, may come from the priests who saw their neighboring “pagans” eating pork sacrificed to Demeter in Greece and to Baal in Canaan.

## Dying and Rising Gods

Still controversial is Frazer’s argument that there have been numerous examples of dying and rising gods. He had no trouble finding examples in classic studies of eastern Mediterranean cultures: Adonis, Attis, Osiris, Dionysus, Persephone, and the “Corn-Mother” or “Corn-Spirit” (corn = grain) in plants and animals worldwide. Building on Wilhelm Mannhardt’s theory of the *korndämonen*, Frazer interpreted these and many others as examples of his core theory: (a) the divine force behind the planting of seeds seems to die underground, (b) the growth of the plant is a resurrection of the apparently dead divine force, and (c) the rituals and myths of the dying and rising gods and goddesses express this fervent belief:

Under the names of Osiris, Tammuz, Adonis, and Attis, the people of Egypt and Western Asia represented the yearly decay and revival of life,

especially of vegetable life, which they personified as a god who annually died and rose again from the dead (Frazer 1922, p. 378).

Frazer’s critics, such as Andrew Lang, rejected the centrality of the vegetation spirit practices (Lang 1901), broadly attributing illogical archaic myth, ritual, and religion to the premodern failure to distinguish between humans and other things in the world (Lang 1887, Chap. 3). Lang and others also rejected the comparative method, saying that he glossed over too many details that make the cases different (Boas 1994), thus making the concept of dying and rising gods impossible (Jonathan Z. Smith), but others today argue that the similarities are strong enough to make the comparative method valid and the dying and rising gods a convincing concept (Mettinger 2001).

## Heady Non-Psychology

Frazer sought to find an overarching logic, however mistaken, in prescientific magic and religion. He tied the vegetation spirit theme into wider practices: the expulsion of evil in the scapegoat (Frazer 1922, Chaps. 55–58), the winter solstice fire festivals in Europe (Frazer 1922, Chaps. 62–63), including burning human sacrifices or effigies, and the myth of the death of the Nordic Balder by mistletoe (Frazer 1922, Chap. 65). This heady mixture made for a sweeping theory, pulling a vast range of ritualized phenomena into his single theory of the vegetation deity’s annual cycle.

Frazer’s theory was daring and exciting to Europeans waiting for explanations of other cultures’ strangely erotic and bloody practices. In the guise of a thoroughly pragmatic, materialist theory that assured the fertility of the crops and animals, Frazer in theory rejected any role of emotion – no social or psychological motives are necessary, Frazer thought. But then he would hint at deeply psychological motives such as fear in this frothy mixture of bloody murder, political domination, erotic rituals, and life overcoming death, all happening among the “others,” just beneath the proper surface of his Victorian consciousness. Denying psychology, he elaborated on it with a flourish.

Though he was friends with and initially inspired by Frazer, Bronislaw Malinowski became a leader of the new, more empirical, field-oriented, revealing functionalist, twentieth-century anthropology that rejected the old-style reckless armchair comparative speculations and insisted upon careful observations of behavior, limited to the context of an observed tribal society. His ethnography in the South Pacific set a new standard because he learned the language of the natives he was studying, became friends with some, and developed the classic theory of participant observation, a new anthropological methodology (Malinowski 1948). This development soon made Frazer professionally irrelevant among anthropologists, although the themes that he explored remained fascinating to them.

The myth and ritual school, a group of classicists, also called the “Cambridge Ritualists,” was influenced by Frazer, notably in their quest for the primitive roots of classical Greek ritual, drama, literature, society, and the theory of the priority of ritual to myth. They included Jane E. Harrison, Gilbert Murray, A. B. Cook, and Frances M. Cornford (Ackerman 1991).

## Sigmund Freud

Sigmund Freud soon picked up on the unconscious elements in Frazerian themes, such as totem and taboo, with his Oedipal interpretation but gave more credit to the power of unconscious incest dynamics. In *Totem and Taboo* (1913/1950), Freud saw totems as ancestral fathers. But for him, this was a continuation of the historical events in his speculative theory of the “primal horde.” The strongest male mated with as many females as desired, and as his sons grew into puberty, lacking women, they killed him and mated with his wives. Thus, they were able to become men themselves, but felt terribly guilty, so set up a sacred totem animal as a substitute to be revered for the murdered father. The guilty sons felt the need to atone and reconcile with the dead father. So the sacrifice of the totem animal expresses both sides of the ambivalent totem psychology – anger

and reverence – echoing the primal murder and penance for it down the generations. The whole ritual was saturated with Oedipal guilt and is thus filled with taboos. The strongest taboos in this situation are the taboos against disrespecting the fatherly ruler and dealing with corpses. Freud sees these taboos as Oedipal guilt aversions. This was an elaboration on Freud’s theory that unconsciously, God is nothing more than an exalted father (Freud 1913/1950, p. 147), an extension of the primal totem, and so Christian communion is an unconscious repetition of the guilty primal murder of the father. Freud’s venture into anthropology was at least as reckless as Frazer’s, both extending the daring speculations of nineteenth-century thought. Freud fares better in the realm of clinical psychology, where unconscious dynamics are openly acknowledged (Freud 1913/1950).

## Carl Jung

Carl Jung’s archetypal psychology of the collective unconscious shares some themes with Frazer, such as the comparison of motifs from cultures around the world. But Jung is interested not in grand theories of history based on myth, nor in evolution, magic, or fertility, but in healing. He focuses first on the patient’s feelings and dreams, his unconscious production of images that have parallels in collective images, such as the ego, the lover (*anima/animus*), or the shadow (Jung 1979, para. 1–42). Jung’s comparative method is much more focused and disciplined than Frazer’s speculations, even when he ventures into cultural reflections. Jung developed a strong theory of archetypal images that has had a major influence (often unacknowledged) on psychotherapeutic psychology, such as his archetypal image of the introvert and extravert typology.

For Jung, the divine is not Frazer’s vegetation spirit or Freud’s exalted father, but a far more refined archetypal experience that he named the “Self” (Jung 1979, para. 43–126). Subsequent Jungian analysts refined Jung’s thought even further. Jungian feminists corrected Jung’s prefeminist views, exploring the goddess archetypal images (Bolen 1984). James Hillman

criticizes Frazerian theories that portray themselves as doing science and revisions them as imaginative mythologies. While anthropology was striving to become more factual, Hillman's archetypal psychology revisions old nineteenth-century concepts such as Tylor's animism and Freud's Oedipus complex into archetypal mythologies (Hillman 1975, pp. 12, 18).

The development of Frazer's theory took place in the context of the development of the rise of Protestantism's higher biblical criticism, originating in Germany. Frazer came out of the Calvinist Presbyterian and Free Church struggles in Scotland and the debates in England, where Christianity was wrestling with issues such as the importance of a state church versus the need for nonconformist independent churches. Also, the German-based free-thinking biblical criticism that was taking the Bible apart as a historical document, heavily indebted to the customs of its time and editing processes, challenged the literal readings of the Bible (Kee 1997). This was consistent with the rise of comparative religion.

A fascinating blend of highly imaginative literary speculations with a page-turning effort to plumb the depths of the mysterious practices of societies strange to proper Victorian England, *The Golden Bough* has been thoroughly deconstructed but still carries some cultural impact. The 1922 condensation has not yet gone out of print. Although (or because) Frazer never traveled beyond Greece and had no interest in actually meeting a "savage," his book resonates in the collective unconscious of Western culture. It still carries a fascination that Cambridge Classicist Mary Beard recognized as a "metaphorical voyage into the unknown, the wild, the Other" (1992, p. 221). Much of its appeal has to do with its effort to separate European knowledge from the new societies appearing in the Europe's expanding horizon and to affirm the certainty of European epistemologies by denigrating the magical and religious practices of the "savages." Its oversimplified and shocking exposés served as a reassuring effort to legitimize European imperialism (Beard 1992, p. 217). It allowed readers to fantasize scandalous, dramatic, bloody, and fantastic rituals while striving to keep them at

a distance as alien superstitions, by shoving their psychology into the unconscious.

Yet Frazer's work is not just a charming, tawdry antique. It has serious implications for the interpretation of Jesus' death and resurrection that the study of world religions inevitably brought forth. If the dying and rising god theme was indeed common in Jesus' time, this was not the only account of a god on earth who died and was resurrected. But, the argument goes, the earlier cases were strictly vegetation deities, and Christ was a moral and spiritual reformer, not an image of the life-death cycle of plants. This, of course, was not enough for church leaders, who saw his theory as an intolerable attack on traditional Christianity's view of Jesus' resurrection as unique. Though an agnostic or atheist, Frazer attended church and had an uneasy conscience and a naive sense of the powerful impact that his kind of work would have on religions. He saw himself as a scientist who must seek truth despite the social consequences or sentiment, yet he held onto a conventional Christianity (Fraser 1990, p. 134; Sharpe 1975, pp. 87–94).

Although his material and methods have stimulated many, such as Freud and Jung, Frazer's preliminary use of the comparative method has become an easy target of criticism of the comparative studies of religion in general (Boas 1994; Malinowski 1948; Smith 2005). Thus, his research provides a major locus for exploring the value of that method in the study of world religions. However, the *Golden Bough* is a monumental compendium of material, accurate and inaccurate, recklessly speculative, naively rationalistic, and blandly confident in the archetypal mythology of "progress." Not unlike Freud's achievement of revealing the unconscious in psychology, and Jung's archetypal psychology, Frazer roughly sketched in broad outline many of the deep archaic roots that trouble contemporary society, far more erotic, bloody, mysterious, religious, and fascinating than the modern rational veneer that has developed since those dark, passionate rituals flourished. Subsequent psychological interpretations of the dramas that he described take a deeper approach. How Frazer's material might

help us understand “irrational” behavior in current politics, society, and personal life remains an important topic of debate. For the study of world religions using the comparative method, the question lingers whether this method will undermine religion or generate new religions and new “ecumenical” tolerance.

In 1959, Theodor Gaster published an updated, abridged version called *The New Golden Bough*, which sought to eliminate unreliable field reports and updated others, and modified Frazer’s theory somewhat in view of recent scholarship (Gaster 1959). But it was seen as a “misguided facelift,” not the needed critique (Hyman 1959, p. 439).

Frazer inspired many artists, such as James Joyce (*Ulysses*) and T. S. Eliot (Eliot wrote that in the *The Waste Land*, his reference to the Tarot’s “Hanged Man” card: “is associated in my mind with the Hanged God of Frazer.” in Abrams, 1968, p. 2584). Discussing Joyce, Eliot also says: “Psychology... ethnology and The Golden Bough ... make possible what was impossible even a few years ago. Instead of narrative method we may now use the mythical method.” in Abrams 1968, p. 2626). In 1959, Stanley Hyman’s book *The Tangled Bank: Darwin, Marx, Frazer and Freud as Imaginative Writers* interprets Frazer’s work as literature, which Frazer himself acknowledged, while still trying to cling to a scientific method (Hyman 1959, p. 244). Hyman (1959) points to Frazer’s “vast argument from analogy” (p. 237), using root metaphors, such as cultural evolution (p. 247), the mystical communion of “savages” as philosophers sharing in the spiritual powers of nature (p. 224), the image of explosives and electricity to describe the power of a king’s tabooed energy (p. 251), nature as a machine (p. 235), and the military metaphor of the long, slow war against superstition (p. 251). Hyman also pointed out the inconsistency of Frazer’s waffling theory of myth as intellectual, historical, or ritual in origin (1959, p. 239). Frazer certainly did write in the literary style that combined what was thought of as science in his time with the flowery rhetoric of an English gentleman. He could not describe a scene without elaborating on it artistically.

Mircea Eliade later developed a more careful and refined comparative study than Frazer’s, using the newer phenomenological method, blended with more reliable anthropological and historical studies. In his *Patterns in Comparative Religion* (1958), Eliade explored “hierophanies” or appearance of the sacred in phenomena such as the sky, sun, moon, water, stones, earth, fertility, temples, time, and myths. He echoed Frazer dimly in his studies of vegetation and rites of regeneration in agricultural fertility cults. But for Eliade, “there has never been any real vegetation cult, any religion solely built upon plants and trees” (Eliade 1958, p. 325). The cycles of death and life are evident, although rooted in sacred hierophanies, not efforts to manipulate nature, which to science is mechanical. Eliade edited the first edition of the classic *Encyclopedia of Religion* (1987, 2nd ed. 2005), now the standard encyclopedia for the study of world religions. He was criticized, mostly from the empiricist anthropological side, for overgeneralizing and lacking sufficient observed support. But, having closely studied Hindu Yoga, for example, he believed that the symbolism of experiences of the sacred is based on reality (however it may be misinterpreted), not illusion. This was offensive to critics committed to the non-spiritual, non-symbolic scientific metaphysics (Smith 2005).

The debate continues over comparative religion’s value, wrestling with these themes. On the one side, how much should scholars of world religions acknowledge the reality of the sacred for believers and how much should they find some truths in symbolic, poetic language? On the other hand, how much should they use more scientific methods that do not acknowledge the reality of the sacred, even for believers, and emphasize the higher value of detailed, logical, more literal language and anthropological studies of specific societies? This is a major hermeneutic, methodological debate in our culture. Jonathan Z. Smith’s rejection of Frazer’s category of “Dying and Rising Gods” represents those who seek a more “scientific” method for comparative religion. Kimberly Patton’s *A Magic Still Dwells* represents those who think that meaningful

symbolic comparisons can be made based on authentic experiences of sacred realities which cannot so easily be discredited by the scientific hermeneutic. Even scientific and postmodern skepticism about truth claims are not neutral, she argues, since they are based on imaginative and metaphysical presuppositions [such as the human right to dominate an alien nature], not simply evidence. Nevertheless, situating general themes in various social contexts far more carefully than Frazer did, as well as carefully examining truth claims, is essential as comparative religion continues.

however no coercion in grace: it may be accepted or rejected by the one on whom it is bestowed.

In St. Paul's commentaries on faith, the necessary exertions of the will are displaced from seeking to keep the law to accepting, through grace, the salvation that is freely given by God: "For by grace you have been saved through faith; and this is not your own doing, it is the gift of God – not because of works, lest any man should boast" (Eph. 2:8–9).

In psychological terms, grace can be seen to be the matrix within which healing energies can pass between psychotherapist and patient. It is grace that allows the patient to safely express any and all life experiences with the assurance that they will be accepted and not harshly judged. It is also grace that enables the therapist to maintain professional detachment and not become destructively involved with the patient when the patient emotionally attacks, challenges, and tests the psychotherapist in the course of transference.

## Grace

Krystyna Sanderson  
The Blanton-Peale Institute, New York,  
NY, USA

Grace seems to be a particularly Christian concept. The Incarnation itself is commonly referred to in Christian writing as an act of God's grace. "For the law was given through Moses; grace and truth came through Jesus Christ" (John 1:17). Grace as an element of Christian faith denotes God's unmerited favor toward all people and, though a free gift with "no strings attached," is often linked with the human will to do good and seen as the means by which a person is empowered to make right choices. There is

## The Great Mother Archetype

From a psychoanalytical perspective, the Great Mother is the archetypal manifestation of the

collective cultural experience of childhood development. More specifically, the influences exerted on children are not so much the product of the mother herself, as an individual, but rather the product of the archetypal mother image rooted in the collective unconscious. As such, the image of the Great Mother reflects both the feelings of maternal support, comfort, and love for a child and the negative capricious experience of vulnerability, helplessness, and dependence experienced by the child in development. In this sense, the archetypal image of the mother is nurturing and loving but also capricious, mysterious, and linked to feelings of vulnerability and seduction (Jung 1968).

Thus, there is an intrinsic duality to the archetypal representation of the Great Mother. The imago of the divine feminine is paradoxical, serving as an archetypal manifestation in the collective unconscious but also, precisely because of the power of the symbol in the human psyche, as the focal point of a vast array of projections from both men and women. The Great Mother is seductive and capricious, virginal and pure, mothering and supportive yet mysterious and cruel. Jung commented on this sense of a fractured and split symbolic configuration of the Great Mother, observing that such splits are common in powerful symbolic representations and furthermore that as a fundamental part of childhood development, a child has to come to terms with their biological mother as a fully formed human being and reconcile these contradictory perceptions within the infant-mother dyad if they are to fully develop into psychological adulthood and relate to their mother as an individual rather than as a symbol. Closely linked to this experience of reconciling divergent symbolic forms associated with the archetype of the Great Mother is Jung's hypothesis that the Great Mother is experienced differently by males and females. Jung argued that the intrinsic alien qualities of femininity to a masculine psyche would lead to the representation of the Great Mother being more deeply impressed in the unconscious aspects of the psyche of a male and thus would exert a far deeper influence. Similarly, the feminine

experience of the Great Mother is far more closely linked to a woman's conscious representation of the self and thus exerts less of a hold on the unconscious (Jung 1968).

It is this sense that the symbolic manifestation of the Great Mother in the form of Mother Goddesses is perhaps the most illuminating. The breadth and depth of Mother Goddess representations and worship through history and across cultures is remarkable. Mother Goddesses, as the symbolic manifestation of the Great Mother archetype, are associated with all major aspects of life such as death, birth, initiation, fertility, agriculture, warfare reproduction, and wisdom. Indeed, the sheer diversity of Mother Goddess representations closely aligns itself with Jung's paradoxical union of opposites intrinsic to the Great Mother archetype (Jung 1968).

### **The Great Mother in Goddess Worship**

While a full discussion of the manifestation of Goddess worship or deification of the archetypal Great Mother and the complex and often controversial claims surrounding claims of Neolithic widespread Goddess worship is beyond the scope of this article, it is worth noting some common themes that resonate throughout cultural patterns of deification or sacralization of the Great Mother archetype. Sacred images of the Great Mother archetype range through the vast proliferation of the Goddesses of antiquity and contemporary Hinduism to the sacralization of the Virgin Mary in many catholic traditions to the Gnostic veneration of Sophia. Despite this proliferation, there are certain common themes and distinctions in the way the feminine imago is manifested. Typically, these themes also reflect the varied and diverse associations of a reified femininity as experienced in cultural life (James 1983).

### **The Great Mother and the Holy Virgin**

The manifestation of the Great Mother is commonly associated with virginity. Perhaps, some

of the most visible representations of this model of reified feminine sacrality are the iconic figure of the Virgin Mary in Catholicism and the Hindu Goddess Kannagi who is goddess of both chastity and the sacredness of motherhood. Similarly, Mother Goddesses are typically associated with nurturing, protection, and healing. Overtly, this relates to the aforementioned experience of childhood and infancy combined with the socially ascribed role given to women in most cultures. However, it also relates to anthropological notions of pollution and taboo through which the purity associated with motherhood or the sacred virgin serves to purge people of corruption and contamination. Goddesses in general tend to be attributed with nurturing qualities serving as the symbolic wellspring of life. Similarly, images of the sacred feminine are commonly constructed in local mythologies as wives and consorts of gods, also linking the role of the Great Mother with established social structure and practice. Conversely, the Great Mother is also commonly associated with violence and destructive power; as illustrated by the triple aspected Morrigan of Celtic folklore, the Balinese Goddess Rangda and the Hindu Goddess, Kali. These Goddesses, while having nurturing and loving sides to their personas, are commonly represented as capricious, destructive, and cruel. This pattern closely reflects Jung's notion of the Great Mother as represented archetypally in religious forms, having a distinct duality which reflects the sense of helplessness and vulnerability experienced by infants in development and growth.

### **The Great Mother and the Earth Goddess**

Goddesses are also commonly linked with the earth and with natural phenomena. A contemporary manifestation of this is the Earth Goddess of many neo-pagan traditions or James Lovelock's Gaia hypothesis. Developing in the nineteenth century, this notion of a universal Mother Goddess linked to the earth has become widespread in western culture (Hutton 1999). However, while Earth Mother goddesses are very common, there

are numerous exceptions to this rule of feminine Mother Goddess and earth association. For example, Egyptian goddesses are rarely Earth Mothers; indeed, Sky Goddesses and Earth Gods are more common, as in the Japanese Shinto tradition. The Venus figures found by archaeologists in the Neolithic period are often taken to represent a universal monotheistic Earth Mother religion preceding a later degeneration to patriarchal religious traditions. However, while there is evidence for this, the Paleolithic Earth Goddess hypothesis has come under severe historical critique due to the often indiscriminate manner in which various symbols were uncritically configured as intrinsically representative of an Earth Goddess while contemporary use of similar figures by indigenous peoples rarely corresponded with the Great Goddess hypothesis. That being said, many of these images and artworks clearly relate to examples of ritual use of feminine images and artwork and indicate the importance given to the sacred feminine in the ancient world (Gimbutas 1982; Hutton 1993).

### **The Great Mother as a Religious Manifestation**

The Great Mother as a religious manifestation is demonstrated throughout history and across cultures and continues to undergo renewal and redevelopment within many new and well-established religious movements. The Mother Goddess image has played an incredibly important role in prehistory, throughout the development of agriculture and contemporary civilization and in urban life, and continues to play a significant role in all religions and cultures. Nevertheless, it is important to evaluate the significance and symbolic import of these representations within the context of the culture and society in which they operate. It is also worth noting that, from a Jungian perspective, while the Great Mother serves as the archetypal source for a host of religious representations, it is not the same as the deified images of femininity and motherhood that exist across cultures. For Jung, the

fundamental nature of the mother–child dyad meant that the Great Mother as an archetype would be a universal symbol within the collective unconscious. However, this is a far cry from reifying the cultural manifestations as existent manifestations of a universal deity (Jung 1968).

## Green Man

Lee W. Bailey  
Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

The Green Man (Fig. 1) is an ancient depiction of the foliate face of a man, woman, or animal with vegetative growth around the face or sprouting from the mouth. He is a personification of the transcendent power behind the growth of life and the psychology of human desire to reproduce. He was an archetypal pre-Christian vegetation god image that was then accepted in church

**Green Man, Fig. 1** Photo courtesy of the author; molding of original church art by oakapple designs.co.uk

architecture for centuries. He appears in many countries, in thousands of churches and pub names, as well as in dances, such as the English Morris Dancers, where he is a man dancing around, totally covered with leaves, chasing girls, similar to “Jack in the Green.” This expresses his embodiment of the joyous natural psychological desire to reproduce. He is often part of a dying and rising ritual, expressing his personification of the winter disappearance of many plants and the spring reappearance of plants and births of new animals. He is prominent in Europe, especially in Ireland and England, in medieval churches and cathedrals, sometimes also as a woman or animal. For example, several Green Men with bright golden leaves were carved on the pulpit of Elisabethkirche in Marburg, Germany, around 1340 (Anderson 1990, p. 64).

The Green Man is a masklike version of the spirit of many ancient vegetation gods, such as Osiris, Dionysos, Tammuz, Adonis, Attis, and Cernunnos, when he was related to the Great Goddess as lover and, as a divine power of life in plants and animals, is her reborn or resurrected son (Anderson 1990, p. 21). In the days when agriculture was understood as a gift from the divine, the Green Man was thanked for the crops. When life was more subject to disease and death, people psychologically felt more

reverence and thanks for the Green Man as an image of sustenance. In pre-Christian Europe, trees and groves were commonly the focus of sacred presence, and the head was also venerated as a locus of soul. Yew trees, for example, have long been felt as sacred in Ireland and the United Kingdom. Many remain today in churchyards and cemeteries. In the USA one can feel that sacred presence in the giant redwood and Sequoia forests in California.

The Green Man was a figure in many legends, in rowdy adventures with Jack and romances with girls (Anderson 1990, p. 10ff). The Green Knight was humanized in the medieval Arthurian romantic legend *Sir Gawaine and the Green Knight* (Armitage 2007). Green Man songs and poems include clear identification with both plants and human love:

Like antler, like veins in the brain the birches  
Mark patterns of mind on the red winter sky;  
'I am thought of all plants,' says the Green Man,  
'I am thought of all plants,' says he.

...  
The alders are rattling as though ready for battle  
Guarding the grove where she waits for her lover;  
'I burn with desire,' says the Green Man,  
'I burn with desire,' says he (Anderson 1990, p. 12).

The power of reproduction present in plants, animals, and sexual desire was symbolized by this age-old Green Man, burning with desire to reproduce and keep life going. Ultimately, reproduction is deeper than biology, desire deeper than psychological instinct. It is also a sacred wonder, a "greenness" emerging from the ultimate reality that keeps life going on this planet. This image is a deep archetypal image that is transferable to other cultures and religions. The Hebrew Tree of Life is central to the Garden of Eden (Genesis 2:9). Jesus used a vegetative image, saying "I am the true vine. . ." (John 15:1). The medieval nun Hildegard von Bingen emphasizes the image of *viriditas* – "greenness" in her creation spirituality, God's creative power appearing in nature. She called Jesus "Greenness Incarnate" (Metzner 1999, p. 140).

From the Renaissance onward, the Green Man continued to appear in stained glass, manuscripts, and metalwork. But as the separation between

humans and nature grew in the age of science, the Green Man faded from consciousness. However, he was revived in the nineteenth-century Arts and Crafts movement. The Green Man then appeared in contemporary times in many artists' works (Araneo 2006). In 1939 Lady Raglan stirred his reawakening with her anthropological study. Many international and current appearances of this enduring vital life-energy figure have been documented (Green Man). In Kenya, Wangari Maathai, Ph.D. (1940–2011), embodied the "Green Woman" spirit. She founded the Green Belt Movement, focused on planting trees, environmental conservation, and women's rights. For this, in 2004 she became the first African woman to win the Nobel Peace Prize. The Green Man [and Woman] point through the power of plant and animal growth, down to their ontological roots. He/she can transform the psychology of desire to a deeper, much broader sense of the sacredness of reproduction. The "Green" image is now gaining a renewed power, expressing the depth of the ecological psyche in its struggle against industrial pollution.

## Grief Counseling

Joan Berzoff

End-of-Life Care Certificate Program, Smith College SSW, Northampton, MA, USA

This entry begins with some of the theorists who guide grief and bereavement counseling. It then considers cross-cultural and spiritual issues in grief and bereavement. Next, it examines two modalities of grief practice, individual and group, as well as the core skills necessary for grief counseling. Finally, it raises the current controversy about the diagnosis of prolonged grief, now under consideration for the DSM-V.

### Freud

Freud was one of the first to conceptualize the differences between healthy and complicated bereavement. In “Mourning and Melancholia” (1917), he wrote that grief was not itself a pathological state although it often feels that way. All griever feel dejected, exhausted, and depleted. They are preoccupied with the lost person and withdraw their energy from the outside world while intensely holding onto memories of the deceased. They do not relinquish those memories easily, as no one ever abandons love willingly. But with time and reality checks, mourners begin to redirect their intense energy back to the world in order to love and live again. How does this occur? Through identifying with aspects of the lost person, Freud wrote that the “shadow of the object falls upon the ego,” speaking to how loss shapes the mourner’s self in new ways (Freud 1917, p. 249). Thus, mourning can be seen as potentially changing the mourner’s identity and even ideals (Loewald 1962).

But Freud (1917) added another dimension to grief, which he called *melancholia*, and which others have called complicated or prolonged grief. In Freud’s view, when there has been a conflicted relationship with a person who has died, unconscious anger toward that person is directed at the self, leading to a loss of self-esteem, self-criticism, self-blame, worthlessness, loss of appetite or sleep, and, in its worst, suicidality. Pathological grief does not end. It is debilitating to internalize an unresolved and conflicted relationship and difficult to treat, due to its unconscious and denied roots.

### Children

Bowlby (1969, 1973, 1980) added to the discourse in his study of children’s grief. He studied children who had been separated from their mothers. The babies he observed in hospitals first protested with much wailing and screaming. When that failed to restore their mothers, children wept, pined, searched, and yearned for them. When their mothers still failed to return, some infants became detached, denying their needs for emotional attachment altogether. He theorized that grieving children experience four potentially painful stages of grief including numbing, yearning and searching, disorganization, and despair. But he added the fifth stage of reorganization, suggesting the importance of resilience and the capacity to adapt to loss that many children and adults have.

### Adaptation

Lindemann (1944) also defined normal and pathological grief as varying forms of adaptation. Studying those who lost loved ones in the Coconut Grove fire in Boston, Mass., he saw grief as always including physiological symptoms, preoccupations with images of the deceased, feelings related to not having done enough for the deceased, and anger at other professionals for not having saved the deceased. He saw pathological grief as symptoms resulting

from unconsciously incorporating the lost person, overactivity, manic behavior, marked hostility, or self-destructiveness. He noted the value of being able to anticipate a loss in order to prepare for and cope with it.

## Kubler-Ross

While Bowlby (1969, 1973, 1980) and Lindemann (1944) suggested specific stages of grief, Kubler-Ross (1969) was even more specific in delineating specific stages of grief, seeing grievers moving through linear sequences. First, mourners denied the loss; next, they felt anger, and then they tried to bargain. Next, they experienced depression and finally they moved into acceptance. In fact, we now know that no one actually grieves in such linear ways. Stroebe and Shut (1999) note that grief is always a dual process. Loss is never static but moves back and forth between expressing grief and living life.

## Positive Aspects

Many contemporary grief theorists (Baker 2001; Bonnano 2004; Stroebe and Shut 1999; Worden 2009) therefore emphasize some of the positive aspects of grief. For example, most current grief theorists report that mourners never relinquish their ties to the dead, but maintain continuing bonds with those who have died; their relationships continuing to grow despite the loss. Further, loss and even traumatic loss can be occasions for growth. Calhoun and Tedeschi (2006) note that after a traumatic loss such as in combat or after tragedies such as 9/11 and in natural disasters, mourners create new meanings, even monuments, to those who have suffered, often fighting on their behalf, so others suffer less.

This view of grief sees mourners not as passive recipients of loss but as active participants in their grief, creating new narratives and meaning (Neimeyer et al. 2011) and often making profound social and political changes as a result of the loss (Berzoff 2010). For example, mothers against drunk driving, or those who testified in

Congress about lax security after 9/11, or the Susan Komen Foundation offers us a few of so many everyday examples of how mourners use their grief experience to activate social and systemic change.

## Postmodern Views

A more postmodern view also deconstructs the values embedded in Western theories of mourning. In many Western cultures, the emphasis on separation and autonomy leads to the view that grief can be worked through and resolved. But in many cultures, grief is not expressed verbally but through the body: a pain in the belly, or a “wind” in the heart (Corwin 1995). For some groups who have been oppressed, death may be experienced as emancipation from suffering. Many Native American, African Indian, and even White cultures encourage contacting the dead for counsel. Most cultures see the goal of mourning as maintaining a spiritual involvement with the dead. In Hindu cultures, sacrifice is often a part of bereavement, with offerings made from birth to death to ensure the dead’s entrance into Nirvana. There are also different expressions of feelings of bereavement. The Balinese are expected to project a happy and smooth outer appearance in mourning (Wikan 1990) while African Americans and Jews consider stoicism at funerals to be pathological (Imber-Black 1991).

## Groups

How do these many ideas inform grief counseling? First, counseling not only occurs in individual work but in group work as well (Silverman 1986). Groups for the bereaved can destigmatize grief; they can be ways to share resources, offer social support to mourners, normalize tragedy (Sutton and Leichty 2004), and offer spiritual connection so that loss is linked to something greater than the self. Groups can include family loss groups, children’s groups, and bereavement-specific groups (i.e., widows, adolescents, or

parents who have lost a child). For many in groups, participation is a sign that recovery has begun to occur (Silverman 2000).

## Individual Counseling

In individual counseling, the emphasis is on finding both meaning to existential suffering (Neimeyer 2002) and on maintaining enduring connection to the deceased in the midst of embarking on a new life (Worden 2009). While grief counseling may focus on understanding and dissolving more pathological bonds to the deceased (Freud 1917), another part of the work is in recognizing that there will always be waves and paroxysms of grief (Didion 2005). Grievers need to tell their stories and should be encouraged to do so: through bringing in pictures, blogs, and objects of the dead, since literal objects of the dead can connect the mourner to the deceased person (Berzoff 2004; Volkan 1981). Clients should be encouraged to tell their stories again and again, reconstructing the meaning of the person's life and death. Grief counselors should always elicit cultural practices, rituals, and prayer, which provide solace and support. Clinicians should listen for the client's belief system, meaning-making system, and spiritual connections.

## Grief Counselors

What does the grief counselor need in order to do this work? First, self-knowledge and an open heart are essential (Farber et al. 2004). Grief counselors need to know how they have faced their own losses and mortality. They must hold a clinical stance of authenticity, respect, and the capacity for surprise (Berzoff and Silverman 2004). Grief counselors need to be able to bear witness, be present to, and to tolerate suffering without undue anxiety or fear (Cassell 1982). They need to be able to elicit multiple forms of legacy building that commemorate the dead. They need to be able to attend to each individual or family's way of expressing grief, and to be able to bear a range of feelings including anger, sadness, and hopelessness.

They also need to be able to offer hope. Grief counselors need to recognize that there is no one right way to grieve and to be aware of the values, expectations, developmental stages, strengths, and ways of coping that each mourner has used in the past (Ferris et al. 2002).

This is not work for the faint of heart. Compassion fatigue is always a risk, and so clinicians must find forms of renewal in self-care, supervision, meditation, or exercise. Sometimes self-care comes from the satisfaction of helping another; sometimes it emerges through helping others change the environments in which their loved ones died (Berzoff and Silverman 2004).

## Prolonged Grief

Currently, there is a debate over whether to make "prolonged grief" a diagnostic category. Prigerson et al. (2002) have conducted research for over a decade in support of this diagnosis that includes having trouble accepting death, death interfering with life, being bothered by intrusive images, avoiding uncomfortable previously enjoyed activities, and feeling cut off from others, for more than 6 months. While the potential value of such a diagnosis may be reimbursement for grief counseling, we must ask whether these criteria do not describe every mourner, healthy and pathological? Placing a time limit of 6 months on grieving may lead to stigmatizing, problematizing, and pathologizing mourning itself. The medicalization of grief may also undermine a bereaved person's self-esteem and even encourage dependency on a grief counselor (Parkes 2011) when there may be no need for counseling given that grief is an inevitable part of the human experience.

## Guanyin

Minqin Wang<sup>1</sup> and Lee W. Bailey<sup>2</sup>

<sup>1</sup>College of Foreign Languages, Hunan University, Changsha, Hunan Province, People's Republic of China

<sup>2</sup>Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

*Guanyin* is one of the most popular deities of East Asia. In China she is known as *Guanyin* (also Kuan Yin or Kwan Yin). She is a Bodhisattva also called *GuanShiYin* (观世音), *Guan Zi Zai* (观自在), or *GuangShiYin* (光世音), meaning “She who hears the voices in the world crying for help.” Cantonese variations are *Kwoon Yam*, *Kwoon Sai Yam*, or *Kwoon Chi Choi*. In Japan she is known as *Kwannon Bosatzu* or *Kwannon Sama*, in Vietnam as *Quan Am*, and in Korea as *Kwan Seum Bosal*. In *Daoism*, *Guanyin* is called “*Ci Hang Zhen Ren*” (慈航真人) “Immortal of the Benevolent Ship,” “*Guanyin Da Shi*” (观音大), or “*Ancient Buddha of the Southern Sea*” (南海古佛). The male Bodhisattva *Avalokiteshvara* was brought from India to China, and his name was translated to the Chinese as *Guanyin*. Then it was slowly blended with uniquely indigenous Chinese elements. Although often oversimplified as simply an emanation of *Avalokiteshvara*, *Guanyin* is actually a uniquely Chinese goddess who synthesizes Buddhist, Daoist, Confucian, and indigenous shamanic elements.

## History

Buddhism was first introduced to China during the Han Dynasty (206–220 CE), and *Guanyin* soon appeared as a male Chinese version of *Avalokiteshvara* in art as a monk with a thin mustache. Then, over the next several centuries, *Guanyin* was widely transformed into a woman. As early as 483–493 CE, an emperor had a vision of a feminine *Guanyin* (Stein 1986, p. 23). This presents a problem: some scholars cannot explain why the masculine changed into the extremely

popular feminine *Guanyin* in China. This feminine transformation must have come from somewhere with good reasons. The answer has historical grounds and psychological, social, and spiritual reasons among the people who made her so popular. Of all the imported Buddhist deities, *Guanyin* was the only one to become a genuine Chinese figure. Many Chinese are not even aware of her Buddhist roots (Yu 2001, p. 223).

Although *Guanyin* is now commonly regarded as a female deity, she may still appear as a man or a woman. For example, the current Dalai Lama is said to be an incarnation of *Guanyin*. In Buddhism today, when a person becomes enlightened, they may become a Buddha, no matter whether the person is a man or woman. Similarly, when a Buddhist swears to serve people heart and soul without any selfish desires, the person becomes a Bodhisattva, regardless of their gender, because ultimately the Buddha mind is beyond gender, although humans connect to the transcendent strongly through gender characteristics.

One historical reason for her popularity is that during the fourth through the sixth centuries, invaders from the north (“*caitiffs*”) invaded China and forced the government south into the Yangtze River valley. Amid this chaos, when traditional Confucianism struggled to maintain order and civility, people likely welcomed the warm, compassionate, saving spirit of *Guanyin*, who was portrayed as responding immediately to sincere cries for help from people in desperate situations. *Guanyin* miracle tales spread, telling of her saving people from warriors, drowning, sickness, and infertility, often stressing a conversion experience (Campany 1996).

Psychologically and socially, *Guanyin's* modern Buddhist egalitarianism goes against the ancient Confucian views of women as inferior, even polluted. Chinese goddesses helped remove women's supposed pollution related to reproduction. Their followers might seek purity by resisting marriage, not consummating their marriage, living in celibate women's communities, or providing their husbands with a concubine. Belief in goddesses still supports mothers and sisters who want to reduce family conflicts, such as paternal domination. The more

inclusive goddesses also help unite various village territorial groups (Sangren 1983, pp. 11–17). These important social and psychological functions of goddesses like *Guanyin* give many women a countercultural social group and goals outside family.

## Spirituality

The Buddha told Inexhaustible Intention Bodhisattva, “Good man, if any of the limitless hundreds of thousands of myriads of *Kotis* of living beings who are undergoing all kinds of suffering hear of Guanshiyin Bodhisattva and recite his name single-mindedly, Guanshiyin Bodhisattva will immediately hear their voices and rescue them” (Kuo-lin 1977). This is different from the traditions emphasizing study or meditation. This also goes against the ancient hierarchical traditions of Asia, in which the high gods were allied primarily with royalty. While celestial, *Guanyin* is also very close to people. *Guanyin* and the Bodhisattva *Da Shi Zhi* (大勢至) are two important assistants of Amita Buddha. The three are called “Three Saints in the Western Paradise.”

For Chinese Buddhists, Buddhas and Bodhisattvas do not only exist in the spiritual world. Nor are they just the statues in the temples or pictures in the altars. Some old gods were deified government officials exercising imperial territorial rule. But Buddhist deities are universal and “present” among the common people in daily life and emphasize individual salvation. But unlike some Buddhist practices that suppress the senses, *Guanyin* is more Tantric, appearing in sensation, sight, touch, hearing, and fragrances. *Guanyin* was the first Chinese deity to leave heaven and appear with saving powers when people were in crisis (Campany 1996, p. 256) (Fig. 1).

Buddhas and Bodhisattvas have many forms, including appearing as common people, giving spiritual guidance, and performing miracles (including resurrections) (Yu 2001, pp. 190–191). Accounts of miracles and divine wonders were well known in China before *Guanyin*, but many of hers contained the new

**Guanyin, Fig. 1** Retrieved from “Forum/bbs” at <http://qiankunzhiyi.aa.topzj.com/forum-3926-1.html>.

Buddhist psychological emphasis on conversion to a new Buddhist life. The first known compiler of eyewitness accounts of *Guanyin* miracles was Fu Liang (374–426).

## Iconography

*Guanyin* is said to have 32 forms. Some of these were imported with *Avalokiteshvara* (such as the thousand-armed image), and some were indigenous Chinese images (such as giving a child):

1. The oldest known indigenous Chinese image is of the “Water Moon *Guan Yin*,” white-robed with a large moon halo (Yu 2001, p. 184).
2. *Guanyin* holding a willow branch and a narrow vase of her “sweet dew” of compassion and healing.

3. *Guanyin* with a fish basket, indicating *Guanyin* saving people in ocean storms (and in life).
4. *Guanyin* with a lotus flower (a traditional Indian image of beautiful new life on water, growing from mud [life's messes] yet remaining pure) indicating that she always helps people to become enlightened.
5. *Guanyin* in white (pure) clothes, indicating *Guanyin* going to the secular world to help people.
6. *Guanyin* in red clothes, indicating *Guanyin* staying in the temples to help people.
7. *Guanyin* with four arms or eleven faces on her crown or one thousand hands and eyes, indicating her many powers (a traditional Indian image).
8. *Guanyin* standing on a dragon (a traditional Chinese image), indicating her great powers to redeem sea animals.
9. *Guanyin* with a horse's head, indicating her going to the animal world to redeem animals.
10. *Guanyin* with a child, indicating her sending children to infertile women.
11. *Guanyin* seated in the casual "Royal Ease" pose, with legs apart and one arm resting on a knee raised high (like Hindu royal images).

But *Guanyin's forms* are countless. That is why there is a saying "If you be humble and modest, you will meet *Guanyin* everywhere." You can see *Guanyin* even in an oyster. In ancient times, there was a king who was very cruel and killed a lot of people and animals. He liked to eat oysters very much. In order to persuade him to love others, *Guanyin* made his/her image into all the oysters he got. So when he opened every oyster, he found the image of *Guanyin*. Then his Buddha nature was evoked and he realized *Guanyin's* intention, so later he became a very good king.

## Festivals and Pilgrimages

There are three annual *Guanyin* festivals. In the Chinese lunar calendar, February 19th is *Guanyin's* birthday, June 19th is her day of receiving *Dao* (becoming enlightened), and

September 19th is her day of achieving *Dao* (having the ability to apply the *Dao* perfectly to help others). Celebrations are held in each temple, and monks or nuns lead ceremonies such as singing "Praising Incense," reading the names of many Buddhas, reading "Da Bei Zhou" (大悲咒) (Mantra of Great Sympathy), singing "Praising of *Guanyin Da Shi*," reading "Poems of Bodhisattva *Guanyin*," and returning the benefits of prayers to Buddhas and Bodhisattvas and to parents, children, relatives, friends, and even one's enemies in previous and present lives. *Guanyin's* Ritual of Repentance and Forgiveness is also popular (Yu 2001, pp. 263–265).

*Guanyin's Dao Chang* (道场) (main place of spreading the *Dao*) is on *Pu-tuo* mountain in Ningbo, Zhejiang province, in the bay south of Shanghai. *Pu-Tuo* was a Daoist haven from the first century BCE Han period. It has been destroyed by wars and pirates and rebuilt repeatedly. It became Buddhist by the eleventh century. It is a busy pilgrimage island where people seek blessings and visions at temples, monasteries, rocks, and caves full of surging waves. It is one of the traditional four major holy mountains in China. It is part of *Guanyin's* connection to China's South Sea, where miracle stories tell of her appearing in light or floating on a cloud to save drowning sailors.

Hang Zhou has also been a major *Guanyin* pilgrimage site. In 1987 an estimated two million pilgrims went there for her birthday. At such temples, pilgrims typically light incense and candles, chant and pray, burn spirit money to ancestors, and incubate dreams to be interpreted by monks. Pilgrims may beat on a hollow wooden "fish" and chant a *dharani* such as *Na Mo Da Ci Da Bei GuanShiYin Pu Sha* (Homage to the greatly compassionate, greatly merciful GuanShiYin Bodhisattva) (Blofeld 1977, p. 26).

## Texts

There are numerous *Guanyin* texts, notably "The Universal Gateway," which is the 25th chapter of the *Lotus Sutra*. The oldest version we have of this was translated by Dharmaraksa in 286 CE

(Yu 2001, p. 161). Later it was translated from the Sanskrit into Chinese by Kumarajiva. It stresses how that people in need can call the name of *Guanyin* and they will be assisted immediately. It promises deliverance from swords, chains, demons, and bandits and offers sons to women who call out to her. There is some debate about her name's translation from the Sanskrit to the Chinese, but this is traditionally the text where the name for *Avalokiteshvara* was translated to *GuanShiYin*, meaning "Lord who perceives the cries of the world."

Early texts were found in a sealed cave at Dunhuang in northwestern China – wall paintings and banners of *Guanyin* saving people from distress, 1,048 copies of the Lotus Sutra, and almost 200 separate copies of the *Guanyin Sutra* (Campany 1996, p. 83). Another cave at Fangshan, near Beijing, revealed a treasure of hidden texts, stone slabs, and art about *Guanyin* (Yu 2001, p. 111). They showed that ancient kings often had *dharani* (invocations) carved on stone steles with sculptures, erected them around the country, and ordered monastics to memorize and chant them, seated in front of a *Guanyin* image.

A very popular text is the Ming Dynasty (1368–1644) novel called *The Journey to the West*. This long, multivolume, historically based legend blends a Buddhist picture of *Guanyin* with indigenous Chinese local gods, Daoist *Xian* spirits, and various folklore scenes of dragons and monsters. The novel is based on the journey of the historical Tang (618–907) monk *Xuanzang*. His autobiography records a 17-year round-trip journey along the Silk Road from China to India to get the Dharma in sutras to take back to China. In the Ming novel he is called "Tripitaka," which is an honorary title for a monk. The story was made into a popular 1979 Chinese television series. *Guanyin* plays a major role in the tale. First she is sent by the Buddha to China to find a suitable messenger to come and get the Dharma. She chooses Monkey (symbol of ego), who struggles on his way with various monsters (shadow beasts). *Guanyin* graciously appears and converts each one – Sandy, Pigsy, and Dragon – with forgiveness for their sins and their vows to behave and help along the

journey. The highly allegorical and action-filled adventure shows *Guanyin's* refined Buddhist theme of psychological conversion.

A famous ancient *Guanyin* text was inscribed on *King Kao's Guan-ShihYin Sutra* stone votive stele (550–577), now in the Asian Art Museum in San Francisco (Yu 2001, p. 110). *Lu Kao's More Records of Kuan-shih-yin's Responsive Manifestations* (in Chinese) is a typical collection of miracle stories (Yu 2001, p. 579). A series of *Guanyin* poems are used in divination, such as this one telling of her role since the beginning:

From the beginning of Creation, everything had meaning:

The lucky day brings everything fruiting to ripeness...

Then revelation comes - and don't take it lightly -  
The pure-hearted will be graced by the Divine One  
(Palmer et al. 1999).

## Background

*Guanyin's* background is multifaceted. The Buddhist tradition of the shift from a male to a female divinity needs historical and psychological explanations. *Guanyin* traditions are clearly rooted in Buddhist goddesses such as Tara, archaic shamanic Chinese goddesses such as The Queen Mother of the West, and Daoist goddess such as *Ma Tzu*; in these historical roots and current practices are several psychological factors, such as women's pollution relief.

The representations of *Guanyin* holding a child are rooted in the archetypal maternal desires expressed in China as early as archaic Neolithic (c. 500–2500 BCE) Chinese female figurines, called "fertility goddesses," and temple ruins found in Mongolia, with female names on buried shamanic oracle bones and later bronze vessels. This feminine side of Chinese culture was absorbed into *Guanyin*, who is invoked to grant pregnancy and easy deliveries of both boys and girls (Yu 2001, pp. 127–140).

The popular legend of *Miao Shan* ("Wonderful Goodness") had a powerful role in feminizing *Guanyin* (Yu 2001, p. 349). The oldest known account was carved on a stele in Honan in the eleventh century. With many variations and

psychological implications, the story is that *Miao Shan* was a princess who refused her father's command to marry (a refusal of filial piety, an Oedipal/Jocasta conflict, and a feminist assertion of Buddhist celibacy and archetypal purity). He pressured her and she retreated to a convent. He angrily burned it down and her spirit ascended above (transcendent function). Then her father fell ill (psychosomatic illness) and heard from her in disguise that the only medicine for him would come from a person who had never been angry (transformation of archetypal shadow). He sent for it and she returned him a medicine made of her arms and eyes, willingly sacrificed. When he healed and learned of her astonishing filial sacrifice (submission of ego to higher Self), he took the family to her and they all took refuge in the Buddha (submission of ego to higher Self). She was *Guanyin* in human form all along (presence of transcendent in daily life). The dominant themes of are conflicting: Buddhist celibate opposition to marriage; women's resistance to traditional roles, yet Confucian filial piety; and her self-sacrifice to heal her father. Self-sacrifice with a slice of flesh (*ke-ku*) to heal parents was a known practice in ancient China, although Confucians officially opposed it (Yu 2001, pp. 333–334). Pious Chinese were thereafter often named *Miao Shan* (Yu 2001, p. 303). Many Chinese deities are described like her, either as humans later deified or as deities in human disguise.

The image of *Guanyin* holding a fish basket is based on a legend also known as “Mr. Ma's Wife.” In the Tang Dynasty (809 or 817), the story emerged that one day a lovely woman appeared in a village carrying a basket with a carp in it. She attracted many men's marriage proposals. Her selection process was a contest – who could memorize the entire *Lotus Sutra* that she carried under the fish, in 3 days. Only a Mr. Ma could do it. But just before the wedding, she mysteriously died. They buried her and later a monk came and showed that her bones were linked by a golden chain, indicating that she was a great sage, and he carried her up to the sky, as in a resurrection. Many were converted to Buddhism and she was recognized as *Guanyin*.

The archaic Queen Mother of the West (*Xi Wang Mu*, 西王母), also known as the Eternal Mother (*Wu Sheng Shen Mu* 无生圣母, *Yao Chi'ih*, *Wang Mu Niang Niang* 王母娘娘), is an ancient goddess who never appears on earth (thus remaining pure) and grants children. She was adopted by the Daoists and gives the gift of immortality and the secrets of eternal life. She is worshiped by both the elite and the masses. She was the most famous Chinese goddess before *Guanyin* and may well have been a model for *Guanyin* (Yu 2001, p. 480). She provides the best archaeological evidence of archaic goddesses – bone carvings from the Shang (1760–1122 BCE) (Despeux and Livia 2003, p. 25; Yu 2001, p. 409). During a drought in 3 BCE, she was worshiped by masses of people with straw manikins of her singing, dancing, and drumming around fires (Yu 2001, p. 410). She rules from the mythical Mt. Kunlun; she saves people and dispenses peaches of immortality, notably to emperors. Her cult involves ecstatic spirit possession. The Queen Mother is the essence of cosmic and bodily *Yin* and teaches how to balance *Yin* and *Yang* in life, including sex, and thus live a long life and become enlightened (Despeux and Livia 2003, pp. 25–47).

An important Daoist goddess is *Ma Zu* (*Ma Tsu P'o*, *Mazipo*), a fisherman's daughter from Fujian (Perkins 1999, pp. 319–320). She refused marriage and developed herself spirituality until she was able to project herself and influence nature. She used her powers to rescue her brothers and father, who almost drowned. She died early but continued to safeguard fishermen and traveling traders. She is also known for granting children and is very popular in Taiwan (Sangren 1983, p. 8). Integrated into the Daoist pantheon in the fifteenth century, she is still a popular deity in southern China. Like *Guanyin*, she remained celibate and made a vow to rescue all, and in her immortal form she responds to the sincere chanting of her name (Despeux and Livia 2003, p. 65).

Tara (“eye”), originally a Hindu goddess, in south Asian Buddhism is one of the primary emanations of *Avalokiteshvara*, born from his tears or a ray of light from his eye. The white *Tara* reveals her compassionate side. Whether

called a Bodhisattva, Buddha, or deity, she is a savior who hears the cries of those suffering in *samsara*. Tara appears in art at the side of *Avalokiteshvara*, and *Tara* and *Guanyin* are also called “sisters of *Amitabha*” (Stein 1986, p. 35). The eye appears in *Guanyin* art also. John Blofeld sees *Tara*, who comes to the aid of needy mortals, and *Guanyin* as identical, although *Tara* is not well known in China (Blofeld 1977, pp. 53–64, 40–41). Many important themes from her predecessors were woven into *Guanyin*’s tradition.

## Psychology

Exploring why *Guanyin* became feminine, we must look at traditional Chinese gender relations. Does *Guanyin* offer a psychologically tame balance for the ancient traditional role of women as subservient, portrayed in the saying “I was born a woman because of evil karma in a previous life” and the scornful relegation of women to an impure role in life due to their reproductive functions (“The Blood Bowl Sutra” – 1194 CE)? Women were taught to detest their bodies and could only hope to escape Hell by being reborn as a man (male repression of shadow by projection onto women).

Or does *Guanyin* function as a more bold, compassionate, saving contrast to that repression, even a feminist opponent to that? The answer is that both themes are offered, as in the story of *Miao Shan*, who rebels against women’s subordinate position in marriage demanded by Confucian filial piety, by seeking to become a nun, but then sacrifices her own flesh to save her father, which shows loyalty to filial piety, as well as her Buddhist role as savior (Boucher 1999).

Daoism also views the feminine in an ambivalent way. It sees the *Yin* energy as a positive cosmic force in women but in contrast with a strongly patriarchal view of *Yang* from the Confucian tradition that suppresses women and sees them as polluted by their reproductive functions. The strong Confucian preference for a son to carry on the family name is a social denigration of girls not easily overcome by a Daoist balance of *Yin* and *Yang*.

Male-dominated Han Dynasty (206 BCE–220 CE) rulers and their formal heavenly gods pushed aside the goddesses and subordinated women, so, despite women’s stronger roles in Daoism and ancient traditions such as the Queen Mother of the West, their needs went largely unmet until they were filled by *Guanyin*. The personal and more inclusive needs of men and women of all classes were also met by *Guanyin* (Yu 2001, pp. 412–416). Goddesses cannot assure the political empowerment of women in a patriarchal society, but they can provide deep-seated spiritual guidance, comfort, and some amelioration of patriarchal authority. The Maoist revolution did free women from much ancient oppression, and now religions in China are expanding.

*Avalokiteshvara* is primarily a Bodhisattva of compassion and a cosmic savior from perils but was also commonly identified with royalty in Southeast Asia and Tibet. In imperial China the emperor was legitimized by the Confucian “Mandate of Heaven.” By contrast, *Guanyin* was not identified with any kings or queens, although she does appear in a royal court in the novel *The Journey to the West*. People of all social classes, especially women, and even great sinners knew *Guanyin* more for her mercy and kindness. No one native Chinese goddess before *Guanyin* had all of her qualities (Yu 2001, p. 5).

Chinese spirituality is highly syncretic and unique and spread across East Asia. Sometimes people do not even realize that they are blending Buddhist meditation, Confucian filial piety, Daoist Yin-Yang exercises, and archaic ancestor or *Xian* worship. Therefore, it is not surprising the *Guanyin* is a syncretic blend.

*Guanyin* is a strong goddess who helps balance ancient patriarchal traditions, providing women with access to divine power, giving them pride (ego strength), and counteracting patriarchal assertions of pollution (shadow projection). She provides a more egalitarian alternative to Confucian hierarchical class traditions. She helps women wrestle with ancient Chinese versions of Freudian family dynamics (filial piety and conflict). She helps people of all parts of society transform their shadow archetypes

patterns (monsters, tyrants) into higher spiritual devotions to the Buddha. She is a warm, maternal spirit of divine compassion.

Unlike remote divinities or sages who appeared long ago, *Guanyin* is very “present,” in methods of bringing the unconscious depths to the surface through ritual and spontaneous altered states – chanting, singing, fasting, dream interpretation, and visions. The numerous reports of her saving miracles continuing into the present show an active openness to numinous powers available at any time. This contrasts with the “disenchantment” of industrial societies that seeks to strip the world of transcendent wonder. Accounts of her conversions emphasize not just her overwhelming power, but people making decisions to change their lives, which in Western Jungian terms maintains free will as the divine savior archetypal image transforms the ego. *Guanyin* follows the ancient Asian Tantric pattern of Kundalini as she transforms the shadow effects of the lower chakras by moving them upward, as in the “Monkey” conversions of dragons and monsters into devoted seekers of the Dharma and in the lotus image. *Guanyin* is a widespread, uniquely Chinese goddess with a Buddhist core and background of Daoist and indigenous goddesses.

## Gurdjieff, George

Sheldon Brown<sup>1</sup>, Patricia Hemminger<sup>2</sup> and Jonathan Pepper<sup>3</sup>

<sup>1</sup>Pleasantville, NY, USA

<sup>2</sup>Sparta, NJ, USA

<sup>3</sup>New York, NY, USA

A century has passed since George Ivanovich Gurdjieff, born in Armenia (1866–1949), offered an esoteric teaching based on knowledge and methods of “awakening” long forgotten in the West. His mystical teaching focused on self-awareness, as is shown by the title of his book

*Life is Real Only Then, When 'I Am'* (1999). The outer form and character of his teaching changed considerably during Gurdjieff's lifetime in response to changing external conditions, to the needs and understandings of his pupils, and to make possible the continued transmission of his life's work. The record of accounts by his pupils, the growing influence of his writings, and the living legacy of centers established throughout the world attest to the remarkable scale encompassed by his vision.

## History

George Ivanovich Gurdjieff was born in Alexandropol (now Gyumri, Armenia) on the Russian side of the Russo-Turkish border, probably in 1866. We know of his early life from his own account in *Meetings with Remarkable Men* (Gurdjieff 1963/1975/1985). Gurdjieff was deeply influenced by his Greek father, an *ashokh* or storyteller with an encyclopedic knowledge of traditional songs and folklore, who exemplified qualities of integrity, honesty, conscientiousness, impartiality, and inner detachment despite external misfortune. Gurdjieff was also influenced by his tutor, Dean Borsch, a member of the Russian Orthodox Church, who introduced him to such perennial questions as how to conceive of God, the nature of the soul, and the basis for objective morality. A third influence was the extraordinary paranormal phenomena that Gurdjieff witnessed as a boy, which neither his studies nor his teachers could explain.

As a young man, Gurdjieff moved to Tiflis (now Tbilisi, capital of Georgia, east of the Black Sea) and became an interpreter for the Transcaucasian Railway Company. His burning question became a search to understand the meaning and aim of existence. He expressed this as "an irrepressible striving to understand clearly the precise significance, in general, of the life processes on earth of all the outward forms of breathing creatures and, in particular, of the aim of human life in the light of this interpretation" (Gurdjieff 1933–1974). Convinced that transmission of forgotten knowledge

must still occur, for more than twenty years, Gurdjieff embarked on wide-ranging journeys from North Africa and the Middle East to Tibet. These travels led to intimate acquaintance with schools of esoteric knowledge from sources including esoteric Christianity, Muslim Dervish orders, and Buddhism.

In 1912 Gurdjieff began to assemble pupils in Moscow and St. Petersburg and offered the comprehensive teaching that he had so painstakingly sought, drawing from diverse religious, philosophical, psychological, and cultural (folk wisdom) sources. He soon attracted a number of prominent pupils, including P.D. Ouspensky, a Russian journalist and author of several books on spiritual search, the Russian composer Thomas de Hartmann, and his wife, Olga.

It appears that Gurdjieff planned to establish an institute where his teaching could be studied and put into practice. However, the Russian revolution made it necessary for him and his pupils to move, first to Essentuki in the Caucasus, then by an arduous mountain journey on foot to Tiflis, then to Constantinople, Berlin, Dresden, and eventually to France where he was at last able to establish an institute in secure conditions. Throughout this period of emigration, the published record of his pupils attests to intense training designed to educate and harmonize all parts of a human being and to correct the lopsided development resulting from contemporary culture and education (de Hartmann 1964; Ouspensky 1949–2001). It was during this time that Gurdjieff met the artist and theater designer Alexandre de Salzmann and his wife, Jeanne, a Dalcroze-trained dancer. Jeanne became his foremost pupil and worked to spread his teaching after his death.

In 1922, Gurdjieff opened the Institute for the Harmonious Development of Man at the Prieuré in Fontainebleau-Avon, outside of Paris. Leading intellectuals and artists, among them A.R. Orage, editor of the British periodical, *The New Age*, from 1907 to 1922, and mentor of an entire generation of notable authors, were among those attending the Institute. The regimen included vigorous physical work, evening lectures, and practice in the Sacred Dances. In a unique

collaboration, Thomas de Hartmann converted often complex melodies, presented briefly by Gurdjieff, into complete piano compositions that were then played for the assembled community. In the daily life of the Institute, Gurdjieff used methods, both challenging and often remarkably compassionate, for helping his pupils to work on themselves and bring the three parts of a human being – head, feelings, and body – into a state of balanced awareness. This first awakening opened a new possibility of consciousness necessary to become what Gurdjieff called “a man without quotation marks” (Gurdjieff 1973–1991, p. 91).

Public demonstrations of the Sacred Dances, also called Movements, and meetings took place in Paris, New York, and other cities in 1923–1924. Groups formed in New York and continued to meet with Orage until 1930. In July 1924, a car accident not far from the Institute left Gurdjieff in critical condition for several months. As he recovered, he began delineating his ideas in a series of three books: *All and Everything: Beelzebub's Tales to His Grandson* (1950/1963/1992), *Meetings with Remarkable Men* (1963/1975/1985), and *Life is Real Only Then, When 'I Am'* (1974/1978/1999).

Until the early 1930s, when the Institute closed owing to the worldwide Depression, students from Britain and the United States would go to the Institute to work directly with Gurdjieff, and he established a pattern of frequent travel to the United States to work with his pupils. They were the first to hear his still evolving literary works, characteristically read aloud in small circles. During the Nazi Occupation, Gurdjieff continued to meet at his apartment in Paris with small groups of mainly French pupils.

After the war Gurdjieff traveled to the USA again, and many of his older pupils, with their own students and children, returned to work with him in France during the last years of his life. In his cramped Paris apartment, he hosted elaborate lunches and dinners, remarkable teaching occasions often ending with Gurdjieff's own music, which he played on a harmonium. In these conditions and in the presence of Gurdjieff, many

students, by their own accounts, experienced moments of intense self-discovery. Gurdjieff died in Paris in October 1949.

## Gurdjieff's Ideas

Gurdjieff offered a comprehensive framework for inner development in the context of a cosmology. The Gurdjieff Work, his method and ideas, are commonly referred to as the Fourth Way. He taught that the other three ways – the way of the yogi, the fakir, and the monk – focus on one or another of the parts of a human being (mind, body, feeling) and often call for a retreat from life. Gurdjieff believed it to be essential to address all three parts at the same time in the midst of life. The Institute for the Harmonious Development of Man was the blueprint for what is practiced at Gurdjieff centers today, which includes practical work, sacred dances, meditation, and the study of ideas. The aim was to help the three centers of an individual function in harmony, removing barriers to inner development and deepening receptivity to more subtle influences than ordinarily perceived. The essential step in the Gurdjieff Work is to sincerely face one's actual situation, in this moment, now.

Gurdjieff taught that our psychological and spiritual development is ordinarily incomplete and imbalanced. For human beings four states of consciousness are possible – sleep, the waking state, self-consciousness, and objective consciousness – but we ordinarily live only in the first two. Human beings must “work on themselves” in order to realize their full capacity and manifest their true nature. However, as we ordinarily are, we are incapable of maintaining the psychological effort necessary for self-knowledge and inner transformation. A common analogy is that we are “asleep” or “in prison” – slaves to the domination of an associative mind that fosters an illusory self-image and obscures a truer vision of what we are. Gurdjieff asserted that the knowledge required to correct these distortions and to enter the path of self-transformation exists and has been passed down

to the present time. He often referred to fragments of this knowledge remaining evident in religion, art, music, folklore, and science.

In order to begin the process of inner development, Gurdjieff believed that we need to see our situation as it truly is. A human being's three aspects – mind, body, and emotions – do not work cooperatively but interfere with each other, causing a loss of the energy that is needed to become more deeply aware of our being and purpose. Through what he called “self-observation” and “self-remembering,” Gurdjieff indicated that we could begin to have a true sense of our situation, which is that we are not fully present or aware, but are instead lost in imagination. We begin to see the false sense of unity, our multiple “I’s” that vie for supremacy, chronic tensions, identifications, unfounded reactions, and judgments of ourselves and others. It becomes evident that we do not direct our lives, although we imagine that we do. These insights resonate with Freud’s and Jung’s psychological views of the therapeutic power of becoming aware of one’s unconscious as well as the Buddhist view of the need to “awaken.” But what is missing from modern psychological theories, unless they are informed by some spiritual influence, is the idea of other levels of consciousness beyond our ordinary waking state and of the efforts required to reach or maintain these (Skynner 1996, p.136).

With this understanding of our true situation comes a feeling of something missing, an emergent intuition that our participation in our lives is a shadow of what it could be. Rather than seeking to escape this feeling of lack by ignoring it or blindly trying to overcome it, Gurdjieff taught that the effort to continuously observe this situation allows us to open to a finer level of experience than ordinarily perceived. It is from these impressions that a new sense of oneself and one’s place in life can arise.

Only through sincere acceptance of our situation can we begin to live our birthright as human beings and manifest our true potential, living in touch with objective conscience and with our three parts in harmony. And only by the practice

of “self-observation” and “self-remembering” can we rediscover that we are composed of two natures: an ordinary nature necessary for functioning in life and an inner nature through which we can be connected to more subtle influences.

## Gurdjieff Work Today

Today, more than 60 years since the death of Gurdjieff, the Gurdjieff Work is active and thriving in groups around the world. Before his death in 1949, Gurdjieff entrusted Jeanne de Salzmann and other close pupils to help continue to transmit his teaching. Major centers were created in New York, Paris, London, and Caracas and more in many other cities.

## Methods

While the specifics may vary, all groups related to the four main centers engage in the following forms of work:

*Group Meetings:* Most groups have weekly meetings as peers or facilitated by more experienced students, where pupils explore their understanding gained through study of Gurdjieff’s ideas, from the experience of exercises, and from the effort to face one’s situation while being in the present moment.

*Movements:* Gurdjieff left a great many Sacred Dances or Movements derived from his encounters with esoteric and religious cultures in which sacred dance remained a living vehicle for self-study. The Movements are a precise series of positions, often complex and beautiful, accompanied by Gurdjieff’s and de Hartmann’s piano music.

*Meditation:* Most groups have a regular sitting practice, which serves as a support for individual and collective inner search.

*Practical Work:* Preparation for “work in life” is explored as a community during intensive periods, from one to ten days, with activities such as cooking, crafts, and carpentry combined with study, Movements, and sittings.

A large volume of literature, music, film, and other material exists from and about the Work. However, it should be noted that the Work is an oral tradition. While the materials can be inspirational, thought-provoking, and supportive, the actual transmission of the teaching can only occur directly through what is today called “the work together” – and not only by reading or conventional study or thought. The Work is a living teaching, now in its third and fourth generations.

## Hafiz

Ali Ayten  
Department of Psychology of Religion,  
Marmara University, Istanbul, Turkey

It is an Arabic word used to identify the one who entirely memorizes and recites the Qur'an, the holy book of Muslims, which is over 600 pages with more than 6,000 verses. The word *hafiz* is also used for those who memorize the sayings of Prophet Muhammad in certain numbers, but these are rare.

The first to memorize the Qur'an was naturally Prophet Muhammad as the Qur'an was revealed to him. Given that the Prophet was an unlettered man, his early followers eagerly recorded and memorized each new revelation as it was revealed. By the time the Prophet passed away, many had memorized its entirety. This custom has been kept up throughout the Muslim world, and hundreds of thousands have memorized it. Although the number of those who endeavor to memorize the whole Qur'an seems to have been decreasing in the age of computerization, it is still one of the highest goals in Muslim life to become a human repository of the Qur'an. Being hafiz is still one of the most rewarded honorifics in Muslim society. The *hafiz* feels a psychological pressure on himself/herself to be a committed, decent, and virtuous member of the society as she/he is believed to bear a sacred trust in his/her mind.

Prophet Muhammad encouraged his followers to read and recite the Qur'an, if not to memorize its entirety, and cherished such followers. In the first centuries of Islam, mosques were used to memorize the Qur'an, but later, special courses in *madrasas* (Islamic school) or a special school called school of memorizers (*dar al-huffaz*) were opened. In the beginning, teachers developed various techniques of their own, but these have been evolved into specific methods over time. Some asked students to memorize verses in fives first before going into the next ten. Some favored memorizing page by page to repeat the already memorized page the following day. Students begin memorizing the Qur'an at very early ages and many memorize the whole Qur'an before adolescence.

## Hajj

Ali Ayten  
Department of Psychology of Religion,  
Marmara University, Istanbul, Turkey

Hajj is an Arabic word meaning to face and visit a sacred place. It is one of the five pillars of Islam.

The *Ka'bah*, in the city of Mecca, Saudi Arabia, the house of God (Allah) built by Prophet Abraham and his son Ishmael, is the only pilgrimage site in Islam. It is a duty of Muslims to visit the *Ka'bah* once in a lifetime if one can afford it financially and physically. Currently, three million Muslims make hajj every year.

The ritual of hajj is performed on certain days of the year, the first days of the twelfth month (*Dhul-Hijjah*) of Islamic calendar, followed by the Festival of Sacrifice. Visits to the *Ka'bah* at other times are called *umrah*. The obligatory rituals in *hajj* are to circumambulate the *Ka'bah* for at least seven times and stay at the hill of Arafat, not too far from the *Ka'bah*, for some time on the 9th day of the twelfth month. Other rituals include symbolic pebble throwing at an effigy of Satan as well as walking quickly between two locations called *Safa* and *Marwa*, also in Mecca, between which Hagar, the wife of Prophet Abraham, searched for drinking water for her son Ishmael. One who performs the hajj is called "*haji*" (pilgrim), a highly respected title in the Islamic world, which encourages one to live a moral and religious life by keeping away from sinful acts. All pilgrims are supposed to wear white garments (a pilgrim's special dress called *ihram*) during *hajj* which represents the fraternity of all races and nations.

The ritual of hajj is supposed to affect the pilgrim deeply and transform him/her spiritually. It covers many symbolic and sentimental acts. The white gown, having no other belongings, represents physical and spiritual purity to make the pilgrim feel humble and that she/he is nothing but an ordinary being ever dependent on the Lord. It also symbolizes that the person is bereft of worldly desires and ready to return to the Creator as she/he was born. Millions from every color, race, and nation meet around the *Ka'bah* to feel united in a spiritual ambiance leaving all differences behind. Pilgrims place their hands on the black stone (*Hajar al-Aswad*), which is believed to have descended from heavens, located on the corner of the *Ka'bah*, at every turn of circumambulation to renew their submission. Pilgrims walk in patience between the hills of *Safa* and *Marwa* renouncing unwanted habits.

By throwing pebbles at an effigy of Satan, they symbolically remove themselves from Satan, who endeavors to lead humans astray. And they finally slaughter an animal to show that they are ready to sacrifice what they have for the sake of their Lord. Hajj, more than anything, is a practice for the Day of Judgment with millions of people from all over the world gathering around the house of God. Pilgrims therefore feel the imminence of the Day of Judgment when they will account for their acts in this world.

## Hallucinations

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Numerous theories have been put forward to account for the origin and persistence of hallucinations among the human species. Historically, endogenously arising hallucinations were seen as evidence of either divine or demonic possession – usually the latter. Orthodox psychodynamic theories view hallucinations as unconscious projections of neurotic conflicts or as externalized wish-fulfillment fantasies, while biologically situated theories interpret them as dysfunctions of the brain – typically involving the neurotransmitter dopamine. Hallucinations may occur in any sensory modality – visual, auditory, olfactory, gustatory, tactile, etc. – with auditory and visual being the most frequent and the most frequently associated with psychotic disorders such as schizophrenia.

Hallucinations may be stimulated exogenously with the imbibition of certain psychoactive substances. Pharmacologically classified as

hallucinogens, these substances would come to be known in common culture as psychedelics (mind-manifesting) and later as entheogens (god-manifesting). Regardless of moniker, the constellation of effects produced by compounds belonging to this group includes altered perceptions of reality and self, intensifications of mood, visual and/or auditory hallucinations, distorted sense of time and space, and an enhanced sense of meaningfulness. Modern pharmacology distinguishes psychedelic agents from other classes of drugs in their unusual ability to produce the aforementioned effects that are known only to occur in dreams or “times of religious exaltation.” Prevalent medical models reductively view hallucinations as the result of disrupted information processing in cortico-striato-thalamo-cortical feedback loops that facilitate the filtering of external stimuli.

Entheogens maintain an important, albeit controversial, place in the history of religions. There is ample evidence to suggest that mind-altering compounds have been used since remotest antiquity by virtually all peoples of the Earth to induce altered states of consciousness. Particularly important in the shamanic context, the ritual consumption of substances (*ayahuasca*, *peyote*, *mescaline*, *Salvia divinorum*, etc. – all plants and plant extracts which generate powerful hallucinations) extends across all cultures and throughout all times, including Siberia, Asia, Europe, and North and South America. Approximately 150 psychoactive plants have been identified in recent ethnographic research as still being used in indigenous religious customs today.

As the academic study of religion began to develop at the dawn of the twentieth century, efforts were redoubled to apprehend the historical opacity of religious texts and to link the mythic places and potions of the past with physical locations, actual plants, and historical people.

The amateur ethnomycologist R. Gordon Wasson is perhaps best known for his work on the ancient Vedic god Soma. In a book as internationally reviled as it was universally lauded, he put forth the theory that Soma was one in the same with the fungus known as *Amanita muscaria* – or the fly agaric – which,

once imbibed by the officiating priests, was then passed through the body and voided by the bladder only to be drunk again, the process resulting in dramatically altered states of awareness. He theorized that the entirety of Eastern religion owes its modern philosophical orientation to the ecstatic visionary states that Soma produced once consumed.

In a later work written in conjunction with Albert Hoffman, discoverer of LSD, he put forth the theory that the beverage known as *kykeon*, an intoxicating brew central to the rites of the Eleusinian Mysteries, was, in fact, a fermented derivative of barley containing ergoline alkaloids from the ergot fungus, from which LSD was originally synthesized.

In a similar vein, the Pythia of Delphi is believed by some to have entered states of ecstatic trance after inhaling the noxious and hallucinatory fumes rising from the fissures of her subterranean abode before offering oracular advice. The alleged identities of these vapors have spanned the entire spectrum of hydrocarbon gases, but most authorities agree that ethylene, which has been empirically confirmed as producing trance-like states in persons exposed to sufficient quantities and concentrations, is the most likely candidate. These are but three of many such theories attempting to link the intoxicants of antiquity with known mind-altering compounds of the present.

The post-Enlightenment lenticular structures of the modern age have been brought to bear on the issues of entheogens. Inquiries from fields as disparate as psychology, neurology, theology, and medicine have all made significant impacts in advancing our collective understanding of these perplexing substances and their even more perplexing effects. Beginning in the 1950s, government sponsored research projects on psychedelics ranged from efforts to “cure” schizophrenia (as the effects were seen to temporally mimic psychotic states) to the treatment of alcoholism. More existentially oriented projects such as psychedelics’ effects on quality of life as well as exploration into how transcendent states are neurochemically mediated were soon to ensue.

Psychologists were quick to take note of the transformative potential of psychedelics, particularly of how a confrontation with death in a ritual context could lead to a reduction in the fear of mortality. Timothy Leary, Ralph Metzner, and Richard Alpert (1995), all on faculty at Harvard, began a series of experiments investigating the effects of LSD on initiating transcendent mystical experiences. This psychologization of spirituality would prove to be inextricable from the transmission of Eastern religious traditions to the West, although this indebtedness toentheogenic sources would remain infrequently acknowledged.

Research was to effectively cease in 1963, when access to these substance became restricted, making them nearly impossible to procure. Due to the incendiary rhetoric surrounding the dangers to both society and self that hallucinations purportedly posed, public interest soon subsided along with the Academy.

## Commentary

Presently, entheogenic research is enjoying a scientific recrudescence. Experimental treatments for addiction using ayahuasca, psilocybin, and ibogaine have already been met with impressive success. New research on ketamine and the inducement of near-death experiences (NDEs) holds much promise for the continued unlocking of the mysteries of the mind. Perhaps the most beguiling question of all becomes then: how can we understand alleged alterations of consciousness without first understanding consciousness itself? This crucial question is central to the concerns of both psychology *and* religion and will continue to unveil progressively deeper accounts of these mysteries as inquiries of this nature continue to unfold within the fields of psychology, religion, and the meeting of the two.

## Hanging and Hanging God

John Eric Killinger

The Intermundia Press, LLC, Warrenton,  
VA, USA

Deriving from two Old English words *hangian* and *hon*, and supported by the Old Norse *hengjal* / *hanga*, “to be suspended,” *hanging* is also influenced by the Sanskrit *sankata*, “hesitate,” and the Latin *cunctari*, “to delay, defer, suspend.” Despite the fact that the terminology “hanged” is usually reserved for legal language, the word has also extended into metaphoric usage (e.g., *I'll be hanged*, *hang-up*, and *hanging out*). There are affinities in Hebrew (תָּלָה, *tālā*, “hang up, let down, dangle, put to death by hanging,” Genesis 40:22, 2 Samuel 21:12; Esther 9:14) and Greek *kremamai* and *kremannymi* (Κρεμάμαι in the LXX (Septuagint), but seven times as Κρεμάννυμι in New Testament, referring to dependence on the entire law and the prophets (Matthew 22:40), execution of the two crucified with Jesus (Luke 21:39), and specifically to “crucifixion” in Galatians 3:13, even though it is derived from the Deuteronomic code (לִיּוֹלָא, *tālā 'al* in Hebrew for “hanging after execution”). With the prepositions *around* and *on*, this Greek usage also literally meant hang, as in the millstone hung around one's neck (Matthew 18:6) and the snake that bit Paul on the hand

(Acts 28:4), respectively. Hanging upside down, as St. Peter reputedly suffered, is a mark of humiliation and derision, a reversal of what the person stood for prior to being hanged. Such a method of hanging was called “baffling” (Spenser 1978, p. 956).

Hanging was, according to the Old Testament, allowed but seems to have occurred *after* a person was executed. In compliance with Deuteronomic law, the body was to be removed before nightfall so as not to pollute the land given by God as an allotment. Even as early as the story of Joseph in Egypt, hanging consisted primarily of beheading followed by the displaying of the decedent’s head on a pike. King David’s eldest son Absalom caught the long locks of his hair in the low branches of an oak tree during his flight and was left hanging “between heaven and earth.” Disregarding the order to spare the king’s son, Joab, David’s chief general, kills Absalom with three spears to the heart (2 Samuel 18:9–15).

A liminal feature occurs in hanging. This is particularly true with regard to hanging gods such as Jesus the Nazorean who claims oneness with God, Odin the Norse All-father, Attis, and Osiris, who prior to his Dionysian dismemberment hung like Jesus for 3 days. According to Frazer (1914/1936, 1922/1996), the Phrygian satyr of Lydia, Marsyas, along with Adonis, Artemis, and even the fair Helen, ought to be included in this list of hanging gods. We might ourselves include Herman Melville’s Captain Ahab who had a crucifixion in his face (Melville 1967, p. 111) and the twelfth card of the Major Arcana in Tarot known as the Hanged Man. This liminal feature is *intermundia*, a state of being suspended between worlds suffused with death and rebirth – it is the presence of the absence of *ananke*, or necessity. It is not-space space and not-temporal temporality in much the same way as the alchemists called the *lapis philosophorum* the not-stone stone, or *lithos ou lithos* (λίθος ού λίθος). Cicero (2000), in his *De natura deorum*, translates Epicurus’ term *intermundia* as *metakosmios* (μετακόσμιος), the place wherein he consigns the Greek pantheon. *Metakosmios* is derived from the verb *metakosmeō* (μετακοσμέω), *rearrange, modify, and changed in aspect*. Metaphorically it is a new

arrangement, a change of condition, even a change of character, indicating its transformative aspect.

Hanging, this pathos of the god, even human hanging, often occurs outside the city wall. Jesus was crucified on the green hill of Golgotha outside of Jerusalem. Odin underwent hanging on the windswept World Ash Tree, Yggdrasil, away from human and divine contact, yet rooted to all and none. Osiris was encased in Set/Typhon’s beautifully wrought sarcophagus that became hung up and further entombed in the trunk of a tamarisk tree after floating down the Nile, which is also “up” as it would be northward, for as above, so below. Attis, who in alchemy is synonymous with the Egyptian god Osiris, performs his self-mutilation under a sacred pine tree and, in accordance with later ritual, is portrayed in effigy and hung on the pine tree as the officiating leader of the Attis-Cybele rite sheds his own blood to promote the fertility of the crops for the coming year. The Attis-Cybele myth is linked to the Artemis-Actaeon myth (and that of Isis-Osiris) and those of the respective fragmentations of Dionysus and Orpheus, whose misogynistic “madness” causes the Thracian maenads to tear him apart. The spirit of union not yet extracted is still part of the greatest dilemma of human beings today, according to Schwartz-Salant (1995). This is the “conclusion” to the problem and recognition that fragmentation, rather than repression, has a greater significance for development and pathology. Thus, being wounded to the point where one is branded a heretic or even an apostate necessarily moves the soul to action.

Prayers and other cultic acts carried out in the hope of fertile land and crop abundance occur in the rites of Tammuz. Ezekiel 8:14 refers to the lamentation of the women over the death of Tammuz (תַּמְזֻז, Θάμμουζ) as an abomination to the Lord in the kingdom of Judah. Tammuz, or Dumuzi (whose name means “proper son [or child]”), was the Sumerian shepherd who married Inana, died, and was resurrected by her. Even Inana must be executed and hung like a piece of rotting meat in the underworld. When she ascends, she gives up Tammuz in her place.

He escapes, then is captured, only to be freed by the love of Inana. Like Persephone, Tammuz is to spend half the year in the underworld, the other half upon the earth. The mythology of Inana-Tammuz is reckoned to date back to 3000 BCE and encroached upon ancient Palestine, being given some recognition in various circles of the culture of Jerusalem. Ezekiel's astonishment is at seeing the lamentations of the Tammuz cult infringe upon the sacred center of Jewish religion. Despite such lamentations being viewed as supplementary to the worship of YHWH, the abomination of it lies in its being an insult to the "living God" and nothing short of apostasy.

Tammuz is related to Osiris and also to the mythology of the Phoenician Adonis, whose origins are not of the Greek classical period but semitic. According to Zimmerli (1969/1979), the lament of the death of Adonis (the Phoenician vegetation god type) is also attested in the Septuagint versions of 1 Kings 14:13 and Jeremiah 22:18 (242). Adonis' name derives from *adon* (אדון), meaning "master, ruler, lord." *Adōn* is the aleph and tav, alpha and omega, the one who was, is, and *is to come*. The Masoretic text of the Hebrew Bible (Old Testament) uses *Adonai* to refer to the tetragrammaton YHWH, and this would connect Tammuz/Adonis/Osiris with Jesus in this respect. Not only this, it freights the reading of Ezekiel 8:14 with difficulty, imbuing it with a kind of fundamentalist repression, for example, "If you are not with me, you are against me."

The liminal state involved in hanging may be long or short. The unusual swiftness of Jesus' execution, which only lasted a matter of hours, comes as both a surprise and astonishment. Performed as a deterrent against rebelliousness, many Roman crucifixions lasted as long as 3 days. Jesus was forced to carry the *patibulum*, or cross-beam (also "dungeon," "torture"), probably several hundred meters to the execution site where the seven-foot-tall stipes (vertical beam) would have been erected and awaiting him. Curiously, the vertical pole, called *stipes* in Latin, means both "tree trunk" and "instrument of torture."

The chronicling of Osiris the great Egyptian god of resurrection, found primarily in Plutarch (1936), had nine watchers and nine mourners,

aligning it with Odin's nine whole nights and nine songs. Like the division of the uroboros in the *Pistis Sophia* into twelve aeons, Osiris' night realm was divided into twelve parts. In Kabbalah, the number twelve represents the philosopher's stone. Twelve also is represented by the Hebrew letter *lamed* (ל). Lamed is the heart and central letter of the Hebrew alphabet. Because it towers over the other letters, it represents the King of kings, an attribute also given to the Hanged Man, the twelfth trump of the Tarot's Major Arcana. The poles of this Tarot card could refer to the Egyptian two-finger amulet that was placed either in the swaddling of the mummified remains of the deceased or loose in the coffin. These amulets represented the two fingers of the god who helps Osiris ascend the Ladder of Rē.

The Norse god Odin's hanging lasted nine whole nights, according to the *Hávamál* of the Poetic, or Elder, Edda. Like Jesus, Odin suffered impaling with a spear, screamed as he reached for the runes, which might perhaps have been tinged with the horror of forsakenness (as he received no bread or drink-filled horn), and sacrificed himself to himself. In the process, he learned nine powerful songs. As his wisdom grew he came to know 18 powerful charms or runes, the twelfth of these, curiously, concerning the freeing of a hanged man for conversation. This death of god to become god is not unlike the death of Jesus on the cross. It is the death of God effected *in* God, the breaking of old patterns that bind, limit, or restrict one's nature – the interface of *religare* (religion as tied or bound back to a previous state of existence) punishing *religere* (religion as embodiment of reflection and connection) or remembering versus unforgetting, as in the alchemical representation of the winged and wingless birds forever attached to one another. Odin, like Teiresias, goes through a purgation through suffering in token of new insight. Thus the metaphor of hanging as transformative act demonstrates that the hanged god moves through a transition from knowing about to becoming being, as in the movement from knowledge/curiosity to unknowable ultimate reality (K → O).

Like Odin, the Hanged Man card of Tarot's Major Arcana is often depicted with his head

deep in the earth, seeing its secrets as Odin saw the secrets of Yggdrasil. With the card turned upside down, the hanged man appears to be dancing in the abyss over which he had been suspended. This curiously links Odin with trickster associations. Connected with this is the sense of eutony (εὐτόνέω, *eutoneō*), meaning “having or possessing faculties.” Its shadow aspect includes the meaning “distension.” Kestenburg (1978) describes eutony as a stretching out, “transsensus.” Characterized as breathful flowing, eutony/transsensus is similar to the diaphragmatic breathing practiced in yoga and tai chi, as well as choral and opera singing, and the playing of wind instruments that spiral us back to the Phrygian satyr Marsyas and the vanity of his musical challenge of Apollo. As a follower and comforter of Cybele following the death of Attis, he was renowned as a flautist, and because of his fame, he provoked Apollo into a musical contest. Marsyas would have won had not Apollo dared Marsyas to play his pipes upside down. Marsyas lost the duel, with the result that Apollo hung and flailed him upon a pine tree.

Such suffering, then, is helpful to us. It can indeed, as Moltmann (1974) asserts, be spiritually healthy. Despite being vulnerable, afraid, and alone, we wait for what will come and we are on the verge of something greater than we can know or about which we can think or attain through action. That is beginning to experience a new level of consciousness without preventing the advent of what can come, if indeed it is on its way.

## Happiness as a Goal

Mark Greene

Counselling and Psychotherapy, Mercury Pier Publishing, Hong Kong Special Administrative Region of the People’s Republic of China, North Point, Hong Kong

Two questions require attention at the outset. First, whose goal is this? Second, what exactly constitutes a working definition of happiness? This entry does not attempt to address the second question in its short form due to the many

assumptions inherent in the use of the word across all cultures and in all languages. The Chinese word for happiness, for example, is made up of two other words “open” and “heart.” As poetic and evocative as this usage may be, it does not aid in arriving at an actual definition. The term happiness must then be bracketed.

That happiness is a conscious goal at all seems to be a product of the Enlightenment. One such famous example can be found in the United States Declaration of Independence which groups the word among what modernist discourse deems to be basic rights by guaranteeing everyone in America (excluding slaves and women) the right to “life, liberty, and the pursuit of happiness.”

To begin to address the second question, a definition of happiness must be both deepened and broadened. Abraham Maslow’s hierarchy of human needs provides an excellent model with which one can address the psychological experience and physiological requisites that might form such a definition. By classifying five categories of needs in ascending order (physical, security, love/relationship, esteem, and self-actualization), Maslow overlays humanist assumptions with universal needs. This parallels the generally held assumption that happiness as a goal is a universal phenomenon. Maslow goes one step further by proposing that self-actualization, the highest level in his hierarchy, is a need just like any other (water, food, sleep) but one that the individual is unlikely to address until all of the needs underlying it have been met.

## Hasidism

Kate M. Loewenthal

Department of Psychology, Royal Holloway,  
University of London, Egham, Surrey, UK

What is Hasidism? How has it been related to psychology and to the psychology of religion?

## What is Hasidism?

The term “Hasid” occurs quite widely in Jewish texts, particularly those concerned with ethics, generally referring to righteous individuals. Hasidism also refers specifically to the pietist movement which developed in eighteenth-century Ukraine under the leadership of Rabbi Israel Baal Shem Tov (literally “master of the good name,” sometimes abbreviated to BeShT). Hasidism raised morale after the ills of the seventeenth century: the 1648 Chmielnitzki pogroms, which destroyed many communities and the religious disorientation caused by the antinomian Sabbatian movement. Hasidism is often seen as an attempt to dismantle the elitism of Eastern European Jewish life, in which prestige accrued to religious study and to wealth. Hasidism asserted the spiritual worth and potential of every individual. The movement spread rapidly, as the Baal Shem Tov and his disciples traveled with the purpose of freeing poverty-stricken Jews imprisoned for debt, disseminating Jewish teachings including the “inward” aspects, based on kabbalah (Schneerson 1980). Leadership passed to the Maggid of Mezritch and then branched out into a number of schools each headed by a Hasidic Rebbe emphasizing a particular style of divine service. In the second and third generations, the movement was opposed by the mitnaggedim (lit. “opponents”) who obtained the support of the famous Rabbi Elijah Gaon of Vilna, himself a kabbalist and a recluse. He thought Hasidism was yet another form of an antinomian movement. Around 1800 a distinction emerged between the Habad school, which emphasized the primacy of

intellectual understanding in order to arouse spiritual feelings, and the so-called Hagat style, which emphasized the primacy of emotional fervor in worship. The term “Habad” is an acronym for the intellectual divine attributes: wisdom (hokhmah), understanding (binah), and knowledge (daat). “Hagat” is an acronym referring to three first of the seven emotional attributes: kindness (hesed), severity (gevurah), and beauty (also understood as mercy) (tiferet). Hasidic teachings can be seen as the latest stage of the Jewish mystical tradition (Scholem 1941).

By the late nineteenth century, it was estimated that well over half of Eastern European Jewry were identified as followers of one or other Hasidic Rebbe. Eastern European Jewry was particularly devastated by the holocaust, but post-World War II has seen the revival of Hasidic life particularly in Israel, the USA, and Europe, also in Australia and South Africa. Habad Hasidism has been particularly active in deploying emissaries to hundreds of Jewish communities worldwide, forming nuclei of outreach activity. Other schools of Hasidism live in enclave-style communities, and such communities have proliferated and enlarged in Israel, Europe, the USA, and elsewhere. Hasidism is a salient force in so-called “haredi” (strictly orthodox) Judaism, although mitnaggedic and other non-Hasidic styles of strictly orthodox Judaism are also important.

The twin themes of Hasidism are love of God and love of fellow humankind. In practice this involves scrupulous and inspired maintenance of the divine commandments (mitzvot), religious study including the “inward” aspects of Jewish teaching (especially among Habad), and care for others. Dress is distinctive: for men, black frock coats or suits, hats, and sidelocks and, for women, modest dress including sleeves below elbows, skirts below knees, and hair covering.

Other strictly orthodox Jews adhere to a similar dress code and scrupulous observance of the commandments. What distinguishes Hasidism is the close adherence to the charismatic and inspirational leader, the Rebbe, whose advice and blessing may often be sought, which entails a close-knit social community.

As mentioned, Hasidism is informed by kabbalistically based teachings, the so-called

“inward” aspects of Jewish teaching. A classic text is *Tanya* (Shneur Zalman of Liadi 1796/1973), which is of considerable interest to psychologists of religion. Features of this work include a description of the human spiritual yearning to be united with the divine, the incessant spiritual struggle between the good impulse, based on the divine soul, and the animal impulse, towards selfish comfort. Hasidic teaching is not strictly speaking ascetic: the material world is to be used appropriately, according to Jewish law, and in this way the divine sparks that are trapped in creation will be raised to Godliness. The soul has a natural desire to be united with its divine source, and this can be achieved in prayer and in right action. Particular emphasis is placed on charity and kindness to others. Hasidic psychology is thus underpinned by strong moral and spiritual themes. Human psychic structure is a microcosm of the macrocosm, which involves a progressive down-chaining of creation from its divine source, through the four “worlds” of emanation, creation, formation, and action, each comprising the ten divine attributes (wisdom, understanding, knowledge, and seven emotional attributes), until practical action is achieved. This scheme derives from Lurianic kabbalah and expounds the cosmic significance of individual actions.

Hasidic teaching is not addressed solely to Jewish audiences. Rabbi Menachem Schneerson thought that the second section of *Tanya*, which presents a system of contemplation of the spirituality of existence, has universal relevance. He taught that “right living” involves the performance of those commandments obligatory on the particular individual, and for non-Jews this involves the seven commandments of the descendants of Noah (see Clorfene and Rogalsky 1987; Cowen 2003), including belief in the unity of God, the practice of sexual morality, honesty, and avoiding cruelty to animals.

There have been a number of attempts to apply Hasidic insights into the practice and understanding of psychology, some written for lay audiences and others for academic and professional clinical audiences. The latter genre includes Rotenberg (1995), Weiss (2005), and Berke and Schneider

(2008). These authors have used and examined Hasidic and kabbalistic teachings and concepts in relation to psychological and psychoanalytic understanding of behavior and feeling. Rotenberg, for example, suggests that the kabbalistic paradigm of creation may lead to a less assertive-aggressive style of communication, sexuality, and communication compared to the Western norm.

Another genre has been the psychological study of Hasidism and its distinctive features of social organization and spirituality. Schachter-Shalomi (1991) has examined the dynamics of the relationship between the Hasidic leader (Rebbe) and the follower (Hasid) in the one-to-one encounter (sometimes known as *yechidut*) in which the Hasid seeks advice and blessing. Winston (2005) has studied young men and women who have chosen to leave the (Satmar) Hasidic lifestyle; Satmar is often said to be particularly strict in its outlook. El-Or (1994) has studied the beliefs and values of Hasidic women from the Gur group, in *Educated and Ignorant*, in which women emphasize the value they place on their role as the center and foundation of the home. Other studies of Hasidic women have often focused on the outreaching Lubavitch group, for instance, Loewenthal's (1988) study of religious development and commitment in this group and Levine and Gilligan's (2003) *Mystics, Mavericks, and Merrymakers*, a study of adolescent girls. Another important genre involves the attempt to examine the inspirational fervor of Hasidic worship and to distinguish it from psychopathological states: Idel's (1995) work on ecstasy and magic and Mark's (2009) work on mysticism and madness in Braslav Hasidism are noteworthy examples.

A striking feature of Hasidic life is the high value placed on family size: bearing and rearing as many children as possible is a feature of strictly religious Jewish life, with an average of six children per family. Children are seen as a blessing. Family size has an impact on the well-being of the women, men, and children concerned, and this impact is often positive, as has been the impact of the value placed on marital and family stability (e.g., Frosh et al. 2005; Loewenthal and Goldblatt 1993; Loewenthal et al. 1995).

In conclusion, it may be stated that Hasidism, a pietist movement within Jewish orthodoxy, has inspired considerable interest, not only among those looking for New Age-style spirituality but among academic and professional psychologists. Its intense spirituality and kabbalistically based teachings have important psychological content, in which human psychology is depicted as driven by spiritual and moral striving. Aspects of Hasidic life have been studied by social scientists and psychologists, and there is clearly scope for further work.

Although the Hawaiian religion officially was abolished by the monarchy in 1819, these various *heiau*, dedicated to a particular god, goddess, or purpose, still engender awe and respect from the Hawaiians who step lightly into their confines.

For the Hawaiians, though, sacred places included not only the *heiau* and *luakini* but also other significant locations that related to the religious and social system of the people. Among some of these sacred sites included Halema'uma'u Crater on the island of Hawaii where the goddess *Pele* dwelt; the birthing stones at Kukaniloko on Oahu where *ali'i*, royalty, had been born; and the places of refuge *pu'uhonua*, such as the one at Hōnaunau on Hawaii island where violators of the law or defeated warriors could seek sanctuary. The Hawaiian religious system not only consisted of beliefs in multiple and powerful gods and goddesses but also regulated the social system of the people that guided the customs and actions of the people. Sacred spaces are not so much architectural as natural, since Hawaiian religion is so much a part of soul in the natural world.

## Hawaiian Religion

Regina Pfeiffer  
Religious Studies, Chaminade University,  
Honolulu, HI, USA

### Sacred Spaces

Near the sandy shores of the Hawaiian Islands and up in their fragrant mountains exist remnants or restorations of ancient Hawaiian temples, *heiau*, of which there were several types. Larger, sacrificial ones were known as *heiau-luakini*, dedicated to the god *Kū* (Malo 1951), the god of war. These could only be erected by a king or *mo'i* of an island and were the only ones at which a human sacrifice could be made (Mitchell 1992). A chief, *ali'i*, could erect a *heiau mapele*, dedicated to the god of agriculture *Lono* (Malo 1951). A third type, *heiau ho'ola*, was a healing site and was located in each district (Mitchell 1992).

### Kapu

Many aspects of the Hawaiians' lives were based upon the religious beliefs and system. "Every aspect of life was carried out in accordance with deeply implanted religious beliefs" (Mitchell 1992, p. 70). Fishing, planting, eating, healing, and playing were all aspects that connected directly to the gods and *kanāwai*, laws that governed the people. This system commonly has been referred to as the *kapu* system. *Kapu* means sacred or forbidden. Hence, the system identified those aspects of life that were sacred, including persons, places, and events. Briefly, the foundation of the *kapu* system lay within the religious beliefs of the community, with its poly- and pantheistic focus that incorporated animistic tendencies that believed in the habitation of gods and goddesses in the natural surroundings. The *kapu* system first and foremost honored the gods and goddesses. It also kept the presence of the divine in the psyche. For example, since the

ali'i (chiefs and chiefesses) not only represented but also were descendants of the divine, their persons and personal effects were guarded closely to maintain the kapu, the sacredness of the gods within them. Also, as the ali'i walked abroad, māka'ainānā (commoners) prostrated themselves and could not be close enough to be touched even by the shadow. Psychologically, the divine is present in the kapu and its mana (spiritual power) required boundaries.

## Major Gods

All Hawaiians, whether chief or common people, worshipped four major gods: *Kū*, *Kane*, *Lono*, and *Kanaloa* (Malo 1951). *Kū*, as mentioned previously, was the god of war and also represented “the male generating power” (Mitchell 1992, p. 72). In addition, the rising sun was called *Kū*, and the third to sixth nights of the lunar calendar were named and sacred to him as well (Mitchell 1992). The second god in this pantheon was *Kane*, which means male. *Kane* was the creator of the world,

according to Kepelino (2007). One of the names associated with *Kane* was that of *Kane* of the long night, *Kane-i-ka-pōloa*, because he dwelt alone in the darkness and created it (Kepelino 2007). From *Kane* also came light, heaven, and earth (Kepelino 2007). The third god in the pantheon was *Lono*, whose primary concerns were agriculture, fertility, and peace (Mitchell 1992). One major annual festival, *Makahiki*, was dedicated to *Lono*. Lasting for about four lunar months, beginning about mid-October, the *Makahiki* season was a time of rest for all Hawaiians. During this time, no work could be done; no war could be waged; regular religious observances were suspended (Malo 1951). *Kanaloa*, the last of these four gods, was associated with the ocean and ocean winds and was also credited as being the god of the octopus (Mitchell 1992). “In the *Kumulipo*, *Kanaloa* is ‘Kahe’ehaunawela,’ the evil smelling octopus” (Mitchell 1992, p. 74). *Kamapua'a* (“hog child”) (Fig. 1) was fertility-god of agriculture associated with *Lono*. He was a trickster who pursued the goddess *Pele* persistently. His persistence transforms her hot lava into fertile soil (*Kamapua'a*).

## Cosmic Genealogy

The *Kumulipo* was one of the many genealogical and cosmological chants of the Hawaiians. Hawaiians, like other Polynesian groups, had several cosmology stories. They had the narrative of *Papa* as Earth Mother and *Wakea* as Sky Father, but their version did not contain the Maori's forceful separation of the primal parents. As with other Polynesian stories, Hawaiian cosmogony narratives did begin in darkness. Within the first few lines of the *Kumulipo*, darkness, or night as it is translated, is the source of life. Psychologically this suggests an emergence of identity and awareness from the dark unconsciousness. As a religious image, the darkness from which life emerges indicates the vast cosmic depth of divine powers and the coming of human awareness:

Hanau ka pō – Did night give birth.  
 Hanau Kumulipo i ka pō, he kāne; Born was  
 Kumulipo in the night, a male  
 Hanau Po'ele i ka pō, he wahine; born was Po'ele  
 in the night, a female (Johnson 1981, p. 3)

This genealogical chant of more than 2,000 lines followed with a description of how the sea, its creatures, the rest of the natural world, and the human family began.

## From the Ground

Still another Hawaiian cosmogony narrative recorded by Kepilino (2007) also begins in a darkness of deep intense night, when only the gods dwelt at this period, the gods of *Kāne*, *Kanaloa*, and *Lono*. Furthermore, these mythic stories also included a symbolic growth of life, including human life, as emanating from the ground up. This is an image of identity and life coming from the sacred foundation of existence. A Hawaiian story from the *Naua* tradition related that *Wakea* had a child by *Ho'ohokulani* who was born not as a human being but as a *Lauloa* taro taproot. As the taro grew, *Wakea* named the stalk *ha loa* "long footstalk" (Kepelino 2007, p. 192). Later, when a child is born to them, the child is named *Haloa*. Kepilino (2007) wrote, "Now you

must understand that the children born from *Haloa*, these are yourselves" (p. 192). The taro plant itself represented, therefore, each person's connection to the ancestors from below as the deep roots, the grandparents as the corn, the parents as stem, and the children as the leaves. As individuals grow older, their life cycle changes to grow downward to generativity as the major role to fulfill. Thus, psychologically, one's soul emerges from the ancestors underground and emerges from the ground up into a human body.

## Care

Thus, the cosmogony myths provided a sense of identity and location in that the peoples themselves are directly descended from the gods who formed them and also provided the land itself. Because of this direct connection to the gods, the rest of human life was governed by a psychic relationship to the gods, the land, and each other. This psychic relationship was lived by maintaining proper relationships not only with the gods and goddesses but also among the people themselves. There existed a reciprocal relationship built upon a common understanding of the nature of the gods, goddesses, humanity, and the natural world lived as rooted in the land engendering a positive attitude that *mālama*, *care*, existed at all levels of the social structure and within one's personal life. Who one was and one's connection to others and the land depended psychically on this social system. Hence, a psychosocial understanding of human life was rooted in religious beliefs, and its primary feeling is personal and social care.

## Classes and Mana

The social system consisted several strata or classes of human existence, with the *ali'i*, the chiefs and chiefesses, as the highest stratum. They were believed to be descended directly from *na akua*, the gods, and had the greatest *mana* or spiritual power as a result. The direct descent from the gods meant that an *ali'i's mana*, if sustained,

was *kapu* and sacred. Being near an ali'i meant being close to *na akua*, so much so that a safe physical distance was maintained.

The next stratum, the *kahuna* (plural form), was in charge of the religious life of the people and conducted the major religious ceremonies associated with various aspects of life, not just sacrifices to the gods. *Kāhuna* were experts in their particular fields, whether it was offering *pule*, prayers, to *na akua*, healing the sick, or selecting the best koa tree for building. Since the religious life was inseparable from daily life, the *kāhuna* offered the proper *pule*, prayers that were associated with an activity, often at the aforementioned *heiau* sites.

However, one kind of *kahuna* (singular form) instilled fear within the people. That was the individual *kahuna* 'anā 'anā who had the power to pray people to death. People believed in the *mana*, spiritual power, that this kind of *kahuna* possessed and carefully guarded their personal items, including fingernails and hair, so that the *kahuna* 'anā 'anā would not be able to pray them to death. This kind of *kahuna* was utilized to bring death to one's rival or enemy and psychologically was the archetypal shadow or the theological source of evil.

The largest stratum, the *maka'āinana*, was the laborer of fishing, planting, and building. While the people in this stratum outnumbered the ali'i, their fear of the retribution of the gods and goddesses in any breaking of a *kanāwai* and *kapu*, their recognition of the strength of the ali'i's *mana*, and their reliance on the knowledge and *pule* of the *kahuna* maintained the position in society to which the *maka'āinana* adhered. Even after the influx of Westerners and later Christianity, the *maka'āinana* would continue to show deference to the monarchs who led them.

## 'Ohana

All these various social strata knew what their individual responsibilities were in regard to working with one another. A clear demarcation of life and duties with reciprocal responsibilities sustained the social system and provided persons

with a sense of their identity in the overall culture. While later immigrants would consider Hawaiians to be lazy, "Hawaiians seek to nurture human relationships rather than to accumulate material wealth. Commitments to relatives and friends take precedence" (Linnekin and Poyer, p. 44). The religious and social system provided the foundation and basis for relationships that still exist for Hawaiians today, with their emphasis on 'ohana, family. Among Hawaiians, individualism and materialism were not the values consistent with the religious understanding of interconnectedness of humanity to one another and to the natural world. Hawaiians realized their personal identity only as part of the 'ohana that stems from the gods and goddesses themselves. Furthermore, this sense of interconnectedness extended to the ancestors. Even to this day although the *heiau* are not used as places of worship as before, offerings are left at *heiau* in honor and tribute to the ancestors who once believed in the gods and goddesses.

## Healing

Thomas St. James O'Connor  
Waterloo Lutheran Seminary, Waterloo,  
ON, Canada

### Introduction

Healing is a concept and experience that is used by many world religions and professional disciplines including medicine, psychotherapy, pastoral counseling, and family therapy. Parsons (2002) defines healing as the “restoration to wholeness.” Graham (1990) includes body, emotions, mental functioning, family and social relationships, and spiritual life in this restoration to wholeness. In the Hebrew Scriptures, healing is related to *shalom* (peace) and results from righteous living in accordance with the covenant (Graham 1990). Healing is linked to salvation. God is the author of all healing. Often sin is linked to illness and healing of illness occurs when there is reconciliation with God. The *Book of Job* in the Hebrew Scriptures is the exception to the notion of illness as a result of sin.

### Some Religions and Healing

Within Islam, healing is based on the Qur'an and is holistic, i.e., involves the whole person and includes the moral aspects of living (Isgandarova 2005). Muslim physicians were highly trained in the art and science of medicine and included the spiritual in their care for the patient. Avicenna (980–1037 CE) is one such doctor. The traditions (*hadiths*) of the Prophet Muhammad required the building of hospitals and care of the sick. Prayer and reading from the Qur'an are important Islamic practices of healing. In Hinduism, healing is seen as the restoration of balance. The science of medicine is known as the “science of longevity” (*ayurveda*). Illness occurs when the different elements of the body and one's life get out of balance. Healing is achieved through restoring balance involving the use of herbs and

other remedies. In Taoism, illness is connected to the context and healing requires the achievement of integration both internally and externally.

In the Christian Bible, the ministry of Jesus involves healing. Many healing miracles stories are presented in the gospels. Pilch (1998), however, challenges the view that the healing miracles of Jesus are about cure. He argues that these healings are about new meaning and restoration of the ill person to the community. Healing in the Christian context involves the whole person as well as relationships in the community. Christians in the early centuries established hospices to care for the sick and pray for miracles. The focus was not on cure but on care. There is the belief that sin brings illness. Dedication to God and keeping the commandments brings health. However, there is also the notion that sickness could be part of God's plan and the ill were urged to offer their trials for their own sanctification and the sanctification of others. Some Christian denominations such as Roman Catholic and Anglican developed sacraments of healing (Sacrament of the Sick) to heal the sick both physically and spiritually.

### Medicine and Family Therapy

As medicine developed in the Enlightenment period, a split took place between body and soul based on the philosophy of Descartes and Newton. Medicine addressed the body and religion addressed the soul and both sought healing. The physician brought the cure of the body and the priest the cure of the soul. Clebsch and Jaekle (1967) note that healing is an important function of pastoral care and counseling within the Christian church. In modern medicine with the advance of antibiotics and other medical interventions, healing became synonymous with cure. The dualism of body and soul began to break down. Medicine became interested in the whole person and the view developed that the emotions, mind, and spirit are all integrated in the human person and could influence the health of the body. Sagar (2005) and Koenig et al. (2001) see religion/spirituality as offering healing to the

body and mind. O'Connor and Meakes (2005) document an explosion of research and publication on the relationship between spirituality and health in healthcare journals. Medical research agrees that religion/spirituality can be an excellent coping mechanism for challenging health conditions. The more controversial issue is whether religion/spirituality can be a determinant of health and bring healing.

In family therapy, healing is viewed as restoring family relationships. Family therapy emphasizes a systems approach which sees the human person as part of a vast web of relationships. The focus is not so much on the individual but on the relational. Abuse, addictions, violence, disrespect can damage the web of relationships. Healing in these family relationships means striving to facilitate the I-Thou articulated by Martin Buber. Healing involves listening to each other, not being reactive, seeking the good of each other and forgiving. Strength-based and solution-focused approaches assume that there is a healing process within families that is part of their experience (Walsh 1998). Spirituality is one means to facilitate such healing (Walsh 2009). Rovers (2005) uses the theory of Bowen and Bowlby to heal the wounds between couples, and spirituality plays an important role.

### Childhood Pain and Healing

There is some skepticism about healing the wounds that are experienced in childhood. Therapy and life experience can uncover these wounds. The therapeutic relationship is one way of healing the pain and hurt. Bowen and Bowlby addressed the deficits in childhood that resulted from family relationships. Both thought therapy could be helpful but did not believe in total healing. The goal is to manage the pain and seek to develop better relationships as an adult. Pargament (1997) uses the term coping instead of healing in describing the impact of religion on challenging experiences. Coping involves conservation of one's identity and transformation of identity. In psychiatry, the development of new drugs has helped persons cope with depression, schizophrenia, mood

disorders, etc. This biological approach is not viewed as healing the illness but rather helping the person manage and function with the illness.

In our post modern era, healing is experienced in multiple ways: psychotherapy, medical interventions, meditation, walking the labyrinth, prayer, reading sacred texts, talking to friends, exercise, rituals, family therapy, diet, using alternative medicines, silence, belonging to a community, etc. One of the challenges of our age is healing the animosity between groups. Religion and spirituality can work effectively with psychology and science in facilitating the restoration to wholeness (healing).

## Heaven and Hell

Morgan Stebbins

Faculty of the New York C.G. Jung Foundation,  
New York, NY, USA

Heaven and hell seem, at first glance, to be ubiquitous to religious systems. However, there are many ancestor- and spirit-based religions in which there is no such term and in which there is no concern for what happens after death or as a reward or punishment (Boyer 2001). However, in the major religious traditions with developed cosmologies, heaven and hell are described as both cosmological regions (the heavens, the abode of God) and representative of religious consequences. Psychologically heaven and hell refer to experiential states and can be found in common sayings such as “war is hell.”

Although the description and function of heaven and hell vary widely with religious tradition, heaven is usually thought of as peace, bliss, or happiness and hell of course with suffering and punishment.

In the Hebrew Bible, the closest thing to a reference to hell (heb. *Sheol*) can be found in Isaiah (38:18), the Psalms, and Job (7:7), although since there was no concomitant conception of heaven (apart from as an abode of God and the heavenly beings), and since *Sheol* can well be translated as grave, there was not a highly differentiated idea of heaven and hell.

In the Hebrew bible, ideas of heaven and hell developed only very late, finding final form only

in the Book of Daniel. Early on, Job comments scornfully that the dead “lie down alike in the dust” (21:26), indicating that it’s all the same after death. This conception changes slowly, until Psalm 73 identifies moral categories: the false are dispatched “far from thee” and the loyal “near God.” Finally in Daniel we find the introduction of the resurrection (12:20) and differential consequences – the good enjoy everlasting life, while evildoers suffer everlasting defeat. This all changes with medieval Jewish mystical speculation, especially in the Zohar. With the introduction of Kabbalistic traditions, we find a complex system of multiple heavens and their attendant angels.

By the time of the New Testament, however, Zoroastrian speculation had changed the vocabulary of heaven quite a bit. Not only that, very different types of places or experiences are implied by the different usages. For example, in the Gospels heaven is referred to in different places as “the great reward,” the “abode of the Father,” “life everlasting,” “paradise,” “the city of God,” “the kingdom of God (or Christ, or heaven),” and “the joy of God.” We can see in this a huge variety of meanings, especially when Jesus alternately refers to this state as “within you,” “among you,” and “according to your deeds” (cf. the kingdom of heaven (Matthew 5:3), ...of the Father (Matthew 13:43), life (Matthew 7:14), life everlasting (Matthew 19:16), the joy of the Lord (Matthew 25:21), great reward (Matthew 5:12), the kingdom of God (Mark 9:45), the kingdom of Christ (Luke 22:30), the house of the Father (John 14:2), city of God (Heb. 12)). From a psychological point of view, we see the beginning of great differentiation of inner states which finds its apex in Dante’s *Divine Comedy*. In this work, Dante is concerned not so much with punishment but the mystery of how we injure ourselves (this is also the psychological meaning of sin). A saying in the Talmud runs, “The evils others do to me are as nothing compared to the evils I do to myself” (Blumenthal 2009). From this perspective hell is the experience of betraying one’s self and the price that is paid in the moment, not at some future point.

Other major religious traditions have very developed ideas about heaven and hell as well. There is a huge geography of heavens in Buddhist tradition. The *Vinaya* sutra describes seven hells and 26 heavens, each specific to a type of karma (not unlike Dante's formulation). A central Buddhist concept (illustrated by the Bhavacakra mandala) involves the six worlds of rebirth – each represents the results of karmic past and run from the horrific world of hungry ghosts to that of demons, animals, humans, titans, and gods. Although being reborn as a human is not the highest karmic reward, it is the only realm from which one can attain nirvana (Webb 1975). This implies, psychologically, that being fully human is the optimum place from which to grow – regardless of idealizations or collective values.

In Chinese mythology, the concept of heaven was understood on one hand as a synonym of *Shangdi* (supreme deity) and on the other hand as a synonym for nature, especially the sky. Heaven was a state both attainable and manifested in the world and its rulers. The Chinese word for heaven, *Tian*, is a cognate of the name of the supreme deity, and Confucian theorists such as Mozi understood that while heaven is the divine ruler, the son of heaven (the King of Zhou) is the earthly ruler. In fact, heaven would be manifest on earth to the extent that the ruler lived according to the *Tao*.

The Qur'an explains that good deeds lead to an afterlife in Eden. Heaven itself is described in the Qur'an in verse 35 of Surah Al-Ra'd: "The parable of the Garden which the righteous are promised! Beneath it flow rivers. Perpetual is the fruits thereof and the shade therein. Such is the End of the Righteous; and the end of the unbelievers is the Fire." Since Islam rejects the concept of original sin, Muslims believe that all human beings are born pure. In Islam, therefore, a child who dies automatically goes to heaven, regardless of the religion of his or her parents. Furthermore, anyone who has worshipped no other god but Allah will go to heaven, thus including all Christians and Jews. However, there are many levels of paradise depending on how righteous a person is on Earth. The highest level that all Muslims are

encouraged to ask for is *Jannatul Firdaus* (*The Belief in Heaven in Islam*).

The collective projection of what human behaviors lead to suffering changes over time and is always developing. The Vatican recently clarified the gender difference in the experience of heaven and hell. Men, apparently, will go to hell for the sin of lust and will suffer from burning brimstone. Women, on the other hand, will go to hell for the sin of pride and will be broken on the wheel.

In all of these traditions, we find a veritable taxonomy of psychological experience as well as a prognostic system: some hells are harder to recover from, some people are less likely to develop in this life, or will not develop at all. The question to ask is why these nearly ubiquitous other realms have been so widespread. There may have been a time when people genuinely feared the threat of eternal damnation, but a psychological view would look toward a combination of the world-shaping power of the imagination and the innate dissociability of the psyche as the factors which allow human beings to experience and describe very subtle or vague aspects of mind and to offer them in salient, that is, usually concrete form. This also explains why there is no end to metaphysical speculation, since there appear to be an ongoing (and so far untapped) geography of inner states.

## Heidegger, Martin

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Martin Heidegger (1889–1976) is considered by many as the founder of existential or hermeneutical phenomenology. Heidegger's work has been a meeting place at the interstices between Daseinsanalysis (Binswanger 1967; Boss 1963, 1979), continental philosophy of religion (Caputo 1978; Crowe 2006), and existential theology (Tillich 1966; Bultmann 1953; Macquarrie 1999). Given how his work provides the convergence of these disciplines that result in an existential approach to psychology and religion, it behooves us to attune to Heidegger's influence and inspiration for this field of study. What is more, Heidegger's work is thoroughly inspired by his life story, a story that is a tapestry of religious moments and happenings that belie presumptions of his apparent atheism. Martin Heidegger's place in the field of psychology and religion may surprise others who are more likely to consider him as a continental philosopher.

Martin Heidegger was born in Messkirch, Germany, and raised as a Roman Catholic. His father was a sexton in the local parish. He studied theology at a Jesuit seminary in Austria and then at the University in Freiburg. Putting together

his foundation in theological reflection with the genesis of his commitment to phenomenology as it relates to philosophical psychology, Heidegger wrote his dissertation, entitled *The Doctrine of Judgment in Psychologism*, and later finished a thesis on Duns Scotus.

Although presumed to be an atheist, religiosity as a phenomenological experience was central to Heidegger's entire being and works. John Caputo (1978), John Macquarrie (1999), and more recently Benjamin Crowe (2006) have all written extensively on the mystical and religious elements in Heidegger's thought, as a biography about his life that also highlights this religious dimension for Heidegger appropriated titled, *Martin Heidegger: Between Good and Evil* (Safranski 1999).

The relation of Heidegger's work to other religious traditions beyond Christianity may also be surprising. Heidegger contributed to the translation of the Tao Te Ching, and much has been written about Heidegger's work in relation to Buddhism, Taoism, Hinduism, Christianity, and Judaism (Caputo 1978; Crowe 2006). Heidegger's contextual understanding of both situations or events and human existence was ripe for these kinds of comparisons between Heidegger's thought and the deep richness of the world religions. It was out of his religious interest that he came to philosophical psychology and the philosophy of existence, and it can be soundly argued that his religious interests never dissipated; they only morphed over his life as he continually tried to clarify them. His journey was his own variance of faith seeking understanding, but not a faith in propositional or doctrinal beliefs. Heidegger's faith was awaiting for the gift of Being's disclosure.

Much of Heidegger's work was written in his small hut lodged on the hillside of Todtnauberg in Germany's Schwarzwald. There, Heidegger grew more and more appreciative of, and adopted, the simplicity of a peasant's lifestyle. He wore peasant clothing, cut his own wood, and believed the lack of distractions provided the best atmosphere for doing phenomenology. Not only did he write about dwelling *as* building, he lived it. In the *habitas* of his obvious ascetic

proclivities, Heidegger's radical or hermeneutical phenomenology, and its subsequent destruction of metaphysics, offers profound implications for a deeper understanding of homo religiosus.

Hermeneutical phenomenology, pulsating with an ability to open up experiences beyond our typical ways of seeing events and things, offers an existential transcendence from static, mundane, and profane conceptions and comportments in existence to a more open and unfolding of Being. It is not just what one discovers that is transcendent, as the very *process* of interpretation itself that discloses authentic existence, or *Dasein*. *Dasein* is the showing of Being's presence in its coming to "be there" each moment of our lives (Heidegger 1962).

*Dasein* is not a fixed object or thing, as the ego or self is often understood, but the process of "clearing" in which human existence is understood. *Dasein* finds its ownmost possibilities when confronting its own death. By accepting one's finitude, facticity, and what Heidegger called "thrownness," we are freed to value and respond to harkenings for us to stand out in our own specificity and uniqueness in the world. Our ways of being-in-the-world find their significance in light of the circumstantial webs of meaning in any given instance, with each subsequent happening or event carrying its ownmost possibilities for us as enframed by our ever-present and inescapable being-onto-death.

Two Swiss psychiatrists, Ludwig Binswanger (1881–1976) and Medard Boss (1903–1990), brought Heidegger's work on *Dasein* to the attention of psychiatric medicine and later to clinical, phenomenological psychology in what became known as Daseinsanalysis, or existential analysis (Binswanger 1967; Boss 1963, 1979). Daseinsanalysis is practiced around the world, and has its organizational home in the International Federation of Daseinsanalysis, that includes countries such as Brazil, Greece, Belgium, France, Hungary, Austria, Canada, England, the Czech Republic, and, of course, Switzerland. Moreover, it is not uncommon these days to see various international conferences addressing Heidegger's thought in relation to religious phenomena.

What is even more interesting from an existential-phenomenological understanding of the psychology and religion field is Heidegger's infamous "turn" during the period of his latter thinking and writing that led him away from a focus on *Dasein* in the world toward an analysis of *Ereignis*, or happening, event, or circumstance that gives rise to *Aletheia*, or the disclosure of truth. Truth, however, for Heidegger is the very disclosure of Being itself. One can hardly ignore the similarities with theological reflection on revelation. Furthermore, Heidegger's asceticism shows itself again in his invitation toward a meditative rather than calculative approach in understanding phenomena. *Gelassenheit* is called for, or releasement, thus allowing things to unfold in their time and uniqueness.

At the same time, admittedly, an initial view of Heidegger's being-onto-death certainly seems to preclude any otherworldly understanding of spirituality as the possibilities of metaphysical entities residing in a dualistic world. Yet, hermeneutically, even reflections on otherworldliness arise from the circumstantial "thrownness" in which we come to think of such matters. Nevertheless, I do believe Heidegger opens for us another understanding of spirituality that influenced many existential theologians, including Paul Tillich (1966), Rudolf Bultmann (1884–1976), John Macquarrie (1999), and Langdon Gilkey (1976), among others.

In one, concise summation of his relationship to spirituality, Heidegger believed that it is only through an understanding of transcendence do we come to a proper experience of *Dasein* (Heidegger 1977). This conviction locates him squarely, even if unwittingly, within the field of psychology and religion, albeit altering much of what we have heretofore understood about this field. Through Heidegger, we are offered a Daseinsanalytic perspective of psychology and religion.

## Commentary

Perhaps Heidegger's typical absence from historical accounts of psychology and religion, apart

from his destruction and overcoming of metaphysics, may be due to a cautionary ambivalence felt by most people regarding his unfortunate membership and participation in the Nazi party during World War II. Heidegger was strangely silent on this matter both during his membership and up to his own death. Nevertheless, Heidegger's position on these matters is notoriously complicated as he had deep and committed relationships with a variety of prominent Jewish scholars during this time, for instance, Hannah Arendt, Herbert Marcuse, Karl Lowith, and Hans Jonas, and he refused to appoint Nazis officials to administrative posts while rector at the University of Freiburg and openly disagreed with Nazi ideology on racial genetics and other matters, which resulted in being monitored by the Gestapo (Burston and Frie 2006). Heidegger eventually resigned from his appointment as Rector at the University of Freiburg, and withdrew from politics and much of public life, remaining silent on the whole affair. Nevertheless, it is hard pressed to find how Heidegger's life works on how the authentic life is lived by *not* succumbing to *Das Man*, or The They, could in anyway suggest a profascist position. Again, similar to how Nietzsche's *Übermensch* was grossly and tragically misunderstood as a Aryan proposal, Heidegger's disclosure of Dasein in the event of existence was not an inaugural trumpeting for the Third Reich, the latter movement being the opposite of Dasein and more ominous than Heidegger himself even foresaw.

Heidegger leaves us with the possibility of understanding the field of psychology and religion from a Daseinsanalytic perspective. Paul Tillich's (1966) use of Heidegger to shift our understanding of God as *a* being to *Being* itself need not leave us with a false dilemma of choosing theism or atheism. For Heidegger, ontotheology has long since confused the ontic with the ontological or concrete things with the life that clears space for things to be-in-the-world. His destruction of metaphysics, as Benjamin Crowe (2006) has pointed out, may very be influenced by Martin Luther's thought, particularly after Heidegger's break from Catholicism. What is specifically significant is the influence of Luther's *destructio* both

on Heidegger's insistence on humanity's "thrownness" as a conditioning of freedom and of the necessity of clearing space beyond the distractions of *Das Man*.

Finally, Heidegger shows us the inescapability of what I call our "enactments of significance" that are lived out every moment of our lives, which returns us to the hermeneutics of religiosity as well as the religiosity of hermeneutics. When we are left in situations in which Heidegger himself agreed that "only a god could save us," we can be certain that the saving god will be-in-the-world, clearing space and unburdening the heaviness of constricted existence so that we may share in *Dasein's* call toward authenticity and uniqueness.

## Heresy

Clodagh Weldon

Dominican University, River Forest, IL, USA

From the Greek word *haireisis* meaning choice (and by implication that which is chosen by a faction of believers), heresy is that which emerges within the Church which is contrary to orthodox teaching as it has been revealed by God and is thus rejected by the Church as false or “heretical.” Aquinas (1224–1274) describes heresy as a “species of infidelity” in which believers corrupt the dogmas of Christianity. Functioning like a gangrenous disease which infects the body, heresy subverts the faith of the Church and, from an orthodox standpoint, must be removed. Excommunication, military action, inquisitions, and burnings at the stake all feature as means of combating heresy in the history of the Church.

The New Testament exhibits a concern about emerging factionalism within the Christian movement and is replete with warnings about “heresy.” Paul talks of divisions among early Christians in Corinth (1 Cor. 11:19) and warns the Church of Philippi “Beware of the dogs!” a reference to those who mutilate the faith. He

warns believers in Jerusalem of “savage wolves,” men within their group who “will come forward perverting the truth” (Acts 20: 29–30). Peter also warns of “false teachers” who introduce “destructive heresies” and thus bring damnation upon themselves (2 Pet 2:1). In Tit 3:10, purportedly from Paul, we read of what should be done with a heretic: offer a first and second warning and then break of contact with the person. They are “perverted and sinful” and condemn themselves.

The word “heresy” gains ascendancy in the writings of the Church Fathers. In the second century, for example, Irenaeus of Lyons used the word “haireisis” to describe opponents whom he categorizes as those who did not hold to his “orthodox” beliefs.

Multiple examples of heresy emerge in the early Church, most of which focus around exaggerations of either the humanity or the divinity of Christ, the second person of the Trinity. The Docetists, condemned as heretics by Ignatius of Antioch (d.c. 107), taught that Christ was divine and only *seemed* to be human. Representing orthodoxy, Ignatius noted that if Jesus were not fully human, he would not have been able to save humanity. The Ebionites (also known as Adoptionists) taught that Jesus was the adopted Son of God. In response, Irenaeus of Lyons (d.c. 200) said that if Jesus were not “of God,” he could not have saved us. Arianism taught that Jesus is of like substance (*homoiousios*) to God the Father. The Council of Nicea (325 CE) condemned the Arian heresy and proclaimed that Jesus is of the same substance (*homoousios*) as the Father. As can be seen from these three examples, the emergence of heresy within the Church led not only to a condemnation of heretics but to a clearer articulation of Christian doctrine. This articulation finds its expression in the Creeds of the Church. An excerpt from the Nicene Creed, for example, reads, “We believe in one Lord Jesus Christ, the only son of God, eternally begotten of the Father, God from God, light from light, one in being with the Father. . . .” The response to the heresies of Adoptionism and Arianism is clear: Jesus is not adopted, he is “eternally begotten of the Father, God from God”; he is not *like* God in substance but “one in being with the Father.”

## Commentary

Freud has little to say about heresy, other than that it was condemned and punished by the Catholic Church. For Jung, on the other hand, heresy is much more important. He believed that heresy (as that which is rejected) needed to be reincorporated (“reintegrated”) in the interests of wholeness. He thought, for example, that the Christian doctrine of a Trinitarian God who is the *Summum Bonum* was deficient because it neglected the shadow side of the God image. Thus for Jung, that which had been rejected by orthodoxy as heretical because not in accord with revelation – such as the dark side of God – needed to be recovered and brought back to the whole.

## Hermeneutics

Todd DuBose  
The Chicago School of Professional  
Psychology, Chicago, IL, USA

## Hermeneutical Origins

Hermeneutics is the art and science of interpretation. Originally used to interpret texts, initially

Biblical texts and then extended to other texts, hermeneutics evolved into not only a way to interpret literature but also a way to interpret any human experience. In fact, hermeneutics became known as a way to describe how existence works as a whole in that life is an undulating dance between concealment and revelation.

The etiology of the word, “hermeneutics,” is based on the mythical character, Hermes, the messenger, who delivered and interpreted messages from and between the gods. As hermeneuticists and historians Richard Palmer and Norman O. Brown have pointed out, Hermes was a trickster as well and known for his deception and thievery. Hermes stands in liminal space that is neither here nor there but a bridge between one place and another – though not identified with either one (Palmer 1969; Brown 1969). This description of Hermes is apt given the profound potential for bestowing blessings or wrecking havoc as a result of the interpretive process.

Hermeneutics, although addressed by figures as early as Plato and Aristotle, originated as a more formal practice with Rabbinic and Early Church Father concerns for how to interpret sacred scripture. Central to this debate was whether or not scripture should be interpreted literally or allegorically, particularly when application to contemporary concerns was an issue at hand. Adjudicating between conflicting allegorical understandings led to “rules” established for interpreting texts, thus leading to an exegetical approach to interpretation. Historical, contextual, literary, and grammatical frameworks became privileged as essential contexts in which texts should be understood.

Medieval thought and debate led to the continuation of exegetical and allegorical analysis of symbolism, with annotations accompanying interpretations, thus facilitating better possibilities for lifestyle applications. During the Renaissance and Enlightenment, further exegetical tools were developed for use in interpretation, though this time expanding the purview of textual material to any secular text. Hermeneutics continued in this vein until the thought of Friedrich Schleiermacher (1768–1834). Schleiermacher saw the

central task of hermeneutics as a guard against misunderstanding between the author's intentions and the interpreter's grasp of textual meaning. Empathy for the author's intention, and aligning one's own intentions and experience with that of the text, Schleiermacher thought, would lead to better understanding of the text's meaning (Schleiermacher 1977).

Wilhelm Dilthey (1833–1911), though, proposed that understanding is best achieved when actual life situations are the focus of hermeneutical analysis. Hence, he saw hermeneutics as a method by which one could understand the inner meanings of artifacts, actions, products, and experiences of others within human existence and, consequentially, argued that hermeneutics should be applied beyond texts to any human experience (Dilthey 1989). Dilthey also brought to our attention how mediated experience is for us and held firm to his conviction that we cannot understand inner meaning and experience related to any person, artifact, or text without moving through linguistic and cultural filters. These convictions prepared the ground for further developments in hermeneutics.

Martin Heidegger (1889–1976), one of Edmund Husserl's (1859–1938) students, was highly influenced by Dilthey's work, shifted the focus of hermeneutics beyond being a functional tool of interpretation, for texts or human experiences, and, instead, saw the hermeneutical process as descriptive of being itself (Heidegger 1962). The interpreter's very existence is an enactment of interpretation. The truth of one's existence unfolds in the interplay of call and response, of seeking to understand while also disclosing oneself to be understood. We are called to our "ownmost" possibilities and discover them only when we allow ourselves to be interpreted and delimited by our limitations, contingencies, and finitude in each moment of our lives. From the moment we rise from sleep, or even during sleep, we are perpetually interpreting experiences happening around us as well as unfolding ourselves to others in light of their inquiries and engagement with us.

Each significant piece of writing, text, expression, experience, action, or otherwise gains its disclosed meaning when seen against the

backdrop of one's historicity or immediate enactment of one's life story. Moreover, Heidegger, furthering the Augustinian focus on faith seeking understanding, argued that only through our risked and invested pre-understandings within the delimitations of our horizons can we come to know anything. What can be known, though, is not something that can be isolated and held static, as being is perpetually becoming itself through the undulation of concealment and disclosure. Existence only partially discloses itself in any given moment and depends on solicitude or care and concern, to clear space for its further disclosure – which is never complete.

Hans-Georg Gadamer (1900–2002) integrated Heidegger's emphasis on the situatedness of meaning and Schleiermacher's emphasis on the importance of the interpreter's psychology for interpretation and saw the hermeneutical project as facilitating the meeting of horizons. Horizons are the capacities one has to understand, communicate, meaning make, and exist within the given historical and cultural traditions demarcating one's lived experience and perspective (Gadamer 1989). Horizons are inherently limited, thus necessitating dialog for truth to disclose itself. Hermeneutics as being, then, always and already discloses existence's inherent relationality.

Among other seminal figures in the history of hermeneutics, two other names stand out: Paul Ricoeur (1913–2005) and Jürgen Habermas (1929–). Ricoeur's utilized hermeneutics to integrate the field of semiotics with religious experience (Ricoeur 1967). More specifically, Ricoeur sought to understand the existential modes of existence embedded in and mediated through religious symbolism, particularly symbols of sin and evil. Jürgen Habermas (1975), working from within the Frankfurt School of Critical Theory, utilized the power of hermeneutics to critique oppressed social structures and practices.

## Hermeneutics in Psychology and Religion

Michel Foucault (1926–1984), Jacques Derrida (1930–2004), John Caputo (1940–), Hans

Koegler, and Charles Winquist (1944–2002) have all offered various critiques and developments of hermeneutics. Foucault critiqued and reframed how power operates in discourse and relationships through genealogical and archeological analysis of various practices of control. Derrida deconstructed presumptions that discourse could fully represent meaning and experience, by exposing all that is missed in “presencing” practices (Derrida 1980). John Caputo further radicalized Derrida’s deconstructive project by viewing deconstructive analysis as a type of religious experience that functions much like a type of negative theology or apophatic mysticism (Caputo 1987, 2000). Hans Koegler, a contemporary critical hermeneuticist, combines Foucaultian genealogy and Gadamerian hermeneutics to establish a critical hermeneutics that exposes oppressive power practices in relational patterning and dialogical discourse, thus allowing for horizons to meet without domination or submission. Finally, Charles Winquist established a practical hermeneutics in which he invites pastoral practices toward depth relating with others in contemporary cultural situations by allowing interpretations of story and symbol to take us toward deeper dimensions of existence (Winquist 1980).

## Commentary

It is important in the field of psychology and religion that prior to hermeneutics being a way of interpreting texts or human experiences, this art and science was, and still it, a process of “discernment” in general and a “discerning the spirits” in particular. Similarly, “diagnosis” is an art of “completely seeing through or into” another person or situation and also predates contemporary diagnostic practices by hundreds of years. Hermeneutics, therefore, is itself a sacred activity in that its very process unfolds being itself. What is often forgotten is that “divining,” from which the word “divine” arises, is an interpretive process. One could say that the divine, or sacred, is the process of

hermeneutics itself. In this way, the experience of grace, then, is the experience of being truly understood.

Hermeneutics is not a mere “cognitive” activity of neocortical executive functioning, but a holistic comportment of desire that intends communion via the mutual grace of understanding and of being understood. What makes us homo religiosus is our never ceasing desire to understand, as Bernard Lonergan (1904–1984) noted, so that we can become discerning, interpreting, responsible, and loving human beings toward one another (Lonergan 1973/1990, 1957/1992).

College, Ithaca, NY, USA

Hermes was a primordial Greek god, son of Zeus and Maia, a trickster and uncanny rogue, a night fellow, prince of thieves, phallic rascal, and lover of nymphs (Ovid 1955, lines 269–290). This rogue symbolizes the clandestine violation of boundaries and laws. So he was the bad boy of proper society, the thief in the night, and the evasive sneak who bothered with no scruples. He had chthonic roots that were primitive and unheroic, known for evasion and invisibility. Yet he was also called *Argeiphontes*, a heroic “Argus slayer” for killing a monster with 100 eyes, to aid a maiden in a dispute between Jove

and Juno (Ovid 1955, lines 591–780). His Greek presence was marked not by temples, but by herms, the upright phallic stone prisms marking boundaries.

He stole Apollo’s cattle but, pretending childish innocence, denied the whole thing. When Apollo caught him, he saw through his crafty lie. Yet Hermes charmed Apollo with his newly invented lyre and gave it to him, who then gave Hermes a magic golden wand and appointed him god of barter and cowherds. One of his more nurturing images is a youth carrying a ram over his shoulders. He was the guide of souls (*psychopomp*), to underworld Hades, but was also a phallic fertility figure (Homer 1976, Hymn No. 4). Rogues that both steal and bring new life still sneak about at night – that is, in dark shadowy unconsciousness.

For his clever, unscrupulous dodges with words, Hermes was also the god of psychological rhetoric, for the language of tricksters guides the wordsmiths of political speech writers inflating their client’s views, no matter how deceptive, and shooting attacks, no matter how manipulative, onto their opponents. Hermes guides public relations writers promoting a product without mentioning any flaws. He guides financiers devising deceptive schemes and all kinds of profitable trickery. And trickery is a basic part of military strategies.

Hermes, known in Rome as “Mercury” (that shiny, slippery, evasive metal), could put unsuspecting people to sleep or awaken sleepers (Ovid 1955, Pt. 2, lines 32–33). He was a bearer of dreams (Homer 1976, pt. 4, line 14), so psychologically this evasive night fellow carries the unsuspecting sleeper down into the unconscious realm of dreams that baffle the proper Apollonian ego-consciousness – or is he serving Apollonian consciousness?

When mythic Odysseus was on Circe’s island, she gave a potion to his sailors that turned them into swine. But Zeus sent swift Hermes to give a magic protective potion to Odysseus, to prevent him from becoming piggish. Hermes, of the golden staff [says to Odysseus]:

...your friends are here in Circe’s place, in the shape of pigs... Here, this is a good medicine [moly], take it and go into Circe’s house; it will

give you power against the day of trouble (Homer 1967, Pt. 10, line 277ff).

Here Hermes, in the magical depths of myth land, gives the lost heroic Odysseus the secret from a god of how to avoid becoming a beastly swine, under the spell of an enchantment. How many dangerous unconscious blunders could be avoided with knowledge of Hermes' magic transforming potion? Here he serves the Apollonic divine, showing how to avoid the beast.

Hermes' magical tricks take him across the chasm between many opposites, including life and death. At the end of the Trojan war, when the Achaians, led by Achilles, defeated the Trojans and killed Hektor, Zeus sent Hermes to soothe the enmity. Hektor's grieving father Priam wanted to take a ransom of gold to Achilles to trade for Hektor's body. But he dared not approach the Achaians without risking attack. So Zeus sent Hermes to work his magic and lead Priam across the boundary between the armies and ask Achilles to return his son's defeated body. Zeus says to Hermes:

... go now on your way, and so guide Priam inside the hollow ships of the Achaians, that no man shall see him... immediately [Hermes] caught up the staff, with which he mazes the eyes of those mortals whose eyes he would maze, or wakes again the sleepers... (Homer 1951, Pt. 24, lines 335–344).

Hermes led Priam with "many treasures through the swift black night" (Homer 1951, Pt. 24, line 367) across the battlefield. He "drifted sleep on all, and quickly opened the gate ... and brought in Priam" (Homer 1951, Pt. 24, lines 445–47). Priam fell at the feet of Achilles and both these calloused warriors wept for the immense slaughter they had inflicted (Homer 1951, line 509ff). Achilles granted Priam's wish and returned Hektor's body. Thus, Hermes brought together opposites and enabled the release and transformations of grief. Even today the urgency of returning the dead warrior's body home is still enacted in many a town's solemnly grieving ritual parades and burials of fallen warriors.

Jung (1956) saw in the trickster "the reflection of an earlier, rudimentary stage of consciousness" (p. 201). When cultures such as the Olympian Greeks reached a somewhat higher level of consciousness than the chthonic Titans that they

threw into the underworld, they could tolerate the archaic trickster, and even give him a more refined, heroic place in the pantheon. But they could not eliminate his dark shadowy tendencies. He became both a bestial and divine being, bridging two collective psychic realms. He is not really evil, Jung says, but does foolish things out of unconsciousness. The trickster is a collective shadow figure that is surpassed in some ways, yet lingers in the slippery darkness of even supposedly advanced cultures. So the integration into consciousness of the rowdy, dangerous trickster shadow is a constant challenge.

## Hermits

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

A hermit is a person who lives a solitary life as part of their spiritual path. The etymology comes

from the Greek “eremos,” meaning desert. This reflects the history of the hermit in the Christian tradition. The first Christian hermits sought out the solitude of the desert. Hermits generally live a monastic life, though not all monks are hermits. Some modern hermits in the Roman Catholic Church are lay people living solitary lives in their own apartments in the city.

Western hermits began living in desert regions in the third century of the Common Era, in Egypt and Syria. St. Anthony (251–356 CE) is among the most famous of the early desert fathers and mothers, men and women whose life of seclusion and self-denial marked the first Christian monastic tradition. Most, but not all, contemporary hermits are part of recognized monastic order in Christianity.

Judaism, with its emphasis on marriage and family life, does not have an eremitic tradition. Islam also does not have many hermits, though some Sufi mystics were known to be solitary wanderers.

In Eastern religions, there is also recognition of the value of the solitary life. Hindus have several orders of monasticism. “Sannyasa” refers to those who have taken vows to give up the secular household life and live celibately in community and sometimes in solitary states. The “sadhus” are among the most widely known of sannyasi who often take up life as a solitary hermit. Buddhists also have monks who live off in long-term meditation retreat but are attached to the larger monastic community for their basic support. They periodically come out of retreat and engage in teaching meditation to monks in community or lay devotees. Taoism was founded by Lao Tzu who reputedly left his work, *The Tao Te Ching*, with a border guard as he walked off into the wilderness alone. So its founding figure was a hermit and through the ages others have followed his path of solitude. Confucianism, like Judaism and Islam, emphasizes the importance of family life, so it does not support a tradition of hermits.

It is difficult to live completely alone and be able to sustain oneself. Thus, most hermits are attached to either a lay community or a monastic community for sustenance and support. In the

Christian tradition this is the difference between an anchorite (hermit) and a cenobite (monk living in community). St. Pachomius (292–348) is considered the founder of the communal tradition of monastic life in the Christian tradition. But as much as possible the hermit seeks solitude.

The eremitic life is a continuum of self-denial or asceticism, which can range from simple living with some comforts to strict discipline and practices involving self-mortification of the body. After practicing such harsh disciplines, Siddhartha Gautama decided that a middle way of ascetic practices was better and thus struck a new path as he became the Buddha, eschewing extreme practices but seeking simplicity and nonattachment.

The hermit was portrayed in the Rider-Waite Tarot deck as holding a lamp to illuminate his and other’s paths. This symbolism affirms the primacy of the role of seeker after wisdom which is associated with gnostic traditions in the West as well as the more orthodox Christian forms of solitary life. There is a long tradition of solitary practitioners of Hermetic spirituality, including magicians, rosicrucians, and others in the Western esoteric tradition.

### The "Great Man" View of History

It is commonly said that where in the twentieth century impersonal forces were believed to make history, in the nineteenth century heroic individuals were believed to make history. The epitome of this nineteenth-century outlook was the English man of letters Thomas Carlyle (1795–1881). Carlyle opens his *On Heroes, Hero-Worship, and the Heroic in History* (1841) with a statement that has come to epitomize the "Great Man" view of history: "For, as I take it, Universal History, the history of what man has accomplished in this world, is at bottom the History of the Great Men who have worked here" (p. 1).

Carlyle's concern with outward accomplishment sharply distinguishes his conception of heroism from that of the German philosopher Friedrich Nietzsche (1844–1900) in his *Thus Spoke Zarathustra* (1883–1885) (see part 1). The achievement of Nietzsche's *übermensch*, or "overman," is personal, not societal. Rather than praising the *übermensch* for changing his society, Nietzsche praises the society that produces him.

Carlyle's most vitriolic contemporary critic was the pioneering English sociologist Herbert Spencer (1820–1903), for whom the attribution of decisive events to the talents of individuals rather than to the fundamental laws of physical and social evolution is a hopelessly primitive, childish, romantic, and unscientific viewpoint. In Spencer's famous summary phrase in *The Study of Sociology* (1874), "Before he [the great man] can re-make his society, his society must make him" (p. 35).

The twentieth century has spawned still stronger skepticism toward the impact of heroes, even in the face of the seemingly all too real impact of dictators like Hitler and Stalin. Defenders of heroism nevertheless remain. Best

known is the American philosopher Sidney Hook (1902–1989), author of *The Hero in History* (1943/1955). Hook argues for a sensible middle ground between crediting heroes with everything, which he assumes Carlyle to be doing, and crediting them with nothing.

### Modern Heroes

Some heroes, or kinds of heroes, fit only certain periods. For example, it is hard to imagine an aristocratic hero like Don Juan surviving into the twentieth century. Other heroes do survive, either because their appeal continues or because they are protean enough to adapt to the times. Heracles, the greatest of ancient heroes, was by no means confined to the crude image of him as Rambo-like – all brawn and no brains – but on the contrary has been depicted as the embodiment of wisdom, the exemplar of virtue, a tragic hero, a glutton, and even a romantic lover.

In the twentieth century, as in prior centuries, not only have traditional heroes been transformed, but new heroes and new kinds of heroes have emerged. If distinctively nineteenth-century heroes were the romantic hero (Byron's Childe Harold) and the bourgeois hero (Flaubert's Emma Bovary), distinctively twentieth-century heroes include the ordinary person as hero (Miller's Willy Loman), the comic hero (Roth's Alexander Portnoy), the schlemiel as hero (Singer's Gimpel the Fool), and the absurd hero (Beckett's Vladimir and Estragon). Far from divine, the contemporary hero is hopelessly human – mortal, powerless, amoral. The present-day hero is often lowly even within the human community – more the outsider than the insider, more the loser than the winner, and more the villain than the savior. The contemporary hero is not a once great figure who has fallen but a figure who never rises. Sisyphus, not Oedipus epitomizes contemporary heroism. Yet Sisyphus is still to be commended for never giving up. Persistence replaces success; survival replaces achievement. Old-fashioned heroic virtues like courage and duty give way to new ones like irony and detachment. Today's hero is heroic in persisting without success.

Yet it would surely be going much too far to argue that traditional heroism has died out. Present-day heroes in sports, entertainment, business, and politics are admired for their success, not for their mere persistence, and the acclaim conferred on them often reaches the same divine plateau as in times past. They are “idolized” and “worshiped.” At most, the notion of heroism as persistence has arisen alongside the traditional notion of heroism as success.

## Hero Myths

Stories of heroes take the form of myths. The study of hero myths goes back at least to 1871, when, in *Primitive Culture*, the pioneering English anthropologist E. B. Tylor argued that many of them follow a uniform plot or pattern: the hero is exposed at birth, is saved by other humans or animals, and grows up to become a national hero. In 1928 the Russian folklorist Vladimir Propp, in *Morphology of the Folktale* (trans. [1968] 1958), sought to demonstrate that Russian fairy tales follow a common biographical plot, in which the hero goes off on a successful adventure and upon his return marries and gains the throne. Propp’s pattern skirts both the birth and the death of the hero.

Of attempts not merely to delineate patterns but also to determine the origin, function, and subject matter of hero myths, the most important have been by the Viennese psychoanalyst Otto Rank (1884–1939), the American mythographer Joseph Campbell (1904–1987), and the English folklorist Lord Raglan (1885–1964). Rank later broke irreparably with Sigmund Freud, but when he wrote *The Myth of the Birth of the Hero* (1909) [trans. 1914], he was a Freudian apostle. While Campbell was never a full-fledged Jungian, he wrote *The Hero with a Thousand Faces* (1949) as a kindred soul of C. G. Jung. Raglan wrote *The Hero* (1936) as a theoretical ally of James Frazer. Because Raglan’s approach is nonpsychological and even anti-psychological, his will not be considered here.

## Otto Rank

For Rank, following Freud, heroism deals with what *Jungians* call the first half of life. The first half – birth, childhood, adolescence, and young adulthood – involves the establishment of oneself as an independent person in the external world. The attainment of independence expresses itself concretely in the securing of a job and a mate. The securing of either requires both separation from one’s parents and mastery of one’s instincts. Freudian problems involve a lingering attachment to either parents or instincts. To depend on one’s parents for the satisfaction of instincts or to satisfy instincts in antisocial ways is to be stuck, or fixated, at a childish level of psychological development.

Rank’s pattern, which he applies to 30 hero myths, is limited to the first half of life. It goes from the hero’s birth to his attainment of a “career”:

The hero is the child of most distinguished parents, usually the son of a king. His origin is preceded by difficulties, such as continence, or prolonged barrenness, or secret intercourse of the parents due to external prohibition or obstacles. During or before the pregnancy, there is a prophecy, in the form of a dream or oracle, cautioning against his birth, and usually threatening danger to the father (or his representative). As a rule, he is surrendered to the water, in a box. He is then saved by animals, or by lowly people (shepherds), and is suckled by a female animal or by a humble woman. After he has grown up, he finds his distinguished parents, in a highly versatile fashion. He takes his revenge on his father, on the one hand, and is acknowledged, on the other. Finally he achieves rank and honors (Rank 1914, p. 61).

Literally, or consciously, the hero, who is always male, is a historical or legendary figure like Oedipus. The hero is heroic because he rises from obscurity to the throne. Literally, he is an innocent victim of either his parents or, ultimately, fate. While his parents have yearned for a child and abandon him only to save the father, they nevertheless do abandon him. The hero’s revenge, if the parricide is even committed knowingly, is, then, understandable: who would not consider killing one’s would-be killer?

Symbolically, or unconsciously, the hero is heroic not because he dares to win a throne but

because he dares to kill his father. The killing is definitely intentional, and the cause is not revenge but sexual frustration. The father has refused to surrender his wife – the real object of the son's efforts. Too horrendous to face, the true meaning of the hero myth gets covered up by the concocted story. Rather than the culprit, the hero becomes an innocent victim or at worst a justified avenger. What the hero seeks gets masked as power, not incest. Most of all, who the hero is becomes some third party, a historical or legendary figure, rather than either the creator of the myth or anyone stirred by it. Identifying himself with the literal hero, the myth maker or reader vicariously revels in the hero's triumph, which in fact is his own. *He* is the real hero of the myth.

Literally, the myth culminates in the hero's attainment of a throne. Symbolically, the hero gains a mate as well. One might, then, conclude that the myth fittingly expresses the Freudian goal of the first half of life. In actuality, it expresses the opposite. The wish it fulfills is not for detachment from one's parents and from one's antisocial instincts but, on the contrary, for the most intense possible relationship to one's parents and the most antisocial of urges: parricide and incest, even rape. Taking one's father's job and one's mother's hand does not quite spell independence of them.

The myth maker or reader is an adult, but the wish vented by the myth is that of a child of three to five. The fantasy is the fulfillment of the Oedipal wish to kill one's father in order to gain access to one's mother. The myth fulfills a wish never outgrown by the adult who either invents or uses it. That adult is psychologically an eternal child. Having never developed an ego strong enough to master his instincts, he is neurotic. Since no mere child can overpower his father, the myth maker imagines being old enough to do so. In short, the myth expresses not the Freudian goal of the first half of life but the fixated childhood goal that keeps one from accomplishing it.

## Joseph Campbell

Where for Freud and Rank heroism is limited to the first half of life, for Jung it involves the second

half – adulthood – even more. For Freud and Rank, heroism involves relations with parents and instincts. For Jung, heroism in even the first half involves, in addition, relations with the unconscious. Heroism here means separation not only from parents and antisocial instincts but even more from the unconscious: every child's managing to forge consciousness is for Jung a supremely heroic feat.

The goal of the uniquely Jungian second half of life is likewise consciousness, but now consciousness of the Jungian unconscious rather than, as in the first half, of the external world. One must return to the unconscious, from which one has invariably become severed, but the ultimate aim is to return in turn to the external world. The ideal is a balance between consciousness of the external world and consciousness of the unconscious. The aim of the second half of life is to supplement, not abandon, the achievements of the first half.

Just as classical Freudian problems involve the failure to establish oneself in the outer world, in the form of working and loving, so distinctively Jungian problems involve the failure to reestablish oneself in the inner world, in relation to the unconscious. Freudian problems stem from excessive attachment to the world of childhood; Jungian problems, from excessive attachment to the world one enters upon breaking free of the childhood world: the external world.

Just as Rank confines heroism to the first half of life, so Campbell restricts it to the second half. Rank's scheme begins with the hero's birth; Campbell's, with his adventure. Where Rank's scheme ends, Campbell's begins: with the adult hero ensconced at home. Rank's hero must be young enough for his father and in some cases even his grandfather still to be reigning. Campbell does not specify the age of his hero, but the hero must be no younger than the age at which Rank's hero myth therefore ends: young adulthood. While some of Campbell's own examples are of child heroes, they violate his scheme, according to which heroes must be willing to leave behind all that they have accomplished at home and violate even more his Jungian meaning, according to which heroes must be fully developed egos ready to encounter the unconscious from which

they have largely become separated. Campbell's heroes should, then, be adults.

Rank's hero must be the son of royal or at least aristocratic parents. The hero of the egalitarian Campbell need not be, though often is. Where Rank's heroes must be male, Campbell's can be female as well, though Campbell inconsistently describes the hero's initiation from an exclusively male point of view. Finally, Campbell's scheme dictates human heroes, even though many of his examples are of divine heroes. Rank's pattern, by contrast, readily allows for divine as well as human heroes.

Where Rank's hero returns to his birthplace, Campbell's marches forth to a strange, new world, which the hero has never visited or even known existed. This extraordinary world is the world of the gods, and the hero must hail from the human world precisely to be able to experience the distinctiveness of the divine one. The hero has sex with the goddess and marries her – the reason the hero must here be male. He clashes with the male god and defeats him – the additional reason the hero must here be male. Yet with both gods he becomes mystically one and thereby becomes divine himself.

Where Rank's hero *returns* home to encounter his father and mother, Campbell's hero *leaves* home to encounter a male and a female god, who are neither his parents nor necessarily even a couple. Yet the two heroes' encounters are seemingly akin. But in fact they are not. Because the goddess is not the hero's mother, sex with her does not constitute incest. And the conflict with the male god is resolved.

When Campbell writes that myths "reveal the benign self-giving aspect of the *archetypal* father," he is using the term in its Jungian sense (Campbell 1949, pp. 139–140). For Freudians, gods symbolize parents. For Jungians, parents symbolize gods, who in turn symbolize father and mother archetypes, which are components of the hero's personality. A hero's relationship to these gods symbolizes not, as for Freud and Rank, a son's relationship to other persons (his parents) but the relationship of one side of a male's personality (his ego) to another side (his unconscious). The father and the mother are

but two of the archetypes of which the Jungian, or collective, unconscious is composed. Archetypes are unconscious not because they have been repressed but because they have never been conscious. For Jung and Campbell, myth originates and functions not, as for Freud and Rank, to satisfy neurotic urges that cannot be manifested openly but to express normal sides of the personality that have just not had a chance at realization.

By identifying himself with the hero of a myth, Rank's myth maker or reader vicariously lives out in his mind an adventure that, if ever directly fulfilled, would be acted out on his parents themselves. While also identifying himself – or herself – with the hero of a myth, Campbell's myth maker or reader vicariously lives out in the mind an adventure that even when directly fulfilled would still be taking place in the mind. For parts of the mind are what the myth maker or reader is really encountering.

## Hero with an African Face

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Joseph Campbell's (1949–1967) classic *The Hero with a Thousand Faces* was built on Carl Jung's breakthrough theory of the collective unconscious and its mythic, psychological symbolism that appears in cultural forms such as folktales, literature, and religion and films such as *Star Wars*. Campbell inspired much popular and scholarly thinking about myth and comparative religion, and his "monomyth" theory of a single mythic overarching story has appealing echoes that link world mythic consciousness. But critics saw this theory as an insufficiently supported grab-bag of myths. Each fit into his archetypal paradigm about the ego's descent into the unconscious, encounters with various beings, notably divine, and a return to consciousness enriched with the wisdom of the collective underworld. He wrote his book during the late 1930s and published it after World War II, in 1949.

In the next decades, as world religion and myth studies expanded, partly due to his books, his earlier approach came to seem preliminary and lacking in scope. For example, he had not included the newly feminist approach to heroines and goddesses. So Maureen Murdock wrote

*The Heroine's Journey* in 1990. Africana scholars called attention to more mythic themes in Africa, so Clyde W. Ford learned Swahili, travelled to Africa for extensive research, and wrote *The Hero with an African Face: Mythic Wisdom of Traditional Africa* in 1999. Ford sought to find African myths that can help heal the shadowy pain of African-American slavery. Such expansions of Campbell's theory can be seen either as the emergence into consciousness of new elements in Campbell's large archetypal theme, or alternate patterns.

Great Africa, with huge steaming jungles, thirsty deserts, and vast plains filled with exotic plants, animals, and many kinds of people, has the distinction of being the birthplace of the human race, and thus the birthplace of many mythic heroic journeys. Most of North Africa is now primarily Muslim, and the south is a very diverse cultural region. But it can be divided into major regions by language families. The various mythologies of these regions are rich with themes such as creation, virgin birth, heroes, tricksters, magicians, death, and resurrection. These have roots going back as far as 30,000 years, deep in the human collective unconscious, far older than contemporary major religions. The regions are:

1. *The Nilo-Asiatic* region's mythology is primarily centered on Egyptian culture, especially the myths surrounding Isis and Osiris. Osiris was a dying and rising god, Isis was a wife and mother goddess who heroically retrieved Osiris from death. She is mother of Horus, Osiris' son who becomes his royal successor, despite the battle with Set, personification of evil. The Egyptian obsession with the afterworld divided the world into three realms: (a) the upper world of gods and goddesses, (b) the middle world of living beings, and (c) the underworld of departed souls, led by Osiris to their judgment and fate.
2. *The Nilo-Saharan* region, around the sources of the Nile and west of there, a high myth begins with the creation, in which Heaven and Earth were very close, connected by a rope. But humans neglected their responsibilities to the gods, so the rope was cut. This culture group has a high abstract divinity

(*nihilic* in Dinka) that envisions God far above all earthly images of divinity, as a state of being or a way.

3. *The Niger-Congo* (non-Bantu) region in the western Horn has very sophisticated and psychological mythologies of the gods. The Yoruba people have a rich pantheon of divinities (*orishas*) that express major archetypal patterns. In Bambara myth, the world emerges from and dissolves back into the root sound “Yo,” similar to the Hindu “Om.” The Dogon creation account emerges from a series of divine Words, and Dogon villages are laid out on a diagram of the human form, which is seen as a locale of oracles.
4. *The Niger-Congo Bantu* language region, around the Congo River and southeast, sees the sun and moon as expressions of immortality (Sun) and mortal consciousness (Moon). Their mythology is a rich collection of heroic journeys that tell of dramatic adventures in the underworld of dead spirits, full of monsters, and the heavenly realm of divine figures.
5. *The Khoisan* region, in the southwestern Kalahari Desert, is comprised of the Khoi (Hottentots) and the San (Bushmen). In an important sacred ritual, entranced dancers report direct experiences of the divine. San rock art going back 30,000 years expresses ancient myths. Bushmen animal masters, such as the *mantis* and the *eland*, are prominent (Ford 1999, p. xvii).

Campbell’s comment, drawn from Jung’s thinking that “Dream is the personalized myth, myth the depersonalized dream” (Campbell 1949–1967, p. 19), echoes the tradition of the Elgon people in central Africa. For them “little” dreams are not important, but “big” dreams require that the dreamer gather the community and tell it to them, thus opening the door to mythology (Ford 1999, p. vii). The people who live in a mythic world live in the soul’s collective world. And myths often open into the realm of Being, the source of existence, as Jung showed. The symbolic language of dream and myth is many faceted and paradoxical, where numinous divinity can be expressed coming through a pond glowing with wondrous inner light or as a green tree goddess overflowing with love (Somé 1994). Myths can

heal psychological and spiritual wounds such as the pains of slavery and despair. Sadly, slavery has been a terrible commonplace throughout history for conquered people, from Turkish or Chinese palace eunuchs guarding a harem to Africans picking cotton under the blazing sun, survivors of the 30–60 million slaves brought to the colonial Americans in one of the worst holocausts in history.

How can mythology help assuage the blood and grief of such slavery? The theme of a hero’s journey points to the inward passage from soul-breaking misery to a heroic consciousness cultivated by stories told, sung, and danced around campfires that can conquer evil and bring hope. Myths and masks can transport and transform souls. They can teach courage and orient the soul to its higher destiny, its part in the greater mysteries of existence. Today, the BaKongo people tell stories of their ancestors captured and sold to white men in ships. It is said they were taken first to the realm of Mputu. This refers to “agitated waters,” to Europeans, and to the land of the dead. It is seen as the mythic realm where heroic souls travel to battle magical beings. And they had to endure white-faced masters with whips and a male God imagined to be white. But from there each heroic soul is not lost. It is brought home and reborn in the cycles of life and death. “We’re waiting for them,” the BaKongo say (Ford 1999, pp. 5–6) (Fig. 1).

## African Creation

The vast ancient origin of the universe hides deep in mysterious cosmic energies. Religions seek to give answers to this archetypal question beyond rational or empirical knowledge, if not literally, then as psychological and spiritual foundations of the deepest layer of life. Myths of creation are commonly reenacted annually to keep creation going or to keep the archetypal image in consciousness. For example, annual rituals repeat a primeval myth of creation by egg, tree, or breath, returning to “yonder time” (*in illo tempore*) thus regaining and keeping that creative energy going (Eliade 1958, pp. 410–417; Ford 1999, pp. 170–191). The African Bambara of Mali

**Hero with an African Face, Fig. 1** Ritual mask. Fang people. Gabon, west-central Africa. Louvre Museum. Photo by Marie-Lan Nguyen (2006). Public Domain ([http://en.wikipedia.org/wiki/File:Fang\\_mask\\_Louvre\\_MH65-104-1.jpg](http://en.wikipedia.org/wiki/File:Fang_mask_Louvre_MH65-104-1.jpg))

commonly chant “Yo” because they believe that the universe began with this sound, this energy, and continues as the ground of existence. So to chant “Yo” is to harmonize with the deep songs of one’s being, the origin of all the planets, life-forms, and consciousness. This is a sophisticated philosophical intuition of participation in cosmic depth that gives a solid ground to the collective Bambara life journey. It also raises the psyche above the cruder aspects of its archetypal strivings up to refined presence. Primordial divinities such as the biblical God create the world by speaking words, and primordial heroes such as the Chinese “Heavenly Emperor” Fu Hsi create culture. The Hindu original and ever-present “Om” is the primordial creative word full of wisdom (Campbell 1949/1967, pp. 315–317). The Nigerian Yoruba hear the creative cosmic word as “Hoo.”

## African Heroic Journeys

The patterns of African mythology often reflect themes highlighted by Campbell, but not in his “monomyth” order. His hero crosses a first threshold, with complications, such as resistance and a threshold guardian. Ordinary ego consciousness is then left behind and the soul enters a mysterious Wonderland, for “myth is the secret opening through which the inexhaustible energies of the cosmos pour into human cultural manifestation” (Campbell 1949–1967, Prologue, Part 1, “Myth and Dream,” pg. 3). The story of the South African Zulu hero Uncama begins with him crawling down a hole chasing an animal and entering an underworld symbolizing the collective unconscious *mosima*, the abyss where the dead dwell. He crosses the threshold into myth-land, where dynamic creatures come alive and guide souls.

In Angola, the Ambundu people tell of a culture hero whose father called his son Kimanaeuzo to go on a journey. When he returned, all his family and property had been destroyed by an enemy, the Makishi, but his wife had survived, and they started a family again. Their first child Sudika-mbambi at birth was miraculously able to speak, saying “In the sky I set an antelope.” This miraculous birth was immediately followed by a second son, saying: “I am Kabundungulu. . . You will see all the miraculous things that I am going to do.” And he led spirits of nature to build a new house for the family (Ford 1999, pp. 29–30). The tragic suffering of defeat and loss gives way to new beginnings with miraculous powers. This is the hope that lifts the hearts of victims, the magic of myth’s sparkling ability to raise the soul from earthly suffering to see the powerful transcendent saving “antelopes” in the sky.

## The Soul’s Great Adventure

Once past the threshold and its ordeals, the heroic journey begins in the realm of the gods and mythic creatures. These may have no “objective” existence, for their enchanted realm lies below the subject-object dichotomy. But they serve to

dramatize the soul's and the culture's need for transformation, to overcome life's challenges, such as suffering, anxiety, or despair. Today, even apparently totally technological events, such as the journey to the outer space, have mythical purposes deeper than their rational surface ego motives, such as "progress," technological, and national pride. The Chaga people in Tanzania tell of Kyazimba, a poor man whose life felt hopeless. He encountered an old woman who, when he told her his problem, wrapped her robe around him, soared with him above the earth to the zenith of the sun's daily journey at midday. A brilliantly shining chief came up and prepared a feast. The old woman asked for his help for Kyazimba. The chief blessed the man and sent him back to earth and a prosperous life (Ford 1999, pp. 53–54).

Another major African theme is the Sacred Union, a transcendent marriage of a mortal to a divinity that produces a miraculous birth of a culture hero.

In Rwanda the tale is told of the wife of Kwisaba, whose husband was away at war for so long that she finally fell ill with despair and collapsed, unable even to chop firewood. She cried out for the help of someone, even the Thunder of Heaven. Suddenly her hut darkened, clouds gathered above, and in a flash of lightning appeared the Thunder of Heaven, in the likeness of a man. He chopped all her firewood in an instant, lit her fire, and said, "Now what will you give me?" She was struck silent, but soon he said, "When your girl baby is born, will you give her to me for a wife?" Trembling, she stammered "Yes!" and Thunder disappeared. Her daughter was born and named Miseke. Her human father returned home and commanded her to stay inside to avoid the return of Thunder. But she could not be restrained and played outside. Soon when she laughed, to everyone's astonishment, beautiful, valuable beads dropped from her mouth. Soon Thunder returned and claimed her for his wife and carried her above. She soon overcame her fear and loved her husband and had children. But she yearned to return to her earthly family, and Thunder granted her wish. She encountered adventures and challenges there. A friendly boy killed an ogre that had swallowed her children,

and she took them back to their heavenly home, never to be seen again on Earth.

There are several important archetypal themes in Miseke's story, such as a powerful sky god, mating, divine child, soul transformations, and overcoming suffering (Campbell 1949–1967, Pt. II, Chaps. 2 and 3; Eliade 1958, Chaps. 2 and 7; Jung 1979, Vol. 16, para. 214). Her mother was saved by a transcendent figure who "cut her wood" and "lit her fire" with his "axe." She miraculously gave birth to a half-divine child when the father was away. As she grew, from her happiness emerged beautiful jewels, like little eggs. She was initiated into marriage and had heavenly children. Then she struggled with earthly troubles until rescued by a heroic boy, then returned to heaven. This myth gives mothers and girls fruitful symbolic images to prepare them for their successful heroic journey as adolescents, wives, and mothers and in touch with their higher power, like Thunder (Ford 1999, pp. 52–59).

## African Goddesses

In traditional African culture, goddesses are complex and take many forms. They are not so much carved images as powers experienced in nature – reproduction, stars, plants, rivers, or serpents. They are the transcendent power behind nature imagined as feminine, such as Gleti, a moon goddess and mother of all the stars in Dahomey tradition in Benin. In Yoruban tradition in Nigeria, Oba is the Orisha spirit of the River Oba. In South African Zulu culture, Malambo is the snake-like goddess of rivers. In Ethiopia, Buk is goddess of women's fertility, and Atete is goddess of Spring and fertility. For the Southern Nuba of Sudan, the "Great Mother" gave birth to Earth and humanity. The Fon of Dahomey envision a 4-day creation through Mawi, who had the assistance of Aido-Hwedo, the Great Serpent, who helped her and ended coiled, tail in mouth, as a carrying pad under the Earth. This circular serpent image is the widespread archetypal image of the *uroboros*, symbol of the endless round of birth, life, and death. African goddesses are often paired with male figures, such as Mwetsi, the

creator figure Wahungwe people of Zimbabwe. When he touched the creatrix goddess Massassi (the morning star) with a drop of oil, she swelled and gave birth to plant life. His second wife Morongo (the evening star) coupled with Massassi and she gave birth to chickens, sheep, goats, boys, and girls. Later she gave birth to lions, leopards, snakes, and scorpions. The snake brought them trouble and death, and they returned to Disvoa, the heavenly realm (Ford 1999, pp. 114–132). Isis was the great goddess of Egypt who, with her husband Osiris and son Horus, symbolizes many archetypal themes, such as culture bringing, birth, death, and resurrection. The goddess in Africa may also appear as half of an androgynous figure.

Many other archetypal heroes with transcendent powers fill African myth, such as the sacred warrior, the master animals, and the divine self. But intuitively, many people understand that divinity is beyond human form or gender, for it makes both. Rituals, especially initiations, shape the consciousness of traditional Africans to experience and know these many divinities (Somé 1994). The African hero is one image of the supreme power, the fathomless spirit, the ontological mystery that creates Earth and the cosmos, with their many wonders, and is present in its many guiding forms and healing dynamics.

## Heschel, Abraham Joshua

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

## General

Born in Warsaw, Abraham Joshua Heschel (1907–1972) was designated from his youth as the heir to the great Hasidic court of Apt over which his father and grandfather before him had presided. Following a rigorous traditional Jewish education, Heschel enrolled at the University of Berlin in 1927 where he earned a doctorate in Bible while simultaneously studying at a liberal rabbinical college devoted to the critical study of religious texts. Heschel remained in Berlin through the 1930s writing poetry in Yiddish, publishing scholarly works in German, and teaching at a number of Jewish institutions during the rise of Nazi power. German officials deported

Heschel to Poland in 1938, where he taught briefly before escaping to America via England. His mother and two sisters were killed in the Warsaw Ghetto in 1941. Heschel moved to New York in 1945 where he taught for the remainder of his life at the Jewish Theological Seminary, publishing several major works of theology both in Hebrew and English.

## Theology

Heschel believed in a God intimately concerned for human beings. He rejected the Aristotelian view of God, which had entered Jewish thought through Maimonides, as a Prime Mover who himself is not moved. Instead, Heschel laid out a theology of divine pathos in which God is deeply affected by human actions. God, in Heschel's view, reaches out to form relationships with human beings, but humans often ignore God's overtures, blinded by arrogance and a fatal underestimation of our own limitations. Faith begins with humans recovering a sense of awe – an awareness that God is present around us and challenging us to appreciate the ineffable mystery of existence.

Heschel elevated theological concepts such as awe, wonder, and mystery in his writing. Consequently, he was profoundly skeptical of social sciences that selectively ignore those aspects of human life not easily quantified or described in scientific language. He criticized the psychology of his day for its “empirical intemperance” which dismissed questions about ineffable dimensions of existence. He also rejected the idea that religion reflects human beings' need to believe in God. Conversely, Heschel wrote that religious feelings arise as individuals become aware of God's need for them. Heschel consistently maintained that evil acts were rooted in human egocentricity. He accused psychology of “intellectual narcissism” to the degree that it placed ultimate confidence in the power of the mind, dismissed questions of morality, and professed that man can attain his own salvation without resort to God.

Heschel also strongly critiqued religious orthodoxies which mistakenly view ritual piety as an end in itself. While Heschel was traditionally observant in his own life and wrote several moving works about the importance of observances such as prayer and the Sabbath, he understood religious rituals as a spiritual tool to help one continuously redirect his or her attention back towards the mystery of God's presence. Heschel simultaneously argued that ritual observance itself, even in the absence of belief, can help to open the individual's consciousness up to God's intimate love for humanity. Heschel famously wrote that Judaism does not demand a leap of faith but rather a leap of action.

Heschel refused to interpret the Bible as a document describing historical events. He wrote that scripture is not the object of divine revelation but rather a human commentary on revelation itself. The biblical text represents not what God said but rather a human effort to render into words a genuine experience of the divine which far transcends logic and language. Heschel read the prophetic message as demanding that individuals actively engage in a relationship with God by behaving morally and by developing an awareness of the sacred. In his own life, Heschel interpreted this to require his active participation in the American Civil Rights movement and his protest of the Vietnam War.

## Hestia

Susan Wyatt

Antioch University, Los Angeles, CA, USA

In Greek mythology, Hestia was the firstborn of Cronus (Saturn) and Rhea. Since it had been prophesied that one of his sons would overthrow him, Cronus swallowed each of his children; first Hestia, then Demeter, Hera, Hades, and Poseidon. When Zeus, her third son, was born, the infuriated Rhea hid him and gave Cronus a stone to swallow. When Zeus grew to manhood, he forced Cronus to disgorge his brothers and sisters. Hestia, the first to be swallowed, was the last to be released.

Hestia, like her Roman counterpart Vesta, is best known as the Goddess of the Hearth. While she was sometimes portrayed in human form, she was more often represented by images of flames or glowing coals. She had the most awesome responsibility of the Olympian gods. She became involved in none of the caprices and disputes that characterized her family because she was the one charged with keeping the flame alive, reminding us of the critical dependence of early humans on fire. It was Hestia who invented the art of building a house as a place to safeguard the flame and contain its light and warmth. She eschews the blood sacrifice; her preferred offering is sweet wine. She obviates the need for humans to steal fire because she gives it freely as a gift.

Hestia is one of the Goddesses that Jean Bolen used in her explication of archetypal feminine patterns. She represents an inward focus in a woman's psyche. Her identity is not tied to external circumstances or to outcomes. She looks inside herself to find meaning, peace, sanctuary, and the sense of being related to others in a common spiritual bond. Her focus is on the inner flame, her own values and what is personally meaningful to her. Her concern is with the spiritual, with being centered and being connected. She stays in the background, seeking anonymity, tranquility, and solitude.

As the Goddess of the Hearth, Hestia represents the relationship of women to the domestic sphere of life for whom household tasks are a central activity. She also has a social role as the hearthkeeper for the temple of the collective. Just as Hestia's flame is an image of the spirit that animates a home, it also represents the spirit that sustains the life of a culture. Her role, like that of the priestesses of Vesta in classical Rome, is to hold the soul of her culture, steadfastly to keep the flame alive whatever the turmoil of the outer world. Her inward search for meaning is not for herself alone but to sustain the spirit that gives meaning to the culture. Sometimes this task requires her to sacrifice her tranquility and anonymity and step out of the background to remind her culture of who they are, what they value, and what they have forgotten.

As well as the flame in the domestic and communal hearths, the Homeric Hymns identify Hestia as the fire at the center of the world in Delphi. While Apollo made himself the presiding deity of the Delphic oracle, Hestia is the fire that ignites the prophecy. The flame is often used to symbolize psychic processes such as inspiration, intuition, and imagination, and Hestia represents these ways of knowing that were celebrated by Ovid in his hymn to Vesta. The story of Hestia's wooing is an image of a feminine way of balancing the tension between conscious and unconscious. She was desired by Poseidon, who as God of the Sea is often taken to represent the power of the unconscious, and by Apollo, who is an image of rational thought, art, science, and language. To keep peace in Olympus, Hestia vowed to remain a virgin. She is ever poised between the two gods and, between the rational and the irrational, yet ever complete in herself. In gratitude, Zeus declared that the first and last libations would always be hers, and, in Greek religious rituals, Hestia was always the first god to be honored.

However, Hestia lost this honor when a new god, Dionysios, was born. To make way for him among the 12 places on Mount Olympus, Hestia, weary of intrigue and arguments, gave away her position, knowing that she would be welcome wherever she chose to settle. In this ending of the myth, the Greek religion and Western culture

suppressed an element of the feminine spirit and moved into the dualistic patriarchy defined by Nietzsche in terms of the polarity between Apollo and Dionysios.

## Hierophany

Paul Larson

The Chicago School of Professional Psychology, Chicago, IL, USA

Hierophany is a term for manifestation of the divine. It is a broader term than the more familiar term, theophany, because it allows nonpersonal forms of the divine to become manifest. The term was popularized by the noted scholar of comparative religion, Mircea Eliade (1907–1986). His major thesis (1959) is the distinction in human experience between the sacred and the profane modes of life. Our ordinary lives are profane, but he does not use this in a pejorative sense but as simply the opposite of sacred, so a better term for contrast would be ‘mundane’. When we are in contact with the divine ground of being, we are in “sacred space and sacred time,” and when we are out of contact, we are in a profane or ordinary mode of existence. Whether it is in a formal worship service or a private experience of mystical communion with the divine, we have the capacity

to enter into a new and more profound mode of being in the world. In this world of the spirit, we experience some type or degree of communion with the divine. Hierophany is the unfolding of that experience of contact, connection, or communion with a transcendent power or person.

For many people, it takes the form of a feeling of warmth, love, and connection to and receiving inspiration from a deity. For others, there is a “dark night of the soul,” a profound experience of suffering, unworthiness, and alienation. Either the positive or negative inner and private experience we associate with mystics is what Rudolf Otto (1917/1958) referred to as the experience of the numinous. Even the relatively frequent experience the normal worshiper has of connection with the divine during the act of worship is an example of hierophany. Experience of and with the divine does not have to be dramatic and earth shattering; it can be quiet and secure. The experience of oneness with nature while in nature, likewise, can be the basis of a spiritual connection. This was articulated by such writers as the American Henry David Thoreau, whose spirituality centered on a sense of connection to the natural world.

In the Western religions, hierophany is experienced as theophany, since the divine takes on the form of a person. Buber (1958) characterizes this as an encounter of an “I” with a “Thou,” the highest quality of relationship that one can aspire to. There can be experiences which involve only part of senses, for example, ‘auditions’ or ‘locutions’ are the experiences of voices of the divine or their angelic representatives and “apparitions” are the visual manifestations of the divine or angelic beings. The many appearances of the Virgin Mary are examples of this type.

Another type of hierophany is revelation. This can be dramatic and life changing. The classic example is the experience of Saul, who on the road to Tarsus experienced an epiphany and turned from being a persecutor of Christians to become St. Paul, one of its most effective missionaries. Muhammed, likewise, experienced the dramatic visitation of an angel heralding the beginning of the revelations that became the Q’uran.

## Hierosgamos

John Eric Killinger  
The Intermundia Press, LLC, Warrenton,  
VA, USA

## Introduction

*Hierosgamos* is a composite of two Greek words ἱερός (*hieros*) and γάμος (*gamos*), meaning “mystical marriage” or “sacred ceremony.” The word occasionally appears transliterated as two (*hieros gamos*) as it is presented in Greek. Often used interchangeably with *coniunctio*, the hierosgamos is recognized as the highest form of the union of opposites (e.g., King and Queen, Sol et Lunae) in the alchemical opus. Hierosgamos is found chiefly in the literature and theoretical work of analytical (Jungian) and archetypal psychology; nevertheless, it may possess implications for acting out of Oedipal vicissitudes observed in Freudian and psychodynamic psychology.

*Hieros* means “filled with or manifesting divine power, supernatural, holy.” Of this latter meaning, the word refers to the sense of being hallowed or consecrated, for example, holy scripture, even *hieroglyphics*.

*Gamos*, on the other hand, means “wedding,” “marriage,” and even “wedlock.” Pythagoras

uses *gamos* as a name for the numeral *three*, which is masculine frequency. This would account for the motif of the divine child (produced by the union of the king and queen, Sol et Lunae, gold and silver) being usually male, e.g., Christ and Marduk. The usage of *gamos* for the number three allows for the realization of the hierosgamos as the divine third. In this sense, it is connected with the Trinity in much of the writing of C. G. Jung.

Whereas Pythagoras designates *gamos* as three, Plutarch uses *gamos* for the number *five*. This immerses us into the symbolization of the marriage aspect of the ‘Hierosgamos as it is the combination of the feminine aspect (even frequency, i.e., two) and the masculine aspect (three or odd frequency). Rendering *gamos* as “five” could also refer to the alchemical *quinta essentia*, the quintessence that is the fifth element or red tincture that is indexed to the void or chaos encircled by the tail devouring serpent, or uroboros.

Further usage of *gamos* reveals it to denote the number *six* as used by Iamblichus (1998). In this sense,  $1 + 2 + 3 = 6$ , where six is viewed as a symbol of harmony or balance. It thus fits Islamic alchemist ibn Umail’s projection of the *coniunctio* in his *Hall ar-Rumuz*: one equals the observer of the hierosgamos, two equals the feminine aspect, and three equals the masculine aspect. For ibn Umail, six therefore symbolizes the union of polarity which thus creates balance and harmony.

## The Prominence of Hierosgamos

As the highest form of the *coniunctio oppositorum*, or union of opposites, hierosgamos is the spiritual wedding of matter and psyche. We see this in the Babylonian *Enuma Elish*, wherein Âpsu and Tiâmat are not simply the ancestors of the pantheon of gods, but they are also matter and divine spirit united and coexistent.

Often used as a metaphor in reference to the union of two divinities, the hierosgamos can also refer to the union between a human being and a god or goddess, as in the Sumerian story of

Tammuz (Dumuzi) and Inanna (Ishtar/Astarte), Zeus and Leda, and the Holy Spirit and Mary. Even Christian mystics such as St. Teresa of Avila and Hildegard of Bingen describe such experiences in their ecstatic visionary writings. The hierosgamos can also refer to a ritualized public sexual union between a king and a *hierodule*, or sacred prostitute, as a reenactment of such stories as that of Tammuz and Inanna. While popularized in *The Da Vinci Code* (2003), such reenactments were believed to increase potency not only of the king but of the land's continued fertility. The alchemical text known as *Rosarium philosophorum* (Smith 2003) depicts the hierosgamos that occurs during the alchemical opus in the creation of the homunculus (little man). This homunculus is the divine child resulting from a more often than not incestual pairing within the hierosgamos. It is the potential for the hierosgamos to be incestual that leads an analytical relationship toward being inflationary (a wedding of the gods) or to sexual acting out – and that may have Oedipal ramifications.

Religious literatures are replete with the imagery of the hierosgamos. We have already noted its depiction in the Sumerian account of Tammuz and Inanna, which is wrought in erotically charged language. The hierosgamos occurs within reenactments of the Egyptian Osiris dramas of death and rebirth, which again has affinities with fertility cult rites. Union of the Kundalini (as Shakti) with Shiva is also equivalent to a hierosgamos. The Babylonian genesis account, *Enuma Elish*, presents the hierogamynous aspect in its depiction of Âpsu and Tiâmat. In Kabbalah, we find the hierosgamos in the union of Yahweh with the Shekinah, who is often portrayed as Sophia (wisdom). In *Sefer Zohar*, we find in the thought of Adam as an androgynous being that without a hierosgamos, without male *and* female being one, God does not place God's abode in their midst (Matt 2004, p. 314). Adam is the primordial image of the hierosgamos. Interestingly, though, Adam in the Old Testament represents the *imago Dei*, whereas the hierosgamos reflects the godhead. It is the genius of *Sefer Zohar* to point out

that even the *imago Dei* is linked to the godhead, for male and female God created *them* – not *him* – and God called *them* Adam.

It is within the corpus of New Testament literature that we find more allusions to this sacred marriage. In Matthew 25:1–13 (Aland et al. 1998a, pp. 71–72), for example, we have a hint at a hierosgamos in Jesus' parable of the wise and foolish virgins. The hierosgamos itself psychologically indicates a hostile, emotional outbreak of the divine element which destroys the world of consciousness – Jesus' coming to bring not peace but a sword is indicative of this; however, the deeper significance of the sacred marriage implicated within this parable is that the anima is made pregnant and initiates a new birth, that is, a further and more comprehensive incarnation with God. This is the psychological meaning of the need to be born from above in the exchange between Jesus and Nicodemus in John 3 (Aland et al. 1998b, pp. 252–254). It is an archetypal incest in which the god must join with the *imago Dei* in order to produce a new creation. Such an irruption of the hierosgamos and the devastation it causes is not unlike the irruption one encounters when Lacan's Real forcefully breaks into one's consciousness. Such devastating irruptions implicate the difficulty many Protestant Christians have with religious vocation, as the call to become (and be) a minister of God – let alone a religious – means at least metaphorically being wedded to the divine and not to the immediate environs or the world.

The potential unity of the cosmos is indicated in the seed motif (cf. the Christ's image of having as much faith as would fill a miniscule mustard seed in Matthew 17), but it also possesses an intrapsychic meaning as the germ of conscious realization of the self. Whereas this takes fertility rites such as those practiced in Osiris cults to deeper and higher levels – for as above, so below – such seed motifs were apparently abused. As reported by Iranaeus, the gnostic sect known as the Marcosians celebrated a hierosgamos as a sexual initiation of women into their fold, a sacred marriage both inflationary (of the gods) and incestuous in its acting out. The *Corpus Hermeticum* relates that

God sows virtue, reason, and *gnosis* in the human mind, and the thirteenth treatise describes the inner rebirth of man from intelligible wisdom (*Sophia*) and the seed (*spermata*) of goodness that comes from God (Scott 1993).

It is in the apocalypse (Revelation) of John in which we witness more hierogamynous imagery. For example, the banquet of Christ alluded to in Revelation 3 (Aland et al. 1998c, p. 639) has been interpreted as a hierosgamos with God. And in this sense, the celebration of the Eucharist (Lord's Supper) furthers the image of our union with God to bring about and perpetuate the vision of the new heaven, new earth, and new Jerusalem. A similar image of the banquet occurs in the pseudepigraphal *Odes of Solomon*, and its precursor is to be found in the Sumerian story of Inanna/Ishtar's descent to the underworld.

As the Sol et Lunae joining, the hierosgamos results in not just an inner reality. It is total reality according to the fifth parable of the alchemical text of the *Aurora consurgens* (von Franz 1966, attributed to St. Thomas Aquinas). The *Aurora's* vision of the union of Sol et Lunae is no doubt influenced by its appearance in Revelation 21:9 (Aland et al. 1998, p. 676) in which the pair is joined in the image of the Sun-Moon Woman. She gives birth to the *complexio oppositorum* (complex of opposites), the uniting symbol which is a result of the union of the god and human sacred marriage. What is born is tantamount to a  $\chi\rho\iota\sigma\tau\omicron\upsilon\ \chi\rho\iota\sigma\tau\omicron\varsigma$ , a "not-Christ Christ" (not-Messiah Messiah), who not only separates/fragments, but also unites.

The phenomenal popularity of *The Da Vinci Code* (Brown 2003) has prompted much speculation and debate on the hierosgamos relationship between Jesus and Mary Magdalene, even including the grail mysteries' sexual reenactment of the hierosgamos to insure the Magdalene's rose, or blood, line. This subject has been previously broached in other texts such as Kazantzakis's *Last Temptation of Christ* (1960), not to mention the inferences contained in the gnostic texts of the Nag Hammadi, Berlin, and Tchakos codices. The question has been raised regarding the figure on Jesus' right in Leonardo's fresco of the Last Supper. Is it John who is the beloved disciple or

the woman, Mary Magdalene, since she it is Jesus loves best? It is known that male youths were often painted with female attributes, perhaps as a nod to the inner feminine, and in early Christianity John was occasionally referred to as "maiden" (*parthenos*, i.e., "virgin" or "chaste man"). He is indeed Lacan's *jeune homme*, a *sinthome* – playing on the words *saint home* – possessive of rejuvenating qualities. In the gnostic Acts of Peter and the Twelve Apostles, John is charged to be a doctor of souls, a healer of the heart (Meyer 2007, p. 365). Perhaps it is no mistake, then, that transliteration of the Greek  $\dot{\iota}\epsilon\rho\varsigma\ \gamma\acute{\alpha}\mu\omicron\varsigma$  transitioned from two separate entities (*hieros* and *gamos*) to become one: *hierosgamos*.

Still, the transferential field posited by the hierosgamos within guided image therapy and active imagination, or even its context within the relationship between analyst and analysand or therapist and client brings to bear all the rich symbolism of this *coniunctio* or sacred marriage, awakens our awareness of the unconscious connection, and allows us to witness firsthand the numinosity of *coniunctio*. Balance and harmony must be stressed, for on the one hand, conscious evolution of the symbolism of the hierosgamos' numinosity can have very creative and releasing consequences; on the other hand, the shadow side of the unconscious development of this same symbolism can have deleterious and destructive consequences. The hierosgamos is thus linked to the uroboros as life-giving/renewing qualities as well as for its ability to take and/or destroy life.

## Hillel

Lynn Somerstein  
Institute for Expressive Analysis,  
New York, NY, USA

Rabbi Hillel (born in Jerusalem, traditionally c.110 BCE–10 CE) was a famous Jewish

religious leader and scholar associated with the development of the Mishnah and the Talmud. He was renowned for his love of learning and his compassion.

He asked: “If I am not for myself, then who will be for me? And if I am only for myself, what am I? And if not now, when?”

Hillel’s question “If I am only for myself, what am I?” underlies individual human development—the search for the self and understanding who the self is in relation to others. Psychotherapeutic interaction concerns itself with searching deep within to find what is true for the individual and then finding ways for the individual to make contact with others, a process leading from a narcissistic engagement with the world to a fuller, open, mature being, whose everyday life embodies a full engagement with God and the world.

Hillel also said: “What is hateful to you, do not do to your fellow: this is the whole Law; the rest is the explanation; go and learn” (Shab. 31a). With these words Hillel recognized as the fundamental principle of the Jewish moral law the Biblical precept of brotherly love (Lev. xix. 18).

He is also reputed to have invented the “Hillel sandwich,” many centuries before the Earl of Sandwich, who is more commonly held responsible for that culinary morsel. The Hillel sandwich is eaten at the Passover Seder. Ashkenazi Jews eat horseradish on matzoh as part of the Seder meal and call that the Hillel Sandwich.

## Hillman, James

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

James Hillman (1926–2011) was a trickster *extraordinaire*, the radical rethinker of post-Jungian psychology who challenged many cherished assumptions of psychology and religion and pointed the way to a bold new way of seeing psychology as a variety of religious experience. Hillman studied in Paris, Dublin, and the University of Zurich, where he earned his Ph.D. in 1959. That year he became Director of Studies at the Jung Institute until 1969. In 1970 he became editor of *Spring Publications* and made it a stimulating forum for new ideas in archetypal psychology for many years. He taught at the Pacifica Graduate Institute near Santa Barbara for several years, where most of his library is archived. While he agreed with Jung on many themes, such as the centrality of archetypal images, and expanded Jung's view of the shadow, Hillman disagreed with the centrality of Jung's monotheistic central Self as the divine within, symbolized by the circle mandala, and instead stressed a polytheistic view of divinity and soul in the world. In his 1964 *Suicide and the Soul*, he urged therapists to stop seeing thoughts of suicide as symptoms to be cured but as symbols of philosophical life issues.

Hillman challenges psychology to expand out of its medical roots and to see its *poetic and religious depths*. He makes especial use of Greek gods and goddesses to make his point that all soul events, like therapy, are rituals of gods. For the many gods are living personifications of the depths of soul and world. They are not "in" our theoretically subjective psyche, but we are in them, like being in love is being in Aphrodite. While the theoretical ego of modernism enjoys its illusion of being in control, the gods are images of more powerful forces in us and in the world. He decenters religion into a polytheistic company, each with a shadow that

cannot be ignored. Jung pushed open the door to seeing many images of divinity – stones, trees, animals, and goddesses – but still focused on one God. Hillman flung this door further open, exploring the power of many divinities.

Hillman slips out from under the moral assumptions of much psychology and shakes the reader into facing the unthought surprising turn-arounds of many concepts. Mars is active flexing his muscles in war. Dionysus dissolves our egos with ecstatic passion in the flashing lights, thundering music, and seductive dancing of night-clubs. Hillman is not interested in reviving old faiths, but in portraying gods as ever-present numinous images (Hillman 1975, pp. 35-36).

Hillman renames his jumping off from Jung as *Archetypal Psychology*, rather than Analytical Psychology or Jungian Psychology, taking the postmodern path of stressing that "archetypes" are never perceived, but are theoretical constructs behind experience. So we should never speak of substantive "archetypes" as basic forms governing the psyche, as if we could see or know them, any more than humans could perceive Platonic forms. What we can experience are archetypal images that are not contained in the mind, thus limiting psychology to individual psychoanalysis. They pervade the world, not just in the collective unconscious, but in all experience. So all soul's experience has an imaginative, fantasy element, pervading culture and cosmos:

Thus, archetypal psychology's first links are with culture and imagination rather than with medical and empirical psychology, which tend to confine psychology to the positivistic manifestations of the nineteenth-century condition of the soul (Hillman 1975, p. 48).

Hillman focuses on keeping the images in dreams central, not boxing them into a conscious theory, like an Oedipus complex or a Shadow archetype. Symbols don't stand for anything else, Hillman says they are the soul itself in its visible imagination. He developed this theme in his major *Re-Envisioning Psychology* (Hillman 1975) that was nominated for the Pulitzer Prize, encouraging "staying with the images" or "personifying." He also sees therapy not as always healing but perhaps pathologizing – staying with

a pathology's falling apart long enough to see through its literalism to what the soul's images and stories cry for. Similarly, archetypal psychology is not humanistic, not staying at the human level, but seeing the gods as metaphors for "cosmic perspectives in which the soul participates" (Hillman 1975, p. 169) – personified images of lovers, warriors, tricksters, death, and life itself. Therapy is not science but hermeneutics – interpreting soul's images, not proving anything for ego's sake.

In *The Dream and the Underworld* (Hillman 1979a), Hillman says let the ego go deep into the underworld of the soul, where it is no longer in control, and listen to the mythic pattern of a dream's images, such as a serpent. In the underworld, let the images speak and bring their surprising, even shadowy revelations. A symbolic serpent's bite is poisonous not only to the ego but to the soul, it may bring transforming wisdom and intuitive insight. Listen for the opposites of what ego expects. Death may be the death of an archetypal part of the soul, outworn, painful assumptions that need to die to allow new life and soul to be born. Get out of ego's materialistic literalism and subjective humanism. Dive into the mysteries of soul and swim in its vast ocean of archetypal dramas. Ride a whale, kiss a mermaid, and dissolve yourself into the greater mysteries. It's only imagination but full of meanings.

In *Puer Papers* (Hillman 1979b) Hillman develops the themes of the archetypal, mythic Senex or Chronos, a wise old man who favors conservative, static, family history, and approaching death, like Captain Hook. Puer, like Peter Pan or Icarus, is the eternal youth, playful, creative, innocent, revolutionary, and irresponsible. These extremes pervade and overlap in every life and can capture one's ego-consciousness or be welcomed to help negotiate life's journeys, each in turn as needed.

In the challenging book *We've Had a Hundred Years of Psychotherapy and the World's Getting Worse* (Hillman and Ventura 1992), Hillman, in conversation with Michael Ventura, charges that psychotherapy has been so individual, inward, and subjective that it has stifled its ability to see

soul in the world and analyze the world's cultural pathologies. Therapy has helped us work on our relationships and feelings but meanwhile has a blind spot: ignoring the world's need for psychotherapy, disintegrating in poverty, pollution, and the decline of industrial society. The sicknesses are out there – the financial institutions, the buildings, the cities, and the schools – decaying in the Cartesian dualism that sees the world out there as a dead resource bank for human power and pleasure. Archetypal psychology can restore our way of seeing soul in the world – *anima mundi*. "We are abused and victimized less by our personal lives of the past than by a present system" (Hillman and Ventura 1992, pp. 38–39). What's sick is the rigid mental dualism between inner fantasy and outer reality. "Reality is always coming to you through a pair of glasses, a point of view, a language – a fantasy" (Hillman and Ventura 1992, p. 39). The self is an "interiorization of community. . . . If I am not in a psychic field with others – with people, building, animals, trees – I *am* not" (Hillman and Ventura 1992, p. 40).

This can and should open soul to ecology and social conscience, but, like all psyche, it also has a shadow. For example, feverish adolescents may be addicted to their electronic "friends" but unaware of the inner and outer soul. Still innocent and seeking acceptance by peers rather than being helped to listen to their souls, they drive recklessly while texting or sexting. New research indicates that "stress arises largely from "the irritations of daily life," which I take to mean again the aesthetic disorders of the environment, such as racism, noise, crowding, traffic, air quality, crime fears, . . . violence fears . . . school systems. . ." (Hillman and Ventura 1992, p. 81). Jung said that the collective unconscious is the world, and the psyche is not in you, but you are in the psyche (Hillman and Ventura 1992, p. 83). A city is a soul – Brooklyn's ethnic variety or Houston's cowboy swagger.

Materialism and its literalism, blind to its soul, is the disease of our time, so "Trying to break through to non-material experience is the real number-one crime in America today." Despite the dangers of drugs, "the so-called drug war is

a war against seeing reality in any but a strictly materialist, Puritan way” (Hillman and Ventura 1992, p. 149). Hillman agrees with others that the conventional psychology profession is so competitive, repressive, moralistic, and concerned with credentials, income, and status that it has become mediocre and oppressive, blind to fresh insights such as seeing the imaginative basis of thinking and soul in the world (Hillman and Ventura 1992, p. 155).

In his 1996 *The Soul's Code* that became a *New York Times* best seller, Hillman challenges the psychoanalytic focus on the family drama as major shaper of character. Instead, he argues, each soul is born with a seed, like an acorn, that wants to grow in a certain direction. It may be bent by the environment, but many children have shown early tendencies that blossomed into great talents, despite parental or school disapproval. Picasso cared little for school except drawing. Such children should not be forced to stifle their inborn talents.

Hillman's irony takes off with his 2004 *A Horrible Love of War*. He argues that war is normal, inhuman, sublime, and religious – and of course, we love it.

– *War is normal*. Hillman opens with Patton's WWII quote, as he strode around the bloody aftermath of a battle and exclaimed: “I love it, God help me I do love it so; I love it more than my life” (Hillman 2004, p. 1). We can never prevent war unless we explore how the soul's mad love for war makes it interminable. Tolstoy believed that war is determined by some force beyond human will (Hillman 2004, pp. 6–7).

Americans invented the nuclear weapons that have been imitated as a sign of national pride worldwide and have raised the level of everyday anxiety. Now we just suffer the unending parade of smaller terrible wars around the world that inflict enough tragedy and risk the financial solvency of any nation like the USA that tries to put out the fires of the ones that seem to threaten its own imagined security. But during the 5,600 years of recorded history, 14,600 wars have been recorded (Hillman 2004, p. 17). Hillman says: “Though saying ‘war is normal’ shocks

our morality and wounds our idealism, it stands solidly as a statement of fact” (Hillman 2004, p. 21). No matter how many bodies return mangled or dead, no matter how much posttraumatic stress disorder maims the survivors, no matter how much the military budgets threaten to undermine governments, as it did in the Soviet Union, all these are outdone by the barking dogs of the next round of manic aggressiveness. Hillman admits the unvarnished dark truth that “the necessity of war is laid down in the cosmos and affects life with the unbearable, the terrible, and the uncontrollable.” So “Normalcy” must adjust (Hillman 2004, p. 41). Americans must ask, who invented the repeating gun, nuclear weapons, and all the Pentagon's massively expensive machines of war?

– *War is inhuman*. When millions are killed annually and when normal social norms are wiped away by sanctioned rape, robbery, torture, and child abuse, these are age-old horrors of war that just won't stop. The war god of Rome, Mars, lives on triumphant, a mythic enactment of national glory and territory, paranoid fear, and ruthless phallic domination. Like a spooked horse, wars thrive on some invisible, frenzied autonomous transcendent divine power beyond normal control (Hillman 2004, p. 77). Or is that from our ancient animal instinct? The seizure of a soldier by an animal instinct is like the Norse “going berserk” which meant “to wear the bear coat” (Hillman 2004, p. 78). Soldiers tell of feeling immortal, untouchable by death, fearless, and wild (Hillman 2004, p. 80). Is war so untouchable that it must become a sacrament, a holy power of destruction? Do goddesses of death/life like Kali picture today's war lust? How is the inhumanity of war sustained?

– *War is sublime*. Mars and Venus made sublime love in Roman myth, as did Ares and Aphrodite in Greek myth. The mythic Trojan war was fought over the love of Helen. A member of Gen. Patton's staff wrote his wife that the most gorgeous sight he ever beheld was an enemy bomber smashing into flames on a mountainside (Hillman 2004, p. 116). This kind of spectacular, horrid but

sublime beauty fills the souls of fighters, alongside their fear, feelings of immortality, and heroic bravado. War is a defining moment in warrior's lives, when they face death and thus elevate bravery to a sublime moment. Glorious gods are experienced in facing death, the guns, the loyalty to comrades, and the ecstasy of combat.

- *Religion is war*. “War is a force that gives us meaning,” Hillman says, “because war raises life into *Importance*. . . the infinitude in the finite” (Hillman 2004, p. 178). Belief is the short fuse that sets off the explosions of war. The monotheistic religions are especially bellicose, dogmatically claiming their god is the only god, and all others are heathens and infidels (Hillman 2004, p. 185). Americans sing “God Bless America,” Enemy WWI Germans wore belt buckles inscribed “Gott Mit Uns” (God is with us). Both claimed the same God. The Jewish God is a god of war. Islam breeds a warrior spirit. Soldiers of Christ are at war with the world, the flesh and the Devil, easily projected upon other nations (Hillman 2004, p. 188). How many nations’ proclaimed religious innocence conceals such passive-aggressive hypocrisy? (Hillman 2004, p. 189). The fog of war throws together lies about enemy threats and hymns to blind patriotism. Mob hysteria takes over. Rash promises of quick victory are believed. War is bred by pious, self-righteous religious faith.

Hillman strips off the surface reasoning of psychological and religious constructions and drags us down into the dank underworld of soul and culture, to see anew what ego has missed.

## Hillman, James, and Alchemy

Stanton Marlan  
Pittsburgh Society of Jungian Analysts,  
Pittsburgh Center for Psychotherapy and  
Psychoanalysis, Pittsburgh, PA, USA

It has been said often that James Hillman is one of the most original American psychologists of the twentieth century. He is the founder of Archetypal Psychology, considered by some to be an orientation or school within the larger context of Jungian analysis and by others as a radical departure from it. In its own regard, Archetypal Psychology has had wide influence both in the United States and internationally and has impacted not only psychology, analysis, and religion but also the wider range of the cultural imagination as well. Hillman's work on alchemy is an important part of his overall vision and has its origins in the work of Carl Jung.

## Jung's Psychology of Alchemy

Jung, too, had thought about alchemy in a way that few others before him had imagined. Rather than understanding alchemy as a protoscience of chemistry, he concluded that the alchemists were speaking in symbols about the human soul and

were working as much with the imagination as with chemical materials. In short, the gold that they were trying to create was not a common gold, but an *aurum non vulgi* or *aurum philosophorum*, a philosophical gold (Jung, 1963). For Jung, “alchemy represented the projection of a drama both cosmic and spiritual in laboratory terms. The opus magnum had two aims: the rescue of the human soul and the salvation of the cosmos” (Jung, 1977, p. 220). This move brought our understanding of alchemy into the realm of both psychology and religion. A vital part of Jung’s work soon began to address these disciplines. In and through his work on *Psychology and Alchemy* (1953/1968), his essay “Paracelsus as a Spiritual Phenomenon,” and other works, Jung was led to discuss alchemy as a form of religious philosophy (Jung, 1963, p. 209).

As Jung continued to grapple with his personal experience of alchemical transformation, questions continued to surface and shed light on his ongoing relation to Christianity. For Jung, Christianity was of central importance for the Western psyche, but he also felt it cast a collective shadow that needed to be addressed if it was to remain vital to the spirit of the times and relevant to modern men and women. Jung’s attempt to bring analytical psychology into relation with Christianity ultimately led to the question of Christ as a psychological figure. From Jung’s alchemical view, Christianity had depreciated the body and “the feminine” and, in so doing, ultimately had devalued “nature.” Alchemy, with its emphasis on matter, compensated for this lack in Christianity and thus offered the possibility of the further development of the religious psyche.

### Hillman’s Alchemical Psychology

While Jung critiqued Christianity via his alchemical vision, for James Hillman, Jung’s psychology was still overly influenced by Christian psychology, its images and its metaphysics. This led Hillman to make a distinction between a psychology of alchemy and an alchemical

psychology, the former representing Jung’s views and the latter Hillman’s. For Hillman, the transformation of the psyche must be differentiated from the Christian idea of redemption. For Hillman, images speak more directly when their Christian and metaphysical coverings are set aside; then the “level of the collective consciousness can be peeled away, so that the material may speak more phenomenally. Then pagan images stand out: metals, planets, numerals, stars, plants, charms, animals, vessels, fires and specific locales” (Hillman, 2003, p. 101).

In short, alchemy’s curious images are valuable not so much because alchemy is a grand narrative of the stages of individuation and its conjunction of opposites, nor because of its reflection on the Christian process of redemption, but “rather because of its myriad, cryptic, arcane, paradoxical, and mainly conflicting texts [which] reveal the psyche phenomenally” (Hillman, 2003, p. 103).

For Hillman, imagining alchemy within the narrations of metaphysics, Christianity, and Jung’s psychology led to a “psychology of alchemy,” a psychology in which the powerful images of alchemy were reduced to generalized abstractions. He, on the other hand, proposes an innovative move away from a “psychology of alchemy” to an “alchemical way of psychologizing.” In so doing he hoped to restore an alchemical way of imagining (by seeing through concepts, both deliteralizing and rematerializing them, “giving them body, sense and weight”) (Hillman, 1980b, 1981a, pp. 37–39).

The work of soul-making requires corrosive acids, heavy earth, ascending birds; there are sweating kings, dogs, bitches, stench, urine, and blood . . . I know that I am not composed of sulfur and salt, buried in horse dung, putrefying or congealing, turning white or green or yellow, encircled by a tail-biting serpent rising on wings. And yet I am! I cannot take any of this literally, even if it is all accurate descriptively true (Hillman, 1980a, pp. 37, 39).

Through the use of the alchemical imagery and concrete metaphor and by seeing through them, his alchemical psychology seeks to find those qualities of human life which act on the very substance of personality.

## Development of Hillman's Perspective

This move toward concreteness was present in Hillman's earliest lectures in Zurich in 1966 and continued to run through his papers beginning in 1970 with "On Senex Consciousness." In 1978, Hillman published "The Therapeutic Value of Alchemical Language," which set the stage for his continuing reflections.

What followed were a series of papers: "Silver and the White Earth, Parts I and II" (1980, 1981a), "Alchemical Blue and the Unio Mentalis" (1981b), "The Imagination of Air and the Collapse of Alchemy" (1981c), "Salt: A Chapter on Alchemical Psychology" (1981d), "Notes on White Supremacy: The Alchemy of Racism" (1986), "The Yellowing of the Work" (1991), "Concerning the Stone: Alchemical Images of the Goal" (1990), "The Seduction of Black" (1997), and "The Azure Vault: The Caelum as Experience" (2006), which is a revision and elaboration of his paper "Alchemical Blue." Hillman's alchemical papers have been published in the Uniform Edition of the Writings of James Hillman, Volume 5, entitled *Alchemical Psychology*. To his published papers to date, he added "Rudiments: Fire, Ovens, Vessels, Fuel, Glass," which completes his texts on alchemical psychology. Like alchemical texts themselves, the content of these papers is complex and difficult to summarize in any unified narrative, but if there are any themes that run through them, it is in his turn to the nuances of language and image, the importance of the imagination and attention to alchemical aesthetics, and to color as an organizing focus for reflection.

## Hiltner, Seward

James G. Emerson  
San Francisco, CA, USA

If one line would describe the contribution of Seward Hiltner (1910 to November 19, 1984),

it would be this: he put the “theology” into practical theology. In Dr. Hiltner’s work, developed at the University of Chicago in the 1950s, the personality sciences and the theological or religious field came into dialog.

### Pastoral Theology Defined

For many the phrase “practical theology” meant simply techniques of doing ministry. For some the techniques had to do more with manners than with the practice of care – proper dress and appropriate behavior rather than the “care” or “cure” for the parishioner. Seward Hiltner saw pastoral theology as the theology of the practice of ministry.

Every science has a method and the method for the personality sciences, especially when related to religion, was the “perspectival method.”

### The Perspectival Method

Therefore, to understand Dr. Hiltner’s approach, one must first understand his concept of perspectives and the perspectival method. As early as the 1950s, he developed “the perspectival method” of research and evaluation. Today the perspectival method has been picked up by people such as Jerome A. Feldman (2006) in the field of cognitive theory.

For Dr. Hiltner, there were three perspectives from which to look at the total work of the pastor – the communication perspective, the organizing perspective, and the shepherding perspective. The “shepherding perspective” he identified with pastoral theology.

In his basic book, *Preface to Pastoral Theology*, Dr. Hiltner gave a review of the development of the “cure of souls” – care of souls – that preceded what became pastoral care and counseling. To develop his approach he dipped into history and the work of an Ichabod Spencer – a nineteenth-century pastor in Brooklyn who, according to Dr. Hiltner, was among the first to develop case studies of his pastoral work.

It was in Spencer that Dr. Hiltner came to focus on pastoral care as the province of the shepherding perspective.

### The Shepherding Perspective

The significance of this perspective lay in not identifying pastoral care just with counseling or times of calling on the sick. The perspectival approach meant that one could look at preaching, church administration, and Christian education as much from the shepherding perspective as much as the moment when someone said, “Pastor, I have a problem.”

Dr. Hiltner, therefore, identified pastoral care as related to the shepherding perspective. He saw this perspective as particularly a function of the parish minister in practice. Although his work resulted in a profession of pastoral counselors and of pastoral counseling centers, that development was never his intent. Dr. Hiltner understood this shepherding perspective as strictly part of a pastor’s pastoral ministry in the context of the parish congregation itself. The ministry was not something done outside of the parish in a context unrelated to a particular parish.

### Pastoral Counseling Centers

Dr. Hiltner’s approach laid a foundation for bringing science and faith together as the cornerstone of the work of the pastor. Contrary to his expectations, the clarity with which this foundation developed in Hiltner’s books resulted in people who developed a specialty in such a ministry just as others developed a specialty in Christian education. As a result, this specialty soon broke out of the congregational realm and became a freestanding profession in itself. Ministers with a specialty in pastoral care and counseling soon became members of church staffs. More than that, centers of pastoral care and a profession of pastoral counselors emerged.

In some instances, these centers were adjuncts of congregations. More and more, however, the profession of pastoral counseling broke off into

its own discipline with standards of practice and criteria for both certification and evaluation of pastoral counselors. In several instances around the United States, counseling centers emerged. One such example is the Lloyd Pastoral Counseling Center connected with San Francisco Theological Seminary in San Anselmo, California.

This major diversion some see as a contribution of Seward Hiltner. Yet Dr. Hiltner himself always saw pastoral care and counseling as in the context of the pastorate, not the context of a center unrelated to a congregation.

This matter of context was not just a passing interest of Seward Hiltner. In a book authored with the late Rev. Dr. Lowell Colston entitled *The Context of Pastoral Care* (Abingdon Press, Nashville, Tennessee), the picture was given of the contrast between counseling done at a Center and counseling and care in the context of a parish community. The argument was made that there is a basis for seeing the counseling done in the context of a congregation as having, for many, a greater rate of success in healing than in a setting where there is no relation to a community of people.

The other two perspectives that Dr. Hiltner identified with the work of ministry are “organization” and “communication.” Note that he did not speak of preaching, counseling, educating, or administration as perspectives. Each of those he saw as a *function* that could be viewed from the three perspectives. One could ask, “what is the shepherding dimension of preaching?” just as one could ask, “what is the communicating dimension of pastoral care?”

Seward Hiltner represented the second generation of leaders in the movement of pastoral education who related the insights of the personality sciences – especially individuals such as Freud, Jung, and Adler – to the professional practice of ministry. The fountainhead or “father” of this direction was Anton Boisen of Boston.

In the course of time, Seward Hiltner was ordained a Presbyterian Minister. He became the secretary for the department of Religion and

Health of what became the National Council of Churches. His first book related to the interplay between the personality sciences and religion. He then wrote on Pastoral Counseling and *The Counselor in Counseling*. The very title of the encyclopedia in which this article appears would not exist without the pioneering work of Boisen and the key “disciples” that moved out across the United States and developed what they had learned.

In 1950, Seward Hiltner was tapped by the Divinity School of the University of Chicago to join with Dr. Ross Snyder in developing a doctoral program. No longer was pastoral care seen as a technique. The University of Chicago called the field “Religion and Personality.” Because “personality” referred to personality studies such as psychology, psychiatry, sociology, and anthropology, subsequent years saw changes in the title. The breakthrough came, however, in that first program that pioneered the field of pastoral care as an academic discipline and as seen at the doctoral level.

Under Dr. Hiltner’s leadership, the program involved not only the Divinity School but the Medical School of the University of Chicago and the Counseling Center of the university established by Dr. Carl Rogers.

The impact of the program was tremendous. Of the first graduates who earned the PhD, most went to establish similar departments in divinity schools and seminaries across the United States, in Australia and New Zealand, and in the United Kingdom.

Dr. Hiltner himself wrote ten books and over 500 articles. Those who graduated from his and similar programs around the world have added much. Whole sections of libraries in both secular and theological schools now have space to hold the work of this relatively young theological discipline that relates science and theology in the academic world.

## Hindu Women Gurus

Karen Pechilis  
Drew University, Madison, NJ, USA

Hindu female gurus are a highly visible phenomenon in the contemporary world. Several Hindu female gurus have a high-profile existence as spiritual leaders who frequently travel across the globe for sessions with their numerous devotees; examples include Anandmurti Gurumaa, Gurumayi Chidvilasananda of Siddha Yoga, Karunamayi Ma, and Mata Amritanandamayi (Ammachi). Distinctively, Mother Meera, who garnered initial fame by her association with the famous gurus Sri Aurobindo and the Mother, tends to remain at her ashram in a small town in Germany, where she provides her devotees with viewings (*darshan*). In a different register, Ma Jaya Sati Bhagavati, who experienced *mahasamadhi* on April 13, 2012 (in Hinduism, when a great spiritual leader passes away, this is called *mahasamadhi* or “consciously leaving the body”), received numerous awards, including the Gandhi Foundation Award in 2007, in recognition of her service in advocating for people living with HIV/AIDS including caring for infected persons at her Kashi Ashram in Sebastian, Florida. All of these gurus have official websites on the Internet. The international fame and authority of these female gurus stands in marked contrast to the long historical pattern in Hindu tradition that the role of authoritative guru who has a public presence is limited to men. The study of Hindu female gurus contributes to our understanding of the psychology of the teacher-disciple relationship and recent changes to it.

## History

“Guru” is a classical term and role in Hinduism. It has several meanings including “weighty” and “dispeller of darkness” (Grimes 1989, p. 133). In the corpus of the earliest texts in Hinduism, the Vedas, the term is used in the philosophical Upanishads, where it describes a male figure who has ultimate knowledge. Teaching, knowledge, initiation, and devotion are hallmarks of the guru in these texts (for these terms as describing distinctive guru paths, see Cornille 2005). The earliest references are found in two Upanishads that probably date to about 300 BCE. In the Mundaka Upanishad, a “great householder” named Shaunaka approached the Vedic sage Angiras and asked him: “Blessed one, what must one know for [knowledge of *brahman*, the ultimate] to become known?” (MuU 1.1.3; Roebuck 2003, p. 319). The sage provided a detailed reply, which included a description of the necessity to become detached from the world and its swirl of action through teaching by a guru who is centered in the ultimate principle, *brahman* (MuU 1.2.12; Roebuck 2003, p. 322). A second early reference is from the Shvetashvatara Upanishad, which refers to knowledge of *brahman* as a “supreme secret” that “should not be given to one who is not at peace, nor yet to one who is not a son or a student.” The text also speaks of the necessity of devotion towards both god and guru (SU 6.23; Roebuck 2003, p. 315).

Other classical texts apply these teachings to the life of an upper-caste boy. His studenthood, which transitions him from child to adult, is spent with a guru. Initiation (*upanayana*) takes place for boys of the permitted castes between the ages of 8 and 12. It is an important life cycle rite (*samskara*) that initiates the boy into three domains: human society, study of the Veda, and practice of the fire sacrifice. It transitions the boy from biological birth to social status, replacing the mother (Smith 1986, 67). It transforms the boy through sacred knowledge imparted by a guru, with whom the child was said to have a more intimate relationship than with his biological father (Smith 1986, pp. 73, 75–76).

Living with the guru, known as *gurukula*, highlights the seriousness of the relationship and the teaching for boys, while it indicates that this system excluded young girls. Girls only left their family homes after marriage and after puberty – marriage is the most important *samskara* for girls, and it is the counterpart to the boys' *upanayana*. When we hear of educated women in classical Indian tradition, they are firmly located in the family context. For example, the female sage Gargi Vachaknavi, who acts as a guru to male disputants in a debate in one of the earliest Upanishads, the Brihadaranyaka (ca. 700 BCE), is not represented as having studied with a guru; rather, she is in the family line of the renowned sage Garga. Later texts in which women are explicitly portrayed as gurus, such as the *Yoga Vasistha* (YV) and the *Tripura Rahasya* (TR) (both ca. thirteenth century CE), represent them as wives who are gurus to their husbands, again joining women's knowledge with family location. This suggests that for women family is *gurukula* – one learns from a relative who is a sage, or one takes spiritual instruction together with one's husband from a guru (Pechilis 2012).

These same stories reveal that female gurus added a new dimension to knowledge acquisition by joining spiritual knowledge to personal experience in the world (Pechilis 2012). Within the dominant tradition of male gurus, personal insight is valued in the context of structures such a guru lineage, received teachings, and emulation of a specific guru as practiced in the intimacy of the *gurukula* system. In contrast, a prominent theme in the tradition of female gurus is personal experience both in the sense of independent spiritual realization outside of initiation in a lineage (many female gurus are self-initiated) and a pragmatic orientation that relates experience of the world to spiritual knowledge. Personal experience was especially significant to women and served as a cornerstone of their authority since they were not originally included in the definition of guru; thus, instead of relying on the de facto qualification by gender open to men, women who wished to have the authority of

a spiritual teacher (guru) innovated with what was at hand (Pechilis 2004, 2012).

Stories of historical female gurus from the sixteenth through the eighteenth centuries make it clear that for a woman to be publicly known as a guru was controversial (Pechilis 2004, 2012). This barrier was definitively breached by female gurus in the mid-twentieth century who were supported by men and became internationally famous, such as the Mother (Mirra Alfassa 1878–1983, who was the appointed successor of Sri Aurobindo) and Anandamayi Ma (1896–1982, whose husband was her disciple; see Hallstrom 1999, 2004). Contemporary female gurus have a very public presence which they enhance by a pronounced emphasis on public service (*seva*) well beyond the traditional devotional service of keeping up the ashram; female gurus today have established social service agencies such as schools for children, hospitals, food programs for the poor, and prison programs (Pechilis 2004; Saha 2007; Warriar 2005). Spiritual growth is thus intimately linked both to personal experience in the world and public social service in the modern path of female gurus.

## Psychological Aspects

For the devotee, the path is one of transformative personal experiences guided by a guru. Classically, the aim of the guru path is the breakthrough in consciousness constituted by the realization of *brahman* (ultimate reality). This may be described in diverse ways, but a common one is that the guru leads the devotee to experience the unity that underlies the multiplicity of phenomena. This path is in many ways the antithesis of individuation. The process is to restore the *citta*, “the fundamental concept in the Hindu model of the human psyche” that is “very similar to the id,” to its natural state “in which its fundamental aim of ‘I’ awareness and the non-duality of ‘I’ and ‘other’ can be realized” (Kakar 1978, p. 12):

The presence of a guru to guide and monitor this process is essential. But the guru's function is not to help to strengthen the ego's autonomy or to enlarge its domain through insights into the hidden

reaches of the mind. Rather, given the goal of calming *chitta* and the gradual merging of the ego and the (transformed) id, the guru's role ... is to sanction and facilitate this process of integration while all the while keeping a watchful eye on the 'patient's' ego lest it be prematurely engulfed. The presence of the guru provides the necessary support against the danger of psychotic breakdown. Unlike the alert, sanctioning support conveyed in words in most Western psychotherapies, the guru's support is given through 'look, touch and silence' – the language of the *citta* (Kakar 1978, p. 25).

From a Jungian perspective, there is a "feminization of the psyche," in which "the feminine is both an aspect of divinity as well as a psychological experience...in which human consciousness must put itself into a receptive state in order to experience the divine" (Ahmed 2002, p. 84). The guru orients the ego to the divine inner Self.

Traditionally, surrender and loyalty are due to the guru, which amplifies the vulnerability of the devotee within a relationship that is in many ways comparable to a relatively common power differential (parent–child, teacher–student, boss–worker). The female gurus offset this vulnerability by embodying the nurturing persona of mother, evident in their titles (*ma*, *amma*) and behavior (such as Ammachi's hugging) (Charpentier 2010), and by the public dimension they cultivate, such as visibility, accessibility, service, and teachings on their websites. Controversial aspects of the 1960s popular male gurus' paths, such as a closed and secretive residential campus, are outmoded. Still, to what extent a specific guru operates in an authoritarian mode and a specific devotee's response to a guru renders the guru authoritarian for her or for him does need to be assessed, since there remains the potential for the devotee to be overwhelmed by the relationship (Cornille 1991, pp. 23–30; Kramer and Alstad 1993; Storr 1997).

Significantly, there has been a healthy skepticism of the guru in Indian tradition, especially on the issues of the acquisition of money and sexual exploitation. Also, it is worth remembering that, in the traditional model, study with the guru prepared a man to move into a healthy, socially meaningful life of work and marriage; it was not generally speaking an end in itself. These nuances,

coupled with female gurus' emphasis on life experiences, are now beginning to inform western reflections on experiences of the guru path. What we see emerging are personal critical reflections that more calmly and less polemically reflect on areas of disappointment in or perceived limitations of the guru, written by former devotees who reflect on their experiences with the guru in the context of a longer view of their own evolving life experiences; I have called these a "discourse of constructive disappointment" (Pechilis 2012, p. 127). Such reflections have emerged mainly around female gurus, for example, Gurumayi of Siddha Yoga (Caldwell 2001; Szabo 2009) and Gurani Anjali of Yoga Anand Ashram (Chapple 2005), although the genre includes reflections on experiences with male gurus (Gold 2012).

in the formation of the Indian civilization in the second millennium BCE. This mixture entails the inculcation of the Aryan nature deities or *devas* including Agni as fire and altar, Indra as storm and warrior, Vayu as wind, Ratri as night, and Surya as sun. These deities appear in some of the earliest hymns dating possibly to 1500 BCE. The hymns relate a mystical bond between worshiper and the natural world indwelt with spirit. The *Brahman* or supreme Godhead has special qualities as one from whom the cosmos comes forth and moves (*Katha Upanishad*, 2.3.2). His power “reverberates like thunder crashing the sky,” and those who “realize him” go beyond the sway of death (*Katha Upanishad*, 2.3.2). Priests called brahmins used hymns as part of worship and ritual sacrifice. They also produced commentaries to explain the meaning of religious rituals. Together with the hymns, they constitute the Hindu scripture, *Veda* (Sanskrit, *vid*, “to know”), which occur in four family traditions: Rig, Sama, Yajur, and Atharva. Each of these traditions consists of two parts. The first, *karma-kanda*, contains the hymns and interpretations of the sacred rituals. The second part of each tradition, named *jnana-kanda*, contains wisdom material addressing fundamental questions about the meaning of life and the nature of the Divine. The *jnana-kanda* includes the Upanishads, which translates “sitting down” – a reference to the student sitting attentively at the foot of the illumined teacher who gives inspiration based upon personal experience. Ancient sages composed individual Upanishads, ten of which are thought to be the “principal Upanishads” according to the prominent eighth-century mystic named Shankara. The Upanishads are unique in the Vedic tradition as writings which are introspective with a focus upon human consciousness. According to the *Mandukya Upanishad*, there are four kinds of consciousness. In the first, called Vaishvanara, one lives with all the sense turned outward, “aware only of the external world” (3). In the second, Taijasa, one lives in a dreaming state with the senses turned inward to enact the “impressions of past deep and present desires” (4). In the third state of consciousness, Prajna, one exists in deep sleep of neither dreams nor desires, neither mind nor separateness (5). In the fourth state of consciousness,

## Hinduism

Jeffrey B. Pettis  
 Department of Theology, Fordham University,  
 New York, NY, USA

Hinduism has its roots in the fusion of two ancient cultures, the Aryan and the Indus Valley, resulting

there is neither inward nor outward, but a beyond sense and intellect “in which there is none other than the Lord. He is the supreme goal of life. He is the infinite peace and love. Realize him!” (7). In Hinduism Aum (OM) stands for the supreme reality and occurs as a symbol for past, present, and future. It is the symbol of the Godhead, and by realizing it one finds “complete fulfillment of all one’s longings.” It is of the “greatest support to all seekers. Those in whose hearts OM reverberates/Unceasingly are indeed blessed/And deeply loved as one who is Self” (*Katha Upanishad*, 1.2.16). According to the *Aitareya Upanishad*, “the self,” which is inseparable from Aum, existed before all other things, and it is the self who creates all other things – the worlds, Purusha (God), the elements of earthly existence, and human creatures (1.1.1 f.). The self is realized through a personal desire to know the self: “Those who long for the Self with all their heart are chosen by the Self as his own” (*Mundaka Upanishad*, 3.2.3). The self does not come through the intellect, discourse, or the study of the scriptures (*Mundaka Upanishad*, 3.2.3). To realize the self is to enter into a higher state of consciousness, breaking through “the wrong identification that you are/The body, subject to birth and death” (*Kena Upanishad*, 2.4). To see the self in all goes beyond death (*Kena Upanishad*, 2.5). The Upanishads have as their starting place mystical experience and the realization of the self comes through concentrated attention given to the meaning and significance of such experiences. The overall movement of Hinduism concentrates inwardly toward intense introspection and a heightened state of “illumination.”

## Hispanic American Pastoral Counseling

Carlos Velazquez-Garcia

The Psychotraumatology Institute, San Juan, PR, USA

### Culture and Diversity

The term Hispanic or Latino people does not do justice to the diversity that characterizes the Latino people state Medina and Montilla (2006).

The US Census Bureau in 2010 defines the designation Hispanics as follows:

(Referring) to persons who trace their origin or descent to Mexico, Puerto Rico, Cuba, Spanish speaking Central and South America countries, and other Spanish cultures. Origin can be considered as the heritage, nationality group, lineage, or country of the person or the person’s parents or ancestors before their arrival in the United States. People who identify their origin as Hispanic or Latino may be of any race.

This definition emphasizes the presence of the Spanish culture and heritage in the ancestry of the addressed population. Nevertheless, Medina and Montilla (2006) would counter: “Latino Population is a polyculture combining a very heterogeneous and multicolor group of people with a combination of ethnicities, an array of languages, a variety of religions and of diverse socio economic and educational status that although diverse maintain distinctive features and principles that make it “one” particular people.” In the “official” definition of Hispanic American, the communality of language is stressed over the ethnic and racial diversity. This might induce service providers, be them ecclesiastical or otherwise, to develop initiatives insensitive to the rich diversity within the Hispanic American population. Some Hispanics have lived in North America for hundreds of years prior to 1776 and others have a more recent arrival as illegal or undocumented immigrants.

The emerging importance of the Hispanics is underscored by the findings of the US Census Bureau in 2004. It reports that as of July 1, 2003,

there were 39.9 million Hispanics in the USA, not counting 3.9 million Puerto Ricans living in that territory of the USA. The composition of this Hispanic population was 66.9 % of Mexican origin, 14.3 % Central and South American, 8.6 % Puerto Rican, 3.7 % Cuban, and 6.5 % are of different Hispanic origins. It is expected that by 2050 Hispanics will represent 25 % of the population.

## Religion and Demography

A closer look at the Hispanic Americans is provided by the *Pew Forum on Religion and Public Life* in their report of 2007: *Changing Faiths: Latinos and The Transformation of American Religion*. The Forum found that more than two-thirds of Hispanics (68 %) identify themselves as Roman Catholics.

The next largest category, at 15 %, was made up of born-again or evangelical Protestants. Nearly one-in-ten (8 %) Latinos do not identify with any religion. They also noted that differences in religious identification among Latinos coincide with important differences in demographic characteristics. For example, Catholics are a more heavily immigrant population than evangelicals.

Regarding religious practices and beliefs, for the great majority of Latinos, regardless of their religious tradition, God is an active force in everyday life. Most Latinos pray every day, most have a religious object in their home, and most attend a religious service at least once a month. By significant majorities, Latinos who identify with a religion believe that miracles are performed today just as they were in ancient times. For Latinos, God is alive and acting in their midst.

## Positive Characteristics: Familismo, Compadrazgo, Personalismo, Community, and Popular Religiosity

The Hispanic community has positive characteristics that contrast with its surrounding culture. Prominent among these is the importance of the family vs. the hyperindividualism in the

surrounding culture. Family is the primary source of support, guidance, care, and healing in the Latino population. Family is seen as a community of people connected by blood or adoption, marital agreement, or emotional bonds.

In this respect, Hernandez et al. (2010) also note the institution of the *Compadrazgo*, that is, the selection of non-blood relatives for co-parenting for life, vs. the isolationism from nonrelatives in the dominant culture. As in the larger culture, the family is confronting challenges and is increasingly vulnerable to disruptions, breakdowns, and erosion of values. Nevertheless, the Hispanic family is a sturdy, yet flexible, and resourceful institution that confronts these challenges with resiliency.

Along with the importance of the family and the institution of *Compadrazgo*, we find *Personalismo* which is based on the cultural idea that individuals are valued more than material belongings. *Personalismo* can be described as the partiality for close personal relationships. It privileges very personal approaches over against impersonalism. In a Hispanic parish, a phone call will not suffice, but a visit will. The primacy of the communal and close personal relationships inform every community, be it the church as community or the neighborhood as a larger community.

Goizueta (2009), a Cuban-American theologian, in his book "*Caminemos con Jesús*," points out that the popular religiosity of the Hispanic Americans serves as a powerful source of identity. He distinguishes "popular religiosity" from official church dogma or rituals, as the rituals and symbols that arise from within the peoples' religious practices in community.

Hernandez et al. (2010) point out that closely knit families and a high rate of church attendance correlate highly with general health. These characteristics are of paramount importance in determining the locus, the center of the pastoral care agenda and its initiatives.

## A Contextual Theology Informs the Agenda of Hispanic Pastoral Counseling

Liberation Theology is a theological current that began in Latin America after the Second

Vatican Council and the Medellin Conference in Colombia, 1968. The council opened October 11, 1962, and closed on December 8, 1965.

Boer (2007) argues that the political ideologies of liberation emerged in the Third World in centers of exclusion and poverty in the occidental world around the 1960s. Fundamentally, it was the fruit of an explicitly theological work. An example of this fermented area of theological work was the labor of Gustavo Gutiérrez. His classic book *Una teología de Liberación* came about in 1969, precisely 1 year before James Cone's (1970) book *The Black Theology of Liberation*.

The methodological interest of this theology is the examination of reality from the perspective of the oppressed, from the context of oppression. The salient characteristic feature of this liberation theology is the primacy of praxis.

The goals for transformation emerge from the needs of "the here and now," a society with equity and justice where reciprocity is predominant over the dominion of others and where the exploitation of humans against humans is abolished. In the theology of liberation, we observe the preferential option for the exploited, the oppressed, and the poor. The major ethical task is for the practice of social justice and the abolishment of exploitation.

### **Context and Community: Poverty, Racism, Oppression and Marginalization, and the Agenda for Hispanic Pastoral Counseling**

#### **Poverty**

The US Census declared that in 2010, 15.1 % of the general population lived in poverty. Since the 1960s, the United States Government has defined poverty in absolute terms. The "absolute poverty line" is the threshold below which families or individuals are considered to be *lacking the resources to meet the basic needs for healthy living, having insufficient income to provide the food, shelter, and clothing needed to preserve health*.

The breakdown figures were 9.9 % of all non-Hispanic white persons, 12.1 % of all Asian persons, 26.6 % of all Hispanic persons (of any race), and 27.4 % of all black persons lived in poverty. That is, the percentages of Hispanics or Blacks living in poverty in 2010 were three times larger than the percentage of all non-Hispanic white persons. This inequality occurs in ethnic and racial groups that have lived for centuries in the USA and historically have been the object of oppression, discrimination, and marginalization.

#### **Priorities**

The above negative socioeconomic indicators, which are the context of the Hispanic community, sets the agenda for Pastoral Care and Counseling: food, shelter, legal immigrant status, adequate livelihood, safety from violence, and health-care promotion and breaching the gap of access to health care. The above calls for justice and compassion, love, and empowerment, as Chinula (2009) and Kuyawa-Holbrook and Montango (2009) propose.

#### **Pastoral Care and Pastoral Counseling**

Given the context of the Hispanic community, pastoral care is inextricably linked to justice and compassion. "Pastoral Care becomes not what one trained professional does for the hurting, but what the community of faith does for each other," De La Torre (2009) states. We must note that trained pastoral counselors have been a rarity among the ethnic minorities. Chinula (2009) found that in 1993 of the total of 3,187 members of the American Association of Pastoral Counselors (AAPC), only between 25 and 30 were from the ethnic communities of African American, Hispanic, and Asian. This represented only about 0.78–0.94 % of the total membership.

"Because of its primary focus on the individual," Chinula (2009) affirms, "the hyperindividualistic model (of Pastoral Counseling) lacks serious critical social theory and analysis to inform its praxis." He further notes "the hyperindividualistic" model lacks a serious role for the church in its intervention repertoire." Pastoral Counseling could be done outside of the local church, or parallel to it, not necessarily from within it. Furthermore, "the interrelated nature of

context and community suggest that pastoral care is a holistic practice that attends to whole persons—mind, spirit and body—in community” as Kuyawa-Holbrook and Montango (2009) note.

Again, Chinula (2009) proposes that more sociocultural oriented perspectives should guide Pastoral Counseling rather than the more “hyperindividualistic” models. He names the following five alternative models: the individual psychology of Alfred Adler, the structural perspective of Salvador Minuchin, feminist psychologies, ethnic psychologies, and the growth empowerment model of Howard Clinebell.

We must note that at present, there are significant efforts to leverage the unique strengths of faith-based communities to decrease disparities in mental health and substance abuse. The American Association of Pastoral Counselors recently developed training to prepare *Pastoral Care Specialists*, which do not require the same graduate-level academic preparation as the pastoral counselors, as another effort to eliminate mental health disparities that underserved populations suffer.

Another initiative has been the *Mental Health and Substance Abuse Curriculum for Laity* by Uceda et al. (2011). The goal is to train members of faith-based communities to identify persons in need within the church and their communities and develop a network of government, nongovernment, and church-related services be them clinical, social, familial, or behavioral in order to make appropriate referrals. These efforts appear pertinent and promising since they are faith based and the resources human and institutional function within the community.

## Holocaust

Krystyna Sanderson  
The Blanton-Peale Institute, New York,  
NY, USA

The term holocaust, or “the Holocaust,” is most commonly used to describe the persecution and murder of some six million European Jews during World War II. The term is derived from Greek *holos*, “completely,” and *kaustos*, “burnt.” The Hebrew term is *Shoah* – “destruction” or “desolation.”

Other victims of Nazi persecution and murder included Gypsies, Russians, ethnic Poles and other Slavic people, the disabled, gay men, and political and religious dissidents, bringing the total number of victims to 9–11 million.

There is no individual psychological equivalent of the Holocaust, which stands as a uniquely horrifying cataclysm in the annals of European history and attempts to “explain” the Holocaust in psychological terms have been singularly unsuccessful. Jung devoted much attention to the study of mass psychoses and observed a “psychic inflation” of the individual in which ego consciousness is flooded by the unconscious with resulting mass psychotic behavior.

## Holy Grail

David Waldron  
Department of Social Science and the  
Humanities, University of Ballarat, Ballarat,  
VIC, Australia

The Holy Grail is one of the most profound and complex psychological and historical symbols. In terms of mythology, literature, and popular culture, the grail mythos deeply permeates Western culture as a symbol of perfection, struggle, purity, and sacred quest. However, it is worth noting that despite its ubiquity in Western European culture, it was far from well known in Eastern Orthodox nations and in many predominantly Catholic regions, such as Spain and Latin America until the nineteenth and twentieth centuries.

Typically, the grail mythology, in its many forms and variations, focuses on two archetypal narratives. Firstly, there is the grail itself as a symbol of purity, completion, the divine, and plenty. In the *Parsifal* grail myth and *Arthurian* cycle, the grail serves as the panacea, curing sickness and devastation brought to the land by the ailment of the king as the spiritual embodiment of the land and guardian of the grail. The grail as a symbol of wholeness and purity reconciles the king to the source of his ailment and thus leads to the restoration of the land. This theme is well developed by Jungian analyst Robert A. Johnson who utilizes Parsifal’s search for the Holy Grail as a metaphor for the development of wholeness in masculine psychology and reconciliation between the conscious and unconscious aspects of the psyche. The absence or loss of the grail, from this perspective, represents a symbolic dissonance between the conscious and unconscious aspects of the psyche, leading to neurosis, insecurity, and depression. The grail itself becomes the symbol of psychological wholeness and well-being achieved through the completion of the quest and reconciliation with the unconscious and shadow aspects of the psyche (Johnson 1989).

## The Grail Quest

The quest itself forms the second part of the grail narrative in mythology and literature. The quest is a symbolic manifestation of a spiritual pilgrimage towards psychological wholeness and well-being. The quest, comprising three levels, separation, initiation, or trial and return, serves as a parable for the growth of the psyche and the journey towards psychological wholeness and adulthood. Indeed, the narrative of quest or pilgrimage closely follows the pattern of pre-liminal, liminal, and post-liminal phases engaged in ritual and symbolism by all cultures to mark transitional phases and focal points of doubt, turmoil, and anxiety identified by anthropologist Arnold Van Gennep. In this case, the grail serves as the ultimate focal point of resolution to turmoil, unhappiness, and neurosis (Van Gennep 1960).

## The Origins of the Grail Myth

There are other powerful symbolic and psychological associations to the myth of the Holy Grail. However, in part, they depend upon perceptions of the historical antecedents of the grail mythology. For example, one school of thought championed by historians and folklorists such as Roger Loomis, Alfred Nutt, and Lewis Spense is that the grail mythology is a Christianized derivation of the Celtic myths and legends surround the Goddess Cerriden's "Cauldron of Inspiration." In early Welsh literature attributed to the mythic figure *Taliessin*, for example, the vessel recovered by Arthur and his companions is a cauldron set with a rim of jewels and pearls, the fire beneath kindled by the breath of nine maidens, and it would not cook the food of a coward. Similarly, Celtic myth and folklore is replete with images of a cauldron from which issues knowledge, unlimited food and drink, or cauldron-born warriors. The cauldrons in Celtic myth are associated with a variety of gods and goddesses and serve as a symbolic womb of birth, creation, and wisdom and recur continually

throughout Celtic mythology and legends. From this perspective, the Holy Grail is a Christianized myth popularized in the twelfth and thirteenth centuries. In this sense, the grail also has powerful symbolic associations with the psychological feminine, the notion of rebirth, and the sacred mother or divine feminine (Spence 1994; Mathews 1991; Hutton 1993; Nutt 1965; Weston 1957).

## Criticisms of the Grail Mythology

However, this theory of the grail's origins, and thus its symbolic associations, has come under historical criticisms. Ronald Hutton, for example, comments that aside from the superficial similarity of both being a vessel, the grail as a small dish or platter carried by a singly maiden as a symbol of purity, wholeness, and reconciliation to the divine has little in common with the gigantic cauldrons of the Celtic gods kept perpetually filled with inexhaustible food, wisdom, or cauldron-born warriors. An alternate school of thought, led by writers such as Richard Heinzel, Joseph Georing, Wolfgang Golther, and Rose Peebles, among others, suggests that the grail mythology is primarily a Western Christian invention. In particular, this school of thought links the rise of the grail myth to the overwhelming preoccupation with the doctrine of transubstantiation in twelfth-century Western Europe (Hutton 1993; Goering 2005). As the wellspring of all communal chalices, the grail became the focal point of this preoccupation with the physical manifestation of the divine and the bridging between the realm of the spirit and the flesh that distinguished Christianity from the proliferation of dualist heretical movements of this era. Thus, the grail served both as the symbol of ultimate purity and wholeness but also as symbolic bridge between the realm of the flesh and the divine, connecting humanity to the *imago dei*. In this sense, the grail also becomes the epitome of the struggle for spiritual transcendence endemic to Christian belief, and for that matter, the search for enlightenment and the lapis that lay at the core

of medieval alchemy and the hermetic tradition of medieval Neoplatonism (Yates 1972).

However, despite the competing historical origins of the grail mythology, in terms of archetypal symbolism and psychological association, both interpretations of the grail's origins have deeply inspired contemporary symbolic representations and interpretations of the grail myth. Indeed, there are clear antecedents within both Pagan Celtic and Christian mythic structures for the contemporary manifestation of the grail mythology. In either case, the image serves as the focal point of the mythic quest for psychological wholeness and development and the wellspring or birthplace of wisdom, nourishment, and purification. As such, it remains one of the most profound, ubiquitous, and complex archetypal forms in Western culture.

## Homo Religiosus

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

The phrase, *homo religiosus*, refers to the idea that human existence is inherently religious. There is a long lineage of scholars that have proposed this idea, including Georg Wilhelm Friedrich Hegel (1770–1831), Soren Kierkegaard (1813–1855), William James (1842–1910), Mircea Eliade (1907–1986), Rudolf Otto (1884–1939), Friedrich Schleiermacher (1768–1834), Gerardus van der Leeuw (1890–1950), Karl Jaspers (1883–1969), Paul Tillich (1886–1995), Erich Fromm (1900–1980), Abraham Maslow (1908–1970), Erik Erikson (1902–1994), Langdon Gilkey (1919–2004), and David Tracy (1939–). The inherent religiosity, these and other theorists refer to, is not a person's creedal beliefs or institutional commitments per se but refer to our existential drive toward transcendence, freedom, and meaning-making, no matter the differences of religious or a/religious backgrounds or convictions.

Various phenomenologists of religion have helped us view religion as more than collective, institutional practices and beliefs and, instead, helped focus us on the nature of religious experience itself and its impact on how we come to understand ourselves as human beings. Soren Kierkegaard, the father of existentialism, described human development, particularly the development toward deeper subjectivity, as an ethical, aesthetic, and religious progression in becoming a "knight of faith" (1843/1954). William James demonstrated that we use religious symbols, words, and practices for pragmatic reasons and that such religious artifacts and activities represented existentially significant aspect of human existence (James 1902/2007). Mircea Eliade (1907–1986) wrote of the

centrality of hierophanies, or experiences of the sacred breaking into mundane existence (Eliade 1959). Eliade further disclosed how we mythologize the significance these experiences in our lives, which in turn become narratives that orient our own identities as human beings. The stories and myths describe our relationship to both sacred and profane orchestrations of our everydayness. Rudolf Otto (1917/1958) focused on the phenomenology of the “holy” as a numinous experience, that is, as terrifying, attractive, and wholly other to us, and how such encounters clarify who we are in relation to the numinous (Otto 1917/1958). Otto’s emphasis on numinosity is taken from the Latin, *numen*, meaning “deity.” The deity, from this perspective, is not a thing or substantial entity, but a qualitative experience, albeit one of otherness. Nevertheless, if the numinous is a qualitative human experience and a most intense one, then it inescapably influences the development of human being.

Our relationship with the numinous is particular. Given the power and awe evoked in its presence, Friedrich Schleiermacher (1893/2007) described our relationship to the divine as that of “absolute dependence,” noting the predication of human identity on that which is more than itself (Schleiermacher 1893/2007). Gerardus van der Leeuw (1933/1986) described the numinous as one of “power,” which, for van der Leeuw, should be understood in experiential ways rather than in objectified, political, or sociological ones. Much like Otto, van der Leeuw noted that the experiential encounter with the numinous is an encounter with that which is completely overwhelming (van der Leeuw 1933/1986). We come to understand ourselves better as we see ourselves in perspective when confronted with such power. Karl Jaspers (1883–1969), the existential psychiatrist, addressed this phenomenon as well (Jaspers 1919). He wrote that we inevitably experience what he called “shipwreck” in our lives when we stumble into what he called “boundary situations.” Boundary situations, namely, conflict, death, suffering, chance, and guilt, bring us into contact with “the

encompassing,” thus moving us toward the need for each other and the desire for free and meaningful communication. Boundary or ultimate situations, for Jaspers, initiate our transition as human beings from mere *existence* as functional and biological creatures to what Jaspers considered existential, meaningful *Existenz*. Finally, a survey of central figures in the phenomenology of *homo religiosus* must include Paul Tillich (1886–1965). Tillich emphasized the inescapable nature of our intentionality as human beings toward what is of “ultimate concern” (Tillich 1952).

The ideas offered by these thinkers in this survey on the phenomenology of religion include several points to consider: the idea that the sacred is experiential, that consciousness presupposes and is dependent on otherness, that transcendence is related to our intentionality toward otherness-as-ultimate concern, and that ultimate concern as enactments of significance are ever present in our everydayness. These issues are present and show themselves throughout the life span. “Otherness” is the particular qualitative distinction in experiencing the sacred and one that does not reside “in” human consciousness as much as in the “betweenness” co-constructed from our openness to the other and its call for us to dialogue.

If we start with an analysis of our formation as human beings, we find that we come to consciousness about ourselves only in relationship to another, thus suggesting that our very formation relies on the mutual exchange with otherness. Hegel’s (1770–1831) dialectical development of consciousness is one way to understand this process and challenges our conceptions of ourselves as self-contained (Hegel 1807/1979; O’Neill 1996; DuBose 2000). Independence presumes interdependence, so, consequentially, we are not sole creators of ourselves. We desire to complete ourselves through engaging with the other, who in turn desires to engage with us. The unceasing call and demands of alterity, or otherness, as Mark Taylor’s (1987) survey of continental thought reminds us, demonstrate the centrality of alterity and interdependency in identity formation, which nonetheless is not

a formation of the human being as a static and self-contained thing, such as “person.” If we mean by “religiosity” that we are absolutely dependent on the other, as Schleiermacher proposed, and if it is a given that we develop as a result of this dialectic, then the human being is necessarily *homo religiosus*.

We are also desiring creatures, thus disclosing the transcendent nature of our existence. Erich Fromm (1900–1980) described how the “x” experience, or God experience, is a desire for ultimate values in human existence that requires a letting go of egoism (Fromm 1966). Letting go of egoism is often forced when the impact of significant experiences beyond our control jar lose our grip on life. Many thinkers have written on these kinds of “limit” or “boundary” experiences inherent in human existence (Jaspers 1919; Tracy 1996) and at times have called them experiences of the impossible (Bataille 1988; Blanchot 1992), the abject (Kristeva 1982), and unresolvable aporias (Derrida 1980) or as an unreachable other (Lacan 2007). For Jaspers, *homo religiosus* communicates within boundary situations by way of “ciphers,” or symbols of the encompassing, which signify what is experienced by us as beyond our ability to confine and reduce its nature. This “absent presence” is transcendence for Jaspers (Schlipp 1957). Although these thinkers would differ widely in their theological proclivities, they all highlight the centrality of how “that which is more than we are” shapes who we are as human beings.

## Commentary

There are differences of opinion as to whether or not *homo religiosus* refers to a “peak experience” (Maslow 1970) and whether or not *homo religiosus* describes an exceptional person, such as those individuals who have reached rare and higher levels of faith (Fowler 1981) and moral development (Kohlberg 1981), or is a description of the very constitution of any human being. David Wulff (1997) has written about how Erik

Erikson’s (1902–1994) project of comparing Luther and Gandhi was an exploration of *homo religiosus* and emphasized the resolution of life crises in development, starting with our basic trust in the world. For Erikson, basic trust is the cornerstone of *homo religiosus* (Wulff 1997; Erikson 1958). Also for Erikson *homines religiosi* are those individuals in history who have offered us a new set of images and ways of being that promise renewed lives. As Wulff reads Erikson, the journey of *homo religiosus*, which is indeed a lifelong journey, brings one to a sense of centeredness, wholeness, a settled presence, and a greater sense of self and other awareness and well-being. Nevertheless, reserving the title of *homo religiosus* for exceptional individuals such as Mahatma Gandhi or Jesus of Nazareth perpetuates exclusivism and rank-ordered hierarchy of spiritual elitism, thus mitigating against the incomparable uniqueness of transcendence in our lives. Moreover, an elitist position for *homo religiosus* inattends to how meaning-making, transcendence seeking, encounters with numinosity, and finding oneself in the intimacy of relational engagement, even though unique in how these experiences are taken up, are also existentialles in the ontology of human existence as a whole.

Another separatist assumption is found in the popular distinction between religion and spirituality, which is spurious if we heed the wisdom of seeing human nature as inherently religious. To be a human being is to be an enactor of significance in each moment of our lives. Living out significance, or what matters most to us, is the heart of being *homo religiosus* in the world. The original etymology and history of the role of the psychologist was as an “*iatros tes psyche*,” or “physician of the soul.” The logical positivist agenda of only accepting what is observably real contributed to the dissection of the theologian from the psychologist. Yet, lived experience itself is invisible, immeasurable, and incomparable, as life is lived rather than isolated, extracted and objectified, as the French phenomenologist Michel Henry (1922–2002) has argued (Henry 2003).

Hope, significance, emotions, creativity, and intuition are expressions of the soul that propel our everyday decisions and are nonetheless invisible. The objectification of *homo religiosus* leads to the death of *homo religiosus*, which leads us back to the wisdom of Kierkegaard as we close. Access to our natures as *homines religiosi* is found in the radically subjectivity and intersubjectivity of our lived experiences and in the enactments of significance accompanying them.

## Homo Totus

Kathryn Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

*Homo totus*: [Latin origin: the Son of Man, the *homo maximus*, the *vir unus*, *purusha*, etc.]

## Analytical Psychology

Says Carl Jung (1971: para. 419), the *homo totus* is an archetype of the Self, the beginning and the end of psychic process, an exercise of Platonic anamnesis, a memory of wholeness, and an *apocatastasis* that restores an original wholeness that preexists the consciousness of the human ego.

Jung speaks of the *homo totus* in the context of the alchemical process, the chemistry of the Middle Ages, or the art of transmuting metals, which was primarily a psychological process expressed in projective form. Jung says that “The moral equivalent of the physical transmutation into gold is self-knowledge, which is a re-remembering of the *homo totus*” (1968: para. 372).

In Jungian psychology, the notion of individuation indicates the personal journey in which the unconscious is the universal mediator and the all-embracing One (Jung 1971: para. 419) out of which consciousness discovers itself. Consciousness then separates itself out of the unconscious and distinguishes a series of pairs of opposites which unfold in an endless multiplicity in human life. By relating to all the opposites in the process of individuation, we “arrive where we started, and know the place for the first time” (Eliot 1963, p. 208). This place is the knowledge and experience of the Self, the goal of individuation. The Self, in archetypal psychology, is a psychic entity more intensely unified than the unconscious, possessed of and by a oneness equaled only in its own archetype, the *imago Dei*.

## Christianity and Analytic Psychology

In the Christian tradition, the objective referent of this archetype is the *imago*, or image of God. The Christian formulation of this symbolic figure, or *homo totus*, the archetype of the Self, was Christ within whom all the opposites were reconciled and no longer divided; thus, death was conquered. If we bring Jungian psychology into dialog with the Christian perspective, we might say that we individuate toward the goal of living in this image.

Yet, the fact that Christianity produced what would psychologically be considered an archetype of the Self, or archetypal god-man, is not unique to Christianity nor original to this one tradition. Because the *homo totus* is an archetypal idea, it is by definition universal in occurrence.

The *homo totus* is capable of autochthonous revival, “an image arising from the depths of the ‘chthonic’ unconscious” (1968: para. 26), anywhere, at any time. In other words, wherever there is psyche, there are archetypes, and wherever there are archetypes, the archetype of wholeness, or the archetype of the Self, will be foremost in primacy, always at the center of the psyche as a self-regulating force within the individual personality.

Jung tells us, when this archetypal idea emerges, it is a reflection of the individual’s wholeness, i.e., of the Self which is present in the person as an unconscious image (1971: para. 230). Christianity succeeded and sustained itself for over 2,000 years largely influenced by the archetype of the Self that constellated in the soul of those persons in the first century (and after), who responded to the Christian message. The result was that the concrete, human Rabbi Jesus was rapidly assimilated by the constellated archetype. Christ realized the idea of the Self, representing the culmination of all psychic processes to that point in the history of human consciousness.

Christ did so in that he represented the symbolic ultimate in individuation in which many are entirely subordinated to the One, the One being God. As symbolic, the *imitatio Christi*, living in the image of Christ, was not meant to be

a superficial imitation (Jung 1971: para. 522) but a self-realization. Such an exemplar reaches back before Christianity to the Empedocleans and Platonists who believed in a transmigratory supernatural self, the daimon of Empedocles. To realize this Self was to attain the philosopher's goal in the highest degree and to ascend to the *eidos* of humanity, in the philosophical sense.

Christ, then, is an image of the psyche's inherent oneness. Christ depicts the living image of unity-in-complexity and the very nature of the structure of the psyche itself in that psyche insists upon a system with a center that repeats itself archetypal in the unconscious realm of all humankind for all time to be discovered and related to on the journey into wholeness.

If we interpret the content of experience of the *homo totus* by a particular faith, we tend to identify with our subjective interpretation of the manifestation, Jung tells us. To do so would be to lay absolute claim on only one specific image of the godhead, and Jung believes instead that, at least psychologically speaking, we should interpret images of the godhead by comparing all traditional assumptions of faith without insisting upon one over the other. His emphasis is upon the unconscious that expresses itself in a multiplicity of images and symbols.

## Absolute Knowledge

In Jung's own confrontation with mystery, he was not slow to pronounce that there is such a thing as "absolute knowledge." Absolute knowledge pertains to the existence of an a priori knowledge, a preexisting order, and an order before the ego comes to consciousness (Jung 1960: para. 947). Absolute knowledge is knowledge as the formally directing fact that activates and directs the archetypal field of the Self "as a deeper regulating and ordering field" (1960: para. 947, pp. 47–49).

Author James Olney concurs that the Self reflects absolute knowledge as it contains the marriage of the opposites of consciousness and unconsciousness in a marriage, a *hieros gamos*,

a unified One. In this Unity of Being, "because the microcosm is identical with the macrocosm, it attracts the latter and this brings about the *apocatastasis*, a restoration of. . .original wholeness" (Olney 1980, p. 323).

Absolute knowledge is Self-knowledge, knowledge of the Self, which is an anamnesis, a memory of wholeness represented by the *homo totus* as an archetypal idea "by definition universal in occurrence and capable of autochthonous revival anywhere at anytime" (Olney 1980, p. 323).

In essence, we are speaking of a dynamic inbreaking of the collective unconscious, the notion of spirit coming toward us, summoning us in conjunction with culture and the unfolding of human history. The *homo totus* is a repeated expression of unitary reality in the psyche and is emblematic of that which is unconscious and needs to be made conscious again and again in our intrapsychic and collective lives as a symbol of individuation.

## Homosexuality

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Same-sex attraction, love, and relationships have existed from very early times, though the ways in which they have been understood have changed over time and across cultures. Scholarly debate continues between “essentialists” and “constructivists.” Essentialists see sexual orientation as a stable trait recognizable across history and culture. Being “gay” or having a gay sensibility is a persistent and universal potential among humans. Social constructivists hold that our modern categories of ‘gay,’ ‘straight’ or ‘bisexual’ have been more recently created. Human sexual orientation is a more fluid characteristic. In any event, out of similar but slightly differing interests common ground is shared by gay, lesbian, bisexual, and transgender (GLBT) people.

What is unquestionably true is that modern communities of self-identified lesbians and gay men, existing within most industrialized Western societies as open members of the social whole, are a relatively recent phenomenon. The political movement of gay liberation, which began in Europe in the late nineteenth century, has resulted in significant changes of both attitude and practice in those societies. Elsewhere, even now, the existence of homosexual communities is less common in many parts of the world, and it is still viewed as either criminal, sinful, or a type of mental illness.

Since history has been written mostly by men, it is not surprising that we know more about same-sex love among men than among women. In sexual politics, what the dominant gender does is of greater consequence and thus has been more likely to be recorded and given attention. This means that the negative attitudes about homosexuality have been particularly focused on males,

often ignoring altogether female homosexuality and women in general.

In terms of spirituality it must be recognized that there is no spiritual tradition that is uniformly accepting and favorable toward persons with same-sex attraction. While people with same sex attraction have likely existed through all human history, only recently have people taken on a label distinctive of sexual orientation and been visible as a community. Having said that, there is a range of opinions within each of the major world religions as to the status of persons with different sexual orientation. It is important to note that the formal views expressed in the scriptures or writings of prominent religious figures may be more negative than the actual practice within any given spiritual tradition. As theology is translated into pastoral care, there may be more willingness to accept the human condition in its variety.

The Western monotheisms, Judaism, Christianity, and Islam, have been the most explicitly rejecting. Modern gay Jews, Christians, and Muslims face a long history of scriptural condemnation and outright persecution. The Eastern religions, Hinduism, Buddhism, Taoism, and Confucianism, have generally been less rejecting, though neither have they been positive nor affirming. Throughout most of human history, the family, comprised of mother, father, and children, has been the social focus of spiritual teachings. Thus, alternate forms of sexual expression or emotional and social attachment have received considerably less attention. Strong condemnation of many forms of sexual expression, heterosexual or homosexual, which do not support biological reproduction has characterized the official pronouncements by religious leaders across all major types. As long as individuals did their part in producing offspring, there was often little concern with any additional emotional or physical involvements. Bullough’s (1976) work, despite its age, remains the most comprehensive history of sexual variance across time and culture and chronicles the

varying approaches of different religious traditions.

It is widely believed that the most favorably disposed culture toward homosexuality was found in classical Greece. However, the form that it took in that society is quite different than the forms in the current world. Men who sought out relationships with other men to the exclusion of marriage were shunned: viewed as odd and unfortunate. However, society was relatively tolerant of an adult male (termed an “erastes”) having a social and sexual relationship with an adolescent (termed an “eromenos”) up to the time when they began growing a beard (approximately 16–18). The older man was responsible for the moral education of the boy and often presented him with his first spear, shield, and armor as he joined the ranks of adult male citizens of the polis. There was sometimes a mock abduction and the pair would go off to the mountains for a period where sexual activity, male bonding, and education in the ways of adulthood took place. This sort of initiatory sexual relationship had broad social tolerance. Femininity was ridiculed as was excessive lust. In light of contemporary attitudes about the sexual abuse of adolescents and children, this model is no longer found acceptable.

Another model for same-sex desire and relationships involves gender transformation. Many cultures had rigid definitions of male/female characteristics but allowed those who did not fit the mold to switch roles and live as the opposite sex. Several native American tribes allowed this in one form or another. The older term “berdache” has more pejorative connotations and is now replaced by the term “two-spirit” people, to emphasize the presence of both masculine and feminine features in people we would view as lesbian, gay, or transgender.

The modern lesbian and gay culture continues to grapple with the mixed heritage from the world’s spiritual traditions. There are gay-friendly advocacy and support groups in most Christian denominations (Fortunato 1982), within Judaism, Islam, and among Buddhists (Leyland 2000) and Hindus. Many GLBT

individuals wish to remain in the traditions that reject them to one degree or another, and among gay Christians, a thriving market exists for books with more favorable scriptural exegesis. But a gay spirituality movement seeks to trace out the more same-sex-friendly aspects of the world’s religious traditions and craft a synthesis. Animistic and pagan perspectives from a variety of traditions, not just classical Greece, are often woven together (Conner 1993; Johnson 2000).

From a psychological standpoint, the treatment of GLBT persons by established religion leaves deep wounds and feelings of alienation. It is a sore spot in terms of both individual counseling and psychotherapy as well as in the larger arena of group to group relations. So called “reparative therapies” seeking to change sexual orientation are now widely considered inappropriate except by their conservative religious proponents. Gay affirmative therapies seek to repair damage done by both religious and secular discrimination and rejection. The movement for a gay affirming spirituality is underway. Yet the movement toward a gay-affirmative spirituality is well under way.

## Hope

Gilbert Todd Vance

Department of Psychology, Virginia  
Commonwealth University, Roanoke, VA, USA

Hope is an expectation of positive outcomes for future events. Hope is more than a mere wish as hope implies a belief and confidence that positive outcomes will be attained.

Hope is usually viewed as a positive attribute; however, the ancient Greeks were an exception to this view. In the myth of Pandora's Box, when the box was opened, all the evils of the world flew out to torment mankind. Hope, however, remained in the box. The Greeks were ambivalent as to whether hope was a blessing and consolation to mankind or a curse. Some modern writers have also voiced the view that hope is an evil. For example, Nietzsche stated that hope is the greatest of evils, because it prolongs mankind's suffering.

Hope is a prevalent and positive theme in the Judeo-Christian tradition. In the Old Testament, hope is placed in God or directed toward God (Psalm 42:5), rather than toward other, less sure means of deliverance (Psalm 33:17; Isaiah 40:31). Those who place their hope in God will not be disappointed (Isaiah 49:23). Hope is also associated with a future provided by God (Jeremiah 29:11).

In the New Testament, hope is one of three enduring theological virtues, along with faith and charity (love), described by the Apostle Paul in 1 Corinthians 13. Hope is an attribute of love (1 Corinthians 13:7). In the New Testament, there is a specific object of hope – hope in the resurrection of Jesus Christ, through which believers themselves are redeemed (Romans 8:24; 1 Corinthians 15:19; 1 Peter 1:3). Hope in the resurrection steadies believers during times of suffering. This hope is described as a “living”

hope, one that is not frail or perishable (1 Peter). Functionally, hope serves as an “anchor” for believers (Hebrews 6:19). Hope is confidence that God's plans will be realized (Romans 5:2).

Psychologically, hope has been conceptualized as a goal-directed cognitive process consisting of pathways to achieve goals and the perceived ability to use those pathways. Using this operational definition, C. R. Snyder and colleagues have conducted extensive research on hope. In this program of research, hope is positively related to positive outcomes in academics, athletics, health, and psychotherapy.

Clinically, one function of psychotherapy is to instill hope for change or healing. Karl Menninger called hope a “basic but elusive ingredient” in his comments to the American Psychiatric Association's 1959 annual meeting. Hope also falls broadly under the category of positive psychology, which focuses on strengths and resilience.

## Hormic Psychology

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

William McDougall (1871–1938) was one of the giants of early psychology, yet his legacy has gone

largely unheralded, and his name is seldom recalled outside students of the history of psychology. His brand of psychology, termed “hormic” psychology, serves as one of the foundational frameworks for understanding the wide range of human motivational forces. The term “hormic” comes from the Greek word for impulse and according to Hilgard (1987) was drawn from the work of T. P. Nunn, a British colleague.

McDougall was born and raised in Britain and studied biology at the University of Lancaster and later medicine at Cambridge. He completed his medical training at St. Thomas’ Hospital in London, with some additional physiological research under Sherrington. He went on to study experimental psychology under G. E. Müller at Göttingen.

His current lack of popularity in part stems from his taking up the cause of Lamarckian evolutionary theory, the notion that acquired traits can be inherited. He also supported the eugenics movement which was popular in the early twentieth century but became tainted by its association with forced sterilization of the retarded, as well as its use by Nazi lawmakers as a rationale for their race laws. He also defended the concept of instinct at a time when behaviorism was rising to ascendancy and instinct declining.

One of his less well-recognized contributions that are with us today is his advocacy of “three fundamental faculties, of knowing, of striving, and of feeling” (McDougall 1923, p. 378, as cited by Hilgard 1987, p. 813). This is now taught as the ABC of psychology, affect, behavior, and cognition, though behavior is substituted for the faculty of conation, or will.

His views on religion were unconventional. In his 1911 book, *Body and Mind* he espouses an animistic world view. Like Gustav Fechner before him, he finds that life and mind are characteristic of all entities in the natural world. His view are more consistent with the notion of modern panpsychism rather than the spiritual views of animists.

## Hospice

Kenneth J. Doka

The College of New Rochelle, New Rochelle, NY, USA

“Hospice” refers to a system of palliative – that is, comfort-oriented – care designed for patients in a terminal phase of illness. *Hospice* should be understood as a philosophy of care rather than a place where care is offered. It is important to recognize that such care can be offered in a wide range of settings including free-standing hospices, hospital-based hospice programs, individual homes, nursing homes, and even prisons.

## The History of the Hospice Movement

### St. Christopher’s Hospice and the Beginning of the Modern Hospice Movement

Dame Cicely Saunders founded the first modern hospice movement in 1967 in Sydenham, a southeast section of London. Saunders herself was a deeply spiritual woman, heavily influenced by Evangelical Christianity. The name she chose – St. Christopher’s Hospice – had deep religious roots.

The first hospices were established by religious orders, such as the Knights Hospitallers to care for pilgrims, including the sick and incurable, as they journeyed to the Holy Land. The Knights took great pride in offering not only spiritual care but also the finest food and dignified treatment to dying and sick nobility, even as the Knights dined plainly and lived simply (Connor 2009). Later, the term was used by the Irish Sisters of Charity, a religious order that saw its mission as

caring for the dying poor. In fact, Saunders worked with them for a while developing her own philosophy of hospice care. St. Christopher, of course, was the patron saint of travelers.

Saunders was a remarkable woman. She began her career as a nurse and then became a social worker, before finally training as a physician. She sought to develop a facility that would not only offer excellent care to dying cancer patients but would also be a research and training center. St. Christopher's became the culmination of her vision.

### The Development of Hospice in the United States

Saunders' development of hospice was both part of and an impetus to a growing interest in thanatology – the study of death and dying. In that period, there was an emerging academic interest in death evidenced in the publication of Kübler-Ross' epochal *On Death and Dying* (1969), the beginnings of thanatology journals such as *Omega: The Journal of Death and Dying*, and the development of professional organizations such as *Ars Moriendi*, the Forum for Death Education and Counseling, and the International Work Group on Death, Dying, and Bereavement (Doka 2007). The result of this was that the vision of Saunders and the work being done at St. Christopher's generated intense interest.

Among those interested were Florence Wald, the Dean of Nursing at Yale, and Dr. Sylvia Lack, a physician who had trained at St. Christopher's. They founded the first hospice in the USA in Branford, a suburb of New Haven. While this hospice first offered community-based, home-based care, later it shifted to the model of St. Christopher, centering care in a free-standing hospice. By the mid-1970s, a hospice movement was beginning in the United States. In these early years, this interest was generated by a wide range of organizations including churches and synagogues, junior leagues, women's groups, and other community organizations.

Two factors facilitated the growth of hospice. The first was the development of a model of

hospice care as exclusively home care. Dr. William Lamers, a California physician, also trained at St. Christopher's. However, though Lamers left enamored of the concept of home care for the dying modeled there, he also had two other thoughts. The first was simply that he did not want to spend the next few years of his life raising money for a facility. Second, he believed that the best homelike atmosphere – a theme of St. Christopher's – was to provide care in the patient's own home. Lamers' model of hospice as home care could be readily duplicated by the many groups interested in beginning hospices.

While home remains the predominant mode for the delivery of hospice services in the United States and the emergence of such a model was a great impetus to the growth of hospice, hospices have also centered in other residences. Some hospices have created free-standing hospices much like St. Christopher's. In other cases, hospice services have been offered in nursing homes, dedicated sections of hospitals, and assisted living facilities. Some prisons have even included hospice services within prison infirmaries and hospitals. Hospice is less a place than a philosophy of care that can be offered in a range of settings.

The second major factor was that in 1982, United States Medicare allowed reimbursement for hospice services. This allowed a stable funding mechanism for hospice. Now there are over 4,700 hospices in the USA – almost evenly divided between nonprofit and proprietary programs (Connor 2009). Hospice clearly has been one of the most successful social movements in the last quarter of the twentieth century. In addition, it has become more professionalized. The National Hospice Organization (NHO), now the National Hospice and Palliative Care Organization (NHPCO), began in 1978 as a trade/professional organization representing hospices and later palliative care programs. Other organizations such as the Hospice Foundation of America offer educational programs and resources. There are even specialized journals such as the *Journal of Hospice and Palliative Care*.

### **The Development of Palliative Care**

The development of hospice, in general, and St. Christopher's, in particular, strongly influenced the development of palliative care. A Canadian physician Balfour Mount also visited St. Christopher's and decided to apply the principles learned there to dying within the hospital. Mount's work in this area at the Royal Victoria Hospital in Montreal is generally considered to be the beginning of the mainstream palliative care movement (Mount 1997). This movement has made considerable progress in its attempts to incorporate the concepts of palliative care within the mainstream health system. Many hospitals now have palliative care programs, and in 2007, the American Board of Medical Specialties recognized palliative care as a specialty (Connor 2009).

### **Hospice Development Throughout the World**

The concept of hospice has spread throughout the world. There are now hospice programs in Africa, Asia, Europe, the Middle East, as well as North and South America. In reviewing the worldwide growth of hospice, Kastenbaum and Wilson (1997) conclude that the hospices can be developed in a wide range of cultures and the concept of hospice and palliative care transcends the phase of economic development, any given religious tenets, or any one spiritual base. They also note that hospices can draw from historic cultural strengths such as the emphasis on family.

Yet throughout the world, hospices have encountered and, in most cases, overcome resistance from varied quarters. In some cases, this may be a taboo about dying. In other cases, it may be unwarranted fears about the use of opioids leading to either addiction or hastening death. Finally, hospices may have to struggle to develop both sources for sustainable financial support and to find a place within existing structures of health care.

### **Philosophy of Hospice Care**

Wherever hospices are and in whatever form they are offered, hospices do share a common philosophy of palliative care. Central to this philosophy are the following components.

### **Pain Management and Symptom Control**

Key to the philosophy of hospice has been the notion that the heart of palliative care is effective pain management and symptom control. In terminally patients, there may be multiple sources of pain. Thus, hospices will try to carefully assess a patient's pain and apply a variety of strategies – including pharmaceutical approaches, radiation, surgery, alternative therapies, and psychological support – to alleviate pain. Hospices have developed common principles in treating chronic pain. First is that the patient is the best judge of his or her own pain. Second is that pain medication should be given around the clock as needed. This avoids the pain cycle where patients become anxious that the pain medication will cease to be effective before the next dose is scheduled. Finally, pain medication needs to be titrated to allow the best balance between effective management of pain and unwanted side effects or sedation. In addition to pain management, hospices also seek to control, as much as possible, unwanted symptoms such as nausea, diarrhea or constipation, loss of appetite, confusion, or dyspnea (breathlessness).

However, hospices recognize that while managing physical pain is essential, there are other forms of pain as well that add to patient's sense of suffering. Patients may experience psychological pain such as anxiety. They may grieve the many secondary losses such as the loss of mobility and independence that are inherent in late-stage illness. They may be fearful for their family's survival. They may encounter existential pain as they consider their life or death. There may be spiritual pain as dying patients struggle with religious or philosophical themes such as forgiveness, uncertainty of the afterlife, or fears of judgment. A central tenet of hospice is that all forms of pain need to be assessed and treated.

### **A Holistic and Team-Centered Approach**

Since pain is so multifaceted, care must be holistic. Hospice programs emphasize that dying is not only a physical crisis but a social, familial, and spiritual crisis as well. This necessitates a team approach that includes not

only physicians and nurses but also social workers, pharmacists, chaplains, volunteers, and varied therapists such as art and music therapists, physical and occupational therapists, or massage therapists.

### Family-Centered Care

The other aspect of hospice care was to see not only the patient but the patient's intimate network as the focal point of care as both among those who are to receive and to give care. Since the family, interpreted broadly, was the focus of care, services to the family continued after the patient's death. Bereavement care for the survivors became an essential component of hospice care.

### Future Challenges

While the hospice movement has experienced dramatic growth since inception, in the United States, it faces continuing challenges. It is beyond the scope of this piece to consider all the challenges that hospices will encounter – especially as hospices emerge in varied cultures throughout the world. However, a few challenges do seem primary.

One of the major challenges that hospices face is that it is often late in treatment when patients and physicians can accept that fact that the goal of treatment is now palliative rather than curative. The result is that whole populations – such as children – may be underserved by hospice and that often referrals can be so late in the illness that the benefits afforded by hospice care are unrealized. Many hospices have responded by offering “bridge programs,” that is, programs where patients continue curative or life-extending therapies even while receiving palliative care through the hospice team. This may ease the transition to hospice care as the patient continues to decline. In many ways, this may require continued integration of hospice within health care systems.

Hospices were originally developed to treat cancer patients. In recent years, hospices have begun to treat a variety of other illnesses including advanced forms of dementia, AIDS, and other diseases such as ALS. In such cases,

as well as in cancer treatment, it may be difficult to offer a prognosis that death is likely within 6 months (a precondition of the Medicare Benefit) even though care can no longer be curative.

Finally, hospice home care often requires a primary caregiver. If hospices are going to effectively serve clients living alone, they may need to develop increased flexibility in the services that they offer. All of these challenges may require modifications in the regulations such as Medicare that govern funding.

In summary, the development of hospice has led to the continued development and improvements in the nature of palliative care. It has highlighted the importance of offering bereavement services to families and communities. By creating the option of holistic, family-focused, humanistic care, hospices have markedly changed the ways individuals die.

## I Ching

Nathalie Pilard

King's College, School of Divinity, University of Aberdeen, Aberdeen, UK

The *I Ching*, or Book (*I*) of Changes (*Ching*), belongs to the greatest treasures of religion; it is hierarchically the first of Old China's Five Classics (the four other Classics are the *Shu Ching*, or The Book of History (rules for Politics); the *Shih Ching*, or The Book of Odes; the *Li Chi*, or The Book of Rites; the *Ch'un Ch'in*, or The Spring and Autumn Annals, annals of one Chinese province where Confucius lived).

### A Twofold Structure: Oracular Formulae and (Official) Commentaries

Ten centuries of successive stratifications of practices and texts frame this monument of Chinese wisdom, whose secrets have not yet all been discovered by archeologists, philologists, and after them theologians or thinkers. Out of divination customs from the Shang dynasty (1750–1050 BCE) appeared, during the Chou dynasty (1050–771 BCE), the ancestor of the *I Ching*, the *Chou I*, or Changes of Chou, a compilation of oracular formulae. From the eighth century before the Common Era to the second of the Common Era, hundreds of commentaries joined the collection. Carefully

selected and corrected under the Han dynasty (206 BCE–220 CE), they became the official Ten Wings which “protected” the *Chou I* and allowed its understanding. The twofold structure of the *I Ching*, the compilation and – its hermeneutical ground – the official commentaries, was then fixed.

The eastern *Chou I* consists of 450 oracular formulae attached to each of the 64 hexagrams of the book and to each of their constituting six monograms or lines. A line, as the result of a divinatory casting, can be broken and *yin* (—) or unbroken and *yang* (— —). The opposition and the complementarity of these two principles are emphasized in the two opening hexagrams of the compilation, which each possess a supplementary formula ( $64 + (6 \cdot 64) + 2 = 450$ ). Made of six unbroken lines and six broken lines, the first hexagram, “The Creative,” and the second one, “The Receptive,” are the immanence of *yang* and *yin*. *Yang* is first, *yin* second, and together they give birth to all the “existents,” all the things that exist in the three levels heaven, humanity, and earth.

The Ten Wings provide numerous keys and rules for the reading and casting of the oracle. Some are technical and theoretical; others are more philosophical. The respect of hierarchy and the correctness of the position characterize the two main guiding principles of the Wings. All the 64 hexagrams and the complex rules of their trigrams and lines are assumed to symbolize all situations likely to happen in the course of the universe. For instance, there are inferior, nuclear,

and superior trigrams at work in the hexagram; the sixth line is the king's line, the fifth the prince's, the first, third, and fifth lines are correct if unbroken but have also to behave with regard to their neighbor lines, etc. Hence a casting of the oracle supplies the reader with a statement which is the present correct position in the Tao he or she has to follow. The sixth and the seventh Wings form the *Ta Chuan*, The Great Treatise, a major work of the Chinese thought. First attributed to Confucius himself, it was in fact written after his death. Integrating both Taoist and Buddhist thoughts, it expresses the Old Chinese vision of the world, where reality is the daughter of the process of the Tao and where humans, thanks to the right attitude of morality, have to find their way between heaven and earth. The eighth Wing is the *Shuo Kua*, the "Discussion of the Trigrams." These trigrams belong to the mythology of the *I Ching*.

The wise ancestor Fu Hsi is, for the tradition, the first of the four authors of the *Book of Changes*, with King Wên, the Duke of Chou, and Confucius. He is the one who discovered, rather than created, these eight original trigrams, the eight possible combinations of three unbroken and broken lines, the symbols (or images, *xiang*) of heaven, the earth, the thunder, the water, the wind, the fire, the wind, and the lake. This is the naturalist and cosmological foundation of the *Book of Changes*. The natural "Resonance" (*kan-ying*) heard between all existents (see Le Blanc 2003) allows the *I Ching*'s operation of connecting together the structures within the perpetual process of the Tao, the Changes. This Chinese theory is close to the Western notions of macro and micro cosmos, to Goethe's elective affinities, and to Baudelaire's correspondences. The *I Ching* is thus supposed to be the impression and the symbol of the everlasting wholeness and emptiness of the wise man which relate the reader to its correspondence of the moment, to its affinity and duty.

### Philology and History (of the I Ching)

Near to the traditional myth of the book stands its scientific history which does not cancel out

the philosophical hermeneutics of the work but rather enlightens its oldest utilizations and goals. Recent archeological discoveries (see Kalinowski 2006) showed that the *I Ching* has been used differently than was previously thought. The three assumed separate and successive stages of the book – religious, divinatory, and philosophical – are no longer taken for granted, reality proved to be more complicated. The religious age was characterized by the casting of the oracles – turtles or stalk of milfoil – which allowed humans to communicate with their ancestors or gods. The collective procedure testified to the fear for the gods who were asked for authorizations to act through the intermediate of the oracle which transmitted both questions and answers. The utilization of the *Chou I* – the different compilations of oracular sentences and the turtle or milfoil material – within a sheer divinatory context had different goals. Individuals from all groups used to consult local wise men, having expectations on their future. The philosophical age supposedly drained these too numerous practices around the *Chou I* to give birth in the second century to the Commentaries which would form the *I Ching*. In fact, the recent discovery of inscriptions on carapaces of turtles showed that religious purposes remained till high antiquity. In this period, divination still belonged to religious rituals. As early as the fourth century BCE, there appeared the philosophical stage with Confucius using the *Chou I* in order to spread Confucianism. This political concern coexisted with the divinatory use of the compilation, like religion had coexisted with divination.

Since the fixation of the work at the second century till now, many commentaries by the most eminent Chinese thinkers have secured the actuality of the living aspect of the book, like new other wings. The desire to penetrate the intrinsic mystery of the "Classic of the Classics" remains. In the twentieth century, the work became known in the West thanks to the German Protestant missionary Richard Wilhelm's translation, itself retranslated into English by one of C. G. Jung's pupil, Cary Baynes.

## (I Ching) Jung and Spirituality

C. G. Jung discovered the *I Ching* with James Legge's translation in the 1910s, but the reading of Richard Wilhelm's met his understanding of the huge symbolic aspect of the canon, disregarded by Legge. After the rift with Sigmund Freud in 1911, the *I Ching* was the superior voice, intuition embodied, which intimated Jung to find his own way. Companion of the personal Jung, the *Book of Changes* sometimes entered his consulting room, but never really reached the sacred area of his works until 1948 and 1949, the dates of the two forewords of Baynes's translation (see Pilard 2009).

The writing of 1948 constitutes the published foreword of 1949's draft, but the significance of the differences between the two texts allows the designation of the first and second foreword to the *I Ching*. The text of 1948 reveals the first risk taken by Jung: introducing the intuitive book among Western rationalism by a personal casting of the oracle rather than a simple theoretical commentary. The text of 1949 constitutes the second risk: introducing the Eastern theoretical background of the *I Ching* within his own Western thinking. It is the public birth of synchronicity. Both risks were considerable but, to Jung's eyes, indispensable. A sheer commentary would have let Jung be an observer, seemingly objective, in front of the masterpiece. The traditional casting of the *I Ching* involves subjectivity in order to correct it and to redirect it in the Tao, by providing the objectivity the reader cannot pretend to have a priori. Jung chose to render this necessary implication in a living dialog between him and the book. He interrogated the *I Ching* about its introduction in the English-spoken world and his own role on the event, getting from it an optimistic answer the future would confirm.

The second foreword of 1949 replaces five pages out of 20 in order to introduce, for the first time, the notion of synchronicity. Jung's contemporaneous correspondence shows the significant role of the Physics Nobel Price Wolfgang Pauli in the psychologist's decision to reveal his controversial concept. Since Albert Einstein,

whom Jung had met years earlier, and current discoveries of atomic physics, objectivity and the laws of causality had been ipso facto challenged, but science had not found any competitor yet among thinkers for this crucial debate.

Within rational language, synchronicity means acausality. Two events happen not to be linked by causes and effects but by meaning grounds. This is the translation of the Chinese theory of Resonance in one scientific hypothesis. Practically, the "meaningful coincidences" between the two events reveal the theory, but do not prove it, as they happen only once. The *I Ching*, as the agent likely to connect all the existents, is the one able to repeat, at will, these meaningful coincidences between the question of the reader and its symbolic answer. Synchronicity does not undermine causality but on the contrary completes it. It is a working but needed hypothesis based on the inability of reason to grasp the whole reality.

## Religious Attitude and Depth Psychology

The efficiency of synchronicity hence resides in any personal casting of the *I Ching*. However, the right interpretation of the esoteric language of the book belongs to the right attitude of the reader. The religious attitude towards the book that Jung thinks the reader must keep corresponds to the accurate attitude that one must have towards the unconscious. The remarkable inner knowledge that the messages of the *I Ching* provide to moderns should remain as respected as these provided by the same medium to ancients then understood as the gods' orders. This idea appeared in Jung's foreword embodied in the casting of the hexagram of the Caldron, the *ting*. In Old China, the *ting* was a ceremonial vessel used in banquets to link humans to gods. In Jung's casting, the *I Ching* saw himself as the Caldron. Thanks to Baynes's translation and Jung's foreword, it was thus able to connect gods to humans, East to West, and past to present. This symbolic object contained Jung's will to transmit the respect towards the book the reader

must have. Since individual, with no support of social or collective instinct, a modern casting requires humility and simplicity before any interpretation, the same way the psychologist depicted the correct attitude towards a dream.

The *I Ching* entered Jung's world and life by intuition. His recognition of it was immediate. Jung saw archetypes in the 64 *xiang*, symbols in each line. He instinctively used his method of amplification to translate one monogram in his foreword. He could have seen in the *I Ching* a manifestation of the Self. But above all, Jung recognized that the *Book of Changes* was an impression of the world in its wholeness in symbols. No language, either psychological or rational, can exhaust its meaning, its process, and its vitality. Those interested in the Old China wisdom can read and cast the *Book of Changes*. Anybody who asks himself the question "What do I have to do in order to . . ." can use the oracle. A fortune teller could answer by a prediction but then would stop one's implication in the process of the event. A friend could offer an advice, but some acts must be decided alone. The *I Ching* is supposed to provide a perspective: some radial point of view whose center is the question of the reader. The more the question is clear and necessary, the more accurate the answer will appear to the "humble" and "simple" asker.

## Ibn al-'Arabi

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

An Islamic mystic, known as the "Greatest Master" (*Shaykh Al-Akbar*), Muhiyuddin Ibn al-'Arabi (1165–1240 CE), grew up in Seville, where Islamic, Jewish, and Christian mysticism flourished with mutual enrichment. He was educated by Sufi masters in alchemy and esoteric studies as well as Moslem scriptures and traditions.

Ibn 'Arabi possessed prophetic gifts and psychic abilities and was thought to be a "dazzling mental force" (Husaini 1996, p. 6f).

The lives of mystics provide psychological insight into the upper reaches of consciousness where we discover, in the psychological processes of highly evolved persons such as Ibn 'Arabi, a broader and deeper understanding of the essential issues involved in psychospiritual development to its fullest potential.

All Moslems seek to live under the sovereignty of God, since "Islam" itself means "surrender." God is viewed as active in human affairs, and each person aims to fulfill His Will. A central objective is unity with God (*tawhid*). Among medieval Sufis, asceticism and renunciation were highly valued, and Ibn 'Arabi was tenacious in his efforts to perfect himself so as to be worthy of divine union. His life was totally dedicated, aiming to achieve personal annihilation in the Divine Presence.

Following an internally mediated sense of "call," he traveled widely in Spain, North Africa, and the Middle East. When disciples were attracted to his spiritual power, he taught with clarity and spiritual authority, always emphasizing quotations from the Qur'an and traditional stories of the Prophet Muhammad [*Hadith*] while interpreting and embellishing the scripture with the fruits of his own experiential wisdom.

He lived several years in Mecca where he frequently circumambulated the Ka'ba in rapture, repeatedly receiving mystical experiences.

His most prolific writings began in Mecca and were continually sustained by his mystic insights. Finally, at age 58, he settled in Damascus where he lived his last 15 years, finishing his major writings: *The Meccan Revelations*, *The Bezels of Wisdom*, and *The Diwan*.

## Dreams and Visions

At midlife Ibn 'Arabi had a dream: "I was wedded to all the stars of the sky. There was not a single star left, and I married every one of them with great spiritual pleasure. Then I married the moons" (Ibn 'Arabi cited in Husaini 1996, p. 6). This dream of mystical marriage reveals his spiritual expansiveness and forthcoming awareness of divine union.

Islam characteristically emphasizes prophecy, with dreams seen as typical ways that God communicates with humanity. Like Muhammad before him, Ibn 'Arabi claimed his writings (over 400) were in obedience to divine command. *The Bezels of Wisdom*, for example, was given to him in a single dream. By surrendering his own will, he followed the Sufi path of heart, obeying the Prophet's summons to vision (Corbin 1969, p. 232). In a visionary's life, complete annihilation (*fana*) in the Divine opens the doors to imaginative perception of Divine Realities. This marriage, when the visionary and God are united, is a common theme.

Divine Messengers frequently inspired and brought him insights. In Mecca a powerful vision of a female Beloved had great influence on his writing and his experience of Divine Love: "While circumambulating the Temple [ruminating]. . . [s]uddenly there emerged from the shadows the feminine figure who was for him the earthly manifestation of *Sophia aeterna*" (Corbin 1969, p. 278). She rebuked him for seeking intellectual answers to questions that were essentially mystical, and she taught him to trust the illuminations and wisdom of his heart. Ibn 'Arabi alluded to this young woman as an "apparitional figure," both "sublime and divine," one who "manifested. . .visibly. . .with such sweetness as to provoke. . .joy and happiness"

(Ibn 'Arabi cited in Corbin 1969, p. 139). Another of Ibn 'Arabi's archetypal Messengers was Khidr, the Verdant one, associated with Elijah and Shi'ite liturgy. "[T]he fact of having Khidr for a master invests the disciple, as an individual, with a transcendent, 'transhistorical' dimension. . . it is a personal, direct, and immediate bond with the Godhead" (Corbin 1969, p. 54).

Immersed in the divine milieu, Ibn 'Arabi developed to the point where he consciously experienced all life as manifestation of the Divine. He saw theophany everywhere and would interpret even the smallest coincidences as symbolic communications. Night and day were God filled, living in mystic love and gnostic intuition.

In summarizing Ibn 'Arabi's psychospiritual development, it appears that his mystical experiences began with dreams, progressing with the appearance of fleeting dreamlike images during wakefulness, as well as locutions that voiced Divine Commands quite directly. Then, as he became more attuned to subtle messages, more surrendered, and more obedient to the Divine Intent, the visions appeared more full bodied, more human, and "real." Finally, all life became a communication from God for himself as mystic lover.

## Active Imagination

For Ibn 'Arabi, intuition occurs in the heart as "Active Imagination" (*alam al-mithal*), an intermediate world – neither matter nor spirit – but some sacred space between, similar to Jung's Collective Unconscious. He distinguishes premeditated imaginations evoked consciously, from those imaginative products that present themselves to the mind spontaneously like dreams (or daydreams). The spontaneous process or "autonomous imagination" (*munfasil*) is the special locale of dreams, fleeting images, and spontaneous visions, which were commonly reported by the Prophet Muhammad and by many Sufis.

In the intimate relationship between matter and spirit, the energy flow of Active Imagination

is bidirectional. The human (matter) evokes Spirit, reaching up, with prayers of the heart, expressing needs and inviting spiritual intervention. God reaches down, sending a message (e.g., the image of an angel); thus, Spirit is made matter. In these transmutations of energy, matter becomes Spirit and Spirit becomes matter in the intermediate world of the creative Active Imagination.

For Ibn 'Arabi, God uses the human faculty of imagination for Self-revelation, entering consciousness through the door of imaginative processes. "Unveiling ... is knowledge that God gives directly to the servants when He lifts the veil separating Himself from them and 'opens the door' to perception of invisible realities.... Unveiling is an everyday occurrence for prophets [and] for the friends of God [Sufis]" (Chittick 1998, p. xxii f).

Ibn 'Arabi discovered, as have many other mystics, that rational thought actually blocks spontaneous imaginal processes. Anyone can fall into intellectualization, but those who think they know are not open to receiving revelations. The role of the gnostic, the prophet, or the Sufi is to temporarily suspend rational judgment in order to perceive through the imaginal pathways. The desire of the heart is what the aspirant brings to the mystic encounter. Surrender of the ego in a state of annihilation (*fana*) allows the individual to release the illusion of separateness and to perceive the unity underlying all life. "The mystic is then the medium, the intermediary, through whom the divine creative power is expressed and manifested" (Corbin 1969, p. 228).

Ibn 'Arabi's world of imaginal reality predates contemporary psychoanalysis by over 600 years, but one finds understanding of the unconscious, such as Freud's idea of dreams as wish fulfillment and Jung's idea that psychic energy is found primarily at the region where the opposites meet.

### Conjunctio Oppositorum

The theme of unity of opposites (*conjunctio oppositorum*) was a predominant alchemical preoccupation, one that fascinated Ibn 'Arabi, even

as it did Jung six centuries later. For Jung, the union of all opposites comprises the ever-emerging psychospiritual Self, while for Ibn 'Arabi, the union of opposites is experiential evidence of the underlying Oneness of Being. Thus it seems that the one theorist (Jung) was working at the level of the Immanent, the other (Ibn 'Arabi) at the level of the Transcendent. But even this duality must be encountered in unity. The Immanent Divine and Transcendent Divine are essentially the same. Ibn 'Arabi recognized this unity: "There is but one Essence.... He who is universal is particular [while] He who is particular is universal" (Ibn al-'Arabi 1980, p. 150). Self and God are One. For those who can see, multiplicity and oneness are similarly linked. Ibn 'Arabi writes, "...he who has attained to realization sees multiplicity in the One, just as he knows that essential oneness is implicit in the [multiple] divine Names" (Ibn al-'Arabi 1980, p. 153).

Another duality to transcend is the polarity of active and passive. In a full life, both action and contemplation are needed. Ibn 'Arabi also grappled with paradox: how apparent passivity may, in fact, be activity and vice versa. Reflecting on the Qur'an verse, "You will not will unless God wills" (*Qur'an* 76:30), Ibn 'Arabi sees the question as: Whose action is it? When one shoots an arrow, who really shoots? Who really hits the mark? His commentary on this paradox is related to predestination versus human choice.

We say, concerning the relation of choice, that God created for the servant a will through which he wills as a property of this relation. This newly arrived will derives from God's will. God says, "You will not will unless God wills." [76:30] Thereby He affirms will for Him and for us, and He makes our will dependent upon His will (Ibn 'Arabi cited in Chittick 1998, p. 59).

Here the mystic delights in paradox, a dance of opposites that cannot be separated. The question of "Who wills?" has implications in conscious experience: if one has surrendered entirely to God's Will, then one is essentially passive (in terms of self-will and control) even while being thoroughly active (in terms of behavior.) Thus, as *conjunctio oppositorum*, activity and passivity are one.

The ultimate *conjunctio oppositorum* is God, both Manifest and Unmanifest. For Ibn ‘Arabi the omnipresence of God is central. He perceives the Godhead as having five levels and infinite variety of manifestations in a vast Oneness of Being.

The first of these five planes of Being... is Reality in its first and primordial Absoluteness or the absolute Being itself. It is the Absolute *before* it begins to manifest itself, i.e., the Absolute in a state in which it does not yet show even the slightest foreboding of self-manifestation. The four remaining stages are the essential forms in which the Absolute “descends” from its absoluteness and manifests itself on levels that are to us more real and concrete. This self-manifesting activity of the Absolute is called by Ibn ‘Arabi *tajalli*, a word which literally means disclosing something hidden behind a veil (Izutsu 1983, p. 20).

The remaining levels of unveiling are the Absolute manifesting itself as:

1. God: the One of many Names (Allah, Yahweh, Brahman, etc.)
2. Lord: Divine Incarnation (e.g., Jesus)
3. Human: half-spiritual, half-animal beings
4. The sensible world: every aspect of the cosmos (animal, vegetable, and mineral)

Ibn ‘Arabi was thus a pantheistic monist. “[E]verything in Ibn ‘Arabi’s world-view, whether spiritual or material, invisible or visible, is *tajalli* [manifestation] of the Absolute except the Absolute in its absoluteness” (Izutsu 1983, p. 20). From the smallest to the largest element of the universe, all is a manifestation of the Divine, and to that Divine Source, all will ultimately return.

In Ibn ‘Arabi’s writings, the Active Imagination is the locus of unification, the matrix out of which the *conjunctio oppositorum* arises. Essentially God is unity, so is humanity. And humanity – good and evil alike – is part of the Godhead, the great Oneness of Being.

As we in the twenty-first century observe our global community in its struggles to unite, we find that we have much to learn from those wise mystics who understood unity at its deepest levels. Christian, Muslim, and Jew can still learn from one another. Psychology can

contribute by modeling respect and the capacity to listen and ponder in depth the worldview and spiritual perspectives of other cultures.

## Iconography

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Since the earliest times of human evolution, we have communicated with each other by visual means as well as verbal. In semiotics, which is the study of signs and their meanings, the term icon refers to any kind of visual sign. Thus, in a religious context, iconography is the study of the spiritual or religious significance of visual signs or symbols. These can be concrete objects in three dimensions (statues, even buildings) or pictorial representations of symbols in two dimensions or even gestures by live actors used

in religious settings. Iconography is often seen as a subdiscipline of art history.

Religions differ with regard to the status of visual representations of the person of God or significant religious figures. In the Western monotheisms, there is a prohibition of the use of idols to represent the divine. In Christianity this has been relaxed somewhat with regard to portrayals of religious persons, especially in Roman Catholic, Eastern Orthodox, and Anglican traditions. Statues of Jesus, Mary, and a wide variety of saints are found in most churches, cathedrals, or other buildings. In Judaism the use of personal images of religious figures is uncommon, though some illustrations of prophets or other personages are not prohibited. In Islam there is a strict prohibition of portrayals of God or the Prophet Muhammad. Islam has developed its own form of visual decoration using plant and animal motifs in tiles as decorative aspects to sacred buildings and widely uses calligraphy, especially in the stylized Kufic script of Arabic to visually present scriptural material from the Qur'an.

Hinduism has no qualms about representing the various forms of divinity in sculpture or painting. While Buddhism has less emphasis on the personhood of the divine or transcendent, there are numerous representations of the Buddha, various bodhisattvas, and, especially in Tibetan tradition, a whole panoply of demigods, demons, major religious figures, and founders of significant schools of Buddhism. The classical pagan religions of the ancient world were likewise quite comfortable in portraying divine or semidivine persons graphically. It is, however, an oversimplification to say that the pagans worshiped idols. They were quite aware that the statues of their deities were representations for persons or powers that transcended the physical manifestations. It is also true, however, that the deities could come to dwell within their statues and be physically present to the worshipers.

Especially when dealing with complex polytheistic pantheons, iconography is important to distinguish exactly which deity is being portrayed. Thus the basic human shape in male or female form was enhanced by certain clothing,

physical characteristics, objects held, and so on. In Egypt, many of the deities are therianthrope, that is they were portrayed as half human and half animal. For example, Thoth could be distinguished from Horus, as the former had the head of an ibis, whereas the latter had the head of a hawk. In both Hinduism and Buddhism, the human form could go beyond the literal form and have many arms. In each hand the deity could grasp a different implement and these represented various qualities of the deity or bodhisattva.

Likewise, among Christian saints, St. Sebastian is usually portrayed as pierced by numerous arrows, his means of martyrdom. St. Roche, the patron of the plague, is portrayed lifting his tunic and revealing the buboes on the inguinal part of his leg. St. Francis is often portrayed in the brown habit of the order he founded with birds or other animals. Blue has come to be associated with Mary, the mother of Jesus, and her mantle usually takes that color.

Gesture is likewise a party of iconography. For Christians, making the sign of the cross is part of the Mass, or Eucharist, which is initiated by the priest and copied by the laity. The gesture of prayer, orans, is made with arms open at or above waist level, palms facing up. The gesture of blessing is made with two fingers of the hand. In Hindu and Buddhist traditions, various hand gestures, known as mudras, are performed in the act of worship or meditation. Indeed, all the bodily postures of yoga, the asanas, have a quasi-representational quality; the plow, the locust, and the thunderbolt are used both as mnemonics for the pose itself but embody aspects of the thing the pose represents.

Recently, the understanding of the origins of Paleolithic rock art has been understood in light of the neuropsychology of altered states of consciousness (ASC). The cross-cultural similarities in very early, largely geometric designs have been linked to shamanic visionary experiences (Lewis-Williams and Dowson 1988). Entoptic (behind the eye) phenomena are common to many ASCs, and while cultural significances may still vary, the possibility of an iconography of primitive spirituality and religion is enhanced.

Iconography catalogs and explains the meaning of all the graphic devices used to convey religious or spiritual significance. Whether it is in the form of personal representations of the deity, saints, or other religious figures, or whether it is in the form of symbols representing abstractions, or whether it is in the live use of gesture during worship, visual signs are a major part of most religious traditions.

Psychologically speaking, iconography is the playbook by which visual imagery of the divine and the unfolding human understanding of spiritual experience is encoded and recorded. We can use the playbook to unlock meaning in existing visual representations and to create new ones through modification and combination of visual elements. Thus, as our spiritual experiences continue vary, iconography provides sources of continuity and a fertile field for change.

## Id

Stefanie Teitelbaum

Faculty of NPAP (National Psychological Association for Psychoanalysis), IEA (Institute for Expressive Analysis), New York, NY, USA

## Introduction

The Id is the Latin translation of Sigmund Freud's "das es." A direct English translation of "das es" is "the it." This translation is used in the Standard Edition of the Complete Works of Sigmund Freud. The id is the psychical agency in Freud's structural topography of the psyche which is unconscious, containing repressed innate instincts and primordial objects and adapted or psychically determined drives and objects. For Freud, the goal of psychoanalysis is to tame and transform the energy and objects of the id, moving them to the ego and superego in the service of civilization.

The id has no formal place in religious and spiritual literature. Freud acknowledged that his "it" was significantly influenced by the physician analyst Georg Groddeck, whose "it" concept is both compatible with and divergent from Freud's. Groddeck's "it" is "all" and "The Other" of human experience, lending itself to interpretations of the innate presence of the Divine or the godhead in human existence.

## Psychology

1923: Georg Groddeck published *The Book of the It*. Groddeck "it" is all, and the experience of ego "I" is illusion. Words like id-iom and id-iosyncratic suggest the authentic individuality of the personality is id derived (Bollas 1992). While comparisons have been drawn between Groddeck's "it" and the Tao and detachment, his influences are from Greek philosophy and German Romanticism (Durrell 1949).

1923: Sigmund Freud published *The Ego and the Id*, which contained the first mention of the id.

In his earlier writings, Freud laid out conceptual models of the workings of the mind in metatheory or metapsychology which are fictional representations of mental processes. The first topographical metapsychology has three psychical agencies: system unconscious, system preconscious, and system perception conscious. The second topography, the structural model, consists of the Id, the it; the Ego, the I; and the Superego, the over-I. The second topography was primarily laid out and elaborated in *Beyond the Pleasure Principle*, and *The Ego and the Id* (1923). Both topographies were efforts to describe and explain the movement of libido to occupy or cathect the psyche's agencies and developmental zones. Freud acknowledged Groddeck's influence in conceiving the second topography: "by following Groddeck in calling the other part of the mind into which this entity extends and which behaves as though it were Ucs, the 'id'." Freud called the id the "great reservoir of libido." The movement of libido between id, ego, and superego is the subject of Freud's Economic metatheory; the conflict between id, ego, and superego is the topic of the dynamic metatheory. The second topography was driven, in part, by Freud's Revision of the Theory of Instincts and the conflict between the sexual instincts and the ego instincts (LaPlanche and Pontalis 1973).

Freud said "where id was, ego shall be." He stated that the goal of psychoanalysis was "to strengthen the ego, to make it more independent of the super-ego, to widen its field of perception and to enlarge its organization, so that it can appropriate fresh portions of the id. If it a work of culture not unlike the draining of the Zuider Zee" (1933).

Both Groddeck and Freud acknowledge their "it" concepts as influenced by Nietzsche's "it" of general causation. Groddeck embraced the "it" and minimized the primacy of the "I"; Freud's "it" was to be tamed in the service of the "I."

## Religion

1923: Martin Buber published "I and Thou." The concept of "it" as opposed to "thou" is central to that work. I and Thou seek to model

subject-object relations as well as man's relation with God. Buber seeks to transform God from an "it" object to be worshiped to a "you" with whom a subject had a relationship. Freud and Buber met and found much to admire and respect in each other, but their "its" are vastly different.

## Commentary

Bruno Bettelheim (1982) challenged the Latinization of Freud's id, ego, and superego metapsychology. The psyche itself is a Latin translation of "Die Seele," the soul. Bettelheim posits that Freud accepted these mistranslations for two primary reasons: his wish to have the infant field of psychoanalysis accepted as a scientific discipline and his well-documented atheism.

The three "its" of Buber, Freud, and Groddeck were born in the English-speaking public's consciousness in 1923. Only the it of Freud is the id. Existential psychoanalysis, as exemplified by, but not limited to R.D. Lang, finds place for some synthesis of the three "its" (Burston 2000). The "its" diverge and overlap in an effort to differentiate and facilitate a subject to subject relationship between self and self, self and other, humanity and the dehumanized, and man and god.

## Ignatius of Loyola

Paul Giblin

Loyola University, Chicago, IL, USA

Born of a noble family in the Basque region of Northern Spain in 1491, Inigo of Loyola was a great saint and mystic of the Church. His story is a rich study in the dynamics of *spiritual conversion* and psychological decision-making, i.e., how a young man in his late 1920s, a strong-willed soldier filled with zeal became a saint and mystic, deeply in love with God. His *Spiritual Exercises* document his process of grappling with life's major questions, i.e., to whom and what is one to commit, how to assess the goodness of one's choices, and how to live in accord with that which gives life and freedom? Inigo's spiritual journey brought him into profound contact with Jesus Christ. His discernment

of spirits and *Examen of Consciousness* provides tools for ongoing living in spiritual awareness.

## Conversion

Inigo was born the youngest of 12 children to an aristocratic family. His mother died shortly after his birth. He was likely destined for the clerical state but by age 14–15 it became clear that he was much more interested in romance and chivalry. He trained to be a knight in the service of the King of Spain. He was described as full of life, with a strong ego and strong sense of vanity. Sword and cloak symbolized his identity. At age 20, in the service of the Duke of Navarre, he led a largely outnumbered body of Spanish soldiers against a French invasion of Pamplona. He was a fierce fighter, but within 6 h, the battle was over and he suffered a shattered knee and a seriously injured other leg. Two weeks later the French carried him by litter back to his family castle of Loyola. His convalescence did not go well. Surgeons had to rebreak and set the broken knee. Even then one of the reset bones protruded, and Ignatius demanded that it be cut away. William Meissner notes "His willingness to undergo the torment of the surgery is a measure of the extent the ego-ideal dominated his life and behavior to that point" (Meissner 1991, p. 41).

Following the second surgery Ignatius was confined to bed rest. His only reading material was a book on the lives of the saints and a book on the life of Christ. After reading and reading, he would fantasize himself "outsainting the saints" at one moment and at another pursuing knightly deeds in the service of a noble woman. He began to notice a difference in his moods after daydreaming. The aftereffects led on the one hand to stillness, peace, and joy and on the other hand to turmoil and dissatisfaction. He began to recognize God as directly instructing him; when he considered following Jesus' way of life, he was excited, and the excitement persisted. When he considered returning to his previous life of courtly pursuits, an initial excitement quickly turned to emptiness. Ignatius felt himself being moved by two spirits, that of God in the former

and that of evil and Satan in the latter. Thence began his lifelong love affair of God revealed in Jesus Christ. He wanted to go to Jerusalem and experience the Gospel accounts firsthand; he left Loyola castle in 1522.

He travelled to the Benedictine monastery of Montserrat where he surrendered his knightly attire and took on pilgrim clothing. He confessed his sins in great detail and emerged with a stronger spiritual identity. He departed Montserrat with intentions of staying a few days in the remote hill town of Manresa on route to Barcelona and then on to Jerusalem. Ignatius in fact stayed in Manresa for 10 months, living in a hillside cave, fasting and begging, and praying for long hours. His health became poor and he suffered from severe depression. During this time, as back in the castle at Loyola, Ignatius continued to “conduct his experiments” in consciousness, attending to his mood shifts/“movement of the spirits” and recording notes about the Gospel passages influencing him. These were to become the basis for the *Spiritual Exercises*. At the end of the time at Manresa, along the river Cardoner, Ignatius had a profound religious experience, “the great illumination of his life.” He came to understand his faith in powerful new way. Ronald Modras notes “Manresa made him a changed man; at the Cardoner he was given a purpose” (Modras 2004, p.18).

Experience taught Ignatius that God was acting in his and other’s lives; that all people can have this direct, personal encounter with God in Jesus Christ; that all we have and are is gift from God; and that we are loved in spite of our limitations and sinfulness, and in realizing and appreciating these things, we are called to love and service.

Ignatius would go on to preach the Gospel, “help souls,” and engage in spiritual “conversations.” He realized the need to be educated; studied Latin, the Classics, philosophy, and theology; and was ordained. He continued to refine his notes on and give the *Spiritual Exercises*. A small group of fellow students and companions gathered around him in Paris to share the Exercises and Ignatius’ transformative vision. Together they were intent on becoming missionaries and putting themselves at the service of the Pope.

The group practiced “discernment of spirits” and together, in 1540, founded the Society of Jesus, the Jesuits. Ignatius, its first Superior General, would remain in Rome until his death at age 65 in 1556.

## The Spiritual Exercises

Ignatius developed a keen interest in the inner life and the interplay between desire and the feelings and thoughts that follow from entertaining various desires. As he recuperated in Loyola castle and on pilgrimage at Montserrat and Manresa, he became convinced that God was acting in his life. He read and reflected on Christ’s life and the lives of the saints and felt himself being drawn into an intimate relationship with God in Jesus. He continued to take notes on these experiences and refine the notes over the next 20 years. His notes became the basis for guiding others on a similar spiritual journey. The intention of the Exercises is to bring one’s spiritual journey into focus and to help clarify a sense of life purpose, ultimately grounding that life in the fullness intended for each of us by God. The Exercises provide a very concrete and adaptable method for spiritual guidance that was quite distinct from the more logical, ritualized forms of religious practice dominant in the sixteenth century. They provide a highly positive view of God’s action in the world, a world that continues to be created and which invites human participation.

The Exercises encourage a variety of prayer forms including imaginative reflection on the Gospels, lectio divina, breathing and full use of the senses, dialogue with inner wisdom/God, and especially paying attention to the movements of one’s heart. Prayer sessions begin with attention to the desires of one’s heart. The structure of the Exercises is “4 weeks.” These are not chronological weeks but rather periods of focused prayer seeking specific graces. Week 1 focuses on the “purgative way,” examining one’s faults (“doing one’s personal inventory” in other spiritual language) with the goal of choosing God over sin. Week 2 focuses on the “illuminative way” with the intention of better knowing, loving, and

serving God. Week 3 and 4 focus on the passion, death, and resurrection of Christ, the “unitive way,” identifying with his suffering and then with his joy, with the intention of strengthening one’s commitment to follow Christ.

The *Spiritual Exercises* are not a book to be read but rather notes for the director to use with a retreatant. They are given in a variety of forms. The more extended form is a 30-day retreat. Each Jesuit typically makes the “30-day retreat” twice in his life. They are also given in an 8-day retreat, often yearly for the retreatant; a third form is the more extended 9-month retreat entitled the “Nineteenth Annotation,” designed for lay people who wish to make the Exercises in the context of ongoing life. The Exercises are offered and tailored to individuals and to groups.

### Examen of Consciousness

Central to the practice of Ignatian spirituality is the Examen. Originally understood this was an examination of conscience, a twice-daily reflection on the shortcomings of one’s life. A contemporary understanding is an examination of consciousness and a tool for living a more spiritually aware life. Typically five steps are recommended (Hamm 1994): (1) pray for light, to understand how God’s Spirit is acting in our life; (2) review the day in thanksgiving for “gratitude is the foundation of our whole relationship with God”; (3) review the feelings that surface in the replay of the day, pay attention to any and all the feelings that arise; (4) choose one of those feelings, positive or negative, and pray from it; choose the feeling that most drew your attention; and (5) look toward tomorrow and turn your feelings and thoughts into a prayer. Close with the Lord’s Prayer. The Examen has been much examined and adapted. One adaptation by Linn, Linn, and Linn (1994) is particularly helpful in family and marital contexts. The authors encourage prayerful reflection on two questions, “for what moment today am I most grateful” and “for what moment am I least grateful,” and to then share reflections with each other.

### Discernment of Spirits

Ignatius was just into his 1930s when he was recuperating from the cannonball wounds at the Loyola castle. He needed to choose a life direction; was it a return to the knightly and chivalrous life or a move into the future following Christ? Which king or standard, Satan or Christ, was he to follow? During these and the following months, he developed the habit of attending to what was going on in his psyche, especially to the feelings that were evoked in response to his reading and reflection, in response to considering his desires. He became convinced that God was acting in his life; he tuned into God’s actions by listening to the movements of consolation and desolation in his heart. Ignatius developed his rules for discernment to help “people understand the typical patterns of compulsion and grace in their lives so that they are not unwitting victims of their own biases” (Dunne 1991). Discernment of spirits is a means by which persons determine their unique personal vocation; it is also a means by which persons deepen their faith and relationship with God. Discernment calls into question one’s image of God, taking of responsibility and freedom of choice. For Ignatius God was clearly loving and generous, available and self-giving; relationship with God called forth Discernment can be either a personal or communal process. Discernment requires humility, openness/detachment, love, and courage. In the *Spiritual Exercises* Ignatius detailed his “Rules for Discernment of Spirits.”

Ignatius of Loyola continues to have a powerful influence on contemporary spirituality 450 years after he lived. His *Spiritual Exercises*, rules for discernment of spirits, and use of the Examen continue to be valuable guides for many on the spiritual journey today.

## Immanence

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

Immanence is the experience of the divine as within and among us. The immanence of the divine within the natural world is often found in pantheism. Indeed many forms of pantheism equate the totality of the natural world with the divine. The term “divine” will be used because the doctrine of immanence is found in both theistic and nontheistic forms of spiritual world views. It is dialectically linked to the term transcendence and they constitute a primal contrast in the philosophy of religion. In the psychology of religion, the same dichotomy is conceptualized as the difference between self and other. In theistic spirituality the relationship between humans and God or the forms of the divine is a relationship between persons. Buber (1958) conceptualized all relationships as either I/It or I/Thou, either instrumental or fundamentally personal and mutual in its very constitution.

In this context, immanence refers to the experienced presence of the divine within the mundane world and transcendence as the experience of the ultimate “alterity” or the divine as other. In transcendence, we experience of the divine as more than us, something beyond our

capacities and knowledge. In immanence, we can experience the divine as a continuous background presence or as a specific epiphany, a concrete manifestation limited in space and time.

An alternative experience is the absence of the divine, a void. Emptiness can be nihilistic, a cold material world decayed into the completely random state of total entropy, which is the ultimate end of the universe in physics taken in context of materialistic monism as an ontological position. But emptiness can also be experienced as fruition and completeness. This is at the heart of Madhyamaka Buddhism, which is the experience of total emptiness as enlightenment, completely nondual being. Nagarjuna, the late Indian Buddhist sage, and a key figure in Tibetan Buddhism, is the clearest exponent of this position.

The presence of the divine within us can be seen as the source of all spiritual experience, a recognition of self by self. It was first seen in the myth of Narcissus, self-compounded by recognition of self. But the magic of spiritual experience is to shuttle the immanence and transcendence of the divine. This is the basis for not only the fear and trembling in awe in the presence of the mysterious and totally other; it is also the source of the experience of warmth and loving presence at the other end of the spectrum of spiritual experiences. Whether in joyous ecstasy or through the dark night of the soul, we shuttle between the experiences of immanence, transcendence, and emptiness.

## Immortality

Morgan Stebbins

Faculty of the New York C.G. Jung Foundation,  
New York, NY, USA

Human beings, as far as we know, are unique in the ability to understand that each one of us will die at some point. Although we are forever on this side of the “undiscovered country/from whose bourn no traveler returns” (Shakespeare, *Hamlet*, Act III, scene 1), this other type of time or place has been a concern of philosophy and religion from very close to the beginning of human history. Anthropologists consider the transition from living to nonliving to cause a basic cognitive dissonance so extreme that the nascent Neolithic consciousness as well as modern humans are incapable of making sense of it. In the ancient caves of Lascaux and Trois Freres, we see what may be indications of shamanic transformations – the precursors of conceptions of the soul and the beginning of the idea that there might be something more at the end of life than merely stoppage. Funereal remains have also been uncovered from this same period in the Neolithic age, suggesting a conception of something going on after the death of the body. This is developed a bit more in *The Epic of Gilgamesh*, which contains a section in which the hero-king Gilgamesh searches for the herb of immortality. He is tricked by a snake, however, and misses his chance. In this very early (twenty-second century BCE) epic poem, we see an approach to the afterlife that has already gained some momentum.

Not far away in Egypt, there developed perhaps the most highly differentiated conception of multiple souls, their judgment and fate, and the proper internment of the body – at least for the Pharaoh, found in the ancient world. It seems that the common person did not have access to the soul nor of course to much in the way of a pyramid-like tomb in which to transition. This would have to wait for religions of the masses, such as Christianity in the West and Buddhism in the East. The Pharaoh’s body was preserved so

that he himself might have real existence in the Otherworld of the Celestial regions, and in various texts, we can trace a variety of beliefs regarding the manner in which he was supposed to reach the sky. Some early and late texts told of a ladder similar to that which Jacob saw in his dream – “a ladder set up on the earth, and the top of it reached to Heaven and behold the angels of God ascending and descending on it” (Genesis 28:12). In both of these examples, there is the sense that something beyond the body must exist – what we understand psychologically as the psyche – and that there is a veritable hierarchy of unconscious states which are only dimly perceived as instincts, urges, muses, ragings, and all the other demonic or divine possessions to which humans are susceptible.

Another version of immortality is fame, as defined by the story of Achilles. It was prophesied, according to his mother, that he could either have eternal fame and a short life or a long life, children, satisfaction, and perhaps just a few generations of being remembered by his children. Ovid wrote that although “his ashes would hardly fill an urn,” he fared better because “his fame now fills the world.” Although Ovid states clearly that “fame makes the man,” there is a later scene in which Odysseus finds him in Hades and tells him there is no man more blessed. To this Achilles responds, “By god I’d rather slave to another man on earth than rule down here over all the breathless dead” (Ovid, 12, pp. 615–619). This episode shows the social value (perhaps the ideology) of the concept of immortality and the ways in which it can form behavior.

Of particular interest just after the era defined by Gilgamesh are the mystery religions and their role in the development of the concept of the soul and its eternal or immortal destination. The Eleusinian Mysteries are believed to have begun about 1600 BCE. This Mycenaean age was marked by a new turmoil about the fate of the soul. Before this, in most Western traditions, the soul just went to the place of the shades or went with the ancestors, whereas suddenly a level of doubt about what happens after death ran through the Mediterranean world. The Mysteries were intended to *elevate man above the human sphere into the*

divine and to assure his redemption by making him a god and so conferring immortality upon him (Nilsson 1947, pp. 42–64). Of course the mysteries were only for the upper classes who could afford to travel to Eleusis and pay the high fees of the priests. In periods of cultural transition, there is often a deep rearrangement of core unconscious values. These values, as well as the symbols which can translate and contain them, are often communicated through metaphysical assumptions. When the anxiety about mortality and the soul reached the general public (exacerbated by the relativization of local ancestor cults by the religion of the Emperor), a new solution was needed of a more global scope. This is, psychologically, the explanation for the advent of the Christian symbol system.

A completely different form of literal, bodily immortality was posited and pursued almost contemporaneously by Taoist sages and medieval alchemists (Wilhelm 1962 or Dorn, etc.). For both the Taoists and the alchemists, it was thought that the correct bodily nutrients along with a state of mind that corresponds to the way (or Tao) would lead to endless life. In both cases the search was for the *elixir vitae* or potion of life. In fact, the elixir is a concept of great breadth. It is found in Arabic texts where it is referred to as the *elixir of immortality* or *Dancing Water* (in Persian, *Aab-e-Hayat*). The elixir is sometimes equated with the alchemist's philosopher's stone. As well, it can be found in the myths of Enoch, Thoth, and of course Hermes Trismegistus (Thrice-blessed Hermes). In all of the myths, the hero has drunk "the white drops" (liquid gold) and thus achieved immortality. We can even find a reference in the Qur'an (Sura 18; the Khidr), and it is mentioned as well in one of the Nag Hammadi texts. In all of these references, we can derive a psychological image of how a particular relationship with the physical world could lead to a very different experience of temporality.

We can see similar attempts in the efforts of the believers in cryogenic research and other futurist enterprises. Indeed some very simple organisms do live in a kind of immortal existence in that they don't die unless killed, and the

futurist community believes this may be possible in relatively near future. Of course millennial groups have always thought that the end time, or better, the end of time, was impending. If it were not, let's say it was predicted in a few 100 years, then it would have very little personal urgency. This urgency is an important psychological mechanism, since the degree of urgency is what motivates change, and change, as we have seen, is behind the image of rebirth.

The state of immortality, being the province of the gods and divine beings of many sorts, would seem to be desirable – especially if we factor in the "good" immortality conferred by the reward of going to Heaven. However, thinkers of many types have posited that human mortality is critical to development. Jorge Luis Borges explored the idea that life gets its meaning from death in the short story "The Immortal," and Ernst Becker, in *The Denial of Death*, explains that a lack of grappling with the fact of death leads to neuroses of different kinds (Becker 1997). Instead, a confrontation with limitation, especially the limitation represented by the barrier of death, leads to a grounded personality and frees the creative potential which can be thought of as a playful interweaving of elements within a given structure or set of limitations.

In most religious traditions (especially the monistic ones), the status of immortality is confined to heavenly beings and of course the soul. However, depending on whether one (or rather, one's soul) ends up in heaven or hell, immortality can be experienced as either bad or good. Indeed in these traditions, there is often an idea of some sort of eternal reward or punishment. It's not hard to see the anthropological view of this as a coercive social mechanism, but again that tells us little about why it comes about in this form. We can therefore translate the form of this very widespread belief as an intuitive experience of something *other* than normal consciousness, especially in terms of temporality. Wittgenstein may have been referring to this, saying in the *Tractatus*, "If we take eternity to mean not infinite temporal duration but timelessness, then eternal life belongs to those who live in the present" (Wittgenstein: 6.4311). Psychologically this

points to the a-temporal and synchronous aspect of the psyche which does not conform to the rules of efficient or necessary causation nor to the usual rules of the time-space continuum (see especially Jung 1973).

One of the most perplexing types of immortality is that defined by metempsychosis or the dynamic of the soul's reemergence in a new body life after life. In both the Hindu and Buddhist (and Jain) forms, life is seen as negative, the realm of *samsara* or illusion and suffering, and the goal is to end the round of rebirth through extinguishment (that being the literal translation of *nirvana* – a blowing out of the flame of life), or for the Hindu tradition, *moksa*, a liberation which ends individual existence. One of the most sustained and beautiful contemplation of the nature of time and being is found in the Japanese Buddhist monk Dogen Kigen's work *Uji*, written in the thirteenth century (found in lots of places, but a nice scholarly work is by Heine 2006, p. 56). Although it would be ridiculous to paraphrase it, he pushes the understanding of time and timelessness to a point and with a subtlety perhaps still not excelled. These religious conceptions of rebirth can be translated as the experiential understanding that after major change we are, in fact, a different person: there is a discontinuity with the past when a major threshold is passed. Liberation is not very far from a psychological concept to start with, especially given that a subject's reconnection with the numinous core of a given collective symbol set relativizes the personal ego and also frees the subject from ideology.

## Inanna/Ishtar

David A. Leeming

University of Connecticut, Storrs, CT, USA

The Sumerian goddess Inanna, whose Babylonian name was Ishtar, was probably the most important of Mesopotamian goddesses. The stories we have of her date to at least as early as the third millennium BCE. Uruk was her primary city. There she was "Lady of the Date Clusters," a title suggesting her role as fertility figure. It is clear, however, that she was more a goddess of sex, love, and war than a "great mother" nurturer. As "Mistress of the *me*," the *me* being the essential laws and offices of civilization – kingship, godship, sexual practices, marriage, and political power – Inanna was the equal of the great male deities of the Sumerian pantheon. In fact, her primary title was "Queen of Heaven."

Inanna's consort and lover was Dumuzi, the shepherd. Inanna, as the goddess of love and fertility, calls on Dumuzi in love songs central to the Mesopotamian ritual of the sacred marriage, words which, though more sexually explicit, remind us of the love poetry of the biblical *Song of Songs*. Inanna urges her lover to fill her with his love: "My vulva, the horn, the Boat of heaven, is full of eagerness like the young moon. My untilled land lies fallow."

The most famous myth about Inanna is that of her descent to the underworld ruled by her sister, Ereshkigal. This aspect of her story calls to mind the archetype of the descent so common in the hero myth. Like the myths of such figure as the

Greek Persephone, the Egyptian Isis and Osiris, and Jesus, it involves the great themes of sacrifice and resurrection and power gained from the perilous descent into the world of death. There is also in Inanna's descent an implicit agricultural element involving "planting" under the earth and ultimately productive decomposition.

The descent myths tell how as Queen of the Above, Inanna, longed to know the World of the Below of her sister Ereshkigal. Inanna knows life fully, but she knows nothing of infertility and death. Before leaving for the underworld, Inanna instructs her faithful helper Ninshubur to arrange official mourning for her and to approach the other great deities for help if she should fail to return. Leaving her lover Dumuzi as king, she clothes herself in the sacred *me*, which take the form of seven pieces of magnificent clothing and jewelry, and in this state of great pride, she knocks on the gates of her sister's domain demanding admittance. Neti, the guardian of the gates, informs the naked Ereshkigal of the imposing and prideful visitor decked in the seven *me*. Furious at the intrusion, Ereshkigal allows Inanna through the seven locked gates of her realm but only if she gives up one of the seven objects (the *me* as ornaments and clothing) at each gate. Inanna agrees and, as a result, when she arrives at her sister's throne, she is as naked as her host and is thus effectively stripped of her great earthly powers. Such powers are, of course, useless in death. When Inanna attempts to usurp her sister's throne, she is condemned to death by the underworld judging gods, the Anunnaki. Inanna in fact dies and is hung up on a wall like a piece of meat.

Back in Uruk, the "real" world, 3 days and nights have passed, and Ninshubur follows her mistress's orders, declaring a period of deep mourning and asking the gods Enlil and Nannu for help. Both deities refuse, blaming Inanna for arrogance of her decision to attempt sovereignty over the underworld. Only Enki, the wise shamanic god, who from his home in the underground waters of the *abzu* has his ear to the underworld, agrees to help. Enki understands how negatively Inanna's absence is affecting the world, depriving it, in fact, of its source of fertility. From the mud

under his fingernails, Enki creates two creatures without gender, creatures which will not offend the infertile underworld, where Ereshkigal is howling in pain as she gives negative birth, perhaps to the stillborn of the earth. Enki gives the Plant of Life and the Water of Life to the two sexless creatures and instructs them to comfort Ereshkigal. When Ereshkigal offers the creatures gifts for having brought her relief from her suffering, they demand the body of Inanna, as instructed beforehand by the clever Enki. They revive the body with the Plant and Water of Life. But the Anunnaki demand a substitute for the revived Inanna. The goddess departs from her sister's land, gathering up her clothing – her old *me* and power. Entering her own world after 3 days in death, she is once more the glorious Queen of Heaven. But she is accompanied by demons whose job is to ensure the payment of the sacrificial substitute. When the great goddess and her underworld demons arrive at Uruk, a cheerful, well-dressed Dumuzi is acting as king, apparently having forgotten his once-beloved wife. Inanna, enraged by his attitude, offers him to the demons. Terrified, Dumuzi begs for help from the gods, but even when he is turned by the sun god into a snake, he cannot escape. Dumuzi is taken away, but his sister Gestinanna arranges to spend 6 months of the year in the underworld so that he can spend those months back in the world above. This detail reminds us of the arrangements made for the ravished Persephone in the Greek myth. The 3 days in the world of death followed by resurrection remind us of a similar pattern in the story of Jesus.

The psychological significance of the Inanna descent myth is suggested by Samuel Noah Kramer. Inanna lives in the world of consciousness, the world Above, but she must retain contact with the dark world of the unconscious below: "Inanna must not forget her neglected, abandoned older 'sister' – that part of herself that is Ereshkigal" (Wolkstein and Kramer, 1983, p. 161). In the same way, Kramer suggests, Dumuzi, the sacrificial scapegoat, must experience the dark world of Inanna's other side, Ereshkigal, in order to become a "truly 'great' king" (Wolkstein and Kramer, 1983, p. 163).

A dominant approach to the psychology of Inanna's descent has focused on the goddess as a representation of the psychic journey of women. In this paradigm the Inanna-Ereshkigal dichotomy represents the divided feminine and the struggle of women to achieve wholeness in a repressive male-dominated world. By descending to Ereshkigal, the woman experiences her repressed side and returns to the conscious world above with some of her dark sister's power. Others, while not disagreeing with this analysis, stress the fact that most heroes, male and female, must confront the "dark side" in order to achieve the goal of wholeness. In this sense, Ereshkigal is the unconscious hidden and repressed self which needs to be integrated with the conscious self which is Inanna. In descending into the dark world of the unconscious, Inanna must surrender the elements of her authority and personal power, her accepted assumptions about herself. This denuding represents what for anyone is the dangerous and difficult psychological process of self-examination and psychological growth, the willingness to die to the old life to be born into the new. After fully experiencing the world of what Jung would call her Shadow, Inanna returns to consciousness with some of her sister's knowledge. In this approach Inanna stands for all of us who explore the unconscious in order to integrate it with consciousness.

## Incarnation

Charlene P. E. Burns  
Department of Philosophy & Religious Studies,  
University of Wisconsin-Eau Claire, Eau Claire,  
WI, USA

Literally, the act of being "made flesh"; the earliest and most common usage is in reference to the Christian doctrine about the divine nature of Jesus.

### Historical Overview

Belief that the divine manifests in human form is as old and diverse as religion itself. Cave art from the late Paleolithic Age depicts masked figures thought to represent the divine animal spirit; sacred heavenly visitors are portrayed in the art of premodern societies. Many Native American religions teach that souls of the dead return to earth in human or animal form and also that the divine incarnates itself from time to time. Some Australian indigenous peoples teach that the human has two souls: one mortal and the other immortal and believed to be a particle of the totemic ancestral beginnings.

Ancient Greek Gnostics believed that the human being is a duality of material body and immortal soul. The souls turned away from contemplation of the One and fell from the divine realm to be incarnated and imprisoned in the body. These ideas combined with the mythologies of Olympus which told of the gods' interaction with humanity, very often taking on human or quasi-human form. Pythagoras, Empedocles,

and Plato, for example, taught that the immortal soul sinned, fell from an original blissful state, and suffered repeated incarnations until achieving spiritual restoration to bliss. Pythagoras and Plato were themselves thought to have been gods made incarnate.

Several centuries before the Common Era, the ancient Persians believed that Mithra, the God of light, would incarnate at the end of history. Mithra would be a universal king and savior, God born of a woman. Human kings were believed to be the divine Horus in ancient Egypt. In China it was taught that the emperor, as Son of Heaven, was the representative of Heaven on earth. Since the inception of Buddhism in China, emperors have from time to time been believed to be incarnations of the Buddha, and for the ancient Japanese, the emperor was *akitsumi kami*, god manifested in human form (Waida 1987).

Among present-day religions, in the avatar of Hinduism, we find what may well be the oldest clearly developed exposition of divine incarnation. In its earliest form, divine descent in Hindu thought was described as *pradūrbhāva*, manifestation. By the fourth century, before the Common Era, the term *avatar*, from the words meaning “to cross over” and “down,” had come into usage, primarily in relation to the earthly presence of the preserver god Vishnu (Parrinder 1982). In the Bhagavad Gita, Krishna, an avatar of Vishnu, says, “To protect men of virtue and destroy men who do evil, to set the standard of sacred duty, I appear in age after age” (*Bhagavad Gita* 1986, 4, pp. 6–8).

In some forms of Buddhism, emphasis has shifted away from the historical Buddha to the Eternal Buddha, a transcendent being said to embody universal truth. The Mahayana Buddhist doctrine of *Trikāya*, the “three bodies,” teaches that the Buddha is known as *dharmakaya*, True Body (the essential Buddha who is ultimate reality independent of all and yet the “thatness” of all), *nirmanakaya* (Body of Transformation, that by which the earthly historical Buddha was enabled to work the good), and *sambogakaya* (the Body of Bliss or celestial Buddhas and bodhisattvas, those who have attained

enlightenment but choose to return to earth to help others reach *nirvana*) (Gard 1963). In Japanese Buddhism, the doctrine is further developed into a cosmic theism wherein creation is believed to be the embodiment of the Buddha Mahavairocana. This cosmic figure is both immanent, through embodiment of himself in the six constitutive elements of the universe – earth, water, fire, wind, space, and mind – and transcendent, absolute, eternal (Waida 1987).

It is widely held that Judaism is adamantly non-incarnational and yet according to some mainstream Jewish scholarship, the texts of normative Judaism present God in terms of incarnation and that in fact, incarnation as a concept is integral to Hebrew Scripture (Neusner 1988; Wyschograd 1996). Even in Islam, which is a faith based firmly in insistence on the absolute unity of God, there are sects that teach something very like incarnation. Although for the majority of Muslims the idea of incarnation is the greatest form of sin, some Shi’a believe the Imam was the actual embodiment of the divine light. For the Druze of Lebanon, for example, the Imam has been said to be the literal incarnation of God on earth (Martin 1982; Parrinder 1982; Waida 1987).

## Psychological Interpretations

Given the nature of the claim, the idea of divine incarnation is not subject to experimental or laboratory examination. It can be addressed, however, from the psychoanalytic point of view. Strictly Freudian approaches tend toward explanatory claims, whereas other depth psychological approaches attempt to address the question from a functional point of view.

For Freud, religion and all its expressions are infantile regressive defenses. He believed that Christianity is an especially clear manifestation of dynamics at work in the Oedipal complex. The longing to eliminate the father and take possession of the mother is, in a sense, the original sin which gives rise to the guilt from which we must be redeemed. Christ, as both Son of God and God Incarnate, atones for us through his own death. Freud’s focus in his writings on Christianity was

primarily on the meaning of the Eucharist (as symbolic and defensive reenactment of the Oedipal wish to both eliminate and identify with the father), but it can be inferred that the idea of incarnation is an expression of the infantile wish to become the father.

Early in his career, Carl Jung accepted Freud's stance that religion expresses infantile wishes, but as his own understanding of the self evolved, he came to see religion in a more positive light. Writing about the Christian doctrine of the Trinity, Jung (1948) suggests that this symbol is an expression of individual psychological maturation. The Father symbolizes the original state of unreflective acceptance similar to the way we function in childhood. The Father gives birth to the Son, which correlates to growth in discrimination and differentiation from parents, and the Spirit corresponds to a new level of consciousness involving the mature incorporation of the unconscious and discriminatory aspects. In one of his most controversial works, *Answer to Job*, Jung expands this thesis and interprets the idea of Jesus as God incarnate as a manifestation of evolution of the God-image. Cautioning that "the image [of God] and the statement [about God] are psychic processes which are different from their transcendental object; they do not posit it, they merely point to it," Jung argued there that the book of Job tells the story of God coming to consciousness through encounter with Job (1976, p. 556). In the story, God is capricious and jealous, allowing Satan to torment Job without justification. Job remains steadfast in spite of his suffering, and in the end God, not Job, is changed. Remembering that for Jung religious ideas are symbolic expression of aspects of the human psyche, we see that the incarnation of God in the human Jesus is the necessary next step in evolution of the Western God-image. God must become human in order to atone for the wrongs committed against humanity; expressed in psychological terms, the appearance of the symbol of God incarnate reveals the maturation of Western humanity's internalized image of God. The fact that we find incarnation in many religions demonstrates, for Jung, the universality of the God-image archetype.

In object relations and self psychologies, religion is a potentially positive expression of human psychic experience. It can promote wholeness through enhanced object relations and/or provide a bridge between inner psychic and outer social experience. Although the idea of divine incarnation tends not to be directly addressed by psychoanalysts in these schools of thought, the ubiquitous nature of the idea lends support to the thesis that narcissism is basic to human psychological development. For self psychologies, narcissistic libido is a basic energy that functions in the cathexis of objects felt to be a part of ones' self (selfobjects). The challenge of psychological maturation involves redirection and integration of narcissistic cathexes. The God-image, one of the most important selfobjects, is derived from early parent/caregiver relations and changes over time (Rizzuto 1979). Conceptions of divine incarnation, then, may be said to be manifestations of the tension between narcissism and internal object relations.

## Theology and Psychology

Some theologians with expertise in psychology have made interesting use of these theories to develop a range of new understandings of the doctrine that incorporate explanatory and functional aspects of interpretation. C. Burns (2001) interprets incarnation in terms of the human capacity for intersubjectivity made possible by the innate processes of empathy, sympathy, attunement, and entrainment. In a more classic psychoanalytic mode, J. Moltmann (1973) interprets the powerlessness of the crucified God incarnate as a counter to the Oedipal father imagery of the Hebrew Bible. The image of God crucified opens us to the depths of our own humanity and prepares us to accept the moral responsibility that accompanies freedom of the will. H. Heimbrock (1977) expands on Moltmann's thesis to include the claim that the death of God incarnate on the cross signifies renunciation of the grandiose self which leads to transformation of narcissistic fantasies.

## Indigenous Religions

Kenneth H. Lokensgard<sup>1</sup> and  
Alexander (Alejandro) V. Gonzalez<sup>2</sup>  
<sup>1</sup>The Department of Religious Studies,  
University of North Carolina-Chapel Hill,  
Chapel Hill, NC, USA  
<sup>2</sup>Strayer University, Piscataway, NJ, USA

Indigenous religions are the ancestral religions of peoples who are native to particular landscapes. Their religions help them achieve the goal of living successfully in those places. Thus, indigenous religions vary, just as the places their practitioners inhabit vary. Yet, the many religions practiced by indigenous peoples share common themes. These themes include emphases upon relationship and place. The practicing psychologist or scholar of psychology and religion should pay close attention to manifestations and implications of these themes, as they are the basis of behavior and identity among indigenous peoples.

While a strong thread of tradition runs through most indigenous religions, colonized, often-relocated peoples have had to adapt, borrow, or even establish new religious practices to live in new cultural and/or geographic environments. When the “newness” of these religions is particularly evident, we refer to them as “indigenized” religions. These religions also often fall into well-known categories such as “new religious movements” and “pan-cultural movements.”

Indigenous peoples who continue to practice contemporary versions of their ancestral religions

typically view their landscapes as animate. The animate aspects of their environments include things that nonindigenous people do not consider alive. Moreover, all of these living things possess a potential for personhood. That is, they can interact with and lend aid to humans, if treated respectfully and generously. Therefore, an ethic of reciprocity is found across indigenous cultures (Harvey 2005; Lokensgard 2010b). This ethic is expressed in the social protocols and formal rituals performed by indigenous peoples. Thus, indigenous religions help human practitioners establish and maintain positive relations with other beings, including creator figures, who can aid humans in their quests for successful lives.

Of course, the other-than-human persons inhabiting the environments of indigenous peoples can reciprocate or even initiate poor treatment. Consequently, indigenous peoples must be mindful of their actions at all times. They must follow the ethic of reciprocity in every area of existence. Therefore, religious phenomena are not so easily distinguished in indigenous worlds from political phenomena, economic phenomena, and so on.

Scholars of the past often characterized indigenous religions as less evolved than others by labeling them “primitive” (Geertz 2004, pp. 46–52). One of the reasons they did so is that they misunderstood indigenous ontologies. When we take indigenous ontologies or classifications of being and beings seriously, we understand that indigenous peoples truly understand the worlds around them as alive and personal; their worlds are not just metaphorically alive. This understanding often carries to their language, imagery, and material culture as well. They often consider words, pictures, and ceremonial items to embody other-than-human beings. These things are *not* simply symbolic of other beings.

Past scholars also viewed indigenous religions as primitive because indigenous peoples emphasize oral communication, rather than written. Certainly, some indigenous peoples possessed highly developed forms of pictorial communication before the introduction of abstract writing by colonizers. Yet, to this day, orality remains important. This is not only because there is

vitality to language but also because language facilitates relationships between persons. Thus, it is used very, very carefully by indigenous peoples. Indeed, its misuse can offend others and jeopardize the relationships upon which indigenous peoples depend to live successful lives. Language, then, is thought of in much more complex ways that earlier scholars often understood. Indeed, among indigenous peoples, spoken language and other means of communication have the sort of value that only poets and other artists and intellectuals ascribe to them in nonindigenous societies.

By ignoring the inherent value of religious material culture, the physical world, and the truly effective power of language among indigenous peoples, past scholars often reduced the importance of indigenous religions to the psychological (Evans-Pritchard 1989, pp. 20–47). It is imperative, now, that professionals in the mental health field and scholars of psychology and religion, who work with indigenous peoples or even indigenized peoples, recognize that the external, physical, often personal world is of enormous importance to them as well. The lives of indigenous and many indigenized peoples are governed by the need to maintain proper relationships (Gonzalez 2010; Lokensgard 2010a). This simple fact means that psychologists and scholars must consider those things, beings, etc., to which indigenous peoples relate.

Just as personhood is determined by one’s interactions and relationships with others, so is identity among indigenous peoples. For example, the Blackfoot Peoples of the northwest plains in the USA and Canada refer to themselves as the *Niitsitapiiksi* or “Real Persons.” This name indicates that there is a behavioral dimension to their identity; they are the people who know how to interact with the beings around them *as* persons. This last point is key, as some conservative Blackfoot traditionalists argue that one can only be a “Real Person,” if she or he remains in Blackfoot territory. In fact, Blackfoot warriors of the nineteenth century would consciously put aside their personhood and become “mad wolves,” when they left their lands to raid (Lokensgard 2010a, pp. 78–82).

The Iroquois Peoples of the eastern USA and Canada refer to themselves as the *Haudenosaunee* or the “People of the Longhouse.” Again, ontological status is indicated by this name, and the importance of place is explicit. The names of indigenous peoples as diverse as the *Ainu* of Japan and Russia, the *Yolgnu* of Australia, the *Bosotho* of southern Africa, and the *Yupit* of Alaska all emphasize personhood and, by extension, the behaviors that define personhood for these peoples. Names of other indigenous peoples simply emphasize place. Nevertheless, in all cases, a concern for relationship, expressed interpersonally or geographically, is implicit. This illustrates that identity, for most indigenous peoples, is based upon the notion of relationship.

As stated earlier, the social protocols and formal rituals of indigenous religions, though they manifest differently across cultures, help indigenous peoples maintain the relationships that are so important to them. The protocols and rituals always involve an expression of generosity, respect, or material gift giving. Sometimes all these things are expressed through bodily sacrifice. Such actions demonstrate that the practitioners of these religions embrace the ethic of reciprocity and that they are worthy of whatever help they may need from the other-than-human persons or the creator. These actions are also undertaken to give thanks for help already received. If one takes the necessity of reciprocal behavior seriously, after all, then one lives a life marked by continual giving, receiving, and offering thanks.

Today, almost all indigenous peoples have been introduced to foreign religions, such as Christianity, through the process of colonialism. As a result, many contemporary indigenous peoples practice religions that were unknown to or even resisted by their ancestors. When embraced fully, the foreign religions represent a great departure from the ancestral religions, since the former are not place-based. Their efficacy is supposed to be universal, as they focus almost exclusively upon a figure who created all peoples. Moreover, these colonial religions, particularly certain forms of Protestant Christianity, place

less emphasis on the consequences of one’s actions upon the earthly, immediate relationships that help define one’s life. Most nonindigenous people do not see their worlds as filled with life, let alone with other-than-human persons. So, for them, there are fewer relationships available. In their religious lives, they emphasize the relationship they have with their creator. Even this relationship is sometimes very abstract, since the creator is often viewed as transcendent.

Before continuing, it must be noted that many people, who are not of indigenous ancestry, find indigenous religions attractive. This is a new type of “primitivism,” to be distinguished from the evolutionary primitivism of earlier scholars, discussed above. The new primitivism valorizes indigenous religions, but it is still a damaging phenomenon. Primitivists have appropriated indigenous ceremonial materials, imagery, and rituals. Not understanding the true importance of place and relationship in indigenous worldviews, they have misinterpreted these things and used them in social and geographic contexts in which they were never meant to be used. Moreover, some of the more enterprising primitivists have commoditized indigenous cultures, charging money for the ideas and items they have appropriated. One can easily see how such actions are offensive to indigenous peoples and even damaging to the relationships they maintain.

From a psychological perspective, however, the new appreciation of indigenous cultures is understandable. Many mainstream Americans, Europeans, and others are unhappy with the state of the world and blame technology, in its many forms, for the world’s ills. They contend that technology limits our relations with other people and with the land, it damages the “natural” world, and so on. By embracing what they consider as the simpler, healthier, more community-oriented lives of indigenous peoples, they are protesting technological “progress.” Ironically, the modern primitivists see indigenous peoples as existing at the other end of an evolutionary continuum, just as scholars of the past did (Geertz 2004). In reality, of course, most contemporary indigenous people embrace technology as

strongly as anyone else does, and they suffer the negative effects of certain technologies as well.

Finally, there are those contemporary people of indigenous backgrounds who seek to live the spiritual views of their displaced ancestors. Many such peoples' concurrent beliefs include elements of both "indigenized" religions and Christianity. Notable among these religions are those collectively referred to as African diaspora religions. Primarily oral traditions, these religions involve a system of African spirituality that spread throughout the Americas as individuals from many distinct groups were forcibly brought to places such as Brazil, Cuba, Hispaniola, Trinidad, and the southern United States. In order to live successfully, which involved deriving meaning from their condition of slavery and surviving, slaves reimagined their African homeland in terms of the new geography. Exchanges among individuals with different tribal practices and contact with local indigenous practices and European beliefs, as well as geographical adaptations that substituted the new fauna (such as the Cuban *hutia* for the African *aguti*) and flora for that found in the African homeland, led to the indigenization of these African beliefs and practices.

These practices evolved with the slaves' descendents, and contacts and adaptations had a specific locus relative to the landscape in which they took place, but all maintained a congruent African spiritual orientation to reality that remains evident today. This spirituality is one where a primal force holds the cosmos in balance and animates all things; a supreme but aloof being is above a pantheon of semi-divinities; semi-divinities interact with humans; ancestor veneration is coequal with the semi-divinities; animal sacrifice, herbal preparations, and foods are utilized for divine protection, to elicit a boon, or to appease a semi-divinity or an ancestor; rites of passage are emphasized; and consecrated drums are used to invite spirits and divinities to possess followers (Gonzalez 2010).

In African-derived religions, just as in traditional indigenous religions, religious practices are not compartmentalized from other practices, nor is the "spiritual" readily distinguished from the material world. An instance of this

non-compartmentalization is the *Yorùbá-Lukumí* oracular tradition, where all aspects of a person's life are important and where the material can cause a spiritual imbalance and vice versa. Additionally, because of their animistic base, African-derived religions do not proscribe belief or practice in other spiritualities. The ancestors must be appeased, as they can offer guidance, but they can also cause a spiritual imbalance, as is the case in Cuban *Yorùbá-Lukumí*. Spirits can also, for better or worse, become attached to an individual. Or spirits can inhabit an artifact that takes on personhood, as with the *gnanga* caldron, which is a receptacle for a deceased spirit and *Bantu nkisi*, in the Cuban *Palo Mayombe*. Often we see a pantheon of semi-divinities, or divine spirits, who must be cared for and demand action, such as the *orishas* in *Yorùbá Lukumí*, *orixás* in Brazilian *Candomblé*, and the *loas* of Haitian *Vodoun*. These semi-divinities, who are often other-than-human persons associated with "nature" or tribal/cultural heroes, can also possess the practitioner and offer guidance or demand an offering or that some action be taken.

Besides New World religious cross-fertilization among African tribal peoples, one can detect Christian, indigenous, Spiritist, and even Muslim elements. For example, Cuban *Lukumí*, and Brazilian *Candomblé* and *Ubanda* adapted the structure of Kardecian Spiritism as another way of communicating with the dead, spirit guides, and as a structure to supplant *egungun* (death) rites lost with the Middle Passage. Ethnobotany, which can have both African and New World indigenous roots, is employed for both spiritual and physical healing, and as element to keeping the semi-divinities alive and happy, and is an important aspect of African and Diaspora spirituality. But spirits can be indigenous and non-African as in the case of the *caboclos* of Brazilian *Candomblé*, who possess practitioners, or spirits can become attached as in Cuban *Lukumí*. Here, then, one can see how indigenized religions might also be categorized as "pan-cultural," that is, they often draw from a variety of cultures. Traditional indigenous religions, on the other hand, usually remain unique to the people who practice them.

Practitioners of traditional indigenous religions and newly indigenized religions alike, who are in need of medical or other special help, often rely first upon their own rituals and religious specialists, before approaching nonindigenous professionals. This may be an important point for practicing psychologists to remember. They should also remember that indigenous peoples, including those who come from displaced communities, often carry with them the legacy of colonialism. Even among the most traditional or dedicated of such individuals – those who continue to rely upon their ancestral traditions or even upon an indigenized version of those traditions – the impact of having been branded “primitive” or essentially less-evolved than members of the colonizing society can be tremendous. Of course, there are those many indigenous peoples who no longer practice *any* version of their traditions, precisely because those traditions were denigrated by outsiders. These people, who can no longer base their identities upon maintaining relationships with all the inhabitants of their ancestral environments, have to seek new identities. The practicing psychologist working with these people will have to deal with this fact. Likewise, the scholar of psychology and religion should pay close attention to the extent to which the people with whom she or he is working engage in their ancestor’s social protocols and rituals. If the scholar finds that they do so to a large extent, then the scholar should open his or her mind to the fact that different ontologies are at work in indigenous and indigenized religions. Failure to do so will lead the scholars to overlook the importance of the external, physical, and very personal environments in which indigenous religions are practiced. Such failure will also prevent scholars from understanding the nature of identity among indigenous peoples, and the role that relationships play in those identities.

### Individuation

Leon Schlamm

### Jung’s Definition of Individuation

C. G. Jung defined individuation, the therapeutic goal of analytical psychology belonging to the second half of life, as the process by which a person becomes a psychological individual, a separate indivisible unity or whole, recognizing

his innermost uniqueness, and he identified this process with becoming one's own *self* or *self-realization*, which he distinguished from "ego-centeredness" and individualism. The self, the totality of personality and archetype of order, is superordinate to the ego, embracing consciousness and the unconscious; as the center and circumference of the whole psyche, the self is our life's goal, the most complete expression of individuality (Jung 1916/1928, 1939a, 1944, 1947/1954, 1963). The aim of individuation, equated with the extension of consciousness and the development of personality, is to divest the self of its false wrappings of the persona, the mask the personality uses to confront the world, and the suggestive power of numinous unconscious contents. While individuation appears to be opposed to collective standards, it is not antagonistic to them, but only differently oriented and never isolated from collective relationships and society. Nevertheless, the stunting of individuation by the individual's adherence to social norms is injurious to his vitality and disastrous for his moral development (Jung 1921, 1916/1928).

### **The Spiritual Nature of the Individuation Process**

In his later writings, Jung claimed that individuation is as much a spiritual as a psychological process, uniting instinctual with religious experience. Affirming individuation to be the life in God, insisting that man is not whole without God, and identifying numinous symbols of the self with those of the deity, he conjoined psychological with spiritual development, frequently identifying the former with latter. By sacralizing psychology, as well as psychologizing religion, Jung's writings on individuation, celebrating the union of man and God and matter and spirit within human consciousness, anticipated a widespread contemporary movement away from traditional religion towards detraditionalized and privatized, New Age forms of spirituality recently examined by sociologists and historians of religion (Jung 1951, 1951–1961, 1952/1954, 1956–1957,

1963, Heelas 1996; Hanegraaff 1998; Tacey 2001, 2004; Forman 2004; Main 2004).

Individuation, closely associated by Jung with the transcendent function, is the "teleological" or "synthetic" healing process, underlying all psychic activity, of balancing, mediating, or uniting conflicting psychic opposites, which overcomes psychological disequilibrium and initiates the experience of "wholeness" of the personality. Distinguishing between a consciously realized individuation process and a natural one that runs its course unconsciously, Jung insisted that the former requires the difficult integration of projected, numinous, archetypal, unconscious contents – for example, the shadow, the anima/animus, the wise old man, and the self – into consciousness. Through this union of the opposites of consciousness and the unconscious, frequently triggered by Jung's dissociative technique of active imagination, the clarity of consciousness is intensified, a unity of being is realized and recognized as objective, the individual is freed from emotional attachments to the outer world, and the individuated ego is enriched by the understanding that it is not that something different is seen, but that one sees differently (Jung 1931/1962, 1939b, 1952/1954, 1963). The individuated ego senses itself as the object of an unknown and superordinate subject, the self, the God within us, which, while strange, is also so near to us, wholly ourselves while still an unknowable essence transcending our powers of comprehension. The function of the transcendental postulate of the self, which Jung acknowledges does not allow of scientific proof, is to point to this experience of the incarnation of God in human consciousness, encountered so frequently in his empirical research (Jung 1916/1928, 1939b, 1963).

### **Synchronicity, *Unus Mundus*, and the Mandala**

However, one should not conclude, as many of his critics have, that individuation was understood by Jung to be a wholly intrapsychic experience divorced from the world and human relationships. His metapsychological concept of individuation

was gradually broadened and enriched by his theory of synchronicity, identifying experiences of meaningful, numinous, archetypal, acausal connections or correspondences between inner psychic and outer physical events. These experiences confirmed, for Jung, that individuation does not shut one out from the world, but gathers the world to oneself. However confused Jung's theory was, it succeeded in drawing attention to a baffling reciprocity between human consciousness and the outer world, a zone of experience where physical events appear, mysteriously, to collaborate with and support the individuation process (Jung 1947/1954, 1952; Aziz 1990; Mansfield 1995; Main 2004). Jung's theory of synchronicity led him, in turn, to his concept of the *unus mundus* (unitary world), which, drawing heavily on alchemical sources, affirmed that man as microcosm is of the same essence as, or indistinguishable from, the universe and identified his own midpoint with its center. While his concept of *unus mundus* was inconsistent with his professed metaphysical agnosticism, it enabled him to distinguish three phases of the individuation process: (1) the wholly intrapsychic process of withdrawing projections of unconscious contents from the material world, thereby separating consciousness from it; (2) the reunification of transformed consciousness with the material world, as in synchronicity, and with the body; and (3) the experience of unification of the whole psyche, the microcosm, with the macrocosm, during which time and space are transcended. Jung identified this third phase with the alchemical image of Mercurius as a conjunction of opposites, which he believed anticipated the interconnectedness and ordered unity of the multiplicity of contents of the collective unconscious (Jung 1930–1934, 1941/1954, 1942, 1955–1956, 1958, 1963; von Franz 1975).

Jung also argued that the ultimate unity of the archetypes of the collective unconscious as well as of the multiplicity of the phenomenal world, equated by him with his concept of the *unus mundus*, is expressed with particular clarity by the symbol of the mandala. The mandala, an instrument of contemplation frequently used by Eastern and Western religious traditions to

provide spiritual instruction, is a magic circle, square, flower, cross, or wheel, divided into four or its multiples, which emphasizes a central point of orientation and an ordered unity of its many parts. While refusing to identify the individuation process with the soteriological perspectives and goals associated with these religious symbols, he recognized them to be numinous, archetypal images signifying the wholeness of the self, the microcosmic nature of the psyche, and the divinity incarnate in man. As early as 1916, Jung began to produce his own mandalas and to understand them as cryptograms of the development of the self and the psychic process of centering taking place within him. This practice, which he encouraged his analysands to emulate, led him to the conviction that the mandala expresses the path to the center of psychic totality, the goal of individuation, realized through the circumambulation of the self. Moreover, Jung interpreted the frequent appearance of mandalas in the modern clinical setting, in his analysands' paintings and drawings as well as their dreams and visions, as either psychic images compensating for conscious confusion and disorientation or as instruments of contemplation facilitating the transformation of such psychic chaos into order (Jung 1931/1962, 1934/1950, 1950, 1955–1956, 1958, 1963).

### **The Conjunction of Opposites and the Unknowable Nature of the Self**

Acknowledging the perils of the individuation process, psychosis on the one hand, and spiritual inflation of the ego by numinous unconscious contents, particularly the self, on the other, Jung insisted that the individuation process is the product of a conjunction of two sharply opposed orientations. On the one hand, there is a tremendous experience of expansion, of an opening to the transcendental (an experience which the alchemist Gerhard Dorn described as the opening of a window on eternity), and on the other, an experience of the concentration of one's being, an emphasis on the value of the uniqueness and particularity of the personality requiring

considerable ego strength. There is at the same time an experience of a boundless enlargement and of the narrowest of limitations in the ego. Only consciousness of our narrow confinement in the self forms the link to the limitlessness of the unconscious. The individuated person experiences himself concurrently as both limited and eternal. However, he is never more than his own finite ego before the deity who dwells within him (Jung 1952/1954, 1955–1956, 1963; von Franz 1975; Aziz 1990).

Jung also insisted that the individuation process can never be fully realized in this lifetime. He argued that there is little hope of our ever being able to reach even approximate consciousness of the self, since however much we may make conscious, there will always exist an indeterminate and indeterminable amount of unconscious material which belongs to the totality of the self (Jung 1906–1950, 1916/1928, 1952/1954, 1963). Clearly, for Jung, because the self is unknowable, the individuation process is qualified by its suspension between the opposites of the known and the unknown. Individuation is incompatible with unconditional acceptance of unqualified claims to religious knowledge; rather, it requires a humbling acknowledgement of the relativism of all knowledge and experience, albeit one grounded in numinous experience of the self. However, for Jung, this agnosticism is experienced not only as a limitation but also as an invitation, even a challenge, to consciousness to further explore its unknown psychic background, thereby extending its boundaries and understanding (Jung 1963; Hauke 2000; Rowland 2006).

## Inflation

Leon Schlamm

School of European Culture and Languages,  
Religious Studies Section, University of Kent,  
Canterbury, Kent, UK

### Jung’s Definition of Inflation

C. G. Jung defined inflation – an unconscious psychic condition – as expansion of the personality beyond its proper limits by identification with the persona or with an archetype, or in pathological cases with a historical or religious figure. It produces an exaggerated sense of one’s self-importance and is usually compensated by feelings of inferiority (Jung 1934–1939, 1963). Most of Jung’s comments about inflation are concerned with an identification of the ego or consciousness with the numinosity of an archetype (Jung 1934/1950, 1952), leading to a distortion or even dissolution of the former. The key to avoiding inflation is knowledge of the proper boundaries of the ego or

consciousness, and this is achieved by discrimination between it and the archetypal contents of the collective unconscious – the self, anima, animus, and shadow – which possess psychic autonomy. When the ego can distinguish what belongs to itself from what belongs to the objective or transpersonal unconscious psyche, it will be free of inflation (Jung 1951).

### Psychopathological Manifestations of Inflation

However, the psychic discrimination necessary to avoid inflation is very difficult to achieve, because the integration of archetypal materials into consciousness typically leads either to a ridiculous self-deification or to a moral self-laceration. The individual makes himself either a god or a devil (Jung 1917/1928, 1951; Edinger 1995), as the archetype through its power of fascination seizes hold of the psyche with a kind of primeval force and compels it to transgress the bounds of humanity. This causes exaggeration, a puffed-up attitude of inflation, loss of free will, delusion, and enthusiasm in good and evil alike. Jung equates inflation with the experience of godlikeness or of being superhuman, an extension of personality beyond individual limits. In such a state, a man fills a space which normally he cannot fill, and he can only do this by appropriating to himself contents and qualities which do not belong to him, because they belong either to someone else or to everyone or to no one (Jung 1916/1928). This experience may lead to fathomless transformations of personality, such as sudden conversions, as well as to a transitory or permanent disintegration of the entire personality. In all cases, whether inflation is the product of some innate weakness of the personality or encountered during an individuation process, the real clinical difficulty is to free patients from the power of fascination by archetypal figures (Jung 1916/1928, 1951–1961).

The identification of consciousness with eschatological knowledge of the collective unconscious is one of the most frequent expressions of inflation, which can either be equated

with megalomania or a form of prophetic inspiration providing a renewal of life for the individual. In either condition one can be so puffed up or overpowered by new knowledge as to be hypnotized by it and thus foolishly believe that one has solved the riddle of the universe and that all previous understanding is worthless. But this is almighty self-conceit (Jung 1916/1928). When lucky ideas from the unconscious come to the ego, it should not take the credit for them, but begin to realize how dangerously close it had been to inflation (Jung 1955–1956). Jung even speculates that inflation by knowledge, leading to a dangerous extension of consciousness, may be the nature of the deadly sin represented by the eating of the fruit of the tree of knowledge in Genesis 2:17, 3:5 (Jung 1916/1928, 1934–1939, 1941/1954, 1948, 1963; Edinger 1973).

The issue that Jung constantly returns to is our need to be aware of the pitifully limited nature of the ego, especially during individuation when the great psychic danger is that ego-consciousness will be identified with the *self* (Jung 1950, 1958). Inflation and man's hubris between them have elected to make the ego, in all its ridiculous paltriness, lord of the universe, and this is productive of nothing but anarchy and destruction (Jung 1938). If the ego has a spark of self-knowledge, it can only draw back and rapidly drop all pretense of power over the unconscious (Jung 1916/1928). Indeed, every encroachment by the ego into the realm of the unconscious which brings about inflation is followed by an encroachment into the realm of consciousness by the unconscious. An inflation is always threatened with a counterstroke from the unconscious, which in the Bible took the form of the deluge, the great flood of Genesis which destroyed civilization (Jung 1952/1954, 1944).

What this means in clinical terms is that inflation so enlarges the normal ego-personality as to almost extinguish it. The result of such inflation (whether leading to megalomania or to a feeling of annihilation of the ego) is the same: an experience of a serious lesion of the ego (Jung 1946). Alchemy expresses this through symbols of death, mutilation, or poisoning, or the curious idea of dropsy, the desire to drink so much

water that an individual melts away, expressing the experience of suffering from a surfeit of unconscious contents and psychic dissociation. Paradoxically enough inflation is a regression of consciousness into unconsciousness. This always happens when consciousness takes too many unconscious contents upon itself and loses the faculty of discrimination, the *sine qua non* of all consciousness (Jung 1944). This is why Jung argues that, when dealing with extreme cases of inflation, it is far more necessary to strengthen and consolidate the ego than to understand and assimilate the products of the unconscious (Jung 1934/1950). The decision in which way to proceed must be left to the diagnostic and therapeutic tact of the analyst.

### **Inflation, Deification, and the Shadow**

The key to overcoming inflation lies in the recognition of the projection of the shadow and its painful integration into consciousness. Inflation by an archetype is irreconcilable with deflationary acceptance and befriending of the shadow. The conclusion to be drawn from this observation is that we Europeans in a state of unconscious possession must become scared of our god-almightiness (Jung 1944). If we do not, if we unconsciously accept a religious inflation, then we are in danger of putting the divine germ within us to some ridiculous or demoniacal use (Jung 1942/1948). In other words, the danger of accepting such a portentous claim as Nietzsche's that "God is dead" is that in becoming gods ourselves and thereby unconscious of our shadows, we are capable of a level of violence and destructiveness towards our fellow human beings never before known in human history. At the same time, Jung observes that the inflationary effect of declaring God is dead is that one is forced to assume an awful responsibility for intrapsychic experiences, such as one's own dreams, which were hitherto believed to be caused by God (Jung 1934–1939).

Significantly, the danger of inflation of the ego by spiritual knowledge and experience is examined in the writings of Christian mystics and Sufis (Underhill 1961; Welch 1982;

Sviri 1997; McLean 2003), as well as transpersonally oriented psychologists (Wilber 1980; Naranjo 1987; Rosenthal 1987; Assagioli 1989; Caplan 1999). However, unlike these writers who can find no value in the experience of inflation for spiritual transformation, Jung acknowledges that inflation is one of the unpleasant consequences of becoming fully conscious, instrumental in the discovery of the boundaries of consciousness during the individuation process, a painful but necessary Luciferian deed of disobedience to both God and the unconscious (Jung 1916/1928, 1934–1939, 1948, 1963).

## Initiation

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Initiation is a part of most religious traditions; at its heart it is a ceremony for beginning and an important part of the spiritual journey. Van Gennep (1909/1960) coined the phrase “rites of passage” to refer in general to those moments of transition where one moves from one social status to another. There are age-graded rituals, rites of passage from childhood into adulthood, from single to married status, and the final rites of burial after death. But in addition to these major life passages, there are in each society a number of special groups one can join or is invited to join that have their own initiation rituals as part of entering into the community.

Initiation is an essential component of most esoteric constituencies within larger traditions; but rites of passage are also celebrated in the exoteric or more publically available forms of the tradition. Initiation is a particular type of beginning, one marked by a special process of preparation, often involving physical or psychological separation from one's current space and social status, which is moving toward the formal rite of transition. There is a basic distinction between being a spiritual seeker and an initiate into a particular tradition; the seeker has only an etic, or outsider's perspective on the group and its beliefs or practices, whereas the initiate now enters into an emic, or insider's perspective. The rite often is done in a very private, even secret ritual; only other initiates are allowed to participate. Given the possibility of people not being able to connect with a group, but wishing initiation, some esoteric authors have provided means for self initiation Ashcroft-Nowicki (1986). But not all initiations are secret; regular Christian baptism is part of public worship even though it is a type of initiation into the community of the faithful. Likewise, ceremonies validating conversion to a religion are public for reasons of affirmation of group identity.

Most attention, though, is given to initiation as a ceremonial entry into an esoteric tradition. The esoteric/exoteric distinction not only refers to the private versus public nature of the gatherings and communities but refers to an additional level or type of teaching that is conveyed. This special knowledge, or gnosis, is a teaching that is reserved for more dedicated students who take the opportunity to study beyond the basic level. Esoteric groups generally have "outer court" teachings which are conveyed through the most public means as a way of attracting prospective initiates. The "inner court" teachings then follow for those who show consistent interest. The process begins when a seeker attaches her- or himself to a teacher in the tradition. There is a period of preparatory study before initiation and often tests of worthiness to continue. After the initiation ceremony, the student is now part of a community in which there may be additional levels or grades of initiation. A common example

is Freemasonry where the Scottish Rite has 32° to reach the pinnacle of gnosis.

Among the oldest initiatic groups are the mystery religions of classical antiquity. In Greece the most popular initiatic group was the Eleusinian mysteries, into which Plato was admitted. The rites of Dionysus, Orpheus, and others flourished as well as mystery religions from Egypt (Isis) and Syria (Cybele and Attis). Persia was the source of the Mithraic initiatic tradition. In the Western esoteric traditions, most adherents of magic or witchcraft were structured as initiatic systems. In the nineteenth century, the Hermetic Order of the Golden Dawn became the quintessential initiatic system and the origin of most contemporary systems of ceremonial magic. The spelling of magic with a k is a convention used by adherents to distinguish the spiritual practice from stage magic or the art of the illusionist.

In Hindu and Buddhist traditions, initiation is closely linked to the strong relationship between the teacher (guru) and the disciple or student (chela). In the Western spiritual traditions, the teacher is not viewed as other than human, but in the two forms of Indian spirituality, the teacher is seen as the literal embodiment of the divine, as an incarnation of the deity. This imbues the relationship with a special intensity. If you see your teacher as divine, then obedience and veneration can become blinded to the humanity, leading to an increased potential for abuse. In the first generation of Indian gurus moving into the West, several teachers became embroiled in sexual and financial scandals with former disciples. But when the teacher maintains the proper role, then there is an effective transmission of both teaching and experiential practice that allows the student to grow in their chosen faith.

In the late Indian Tantric tradition, with both Hindu and Vajrayana Buddhist streams, the initiation takes on special significance and is termed an empowerment. The teacher not only gives teachings but gives primary instructions in particular meditational practices. The teacher gives the student power to practice the technique under guidance. While it is not denied that in the modern world one can find texts of formerly secret Tantric initiations and can practice them without initiation, the teachers would add the proper use of the techniques

under guidance that can only come from someone who is deeply grounded in the meditation technique.

Initiation across all traditions is a liminal process, that is, it is a vehicle and a process for bringing about transitions. Beginning at the transition from seeker to initiate, the ceremony moves the person from one state of development to another. As other degrees of initiation are conferred, the process of transition is repeated. At each juncture the ceremonial leader acts as a psychopomp to aid the person into a deeper understanding of the path on which they have embarked. The act of initiation can be seen as a parallel concept in the psychology of religion to the rite of passage in anthropology. The common thread is the crossing of a threshold from one state of being to another.

The psychology of initiation is likewise characterized by liminality, the movement from one phase of development to another. The rite of initiation itself marks off the boundary between ordinary time and sacred time, between ordinary space and sacred space, and between our ordinary way of being and a sacred and spiritual mode of being (Eliade 1959). Crossing boundaries involves gaining gnosis, or sacred knowledge, and also the core instructions for further practice of whatever spiritual techniques are taught. It is likened to climbing a mountain, or perhaps diving deeper and deeper into a well, but however the lived experience unfolds it is transformative. Initiation is just the beginning of a series of changes often interspersed with periods of stasis. One can have several initiatory experiences across a lifetime, each one unfolding a new mystery which may yet be seen as a continuation of the first mystery into which the seeker was drawn.

The process of counseling and psychotherapy can be likened to an initiatory process, as Jung understood through his own studies of esoteric lore which informed his depth psychology. Particularly with clients new to therapy, there is some teaching of how to talk, what to talk about, and what limits there are to expression of feeling or rehearsing of new ways of acting. As the process unfolds over time, it deepens because of the cumulative nature of therapeutic dialog. The goal is to give the client the necessary tools

to continue life without the help of the therapist, but with their own renewed and enhanced set of personal skills and values.

## Instinct

Stefanie Teitelbaum

Faculty of NPAP (National Psychological Association for Psychoanalysis), IEA (Institute for Expressive Analysis), New York, NY, USA

## Introduction

Biological instinct is the innate, inherited fixed action patterns of responses or reactions to certain stimuli, both internal and external. These responses or reactions are intermittent and fairly predictable within a specific species. Freudian instinct differs from strictly biological instinct in the uniquely human experience of a consciousness of the pressure to respond, the sometimes consistent presence of such pressure with or without identifiable stimulus, and the variation within the human species. Freud used the words

*instinkt* and *treib* (drive) to describe such instinctual pressure, often interchangeably.

Inconsistency about mind/body dualism is a core component in Freud's writings about instinct. Freud feared monism would make psychoanalysis a religious or mystical discipline and compromise its place in a scientific *Weltanschauung*. Biologically driven forces shaping humanity remain a problematic topic in religious thinking. The polarized debate between biological evolution and intelligent design persists. Segments of Judaism, Christianity, and Islam acknowledge the presence of instincts and a struggle with animal instincts but view the instincts as implanted by the Divine, fundamentally embracing a material monism. The Eastern, Islamic, and mystical Judeo/Christian objective in the struggle with the instincts is to achieve enlightenment and/or union with the Divine. Pragmatic elements of Judaism and Christianity incorporate the thoughts of Aristotle (350 BCE) and Descartes seeking to free and/or transform the energy of the instincts into rationality and free will, as did Freud.

## Religion

### Islam

In the *Sahih Muslim*, a collection of the hadith or oral transmission of the words of the prophet, Chapter 16, verse seven, states, "Indeed God specified one portion of His Mercy to the word, and with that a mother cares for her young and wild animals and birds care for each other." Modern commentators use this portion to argue Darwin's natural selection, stating that there is no scientific explanation for instincts other than of Divine origin.

### Judaism

The *Avot de-Rabbi Nathan* (c.700–900 CE), considered to be a minor tractate of the Talmud, speaks of the *Yetzer Tov* and the *Yetzer Hara*, the inclination towards good and evil, as Divine forces driving human behavior. The *Yetzer Tov* is sometimes viewed as the voice of God in conscience.

1187: Moses Maimonides wrote the *Guide for the Perplexed*, drawing upon Aristotle and Descartes, to position Providence as the source of instinct, whose direction impels mankind towards free will.

### Christianity

1265–1274: St. Thomas Aquinas wrote *Summa Theologiæ*. His thoughts are similar to those of Maimonides, sharing the influences of Aristotle and Descartes. He states that animals are moved towards the future without knowledge of future by instinct, but instinct is planted in them by the Divine. He defined freedom from instinct as free will.

## Psychology/Evolution

1809: Jean-Baptiste Lamarck publishes *Philosophie Zoologique*, theorizing the direct inheritance of characteristics acquired by an individual during its lifetime.

1853: Charles Darwin publishes *Origin of the Species*. Darwin's thesis of the interplay of natural selection and diversity contributing the modification of inherited instinctual inheritance behavior and motivation.

1896: James Mark Baldwin publishes "A New Factor in Evolution," proposing that acquired characteristics could be indirectly inherited based on an organism's ability to adapt to external stimuli during its lifetime (Turney et al. 1996).

## Psychoanalysis

The index of *The Standard Edition of the Works of Sigmund Freud* (1975, XXVI) contains nearly 1000 references to instinct, often contradictory, sometimes returning to previously rejected ideas. The primary areas Freud investigated are:

1. The transmission of inherited instinctual ideas  
Freud grappled with the Darwinian-Lamarckian debate in scientific circles in turn of the century Vienna and was aware of Baldwin's theory. Throughout his body of work, he touched upon the theories of Darwin

and Lamarck, starting with a biological parallel to Darwin, touching upon a monistic theory of instinct dedifferentiating much of the mind/body split, and returning to biology in his last works (Freud 1887–1902, 1933). Most Freudian scholars reject the accusation of Freud as Lamarckian (Garvey 2001).

The instinctual, inherited motivations that captured Freud's imagination include the incest taboo, the primal scene – a child's experience and/or fantasy of his parent's sexual intercourse, the murder of the Father of the Primal Horde, and the Oedipus complex (Freud 1913).

2. The breaking down of sexual instincts into its components in the theory of perversion.

Freud theorized that instincts have (1) a biological source a psychosexual zone; a body part cathected, or occupied, with libido most often but not exclusively referring to the mouth, the anus, and the genitalia; (2) an aim, an action to relieve the unpleasure of the sources of excitation; and (3) an object, the thing that would facilitate relieving built-up excitement. If the sexual instinct broke down into its components, the aim and object were dedifferentiated and the sexual perversions resulted. That is, in exhibitionism, the flasher will experience release of unpleasure in the act of exposing himself without orgasm or intercourse, thus merging the aim and object of the instinct. In Freud's teleological, evolutionary perspective, the perversions eclipsed the object of heterosexual genital intercourse, the necessary action for the survival of the human species (1905).

3. The conflict between sexual and ego instincts in the theories of neurosis, sublimation, and culture.

Freud's (1905) initial instinctual opposites were sexual and ego instincts, the forces of the Pleasure Principle and the Reality Principle. The sexual instinct sought release of unpleasure *unlust*, and the ego instinct attempted to odulate the pressure for release within socially and psychically approved places. When such congruence could not be reached, either a neurotic solution – sometimes

called a compromise formation, or sublimation – the de-sexualizing of the instincts towards the object of art, civilization and religion, satisfied the need to release while disguising any violation of Reality Principle. The Superego became the psychological agency responsible for regulating instinctual pressures (Freud 1920). The metatheory of libido (Freud 1923) is inextricably linked to the metatheory of instinctual forces (Freud 1915).

4. Observations of the failure of the pleasure principle.

Freud conceived of a time in human development without conflicting instinctual demands in the idea of primary narcissism (1915). When Freud could not integrate the compulsion to repeat often painful experience with the metatheory of pleasure-seeking instincts, he formulated the concept of the death instinct (1920). The dualistic couple was of Eros and Thanatos. The death instinct was conceived along biological terms of an organism's urge to return to an inorganic state, free of object and desire.

5. The psyche's effort to represent instinctual life and bring it to consciousness.

Freud conceived a primary process as the psychological method of processing instinctual, biological sense impressions into thought that is understandable by the conscious mind. The elements by which these instinctual sense impressions are translated into thought are displacement, condensation, reversal, symbolization, secondary revision, and dramatization (Freud 1900).

## Freud's Contemporaries and Post-Freudian Thought

Freud's (1915) formulation of primary narcissism opened a door for a Freudian instinctual monism, a concept embraced by Carl Jung and one of the theoretical points leading to Freud's break with Jung. Freud returned to his fundamental dualism, modifying his death instinct, thinking and positing opposing forces of life and aggressive instincts. The aggressive instinct was at first

a concept of Alfred Adler and a key factor in the Freud/Adler break. Freud's Id (1920), the "great reservoir of libido," the source of instinctual energy, was an elaboration of an idea of Georg Groddeck. Both Freud and Groddeck "acknowledge the influence of Nietzsche in their 'its'." Groddeck's "it" is a structure of unity with no such material or instinctual dualism split. For a brief time, Freud's primary narcissism permitted a harmonious overlap with Groddeck and Jung. While Groddeck himself viewed his "it" from a Hellenistic rather than spiritual source, spiritual and existential psychoanalytic thinkers have used the Groddeck "it" in a spiritual context. Jung further posited that the instinct to worship, create, and play is innate, whereas Freud (1927) considered creativity, religion, and worship to be expressions of neurosis and/or sublimation, although recognizing the soothing and civilizing effect of religion as a life-affirming adaptation (Gay 1988; Greenberg 1990).

Ego psychology, notably represented by Heinz Hartman (1955), emphasized the ego's role in adaptation of the instincts, further solidifying a rebuttal of the Lamarckian implication. Early Object Relations Theory as conceived by Fairbairn emphasized the instincts seeking objects and internal or external representation of a soothing or persecutory person and/or idea into or against which to discharge instinctual pressure. Modern Object Relations Theory emanating from the British Independent School and then from American Object Relations has little reference to instinct. The death and aggressive instincts remain a critical component of Adlerian, Kleinian, and Modern Psychoanalysis, but the biological death instinct has not survived in psychoanalytic thought. Heinz Kohut (1976), founder of Self Psychology, criticized Freud's reification of instinct and particularly challenged the innate nature of destructive or aggressive instincts, calling such phenomena an adaptive reaction to an inadequate environment. Attachment Theory posits an infant's instinct to emotionally and psychically attach to the mother as instinctive. Freud also spoke of the anaclitic, or helpless and dependent phase of the infant;

attachment disorder may be seen as Freud's anaclitic depression, a failure of the object of the infant attachment instinct. Attachment Theory draws upon modern neurobiology, each of which refers back to Freud's 1902 biological perspective and rejects the biological death instinct (Fonagy 1999).

## Commentary

The perspective of material dualism applied to Freud's writings about drive and instinct (LaPlanche and Pontalis 1972) might suggest that a good deal of Freud's writing about instinct would be more accurately defined as psychically determined drive. Perhaps Freud's inconsistency with the two terms reflects his own uncertainty about material dualism. On Narcissism (1914) suggests Freud's uncertainty in his commitment to instinctual dualism, and one wonders about the fate of such uncertainty without the Freud/Jung rift. Lorca's (1955) *Duende* "the energetic instinct" of the dark forces in flamenco and bullfighting may be seen as a synthesis of Jung's monadic creative instinct and Freud's dualistic death instinct. Ironically, Freud's thoughts about the nature of man were influenced by Aristotle and Descartes as were Maimonides and Aquinas, but Freud's own conflicts about religion prevented his being able to integrate his science with spirituality. Thoughts about struggle and material nature of Freud's opposing instinctual forces have much in common with thoughts about good and evil, and God and the Devil. While Maimonides and Aquinas are monists as to the substance of God, they are dualists in differentiating God and man.

The nature of libido – the energy of the sexual instinct – and its counterforce or split-off force of death and/or destruction, and maintaining that source of that energy as biological, occupied a good deal of Freud's energy. Jung opened the door for the Divine source of instinctual libido in psychoanalytic theory, the substance responsible for all human instinctual energy much as Aquinas envisioned. William Blake's summary in *The Marriage of Heaven and Hell* is what

eluded Freud, but implicit in religious and Jungian monism:

Energy is the only life and is from the Body and Reason is the bound and outward circumference of Energy.

## Interfaith Dialog

Louis Hoffman<sup>1</sup> and Matt Thelen<sup>2</sup>

<sup>1</sup>Colorado School of Professional Psychology,  
University of the Rockies, Colorado Springs,  
CO, USA

<sup>2</sup>Center for Growth, Colorado Springs, CO, USA

Interfaith dialog is a specific type of interaction between religious groups intended to build bridges and foster understanding between religious groups. The terms “interreligious dialog” and “interchurch dialog” often refer to the same process. Interfaith dialog is intentionally more inclusive in that it can refer to dialogs within a religion (i.e., intrachurch dialog) or between religious groups (dialogs between sects or denominations). Dialog between and within religious groups can occur on multiple levels of communication ranging from the individual level to the institutional level where a designated spokesperson represents beliefs held by the group. As the size of the groups engaged in dialog increases, so does the risk that political motivations will impede understanding of the other’s position (Magonet 2003). For this reason the essential purpose of interfaith dialog is to understand the other’s faith as they experience it.

## Distinguishing Interfaith Dialog from Other Religious Conservations

The motivations for the conversation distinguish interfaith dialog from other forms of interactions between faith groups and individuals. *Evangelism* is a type of conversation intended to persuade the other into sharing one’s own religious belief or faith. *Debate* is intended to use rational means to prove or convince the other party that one’s own views are correct. *Assimilation* refers to the forceful adaptation to a secondary religion. *Apologetics* is a type of conversation, often initiated without the other party present, intended to provide a rationale or defense of faith. Apologetics is often an interaction between faith groups and science with the motivation of defending faith against science. *Teaching* assumes a power differential in which was in educating the other individual about a belief system. Mentoring, similarly, assumes a power differential in guiding one into a particular belief system. *Excommunication* refers to the banishment of an individual from a religious group. *Revelation* refers to communication between an individual and a metaphysical source.

An interfaith dialog, conversely, emphasizes equality between participants to facilitate learning from the other. The purpose is not to change the other’s faith or belief system, but rather in fostering understanding, deepening one’s beliefs, and potential adapting one’s beliefs. In the tradition of Martin Buber (1965), dialog often is referring to openness to being changed by the encounter. Several motivations can exist as to why one would enter into an interfaith dialog. First, it is useful in the ecumenical purpose of establishing common ground as a deterrent to stereotypes, conflict, and terrorism. Many Protestant denominations have entered into interfaith dialogs in order to establish an ecumenical relationship with other denominations in which they share resources such as ministers and theologians. Moreover, interfaith dialog is a strategy that can be used to encourage open worship across denominational lines and to better serve the needs of a diverse congregation. Second, interfaith dialog is often

engaged in to promote understanding. Since the terrorist attacks of September 11, 2001, on the pentagon and World Trade Centers, many religious institutions, including Christian, Muslim, and Jewish, perceive the need to dialog on differences and similarities (Takim 2004). A primary intention of these dialogs is to dispel misunderstandings that led to the other group being perceived as a threat or danger. Similarly, many attempts at promoting peace in the Middle East have utilized interfaith dialogs to help establish a more respectful understanding of religious differences. This ties to a third motivation for interfaith dialog: promoting peace. An emergent theme of interfaith dialogs is to promote an understanding that all major world religions value compassion and peace. These dispelled the grossly mistaken perspective that some religions advocate for war, acculturation, and even genocide. Although most of the major world religions have a history of engaging in genocide and war, interfaith dialog clarified that this is the result of mistaken, misused, or misguided theology, not an essential proclivity for violence and killing within the religious group. Last, some of the deepest forms of interfaith dialog return to Buber's ideas of the openness to change and growth through dialog. Some religious groups believe that while retaining the core tenets of their belief system, they can grow through interfaith dialog. This may include incorporating beliefs of different religions or may refer to sharpening one's own beliefs through comparison and conversation. An example of this is the interfaith dialog between Judaism, Christianity, and Buddhism engaged by John Cobb, Jr., Maslo Abe, and others (Cobb and Ives 1990).

### Barriers to Interfaith Dialog

Challenges to interfaith dialog are evident for some religious groups. Religious groups with strong evangelistic beliefs often deem the only purpose for engaging in conversation with someone of another belief system is to work toward conversion. These groups generally are

associated with fundamentalist values and a rigid theology. They fear that interaction with people of different belief systems may be a threat to one's own belief. Therefore, they often prohibit or discourage relationships with people outside of their religious group unless there is an underlying goal of conversion. This, however, has led to distrust of the motivations for why many engage in interfaith dialog. Many religious groups who have a minority status or who have been subjected to prejudice and discrimination are fearful of other religious groups that show interest in them. The suspicion of ulterior motives makes it difficult to establish the trust necessary to engage in genuine interfaith dialog.

Psychology, especially peace psychology, has played an important role in researching, assessing, and promoting interfaith dialog. Psychology's interests are often in increasing peace and conflict resolution. However, interfaith dialog is also relevant on a personal level. As interfaith marriages and families increase, a need for assisting couples and families becomes important for many therapists and counselors. At the institutional level of communication, business and organizations frequently turn to psychology for assistance in dealing with religious differences as the work environment becomes more religiously diverse.

## Intersubjectivity

Pamela Cooper-White  
Columbia Theological Seminary, Decatur,  
GA, USA

*Intersubjectivity*, a term originally coined by the philosopher Edmund Husserl (1859–1938), is most simply stated as the interchange of thoughts and feelings, both conscious and unconscious, between two persons or “subjects,” as facilitated by empathy. To understand intersubjectivity, it is necessary first to define the term *subjectivity* – i.e., the perception or experience of reality from within one’s own perspective (both conscious and unconscious) and necessarily limited by the boundary or horizon of one’s own worldview. The term *intersubjectivity* has several usages in the social sciences (such as cognitive agreement between individuals or groups or, on the contrary, relating simultaneously to others out of two diverging subjective perspectives, as in the acts of lying or presenting oneself somewhat differently in different social situations); however, its deepest and most complex usage is related to the postmodern philosophical concept of constructivism or, in social psychology, *social constructionism* – the notion that reality is co-constructed by participants in a relationship and in society. The term *subject* is preferred to the term *self* by many postmodern philosophers and psychoanalytic theorists because *subject* suggests fluidity, mutability, and contingency in relation to influences from outside oneself, while *self* suggests a reified entity, structure, or even essence (somewhat akin to the term *soul*). “Intersubjectivity,” then, denotes a more reciprocally influential and dynamic interaction than a “subject-object” relationship in which one partner in the dyad (the “object”) is characterized by the gaze of the other (the “subject”).

In sociology, Peter Berger and Thomas Luckmann used the term *intersubjectivity* initially to highlight the *distance* between the immediate sense of reality presented by one’s own bodily experience and the awareness that

others operate in the world from a parallel but different locus of bodily experience of their own. However, it is precisely in negotiating between one’s unquestioned everyday reality and externally perceived “provinces of meaning” that others’ experiences may, at least temporarily, become definitive for one’s own, expanding one’s sense of reality or even transporting oneself to “another world.” Socialization, then, plays a central role in defining what “reality” is, and reality itself is socially constructed. They point out that “aesthetic and religious experience is rich in producing transitions of this kind, inasmuch as art and religion are endemic producers of finite provinces of meaning” (Berger and Luckmann 1967, p. 23).

Social psychologist Kenneth Gergen has written extensively on the ways in which knowledge of oneself, others, and the world are constructed not in the isolation of individual minds, but in and through relationships. Rejecting the notion that knowledge is purely empirical and cumulative, Gergen has argued that “truth” is always value laden and, therefore (drawing from critical theory), “reality” is not immutable, but always is understood via interpretation. More attention, then, should be given to the outcomes implied by any given assertion of reality, rather than to its “accuracy” as measured by its supposed correspondence to absolute truth. In place of either foundationalist claims to truth or unmoored relativism, Gergen has advocated for the mutual construction of relational “discursive imaginaries” that would not be defended on the basis of their claims to reality, but rather on the basis of “scenarios that could support a common desire to pursue viable futures” (Gergen 2007, p. 365). Gergen finds this as compelling for religion as for science, and relevant for virtually any cultural discourse threatened by schism over competing claims to absolute truth. Gergen’s constructionist vision, and that of other social psychologists and sociologists of knowledge, has been influential in some family therapy circles (Flaskas 2002) and has also provided a philosophical impetus for various forms of narrative therapy where the construction of life-giving personal stories and

the deconstruction of internalized hegemonic or oppressive interpretations are a focus of therapy (White and Epston 1990).

The concept of intersubjectivity has also been a central theme in contemporary psychoanalysis. The emphasis has shifted from a one-person psychology (*intrasubjective* or subject-object) to a two-person psychology (mutually influential or subject-subject) (Aron 1996). Two initially separate but similar psychoanalytic movements developed in the 1980s that utilized intersubjectivity as a key to understanding therapeutic action and the therapeutic relationship. Emerging from Self Psychology (drawing on the Chicago analyst Heinz Kohut's theories of empathy and "vicarious introspection"), American analysts Robert Stolorow, George Atwood, Bernard Brandchaft and Donna Orange developed "intersubjectivity theory" to describe the mutual influence of the conscious and unconscious minds of patient and therapist and how the unconscious relationship could become a tool for deeper empathic understanding of the patient's psychic structure and therapeutic needs.

Roughly at the same time, drawing from both philosophy and contemporary trends in object relations theory, Jessica Benjamin developed a theory of intersubjectivity that was a central concept in the emergence of "relational psychoanalysis." Drawing on constructivism and the idea that reality is co-constructed by participants in both conscious and unconscious relationship, relational psychoanalysts have advocated for a shift in psychoanalysis from a one-person to two-person psychology (e.g., Hoffman 1991; Mitchell and Aron 1999; Mitchell 2000) as well as a recognition that the therapeutic relationship itself formed an "analytic third" (Benjamin 1998; Ogden 1994, pp. 61–95) – a shared subjectivity that in some sense had a life and a mind of its own. Countertransference is emphasized as a positive tool for understanding the patient in this branch of psychoanalysis, because via intersubjectivity, it came to be understood that the patient's inner world could influence the subjectivity of the therapist, providing an empathic entrée into the patient's own subjectivity. The therapeutic relationship is no longer viewed as

existing between two entirely separate individuals, but rather as a shared pool of thoughts, feelings, fantasies, bodily sensations, and other subjective experiences that may be tapped for shared understanding by both partners in the therapeutic enterprise. Transference and countertransference, similarly, have come to be understood not as two opposing psychological forces in the treatment, but rather as a continuum of psychic experience and a bridge for empathy. These ideas are not entirely new in psychoanalysis and harken back to Sigmund Freud's (1915/1957) statement, "It is a very remarkable thing that the Unconscious of one human being can react upon that of another, without passing through the Conscious" (p. 194).

In recent years, theorists from the intersubjective school and relational psychoanalysis have begun to dialogue and, as schools of thought, have converged via conferences and publications – especially the journal *Psychoanalytic Dialogues*. Recently, Jungian analyst Andrew Samuels has also contributed to the evolving articulation of relational psychoanalysis and intersubjectivity theory, constructing a bridge between American psychoanalysis and British Jungian analytical psychology while, slightly earlier in Italy, Jungian analyst Silvia Montefoschi was also exploring "*interdipendenza e intersoggettività*" in the analytic relationship (see also Stevens 1986).

The psychological theories presented above have been further validated by infant observation studies that demonstrate how the psyche of an infant is formed (and/or damaged) in the context of mutual influence and regulation (or dysregulation) of affect between the infant and his or her primary caregiver (Beebe and Lachmann 2005; Stern 2000). The idea of a mutual influence and interplay of minds is further validated by the discovery in neuroscience of "mirror neurons," which function to allow one person to think, feel, and even construct another's motor activity and even the motives behind it, based on the observed actions of another (summarized in Blakeslee 2006). Neuroscientist V.S. Ramachandran (2009) has stated, "There is no real independent self, aloof

from other human beings, inspecting the world, inspecting other people. You are, in fact, connected not just via Facebook and Internet, you're actually quite literally connected by your neurons." It is these "Ghandi neurons," Ramachandran claims, that enabled empathy among primates and, on a much larger evolutionary scale, made civilization itself possible via imitative learning and cooperation.

There is an emancipatory ethic implicit in the theoretical shift from objectivity to intersubjectivity. Indeed, the modernist valuing of "objectivity" (especially since the Enlightenment in the eighteenth century) – the idea of a pure and undistorted neutral view of the "other" as object – is replaced in intersubjectivity theory by an appreciation of the irreducible otherness of each partner in a relationship and of the mutual influence inherent in any encounter. Inherent in this shift is a further appreciation for the fallibility of any final or definitive understanding of the other as well as a rejection of a utilitarian view of the other as an object to be defined or used for one's own individual ends. In the larger context of culture and society, including religious institutions, the recognition that reality is socially constructed is the first step toward unmasking the dominant paradigm or prevailing worldview in any given society as just one discourse among many—but a discourse of power that underlays and justifies unequal social structures and institutions. This analysis draws back the curtain to reveal how power has masqueraded as the only way to truth, thereby opening the way toward empowerment of and dialogue among a wide variety of perspectives that have been marginalized and suppressed.

González et al. (1994), among others, have also shown the application of social constructionism to therapeutic work with culturally different clients, as a way for therapists to decenter their own cultural biases and assumptions that reinforce social injustice and inequality. Feminist theorists have also found the relationality of intersubjectivity theory and constructivism to be congenial to advocating for non-patriarchal, non-hegemonic psychological theories and therapeutic approaches

(e.g., Benjamin 1998; Chodorow 1986; Gilligan 1985, 1986; and by extension, the writings on "relational-cultural therapy" from the Stone Center at Wellesley College, e.g., Jordan 2009). Complex arguments regarding the relationship of self and other have been further developed in both philosophy (e.g., Levinas 1969; Merleau-Ponty 1945; Ricoeur 1992; Schutz 1972) and postcolonial studies (Bhabha 1994; Spivak 1996). Ethical questions arising from these writings exceed the scope of this entry, but their diverse reflections are conceptually linked to intersubjectivity via a common turn from positivism to hermeneutics and discourse studies; from the positing of an essential self to a constructed, social, and/or narrative subject; and from a value for oneness to a valuing of difference and the other.

Intersubjectivity theory and relational psychoanalysis have begun to be incorporated into pastoral theology, care, and counseling, providing an avenue for rapprochement between the disciplines of pastoral counseling and psychoanalytic theory (e.g., drawing on relational psychoanalysis and intersubjectivity theory, Cooper-White (2004, 2007, 2010), and Hoffman (2010); drawing on Kenneth Gergen's psychology of knowledge, Doehring (2006); and drawing on constructionism and narrative therapy, Neuger (2001)). The inherent emancipatory ethic of intersubjectivity is a natural fit for the contemporary emphasis in pastoral theology, care and counseling on social justice and the valuing of diversity.

There are several natural theological dialogue partners for this attention to intersubjectivity in both pastoral theology and the psychology of religion. The work of the Jewish philosopher Martin Buber, especially his formulation of the "I and Thou" relationship, is perhaps the clearest theological articulation of intersubjectivity (without using the term *per se*): "Inscrutably involved, we live in currents of universal reciprocity" (Buber 1970, p. 67). For Buber, this ephemeral contact with the "Thou" of the other participated in the divine. In Christian theology, there has been a turn toward relationality, especially working in overlapping terrains of feminist, postmodern, and Trinitarian theology

(e.g., Cooper-White 2007; Johnson 2002; Keller 1988, 2003; Milbank 2009; Tanner 1997).

Finally, it should be noted that the term *intersubjectivity* is scarcely needed in the same way in non-Judeo-Christian religious traditions. Eastern cultures and religions have never been so characterized by the individualism that Western intersubjectivity theory interrogates and contests. However, further exploration by psychologists of religion into eastern concepts of self, other, mind, and consciousness would be fruitful for the continuing development of intersubjectivity as a lively and critical concept in the West.

## Intimacy

Carol J. Cook

Louisville Presbyterian Theological Seminary,  
Louisville, KY, USA

Although “intimacy” is commonly understood to refer to experiences characterized by a sense of closeness and connection, scholars who study intimacy agree that no generally accepted, formal definition of intimacy exists. Thus, attempts to study intimacy have taken a variety of approaches, two of which dominate. Within psychology, several branches focus on intimate *interactions*, especially those that take place within couples. Others follow in the tradition of Erik Erikson (1950/1963) who described intimacy as an *individual capacity*, naming the sixth stage of psychosocial development “Intimacy vs. Isolation.” This “dual” understanding of intimacy as primarily relational and/or as a state of being is reflected in dictionary definitions.

*Webster's Third New International Dictionary* defines intimacy as a "close personal relationship especially marked by affection or love (as in close friendship)," one "marked by depth of knowledge or broadness of information." *The Oxford English Dictionary*, 2nd ed., defines it as "The state of being personally intimate" rooted in the Latin word *intimus* meaning "inmost, deepest, profound or close in friendship." As an adjective, intimate first refers to "most inward, deep-seated; pertaining to or connected with the inmost nature or fundamental character of a thing; essential; intrinsic."

Few encyclopedias or dictionaries of psychology include an entry on "intimacy" with the exception of *Encyclopedia of Psychology* (Archer 2000) and virtually no theology or biblical series contains one. Given these common dictionary definitions, however, it is not surprising that language of intimacy infuses descriptions of religious experience. In this context it is used to refer to persons' relationship with God, experiences of worship, prayer, engagement with holy texts, and a sense of spiritual interconnectedness and communion with other persons that may extend to all of creation (Thorne 2003). Although it has increasingly become the domain of scientific study, attempts to articulate intimate experiences have long been the domain of lovers, poets, mystics, novelists, and theologians, those who try to express that which is "inmost, deepest, and profound."

Historically, the *OED* traces the appearance of the word intimacy in English to the mid seventeenth-century. Fletcher (2002) asserts that an academic exploration of intimate relationships in the West goes back at least to Plato's *Symposium*. Perlman and Fehr (in Perlman and Duck 1986) date the formal study of experiences of intimacy in modern times to the early twentieth-century writing of Georg Simmel, neo-Freudians such as Sullivan and Fromm who "emphasized our need for 'chums' and 'unity'" in the 1930s, and to the attachment theory work of Bowlby and others.

It has only been in recent decades that attempts to study intimacy empirically have multiplied, making it a core theme in the emerging field of relationship science. It now comprises a topic of

interest to researchers, theorists, and clinicians and to those who come from a variety of fields including social psychology, clinical psychology, developmental psychology, family studies, and communication studies. Since studies have been so diverse and unsystematic, in their *Handbook of Closeness and Intimacy*, Mashek and Aron (2004) sought to compile some of the most salient research from what is now a "critical mass" into a single volume. They acknowledge, however, that "the study of closeness and intimacy has not yet gelled into a fully coherent field with researchers regularly citing (or in some cases even being aware of) each other and building on each other's work" (2). Thus, as part of the "new science of intimate relationships," it requires further refinement, integration, and theoretical clarity.

A variety of challenges confront scholars who study intimacy (Prager 1995). These include the difficulty of determining what distinguishes it from other similar or overlapping concepts such as love, attachment, commitment, sexuality, and closeness; whether it is primarily an individual capacity or relational process; what constitutes an appropriate "unit of study" (interactions or the relationship); how to measure it; whether and how factors such as mutual self-disclosure, power, sexual orientation, and gender impact intimacy; verbal connection in contrast to physical touch and sexuality; and how different cultural understandings of the self affect research outcomes.

An assumption that has been repeatedly reinforced through research suggests that intimate interactions and relationships provide significant health benefits, function as buffers against stress, and support relationship satisfaction and stability. Generally speaking, intimacy has been perceived to be beneficial and an ideal toward which to strive. However, some scholars wonder whether there is a "dark side" to intimacy, recognizing that partners do not always desire or may not be capable of the same degree of closeness (Mashek and Aron 2004). Others challenge the intellectual dominance of the North American construction of the self as an independent entity who voluntarily seeks connection and closeness. Intimacy looks different from

the perspective of interdependent constructions of the self found in many West African settings where interconnectedness with others is a given (Adams et al. 2004). From the perspective of these African contexts, North American expectations of intimacy are seen to unhelpfully destabilize practices common to this region such as arranged marriage, polygamy, and the need for protection from enemies and evil spirits. When viewed cross-culturally, the presumptive psychological “goodness” of intimacy becomes more ambiguous.

Aspects of the Judeo-Christian tradition include some of this same ambiguity about the role of intimacy. On the one hand, relationships celebrated as intimate ones abound in the Bible’s first and second testaments. Biblical commentators consistently refer to the relationship between David and Jonathan, Ruth and Naomi, the ambiguous lovers in Song of Songs, and Jesus and the disciples, especially the Beloved Disciple, as intimate ones. On the other hand, these same relationships can be seen to challenge, even subvert, past and sometimes current social norms in provocative ways.

For those who believe in a “personal God,” the emotional dynamics that characterize human relationships find an analogy in the relationship between human beings and God. In the words of Old Testament scholar, Renita Weems, “I suppose you can say that everything I know about God I have learned in the muck of intimate human interchange” (Weems 1993, p. 11). Some scholars and theologians maintain that the emotionally charged encounters between persons and God constitute a form of intimacy, one that although never fully mutual or even completely “safe,” still bears the earmarks of friendship (Lapsley 2004). Moses, the patriarchs, prophets, and the psalmists provide prototypes for this kind of intimacy with God. As Luke Timothy Johnson underscores, “spiritual intimacy is intimated but not adequately expressed by those passages in the New Testament that speak of Christians being ‘in Christ’ (I Thess. 4:16; 1 Cor. 15:22; 2 Cor. 5:17; Phil. 2:1; Col. 1:2) or of Christ being ‘in them’ (Col. 1:27; Eph. 3:17)” (Johnson 1999, p. 69). Teachings and images such as “Abide in me as

I abide in you” and “I am the vine, you are the branches” (John 15: 4–5) serve to break down barriers and invite intimacy between Jesus and those who follow him.

In Christian theology, the doctrines of the Trinity and of the Incarnation rely on notions of intimacy. A *perichoretic* or social understanding of the Trinity refers to an intimate, interpenetrating “dance” among the three persons, one which some see as providing a guiding image for human relations as well (LaCugna 1992; Moltmann 1981). The relationship between Jesus’ divinity and humanity that lies at the heart of the Incarnation also reflects a unique intimate union that remains shrouded in mystery despite centuries of doctrinal explication.

Connections between knowing and loving and knowing and sexual intimacy are motifs that recur through both testaments as well. In the worlds of the Bible and in common human experience, knowing and being known result in a certain kind of vulnerability which makes one susceptible to being exploited and betrayed by this same knowledge. Intimacy entails risk for all involved. The need to protect participants from the risks of intimacy especially when power differentials exist has resulted in a body of literature in pastoral care and counseling circles about the importance of maintaining ethical boundaries (Ragsdale 1995). All therapists, but spiritual care-givers in particular, are uniquely charged with staying conscious about the intimate nature of their care for persons who confide in them. Thus as noted in the *Dictionary of Pastoral Care and Counseling* (Madden 1990/2005), there is a place for distance and the maintenance of safe boundaries as part of “risk management” in care-taking relationships.

In conclusion, intimacy comprises one of the most meaningful dimensions of human relationships and, for many, lies at the heart of religious experience as well. Researchers in various psychological disciplines seek to ever more fully delineate the contours of intimate interactions and relationships along with factors that enhance or inhibit its expression. These findings can helpfully inform clinical and pastoral interventions. They may also illuminate fresh aspects of biblical narratives and of persons’ relationship

with the Thou who is God (Buber 1970). In turn, the I-Thou depiction of the intimacy that can exist between persons and God and between persons believed to be created in the image of such a God, may enrich and relativize scientific understandings of intimacy. Religious sensibilities remind those who study intimacy, of the ultimately mysterious, meaningful, and wondrous nature of intimate encounters and push against the demarcations and precise definitions that science seeks to establish. The truth and power of intimacy lies at this intersection of scientific specialization and that which presses toward relational integration and the search for transcendent and embodied union.

## Introversion

Adele Tyler

Life Journeys, Nashville, TN, USA

A psychological term formulated by Carl Jung in his book *Psychological Types* to describe the flow of psychic energy inward, toward the inner world of ideas and emotions or “subject.” The word introversion comes from the Latin *introvertere*, meaning to turn inward. Jung theorized introversion and its opposite, extraversion, to explain the two fundamental and innate attitudes of people toward the outer world or “object.” Introversion and extraversion describe theoretical polarities on a continuum, with all persons using some degree of both attitudes

in reality. Jung defined introversion as a withdrawing of psychic energy, or libido, from the object into the subject. People with a preference for introversion both use and renew their energy by focusing inward and can feel drained by focusing energy on the outside world. Some general characteristics of introversion include a preference for solitude and solitary activities, for one-on-one and small-group interactions, and for listening more than talking; an ease with concentration; and a reserved nature. Introverted forms of religious expression seek the God within and the inner spiritual journey through practices of reflection and contemplation like meditation, solitary prayer, and study of the written word alone or in a small group.

### Intuition

Nathalie Pilard  
King's College, School of Divinity,  
University of Aberdeen, Aberdeen, UK

The largest place conferred on intuition by the modern psychologists belongs to C. G. Jung. The notion had several meanings in his production depending on whether intuition belonged to

Jung's psychology of consciousness, to his psychology of the unconscious, or to his interest in religion and esoterism as an expression of religious movements or of extraordinary gifts.

### Extraordinary Intuitions: Visions and Revelations

"Intuition is a function of perception which includes subliminal [i.e., unconscious] factors, that is, the possible relationship to objects not appearing in the field of vision, and the possible changes, past and future, about which the object gives no clue" (Jung 1936/1960, para. 257). The function of intuition allowed, for everyone, the perception of the possibilities inherent in a situation. For more intuitive individuals, this perception could become a *Ahnung*, which meant both the presentiment of future events and the premonition of things unknown, secret, or mysterious. "Visions" belonged to this category, whereas "revelations" were closer to the German term *Einfall*, which described the way ("fallen") one intuition suddenly arose in consciousness. Paul's sudden conversion to Christianity in his way to Damascus was a revelation, but the voice – enumerating complex alchemical principles – heard by the gnostic Zosimus was a *Ahnung*. The *Einfall* had reached its end in consciousness, giving a "hunch" or a sudden clarity to a content, such as Paul's faith. By contrast, the *Ahnung* lays between the unconscious and consciousness, allowing the perception of a content not clearly – or not yet – differentiated from other ones, such as Zosimus's potential alchemy.

Jung's *Seven Sermons to the Dead*, written in 1916, has been seen and studied as a vision of his whole future work (see Maillard 1993). This episode proved to be the climax of Jung's years of confrontation with the unconscious. The description Jung made of this period in his autobiography *Memories, Dreams, Reflections* revealed this visionary aspect. Jung writes: "The years when I was pursuing my inner images were the most important in my life," – in them everything essential was decided. It all began then; the later details

are only supplements and clarifications of the material that burst forth from the unconscious, and at first swamped me. It was the *prima materia* for a lifetime's work (Jung 1961/1995, p. 225). This *prima materia* was a *Ahnung*, it would require to be clarified in consciousness, but it was so strong a vision that it would represent Jung's whole psychology.

### Intuition as Type and Function of Consciousness

Psychological types constituted Jung's main work of his psychology of consciousness. There Jung made intuition foundational by elevating it to one of the four basic functions next to thinking, feeling, and sensation. Which function one most relies on constituted the individual's psychological type, such as the intuitive type. A type characterized the dominant psychological attitude (*Einstellung*) of consciousness. It was "an *a priori* orientation to a definite thing . . . a readiness of the psyche to act or react in a certain way" (Jung 1921/1971, para. 687). The intuitive type could be either extraverted, directing his intuitions onto external objects – for example, being attracted to anything new and in the making – or introverted, thereby prone to remain strongly attached to internal visions. Seers and prophets belonged to this second category.

Jung distinguished intuition from instinct, fantasy, fantasies, and empathy. The fact that "all psychic processes whose energies are not under conscious control [we]re instinctive" (Jung 1921/1971, para. 765) disqualified intuition from being the same as instinct. In consciousness, intuition was a function which made assimilate a content – even new and sudden – whereas instinct remained an impulse. "Fantasy" or "imagination" was, for Jung, the general expression of psychic life and had no other specific meaning when used as a single term and in the singular. "Fantasies" were also distinct from intuitions. While one made fantasies, one had intuitions. Fantasies were artificial and required reason. Intuitions were natural. They were given direct perceptions beyond reason. "Empathy," for Jung, defined in consciousness, a form of extraversion well

rendered by the German term *Einfühlung* (*ein*: in; *fühl*: feel). One felt oneself in an external object or projected one's feeling onto the object – projecting one's own fears or likings onto someone else, for instance. There empathy did not involve intuition, but occasionally, Jung used the term *Einfühlung* to describe an intuitive capacity required for the interpretation of dreams.

### Intuition and Archetypes

Beyond consciousness, lay the instincts and the archetypes, to which intuition was attached. In the collective unconscious, "intuition is a process analogous to instinct, with the difference that whereas instinct is a purposive *impulse* to carry out some highly complicated action, intuition is the unconscious, purposive apprehension of a highly complicated situation" (Jung 1919/1960, para. 269). "Apprehension" was the key word that linked intuition to archetype. Archetypes were inborn "forms of intuitions," but the exact German expression *Archetypen der Anschauung* is better explained than approximately translated. *Anschauung* characterized, in this context, intuition as one's apprehension, a perception by way of the unconscious, by one's ability of representation, of perceiving everything imaginable and everything in images. Translated into the standard single term "archetypes," the locution *Archetypen der Anschauung* loses a significant part of its meaning. It omits the dependence of archetypes on intuition revealed by the genitive. Correctly understood, the expression thus avoids any association of the archetype with any inherited image that the ancestor of the term, the "primordial image" (*Urbild*), might have suggested. As a capacity to represent, *Anschauung* inherently attached to archetypes depicted an *a priori* tendency, a *facultas praeformandi*, rather than the forms themselves.

In the collective unconscious, archetypes differed from instincts as "archetypes [we]re typical modes of apprehension," whereas "instincts [we]re typical modes of action" (Jung 1919/1960, para. 273, 280), the manifestations of which were always regular and recurrent. In both cases, however, *Anschauung* was required to reach

consciousness. Later, Jung would even assimilate instincts to archetypes as not differentiable entities of the collective unconscious.

### From Empathy to Synchronicity

In Jung's psychology of the unconscious, the term *Einfühlung*, empathy, had a different meaning than in his psychology of consciousness. Whereas *Anschauung* linked archetypes to a differentiated consciousness, *Einfühlung* described a link close to identity between the collective unconscious and varied forms of not differentiated consciousness. The first form depicted the "primitive," who lived in a state of almost unconsciousness by identifying himself with the nature or with ancestors as a mechanism of defense. Jung also studied two other, more elaborated, forms of *Einfühlung* through the experiencing of the annulment of the other. They both concerned esoterism, in its historical religious sense. Psychologically, absolute disregard of the ego was the aim of certain oriental meditations; voluntary identification of the ego with the collective unconscious was the aim of mysticism. In these two cases, mind and body were trained to become themselves the invisible tool intuition and consequently the sheer receptacles of the archetype in consciousness. The frontier between the archetype and consciousness could also be reduced in the phenomenon of synchronicity (see entry). This time, intuition did not fall into consciousness in the form of a feeling (the dreadful effect of numinosity), but of a "meaningful coincidence" which challenged thinking and the law of causality.

### Intuition in Jung's *Answer to Job*

Intuition is a key to understanding the role accorded by Jung to Sophia and to the Holy Spirit in his *Answer to Job*. The symbol of God, or *Imago Dei*, evolved from God the Almighty, to Jesus, to the Paraclete, and to humanity. Between the composition of *Job* and that of the New Testament, Sophia appeared in many writings in many parts of the world. Peoples longed for her

Wisdom in front of God's power. Sophia personified in the unconscious the changing consciousness of the end of the previous era, the intuition of new times. She was pregnant with the unconscious hopes of the peoples. Ancient civilizations had projected their patriarchal culture onto the image of an omnipotent God, leaving His first fiancée stayed in the background, as a latent archetype. By reappearing in the writings, Sophia became the function of intuition which would reunite the unconscious to consciousness. She would fall into her symbol in consciousness Mary, to give birth to Jesus, thereby intuitively creating and enabling the perception (*Anschauung*) of the new symbol of God.

From the unconscious to consciousness, the drama proceeded. The Holy Spirit, symbolized by the Paraclete, continued to ensure the link between the Self – the eternal God – and the evolving self of humanity. The Holy Spirit reduced the gap between Christ (divine), unique son of God, and the God incarnated – realized – in each human, who, like Job, gave God the "conscience" that God had not had. Once God incarnated, each "son of man" had to realize the power of the god within. The H-bomb opened the era of man the almighty, who became responsible of his fate. Man received the duty of the power and the truth of his intuitions. The Holy Spirit and Sophia were neither God nor human – neither the archetype nor its future symbol – but the factor which reunited the two: intuition. They were the entity expressing the hitherto unconscious will of people to get involved in the divine drama. For Jung, religion, rather than disappearing in contemporary times, became conscious.

### Intuition and Mandalas

After his rift with Freud, Jung's confrontation with the unconscious gave birth to the method of active imagination (see entry). Intuitively driven, Jung drew circles to reunite his consciousness to the unconscious. Jung had then the same intuition as his cousin Hélène Preiswerk, when she had held the role of medium during spiritist sessions. In his medical dissertation, Jung had studied the

psychological meaning of the trances of H el ene. During the last sessions, she had had the intuition, the clairvoyance, of a “gnostic system.” She had drawn circles representing a higher and higher level of gnose (knowledge of ultimate realities), the content of which she could not have possibly read or heard of. These circles were the intuition of her next stage in life: adulthood, such as these drawn by Jung intuited his own psychology freed from Freud’s theory.

Jung would later recognize these figures as *mandalas* – the oriental religious symbols of unity, emptiness, and resolution of opposites – and see them as one of the best symbols of the Self. The religious function of the psyche described a specific moment of the method of active imagination, when the third term, the symbol such as Jung’s and H el ene’s *mandalas*, was created from the opposition between consciousness and the unconscious. The tension at once revealed and created the symbol, which intuitively understood, led to a new level of comprehension. In *Memories, Dreams, Reflections*, the last *mandala* painted by Jung appeared at the end of the chapter “Confrontation,” just before the chapter “The Work” (Jung 1961/1995, p. 224). *Mandalas* were intuitive symbols which led Jung to his next stage: work. The religious function of the psyche and Jung’s historic-psychological interpretation of religion through *Answer to Job* depicted religion as official or secular, or even personal, but always as an experience where intuition was involved.

<sup>2</sup>Departments of Psychiatry and Medical Education, University of Illinois in Chicago, Chicago, IL, USA

<sup>3</sup>Department of Psychiatry, University of Illinois at Chicago College of Medicine and Adler School of Professional Psychology, Chicago, IL, USA

The Book of Isaiah in the Hebrew Scriptures presents the prophecies of Isaiah, an eighth-century BCE Israelite prophet. The book in the form we have today was known to the Jewish writer Ben Sira by 180 BCE and has been found among the Dead Sea Scrolls. The Christian New Testament makes much use of Isaiah, notably John 12.38, “spoken by the prophet Isaiah.” Jewish tradition holds that the book consists of the prophecies of Isaiah, written into book form by King Hezekiah of Judah and his scholars (*Talmud*, Bava Batra 15a). Rabbinic tradition accepts the book of Isaiah as the work of one prophet, although Abraham Ibn Ezra (twelfth century) suggests that some of the later chapters may be from a different hand. Some of the

prophecies may have been written down by Isaiah himself (8.1).

Modern Bible criticism beginning with German scholars of the 1780s generally supports the view that the book is the work of two or more people, dividing most sharply between chapters 1 and 39, which deal largely with events and conditions of the late eighth century, and chapters 40–66 which deal with the Babylonian exile of the sixth century and the more distant future even into the messianic era. Today terms like Deutero-Isaiah and Trito-Isaiah are commonly used to designate different parts of the book. Judeo-Christian religious tradition still largely maintains its belief that the Book of Isaiah was wholly the work of one prophet (Friedman et al. 1971, p. 45).

Isaiah's prophecies began ca. 740 BCE, the year of King Uzziah's death (or illness), and continued through the reigns of Kings Jotham, Ahaz, Hezekiah, and possibly Manasseh in the early seventh century. Tradition holds Isaiah to have been of the royal family, and his lofty style is contrasted to the more down-to-earth style of Jeremiah, who grew up in a small town (*Talmud*, Megillah, 10b).

The period of Isaiah's work saw a change of course in Judah and in the Middle East in general, as an aggressive imperialistic Assyria expanded its power and conquests. Feeling threatened by his neighbors, King Ahaz of Judah made himself subservient to the Assyrian emperor Tiglath-Pileser. Later his son King Hezekiah rebelled against the Emperor Sennacherib, who invaded Judah and laid siege to Jerusalem in 701 BCE. The book relates that Hezekiah went to the Temple to pray, and God sent Isaiah to the king with the message that the Assyrians would not "enter the city neither shall he shoot there an arrow. . . ." (Isaiah, 37:34). Sennacherib's army was smitten by a plague, and he returned to Nineveh, his capital, where he was assassinated by his own sons (Isaiah, 37:38).

Isaiah's call to prophecy is described in the magnificent vision in chapter 6. Praying in the Temple, Isaiah saw, as it were, God seated on His throne, hovering over the Temple as though departing from it and surrounded by hosts of

angels. When God called for someone to bear His message to the people, Isaiah answered "Here I am. Send me." When Isaiah hesitated on the grounds of dwelling among a people of unclean lips, God sent a seraph to bring a coal from the altar to touch to Isaiah's lips, both to reassure him of divine support and to indicate that the spiritual fire had not yet totally gone out, although diminished, and also that Isaiah should be careful how he spoke of his people.

A central theme of Isaiah's work was to reawaken the feeling for God among a people who had become dulled and spiritually unmotivated. People had begun to take the Temple for granted; paying their dues to its upkeep but life could have full meaning only if the entire world and not just the Temple would be dedicated to God. The description of God as hovering above the Temple can be seen as a sign of God beginning to remove Himself from it. It is critical to emphasize that in no sense did Isaiah reject or invalidate the Temple or its rites. He criticized only the people's tendency to complacency (Isaiah, 66:3 and 1.11–15; Hirsch 1997, pp. 98–99). Another important theme is Isaiah's castigation of injustice and immorality (e.g. Isaiah, chapters 1, 3, 5, and 7) and his reprimand of those who conspired with his people's enemies (Isaiah, 8:5–18).

Chapter 1, the *chazon*, or vision, again calls attention to the decline in spiritual awareness. Even the ox and the donkey are aware and grateful for the master and for his corn crib from which they eat, but the Judeans lack awareness of God and His bounty to them. Israel was to be a nation of God's Law and God's will, ready to teach God's message to the world. Yet they have become estranged from God. They cannot see that their materialism is causing their land to decay. They are losing their way and can hardly sense the differences between their religion and the idolatrous cults of their neighbors. The Temple service is wonderful but has no meaning unless it is carried on with true commitment and feeling.

Isaiah often expresses the view that politicians and kings may think they run the world, but the world is in fact God's. The difference of view is made dramatically clear in the story (Isaiah, 7–8) of Isaiah's meeting with King Ahaz. Judah was

threatened by the Kings Pekah ben Remaliah of Israel and Rezin of Syria. Bringing along his young son Shear-Yashub, Isaiah met with the king in the Washers' Field to convey the message that God would protect Judah and that Ahaz need neither fear invasion nor seek an Assyrian alliance. The king, however, would not listen at all and rejecting an offered sign of divine support made a treaty with the Assyrians, who welcomed the pretext to come and conquer both Israel and Syria. However, once invited into Judean affairs, the Assyrians stayed until they invaded Judah too, not many years later in Hezekiah's time.

Eventually the Babylonians conquered Israel and took most of the people into slavery in Babylon. Isaiah 40 opens a new series of prophecies in which Israel is comforted after its long Babylonian exile (587–539 BCE), which will be seen as an important if painful learning experience. The Persian King Cyrus freed the Jews from Babylon to return to Israel, where they began to rebuild the Temple, as the Bible records in the books of Ezra and Nehemiah. Israel will have learned from its tribulation and will be imbued with the consciousness of its historical mission. In all the uncertainties of history and diaspora, God will remain the shepherd of His people, and He will not let the world go unfulfilled. Nations will find meaning in their recognition of God, for it is He who rules history and before whom princes and judges are as naught.

Chapter 42 depicts God as having created the world and still creating it. He will hold Israel's hand and guide it toward perfecting His ideal of righteousness. All will recognize and give honor to God, and human leaders who misused their power will cry in pain and fury. Israel will be a state founded on divine laws of morality and not mere power and force. The prophet goes on to talk at length about the messianic future. The final prophetic vision, chapter 66, paints the future when all humankind will go hand in hand dedicating themselves to God (Isaiah, 66:19–24).

Isaiah's vision has important psychological implications. He continuously calls for the integration of sincere spiritual depth with practical behavioral actions. Concrete symbolic actions do

not substitute for ethical behavior, but they are not to be disregarded either. This integrated view represents a centerpiece of Judaism's emphasis of the interconnection of inward emotional life and outward actions. In this way Judaism is often said to be a religion of deed rather than intention. This understanding of Judaism as a religion of action is encapsulated by the biblical verse in which the Jews standing at Mount Sinai signal their acceptance of the Torah with the words "*na'aseh v'nishma*" – "We will do and we will hear/understand." In other words, the Jewish people promise first to observe the laws of the Torah and only afterward to study these laws. In traditional Jewish culture, this statement has come to epitomize the Jewish commitment to concrete actions rather than simply underlying intentions.

Isaiah's integrated view has received full expression in the simple yet profound sequence in *Fiddler on the Roof*. When Tevye asks Golde, his wife of many years and mother of his children, "Do you love me?" she at first responds incredulously. "Do I love you? For twenty-five years I've washed your clothes, cooked your meals, cleaned your house, given you children, milked the cow. After twenty-five years, why talk about love right now?" However, Tevye persists "I know... But do you love me?" Golde muses out loud: "Do I love him? For twenty-five years I've lived with him, fought him, starved with him. Twenty-five years my bed is his. If that's not love, what is?" Tevye again asks: "Then you love me?" Golde responds "I suppose I do." Tevye, finally satisfied, responds in kind: "And I suppose I love you too."

Though overly simplistic, this description reflects the centrality of *mitzvot* (commandments) in Jewish life, as well as the rabbinic conclusion that, in most cases, a person who performs a mitzvah without focusing on its significance has nevertheless fulfilled his or her religious obligation at least partly.

One must ask oneself if a starving person really is more concerned with a passerby giving him food or the purity of his motives in feeding him. The answer is obvious, and overconcern with one's spiritual life at the expense of helpful behavior toward another implies a narcissistic

self-absorption very far from Isaiah's vision of a healthy integration of spiritual depth and concrete actions and the beautiful interchange between Tevye and Golde described above.

This view has greatly influenced psychological theories such as cognitive dissonance theory postulated by Leon Festinger (1957), emphasizing the drive to consistency between outward behavior and inner attitudes and beliefs. This integration is critical to a healthy view of human psychology, rejecting on the one hand empty ritual but on the other hand spirituality devoid of practical behavioral consequence. For Festinger, change in behavior will likely lead to a change in underlying attitude, because of a need for the behavioral manifestations of an act to be affectively and cognitively consistent with one's inner life.

## Isis

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

Isis was originally an independent Egyptian goddess in the predynastic era in the Nile Delta, prior to 3100 BCE. She was daughter of Geb (Father Earth) and Nut (Mother Sky). She was brought into the Heliopolitan tradition with Osiris, Set, and Horus. She was a great Mother Goddess and Savior. She is portrayed with her brother-husband Osiris, or having large wings and a crown of a disc between cow's horns, or seated as a mother suckling her infant son Horus, the archetypal origin of all Pharaohs. She protected children and could appear as a kite bird (Fig. 1). There are various versions of their mythology, and this is a condensed one.

Isis helped Osiris give people civilization. As Earth Mother, she taught people agriculture, instituted marriage, the arts of grinding grain, spinning flax, and weaving. She was a great Enchantress, knowing magic and medicine, that she taught humanity. There are many versions of their myth; this is a common one: Osiris' jealous brother Set was a wicked god of the desert. One night at a banquet, Set displayed a decorated chest that was made to fit only the king. Several tried, but only Osiris could fit exactly. Then Set and his minions slammed it shut, nailed it tight, and threw it into the Nile.

**Isis, Fig. 1** Isis with wings of one of her forms, a kite bird (Art courtesy of the author, 2002. Public Domain)

Isis was distraught at this wicked sibling rivalry and grieved mightily. She cut off half her hair, and began the search for her beloved husband's body. Some children told her they had seen it floating toward the Sea. A revelation told her that it had floated north to the city of Byblos in Phoenicia. There a great tamarisk tree grew around it. The King had cut down the tree for a pillar in his palace.

Isis came to Byblos, where the Queen Astarte had given birth to a son. Isis was appointed to be the nurse of her newborn son, and at night she secretly held him above the fire's flames to magically burn away his morality and make him divine. But she was discovered by Queen Astarte, who was furious. But great Isis revealed her true identity. The King cut down the tree and gave it to Isis, who cut it open and found Osiris' coffin. She fell upon it weeping. The King gave Isis a ship to return to Egypt. By her magic she and Osiris conceived in her the child Horus, so Osiris would have an heir to take the throne. On her return to Egypt, Isis took the coffin to a hiding place in the marshes, to hide from Set. But wicked Set discovered them and again attacked Osiris. This time he cut Osiris' body into 14 pieces and scattered them up and down the Nile. Grieving mightily again, Isis set off searching for Osiris' body. She found

all parts except his phallus. At each place where she found part of his body, a temple was built. Isis modeled a phallus substitute and, with the aid of her sister Nephthys, reconstituted Osiris' body and anointed it with precious oils, thus performing the first ritual of embalment. For Egyptians, the soul depended upon the body for resurrection. Thus, Osiris was restored to become the Lord of Eternal Life. Isis managed to evade Set and gave birth to Osiris' heir Horus, who regained the throne from Set. Each night Osiris steered an underworld bark below the Nile, taking the dead to the afterlife to be judged. Isis was often pictured with him, protecting the dead with her wings.

Psychologically, Isis gave strength to the many archetypal patterns of women's lives: she symbolized the mythic primordial Mother Earth who protected children; aided those who prayed to her, rich or poor; taught the arts of civilization, from farming to healing magic; faced evil, struggled to keep her family together. Isis suffered the loss of her beloved to his wicked jealous brother, grieved, and brought him home. She mothered her son Horus and protected and nourished him to become the first Pharaoh. She resurrected her beloved Osiris, not to earthly life, but, since he was a god, he returned to be the Lord of the Dead in Eternity. Thus, she modeled many archetypal patterns, from strong Mother Earth to suffering wife, mother of a fine child, Queen, and powerful goddess of resurrection and salvation, overcoming grief, evil, and earthly death.

## Islam

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

Islam (Arabic “submission”) aligns itself with the monotheistic religions of Judaism and Christianity and the belief in the prophets whose attestation to the sovereign, ongoing and active purpose of the one God: “We believe in God and that which was revealed to us; in what was revealed to Abraham, Ishmael, Isaac, Jacob, and the tribes; to Moses and Jesus and the other prophets of the Lord” (Sura 2:135). It is founded upon a succession of religious vision experiences by Muhammad (b. ca. 570 CE), a poor and probably illiterate Arab who struggled through much of the first 40 years of his life. Around 610 CE while meditating in a cave in Mount Hira near Mecca (Saudi Arabia), he receives revelations from the angel Gabriel. The angel “who is powerful and mighty” (Sura 53.5) imparts the “Book” into the heart of Muhammad who is instructed to ‘*iqra*, “recite” (*Al-Quran*, “The Recitation”). Through the encounter Muhammad understands himself to be an emissary of God as the last and greatest of the Judeo-Christian prophets. He attracts a small following and eventually the hostility from the wealthy merchant class, causing him to flee to Yathrib (Medina) north of Mecca. His flight (*hegira*) marks the starting point of the Islamic calendar (16 July 622). The Koran consists of a collection of a range of teachings having to do with faith, religious ritual practice and worship, and codes of behavior for day-to-day life. The work is arranged in sections called “Suras” so as to impart “gradual revelation” (Sura 17: 106). As the “*Book of Revelations*,” it includes “good news and warning” (Sura 41: 2). A range of subjects receive attention such as Kneeling, Muhammad, The Moon, The Dawn, Clots of Blood, Alms, The Poets, and Women. For “true believers” the Koran is a balm and a blessing, while for the “evildoers” it is “nothing but ruin” (Sura 17:82). For those who do not adhere to Islam, their deeds

will be brought to nothing (Sura 47:1). Those who do believe are promised Paradise to enjoy divine forgiveness, every kind of fruit, rivers of purest water, ever-fresh milk, delectable wine, and clearest honey (Sura 47.15). Those who follow base desires will reside in hell eternally drinking “scalding water which will tear their bowels” (Sura 47:15–16). According to the Koran, Satan seduces those who once received divine guidance but have opened themselves to those who abhor the Word of God. These ones will lose their souls (Sura 47: 26–27). Unlike various religions including Judaism and Christianity, Islam does not evidence the development of ecclesiology or a priestly hierarchy. Rather, its requirements for piety and attention to revelatory experience especially through the mellifluous intoning of Koran verse are collective practices which inherently resist the formation of institutional structure and dogma. Believers are expected to practice a disciplined, conscious life of patience and prayer: “Turn your face towards the Holy Mosque; wherever you be, turn your faces toward it” (Sura 2:144). They are to recite prayers at sunset, at nightfall, and at dawn and to pray during the night as well (Sura 17:78). Each is to show kindness and give alms and make regular pilgrimage to Mecca during which time abstaining from sexual intercourse, obscene language, and argument (Sura 2:197). Islamic culture is known for its contribution to alchemy especially through the work of Muhammad ibn Umail at-Tamimi, known as Senior. A Muslim Shiite, he lived and worked during the tenth century. His *De Chemia (On Chemistry)*, translated into Latin during the twelfth or thirteenth centuries, describes Senior’s entry into what he calls a *barba* – an Egyptian pyramid tomb in his quest for the alchemical secret. There he and his colleague see amid the “fiery prisons of Joseph” (*carceres Ioseph ignitas*) a statue in the middle of the chamber sitting on a throne and holding a tablet (*tabula*). The images of the sun and moon on the tablet relate ancient Greek notions of the processes of the *coniunctio*, the coincidence of opposites. The text reflects Islamic interest in Egyptian mummification as

the source of alchemy. It also evidences parallels with the ancient Emerald Tablet (“all things were made from this one, by conjunction; the father is the sun, the mother is the moon”) attributed to the Egyptian god Thoth and Greek god Hermes Trismegistus. *De Chemia* shows the significant role Islam played in the interpretation and transmission of religious ideas and symbols from ancient Egypt, Greco-Roman, and medieval cultures into the time of the Italian Renaissance and the work of figures including Roger Bacon and Isaac Newton. Al-Razi (ca. 850 CE-ca. 924 CE) and Jabir ibn Hayyan (ca. 721 CE-ca. 815 CE) also play important roles and make significant contributions in Islamic-Arabic alchemy and the pursuit of the elixir. Out of the work of each issues an interest in healing properties of “strong waters” (corrosive salts)

eventually influenced Arabic medicine and being translated into Latin Europe in the twelfth century.

## James, William

Curtis W. Hart  
Weill Cornell Medical College, New York,  
NY, USA

### William James and the James Family

William James was born on January 11, 1842, in New York City and died on August 26, 1910, in Chocorua, New Hampshire. He was a bridge figure between the intellectual and social milieu of the mid-nineteenth-century America of Ralph Waldo Emerson and Walt Whitman and the evolving international Modernist world of Sigmund Freud, Henri Bergson, and Alfred North Whitehead. He was part of one of America's most remarkable families who in the generations before his birth built resources of great wealth through business and entrepreneurial success. His father, Henry Senior, was an itinerant philosopher and theologian who authored dense and idiosyncratic texts related to the work of Swedish religious figure Emanuel Swedenborg. William was the eldest of five children born to Henry Senior and his mother, Mary Robertson Walsh. His eldest brother, Henry, born in 1843, became one of America's greatest novelists and men of letters. He had two younger brothers, Garth Wilkinson (Wilky) and Roberson (Bob), along with the youngest of the five, his sister Alice, born in 1848. It was Alice who came closest to the literary and analytical gifts of

William and Henry as evidenced in her letters and diaries. She also shared with them physical and mental collapses which in turn mirrored the experience of Henry Senior with what he called in a nineteenth-century term his "vastation" which denotes something closely akin to a depressive breakdown.

James' family traveled widely and frequently during William's younger years due to Henry Senior's search for an ideal place to educate his children and to satisfy his own restlessness. William was thus raised and educated in both the United States and Europe. He never completed an undergraduate degree, but he did manage to receive an M.D. from the Harvard Medical School in 1869 though he never practiced medicine. His medical and previous scientific training opened him to the world of physiology and experimental science. He taught anatomy and physiology at Harvard and went on in 1880 to pursue another career interest in the teaching of philosophy. A key point in this formative period came in 1872 where for 9 months he met in Cambridge, Massachusetts, with Charles Sanders Peirce, Oliver Wendell Homes, and Chauncey Wright in what came to be called the Metaphysical Club. These meetings proved to be a prime source of inspiration and reflection that grew over time into what later came to be known as philosophical pragmatism. Pragmatism (a term James himself coined) became a school of thought that dominated American intellectual life up through the first third of the twentieth century.

## James' Contribution

In 1876 James married Alice Howe Gibbens and proceeded with having a family of his own to go along with a wide-ranging career that spanned the next three decades. In 1877 he met the philosopher Josiah Royce who was to become one of James's great companions as well as a friendly intellectual rival and whose idealist framework differed dramatically from his own empiricism. James also discovered and incorporated insights from the work of the French philosopher Charles Renouvier that emphasized the role of freedom in human choice and action. During this most productive phase of life, James published a set of true classics. Among them are *Principles of Psychology* (1890), *The Will to Believe* (1896), *Pragmatism* (1907), and in 1902 the Gifford Lectures at Edinburgh that became *The Varieties of Religious Experience*. His written works including a voluminous correspondence along with his teaching and public lecturing constitute a major contribution to an understanding of the working of the mind with its functions, its needs, and its potentials. His recorded legacy stands the test of time and remains accessible to the specialist and the nonspecialist alike.

Throughout his work James became and remained a radical empiricist. He upheld and never relinquished his belief in experience as a reliable guide in the search for truth. It is crucial to note in any discussion of James' study of psychology and the psychology of religion his reliance upon an experiential, empirical, and pragmatic approach. Pragmatism viewed means and ends as interdependent. And in pragmatism, knowledge is social, relational, and dependent on the "flow" (an important Jamesian word) of ideas, sensations, and interactions between the interior self and any larger worldly context. Indeed, it was James who originated the term "stream of consciousness." It would be hard to imagine the contemporary clinical world and the dialog between psychology and religion without James' contributions. There the emphases on narrative and process can be directly traced to James and those who follow his often invisible influence. Indeed, pastoral counseling, clinical

pastoral supervision, and pastoral care would be significantly diminished without his concepts of "time line," "pluralism," and "healthy mindedness" as conceptual tools and perspectives to enlighten the search for meaning within the therapeutic alliance.

## The Varieties of Religious Experience

*The Varieties of Religious Experience* deserves an exploration for a number of reasons. First, it is a crucial source for analysis of religious experience for interdisciplinary work among psychology, religious studies, anthropology, philosophy, and clinical supervision. Second, it has had a significant impact among those involved in recovering from addiction, most notably William Wilson, one of the founders of Alcoholics Anonymous. Wilson names James and *The Varieties* as a critical source in his understanding the enlightenment and freedom that came to him when he began to lay aside his addictive burden. And third, a number of the terms used in *The Varieties* (e.g., "sick soul," "twice born," and "healthy minded") have not been clearly or consistently identified with him in spite of their having shaped cultural, therapeutic, and academic discourse.

It is the content of *The Varieties of Religious Experience* that fixes its place among the realm of the classics. He explores in these two sets of lectures such topics as "Mysticism," "Saintliness," "Conversion" (two lectures), and the relation of "Philosophy" to religion. James takes on a perspective that places primary emphasis on what happens, what a person goes through, and what *are* her feelings or responses in regard to events, persons, texts, and life crises. He focuses upon direct human experience and not on the perspectives of philosophical speculation or abstract theological dogmatics. Overall, James believes that his empirical and pluralistic approach makes the most common sense.

In *The Varieties* he sees one form of religious experience as that of "healthy mindedness." It emphasizes human capacities for happiness and self-confidence. These qualities are evident for him in the persons of Walt Whitman and Ralph Waldo Emerson and in Protestant liberal theology in general. The experience of the "sick soul," on

the other hand, identifies an inclination to melancholy and to a view of human nature as deeply flawed and in need of assistance. Examples identified with the “sick soul” are John Bunyan and Jonathan Edwards who demonstrate a consistently troubled or “anhedonic” response to life. James also articulates how the “healthy minded” and the “sick soul” represent characters that are either “once born” (optimistic, confident, determined) or in need of becoming “twice born” in order to be renewed, reinvigorated, or restored to a transformed state of wholeness. It must be added that no simple summary can convey the depth and subtlety of James’ analyses and commentary.

Several justifiable criticisms have been leveled at *The Varieties of Religious Experience*. The book is marked by a “decontextualized” and “ahistorical” frame of reference. Historical figures make appearances without commentary regarding what constituted the historical or social circumstances which may have contributed to their encounters with religious experience. He shows less or little innate sympathy for the experience of the Roman Catholic figures mentioned in the book thus perhaps displaying an attitude common to the era of Protestant hegemony in America at the time the lectures were written. And reviewers, notably G. Stanley Hall, were critical of his abandonment of experimental, positivist science as a way of testing and verifying his hypotheses about the various categories of religious experience he explores. In short, James is accused of having abandoned the scientific method for something that appears to be a methodology based on more purely descriptive, biographical accounts laced with philosophical language. These are all fair criticisms that unfortunately fail to take into account the carefully nuanced and empirically derived portraits and concepts that make up the work. James’ writing is deceptively simple and yet richly allusive as well as being psychologically precise and astute.

### James’ Legacy

So what category of religious experience best describes William James himself? Was he

“healthy minded” or a “sick soul”? Biographical evidence seems to indicate that he was both though not at the same time. Weighed down with fear and anguish, he progressed through a period of deep doubt and search for an identity and purpose as a young man suffering what appears to be a mix of clinical depression and panic disorder. James may thus at one point at least be identified as a discernible “sick soul.” He became, as he went forward, filled more with confidence and satisfaction with life that was communicated to others including his family, students, and professional colleagues. He transcended and moved beyond the anxiety, self-doubt, and inhibitions of the morbidly self-absorbed adolescent and young adult he had once been. James may thus be viewed as one who was among the “twice born” who incorporated and displayed a disposition marked by “healthy mindedness” as he matured. His curiosity and zest for exploration for all things was virtually never ending. He was, in the words of the great American psychiatrist Harry Stack Sullivan, committed to being among those “human beings to whom nothing is alien.” James died in 1910 at his beloved country home in Chocorua, New Hampshire, of complications related to a heart condition that had plagued him for many years. His legacy is rich and filled with meaning for all who would take the time to get to know this most American of philosophers.

## Jerusalem

Erel Shalit  
 Israel Institute of Jungian Psychology,  
 Ra'anana, Israel

## History

Jerusalem is a city holy to Judaism, Christianity, and Islam, in which it is the third holiest city after Mecca and Medina.

The history of Jerusalem dates back to the fourth millennium BCE. According to the Biblical narrative, it was a small, fortified Jebusite city until made capital by King David in the tenth century BCE. He brought the Ark of the Covenant, holding the stone tablets with the Ten Commandments, to Jerusalem, later placed in the Holy of the Holiest in the temple built by his son, King Solomon. The Babylonian King Nebuchadnezzar destroyed Jerusalem and deported much of the population in 586 BCE. However, decades later King Cyrus allowed the Jews to return, and the Second Temple was completed in 516 BCE, later rebuilt and enlarged by Herod in the first century BCE. Hellenism was introduced by Alexander the Great, who ruled from 332 BCE. While the Jews eventually regained the rule, the Romans took control in 63 BCE. Jesus, born c. 6/5 BCE, towards the end of Herod's reign, was crucified at Golgotha, probably in 30 CE.

The Second Temple was destroyed, presumably on the day of the destruction of the First Temple, ninth of the month Av, in 70 CE. In 131, Emperor Hadrian renamed the destroyed city Aelia Capitolina and built a temple to Jupiter, prohibiting the Jews from entering the city. With the Muslim conquest in the seventh century

CE, Jews were allowed to return. In 715, the Umayyads built the al-Aqsa Mosque at the Temple Mount.

The Crusaders ruled from 1099, barring non-Christians from the city, which was captured by Saladin in 1187. In the early sixteenth century, Jerusalem and the Holy Land were conquered by the Ottoman Empire. Jerusalem remained desolate for centuries, with a population of less than 9,000 in 1800. Only in the mid-1900s did the city recover and grow again. In 1948, Jerusalem was divided between Israel and Jordan, reunited in 1967 when Israel gained disputed control over Eastern Jerusalem, as well as of the Old City.

## The Name of Jerusalem

Legend says Jerusalem has seventy names and is mentioned in the Bible by names such as City of Joy, of Confusion, of Praise, of Justice, of Righteousness, and of Bloodshed (e.g., Isaiah 1:22, 26; Jeremiah 49:25; Ezekiel 22:2). *The Holy* (Heb. I'r haKodesh) is today the name commonly used in Arabic (Al-Quds). The meaning of the name Jerusalem has been variously interpreted, e.g., as I'r Shalem, the city of peace and wholeness; as combining the Hebrew words Jerusha and Shalem, meaning *Legacy of Peace*; and as a combination of the name that Abraham gave the place after the near sacrifice of Isaac, (Adonai) Yireh, *the Lord sees* (Genesis 22: 1–14), with Shalem. The Septuagint and the Vulgate transliterate the name as Hierusalem, thus combining *Hieros*, the holy, with Shalem.

The plenitude of names, such as “Gateway to Heaven” (Genesis 28:17), reflects the extent to which Jerusalem is pregnant with archetypal imagery and projection of wholeness, often in tense contrast to the conflicts it has suffered through history. The Jerusalem Syndrome is a manifestation of the archetypal possession from which some visitors to the city suffer, as they tread ground numinously soaked in myth and religion.

Jerusalem takes its origin in the City of Shalem and bears its name from its mythological founder Shalem, the Canaanite god of creation,

completeness, and the setting sun. However, while peace and wholeness have become the insignia of Heavenly Jerusalem, the darker shadow side of Jerusalem is present already in its archetypal origin, the twin brother of Shalem being Shahar, the Morning Star. Shahar (as in *Shacharit*, the Jewish morning prayers), or in his Christian denomination Lucifer, announces the arrival of light and consciousness, the shadow that brings light, the light of consciousness that attempts to overthrow the rule of the gods but falls from heaven.

### Archetypal Image of Center and Wholeness

In Judeo-Christian tradition, Jerusalem is a central image of peace and wholeness, a symbol of unity, justice, and future redemption (cf. Psalm 122:1–9; Revelation 21). The ancient Jewish prayer, “Next year in Jerusalem,” entails a request for spiritual rather than physical redemption.

Likewise, in Revelation 21, John describes Heavenly Jerusalem; “I saw the holy city, new Jerusalem, coming down out of heaven from God, prepared as a bride adorned for her husband. . . ‘Behold, the dwelling place of God is with man’.” Jerusalem is then described as “having the glory of God, its radiance like a most rare jewel, like a jasper, clear as crystal . . . the city was pure gold, clear as glass.” Thus, Jerusalem is a prominent symbol of the Self as God image, as an image of the seat of divinity in the soul of man.

In reference to Jerusalem as “the center of the earth,” Jung considers her as a symbol of the Self (1959, *CW* 9i., par. 256). However, as the heavenly bride (Revelation 21:9) and as “the goal of our longing for redemption,” he emphasizes Jerusalem as an archetypal image of the mother (1956, *CW* 5, par. 318; 1959, *CW* 9i, par. 156; 1958, *CW* 11, par. 612).

Likewise, the Shekhinah, God’s feminine aspect, which means dwelling, implies God’s manifestation in the world. The Temple in Jerusalem represents the dwelling of the divine

presence, and with its destruction, says the legend, the Shekhinah was forced into exile. This would indicate not only a split between the masculine and the feminine aspects of the God image, but also that the sense of wholeness and completion is absent from the material dimension of the world. In the individual psyche, this reflects a condition of split between ego and Self (cf. Edinger (1972); Neumann (1970)), an incapacitating separation from one’s soul and inner sources, as expressed in Psalm 137:4–5: “How shall we sing the Lord’s song in a foreign land? If I forget thee, O Jerusalem, let my right hand forget her cunning.”

Judaism ascribes central events, such as the binding or sacrifice of Isaac (the akedah), to the Temple Mount at the center of Jerusalem. An ancient belief has it that Jerusalem is the navel of the universe, and here Adam, the first man, was supposed to have been born out of the dust, the earth, adamah. Successive religions have claimed (cf. Elon 1996, p. 11) that the creation of the world began at the Foundation Stone of the *Temple Mount*, where the Muslim *Dome of the Rock* now stands. Some Jewish legends tell about stones raining from the sky, and from the stone that God threw into the abyss, the world originated, with Jerusalem at its center. The Kabbalistic Book of Splendor, the Zohar says, “groups of angels and cherubim hover above the Foundation Stone, and. . . from there all the world is blessed” (Vilnay 1973, p. 15).

### Transformation from Human to Divine

In Christianity, the pivotal event taking place in Jerusalem is prominently Jesus’ casting out the money changers and the pigeon sellers from the Temple, and the Passion story, with the crucifixion at its center. Jesus confronts the shadow which has taken its seat in the house of prayer and the corruption which has taken predominance over the spirit. The process of individuation often requires a betrayal of collective loyalties (Edinger 1987, p. 83). The ensuing passion story, with the Crucifixion, Burial, and Resurrection of Jesus, entails the grand transition of

*Yeshua*, Jesus from Nazareth to *Christ*, the Anointed, and the Messiah. The human ego “is nailed to the mandala-cross representing the Self” (1987, p. 98). As a psychological process, the coniunctio of the crucifixion reflects the ego’s transformation into Self.

## The Night Journey

Muhammad’s night journey on his flying horse *al-Buraq*, which had the face of a woman, the body of a horse, and the tail of a peacock, is described in the 17th Sura (chapter) of the Quran as taking place from the Holy Mosque in Mecca to “the farthest mosque” (*al-Masjid al-Aqsa*). While *al-Aqsa* has been understood metaphorically, it is sometimes considered to be in recognition of Islam’s roots in Judaism that *al-Aqsa* received its earthly location and was built at the Temple Mount in Jerusalem. According to legend, Muhammad tied the horse to the Western Wall of the Temple Mount, from where he ascended to the seventh heaven, together with the angel Gabriel. On his way he met the guardians of heaven, the prophets of other religions, Adam, Jesus, St. John, Joseph, Moses, and Abraham, who accompany him on his way to Allah and accept him as their master. As Muhammad ascends to heaven, he leaves his footprint on the Stone, and as he returns, he brings the instruction for the daily prayers.

Muhammad’s ascension and return from heaven takes place on a ladder of the prophets that preceded him, thus serving as an axis between earth and heaven, between human and divine, similar to Jacob’s dream of the ladder, the foot of which was in Beth-El (house of God), while its top, according to Rabbinical folklore, reached the gates of heaven from Jerusalem.

## Self and Shadow

While Jerusalem is a symbol of wholeness, it entails a plenitude of shadows, as hinted in its archetypal origin. The prophet Ezekiel describes the Godforsaken Jerusalem as poor and

neglected, as a shameful and condemned whore (Ezekiel 16).

The shadow aspects of the psychological myths pertaining to Jerusalem are evident in actual locations in this city, so full of places where religious events with great psychological implications have taken place. The agony of Via Dolorosa and the tears at the Western Wall are prominent, and both reflect the close proximity of shadow with Self, of pain, agony, loss, and destruction with wholeness and ascent.

Legend has it that Judas Iscariot struck the deal to betray his Master in the country home of Caiaphas, at *The Hill of Evil Counsel* (cf. Shalit 2008, p. 125 ff.). Likewise, near the Old City lies Gehenna, *The Valley of Hell*, which once was the site of a fire altar called Tophet, inferno. Children were burned here as sacrifice to the Ammonite king-god Molech, as mentioned in 2 Kings 23:10:

And he defiled the Tophet, which is in the valley of the son of Hinnom, that no man might make his son or his daughter to pass through the fire to Molech.

Eventually the shrine was abandoned and became a dumping ground for criminals and outcasts, whose corpses were burned in the constantly burning fire, creating the smells and fires of hell. It was before a crowd of priests and citizens in the Valley of Hell that the prophet Jeremiah denounced their pagan practices. He smashed an earthenware jar and cried out, “Thus says the Lord of hosts: So will I break this people and this city as one breaks a potter’s vessel, so it can never be mended” (Jerusalem 19:11).

Jerusalem prominently reflects three aspects of Self and Individuation symbolism: wholeness and unity of opposites, transformation from human to divine, or, psychologically, from ego to Self, and the ladder or axis between ego and Self.

However, as an image of wholeness, or Self in the terms of analytical psychology, it entails, as well, a powerful shadow of hell and evil, of conflict, loss, and mourning. Jerusalem reflects the interdependence between material and spiritual, human and divine, and between shadow and Self.

## Jerusalem Syndrome

Mark Popovsky  
 Department of Pastoral Care, Weill Medical  
 College of Cornell, New York Presbyterian  
 Hospital – Chaplaincy, New York, NY, USA

The term Jerusalem Syndrome refers to a group of psychopathological phenomena in which religious delusions lead to or are triggered by a visit

to the city of Jerusalem. Those suffering from Jerusalem Syndrome characteristically believe themselves to be biblical or messianic figures. Common patterns of behavior include splitting away from sightseeing groups or families and touring the city on one's own, a sudden increased interest in issues of cleanliness and ritual purity, shouting biblical verses or singing liturgical songs in public, formal processions to holy sites, and delivering sermons which may be strongly moralistic in nature or altogether incoherent. Violent behavior is rare. However, in one well-publicized case, an Australian tourist set fire to the Al-Aqsa Mosque in 1969.

Written records of foreign tourists expressing symptoms of Jerusalem Syndrome date back to the mid-nineteenth century when rail travel first made visiting Jerusalem accessible to a large number of Europeans. The Jerusalem psychiatrist Haim Herman published his clinical observations in 1937 opining that the phenomenon made distinguishing between the normal and the pathological psyche twice as hard in Jerusalem as in any other city. Since that time, debate in the medical literature has primarily revolved around understanding if visiting Jerusalem itself may actually trigger a psychotic episode in some or if long-standing psychopathology causes the visitor to travel to Jerusalem in the first place.

Most authors agree that the majority of cases today involve individuals with prior histories of psychiatric illness who have set out to visit Jerusalem under the influence of a religious delusion. Nevertheless, one expert describes a discrete form of Jerusalem Syndrome in which no previous mental illness exists and the psychotic symptoms spontaneously resolve to full recovery shortly after removing the person from the city. While those with previous psychiatric histories manifesting symptoms of Jerusalem Syndrome are roughly estimated to be 50 % Christian and 50 % Jewish, the overwhelming majority of those exhibiting the discrete form of the illness with no prior psychopathology are Protestant Christians. The overall rate of foreign tourists hospitalized for psychiatric reasons in Jerusalem does not differ from that of comparably sized cities. Though less well documented, similar

psychiatric phenomena have been reported in other holy cities including Florence (Stendhal Syndrome) and Mecca.

## Jesuits

Paul Giblin  
Loyola University, Chicago, IL, USA

### Saint Ignatius

In 1534 Ignatius of Loyola gathered a small group of university graduates in Paris and gave them the Spiritual Exercises. The Exercises came out of Ignatius' ongoing conversion experiences especially while recuperating from a cannonball wound and on pilgrimage in Montserrat and Manresa, Spain. The Exercises call the retreatant to focus interiorly and accept God's action in one's life; they also help one to focus one's life direction. Ignatius and his "companions in Christ" made vows of chastity and poverty and were filled with a missionary desire to imitate the life of Christ, to preach the Gospels, and to serve the poor. In 1540 the Society of Jesus, the Jesuits, was formally approved by Pope Paul III, and Ignatius was elected its first general.

The Jesuit charism is that of "contemplation in action," grounded in disciplined prayer practice and service to those in need. Jesuits are called to "find God in all things," to live generously, and to

serve "for the greater glory of God." This spirituality is not a monastic withdrawal from the world. Quite the contrary, its defining vision is to find God through engagement with the world. Jesuit service has taken many forms, beginning with missionary activity, a large educational focus, and an ongoing social justice commitment.

The foundational documents of the Society of Jesus are threefold: the Spiritual Exercises, the Constitutions of the Society of Jesus, and St. Ignatius' autobiography. Jesuits make the Spiritual Exercises in a 30-day retreat at the beginning of their ministry and upon taking final vows. They renew this experience annually in an 8-day retreat. Essential to ongoing Jesuit spiritual practice is the Examen, which is a twice-daily time of prayer and reflection on God's activity in their lives. Jesuits learn the practice of "discernment of spirits." This involves listening to the movements of one's heart; it is based on the assumption/experience that God speaks through the people and events of one's life, and one tunes into God's presence by listening to the movements of one's heart. The Jesuits are the largest male religious order in the world. What follows is a sampling of five Jesuits, admittedly an arbitrary choice of the author's "favorites," who embody the essence of Jesuit spirituality. This entry concludes with a summary of the essential elements of Jesuit spirituality.

### Gerard Manley Hopkins

Gerard Manley Hopkins is the "Jesuit's greatest poet." He is the only Catholic priest and Jesuit honored in the Poet's Corner of Westminster Abbey. He is known for intensity and originality of language, experiments with "sprung rhythm," and as a religious poet who thoroughly embraced the natural world. His poetry is meant to be heard rather than read.

Hopkins was born in Stratford, England, in 1844, the eldest of eight children, and encouraged for his artistic abilities. He, like his father, wrote poetry. He excelled in classical studies at Oxford. At 21 he converted from Anglicanism to Catholicism and at 23 entered the Jesuits,

neither with the approval of his family. He was ordained a priest 10 years later and died at age 44. Hopkins was profoundly influenced by the Spiritual Exercises. Like Ignatius, he saw all creation as infused with the divine; he coined the term “inscape” to describe the “individual essence and uniqueness of every physical thing” and sought to understand the interconnectedness of all things. He saw God as an “incomprehensible certainty” and lived a difficult life trusting in the mystery of God’s providence. Hopkins struggled to balance the dual vocations of priest and poet. His academic-preaching load was heavy, his health was poor, and he struggled to give himself completely to God. He destroyed most of all his early poetry upon entering the Jesuits, seeing the dual vocations as incompatible. He created a small body of prose and poetry over a 14-year period beginning with creation of the “Wreck of the Deutschland,” and this is only because of the encouragement of his religious superiors. Little of his work was published during his lifetime. Like Ignatius, Hopkins’ life was one of service to God, with a significant cutoff from his family, and including an ongoing struggle with the “fascinating and terrible” dimensions of the spiritual journey. Hopkins was driven to describe the natural world, to reflect on its abundant uniqueness and the divinity reflected through it all.

### **Pierre Teilhard de Chardin**

Pierre Teilhard de Chardin was the “most Jesuit of Jesuits in centuries” and a world class scientist and paleontologist. His vocation was to bridge science and faith, which he found as entirely complementary. God was to be found in all things, animate and inanimate, see *The Divine Milieu* (1960). He embraced Darwin’s theory of evolution and wed it to spiritual/cosmic development; he believed that the universe continues to evolve, culminating in a convergence of all things in Christ. Evolution was spiritually directed, not a random process. That all humans have and are is gift from God is celebrated especially in his *Hymn of the Universe* (1965).

Chardin was born in south-central France in 1881. He was the fourth of 11 children raised in a strongly religious family. From an early age, he began collecting stones and minerals, had an “innate appetite for the earth,” and a “certain love of the invisible.” He entered the Jesuits at age 18 where his interest in science was encouraged by his superiors. He was ordained a priest at age 30. Shortly thereafter as a stretcher bearer during World War I, he saw firsthand the evils of war. Ironically he would come to be criticized by religious authorities for being theologically too optimistic and dealing inadequately with sin.

His life experience as both priest and scientist spoke of a profound integration of faith and science, an intimate intermingling of divine, spiritual, and material. Like Ignatius he experienced several mystical moments. His theology however did not resonate well with the religious authorities, and he was “exiled” to China for 12 years and not allowed to publish anything theological or philosophical. *The Phenomenon of Man* (1959) and *Divine Milieu* (1960), like the rest of his writings, were published posthumously. Chardin died in 1955 at age 74 in New York. If the central Jesuit question is how to experience God in one’s life, Chardin answered, by uniting ourselves with the material, cosmic world, and with each other. An oft-quoted Chardin line captures this sense: “Someday, after mastering the winds, the waves, the tides and gravity, we shall harness for God the energies of love, and then, for a second time in the history of the world, man will have discovered fire.”

### **Karl Rahner**

Karl Rahner was one of the most influential and prolific theologians of the twentieth century. He was an official papal theologian for Vatican Council II and was pivotal in shaping the Council’s thinking on church and revelation. He was a pastor and theologian who grappled with real-life issues, beginning with the search for God, questions of life meaning, religious inclusivity, women’s ordination, and the everyday dynamics of hope, forgiveness, gratitude, guilt, and failure.

He loved history and sought pastoral answers in the teachings of the church. His theological starting point was human experience, most especially the radical questioning of human existence. Humans are fully themselves in consciously exploring their desires, their “infinite longing” but not finding satisfaction, and ultimately in union with God revealed in Christ. For Rahner, the Spiritual Exercises were “the existential root out of which he did all his thinking.” His theology emerged from his mystical encounter with God, and his pastoral practice was to encourage such encounter for all persons.

Karl Rahner was born in Freiberg, Germany, in 1904. He was the fourth of seven children raised in a middle-class family. At age 18 he entered the Jesuits and was ordained at age 28. His older brother Hugo was also a Jesuit. After only 2 years in the Jesuit novitiate, he published his first article, “Why prayer is so indispensable,” and in so doing launched his life focus on spiritual practice. Rahner lived for 62 years as a Jesuit and died at the age of 80 in 1984.

### John Courtney Murray

John Courtney Murray, like Rahner, was an architect of many of the Second Vatican Council’s most significant ideas. His was a vocation of bridging religion and public life. He held multiple public and civic positions and engaged diverse issues including academic freedom, religious education in public schools, tax aid to public schools, Selective Service classification, and US-Soviet relations. He advocated for religious freedom and argued for substantive church and civic debate on moral issues, trusting in Americans’ abilities to deepen their religious commitments. “For him, contemporary society (church and state) was healthy and moral in direct proportion to the types of questions that it collectively pursued. The broader the types of inquiry, the healthier the society” (Hooper 1993, p. 2). He argued for ecumenical and interfaith dialogue and dialogue with atheists. He struggled with the Catholic Church’s “over-developed sense of protectiveness and authority.” In 1954 his writing

on religious freedom drew the censure of the Vatican; only 9 years later he was invited into a substantive role in the Vatican Council. His most famous book was *We Hold These Truths: Catholic Reflections on the American Proposition* (1960).

Murray was born in 1904 in New York, entered the Jesuits at age 17, and was ordained a priest in 1933. He was a Jesuit for 47 years and died at the age of 63 in 1967. Early Jesuit missionaries like Francis Xavier and Matteo Ricci found that the Christian faith needed to respect, learn from, and approach other faith traditions with humility. John Courtney Murray heard God’s voice in the dialogue between faith traditions, between church and state institutions, within church structures, and between the pulls of history and the future. His legacy was to embrace and not fear diverse voices.

### William Meissner

W.W. Meissner is a psychiatrist, psychoanalyst, and Jesuit priest practicing in Boston, Massachusetts. He brings together religious training in theology and philosophy with medical and analytic training. John Courtney Murray was his mentor. Meissner’s professional life task has been to build bridges between psychology and theology and between psychoanalysis and faith. He shows the interdependence of psychological and spiritual identity, how “grace builds on nature” while “respecting the ego’s decision-making functions,” and how psychosocial development has psychospiritual equivalents. He challenges Freud’s view of religion as pathological and argues for the reality base and healthy dimension of religious illusion. Meissner has developed an impressive body of work including *Psychoanalysis and Religious Experience* (1984), *Life and Faith* (1987), *Foundations for a Psychology of Grace* (1966), three texts exploring Ignatius and Ignatian Spirituality, and most recently *Time, Self, and Psychoanalysis* (2007). Like Ignatius, Meissner seeks to “find God in all things,” most specifically in the interplay between psychology/psychoanalysis and faith/religion.

## Conclusion

Other Jesuit “giants” might have been chosen in place of the above five. Bernard Lonergan is a Canadian theologian with significant work in the area of theological method. Robert Drinnan was Dean of Boston Law School until he became a Congressman from Massachusetts. William Barry is a psychologist, author, and spiritual director with significant contributions in the area of prayer and spiritual direction. The list goes on.

The abovementioned five Jesuits embody the charism of “contemplative in action.” They are grounded in the experience and vision of the Spiritual Exercises. They have experienced the grace of God’s self-giving often in profound mystical ways. Their response to God’s self-gift is gratitude and service. Each in their own way has sought to “save souls.” Jesuit spirituality is respectful of culture and individual freedom, while keenly aware of human limitation, constraining attachments, and social sinfulness. Jesuit spirituality is optimistic and hopeful, believing faith needs to engage fully with culture and reality. It is necessarily adaptive. It is particularly attentive to the dynamics of human desire, believing that God and human fulfillment are to be found in the depths of the heart’s desires.

## Jesus

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

There is no conclusive evidence to disprove the existence of the Jesus of history, although what evidence that does exist regarding his earthly life and ministry is minimal. Scholars date his birth at ca. 4 BCE. According to the Gospels, his home where he grew up was in Nazareth, possibly in lower Galilee (Matt. 2.23; Mark 1.9; Luke 1.26; John 1.45f). Most likely Jesus had siblings and was raised in a Jewish home and in Jewish traditions including attending synagogue and temple worship and becoming versed in the Jewish Scriptures. He probably helped his father as a builder in a nearby city. His public life begins at about age 30 and is marked in the NT Gospels by his baptism by John the Baptist in the River Jordan (Mark 1.9–11; Matt. 3.13–17;

Luke 3.21–22; John 1.29–34). John the Baptist is thought to have been a member of the Essenes, a Jewish priestly millennia list sect invested in ascetic, apocalyptic beliefs, and practices. The Gospels portray Jesus in a stronger yet respectful light in relation to John the Baptist, suggesting a regard for the Essenes, connecting Jesus himself within the apocalyptic tradition of the Essenes, as well as the Maccabees and the *Book of Daniel*. In this way he is presented as one who carries further and brings to fruition the apocalyptic expectations of past generations. He is presented as an itinerant preacher traveling from village to village addressing the uneducated and poor of an agrarian culture prevalent during this time. Scholars liken him to the cynic philosophers who are speaking out against the social norms of its society. He speaks of the “Kingdom of God,” an envisioned new world order of social justice and divine sovereignty. There are various meanings of this worldview presented by the Gospel writers, although the notion of a definitive and timely advent of the Kingdom is common to all of them. Jesus expected this religiopolitical shift to happen in his lifetime (e.g., Mark 8.38; Matt. 10.23, 16.27–28; Luke 9.23–27), as did Paul his (unknown) contemporary (1 Thes. 4.13–18; 1 Cor. 15). Being outspoken and visionary, Jesus attracts followers – including a selection of disciples. The Gospel of John presents Mary Magdalene as an intimate follower of Jesus, while making reference also to the “Beloved Disciple” whom Jesus loved (John 13.23–25). Jesus was arrested and executed as a martyr by Rome in ca. 33 CE. More than the historical figure, most of the early Christian literature including the New Testament presents some quality of the spiritualized Jesus. He appears as one who is transfigured (Mark 9.2–10) and resurrected (Mark 16.1–8) from the dead. Interestingly, his followers as portrayed in the Gospels appear not to expect an empty tomb nor a resurrection. In all four Gospels the women go to the tomb expecting to find his crucified body sealed within it. In the Gospel of John when Mary Magdalene sees that the tomb is empty, she demands that someone has taken Jesus’ body

and put it somewhere else (John 20.13–15; cf. Mark 16.1; Luke 24.5). However, a variety of postmortal epiphany experiences of Jesus are presented. Jesus appears to Mary after his resurrection (John 20.11–18). He appears to the disciples who are gathered together in a closed room (John 20.19–23; cf. 24–29) and again appears to them on the shore of the Sea of Tiberias (John 21.1–14). He appears to Saul on his way to Damascus resulting in Saul’s conversion to Christianity (Acts 9.1–22). He also appears to Peter (Acts 10.1–23) and to Stephen (Acts 7.54–60). The meaning of Jesus’ resurrection has received much attention. For Origen of Alexandria (ca. 185–254), Jesus as the Christ occurs as the New Adam being in the pure and unbroken likeness of the divine prior to the Fall (*First Principles* I.2.8). Augustine says how Christ as *Adam secundus* restores the damaged *imago Dei* to its original state. This act of restoration extends even to the dead (*descensus ad inferos*). Freud likens Christ to Mithras who alone sacrifices (the bull) for the atonement of the guilt of the brothers (Freud 1913, p. 190). For Jung, Christ exemplifies the archetype of the self and represents a “totality of a divine or heavenly kind, a glorified man... unspotted by sin” (Jung 1969, p. 37). Paul speaks of being transformed in Christ by the “renewal of the mind” (*anakainōsei tou nous*) (Rom. 12.2; cf. 2 Cor. 4.16), relating a notion of spiritual rebirth which is fully penetrating. It is a reformulation process already begun and ongoing and will be brought to completion upon Christ’s return (Rom. 8.18–25). Through Christ one experiences both suffering/dying and transformation into a spiritual body (*sōma pneumatikon*) (1 Cor. 15.44), a body which will have angelic substance and illumination like the stars (1 Cor. 15.41; cf. Dan. 12; Ezek. 1.28; Matt. 22.30).

## Jewish Care and Counseling

Nicole Gehl  
The Priory Hospital, London, UK

The matter of Jewish identity is complex and multifaceted. Judaism is typically described as the religious system of the Jews, based on the belief in one G-d who created the Earth and gave the Torah in a revelation to Moses at Mt. Sinai. The Jewish philosopher Rabbi Moses ben Maimon or Maimonides (1135–1204) set forth the 13 principles of faith, compiled from the 613 mitzvot or commandments found within the Torah (the five books of Moses). These encapsulate the essential requirements of Jewish belief in his commentary to the Mishnah (Sanhedrin, 10):

1. Belief in the existence of the G-d the creator.
2. G-d is unity.
3. G-d is incorporeal.
4. G-d is eternal.
5. Prayers are to be directed to G-d alone.
6. The words of the prophets are true.
7. Moses was true and the chief of the prophets.
8. The whole Torah now in our possession is that which was given to Moses.
9. The Torah will not be changed
10. G-d knows all of the deeds and thoughts of man.
11. G-d rewards those that keep his commandments and punish those that transgress them.
12. The Messiah will come.
13. G-d will resurrect the dead.

Jewish identity, however, is not predicated on one's set of beliefs and/or observances. A Jewish person does not necessarily practice Judaism, nor does one's strict observance of all the tenants of Judaism automate one's acceptance as a Jew. In accordance with halakha (Jewish religious law), one's Jewishness is either passed down matrilineally or through a conversion process to Judaism. However, some nonorthodox Jews support the transmission of Jewish identity through patrilineal descent. The matter of what constitutes a valid conversion to Judaism is an issue of contention across Jewish denominations, with the traditional movements denying the lawfulness of conversions taking place within the more liberal sects. There are further controversies with regard to whether one retains their Jewishness should they convert to another religion, or self-identify as atheist, as well as the matter of who should rightfully be considered Jewish by Israeli legislation, and so therefore have the right to settle and gain citizenship in Israel. For summaries of the most common denominations of Judaism, see entries on Orthodox Judaism, Conservative Judaism, Reform Judaism, and Reconstructive Judaism.

It is beyond the scope of this entry, which is concerned with the matters of Jewish care and counseling, to address in any depth positionings in the ongoing debates as to who is and is not rightfully considered a Jew, nor is it the intent to define the experience of Jewishness in a homogenous manner, but rather to acknowledge the concept of Jewish identity and culture as rooted in a particular social and historical context which despite the vast differences across Jewish individuals and communities have certain implications on the worldview of Jewish clients in treatment. The Jewish experience of psychotherapy and counseling has been historically ignored perhaps in part due to the fact that theirs is what is considered an invisible minority status (one cannot deduct Jewish identity by appearance alone, without the presence of external artifacts such as the presence of a star of David or a yarmulke) and in part because Jews often view themselves as having a bicultural identity, developed in part by their membership within a particular country and society (Schlosser et al. 2009).

In recent years there has been an upsurge of research and interest in ethnocultural factors in mental health care and the need for psychotherapists and counselors to be aware of Jewish culture, religion, and ethnicity and the impact that it has on the lives of their Jewish clients. This remains challenging as there is not any simple way of encapsulating the essence of the Jewish experience.

## Jewish Issues

Schlosser (2006) asserts that there are basic issues and experiences that all Jewish people will have to negotiate. These include (a) anti-Semitism, (b) the Shoah (i.e., the Holocaust), (c) internalized anti-Semitism, and (d) the invisibility of Judaism. Anti-Semitism, defined as “a hostile attitude toward the Jews that has become institutional and traditional” (Halpern 1987, p. 3), has been prevalent across cultures in various forms for over 4,000 years and persists in contemporary society in blatant (Holocaust denial, Jewish conspiracy theories) and more subtle manners (exaggerations of the Jewish sphere of influence in government, finance, and the media). Anti-Semitic stereotypes impact religious and secular Jews alike, and for some Jewish people, learning about anti-Semitic events may be experienced as traumatic (Friedman et al. 2005). The Shoah (translated literally as “catastrophe” from Hebrew) is a term preferred by many Jews for what is more commonly known as the Holocaust, the attempt at annihilation of the Jewish people by the Nazi regime, which resulted in the murder of over six million Jews. Research on the intergenerational transmission of trauma has led to the conclusion that all Jews feel the impact of this collective suffering and near extermination. One such result of this is the climate of fear experienced by Jews living in the Diaspora and the matter of “Jewish paranoia,” an issue raised by Kaye/Kantrowitz: “Many of us were taught that the world is dangerous because the world is dangerous. A therapist who treats this fear as

a pathology seriously misses the point” (1991, p. 12). Another consequence is the matter of internalized anti-Semitism, which may manifest in feelings of self-hatred or shame regarding one’s Jewish identity, distancing oneself from the Jewish culture and heritage, and hostility towards practicing Jews. As mentioned above, people of Jewish identity are members of “a hidden diversity” (Naumburg 2007). Langman (1995) posits that they have had a minimal focus in multiculturalism for the following reasons: they are seen as an assimilated nonminority, economically privileged, part of the white majority, members of a religion rather than a culture, and due to the lack of awareness of Jewish oppression. The lack of attention to Jewish multicultural issues contributes to the Jewish people feeling alienated and marginalized by the mainstream.

## Jewish Identity in the Consulting Room

It has been suggested that when a therapist and client share a background, empathy and rapport may be more readily established (Alladin 2002). However it is wrong to assume that a Jewish therapist is preferable for Jewish clients. In fact gentile clinicians may offer a unique space for Jewish clients who wish to explore their beliefs and practices, without feelings of guilt or shame related to appearing “a bad Jew,” or “not Jewish enough,” to a Jewish therapist (Naumburg 2007). The biases and beliefs that a Jewish therapist may have around their own identity may similarly provide a difficulty when understanding the experience of the Jewish client (Krieger 2010). Whether or not there is a shared Jewish identity and regardless of how knowledgeable in Judaism one is, it is impossible for the therapist to know how the client experiences lived Judaism and must have a willingness to work with the question into the room. The culturally sensitive clinician should seek understanding of the Jewish client’s level of religious observance and relationship with the Jewish community and with the dominant culture at large. Not every Jewish client will

disclose their Jewish identity, however, and it is essential to follow the client's lead in this respect and with the utmost sensitivity in inquiring about a client's religious and ethnic background. The therapist must negotiate between demonstrating interest and respect for Judaism as an essential component of identity and respecting the wishes of the client whether or not to disclose this information (Schlosser 2006). Ultimately it is for the client to determine their Jewish identity's relevance to their difficulties which led them to seek help.

## Jewish Families

Culturally competent mental health practitioners need an understanding of the central role of the family in Jewish culture and to foster an awareness of the possible value conflicts between its relatively collectivist culture and the biases of traditional therapies which place a strong emphasis on the individual. The importance of family in Judaism is emphasized in both the Torah and the Talmud (rabbinical teachings and commentary on Jewish law), and the subject of marriage and childbearing is regarded as the fulfillment of G-d's will. As is set forth in Genesis 1:27–28, "Be fruitful, and multiply, and replenish the earth." Within Orthodox communities, arranged marriages are commonplace. Intermarriage (i.e., the marriage of a Jewish person to someone not Jewish) is forbidden by halakha. The consequence of choosing such a marriage is exclusion from the family of origin and the Jewish community. Instances of intermarriage have risen substantially in recent decades, and as a result the response of parents of children who have chosen intermarriage ranges from acceptance to sitting shiva (carrying out rites of mourning), as though the child had died. Jewish families are typically child centered, and there are laws, which dictate the manner in which children and parents interact with one another; it is the duty of the parents to transmit Jewish values, history, and identity to the child and the duty of the child to honor and respect his parents. Conflicts around

negotiating parental expectations and the emotional repercussions of being pulled towards their own desires are common emergent issues for Jewish clients in psychotherapy. The prospect of differentiation from the family of origin in asserting one's beliefs and lifestyle is a common struggle for adult Jews. For example, the requirement to honor and respect parents may prompt a sense of obligation for some clients to marry and have children before they are ready (Krieger 2010). The matter of defining boundaries and refining connections and obligations between family members across generations may be indicated in therapeutic work with Jewish families (Naumburg 2007).

## Responsibilities of the Clinician in Counseling Jewish Clients

Clinicians working with Jewish clients have a duty to develop understanding of how anti-Semitism has manifested within their society historically as well as the manner in which it persists today. The first port of call is acknowledgement of its existence and to confront one's own beliefs and behaviors around Jewish culture and Jewish people. Sensitivity to one's own assumptions and prejudices is paramount prior to starting the therapeutic process with someone of a minority status, whether or not the clinician shares that aspect of identity. Counseling professionals should make an effort to have a basic understanding of Judaism, its history, and traditions as well as some awareness of the tenants of living a Jewish life. At the same time, the clinician needs to retain awareness that Judaism is more than a religion and that Jewish identity is widely variable and may be experienced differently between individuals within the same religious denomination and even within the same family of origin. For this reason the clinician must be prepared to ask questions of the client's experience of cultural identity. Finally when counseling Jewish clients, clinicians would be well served to keep in mind that many taken-for-granted concepts such as enmeshment and

paranoia are culturally bound and to maintain a flexible approach breaching such areas with caution and sensitivity. It is not just the client who sits with the therapist in the consulting room, but a host of familial and cultural experiences with distinctive support systems and variable communication styles.

## Jewish Law

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

## General

Known in Hebrew as “Halakhah” (lit. “going” or “walking”), Jewish law represents a broad legal tradition regulating the full range of human activity including criminal matters, torts, worship, sexuality, marriage, divorce, diet, Sabbath observance, business ethics, and communal structure. Since the Middle Ages, a number of legal codes have purported to detail it in its entirety; however, no single book or set of books contains the full corpus of Jewish law. Rather, Jewish law is primarily a common law system with individual rabbis serving as judges who apply past precedents to novel situations. As rabbis may differ significantly in their interpretations of authoritative texts, individual practice under the aegis of Jewish law can vary widely from community to community.

## Biblical Law

The roots of Jewish law begin in the legal sections of the Pentateuch, Exodus 19–24, Leviticus 1–26, and Deuteronomy 4–26. These biblical law codes combine apodictic and casuistic laws, suggesting a rich legal tradition in the biblical period containing both a centralized ruling authority and an organic process for law to develop as experience accumulated. Even in its own time however, the laws of the Pentateuch were not sufficient by themselves to govern a society. Entire fields, such as family law, are virtually ignored, and individual dictates are often too vague to be applied in practice; for example, there are several commands to observe the Sabbath but almost no explicit direction regarding how to do so. Consequently, judges

and communal leaders began adapting, expanding, and interpreting biblical law from its inception. No written record of this legal discourse from the early postbiblical period exists today, but a vast oral tradition of legal exegesis was transmitted from generation to generation of communal leaders. These legal decisors – called “rabbis” from the first century onward – were viewed as spiritual descendants of the biblical prophets such that their interpretations and legal rulings held that status of biblical law even when they clearly limited or contradicted an explicit biblical command.

### Rabbinic Tradition

This oral tradition was first written in collections of Legal Midrash (*Midrash Halakhah*) somewhere between the second and fifth centuries. The books of Legal Midrash follow the order of the Pentateuch and purport to interpret each verse with legal ramifications. Some of the exegesis seems faithful to the original intent of the text, and other interpretations represent a clear effort to tie the current practices of the time to biblical verses even when no obvious link exists. This process of Legal Midrash allowed devotees to believe that their spiritual practice was rooted in the Bible even when the biblical text itself was too foreign or too vague to be of practical use without significant adaptation.

In second-century Palestine, Rabbi Judah the Prince compiled a vast legal text called the Mishnah (“Teaching”). It is arranged topically instead of according to the order of the Pentateuch. Unlike later law codes, it rarely presents definitive rulings on controversial issues; rather it summarizes generations of debates among scholars and records dissenting opinions. Often the positions described are not accompanied by the legal reasoning supporting them, but occasionally the rationale or exegetical basis underlying each side of the debate is presented. The Mishnah was quickly canonized and rapidly disseminated among Jews. Its popularity elicited extensive interpretation and expansion. Scholars speculated about how each rabbi arrived at his particular

ruling, brought borderline cases to further define each position, and added glosses to cover new situations. This body of interpretation on the Mishnah came to be called Gemara (“Learning”) and was eventually transmitted together with the Mishnah in a combined form that today we call the Talmud.

The Talmud grew to an incredible size before it was sealed in the fifth century. It weaves its legal discourse together with narrative, hagiography, theology, folk wisdom, and biblical exegesis of a nonlegal nature. It became the focus of Jewish scholarship for centuries and the basis for all future legal rulings. Like the Mishnah before it however, the Talmud often does not offer a definitive ruling on an open question but rather explores the rationales behind each viable opinion. Consequently, rabbis in the post-Talmudic period faced with the need to make a specific legal determination often corresponded by letter with more senior rabbis requesting advice on how to apply a particular Talmudic passage to a practical situation. These letters are known as Teshuvot (“Responsa”) and came to set authoritative legal precedents. Later Teshuvot cite earlier Teshuvot at least as much as they cite Talmudic discussions.

### Medieval Period

In the Middle Ages, several leading rabbis attempted to write legal codes summarizing all the Teshuvot and other opinions on a given topic to date, allowing the reader to quickly find a definitive ruling. Many of these codes were criticized for omitting dissenting opinions and oversimplifying what had become a richly textured system of legal discourse. Nevertheless, these codes quickly found popularity among rabbis and knowledgeable Jews daunted by the breadth of texts on even the most simple topic. The most famous of these codes (the *Mishneh Torah* compiled by Moses Maimonides between 1170 and 1180 and the *Shulkan Arukh* compiled by Joseph Caro in the 1540s) are still studied and cited today by rabbis as authoritative rulings on a wide range of subjects. Despite the

popularity of these comprehensive codes, their rulings were general and required additional nuance prior to application in specific situations. Consequently, the responsa literature expanded throughout the premodern and modern periods and remains today the primary source for specific legal rulings.

Though ritual questions were usually addressed by an individual local rabbi, criminal, family, and civil matters were generally considered before a rabbinic court, called a Beit Din, consisting of three or more rabbis. From the Roman period onward, few Jewish communities were afforded sufficient autonomy by the ruling authority to hear criminal cases. Jewish courts themselves ceded the authority to rule on capital cases. Nevertheless, throughout history, civil matters were commonly decided according to Jewish law by rabbinic courts well into the modern period and remain so in some Jewish communities today. These courts have a range of non-corporeal enforcement mechanisms, most notably the threat of excommunication – a very serious punishment in the premodern period when the excommunicated Jew would have been unable to integrate into the surrounding non-Jewish society. It is a principle of Jewish law that, with rare exception, the secular laws of the ruling authority supersede Jewish law when the two come in conflict.

## Contemporary Perspectives

Varying perspectives on Jewish law form the basis of the divisions between Conservative, Orthodox, Reform, and other types of Jews today. Orthodox Jewish theologians generally argue for strict adherence to Jewish law and believe that if it changes at all, it does so only very slowly. Conservative Jewish thinkers similarly value the observance of Jewish law, but most argue that it has always evolved over time and must continue to do so. Forward development of the law is most necessary when the law itself causes harm or otherwise alienates individuals such as when it excludes women from ritual

practice. Reform Jewish leaders generally distinguish between Jewish law relating to ritual matters and Jewish law relating to ethical behavior. They claim that the level of adherence to Jewish law on ritual matters should be determined by the individual and that Jews today only have an obligation to observe Jewish law with respect to ethical behavior. Of all groups, the Reform movement sees Jewish law as the most fluid and open to change. Individual Jews identifying with any one of these movements may or may not observe Jewish law in the ways suggested by the theologians of the movement.

Westerners are used to a divide between the public and private spheres, with law governing only the public and saying little about private behavior. Consequently, individuals steeped in classic Western tradition often have a difficult time appreciating the vast reach of Jewish law into even the most intimate matters an individual may face. For those who do adhere to Jewish law, discrepancies between legal requirements and personal practice can cause significant anxiety that is often underestimated by outsiders who are not accustomed to a legal system governing private matters.

One's adherence to Jewish law is measured strictly in terms of one's behavior. Consequently, one may be considered a pious practitioner of the tradition in the absence of underlying belief. This prioritization of action over creed explains why many Jews today consider themselves agnostic, atheistic, or otherwise doubtful of traditional theological claims yet still feel deeply committed to particular religious practices. The apparent disconnect between belief and action can appear illogical or sometimes even hypocritical to the outsider who may expect faith to serve as the primary motivation for religious action.

## Jewish Mourning Rituals

Mark Popovsky  
 Department of Pastoral Care, Weill  
 Medical College of Cornell, New York  
 Presbyterian Hospital – Chaplaincy,  
 New York, NY, USA

Ritual practices surrounding death and bereavement are strictly observed by many modern Jews, even those who have abandoned traditional behaviors in other aspects of their lives. Prior to death, the custom is for the dying person to recite a brief confessional prayer called the *vidui* in order that he or she leaves this world with no guilt or sin. There are, however, no theological consequences if this prayer is not offered.

### Prior to Burial

Immediately following death, utmost care is taken to preserve the dignity of the corpse. It is covered with a sheet and never left unattended from the moment of death until the moment of burial. Those who accompany the body during this period are expected to recite Psalms and refrain from casual conversation. Jewish tradition considers the body as belonging to God and only “on loan” to human beings while alive. Consequently, following death when the body returns to divine care, it must remain as intact as

possible. For this reason, autopsies and other postmortem procedures are strictly forbidden except when required by civil law or done for the express purpose of saving someone else’s life, as in the case of organ donation. Similarly, cremation is traditionally avoided on the grounds that no one other than God has the right to destroy the body.

Because the body is not embalmed, burial is done as quickly as possible, usually within 24–48 h barring exceptional circumstances. In the time prior to interment, a volunteer group called the *hevra kadisha* (“sacred society”) washes the body thoroughly and immerses the corpse in ritually pure water. They wrap the body in shrouds and sometimes also a prayer shawl. No other clothes are worn to show that all people are equal in death, regardless of wealth or social status.

### Burial and Funeral

So that the body may return to the earth without hindrance, no objects are buried with the corpse. In Israel, no coffin is used. In Western countries where coffins are required by law, a simple pine box is permitted. It is sealed by the *hevra kadisha* when they finish preparing the body. Open caskets at the funeral are not permissible under strict Jewish law.

Prior to the funeral, mourners will rend a garment or tear a black ribbon pinned over the heart as a sign of grief. Interment follows a simple service with prayers and eulogies. Because it is a religious obligation for members of a community to care for those who have died, all those present at the graveside share the responsibility of burying the body by each shoveling earth directly into the grave until the coffin is completely covered. This practice forces mourners to confront the finality of their loss; denial becomes impossible. Jewish graves are traditionally marked with a simple headstone again symbolizing human equality in the face of death.

## After Burial

For the 7 days following burial, immediate family members will observe *shiva* – a custom in which they remain at home, refrain from unnecessary work, and receive visitors. The community has the obligation to ensure that the family is well fed and always has sufficient numbers in the home for a prayer quorum. The continual presence of visitors generally prevents mourners from retreating into isolation or self-destructive behavior. Mourners sit on low stools to signal their discomfort. Mirrors in the home are usually covered as a rejection of vanity at a time of such intense grief. Visitors offer a simple blessing and avoid casual conversation, focusing instead on remembering the deceased and listening to the mourners describe their experience.

In the 30 days following burial, traditional mourners will refrain from sexual activity, shaving, or attending joyous events such as weddings or concerts. At the end of 30 days, these restrictions relax; however, the children of the deceased continue in an extended bereavement period in which a prayer called the *kaddish*, first recited at the graveside, is offered thrice daily during the year following the death. Because the prayer may only be recited as part of a group of ten, this tradition compels mourners to attend synagogue and avoid the social isolation that often accompanies grief. On each anniversary of the death, the mourner lights a memorial candle in the home and recites the *kaddish* prayer in synagogue.

## Jewish Reconstructionism

Nicole Gehl

The Priory Hospital, London, UK

Reconstructionism is the fourth major denomination of Judaism and was introduced by Lithuanian-born Rabbi Mordecai Kaplan (1881–1983) in the 1920s in America. It is the only major sect of Judaism to originate inside the United States, and the movement has had little reach beyond American borders. Rabbi Kaplan began his career as an Orthodox rabbi, but his dissatisfaction with Orthodoxy brought him to the Conservative rabbinical seminary where he retained a tenureship for 54 years. In this position, he taught Judaism as an ever-evolving civilization and asserted the need for Jewish people to reexamine the practices and customs of traditional Judaism in light of the changes and advances of the times. Kaplan sought to change the emphasis of Conservative Judaism so that it would appeal to Jews who had become psychologically and spiritually distant from their heritage. It was his belief that Judaism had persisted for thousands of years despite the adversities the Jewish people were subjected to because they held the belief that following tenets of Judaism would translate into otherworldly salvation. Kaplan asserted that modern Jews no longer believe in otherworldly salvation, and so for Judaism to remain relevant within the psyche of the Jewish people, it needed to be redefined “into a religion which can help Jews attain this-worldly salvation” (Kaplan 1962, p. viii).

The essence of G-d for Kaplan was something which man can never understand and therefore not of his concern. Rather his interest was in the psychosocial purpose G-d has in man’s life. With this as his aim he founded the Society for the Advancement of Judaism, setting out to “reconstruct” Judaism as it was lived within twentieth-century American culture. Although it was not Kaplan’s original intention to establish a new denomination of Judaism, its

necessity became apparent to his supporters, and in 1940 the Jewish Reconstructionist Foundation was established.

Kaplan controversially rejected many principles of Jewish belief, including the concept of chosenness, a personal messiah, and rabbinic authority. The absence of these traditionally Jewish tenets, some of which have been cited as the location of the focus of anti-Semitism, has particular implications on the self-identity of Reconstructionist Jews. The great conflict between Reconstructionism and Orthodox Judaism is that theology is not at the center of the Reconstructionist movement and *halaka* are apprehended of as “folkways,” rather than binding tenets of Judaism. The Torah is seen by Reconstructionist Jews as the response of the Jewish people to G-d’s presence, rather than a gift from G-d to his chosen people. Likewise, the *mitzvot* (commandments) are believed to be of human invention. Religion for Kaplan is a psychosocial phenomenon based on “neither belief, nor tenet, nor practice, but rather the continuous life of the Jewish people” (Liebman 1970, p. 7).

The matter of gender equality is greatly emphasized within the Reconstructionist movement; female rabbis have been ordained by the Reconstructionist Rabbinical College since its conception, and it was Kaplan’s own daughter who underwent the first Bat Mitzvah ceremony (analogous to the traditional Bar Mitzvah signifying a boy’s transition to adulthood) to mark her coming of age. Kaplan’s reworking of the Haggadah “the New Haggadah” and “The Sabbath prayer book” eliminates ideas and beliefs from the classical frameworks that are inconsistent with the beliefs of the Reconstructionist institution and maintain gender neutrality. Unlike the Reform movement, Reconstructionism advocates the performance of traditions and practices of Judaism for the purpose of maintaining unity and connection for the Jewish people and suggests that “folkways” should be undertaken unless there is a good reason not to do so. As such, the traditional Jewish rituals are most central to Reconstructionist thought and routine.

Hebrew is largely used in the liturgy, yarmulkes are worn, and the observance of Sabbath and dietary restrictions are encouraged; however, it is left to the individual congregations to choose democratically.

The Reconstructionist movement has continued to evolve with the times, and in recent years Kaplan’s successors have returned their attention to spiritual and mystical matters of Jewish thought. From a psychological standpoint, there are particular implications of the Reconstructionist rejection of the identity of the Jews as a chosen people. Reconstructionist Jews are more likely to view themselves as having a bicultural identity than members of other denominations of Judaism. American traditions of moral philosophy adapt well within the psyche of Reconstructionists, who perceive many beliefs and worldviews around *halacha* as outdated. The traditional values retain an importance as connections with the Jewish heritage but are married with a democratic approach. Reconstructionist Jewish identity is predicated, not on faith or belief in the supernatural but in psychological attachment to the Jewish people as a matter of feeling. The sect is alluring for Jews who find themselves in the quandary of finding their cultural heritage less meaningful and yet are unable to repudiate Jewish heritage without feelings of loss and spiritual incompleteness.

The most frequently leveled criticism of Reconstructionist Judaism is that as it is without concrete theories about G-d’s essence, it is not a theology and is rather a perspective on the psychological implications of ascribing to one. There continues to be variations across populations, much like other denominations of Judaism, and due to this, it has been stated that there is not a single definition to the Reconstructionist idea of G-d. Mental health practitioners then, working with Reconstructionist Jews, should have at least a basic understanding of Judaism but also be prepared to inquire about the client’s particular sense of identity and where they see themselves within the Jewish Reconstructionist community.

## Jewish Sexual Mores

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

Classical Jewish tradition contains a wide spectrum of opinions about sexuality and sexual ethics. All rabbinic authorities share the core belief that sexual desire is natural and should be expressed through licit sexual behavior. The majority of traditional voices find nothing shameful about permissible sexual activity. To the

contrary, most rabbis claim that sex can be sacred and holy when accompanied by the proper intention.

The first commandment humans receive in the Bible is “to be fruitful and multiply.” This has been interpreted as a religious obligation to marry and attempt to have children. However, reproduction is not the sole purpose of sex in classical Jewish thought. Sexual pleasure, relief from desire, and the health benefits of sexual activity are often cited in rabbinic literature as reasons to engage in sexual intercourse even in situations when procreation is not possible. Jewish law, in fact, provides a wife with conjugal rights that continue after menopause which entitle her to a certain amount of sexual activity proportional to her husband’s age, health, and professional duties. Though some threads of asceticism exist in the tradition, celibacy is generally considered a rejection of God’s will that humans should function as sexual beings.

Ejaculation outside of intercourse, however, is considered problematic because it involves the unnecessary destruction of sacred material that has the potential to become life. This concern underlies the classical prohibitions against masturbation and the use of contraception. The prohibition against contraception does not outweigh the imperative in Judaism to pursue good health; consequently, contraception is permitted, even in the most restrictive Jewish communities, when it is necessary to ensure the physical health or mental well-being of the individual.

While the Bible includes no direct prohibition against unmarried individuals engaging in consensual sexual intercourse, later rabbinic tradition makes clear that the ideal sexual relationship occurs within the context of marriage. Divorce is considered a tragedy in Jewish tradition but not a sin. While social stigma persists in some insular Jewish communities, classical sources unanimously view the dissolution of marriage as consistent with divine will when one or both parties are suffering. Sex outside of marriage is discouraged in Jewish law. To avoid

sexual temptation, many Orthodox communities observe practices which prohibit unmarried individuals of the opposite sex from remaining alone in a room together or even casually touching each other. Liberal Jewish communities have abandoned these practices and generally are quite tolerant of monogamous consensual sexual relationships prior to marriage. Adulterous and incestuous relationships are punishable by death according to biblical law and have remained strictly forbidden throughout Jewish tradition.

Even within marriage, Jewish law governs sexual behavior. Jewish tradition has preserved the biblical prohibition against sexual intercourse during and immediately after menstruation. Observant couples will abstain from sex for up to 7 days following the cessation of menstrual flow. On the seventh blood-free day, the woman immerses in a ritual bath prior to resuming sexual relations. While this practice has fallen into disuse among many modern Jews, recent creative reinterpretations of the ritual have revived its observance in some liberal communities.

The Bible explicitly prohibits a man from “lying with a man as he would with a woman.” While scholars debate what this meant in its original context, it has been traditionally interpreted as forbidding male homosexual sex. Later rabbis similarly forbade lesbian sex, though this prohibition carries less weight. In modern times, many liberal Jewish authorities have sought to limit or altogether overturn these prohibitions.

## Jewish Tradition and the Environment

Kalman J. Kaplan<sup>1</sup>, Paul Cantz<sup>2</sup> and Matthew B. Schwartz<sup>3</sup>

<sup>1</sup>Departments of Psychiatry and Medical Education, University of Illinois in Chicago, Chicago, IL, USA

<sup>2</sup>Department of Psychiatry, University of Illinois at Chicago College of Medicine and Adler School of Professional Psychology, Chicago, IL, USA

<sup>3</sup>Department of History, Wayne State University, Detroit, MI, USA

The essence of the Biblical/Jewish psychological approach to the environment becomes clearest when compared to the psychological view of the environment emerging from ancient Greek religion/mythology. The Greek mythological view portrays Gaia as “mother earth” and vacillates between worshiping the environment and ravaging it. Like woman, the earth is either to be idealized or raped. This entry will demonstrate this vacillation in the ancient records regarding Greek and Roman treatment of the environment.

The Biblical world does not see the earth in this psychological manner. God has created the world, both the heavens and the earth. The earth is not seen as a mother, and it is to be treated respectfully, not worshiped or raped. Athens and Jerusalem thus represent two contrasting psychologies regarding the earth and life upon it which are of vast importance to modern attitudes toward the environment. Let us compare these two different psychologies in more detail.

Greek and Biblical creation stories embody two radically different worldviews regarding the relationship between God (gods), nature, and the human being. Nature precedes the gods in the Olympian *Theogony*: “First of all there came Chaos” (p. 130), while God creates nature in the Biblical account: “When God began to

create heaven and earth. . .” (Genesis 1). This results in two different views of the relationship of the human being and his environment. For example, Zeus capriciously withholds knowledge of fire from man, thereby keeping humankind subservient. Prometheus surreptitiously steals it back to promote human independence (Ovid 1989, lines 76–86). In stark contrast, the rabbinic sages portray the Biblical God in decidedly more compassionate terms, providing the means for Adam to invent fire (Freedman et al. 1939, 11:2).

It is impossible to overestimate the importance of fire to primitive man. Primitive human beings were dominated by nature. Day and night are different worlds. The sunlight of day provides people with light and heat, enabling them to distinguish land from water and friendly animals and people from predatory and dangerous ones, and providing relief from cold. At night, the sun hides, and man is rendered helpless. But fire changes this. It generates light and heat to hold the environment at bay. Fire enables man to separate the light from the dark and civilization from wilderness. It also enables him to forge and sharpen weapons, cooking utensils, and medicinal treatments; make wheels; and cook and sanitize food. It enables man to constructively make his environment more inhabitable. Yet Zeus attempts to withhold this knowledge, while the Biblical God willingly gives it to Adam and Eve after their expulsion from Eden.

How do these stories impact on Graeco-Roman views of the environment? There is no simple answer to this question, although when we examine the evidence, we find a peculiar ambivalence. On the one hand, Earth, *Gaia*, was seen as the mother of gods, humans, and every living thing (*Homeric Hymns*, 30.1). As such, she should be worshiped and not altered in any way that upsets an abstract balance. On the other hand, many of her offspring were monsters, and her fecundity had a dark side.

As evidence for the idealizing pole, the environmental historian J. Donald Hughes (1996) argues in *Pan's Travail: Environmental Problems in Ancient Greece and Rome* that “the Greeks in particular thought that rearranging land and sea was a prideful challenge to Zeus, who had

ratified their limits when he divided the world with his brothers” (p. 51). Hughes offers the following example to support this thesis. When the people of Cnidus tried to dig a canal through the neck of land that connected them to Asia Minor, many injuries occurred to the workmen from flying rock splinters. They received the following explanation from the Oracle of Delphi: “Do not fence off the isthmus, do not dig. Zeus would have made an island had he willed it” (Herodotus 1975, line 174). They stopped work immediately. Along these lines, Hughes adds that during the invasion of Greece by the Persian king Xerxes, it was regarded as evidence of “pride going before a fall” that he had built a bridge of boats across the Hellespont, turning sea into land, and that he caused a canal to be cut through the Athos peninsula (Strabo 1854–1857, 14.2.5).

On the other hand, the Greek attitude toward the earth sometimes oscillates to the opposite extreme. While being aware of how to treat the soil (Hesiod 1991, line 464; White 1970, p. 177; Xenophon 1971, pp. 5–12), and the importance of fallowing the land and also crop rotation where soil-restoring legumes were planted in alternate years with other crops (Theophrastus 1976–1990, 4.7.3, 4.8.1–4.8.3; Theophrastus 1916, 8.11.8), Hughes suggests that “their use in the Mediterranean was limited by the small size of farms and the necessity of planting each species only where soil and exposure would favor it” (Hughes 1996, pp. 139–140; Pliny the Elder 1855–1857, 18.91; Vergil 1931, lines 73–75).

Though scientifically advanced, the Greeks and later the Romans seemed to have been quite indifferent regarding certain ravages to their environment. Hughes points in particular to the problems of deforestation, overgrazing, and erosion. Plato, for example, observed that the heavily forested mountains of Attica had been laid bare by the cutting of timber and by grazing, resulting in an erosion of the rich and deep soil. As a consequence, the springs and streams had dried up (Taylor 1929, 11b–d). Strabo offered a similar analysis, maintaining that the forests near Pisa had been exhausted by shipbuilding and the construction of

buildings in Rome and villas in the surrounding countryside (Strabo 1854–1857, 5.2.5).

A number of themes stand out in the Greek narratives:

1. Earth and sky exist prior to the gods and in fact create them. *Chaos* must be subdued for this process to occur.
2. The Earth Mother is a very ambivalent source. She gives life but also destroys it.
3. Zeus is trying to keep man dependent, sending him woman as a punishment for his gaining fire, which would have enabled him to control nature in a healthy way.
4. Man vacillates between idealizing and worshipping the earth and, conversely, ravaging and raping it.

The Biblical account is very different. God creates human beings, male and female, His ultimate handiwork, in His own image and gives them dominion over all in nature He has created (Genesis 1). The Bible describes the world and all that is in it as created by God in love. Humankind was given dominion over all, and the first people were placed in the Garden of Eden “to till it and tend it” (Genesis 2:15). It is incumbent on humanity not to wantonly destroy. Having dominion does not entitle man to misuse nature. Nature is not presented as something alien to man; it is neither to be worshiped nor raped, but instead tended and cared for lovingly and carefully. The land of Israel was to lie fallow one year out of every seven, and although the purpose was not specifically the replenishment of the soil, replenishment would serve as one benefit (Leviticus 25:2–7). “You shall not destroy” (*LoTashchit*) (Deuteronomy 20:19–20) is stated in the context of destroying trees but is understood in the rabbinic literature as including all sorts of wanton destruction. All that God created has its own purpose and beauty. A well-known Midrash recounts that David once did not understand why God needed to create spiders. Then a spider spun a web over the entrance to a cave where David was hiding so that his pursuers would not think of looking for him there (Midrash Alpha Beta Acheres d’Ben Sira 9).

The medieval *Sefer Hachinuch* (1988, line 529) writes that the essence of this law is to teach people to love what is good and beneficial

and to take care of it. “It is the way of pious people who love peace and rejoice in the good of the Creation that they would not destroy even a mustard seed and they will do all in their power to prevent needless destruction.”

In the same line of thinking, the Talmud (Talmud Bavli 1989–1999, *Shabbat* 105b) says that one who destroys anything in anger is as though guilty of worshipping idols, in the sense that he obeys the destructive urges in his nature rather than connecting with God and the wonders of His creation.

At the direct practical level, there are dozens of Biblical laws that regulate in great detail what we may and may not do to the environment. The Hebrew Scriptures prohibits the crossbreeding of different species of animals (Leviticus 19:19), and it bans the transplanting of branches of differing species of fruit trees (Leviticus 19:19, as per Maimonides, *Book of Commandments*, negative commandment no. 216) and the intermingling of seeds in planting (Deuteronomy 22:9). Having dominion does not entitle man to misuse nature, but rather exercise an attitude of respect and even awe, a notion that carries over into Jewish law which mandates individuals to recite blessings for all manner of natural phenomena (rainbow, lightning, shooting stars, the first blossoms of a tree, etc.).

Likewise, the Hebrew Bible prohibits various forms of activities that would involve cruelty to animals (Shochet 1984). We may not harness together animals of different species (Deuteronomy 22:6–7); we may not pass by an animal which has collapsed under its load, but are duty-bound to help it (Exodus 23:5, Deuteronomy 22:4); we may not slaughter a mother and its young on the same day (Leviticus 22:28) as we may not take the fledglings while the mother bird hovers over them. On three occasions, the Scripture warns against cooking the kid in its mother’s milk (Deuteronomy 14:21; Exodus 23:19, 34:26).

It is clear then that nature is not to be ravaged, but neither is it to be worshiped. There are times when trees must be cut down, in the service of human progress. Yet at the same time, all of God’s creation is entitled to be protected from wanton destruction. This is the rabbinic understanding of

the *Lo' Taschit* ("You shall not destroy") verse in Deuteronomy that literally bans *only* the destruction of *fruit-bearing* trees during war. Other trees may be destroyed and cut down in order to build bulwarks against the city that wars against one (Sifrei to Deut 20:19–20, Finkelstein edition of Sifrei Devaraim, pp. 238–240). Some Talmudic writings even give explicit permission to alter the environment if it is in the service of advancing human welfare. For example, the protection even of fruit-growing trees may be overridden by economic need (Talmud Bavli 1989–1999, *Bava Kamma* 91b–92a). Alteration or even destruction of parts of the environment for protection of health is permissible (Talmud Bavli 1989–1999, *Shabbat* 128b–129a). In short, human needs must always be balanced against environmental concerns.

Yet it is God and not humanity that is the eternal owner of all the earth. The Biblical God does not attempt to withhold the knowledge of fire from man, as has Zeus, instead encouraging man to incrementally improve on the environment as long as he does so responsibly with a respectful stewardship rather than insisting on an absolutist environmentalism or, worse, blind worship of nature. Environmental concerns must always be calibrated against human needs, and in the final analysis human needs will prevail. In the words of Rabbi Joseph B. Soloveitchik, a great twentieth-century interpreter of Jewish law, there is an unavoidable dynamic tension between the capacity to exercise control over nature and the duty to act toward nature with a sense of fiduciary responsibility.

The following points stand out in these Biblical narratives:

1. God exists prior to the heaven and earth and in fact creates them. The world was at first unformed (*tohu vovohu*) and must be given form and structure rather than subdued.
2. Earth is not seen in sexually differentiated terms. There is no sense of an Earth Mother. The Biblical God creates man to tend and care for the world He has created.
3. The Biblical God is not seen as trying to keep man dependent. He gives man the gift of fire to enable him to help make nature inhabitable.
4. Human beings need not and indeed must not worship the earth or nature. Neither are they free to misuse, rape, or ravage it.

## Jihad

David A. Leeming  
University of Connecticut, Storrs, CT, USA

*Jihad* is the Arabic word for the Muslim concept of holy war. Jihad can be a spiritual and physical war against infidels – nonbelievers – or it can be an inner war against temptation and sin.

The physical jihad is communal, pitting an Islamic culture in a crusade of sorts against non-Islamic cultures or against Muslims seen to be in a state of apostasy. In some cases jihad of this sort involves activities that many Muslims would consider un-Islamic – activities such as suicide and the killing of innocents. Jihad of this sort, known by different names, is common to all religions and cultures. The medieval crusades of European Christians were jihadist in effect. Jews, Christians, Hindus, and Buddhists, as well as animistic peoples, have all waged war in the name of their religions. Jihad of this sort assumes a natural superiority of one religion over all others and can, of course, lead to unspeakable acts and immense destruction and pain.

Inner jihad, known by Muslims as “the greater jihad,” is also common, under other names, to most religions. Christians, Jews, Hindus, Buddhists, and others all subscribe to inner searching and inner struggles against thoughts and tendencies that interfere with what are considered religious-based moral standards.

Psychologically, the jihad that involves actual warfare and killing is often a projection of a communal feeling of arrogance or, more often, of frustration and depression resulting from injustice. The kind that involves such activities as suicide bombing and the glorification of “martyrdom” or the senseless killing of innocents, whether practiced by splinter groups or nations, is an ultimate expression of such arrogance or such depression and frustration.

Inner jihad, whether practiced by Muslims or others, is psychologically based in the universal human desire for wholeness, for the development of Self in the face of powers within and without that would repress and deny that development.

## Job

Ingeborg del Rosario  
 Emmaus Center, Quezon City, Philippines

The *Book of Job* is part of the Wisdom literature of the Hebrew Scriptures or the Old Testament of the Christian Scriptures. Two distinct sections of the *Book of Job* are easily identified, given their differing literary style and content. The prologue (Job 1–2) and the epilogue (Job 42:7–17) are written in prose narrative, while the main body of the text (Job 3–42:6) comprises the poetic dialogues. The poetic section includes the dialogues between Job and his friends (Job 3–37) and, at the climax of the book, the divine speeches, with God speaking out of the whirlwind (Job 38–41) and Job’s responses (40:3–5; 42:1–6). While the prose and poetic sections are most probably of diverse authorship and historical origin, the book is best read as a coherent story. The *Book of Job* is a literary drama built around Job, a mythic figure who serves as an archetype for the human in search for religious and existential meaning in the face of undeserved suffering, an experience replicated endlessly throughout time and across all cultures. Job’s story is the story of everyman and everywoman who have tried to make sense of senseless, innocent suffering and who have tried to keep faith and hope alive in unendurable agony when hopelessness and despair seem to prevail.

While the *Book of Job* belongs to the Wisdom tradition, it challenged conventional religious wisdom that held that righteousness leads to

prosperity while wickedness leads to misfortune. By way of retribution, good is rewarded; wrongdoing is punished. The traditional moral belief was that suffering was the result of sinfulness; therefore, if one suffers, one must have done evil and sinned. The story of Job confronts these beliefs that continue to exist into the present time, pervading consciousness and culture. Job’s story is the universal narrative of the innocent who is honest and righteous yet horribly afflicted and who has not greatly sinned nor done evil yet grievously suffer. The opening line of the *Book of Job* is laden with meaning: “There was once a man in the land of Uz whose name was Job. That man was blameless and upright; one who feared God and turned away from evil” (Job 1:1). An emphatic, forward-looking declaration is made in this description of Job that whatever is to happen next to Job does not happen because he has done anything wrong to deserve it. Job is not to blame for the agonizing pain and suffering he is about to endure.

Following the dialogue between God and Satan where, following Satan’s challenge, God allows the testing of Job (1:6–12; 2:1–6), a searing succession of tragic events unfolds for Job. He first loses his entire livestock and all the servants who cared for them. Then, in one fell swoop, all his sons and daughters perish. While he is grieving these horrific losses, he is afflicted with a leprous disease that scars him and marks him as an outcast from his community (1:13–19; 2:7). All which Job possesses, he loses. Engulfed by enormous anguish, Job is plunged into the silence of helplessness and despair for 7 days and nights. Head shaven and clothes torn asunder, Job is left wordless, sitting upon an ash heap (2:8–13). While his three friends first come to comfort him, sitting with him in his agony, they then confront Job, blaming him for causing his own misery, calling on him to recognize his sinfulness as the reason for his suffering:

Think now, who that was innocent ever perished?  
 Or where were the upright cut off? As I have seen,  
 those who plow iniquity and sow trouble reap the same.  
 By the breath of God they perish, and by the blast of his anger they are consumed (4:7–8).

For you say, 'My conduct is pure, and I am clean in God's sight'. But, oh, that God would speak, and open his lips to you, and that he would tell you the secrets of wisdom! For wisdom is many-sided. Know then that God exacts of you less than your guilt deserves (11:4–6).

Is it for your piety that God reproves you, and enters into judgment with you? Is not your wickedness great? There is no end to your iniquities (22:4–5).

Individuals afflicted by tragedy and loss, even if this be by natural cause or calamity, often carry the additional emotional burden that comes with wondering if they might have caused or been responsible for their suffering. Patients who have suffered childhood trauma and abuse often blame themselves for the cruelty and violence they experienced, believing on an affective level that they somehow caused this to happen, permitted it to continue, and did not do enough to make it stop. Therapeutically, the tendency towards self-blame can be understood as a way of defense and self-protection for the patient dealing with abuse and trauma. By blaming themselves, patients need not acknowledge the more awful realization that they were helpless, trapped in a situation that was out of their control. How much less terrifying it is to blame self and claim power, agency, and responsibility over what happened than to confront enormous grief and anger at the betrayal of those responsible for the abuse.

The tragic experiences of Job in the opening narrative also outline what is characteristic of trauma as it can be clinically understood. A traumatic event is extreme and terrifying, sudden and unpredictable, involving exposure to witness or threat of serious injury or death to oneself or to others (DSM-IV 1994). Such unexpected, unfathomable experiences that threaten life and boundaries of self can inundate and overwhelm physical and psycho-emotional resources, evoking responses of great horror, fear and terror, helplessness, and powerlessness. Trauma also upends foundational assumptions affectively formed from early on one's sense of self-worth, security, competency, and mastery; beliefs in the reliability, goodness, and trustworthiness of others; and assumptions that the world is safe, fair and just, orderly, and predictable and that life has inherent

balance, purposefulness, and meaning. Trauma shatters these beliefs and assumptions that had created stability in the present and provided a sense of hopefulness for the future. In the figure of Job is held a template of trauma: religious patients who have experienced trauma resonate with the impact of the tragic events that befell Job; his deep sense of horror, anguish, and helplessness at their unfolding; and the shattering of religious beliefs and God assumptions that had provided order and meaning to life. In the way of Job, patients can sit in and be with the speechlessness of their overwhelming pain and suffering. In the therapeutic space, the analyst is challenged to reverently witness to the unspeakableness of the trauma's impact, sharing in the terror and horror, helplessness, and powerlessness that demand venerable, vulnerable silence, as well as the empathy of presence, rather than facile interpretations and anxious interventions.

The *Book of Job* is replete with God questions, queries about the nature of God, and how divine activity is perceived and experienced. The succession of tragic events that befell Job is set off by God's innocent questions to Satan: "Where have you come from? . . . Have you considered my servant Job?" (1:7–8; 2:2–3) and Satan's challenging repartee: "Does Job fear God for nothing?" (1:9). In the midst of his anguish, Job raises his own questions and challenges to God: "Why have you made me your target? Why have I become a burden to you?" (7:20); "Why do you hide your face from me and count me as your enemy?" (12:24); "Why do the wicked live on, reach old age and grow mighty in power?" (21:7); "Why are times not kept by the Almighty, and why do those who know him never see his days?" (24:1); "Did I not weep for those whose day was hard? Was not my soul grieved for the poor?" . . . "Does he not see my ways, and number all my steps?" (30:25; 31:4). Midway into the *Book of Job* is a hymn to wisdom where lies a question twice repeated that reflects the profound depth of Job's spiritual quest in the midst of his suffering: "Where shall wisdom be found and where is the place of understanding?" (28:12,20). God responds out of the whirlwind, claiming the divine right to inquire, also

inundating Job with questions: “Who is this that darkens counsel by words without knowledge? . . . I will question you, and you shall declare to me. Where were you when I laid the foundation of the earth?” (38:2–3). God’s questions to Job come one after another, besieging and beleaguering, leaving him speechless, with hand over his mouth (40:4–5); yet, in the epilogue, God affirms that Job’s persistent questioning towards a more radical, liberating understanding of the divine ways was a way of right speech about God (42:8).

Experiences of trauma and suffering can precipitate the doubt and challenge of traditional religious beliefs, in one’s questioning one’s understanding of God, the nature of divine power and authority over universal order, human freedom, and will. The *Book of Job* highlights the value of questing and questioning, of going beyond the bounds of what is known and conventional towards an authentic inquiry that dares enter the ineffable realm of mystery encountering the limitless, complex possibilities God, delving into the immeasurable depth of the divine-human relationship. From a space of integrity in the search for truth, one may discover a God one cannot limit, hold, or control: God elusive and enigmatic, paradoxical and contradictory, and God unfettered and radically free. Job’s experience of God who is both oppressor (6:4) and protector (14:13), persecutor (19:6–22) and redeemer (19:25–27), and enemy (13:24) and friend (29:4) manifests divine incongruity. Carl Jung describes this experience as an antinomy, God as a totality of inner opposites, and God who is everything in all its fullness. The prologue foreshadows this incongruity of God and the divine ways, when it describes God as having destroyed Job *hinnam*, “for no reason” (2:3). While God is apprehensible, God cannot be fully known, contained, or fathomed, for God is radically free, totally Other, and ultimately irreducible to the established bounds of belief systems. The cosmic order also reflects the divine nature. Job is turned over to the power of Satan, the Hebrew translation of which is closer to adversary: Job, as with all humans, will inevitably meet chaos, struggle, and adversity, an intrinsic part of life’s free, consequential unfolding.

While some religious patients who grapple with trauma, chronic suffering, and even the adversarial encounters of daily life find consolation in their religious tradition, others may rigidly hold on to beliefs that deny the complexity of human experience, refuse to acknowledge the expanse of divine mystery, and consolidate feelings of self-blame, inadequacy, shame, and guilt. The process of facilitating the creation and holding of an inner space enough for patients to notice their beliefs and observe how they come to believe without harshness of judgment or self-criticism can be painstakingly slow. The therapist does not engage in intellectual debates over the rightness or wrongness of particular beliefs but is challenged to facilitate gentle inquiry into the nature of beliefs, exploring their evolution and development in the faith story of the religious patient. Because religious beliefs provide an affective level of grounding and foundation, the patient’s inquiry into these beliefs that is usually precipitated by experiences of suffering can cause profound restlessness and disorientation, anxiety, and grief. As with the figure of Job who confronted the incongruity of his beliefs and experiences and was transformed in the process of doubt and disquiet, questing and questioning towards a qualitatively new way of understanding self and God, so too are religious patients invited into a space of unbridled curiosity and wonder, of unfettered interest and inquiry, to look beyond conventional answers that no longer engage their existential questions and experiences. Such is the powerfully transformative way of “right speech” that affirms not only the complexity of God but also the complexity of self able to hold, contain, and live in the midst of mystery and unpredictability and in the adversity and incongruity of life.

## John of the Cross

Ann Moir-Bussy  
School of Social Sciences, University of  
Sunshine Coast, Sippy Downs, QLD, Australia

## Life

Juan de Yepes (John of the Cross) was born in Fontiveros, Spain, in 1542. His father died soon after his birth and his mother struggled to look after her three sons. His mother moved to Medina del Campo, and John was placed in an orphanage where he stayed till his teens. He then became a nurse and attended a Jesuit college. He entered a Carmelite Monastery at the age of 21 in Toledo in Spain. Wanting a more rigorous spiritual life, John of the Cross was about to leave the order for a more secluded one, when he met Teresa of Avila who encouraged him to join her in Medina where she had founded a reformed group of Carmelite nuns. Together they then founded the reformed group of Discalced Carmelites for the Friars. Opposed to the reform, the friars in Toledo captured him in 1577 and imprisoned him for 9 months in a dark cell and treated him brutally. It was during this time he began to receive divine consolations and began to write some exquisite

mystical poetry. He escaped in August 1578 and worked with Teresa of Avila to found more reformed monasteries of Discalced Carmelites.

## Writings

John was charged with the spiritual direction of Teresa's sisters, and he taught and wrote maxims to guide them and began to write some major works on mysticism and contemplation. His major works included *The Ascent of Mount Carmel*, *The Dark Night of the Soul*, and *The Living Flame of Love* (Arraj 1986). His aim in his writings and teachings was to show his subjects the way to achieve divine union. This could only be achieved by a "complete and penetrating detachment from all that is not God Himself" (Arraj 1986, p. 50). This emptying out John described as the "dark night of the soul," first purifying the senses and then through purification of the spirit. *The Ascent of Mt Carmel* begins with an explanation of his poem "On a Dark night" and was "an exposition of a diagram that St John had drawn illustrating how to ascend the mount of perfection" (Arraj 1986, p. 49). This work was not finished. The Ascent-Dark Night is a mixture of poetry and prose, psychological descriptions, and doctrine. The maxims in the writings are meant to be lived rather than intellectually understood. John of the Cross also left the following works:

1. An explanation of the "Spiritual Canticle," (a paraphrase of the Canticle of Canticles)
2. An explanation of the poem beginning "O living Flame of Love"
3. Some instructions and precautions on spiritual matters
4. Some 20 letters, sent mainly to his penitents
5. Poems
6. A collection of Spiritual Maxims (see the Catholic Encyclopedia)

John of the Cross lived a life of extreme austerity yet saw this as the path of submitting to the Divine in order to attain union. Towards the end of his life, after the death of Teresa, he was opposed by some of the members of the order he had founded. Again he was mistreated and

became seriously ill and was moved to the monastery of Ubeda, where he died in 1591, aged 49 years.

## Psychological Implications

It could be assumed that John's journey to contemplation and mysticism and Carl Jung's journey to individuation are similar processes. John's journey is another example of what can be seen as a universal psychic process. Both John and Jung cared for the psyche of other people. Both underwent an experience that was akin to the "dark night." Psychologically the dark night can be described as letting go of one's ego. John spoke of total detachment; Jung sees it as a process of facing and accepting one's incompleteness, a time of holding the tension of the opposites and waiting for wholeness to emerge. Letting go implies working against our own unconscious outmoded attitudes, habits, and assumptions, withdrawing our projections and accepting the totality of who we are. Jung wrote, "The foremost of all illusions is that anything can ever satisfy anybody" (Jung 1969, Vol. 11). The discrimination of the opposites is a result of the *Dark Night of the Soul* and from it comes reunification of the opposing elements. This is similar to the purification of the senses described by John of the Cross. Greek myths also narrate the dark night, and psychologically they illustrate the process of development towards individuation. Examples of these myths are the Night Sea Crossing, The Descent of Inanna to the Underworld, and Persephone. Alchemical symbolism, used by Jung, shows the outcome of the dark night in the image of the *coniunctio* of King and Queen. This can be related to the divine union that takes place spiritually after one has persevered and lived through the dark night. Perceval's (or Parsifal's) journey in the Grail Legend also "personifies the principle of Christian consciousness confronted with the problem of *physis* and of evil... as if the dark aspect of divinity had attacked him, in order to awaken him to a more conscious religious attitude" (Jung and von Franz 1970). The dark night is somewhat like an

initiation before being admitted to relationship with higher consciousness. The ego must be transformed if one is to abide in one's true nature. For John, this transformation takes place through contemplation, a loving gaze at God that leads to a mystical consciousness – where knowledge and love are combined.

## Judaism and Christianity in Freudian Psychology

Richard Kradin  
 Departments of Medicine and Psychiatry,  
 Massachusetts General Hospital, Harvard  
 Medical School, Boston, MA, USA

Freud's perspectives on religion played an influential role in the development of psychoanalysis. In turn, psychoanalytic thinking has contributed

to contemporary ideas on religion. Jakob Freud had already begun to distance his family from observant Judaism when his son, Sigismund Schlomo (Sigmund Freud), was born in Moravia (current Czechoslovakia) in 1856. Whereas Sigmund claimed to have been denied the benefit of formal Jewish education, his assertion appears to be a pretense, as there is convincing evidence that Freud was exposed both to the ancient Hebrew language and to Jewish religious texts as a child.

Eastern Europe in the late nineteenth century was a hotbed of anti-Semitic fervor. Freud recounted his father's humiliating encounter with a young anti-Semitic street tough and suggested that his father's failure to defend himself had left the young Sigmund deeply disillusioned. He turned in fantasy to Hannibal's father – who had urged his own son to right the ancient wrongs done to Carthage by Rome – as a role model of proper masculine virility. The conflation of disappointment in his own Jewish father's perceived weakness and Christian bigotry continued to occupy Freud throughout his adult life.

Following a brief flirtation with religion as a young man, Freud professed a staunch atheism that never again wavered. As a young man, he took great pride in his Germanic heritage and thought of himself primarily as a "German Jew." However, as anti-Semitic sentiments in Vienna grew increasingly overt, he ceased to identify himself as a "German" and viewed himself, as he confessed to his friend the Protestant pastor Oskar Pfister, primarily as a "Godless Jew." His particularly fondness for Jewish humor formed the basis of his *Jokes and the Unconscious* (1905).

## Judaism and Psychoanalysis

The members of Freud's inner circle of Viennese psychoanalysts were exclusively Jewish. This, and the fact that most of his early clientele were members of the Jewish bourgeoisie, prompted his non-Jewish critics to suggest that psychoanalysis was a "Jewish science" without wider

applicability. Freud was concerned by these comments, as they threatened the broader acceptance of psychoanalysis. In response, he deliberately attempted to recruit non-Jewish practitioners to the new movement. He courted the support of the young Swiss psychiatrist Carl Jung, who had recently published his observations on mental *complexes*, which Freud adopted as the physiological cause of why repressed mental contents would at times intrude into consciousness as parapraxes. But when Jung was appointed to a prominent leadership role within the psychoanalytic movement, Freud's Jewish colleagues expressed their dismay.

The Freud-Jung relationship was strained by a variety of factors, including their religious differences. Jung's rejection of Freud's definition of libido as overly limited eventually led to the complete rupture of their relationship (see Jung and Religion). Jung claimed that Freud viewed the unconscious as predominantly negative and that his ideas had been influenced by his Judaism. He further concluded that Freud's personality type (extraverted, thinking, sensation) had interfered with his capacity to appreciate religious sensibilities, except as a neurosis. Freud countered Jung's criticisms of *libido* in *On Narcissism* (1914) and never again seriously referred to his junior colleague's psychological contributions.

## Freud and the Psychology of Religion

Freud authored three major theses that dealt primarily with religion. In *Totem and Taboo* (1913), he argued that religion represented a phase in the evolution of the psyche. His opinions followed those of the nineteenth-century British anthropologist E.B. Tylor, who argued that man's psychology evolved from a primitive phase of belief in magic to a phase dominated by religious beliefs. Modern man, according to Tylor and Freud, had recently achieved a more sophisticated perspective characterized by scientific thinking. According to Freud, these cultural phases parallel the ontogenetic psychological evolution of the man from the infantile stages of magical thinking, through childhood dependence, and mature self-reliance.

In this highly speculative treatise, Freud argued that proto-*Homo sapiens* lived in small hordes dominated by a single male who tended both to hoard the available women and to mate with them. Young males, distressed by their lot, banded together to kill their father and distributed the females more equitably. However, according to Freud, the guilt related to acts of patricide and incest led to worship of the dead father and to specific taboos that formed the basis of religious behavior.

*Totem and Taboo* was criticized in academic circles for its lack of credible evidence, as well as for Freud's persistent adherence to the previously rejected theories of Lamarck, who had argued that memories of events could be genetically transmitted. Although modern field studies of great apes have confirmed that alpha-males do tend to dominate other males aggressively and to ward off their access to females, this is a far cry from concluding that such behavior has been the source of religious sensibility and practice.

In his *Notes upon a Case of Obsessional Neurosis* (1909), Freud compared religion, with its emphases on guilt and compulsive ritualistic behaviors, to obsessional neurosis. But by far his most damning and influential polemic against religion came in *Future of an Illusion* (1927), in which Freud argued that the image of God as a benevolent paternal figure was evidence of a persistent infantile wish – an illusion motivated by a need to identify a powerful figure that could protect one from the vicissitudes of nature, disease, and death. From Freud's perspective, the most appropriate response to religious beliefs was to expunge them, by identifying their roots in childhood fantasies and fostering confrontation with manifest reality. Although he admitted that patients might not necessarily be happier as a result of this exercise, it was, according to Freud, the obligation of the mature independent psyche to confront reality courageously. Only science, and not religion, could provide objective explanations of the real world, and as such, he concluded that the goals of science and religion were incompatible.

Freud's final critique of religion was completed shortly before his death. In *Moses and Monotheism* (1939), a set of three essays, he extended the ideas in *Totem and Taboo* specifically to the

origins of Judaism. He argued that Moses was not a Jew, but an Egyptian who espoused monotheistic beliefs, and had offered them to a band of Jewish slaves that he subsequently freed from bondage in Egypt. In their wanderings through the desert, the disgruntled Jews eventually murdered Moses, but their guilt subsequently led them to embrace his monotheistic beliefs and to adopt penitential taboos and ritual practices. As in *Totem and Taboo*, Freud offered no evidence for his theory, apart from that deduced from psychoanalytical inquiry. The work was controversial; it was poorly received by most academics and it angered religious Jews, who rejected it as heretical and nonsense.

## Response to Freud

Jewish scholars remain split in their judgment of Freud – some have rejected his ideas as antithetical to those of Judaic culture, while others have attempted to integrate them into the larger fabric of Jewish thought. From a purely religious perspective, Freud's works are undeniably unyielding in their rejection of all modes of theism and incompatible with both observant Judaism and Christianity. In addition, Mordechai Rotenberg contends that Freud's focus on Darwinian struggle and oedipal conflicts, which emphasize the goal of the individual differentiating away from the group, runs counter to the core Jewish value of community. As Judaism is essentially a tribal religion, its continued survival depends on maintaining communal bonds. In this regard, Judaism stands in contradistinction to the goal of personal salvation that characterizes the Lutheran Protestantism. It is possible that Freud living in a Germanic world might have adopted and modified their values as a therapeutic goal.

Although widely criticized by religionists, anthropologists, and sociologists, Freud's psychological musings have been widely embraced by secular humanists. However, some have argued that Freud's conclusions are overly simplistic, as they ignore the importance of societal influences and reduce religious impulses to "nothing but" neurosis. From a phenomenological perspective, as

William James suggests, religion is properly *sui generis*. Furthermore, from a pragmatist's perspective, religion can provide meaning and comfort for many and contribute to a favorable quality of life. In adopting conscious rationality as a cardinal goal, Freud can be grouped with other post-Enlightenment secularists who denied the reality of innate irrational elements of mental experience.

In his monograph *A Godless Jew* (1987), Peter Gay ponders whether Freud's cultural Judaism may have been an element in the founding of psychoanalysis. Freud's Judaism potentially influenced psychoanalysis in many areas. In *Interpretation of Dreams* (1900), Freud examines the Old Testament dream interpretations of Joseph and Daniel and entertains the perspectives of Talmudic sages on dreams. Freud's view of the unconscious as the repository of repressed contents parallels the biblical reference to what God chooses to "reveal" versus "conceal." The idea viewing the manifest content as concealing a latent wish is highly suggestive of the style of midrashic exegesis of texts that was applied by the rabbis and later by the mystical Kabbalists. The Jewish exegetical tradition, like Freud, seeks to plumb texts for their deeper meaning. The modes of exegesis, often referred to by the acronym *PaRDeS* (*p'shat, remez, drash, sod*), refer, respectively, to the straightforward in-depth understanding of a revealed text, allegory, interpretive elaboration of the text, and its deepest secret meaning. All of these elements can be identified in Freud's interpretive technique.

Furthermore, many Kabbalistic theosophical interpretations are highly eroticized and include internecine conflicts between symbolic elements of the Godhead, comparable to the family "romance" of oedipal dynamics, in their symbolic efforts to elaborate the dynamics of the Godhead. The inheritors of the Kabbalistic tradition in Eastern Europe, the movement that became Hasidism in the eighteenth century, tended to psychologize these symbolic contents, much as Freud would later do. In this regard, it is noteworthy that Freud's father had been born into a Hasidic family, so that influences from that tradition would undoubtedly have had some influence on Freud's personal and cultural milieu.

The emphasis within mainstream Judaism on ethical humanism and legalisms, with a relative downplaying of both mystical beliefs and the importance of the afterlife, may have fostered Freud's development of a "science" of mind that was predisposed to dismissing the irrational aspects of religion as illusory, as opposed, e.g., to the inherent mystery of the Christian trinity.

It is risky to attempt psychoanalytic explanations for Freud's disdain of religion beyond those openly admitted by him. But his views on religion appear to be rooted, in part, in his ambivalence towards his father, his own Jewish background, and his encounters with Christian anti-Semitism. When, at the end of his life, Freud found himself potentially ensnared by the Nazis in Austria, he managed to escape with his family to England, where he lived briefly until his death from oral cancer in 1939. While he never renounced his atheism, the elderly Freud increasingly expressed solidarity with the Jewish community.

## Judaism and Christianity in Jungian Psychology

Richard Kradin  
Departments of Medicine and Psychiatry,  
Massachusetts General Hospital, Harvard  
Medical School, Boston, MA, USA

The Swiss psychiatrist Carl Gustav Jung (1875–1961) was a member of Freud’s early psychoanalytical movement. However, he broke with Freud in 1912 over a variety of issues, including the importance of religion in psychological life. Jung viewed the religious impulse as a *sui generis* psychological activity, and his conception of the unconscious was fundamentally different than Freud’s (see ► [Judaism and Christianity in Freudian Psychology](#)). Unlike Freud, who viewed most unconscious contents as the result of repression, Jung conceived of two strata of unconscious processes. The personal unconscious corresponded roughly with Freud’s conception. But according to Jung, there was also a deeper transpersonal stratum shared by all human minds that he referred to as the collective unconscious. The collective unconscious was the creative mythopoetic center of the psyche. It included the archetypes comparable to the Platonic “ideas” and like the Kantian *a priori*, served to structure psychological experience.

## Jung’s Concept of the Self

Jung referred to the “self” (hereafter capitalized) as a supraordinate archetype whose role was to regulate all of the others. He held that the psyche was also a self-regulating structure, with conscious and unconscious processes in an ongoing compensating dialectic. According to Jung, although archetypes were never experienced directly, they were knowable indirectly by the “archetypal images” they mediated. According to Jung, the “self” was also the source of the *imago Dei*, or God image, which could take on many different forms depending on one’s personal experience. A major goal of the Jungian individuation process was a progressive conscious experience of the activities of the “archetypes” and in particular the “self,” reflecting Jung’s fundamentally religious view of the aim of a life.

Jung had exhibited interest in God as a boy but was unmoved by what he viewed the impersonal approaches of organized religion. He was also disillusioned with his father, a Protestant minister, who, according to Jung, lacked a strong sense of faith and was prone to limpid theological intellectualization. Unlike his father, Jung’s approach to religion melded pagan, Eastern, and Christian myths, in the service of providing a transformative personal experience.

Jung’s theory of the psychology of religion was influenced by his studies of Eastern religions. In the philosophies of the East, Jung found what he interpreted to be references to the archetype of the “self,” which he modeled on the idea of the atman of the Hindu Upanishads. Jung imagined this “self” as a paradoxical symbol, e.g., as the center and circumference of a circle, as personal and impersonal, and as both limited and unbounded. The multicultural symbolic expressions of the “self” could assume many avatars. He further concluded that the implied wholeness of the “self” was depicted by the mandalas of Tibetan Buddhism, and he perceived a link between religion and psychotherapeutic healing, as he had noted that the spontaneous efforts at drawing mandalas were a routine and early feature of recovery from psychosis.

However, Jung was also a pragmatist and concerned that the Western psyche would not be able to embrace Eastern religious myths that called for the progressive extinction of the “ego.” In order to distinguish his psychology from the Eastern nihilistic philosophies, he introduced the idea of “individuation,” i.e., the process via which a person becomes an enlightened psychological individual through a progressive experience of the “archetypes” and in particular of the “self.” He viewed the life of Jesus as the cardinal example of an “individuation” process.

Jung’s idea of the “self” paralleled the Eastern perspective that located God within man, as opposed to the Western disposition of viewing God as a monarch residing somewhere outside of oneself and approachable only by obedience or imitation. Indeed, Jung was criticized by Western theologians for adopting a solipsistic view of God, and some monotheists argued that Jung’s emphasis on the variations of the God image was essentially merely a new form of pagan polytheism.

### Jung and Mysticism

The Protestant theologian Rudolph Otto was an important influence on Jung’s psychology of religion. Otto examined the psychology of death and resurrection in *Das Heilig* (The Idea of the Holy). Jung’s idea of an experience of the self parallels Otto’s descriptions of a transformative religious experience and is essentially mystical. This includes the strong affect that Otto referred to as “numinous.” During such a transformative experience, according to Jung, the ego senses the “self” as both imminent and “other,” i.e., as outside the realm of description, irrational, and preverbal. Following Otto, Jung also termed this a *mysterium tremendum et fascinans*, which is invariably characterized by surprise, awe, and fascination. However, both Jung and Otto agreed that the capacity to experience transcendent states was not an equally shared capacity, as certain nonverbal affectual experiences are rooted in prelinguistic activities of the brain that vary among individuals.

Jung viewed the “numinous” experience as the basis of all theophanies and religious revelations. But as Gershom Scholem noted, when “numinous” experiences are reported by those already steeped in a given religious tradition, they generally reflect the images of an underlying orthodoxy, so that Catholics are more likely to be “visited” by the Virgin than by the Prophet Elijah. This observation underscores the importance of societal and cultural influences on religious experience. Jung’s own imaginal confrontations with his unconscious included encounters with Salome, Elijah, Bacchus, and Philemon and appear to reflect his broad knowledge of the syncretistic Hellenistic and Judaic myths that form the basis of Christianity.

Throughout Jung’s explorations of religious myth, and in particular the Christian myth, he stressed the importance of wholeness. He was dissatisfied with the idea of the Christian trinity, because he thought that it excluded the role of the feminine. From his own experience, Jung had come to believe that wholeness was archetypally configured primarily as a “circle” or as quaternities. In his late writings, he noted that the doctrine of the Assumption of the Virgin Mary adopted by the Vatican in the 1950s was actually one of the great theological advances of the Church by raising the level of the feminine principle and acknowledging a quaternity in heaven.

Jung’s emphasis on wholeness helps to explain why he was also opposed to the doctrine of the *privatio boni*, i.e., that evil is merely the absence of God, who according to Augustine is an all good summum bonum. Jung argued that the splitting of good and evil predisposed the Christian psyche to difficulties in metabolizing negative affects, which were instead repressed and embodied by what Jung termed “shadow,” a concept roughly equivalent to the Freudian unconscious.

### Myth and Religion

In his explorations of myth, Jung noted what he interpreted to be the struggle of the ego with a greater “other” within the psyche, i.e.,

a confrontation of the ego and “self.” He repeatedly referred to Jacob’s struggle with the angel as a mythic representation of man’s struggle to individuate. For Jung, faith was a cardinal tenet of psychotherapy, as it called for the ego to be transformed by its own “death” and “resurrection.” Therapeutic progress was fostered by faith and by an awareness of the “self.” This attitude would prompt Jung to suggest to Bill Wilson, the cofounder of Alcoholics Anonymous, that alcoholism could be cured only by faith in a “higher power,” an idea that subsequently became a cardinal tenet of 12-step programs.

In *Answer to Job*, Jung examined the asymmetric power struggle between the ego and the “self” and their uneasy, evolving relationship. He argued that in going from the image of Jahweh in the Old Testament to Christ in the New Testament that the God image had actually shown an own evolution of consciousness. This idea was criticized by both Jewish and Christian theologians, who argued that Jung had a persistent tendency to anthropomorphize God, thereby confusing the transcendent creator God with his creation, i.e., man.

### Jung and Anti-Semitism

A continued area of controversy is Jung’s stance with respect to Germanic anti-Semitism during the Nazi era. Jung’s psychology included a role for differences between races and cultures, and he has come under substantial criticism in some circles for this view. Although such attitudes were prevalent in Jung’s time, it appears that he may have benefited professionally from the systematic persecution of Jewish psychologists in Europe. Jung’s activities and public statements during the war appeared to confirm suspicions of Freud’s followers that Jung harbored anti-Semitic inclinations. However, Jung’s attitudes were by no means consistent and he supported the careers of many of his Jewish colleagues.

Although it is fair to conclude that Jung’s primary religious affiliation was Christianity

and that he saw it as having had a dominant influence in shaping the Western civilization, he focused primarily on the mythic elements of the religion, especially on the writings of the third CE gnostics. Late in his career, Jung became preoccupied with the psychological importance of alchemy and investigated medieval texts for evidence of how the alchemical opus was an effort at psychological transformation. His last major work was devoted to the idea of the unification of what he termed “the opposites” that structured of the psychological archetypes of what he termed the “collective unconscious.” Towards the end of his life, Jung became aware of the enormous influence that the Jewish Kabbalists had on the alchemical tradition. The Hasidic movement of eighteenth CE Judaism had adopted the complex mythical theosophy of the Kabbalists and psychologized it. Their approaches included the concept of *yichudim*, i.e., the unification of psychological opposites in the service of wholeness. Prior to his death, Jung confessed that much of his life’s work had been prefigured by early Hasidic masters.

Jungian psychology continues to play an important role in religious movements. Although Jung was more favorably disposed to religion than Freud, his psychology of religion was often at odds with traditional theological perspectives. Some have accused the Jungians of being a guised religious cult, claiming that Jung was attempting to transform the Christianity into a new religious movement. However, such views are likely extreme. Furthermore, most within the Judaeo-Christian tradition continue to view religion primarily as transcendent and beyond psychological interpretation.

One of Jung’s important contributions to the psychology of religion was to recognize the primacy of image as the carrier of affect. Jung’s psychology of religion emphasizes the importance of embodying experience via encounters with internal imagery, as opposed to the theological abstraction of the Godhead. He recognized that the psyche naturally tended to concretize abstractions into images in order to experience them directly. Otherwise, according to Jung, one risks reducing religion to either ethereal

abstractions or ritualistic behaviors. In this regard, like Freud, Jung appears to have both rejected and attempted to redeem his father.

As a confessed introvert, Jung appears to place primary importance on personal mystical experience. Although he did address the importance of evil in his writings, he views it as an impersonal archetypal force. Jung does not appear to have placed considerable value on the Judaeo-Christian tenets of ethical humanism and *communitas*.

However, Jung's emphasis on the mythic basis of religion continues to provide one of the few secular approaches to the psychology of religion.

## The Origins of Academic Psychology

The origins of twentieth-century academic psychology can be traced to E. B. Titchener's school of structuralism or structural psychology, which itself was strongly influenced by the earlier work of Wilhelm Wundt in Leipzig. Wundt was the father of the new experimental psychology (cf. Marx and Hillix 1963, p. 62) and established the first formal laboratory for psychology at the University of Leipzig in 1870, thus succeeding in giving psychology formal academic recognition and delineating it from its two parent fields, physiology and philosophy. Titchener subsequently launched structuralism in 1898 as "the psychology."

The method for Wundt and Titchener was introspection, or the study of one's immediate conscious experience. Consciousness was seen as the sum total of a person's experiences at any given time and mind as the accumulation of these experiences across the life span. Titchener listed three problems for psychology that were similar to Wundt (1894, p. 13): (1) to analyze concrete mental experience into its simplest components, (2) to discover how these elements combine, and (3) to bring them into connection with their physiological conditions.

Titchener brought a number of biases into American academic psychology. First, he felt psychology should study experience detached from learning, that is, detached from attributed emotional meaning. Second, he roughly accepted Wundt's parallelism as a solution to the mind-body problem. This position asserted that the mind and body run parallel courses, without saying that one causes the other, but simply that both

are affected by an external cause. At times, Titchener seems to feel uncomfortable with this mind-body dualism, searching for a more monistic conception, but he never really formalizes this position. Third, he seemed to emphasize conscious introspectionism, rather than attempting to access the unconscious as did Freud. Fourth, Titchener's structuralist approach was very anti-functional in its orientation, a point on which he was attacked by American functionalist and behaviorists. Fifth, Titchener insisted that psychology be pure rather than applied, decrying the notion that the function of psychology was to find ways of ministering to sick minds.

### **Greek Underpinnings of American Psychology**

Jews thus encountered in American academic psychology an approach quite foreign to biblical and later Jewish views of the human being. In fact, some of the thinking in academic psychology seemed to reflect an ancient Greek view of life which Judaism had never been able to accept.

For one, the idea that mind and body are separated rather than integrated seemed to fit the Greek compartmentalization of the human being into *psyche* and soma. In Plato's view, "the soul is a helpless prisoner chained hand and foot in the body, compelled to view reality not directly but only through its prison bars, and wallowing in utter ignorance" (Plato 1993, p. 83a). It is the purpose of the human being to behave in a pure and unblemished manner in order to allow the soul to free itself cleanly from the body and to return to its existence in the ideal world. If the soul does not break away cleanly, it must return to this world until it achieves complete purity (Plato 1993, pp. 61d–68a, 1983, p. 11). Plato's emphasis on philosophy as "preparation for death" is dramatically different from Judaism's life emphasis. *Torah* indeed is described as a "medicine for life" (*Babylonian Talmud*, Kiddushin 30b).

Second, the exclusive emphasis on conscious introspection to the exclusion of the emotional, irrational, and unconscious aspects of the human psyche reflects the dialectic in the ancient Greek

world between the Apollonian and Dionysiac aspects of Greek life (Nietzsche 1956). Unfortunately, the psychoanalytic alternative emphasizing the important role of the unconscious also employed Greek master stories such as Oedipus and Narcissus (cf. Freud 1914, 1923, 1924). Third, the anti-functional bias in Titchener reflects an anti-developmental view in Greek mythology and philosophy. Each age of Gods begins anew (Hesiod 1973) with no developmental or historical purpose. Structures become reified as permanent edifices rather than as developmentally purposive. Fourth, the structuralist approach seemed to be too narrow for the Jewish world view to accept, excluding the very issues of free will, morality and wisdom and emphasis on life that Judaism teaches.

Finally, the idea that psychology be pure rather than applied also bespeaks to a certain intellectual prissiness and disdain for the real world. This is quite removed from the Jewish emphasis on action as expressed in the social psychological theory of cognitive dissonance (cf. Festinger 1957) and in certain behavior modification theories in clinical psychology (cf. Ayllon and Azrin 1968; Bandura 1969).

### **A Judaic View of Psychology**

A Judaic view of psychology emanates from *The Torah* which in the fullest sense includes both the Hebrew Bible and the very ancient oral tradition which culminated in the Talmud and Midrash and subsequent rabbinic literature. It has almost nothing in common with the philosophical systems underpinning structuralism and modern academic psychology, largely based on ancient Greek thinking. It has also nothing in common with mythology, which typically centers around fate, caprice, irony, and lack of purpose. A Jewish approach to psychology also differs in emphasis from psychoanalytic thinking which, though founded largely by Jewish figures (Freud, Adler, Rank, Abraham, etc.) and focused on understanding the irrational, relies on ancient Greek master stories as its base. Judaism draws its master stories from the Bible.

1. *The unique and the general.* Genesis relates that God created man in His own image. This emphasizes the value of each individual and tends towards an ipsative psychology rather than to an abstract general idea of mankind. The unique individual must be studied and understood, not an aggregate statistic. A clinical psychology naturally emerges from this viewpoint in which individual differences are valued and respected rather than written off as error variance. The Talmud stresses the value of the individual human being and the irreducibility of each life: "To save one life is to save the world" (*Babylonian Talmud*, Sanhedrin 37a).
  2. *Body and soul.* A person's body and soul are holy and are created by God as an expression of love. Body and soul are by nature harmonious and not at all in conflict, and both can work to fulfill a person's purpose of being close to God and serving Him with love. Urbach (1979, p. 214) argues: "In *Genesis* (2:7) it is stated 'and man became a living soul (*nefesh*),' but the term *nefesh* is not to be understood in the sense of *psyche*, *anima*. The whole of a man is a living soul. The creation of man constitutes a single act." God created people in His own image and blessed them with creativity and with dominion over all the world. One of the highest acts of human creativity is to produce new human beings, as God Himself did. Every human life is valuable and unique. The human soul need not achieve total perfection in this world nor is the body a prison or a tomb for this soul, but its mansion. It is enough and wonderful for a person simply to do his best.
  3. *The self in relationship.* A Jew is obligated to devote himself to studying *Torah* so that he can develop as a human being and use his freedom and creativity optimally. Nor can a person carry this out in isolation from others. This development is expressed in a social context. People were designed to live with others: spouse, family, students, friends, and colleagues. People have obligations to fellow human beings and to God which require constant study and attention.
- Thus, Judaism tends naturally to an interest in social psychology. However as Hillel taught, obligations to self and other must be balanced (*Avot* 1:14; Kaplan 1998). Furthermore, both outer behavior and inner feeling matter. Cognitive dissonance theory (cf. Festinger 1957) is very Jewish in this regard, emphasizing that the best way to change inner attitudes is to first change behavior. Thus the rabbinic expression, "the hearts are drawn after the actions."
4. *Perfection and wholeness.* While Greek Platonism emphasizes perfection, the Hebrew Bible emphasizes wholeness. For Plato, the *ideal* is always superior to the *real* and *being* to *becoming*. The Hebrew Bible in contrast emphasizes the real and becoming. While Plato viewed philosophy as "preparation for death," the Hebrew Bible, in contrast, constitutes a "guide for living." Thus too, Pygmalion can seek unity only with a woman that he himself forms according to his own specifications. The Bible sees husband and wife as two individual beings, who support each other in searching for fulfillment.
  5. *Freedom and obligation.* God has given people freedom to make important moral choices. In order to best use this freedom wisely and to make the best choices, a person must develop both his intellect and emotions. The human being also has a high degree of moral responsibility that naturally complements his freedom. Although God provides a blueprint for the individual to live his life, the individual must discover it and choose to accept it. There is little sense of the determinism or fate so endemic to classical Greek thinking nor any notion that the biblical God is subject to the impersonal forces of fate (*moira*) and necessity (*ananke*) which govern the Greek Gods.
  6. *Determinism and repentance.* The *Torah* rejects the idea that human acts are predestined. A person always has a choice to do right or wrong in any situation. There is neither fate nor necessity. A person need not be overwhelmed by feelings of doom, as

were the Greek heroes. A single failure need not be seen as archetypal or irremediable. The Greek prophet predicts that an outcome will occur independent of an individual's actions. The Hebrew prophet, in contrast, typically predicates his prediction on the individual's behavior. The Hebrew prophet hopes that his prophecy will affect the individual's behavior and thus avoid the negative consequences. The individual may repent and thereby alter what happens to him. A person challenged by his own imperfections or handicaps or facing great difficulties can live a loving, happy, and productive life. One need not despair and must always face life with optimism. Hope itself improves both the individual's condition and his outlook. A person can and must improve himself both in spiritual and material matters. Thus, Judaism sees the individual as having great potential for development (cf. Shestov 1966).

7. *Life and death.* Human life is precious and holy. Every moment offers the individual the opportunity to be close to God, to learn, to do good, and to create. The well-known Hebrew toast is "lechayim" – to life! The human being has intrinsic worth as a creation of God, in God's image, and not simply as a function of his achievements. Sometimes, one moment is enough to give new meaning to an entire life. God loves and supports a person in giving him life and capacity and energy to act even when he does evil. Unlike the ancient Greeks and many other civilizations, traditional Jewish thought finds suicide a terrible destruction of human life, perhaps even more abhorrent than murder (cf. Kaplan and Schwartz 1993). While among Greek and Roman philosophers freedom is often equated with suicide (Seneca 1979, 111.15), the Talmud equates freedom with following *Torah* (*Avot* 6:2).
8. *The unconscious in Judaism.* Judaism is not limited to conscious introspection as was structuralism. Rather, the Talmud, Midrash, and later rabbinic thought place great emphasis on understanding the hidden, unconscious motivations of human behavior. Indeed, Judaism stresses many levels of interpretation of biblical text. The reader is referred to the important work of David Bakan (1958) on Freud and the Jewish mystical tradition and the more contemporary work of Mordechai Rottenberg differentiating the following levels of interpretation: *peshat* (rational), *remez* (hint), *derash* (inquiry), and *sod* (mystical). In many biblical stories (e.g., Jonah), God actually intervenes as would a good therapist to help a protagonist to learn why he has behaved in a manner harmful to himself and to his higher purposes and to help him to change for the better. Sometimes, learning is aided by the use of parables so that the person is able to look at himself without fear. This is exemplified in the Prophet Nathan's parable to King David regarding his conduct toward Uriah's wife Bathsheba (II Samuel 12). Behavior can affect emotional states, so that some changes at the level of action can bring about changes in one's inner state of mind.
9. *Theory and practice.* Judaism features a long history of concern both for mental health and personal development. This is displayed both in the wide literature on human behavior and growth and also on the strong pattern of close connection between sages and the general community. It was normative for people to consult closely with sages on every sort of personal or familial problems, large and small. No person should feel isolated or abandoned when facing a problem or a hard decision. He has an advisor to turn to in questions of personal development and in practical problems. The rabbis in Eastern Europe operated in many ways like psychotherapists of today. There is a major difference, however. The traditional rabbis employed biblical master stories and Talmudic wisdom as a basis for intervention rather than ancient Greek myths.
10. *Jews, the enlightenment and psychology.* Although the previous sections may suggest to the reader that Jews in modern psychology uniformly carried values and perspectives of biblical and Judaic thought, the reality is

much more complex. Many Jews in the field of psychology may actually have been less traditionally religious than their Christian counterparts – and often times than their own patients. For example, Shafranske and Malony (1990) report that in a sample of 409 clinical psychologists, only 40 % believed in a personal transcendent God, compared to 90 % of the general public. There are historical reasons for this, arising from the Jewish encounter with the enlightenment which paradoxically offered the individual Jew liberation into a new Europe but at the cost of surrendering something of his covenantal religious and national identity. This same trend existed in American academia in the early and middle parts of the twentieth century. The Jew was seemingly offered emancipation from ethnic and immigrant marginality into the faceless common culture of the secularized enlightenment world of academic psychology (and academia in general) at the expense of a Judaic world view. (This held true despite the quotas on Jews at many major universities, particularly in the northeast United States.) Indeed for many Jews, psychology itself may have become a religion, filled with Greek and Eastern rather than biblical ideas (Wellisch 1954). In recent years, a far more liberated and self-confident Jew has emerged in psychology, joining some Christian counterparts in offering a serious biblical alternative to contemporary psychology (cf. Kaplan and Schwartz 1993, 2006, 2008; Schwartz and Kaplan 2004, 2007; Wellisch 1954; Yerushalmi 1991). This has resulted in a plethora of books and interdisciplinary journals such as *The Journal of Psychology and Judaism*, *The Journal of Psychology and Christianity*, and *The Journal of Psychology and Religion*.

## Judas Iscariot

Clodagh Weldon

Dominican University, River Forest, IL, USA

### Introduction

In Christianity, Judas Iscariot is one of the 12 apostles who betrayed Jesus for 30 pieces of silver. His name, Judas (*Ioudas*), is the Greek form of Judah, the southern territory of Palestine (renamed Judea by the Romans). The inhabitants of Judah were the Judahites (later abbreviated as “Jews”), and thus Judas’ name is equated with the Jews. The name “Iscariot” is subjected to two different interpretations. The first is that it means “Man of Kerioth,” a city in Judah (Joshua 15:25), which would be significant because it would present Judas as an outsider, a man who was different from the 11 Galileans. A second suggestion is that “Iscariot” derives from the Greek “sicarri,” a sect of the Zealots who took up arms (daggers) against the Romans. Whichever interpretation is preferred, Judas’ name is synonymous with betrayal; to call someone a “Judas” is to express contempt for the duplicitous behavior of that person.

## Judas in the Bible

In the Old Testament, Judah was the son of Jacob and Leah. His name in Hebrew, *Jehudah*, means “praise the Lord.” Judah was a patriarch of one of the 12 tribes of Israel. This is significant because Jesus’ call of the 12 apostles symbolizes a reconstitution of the 12 tribes. Judas, son of Simon the Iscariot (Jn 6:71), is chosen by Jesus as one of the 12 apostles and is always listed last (Mt 10:4, Mk 3:19, Lk 6:16, Jn 6:71). He is presented in the gospels as thief (Jn 12:4) and betrayer.

Although best known for his betrayal of Jesus, another story about Judas appears in the Gospel of John. In it, Judas protests the anointing of Jesus at Bethany by Mary as a wasteful act, suggesting that the oil should have been sold and given to the poor. His concern, however, is not for the poor but, as John tells us, “because he was a thief and held the money bag and used to steal the contributions” (Jn 12:7).

Judas’ task as betrayer is brought to light at the Last Supper, when Jesus predicts that someone with whom he shares this meal (and the table fellowship which accompanies it) will betray him (Jn 6:64, 13:11, 26), thereby fulfilling the prophecy of Ps. 41:9. Jesus’ followers want to know the identity of the betrayer (Mt 26:21), and Jesus reveals that it is the one who dips his bread with him into the dish (Mk 14:18). He warns that it is better not to be born than to betray the Son of Man. Symbolically, the dipping is an image of death.

Both Luke and John see Judas’ betrayal as the work of Satan (Lk 22:3, Jn 13:2): in Luke, Satan enters into him; John says he is “a devil.” Judas goes to the chief priests to see what they will give him to hand Jesus over (Mk 14:10), and he betrays Jesus for 30 pieces of silver (Mk 14:10; Mt 27:10), by all accounts a paltry amount. Matthew tells us that this is a fulfillment of the prophet Jeremiah; in fact it is a fulfillment of Zechariah 11:12–13. Arriving in Gethsemane with a large crowd with clubs and swords (Mt 26:47), Judas gave the chief priests a sign – the famous and duplicitous kiss – in order that they might arrest Jesus.

According to the author of Matthew's gospel, Judas regrets what he has done (Mt 27:3) and returns the 30 pieces of silver (Mt 27:4), throwing it into the Temple. Luke, however, tells a different story: Judas used the 30 pieces of silver to buy land (Acts 1:18). Matthew and Luke also give different accounts of Judas' end. For Matthew, the cause of death is suicide by hanging (Mt 27:5), but for Luke it is a fall. He writes, "falling headlong, [Judas] burst open in the middle and his insides spilled out" (Acts 1:19). Henceforth, the field was known as "Akeldama, i.e., Field of Blood" (Acts 1:20). Some scholars have tried to reconcile the two accounts, suggesting such things as a suicide gone wrong.

The question of Judas' fate has long been a subject of theological debate. For some, he is eternally damned, condemned, for example, to the lowest circle of Dante's *Inferno*. Placed headfirst into one of the three mouths of Lucifer (Brutus and Cassius, who also killed their masters, are devoured in the other two mouths), Judas Iscariot is chewed for all eternity as his back is skinned by Lucifer's claws. Not all, however, share Dante's vision of Judas' fate; for some, his eternal damnation is more problematic because it conflicts with God's goodness, and for others, it raises questions about the fairness of his fate given its place in the divine plan as foretold in Old Testament prophecy (Zech. 11:12–13, Ps. 41:0).

Some scholars (e.g., Klassen) dispute the traditional rendering of Judas as betrayer, based on the translation of the Greek word *paradidomi*. The word is used 59 times in the New Testament: when used in connection to Jesus (27 times), it is translated "handed over" (this is related to the word *paradosis* which is used of the tradition which is "handed down" from the apostles); when used in connection with Judas (32 times), however, the word is translated as "betray." If this reading is correct, the centuries-old maligning of Judas is brought into question.

## The Gospel of Judas

The Gospel of Judas, discovered in Egypt in the mid-1970s and recently unveiled by National

Geographic, also presents a very different picture of Judas. In his *Adversus Haereses (Against Heresies)*, which is dated c. CE 180, St. Irenaeus, Bishop of Lyon, condemns this gospel as "a fabricated work." He identifies it as a Gnostic text because it presents secret knowledge (*gnosis*) as the way to salvation. The Gnostics were dualists – they saw the material world as evil and the spiritual realm, the realm of God and the aeons (or divine principles) which emanate from God, as good. The material world is created as a result of the fall of one of these aeons, and some of the divine substance becomes trapped in human beings. Human beings, however, are unaware of this, and so Christ is sent to reveal this secret knowledge to his inner circle and thereby save them. In *Against Heresies*, St. Irenaeus tells us that Judas was the only one among the 12 who "recognized the truth and perfected the mystery of betrayal." In other words, Judas alone possessed this secret knowledge. Indeed scholars tell us that the recently unveiled manuscript of the Gospel of Judas begins with the words "The secret account of the revelation that Jesus spoke in conversation with Judas Iscariot" and has Jesus saying to Judas, "Step away from the others and I shall tell you the mysteries of the kingdom." Unlike the canonical gospels, the Gospel of Judas sees Judas as a hero, the greatest of the apostles. Jesus tells Judas, "You will exceed all of them. For you will sacrifice the man that clothes me." In other words, Judas' betrayal helps Jesus to get rid of his material body and thereby liberates the divine substance that was trapped within, facilitating a return to the spiritual realm. From a historical perspective, the Gospel of Judas does not reveal much about the historical Judas, but it does give more insight into Gnosticism from a Gnostic perspective.

## Judas and Anti-Semitism

Given the association of Judas' name with the Jews (the Judahites – later abbreviated to Jews – were the inhabitants of Judah, which is Judas' name in Greek) and the gospel identification of Judas with the demonic, the anti-Semitic charge of the Jews as "Christ killers" can be seen

going back to Judas. Medieval artwork often exaggerates the Jewish features of Judas, despite the fact that Jesus and his followers were all Jewish. Some scholars even doubt the historicity of the person of Judas, suggesting that he functions as a literary device to blame the Jews for the death of Jesus.

## Commentary

For Freud, betrayal is oedipal and thus rooted in jealousy. He saw his split with Jung as an oedipal betrayal of the father. In “Two Lies Told by Children” (Freud 1976, pp. 305–309), Freud makes an explicit reference to Judas’ betrayal as oedipal in nature. He tells the story of a 3-year-old girl who was given hush money after seeing her nursemaid having sex with a doctor. The girl played with her newly acquired coins in such a way as to betray the maid to her mother. This, says Freud, she did out of jealousy. Some years later, when she was 7 years old, the girl requested money from her father to purchase paints that she might use to decorate her Easter eggs. Much to her dismay, the father denied her request. Given her earlier association of taking money with erotic relations, Freud argues that the young girl felt this as a deep rejection by her father. Sometime later, the girl needed 50 pfennigs to make a contribution for a funeral wreath of a princess who had died. Her father gave her ten marks with which the little girl contributed to the wreath collection. Having bought the paints she had long desired with another 50 pfennigs, the girl placed the remaining nine marks on her father’s table. Denying that she had purchased the paints, her brother betrayed her and she was severely punished. Consequently, the little girl felt the father’s punishment as a rejection and suffered from psychological problems, especially in relation to money. One day, just before starting school, a neighbor sent her on an errand with some money. Meeting the neighbor on the way home, the little girl threw the change down on the pavement. Pondering her actions, she thought them “inexplicable,” “the thought of Judas occurred to her, who had thrown down 30 pieces of silver which he had been given for betraying the

master.” But in what way could this young girl identify with Judas? He argues that her early traumatic experience of erotic relations, in which she had betrayed her nursemaid for money, had led her to associate taking money from anyone as a symbol of a physical surrender (“an erotic reaction”) and taking money from the father as “a declaration of love.” He concludes that the little girl’s desire for her father is denied because it is unconscious – she cannot admit it to herself in the same way that she cannot admit that she appropriated the money (Freud 1976, p. 309).

For Jung, on the other hand, Judas’ betrayal of Jesus is archetypal, i.e., it is a universal motif which taps into a tremendous force of the collective unconscious (Jung, § 42). As a myth, it is particularly tragic because the hero is destroyed by a friend through treachery (Jung, § 42). Examples abound in Shakespeare (Othello, Lady Macbeth, King Lear, Julius Caesar), in the Bible (Delilah and Samson, Jacob and Esau, Joseph and his brothers), and in Greek mythology (Clytemnestra and Agamemnon, Odysseus and Philoctetes, Medea and Jason). For Jung, the betrayal myth will continue to be repeated because it articulates the idea that envy “does not let mankind sleep in peace” (Jung, § 42).

## Julian of Norwich

Jill L. McNish  
 Union Theological Seminary, Swedesboro,  
 NJ, USA

### Background

Julian of Norwich, sometimes referred to as “Dame Julian,” “Julian,” or “Mother Julian,” was an English mystic who lived at the end of the fourteenth and beginning of the fifteenth centuries. The circumstances of her early life are shrouded in mystery, but it is believed that in or about 1,373, she suffered a very serious illness from which she miraculously recovered. It has been conjectured that she may have been married and had children prior to becoming a mystic and anchoress. Visions that she experienced in the course of her illness, many of which involved Jesus’ Passion, radically changed her life and led her to become an anchoress enclosed in a single-room cell attached to the church of St. Julian in Norwich. There were two windows in her cell. One was a small window onto the street, from which Julian could converse and provide spiritual direction (which she did for many individuals including, most famously, Margery Kempe); the other window permitted her to witness masses in the adjoining church. Julian is best known for two accounts of the visions she had while ill and theological conclusions that she eventually drew as she contemplated and integrated the meaning of those visions. The first and much briefer account, written soon after her

illness, is sometimes known as the *Short Version of the Revelations of Divine Love*, sometimes alternately known as *Showings of Divine Love*. The second account, an expansion of the first version, was written about 20 years later.

### Psychological and Theological Perspectives

It is not known whether Julian actually penned the accounts herself or dictated them to a scribe. In any event, her work is extremely significant in and of itself for being what is believed to be the earliest surviving work in the English language reflecting the feelings, thoughts, and experiences of a woman. Beyond that, or perhaps partly because of that, the work is of great significance for the following theological/ psychological orientations:

1. Julian emphasized and developed an idea that had emerged only tangentially in earlier Christian writings (including places in the Hebrew scriptures, St. Paul’s epistles, and in some medieval writing), i.e., the idea of God and Jesus as having the attributes of “Mother” as well as “Father.” Thus, she wrote, “So Jesus Christ, who opposes good to evil, is our true Mother. . . . As truly as God is our Father, so truly is God our Mother, and he revealed that in everything, and especially in these sweet words where he says: I am he; that is to say: I am he, the power and goodness of fatherhood; I am he, the wisdom and lovingness of motherhood; I am he, the light and the grace which is all blessed love. . . .” (Julian 1978, pp. 295–296). Julian continued in this vein in equating a mother’s milk with the blood of Jesus: “The mother can lay her child tenderly to her breast, but our tender Mother Jesus can lead us easily into his blessed breast through his sweet open side, and show us there a part of the godhead and the joys of heaven. . . . This fair lovely word ‘mother’ is so sweet and so kind in itself that it cannot be said of anyone or two anyone except of him and to him who is the true Mother of life and of all things” (Julian 1978, p. 299). In her work, Julian

perhaps more than any other mystic of the Middle Ages incorporated the feminine into the Godhead.

2. Julian's work is notable in its time and context for its theology of sin which is remarkably grace filled and displays a vision of God which is at once bigger than that of most of her contemporaries and more personal. For Julian, God was not a stern, rageful, judgmental Father, but a wise, loving, and compassionate Father and Mother who understands our nature and expects us to sin. Thus, in one of her visions, she heard Jesus say, "Sin is necessary but all will be well, and all will be well, and every kind of thing will be well" (Julian 1978, p. 225). Moreover, she said that in her visions, "I did not see sin, for I believe that it has no kind of substance, no share in being, nor can it be recognized except by the pain caused by it" (Julian 1978, p. 225). Julian wrote that we were not to "be too much aggrieved by the sin that comes. . . against God's will" (Julian 1978, p. 33). Perhaps most surprisingly for a person who lived in the Middle Ages, Julian said that she saw "no kind of wrath in God. . ." (Julian 1978, p. 33).
3. Writing in a historical time and place of much barbarism, upheaval, and premature death owing to many factors including the Black Death, Julian's work is notable and unusual for its lightness and for its sense of optimism and divine love that it conveys. In her work, one experiences an overarching sense of an overflowing grace and goodness and kindness in the Godhead and in Divine Providence. Thus, her *Revelations* contain the constant refrain and insistence that regardless of what may befall us, and as impossible as our life situations may sometimes seem, we will "not be overcome" (Julian 1978, p. 164) and that "all will be well." Julian concludes her *Revelations* with the following words she perceived from God:

What, do you want to know your Lord's meaning in this thing? Know it well, love was his meaning. Who reveals it to you? Love. What did he reveal to you? Love. Why does he reveal it to you? For love.

Remain in this, and you will know more of the same. But you will never know different, without end (Julian 1978, p. 342).

Taken as a whole, Julian's *Revelations* reveal a person who appeared to be remarkably devoid of defenses of shame, dualism, splitting, self-hatred, paranoia, and negative introjections that were the hallmarks of many of the other mystics and theologians of her time; a person who furthermore was able to integrate archetypes of the maternal, the paternal, and the lover into her images of God in Jesus Christ.

## Jung, Carl Gustav

Murray Stein

International School for Analytical Psychology,  
Zurich, Switzerland

Carl Gustav Jung (1875–1961), the founder of Analytical Psychology, ranks as one of the major contributors to the modern psychological understanding of religion and religious experience. His signature work in this area, presented in 1936 in the annual Terry Lectures at Yale University, is *Psychology and Religion*.

### Childhood

Carl Jung was born into a traditional and unusually religious Swiss family. His father, Johann

Paul Achilles Jung, was a Swiss Reformed pastor with a doctorate in Oriental languages from Göttingen University, and his mother, Emilie née Preiswerk, was the daughter of a prominent Swiss Reformed minister in Basel, Samuel Preiswerk. Jung's early years were deeply infused with religious influences and impressions. Surrounded by church and churchmen in his childhood and growing up in ultraconservative Basel, he assimilated the prevailing religious atmosphere of Swiss Protestantism of the place and times, with its characteristic narrowly provincial views of Catholics, Jews, and other cultural aliens. In time, he would rectify this narrowness.

In the autobiographical work, *Memories, Dreams, Reflections*, Jung reports a number of childhood experiences involving religion and religious figures. As an intellectually restless adolescent, he questioned his father sharply about the teachings of Christianity, such as the doctrine of the Trinity, but found no satisfaction in his father's answers. Subsequently, he turned to books in his father's library for enlightenment. When his mother gave him a copy of Goethe's *Faust* and passed on to him the family myth that his grandfather Jung – also named Carl Gustav, a professor of medicine and ultimately the *Rektor* of the University of Basel – was an illegitimate descendent of Goethe's, he became fascinated by this classic of German culture for life. In the gymnasium and later while attending medical school at the University of Basel, he read philosophy (Kant, Schopenhauer, C.G. Carus, and Nietzsche were especially important) in his spare time. All of this would feed eventually into his extensive studies of myth, religion, and heterodox traditions such as Gnosticism and alchemy. In his adult years, his erudition in the history of world religions and their symbolisms was formidable.

### Early Contributions

While enrolled as a resident psychiatrist at the Bürgholzli Klinik in Zurich, where he was the chief assistant to Prof. Eugen Bleuler, he began an intense collaborative relationship with the

Viennese founder of psychoanalysis, Sigmund Freud. He would later call this his first big indiscretion because Freud had no standing whatsoever in psychiatry or university circles at the time. Jung recognized Freud's genius immediately upon meeting him and was initially impressed by the scientific and therapeutic value of his methods for delving into the dark corners of the human mind. The voluminous correspondence between the two men contains a graphic account of the waxing and waning of their relationship and reveals the importance that their differing attitudes toward religion played in their discussions. From the beginning, however, Jung was skeptical about Freud's heavy reliance on the sex drive and on personal psychodynamics to explain the etiology of neurosis and psychosis on the one hand and more importantly about his insistence that repression, sublimation, and wish fulfillment could exhaustively explain the creation and meaning of human culture and religion. Later, in the person and philosophy of William James, whom he met at Clark University in Worcester, MA, in 1909, Jung found a more intellectually compatible resonance. He especially appreciated James's empirical methodology in *The Varieties of Religious Experience*.

When the relationship with Freud broke up in 1913, Jung had just completed *Wandlungen und Symbole der Libido*, translated as *Psychology of the Unconscious* in 1916 and later revised and published as *Symbols of Transformation*. This was his first extensive exploration into the primordial and collective foundations of dreams, fantasies, and imagination. In 1914, having separated from Freud and resigned from the International Psychoanalytic Association, of which he was president, Jung founded his own school of psychoanalysis, Analytical Psychology. In 1921, he presented the results of his new thinking in the volume, *Psychological Types*. In these two early works, he delved deeply into the history of Western thought, including its theological and religious traditions. In addition, his broad study of world religions, mythologies, and other symbol systems is also on full display there. At the same time, he was engaged in a challenging self analysis, which is described in *Memories, Dreams,*

*Reflections* and which he discussed with students in a number of seminars (as recorded, for instance, in *Analytical Psychology: Notes of the Seminar Given in 1925*). Jung was fully cognizant of the religious content of his dreams, fantasies, interpretations, and written creations (such as the quasi-Gnostic *Septem Sermones ad Mortuos*) during this period. Relying heavily on these “inner experiences,” many of which are recorded in *The Red Book* (a privately kept journal that is due to be published for the first time in 2009), he constructed the psychological basis for his approach to religious life and spirituality, which would appear in many writings in the decades to follow. As a modern person who had left, or had “fallen out of,” his inherited religious tradition and was therefore without a myth to live by, Jung felt a strong need to make up for this loss. Without myth, he discovered, the individual’s life lacks meaning. Many of his subsequent essays are addressed to people like himself. In his depth psychology, Jung offered a set of methods and interpretive strategies that could be used to solve this crucial spiritual problem at the core of modernity.

### **Collaboration and Influences**

Increasingly, Jung’s interpretations of religion departed from the typical contemporary psychoanalytic ones. Jung did not intend to be an apologist for religion, as Freud was quick to claim. While appreciative of the value of religious traditions and aware of the power of religious images and experiences to transform individuals’ lives, Jung could also be skeptical and certainly knew of the shadow sides of these institutions and psychic phenomena. Rather than wrapping himself in assertions of faith, his intent was to use his psychological theory as a scientific hypothesis that could perhaps explain the origins and significance of religious thought, imagination, and feeling and the religious behavior of human beings throughout history and across cultures. After World War I, Jung made trips to such far-flung places as the American Southwest, Africa, and India, where he observed the religious

customs and mythologies of the indigenous peoples. These journeys fed into his interest in the varieties of religious ideas, perspectives, and images that grow out of the psychic experience as well as further convinced him of their common features and patterns.

In the 1920s, through his acquaintance with Hermann Graf Keyserling and participation in the latter’s “School of Wisdom” in Darmstadt, Germany, Jung met Richard Wilhelm, the missionary Sinologist and translator into German of a host of texts from the Chinese including, importantly, the *Tao Te Ching* and the I Ching. Through friendships such as these, he developed a special and abiding interest in Eastern thought and religions, and he began as well to find intriguing parallels between Western psychology and Eastern philosophy, which added credibility to his intuition that the collective unconscious is the universal matrix of religious imagery and ideation. In 1928, Wilhelm invited Jung to write a psychological commentary for his translation of the Chinese text, “The Secret of the Golden Flower,” which gave Jung the opportunity to inspect more deeply and precisely the commonalities between the psychological processes he found active in his European and American patients and the more explicitly spiritual productions of the ancient Chinese practitioners of yoga and alchemy. These parallels fascinated him and led him to formulate the view that the unconscious is the source of a spontaneous evolution of religious imagery with a concomitant suggestion of transcendent meaning, which can eventually make its way into consciousness via dreams and imagination. In a series of lectures given in the 1930s and later formulated in more detailed terms as Part II of the work, *Psychology and Alchemy*, Jung attempted to demonstrate how this process can be observed in a modern nonreligious Western person’s dreams and spontaneous fantasies. In these studies, he identified a process of spiritual development that emerges from the unconscious background of the psyche into the light of day through the medium of dreams and active imagination. A hallmark of this development is the experience of the numinous archetypal images of the collective unconscious. (Rudolph Otto’s

book, *Das Heilige* (in English, *The Idea of the Holy*), played an important role in Jung's thinking about psychology and religion. Otto coined the term "numinosum" to describe the nature of religious experience.)

In the 1930s, Jung collaborated with a number of well-known scholars of Eastern Religions, such as Heinrich Zimmer, Wilhelm Hauer, D.T. Suzuki, and W.Y. Evans-Wentz. For Evans-Wentz, who was translating and editing a series of Eastern texts into English, Jung wrote psychological commentaries on *The Tibetan Book of the Great Liberation* and *The Tibetan Book of the Dead*. His interest in the psychological aspects of world religions was further expanded and greatly nourished by his participation in the Eranos Tagungen held in Ascona, Switzerland, annually beginning in 1933. In this international gathering of scholars, he met and conversed with such luminaries as Martin Buber (on Hasidic Judaism), Henri Corbin (on Islamic mysticism), Mircea Eliade (the founder of the discipline known as History of Religions), Karl Kerényi (on Greek mythology), Gilles Quispel (on ancient Gnosticism), Paul Radin (on Native American mythology), Gershom Scholem (on Jewish mysticism), and Paul Tillich (on Protestant theology). In turn, Jung's ideas had a significant influence on the thinking of the scholars who attended the Eranos conferences.

## Religion and Archetype

Jung's psychological theorizing puts forward the notion that all human beings share a common primordial level of psyche, which he termed the collective unconscious. Out of this common psychic matrix, he argued, are forged all the world's religious images and dogmas. The characteristic patterns of Deity, which take form spontaneously throughout history and across geographical regions, he designated as archetypal images. These fundamental patterns can be found in all peoples and are particularly obvious in their myths and rituals. The religious dogmas and icons of the world's religions give expression to refine and elaborate, in one degree or another, the

archetypes of the collective unconscious. This makes of them suitable containers for the complexity of individual human psyches. As containers, the dogmatic expressions within religions also provide a strong defensive bulwark against the onslaught of original religious experiences of the numinous, which Jung (as a cautious psychiatrist) feared could lie at the root of ominous psychiatric disturbances if they occurred to insufficiently stable personalities. They could also bring about collective states of possession and lead to social upheaval and catastrophe, as he witnessed in nearby Germany during the 1930s and 1940s.

The archetypes underlying and supporting the religious dogmas and images are psychological forces: they behave like drives, but they are not just impulses, they are also represented as images in the psyche and can express themselves as ideas and ideologies. They have both a spiritual and a biological basis. Jung regarded the production of images and ideas with a strongly religious thrust to be a natural human tendency. In his view, the proclivity to imagine and conceive, to worship, and to recognize Divinity belongs to the human psyche's nature, and the psyche's more unconsciously created and driven religious productions are often combined with the more conscious human need for personal meaning. With this perspective, Analytical Psychology is able to take a view of religious experience and behavior in all its manifestations that is appreciative of psychological values, including both defensive and prospective ones.

## Jung and Christian Tradition

After a trip to India in 1938, Jung focused more exclusively on his own background religious tradition, Christianity, interpreting and commenting on its images, doctrines, rituals, and texts in such works as: "Transformation Symbolism in the Mass" (1941/1954), "A Psychological Approach to the Dogma of the Trinity" (1942/1948), *Aion* (1951), and *Answer to Job* (1952). In these writings, Jung used psychological theory to interpret critically the psychological sources,

consequences, and implications of the Christian tradition – its Biblical background, its theological and ethical thinking, and its two millenniums of history. His use of a variety of heterodox and hermetic materials – Gnosticism and alchemy, especially – should be attributed not only to a personal preference for these esoteric movements nor only to his opinion that the practitioners of these were more psychologically minded than the mainstream theologians but importantly also to their value as resources for attaining a critical distance from the orthodox and dogmatic religious tradition. He found in these counter movements a means for purchasing insight into Christianity's one-sidedness and inadequacies due to the repression of differing but complimentary religious tendencies. Jung claimed to respect all religions, their symbolisms and ritual activities, since all equally originated from a common human matrix, the collective unconscious and the archetypal patterns of the psyche. But he also allowed himself to retain a critical perspective on all of them equally from the vantage point of psychology.

During the final decades of his life, Jung carried on a rigorous epistolary dialog with the English Dominican theologian, Fr. Victor White, O.P. (1902–1960). More than any other of Jung's theologically informed and trained students, Fr. White consolidated and expanded on Jung's dialog with the Christian tradition, especially as it is expressed in the Roman Catholic Church. In his two books, *God and the Unconscious* and *Soul and Psyche*, White explored in a highly refined and disciplined fashion the potential for dialog between Analytical Psychology and Roman Catholic theology. The collaboration between these two men broke down because of their insurmountable differences – Jung was a secular Protestant who followed Kant's epistemological reservations about metaphysics, White was a Roman Catholic priest and a committed Thomistic theologian; Jung viewed God as a symbol, White had faith in a revealed God; and Jung understood God as a coincidence of opposites (coincidentia oppositorum, following Nicholas of Cusa among others) and held out for the psychological reality of evil as a potent

force in human affairs as opposed to the way he saw Christianity playing it down in its teaching of evil as "privation of good" (*privatio boni*), White accepted the Catholic teaching of God as the Highest Good (*Summum Bonum*) and considered evil, even if it is real enough in human affairs, to be but without metaphysical foundation. Their differences in methodology and ways of thinking – psychological versus theological – remain highly instructive for anyone wishing to enter into the dialog between depth psychology and traditional theology.

## Jung, Carl Gustav, and Alchemy

Alane Sauder-MacGuire  
New York, NY, USA

The practice of the alchemical arts has its origin in the second or third century BCE in Greece. It spread through the ancient Near and Far East. In the most basic understanding, alchemy has always been about transformation and remains so in the psychological theory of Carl Jung. The

name, alchemy, in fact, derives from the Arabic *al-kimia* meaning the art of transformation.

Transformation in alchemy is effected by the realization of oppositions and the subsequent reconciliation of those opposites. The work involved discerning oppositions and then reconciling what often seem irreconcilable opposites. The goal was to produce a unity and wholeness that was then incorruptible and was able to transcend oppositions. This remained for the alchemist and so remains today for the psychotherapist using an alchemical model in his practice: an ideal never attained, but aspired to. In fact, the attainment of the goal would put an end to the growth as well as the needs for growth of the personality because it is from that tension of opposites that the personality develops.

Perhaps in the popular imagination, alchemy is most commonly thought to be about the converting of base metal into gold, a nonreactive or incorruptible metal. Symbolically, the alchemical processes naturally metamorphose into the transforming of the corruptible into the noncorruptible and of physical matter with its corruptibility into something beyond corruption – that is eternal. A concurrent purpose of the transformation of base metal into gold became creating an elixir of life that could ameliorate the process of corruption of the body in the aging process. It was by the creation of what is termed the philosopher's stone that these processes could be accomplished. In Jungian psychology, this is thought of as the third that emerges from the irreconcilable opposition of the two and is termed the transcendent function that will be discussed below.

Originally, the processes of psychic transformation and physical transformation were amalgamated in the alchemical arts. The moral and religious problems that alchemy implicitly addresses were intertwined with the idea of the physical transformation of the metals.

In the Renaissance, alchemy developed in two directions – one moving closer to science and the other becoming more philosophical. The former focused on the transformation of physical stuff and eventually became the discipline of chemistry. The latter remained more of an art becoming more philosophical and concerning itself with the

imaginal and the transcendent. The problem for these alchemists, in part, became the reconciliation of the experience of physicality with its temporal and limited orient with the soul, spirit, and imagination with their limitless eternity.

In either case, Jung believed the idea of the transforming of metal into gold captured the passion and thereby the imagination of an alchemist. They described in their writings the archetypal process of transformation of the personality into an integrated form in which its integrity was corrupted neither by inner nor outer events. Jung called this process individuation, and although unattainable, it was always an inner quest.

As such, Jung believed the writings of alchemists provided a window into process of the unconscious. He felt it described the psychological phenomenology observed in the unconscious often with a detail he found astonishing. The alchemists either projected their psychological content unto the base metal or, in later times, later used the metals as a vehicle to describe their inner strivings. Because they knew little or nothing about the actual properties of the metal, it provided a blank screen for their projections and descriptions.

Jung held that in understanding the projections the alchemist made unto the metal, the clinician could gain insight into the natural and archetypal processes of the unconscious and thereby bring into consciousness elements and developments within the psyche that would promote the process of individuation. In its complexity, alchemy mirrored the complexity of the human psyche.

Jung also felt that the alchemical writings provided a needed compensation to Christian doctrine. Although the majority of the alchemists whose writings Jung explored were Christian, their writings included chthonic elements that Jung felt were missing from the Christian cannon, but an integral part of psychological reality. Most importantly for Jung, alchemical writings incorporated the bodily experience and the idea of evil not just as a perversion of creation and existence but as an element of it.

For Jung as for the alchemist, the problem of the opposites was of prime importance, and good

and evil as the components of morality are among the most psychologically important opposites. To Jung, the Christian doctrine of original sin did not adequately address the problem of evil, but instead split evil off from good and from god in creation. Evil as sin was only a perversion of this good. Jung believed that in order for the individual psyche to individuate, evil must be considered seriously as an archetypal force as innate and fundamental both to creation and the individual self. Because evil was so split from the idea of god in Christian doctrine, the collective consciousness, conditioned by that Christian doctrine, was forced to identify with the good or be burdened by a guilt that prohibited the realization of the wholeness of the personality.

The dominant worldview was that the patriarchal world with its masculine orientation of consciousness which precluded the acceptance of evil. The alchemist projected elements of the matriarchal feminine unto the metals and so thereby incorporated in their writings that which had been culturally repressed. Inclusion of the matriarchal feminine allowed for the reconciliation of good and evil and made it possible in a psychological way that Christian doctrine did not provide.

Richard Wilhelm, the noted sinologist, propelled Jung into study of alchemy through his interpretation of a Chinese treatise, *The Secret of the Golden Flower*. Jung's first alchemical writing published in 1929 was the introduction to Wilhelm's translation of this work.

In 1944, Jung's *Psychology and Alchemy* (CW 12) was published. It contains a dream series that showed the process of individuation that Jung amplified and interpreted using alchemical symbolism. It also contains an essay explicating the religious elements of alchemy. Other of Jung's alchemical essays are in *Alchemical Studies* (CW 13).

What is generally thought to be Jung's greatest alchemical work and the culmination of his research and thinking about alchemy, *Mysterium Coniunctionis* (CW 14), was written between 1941 and 1954. It is concerned predominantly with the problem of opposites and uses a variety of symbolic alchemical symbols such as Sol and

Luna, Rex and Regina, and Salt and Sulfur to explicate the problem. “Coniunctio” was the alchemical word for the unification of opposites and Jung felt that this unification of opposites was the central problem of alchemy.

The metaphor of the sexual unity of male and female is often used to illuminate the process because it is the most obvious opposition in the human experience. It was Jung’s contention, certainly supported in the alchemical literature, that every human has within his unconscious a contra-sexual part or archetype that he termed as anima in man and animus in woman. The symbol of sexual unity, thus, provides the image of the human being reconciling the opposites within.

Perhaps the most explicit use of the sexual metaphor used by Jung to describe psychic phenomena is in *The Psychology of the Transference* (part of CW 16). It was originally a part of *Mysterium Coniunctionis*, but was published separately in 1946 and analyzes a series of sixteenth-century alchemical woodcuts called the *Rosarium philosophorum*. It is Jung’s major work on transference/countertransference dynamics. Jung understood the images portrayed in the woodcuts to describe the complexities he had experienced in the transference/countertransference field in a way that no other vehicle could.

## Commentary

In understanding Jung’s work in interpreting alchemical writings and their relation to psychological material, it is important to understand that for Jung, projection was not only as in the Freudian sense a mechanism for evacuating discordant repressed material. It was also a mechanism for the realization of the eternal components of the personality that have never been conscious. Jung termed these components archetypal. They represent the innate patterning of psychological process and behavior that constitute the experience of being human. The projections, the alchemist made upon the metals, represented archetypal material that described the process of individuation.

On the one hand, Jung meant individuation as the process of the spiritual components of the personality joining together with the instinctual components into a wholeness. On the other hand, individuation can be thought of as the process of fully living out the fullness one’s potential – being the very being one was meant to be. Obviously both of these processes entail a unity of the personality that reconciles the opposing components that are inevitable results of the expanding consciousness resulting from confronting the unconscious.

The process of individuation has a complexity, subtlety, and a myriad of variations. In alchemical symbolism, Jung found a way to describe it.

The analogy to the alchemist attempting to make gold which is a metal whose components are stable and nonreactive is obvious. The attempt was to find a substance that could contain the warring oppositions that caused the metal’s instability. In his psychological theory, Jung has termed this holding together the tension of these opposites a mediating third the transcendental function. For a third way that holds these opposing tendencies together to emerge, one must work to the extent of one’s ego’s ability on the problem and wait for the solution from the depth of the psyche.

The following is an attempt to describe the individuation process in a linear form that must necessarily be only a surface view of a profound process:

The process begins when the original unity of being begins to break down with the confrontation of what Jung has termed shadow. The shadow is the part of the personality that is repressed because it does not meet with the ideal of what one or society believes one should be. As the individual becomes aware that these shadow qualities lie within and can no longer be blamed on mother, father, or someone else, the original unity is shattered and the work of reconciling ego and shadow begins.

There is also the confrontation of the archetypal pieces that vie for the time-limited space of consciousness – such as feeling the desire to be a mother while at the same time desiring a powerful work position. One desire is

motivated by what Jung would call the mother archetype, the other by the power principle. Both may be aspects of the self that need to be expressed, but the limitation of time may not allow both to be expressed with a full intensity.

Another example of oppositions called forth in the process of individuation would be falling in love with someone and being in a situation where the sacrifice of much that is loved in one's present life would be necessary if the new love is to be realized. The ego can find no solution with the attitude it holds except to split from one love and cling to the other. The answer can only emerge from the confrontation and struggle with the unconscious. It is this sort of psychological struggle the alchemical process describes.

Jung did not believe that the problems of life engendered by these conflicting components were soluble as such, but rather that a new attitude must emerge that could hold them. Alchemically, this was the philosopher's stone that allowed seemingly opposing forces to exist in harmony. Psychologically, this means the ego moves more in accord with the self. In other words, the temporal world of the ego is reconciled with the limitless self-moving which moves consciousness to a viewpoint large enough to encompass the conflicts. The individuated way would be holding the tension of these opposites until a third way (the transcendent function) emerges.

In summary, alchemy provided for Jung insight into the process of individuation. It allows the student of his methods a map of complexity and subtlety to the unfathomable depths of the psyche.

Religious Studies Section, University of Kent,  
Canterbury, Kent, UK

### Jung's Celebration of Eastern Religious Traditions

C. G. Jung's dialog with Eastern religious traditions, spanning almost 50 years, was profoundly influential on the development of analytical psychology, enabling him not only to discover cross-cultural confirmation for his clinical research but also to extend his own metapsychological concepts (Jung 1973, 1976; Coward 1985, 1996; Bishop 1992; Clarke 1994; Shamdasani 1996). Based on the assumption that Western consciousness is historically conditioned, is geographically confined, and represents only part of mankind, he argued that Eastern psychology forms the indispensable basis for a critique and objective consideration of Western psychology (Jung 1931/1962, 1950/1955, 1973). Jung's primary interest was in *yoga*, a general term for him indicating the spiritual development of the personality within the Hindu, Buddhist, and Taoist religious traditions. Rather than distinguishing between the variety of yoga practices and competing soteriological perspectives established by the canonical traditions of Hinduism, Buddhism, and Taoism, Jung was interested in yoga as a natural process of introversion, seeing the inner processes to which yoga gave rise as universal and the indigenous methods employed to achieve them as culturally specific (Jung 1936; Shamdasani 1996). The symbolism of oriental yoga materials provided Jung with invaluable comparative material for the interpretation of the collective unconscious, assisting him in his endeavor to develop a cross-cultural comparative psychology of inner experience (Coward 1985; Clarke 1994; Shamdasani 1996). Thus the intention of his essays and commentaries on Indian, Tibetan, Chinese, and Japanese

religious materials (Jung 1931/1962, 1932, 1935/1953, 1936, 1938–1939, 1939a, 1939b, 1939c, 1939d, 1943, 1944a, 1950), as well as his persistent reference to these materials throughout his other mature writings (Jung 1921, 1934–1939, 1951, 1955–1956, 1963, 1973, 1976), was not to invite his readers to uncritically adopt Hindu, Buddhist, or Taoist spiritual practices, but to demonstrate that the contemporary intrusion of Eastern spirituality into Western consciousness (which has a long history) possesses profound psychological significance: the Western discovery or rediscovery of the collective unconscious, the source of religious experience. Moreover, his research on Eastern religious traditions led him to realize that European alchemy, providing a bridge between analytical psychology and Gnosticism, is a Western form of yoga (Jung 1938–1939; Coward 1985; Clarke 1994; Gomez 1995; Shamdasani 1996).

Jung was drawn toward Eastern mystical traditions because of their dominant orientation toward overcoming severe imbalances between opposites (particularly spirit and matter/instinct and good and evil) causing disunity within the psyche and human suffering. This healing tendency of *yoga* traditions to focus their attention on the dynamic interplay between complementary opposites and psychic liberation from them through either their balancing or transcendence, Jung argued, paralleled, even anticipated, his own individuation process of seeking psychic wholeness. Recognizing Chinese and Indian symbols of the *Tao*, *brahman*, *atman*, and many others as uniting pairs of opposites provided him with confirmation that the archetype of the “self” unifies all opposites (Jung 1921, 1931/1962, 1939c, 1955–1956, 1963; Coward 1985, 1996; Clarke 1994). Moreover, Jung was attracted to the emphasis Eastern yoga traditions place on detachment from egocentricity as the condition for the spiritual transformation of consciousness, because it provided support for his affirmation that individuation requires the shifting of the center of the personality away from the ego (and its emotional attachments to the outer world) and toward the self. For Jung, recognizing that the ego stands to the self as the moved to the mover, or as object to subject, leads to an extension and

refinement of consciousness familiar to the East, enabling the analysand to achieve relief from suffering caused by the conflict of opposites and to realize that it is not that something new is seen but that one sees or experiences differently (Jung 1931/1962, 1934–1939, 1939b, 1939c, 1941/1954, 1951, 1963, 1973, 1976; Coward 1985; Clarke 1994). What impressed Jung most about the transformation of consciousness celebrated by the yoga traditions of the East (equated by him with the self-liberation of the mind in contrast to the grace of God in Christianity) was the importance assigned to bringing the divinity within the range of human experience rather than, as in much Western religion, accepting that God is inaccessible to human consciousness (Jung 1939c, 1963; Coward 1985).

### Jung’s Ambivalence Toward Eastern Religious Traditions

Nevertheless, Jung’s enthusiasm for Eastern religious traditions was qualified by what he considered to be their excessively introverted psychological orientation. Observing that the mind of the Far East is related to our Western consciousness as the unconscious is, that is, as the left hand to the right, he understood the relationship between Eastern and Western mentalities and religious traditions to be one of complementary opposites. Whereas Western man is predominantly extraverted, finding meaning in the external world, Eastern man is predominantly introverted, locating the meaning within himself through sinking into meditation. Adopting a position of East/West psychological relativism, he argued that whereas the introverted Eastern spiritual perspective searches for the riches of knowledge within the psyche, the extraverted Christian perspective is driven by the principle of love which encourages worldly activity. Whereas for the Westerner, the essence of that which works is the world of appearance, for the Indian it is the soul because he recognizes that the psyche alone possesses immediate reality. The world for him is a mere show or façade, and his reality comes close to what we in the West would

call a dream. Jung's encounter with what he perceived to be the dreamlike world of India during his visit to the subcontinent in 1938 led him to conclude that whereas the Westerner believes in *doing*, the Indian believes in impassive *being* because God is within all things and especially man (Jung 1921, 1932, 1939a, 1939c, 1939d, 1943, 1947/1954, 1950/1955, 1955–1956, 1963; Coward 1985; Reynolds 1989; Clarke 1994; Gomez 1995).

Jung, however, was equally critical of the psychological perspectives of both the introverted East and the extraverted West. Both standpoints, he argued, while each having their psychological justification, are one sided or extreme in underrating or losing one half of the universe (either the world of consciousness or of the unconscious); thereby, they make the mistake of artificially separating themselves from total reality. Both the Eastern and the Western standpoints need to reorient themselves toward the goal of the individuation process: the conjunction of introversion and extraversion. Since the twentieth century, Western man is excessively extraverted, suffering an unprecedented spiritual crisis because he has no time for self-knowledge and he is in need of compensatory introverted spirituality to provide necessary psychic balance. Here, for Jung, lies the meaning of the West's engagement with the East during the twentieth century; exposure to Eastern traditions provides the catalyst for Western spiritual transformation: the realization that the unconscious is the generator of consciousness. The West must, however, approach Eastern values from within and not from without, building on its own psychic ground with its own methods to produce a Western form of yoga on the basis laid down by Christianity, rather than trying to cover its spiritual nakedness with the gorgeous, but psychologically alien, trappings of the East. Jung argues that an encounter with yoga in the twentieth century serves to remind us that we in the West possess similar forms of introverted spirituality: Gnosticism, medieval Christian mysticism, and alchemy (Jung 1930, 1938–1939, 1939c, 1943, 1944a, 1951, 1954, 1955–1956, 1963; Coward 1985; Clarke 1994; Gomez 1995).

Jung insisted that the mentalities of the East and the West are fundamentally different, because they are the products of different histories deeply rooted in the psyche. Because Eastern religious teachings, symbols, and practices are a foreign body in the Western psyche, adoption of them in the West can only succeed in producing an artificial stultification of Western intelligence and the means not of addressing Western psychological and spiritual problems, but of avoiding them. For this reason, Jung repeatedly warned against the practice of yoga by Europeans, a form of mimetic madness which could, on the one hand, lead to a strengthening of will and further repression of unconscious contents by consciousness and, on the other hand, to psychotic states in which consciousness is overwhelmed by the unconscious. Instead of the practice of yoga, Jung prescribed for the European his own visionary technique of active imagination to facilitate the flow of unconscious contents into consciousness (Jung 1916/1958, 1931/1962, 1932, 1935/1953, 1936, 1938–1939, 1939c, 1943, 1944b, 1951, 1954, 1963; Coward 1985; Clarke 1994; Shamdasani 1996).

### Jung's Objections to Hindu and Buddhist Nondualism

Moreover, Jung objected to the claim of nondualist Hindu and Buddhist traditions that the ego can be *completely* dissolved in, or absorbed by, the transcendental self (*brahman*, *atman*, *purusa*, *nirvana*) in a trance-like state (*samadhi*) attained by yoga practice. He argued that the identification of the self-conscious subject with, or its disappearance within, a universal consciousness celebrated by Eastern canonical traditions must be equated with unconsciousness and that exclusion, selection, and discrimination are the root and essence of consciousness. Jung conceded that the practice of yoga can produce a remarkable extension of consciousness, but it cannot lead to an egoless state, because there must always be something or somebody left over – the infinitesimal ego, the knowing “I” – to experience the realization that there is no distinction between subject and object. If there is no knowing subject, the nondual

position cannot be stated as an object of knowledge (Jung 1939c, 1939e, 1951; Coward 1985; Reynolds 1989; Clarke 1994). In contrast with this nondualist position celebrating the transcendence of opposites (*nirvāṇa*), ultimate perfection, and the final conquest of suffering attained through the realization of *mokṣa* (liberation) or *nirvāṇa* (enlightenment, extinction), for Jung, because the infinite unconscious can never be fully known by the finite ego and the individuation process never completed, suffering caused by the dynamic interplay of opposites can never be fully overcome. Jung insists that complete redemption from suffering in this world is an illusion and complete liberation from the opposites means death (Jung 1916/1958, 1946, 1958, 1963, 1973; Ajaya 1983; Coward 1985; Clarke 1994; Muramoto 2002).

### Jung's Dialog with Taoism

Jung's exposure to Taoist materials was more influential on the development of his concept of the self than his dialog with the Hindu and Buddhist nondualist traditions. Noting that the *Tao* is the middle way between opposites such as man and nature and heaven and earth, he recognized that the goal of Taoist practice of reestablishing a balance between the opposites of *yang* (warmth, light, maleness, heaven) and *yin* (cold, darkness, femaleness, earth) in the *Tao* and the goal of the individuation process, a balancing of compensating psychic opposites in the experience of the self, were parallel processes. Jung found in the Taoist teaching that man, as microcosm, is a reconciler of opposite confirmation, on the one hand, for his view that individuation requires bringing the opposites of spirit and instinct and introversion and extraversion into harmony through letting go of the ego in spontaneous action (*wu-wei* – action through non-action) and, on the other, for his theory of synchronicity, the meaningful acausal connections or correlative parallels between inner psychic and outer physical events. Jung's dialog with Taoism led him to affirm through his theory of synchronicity that intrapsychic life must be interrelated with corresponding experience of the

external world (Jung 1921, 1931/1962, 1950, 1951, 1952, 1963; Aziz 1990; Clarke 1994; Coward 1996; Main 2004).

## Jung, Carl Gustav, and Feminism

Vivianne Crowley  
Cherry Hill Seminary, Columbia, SC, USA

Carl Gustav Jung's analytical psychology was important in valuing the feminine in counterbalance to what he saw as an excessive shift towards "masculine" logos, rationality, and science in Western society. But, infused with patriarchal assumptions, Jung's work on gender is flawed and lacks awareness of the issues raised by later feminist psychologists such as Crawford and Unger (2000). Jung's work is however an important catalyst. Jung's critique of religion has inspired some women and men to challenge the absence of the divine feminine and women leaders in their religions of birth and others to turn to goddess spirituality to find empowering religious images and roles.

### Women in Switzerland

Carl Jung's attitudes to women were formed in the conservative patriarchal culture of late nineteenth-century Switzerland. It was an era that saw the beginning of first-wave feminism; but

women did not gain the vote in Swiss federal elections until 1971 (CFQF 2009b), and equality in education was not written into the Swiss constitution until 1981 (CFQF 2009a).

### Women's Role

The Swiss women's movement was divided between those seeking equal rights and political representation and "dualists." Dualists predominated and pursued an "equal but different" agenda that saw women's role as primarily to assure the well-being of the family (CFQF 2009c). Jung supported the idea of women's suffrage (Adler 1975, pp. 475–478), but his theories reflected a "dualist" viewpoint that stereotyped women.

The conscious attitude of a woman is in general far more exclusively personal than that of man. Her world is made up of fathers and mothers, brothers and sisters, husbands and children. . . . the man's world is the nation, the state, business concerns, etc. (Jung 1953/1979, Vol. 7, para. 338).

Jung saw *Eros* (feeling, relatedness, and love) and *logos* (reason, spirit, and differentiation) as present in both sexes but women as oriented primarily towards *Eros* (Jung 1953/1979, Vol. 9ii, para. 28). He spoke disparagingly of women who tried to make the sexes equal, rather than valuing difference. Attempting to follow a "masculine" profession might injure women's "feminine nature"; for while women could "do anything for the love of a man," only the exceptional could do something important for the "love of a thing" (Jung 1953/1979, Vol. 10, para. 243).

### Anima: The Female Within the Male

Douglas points out that Jung's work synthesizes the positivism of his medical studies with romantic philosophy that endowed women with the unconsciousness, irrationality, depth, and emotions forbidden to the "masculine" rational self (Douglas 1997, p. 19). Jung considered the unconscious a source of knowledge and insight, and through

his relationship with a woman, a man could access his inner feminine, the *anima*, which is

... fundamentally unconscious ... an imprint or 'archetype' of all the ancestral experiences of the female, a deposit, as it were, of all the impressions ever made by woman .... (Jung 1953/1979, Vol. 17, para. 338).

Jung comments that "Every mother and every beloved is forced to become the carrier and embodiment of this omnipresent and ageless image ... ." (Jung 1953/1979, Vol. 9ii, para. 24). Jung's thinking often appears to confuse women's psychology with the male projection of the *anima*.

### Women Analysts and Jungian Psychology

Feminist theologian Mary Daly has commented that few women analysts trained by Jung questioned his ideas on gender, and she criticizes women for promoting "Jung's garbled gospel" as feminist (Daly 1978, p. 280). David Tacey believes that there was even a "secret payoff" for women in identifying with Jung's *Eros* model:

... Jung was inviting them to step outside their limited humanness and to become archetypal. Women were secretly to view themselves as living incarnations of the Goddess .... (Tacey 1997, p. 28).

Jungian psychology had in any event more practical attractions. The profession of analyst had much to offer in an era when it was difficult for educated women to make a career. Whatever Jung's gender biases were, he saw women as excellent potential therapists and was willing to train them.

Many of those who trained were far from Jung's *Eros*-dominated stereotype. Dr. M. Esther Harding was a strong-minded lesbian whose books were important for the development of goddess spirituality. Together with Drs. Eleanor Bertine and Kristine Mann, she founded the powerful New York C. G. Jung Institute. Dr. Jolande Jacobi drew up the original plan for the C. G.

Jung Institute in Zurich. Dr. Marie-Louise von Franz was Jung's valued collaborator on his alchemical works.

A careful reading of women analysts' work reveals a more proactive engagement with Jung's ideas than Daly depicts. Jung was aware of his limitations:

The elementary fact that a person always thinks that another's psychology is identical with his own effectively prevents a correct understanding of feminine psychology (Jung 1953/1979, Vol. 10, para. 240).

It was women analysts who developed Jungian thinking on women. Toni Wolff argued that *Eros* is not the leading mode of conscious functioning of all women and that Judaism and Christianity, with their lack of the divine feminine, damage women. Drawing on sources including Bachofen on prehistoric matriarchy, Wolff created a typology that categorized women as mother, *hetaira* (in ancient Greece, an educated female courtesan), medial woman, or Amazon. Earlier generations might be limited to only one of the archetypal roles; but contemporary women should aim to move beyond this "one-sidedness" (Wolff 1941). Jung considered that the *anima* in men was mirrored in women by the *animus*, but his ideas were vague (Jung 1953/1979, Vol. 9ii, para. 28). It was Emma Jung who developed the idea that as women matured psychologically, so too would their *animus* figures and that rather than projecting these qualities onto a man, women must reclaim what the *animus* symbolizes – word, power, meaning, and deed (Jung 1957, p. 20).

### Religion and the Feminine

From a feminist perspective, patriarchal religions can be a source of oppression for women. Jung raised radical questions about the God image of Christianity, which he considered deficient psychologically because the Trinity did not include a female aspect (Jung 1953/1979, Vol. 11, para. 251). When in 1950 Pope Pius XII proclaimed the Catholic dogma of the

Assumption of the Blessed Virgin Mary into Heaven, Jung saw this as an important event that left Protestantism as

... nothing but a *man's religion* ... Protestantism has obviously not given sufficient attention to the signs of the times which point to the equality of women. But this equality requires to be metaphysically anchored in the figure of a 'divine' woman ... The feminine, like the masculine, demands an equally personal representation (Jung 1953/1979, Vol. 11, para. 753).

The impact of Jung's psychology can be seen in the work of goddess-oriented women, such as Adler (1986), Crowley (1989), and Starhawk. Indeed, Adler comments that

Much of the theoretical basis for a modern defense of polytheism comes from Jungian psychologists, who have long argued that the gods and goddesses of myth, legend, and fairy tale represent archetypes, real potencies and potentialities deep within the psyche, which, when allowed to flower, permit us to be more fully human (Adler 1986, p. 28).

From a Christian perspective, analyst Ulanov accepts the idea of female identification with *Eros* but views *Eros* as of equal value to logos and criticizes the exclusion of feminine imagery from religious symbolism as psychologically and socially damaging.

## Goddess as Role Model

Other Jungians found in ancient goddesses models for women's psychological growth that go beyond Jung's stereotyped thinking. Esther Harding sees in myths of a virgin Moon Goddess, who is virgin in the sense of being "one-in-herself" yet also goddess of love and mother goddess, an archetypal pattern helpful for modern women.

In the same way the woman who is virgin, one-in-herself, does what she does – not because of any desire to please, not to be liked, or to be approved, even by herself; not because of desire to gain power over another, to catch his interest or love, but because what she does is true (Harding 1971b, p. 125).

Turning to ancient myth, Sylvia Brinton Perera interprets the voluntarily descent of the Sumerian goddess Inanna into the underworld as a heroic quest and an empowering approach for women in overcoming depression. Jean Shinoda Bolen in *Goddesses in Everywoman* and Jennifer and Roger Woolger in *The Goddess Within* find in goddesses such as Artemis, Athena, and Hera powerful female archetypes that can help women negotiate the complexities of contemporary life. A goddess is seen not a supernatural being but

... a complex female character type that we intuitively recognize both in ourselves and in the women around us (Woolger and Woolger 1990, pp. 7–8).

Such psychological reductionism may offend the religious who worship ancient deities but points to how powerful deity symbols can help overcome sexual stereotyping.

## Feminist Critique

Until the mid-1970s, Jung's work was widely seen as valuing the feminine. This changed with second-wave feminism, which sprang from the realization by women that

... male-authored systems of knowledge ... had either omitted or distorted the representation of women (Rowland 2000, p. 73).

Naomi Goldenberg accused Jungian psychology of being itself a form of patriarchal religion, in which Jungians failed to question the "prophet's" premises about archetypes and women. Demaris S. Wehr (1988) evaluates Jungian ideas of "the feminine" as essentialist, conservative, contradictory to feminism (p. 10), and distorted by androcentrism and misogyny (p. 99). She acknowledges, however, Jung's contribution in highlighting the negative effects for women of masculine deity symbols which

... lead people to feel comfortable with or to accept social and political arrangements that correspond to the symbol system (Wehr 1988, p. 22).

Postmodernism and third-wave feminism, in which

... the very dichotomy man/woman as an opposition between two rival entities may be understood as belonging to metaphysics (Kristeva 1979/1986, p. 209),

has seen a reinterpretation of Jung's concepts. Estella Lauter, a pioneer of feminist archetypal theory, argues that the *animus* is not reflected in women's artwork and may not be numinous for women, as is the *anima* for men (Lauter 1985, p. 72). James Hillman considers that *anima* cannot be "contained by the notion of contrasexuality" and is relevant to women and men (Hillman 1985, pp. 53–55). Tacey comments that Hillman's work has value in removing,

... the patriarchal assumptions and conservative biases of Jung's psychology, adopting his androgynous understanding of the psyche without his moral imperatives ... (Tacey 1997, p. 31).

Susan Rowland argues that, from a postmodern feminist perspective, Jungian archetypal theory may overcome the influence of patriarchy because, not being culturally derived, the unconscious should "compensate for and combat cultural stereotyping" (Rowland 2000, p. 42).

Contemporary thinking that sexual orientation falls along a continuum rather than being an absolute has drawn upon Jung's ideas that

Either sex is inhabited by the opposite sex up to a point. . . (Jung 1953/1979, Vol. 9i, para. 58)

and

As civilization develops, the bisexual primordial being turns into a symbol of the unity of personality, a symbol of the self, where the opposites find peace (Jung 1953/1979, Vol. 9i, para. 294).

Analyst Susan McKenzie argues that Jung's psychology can be read as supportive to postmodern queer theory and that contemporary Jungians should

... engage in a revision of Jungian gender theory ... to offer a Jungian contribution to gender thinking in the spirit of the other Jung: the Jung of the symbolic, the mythic, and the subtle body.

Despite its flaws, Jung's work inspired many pioneering women in the field of psychotherapy,

and it continues to be a fruitful resource for new generations of feminist women and men seeking to address some of the fundamental questions of the psychological meaning of religion for individuals and society.

## Jung, Carl Gustav, and Gnosticism

Leon Schlamm

School of European Culture and Languages,  
Religious Studies Section, University of Kent,  
Canterbury, Kent, UK

In response to persistent charges by his theological critics that he was a Gnostic (Buber 1952; Heisig 1979; Segal 1992; Dourley 1994), Jung insisted that he was neither a Gnostic nor a metaphysician, neither a theist nor an atheist, neither a mystic nor a materialist, but rather an *agnostic* empirical scientist and an analytical psychologist (Jung 1951–1961, 1952/1973, 1956–1957, 1963). Yet Jung's enthusiastic engagement with Gnosticism spanned more than four decades, from his early association with G. R. S. Mead and his frequent citation of his translations of Gnostic and Hermetic writings (Goodrick-Clarke and Goodrick-Clarke 2005; Hoeller 1988; Noll 1994) and his 1916 parnormally produced gnostic poem, *Septem Sermones ad Mortuos* attributed to Basilides of Alexandria (Jung 1916–1992), to his systematic treatment of Gnostic materials transmitted by Patristic sources in *Aion* in 1951 and the acquisition by the Bollingen Foundation, through the efforts of Gilles Quispel, of the Jung Codex (containing the *Evangelium Veritatis*, the “Gospel of Truth”) in 1953 (Jung 1953; Rudolph 1987; Wehr 1987).

### Reasons for Jung's Interest in Gnosticism

Jung's interest in Gnosticism arose as early as 1909, through his discovery that they were apparently the first thinkers to concern themselves with the numinous contents of the collective unconscious (Jung 1952–1973). Recognizing Gnosis as a psychological knowledge whose contents derive from the unconscious, Jung argued that the Gnostics anticipated and more or less prefigured the goal of analytical psychology, the

individuation process, albeit expressed in a language suited to the age they lived in, thereby demonstrating that the idea of the unconscious was not unknown to them (1951). This discovery that the Gnostics were, in their own way, engaging with unconscious contents was the first to end what Jung saw as his intellectual isolation, providing confirmation from the history of religions for the veracity of his own psychological findings (Jung 1921, 1951). Such confirmation and support for his work would later be supplemented by his research into European alchemy which provided a bridge from the modern world to ancient Gnosticism (1963). Acknowledging that alchemy was a continuation of Gnosticism, Jung affirmed that psychology could not be divorced from history.

Yet Jung always qualified his enthusiasm for Gnosticism, claiming that the Gnostics had no genuinely psychological conception of archetypal images. Rather, they projected their subjective inner perception into a cosmogonic system and believed in the metaphysical reality of its psychological figures (Jung 1921, 1963). In other words, ancient Gnostics had not achieved individuation in the modern sense; but because they engaged with unconscious contents more intensely than most of Jung's contemporaries, their symbols and experiences provided illuminating comparative material which, through amplification, could deepen Jung's clinical understanding of the unconscious. Jung's preoccupation with the parallels between Gnostic and modern clinical materials should be construed, therefore, not as evidence that he was a Gnostic – although he made no secret of his preference for religious experience over faith or belief (Jung 1906–1950; McGuire and Hull 1977) – but rather as a vehicle for carrying his own modern psychological research into the individuation process forward.

### Jung's Interpretation of Gnostic Materials

Jung provides a summary of his reading of Gnosticism in *Aion*. The Gnostic myth of the ignorant

*demiurge*, who imagined he was the highest divinity, illustrates the perplexity of the ego when it can no longer hide from itself the knowledge that it has been dethroned by a supraordinate authority, the *self*. The *self*, the antithesis of the ego, consisting of the sum of conscious and unconscious processes, corresponds to the innumerable designations for the Gnostic savior figure of the *Anthropos*, including Christ (Jung 1951). Elsewhere, he observes that Gnosticism projected the union of conscious and unconscious in the individuation process in the form of a drama of redemption into the heavens, equating ego-consciousness with the vain *demiurge* who fancied himself the sole creator of the world, and the *self* with the highest, *unknowable God* who emanated the *demiurge* (Jung 1949). For Jung, all Gnostic images or symbols of *aeons*, *archons*, etc., are expressions of the operation of unconscious psychic forces. Exposure to Gnostic mythological accounts of divine emanation in the twentieth century can trigger greater awareness of the complexity of intrapsychic processes, not only because such accounts provide a mirror for Jung's modern clinical materials but also because they confirm that ancient Gnostics anticipated his psychological technique of active imagination (Jung 1944, 1955–1956; Merkur 1993).

Another reason for Jung's interest in Gnosticism can be traced to his identification of the typical Gnostic descent of *pneuma* (spirit) into *hyle* (matter) and its exile from the *pleroma* (fullness, denoting the transcendental field of divine reality) with the psychological process of projection, in which archetypal images of the unconscious are projected onto the outer world and lost there. Just as the Gnostic *pneuma* desires to lose itself in matter, often because it is attracted to its beautiful reflection in it, so the archetypal images of the unconscious desire to embrace the outer world. Projection is thus a process in which numinous unconscious contents are scattered in, and imprisoned by, the material world. Similarly, there is an equally striking correspondence between the Gnostic's account of *pneuma*'s release from matter or nature and its return home to the light of the *Unknown God* or *pleroma*

and the psychic process of integration, in which numinous unconscious contents projected onto matter or nature are withdrawn from it and held in consciousness during the individuation process. As in the Gnostic release of *pneuma* from matter, so in the process of integration, there is disenchantment with the material world equated with psychic separation from it (Jung 1941–1954, 1944; von Franz 1975, 1985).

### Jung's Distance from the Soteriological Perspective of Gnosticism

Nevertheless, Jung's individuation process cannot be identified with the soteriological goal of Gnosticism. Not only does Jung reduce the Gnostic metaphysical perspective to a psychological one (Segal 1992; Brewer 1996; Hanegraaff 1998), he also argues that the Gnostic godhead, the *Unknown God* or *pleroma*, is unconscious, without qualities or opposites, prior to their differentiation by the development of consciousness (Jung 1916–1992, 1951; Segal 1992). Moreover, while the goal of anti-cosmic, dualistic Gnosticism, in Jungian terms, is to abandon ego-consciousness for the unconscious, the goal of analytical psychology is to unite the two. The ego's return to the unconscious, for Jung, is merely instrumental to the latter's integration in consciousness. Whereas the Gnostic seeks to separate the spirit or divine spark from the material world, thus overcoming spiritual ignorance, Jung seeks ultimately to unite them. In Jungian terms the Gnostic goal must be understood at best as psychic dissociation (with its weakening of ego-consciousness) and at worst as outright psychosis (Segal 1992). Indeed, Jung argued that Gnostic anti-cosmic dualism is an expression of the psychopathology of inflation, which systematically avoids confrontation with the shadow. The enlightened Gnostic is incapable of resisting the temptation to identify his ego with the *self*, the inner Christ, or *Anthropos*, and as a result feels superior to the darkness within him. He has succumbed to the danger of becoming a god or higher man (Jung 1941–1954; White 1952; von Franz 1975; Brewer 1996; Segal 1998).

## Jung, Carl Gustav, and Phenomenology

Roger Brooke

Psychology Clinic, Duquesne University,  
Pittsburgh, PA, USA

C. G. Jung's approach to psychology and to the psychological study of religious experience cannot be understood without an appreciation of his fundamentally phenomenological method.

Husserl's epistemological and scientific call to arms, "To the things themselves," announced the birth of phenomenology, which became one of the great intellectual movements of the twentieth century. In a number of places, the psychiatrist and psychoanalyst, C. G. Jung (1875–1961), argues that his method of psychological analysis is phenomenological. However, his references to phenomenology are always passing remarks, and his phenomenology is never systematically developed.

Jung's sense of phenomenology is evident most clearly when he contrasts his method and assumptions with those of his mentor, Sigmund Freud. Like other phenomenologists, Jung was consistently critical of Freud's materialist reductionism, namely, the attempt to explain the complex phenomena of psychological life in terms of the biologically based wishes and conflicts of childhood. Instead, said Jung, psychology should seek to understand its subject matter consistently on its own terms.

Phenomenology's insistence that phenomena be interrogated on their own terms was taken up by Jung especially with regard to religious experience. He argued that the meanings of the images and rituals of religious experience

should be analyzed in terms that do not violate the integrity of religious experience. So too, more generally, should the fundamental, organizing patterns of the human imagination, which are manifest in the myths and stories of the human species. These organizing patterns, or forms, which Jung called the archetypes, were structurally autonomous and thematically irreducible to terms of reference outside of their own orbits of meaning. For example, the Virgin birth or the life of St. Francis needs to be understood psychologically in terms that honor the inner coherence and meaning of the image or the spirituality of an extraordinary Saint. We should not, says Jung, reinterpret those phenomena, as Freudian psychoanalysis does, in terms of childhood wishes and anxieties, as though they were merely unconsciously determined and neurotic productions.

Jung's claim to being a phenomenologist rests on more than an understanding of its general approach. The characteristics of phenomenology's method are evident in Jung's work as well. These defining hallmarks of phenomenology are often taken to be: description, the phenomenological reduction, the search for essences, and intentionality. Each of these will be briefly considered in turn, together with its place in Jung's work.

### Phenomenological Description

Phenomenology is descriptive. Phenomenological psychology is not concerned with theoretical explanation or abstraction, but with phenomena as they concretely are present to us – just as we are, in turn, engaged with the appearing phenomena. This fundamental dialectic (the ground of the hermeneutic circle) means that the description of the meaning of phenomena has an interpretative moment that intuitively reaches through individual occurrences to their phenomenological heart or “structure.” Jung's method was generally a descriptive hermeneutic. It was a way of interpreting psychological meaning that stayed as close as possible to the phenomenon as it occurred. It was what Ricoeur called a hermeneutics of faith, unlike Freud's

hermeneutics of suspicion. Jung studied phenomena primarily by looking for similar or contrasting images across cultures and history. Therefore, the depth that is sought in phenomenological description is a depth that lies within the phenomenon itself as a core, or structure, of meaning manifested in many diverse occurrences of that phenomenon.

### Phenomenological Reduction

The phenomenological reduction is the systematic attempt to “bracket” theoretical and philosophical preconceptions, thereby to return our thinking to a more original ground in lived experience and conduct. Through this bracketing, the phenomenologist tries to approach the phenomena of psychological life in their vital contexts. It is this reduction that ensures phenomenology remains a descriptive enterprise. Jung repeatedly argued that philosophical materialism and rationalism foreclosed the possibility of an indigenous psychology, one in which its assumptions and methods were self-contained *as psychology*. He also repeatedly argued against the temptation to engage in “metaphysical” speculation when discussing religious experience. As a (phenomenological) psychologist, he wanted to open up a conceptual space for describing religious experience on its own terms, i.e., as experience and not ontology. In other words, Jung did not want the study of religious experience to require an answer to the ontological question of whether or not God exists. Jung wanted his refusal to step beyond experience into ontology to be understood as a humble respect for his epistemological limits as a psychologist. However, as will be seen presently, his position was problematic, so that he has been criticized for psychologizing religious experience.

### Search for Essences

The search for essences (eidetic reduction) is accomplished by considering the manifold variations of a phenomenon so that incidental, or perhaps transient, variations can be set aside and the

essential structure can be intuited. The eidetic reduction reminds one of Jung's method of archetypal amplification, which sought to approach the essential core of meaning within the range of archetypal images and themes. The structural core of meaning was the archetype, distinguishable from the endless variation in archetypal images. Interestingly, just as the existential phenomenologists, following Heidegger's analysis of being as temporal, insisted that there are no ahistorical essences, so Jung came to realize that the archetypal cores of meaning can never be conclusively defined and that they require repeated reinterpretation.

### Intentionality

Intentionality is not so much an aspect of method as a reminder that human being is always being-in-the-world. Being-in-the-world is the irreducible human occurrence of world disclosure, an open clearing (to use a Heideggerian expression) within which, or out of which, both the emerging person and world are gathered and constituted. Intentionality is a reminder that existence undercuts the Cartesian separation of subject and object, the place of experience (as mind, or *res cogitans*) from the world in which all experience concretely takes place. Jung's description of psychological types described the various ways in which the world is disclosed and engaged, the important point being that there is no disclosure of the world that is not already gathered in the attitudes (extravert or introvert) and functions (thinking, feeling, intuition, sensation) of consciousness. Significantly, even deepening introversion is described as an attitude in which the world becomes increasingly oppressive and persecutory. Another important recognition of human intentionality is Jung's consistent understanding of the living human body as already psychological and situated in its engagements with the world. The body, for Jung, is not primarily the body of anatomy, but the materiality of the soul. In this formulation Jung linked his understanding of human embodiment to Augustine's anthropology.

### Critical Discussion

Despite these features of Jung's work that are phenomenological, the early phenomenologists were highly critical of him. Spiegelberg's classic study on the history of phenomenological psychology effectively dismisses Jung's significance and contribution. On his part, Jung thought Heidegger was mad and that phenomenologists were on an irrelevant philosophical rampage.

It is clear that Jung's understanding of phenomenology was superficial. From the disciplined phenomenologist's perspective, Jung failed seriously to bracket his philosophical, and specifically Cartesian, assumptions adequately, with the result that his work fails phenomenologically at crucial moments. It is significant, in this regard, that Descartes' name does not appear in the indices to Jung's *Collected Works* or other writings. There is an irony here. Jung was justifiably critical of Freud's lack of philosophical reflection, because he recognized that Freud carried in his thinking philosophical positions that remained unquestioned and problematic.

Yet the same is true when we consider Jung and the absence of Descartes in his indices.

The result is that Cartesian metaphysics, with its radical dualisms – mind and body, subject and world, inner and outer, etc. – tends to remain awkwardly throughout Jung's thinking. For instance, he tends to speak of the archetypes in a neo-Kantian way as categories of perception (or imagination) that structure experience, yet he also refers to archetypal images, the objects to which we relate, as interior to the psyche and as produced by the archetypes. Both archetypal structuring of experience and the objects of experience itself are interior to the psyche. It might have been acceptable if Jung had simply described images of God as archetypal. The problem, for phenomenologists and most religious scholars, is that Jung then claims that we do not perceive, or relate to, God as such, but only to the God-image, which is interior to the psyche. In some of Jung's writings, at least, neo-Kantian doubt becomes a Cartesian solipsism that is tightly shut.

It is not surprising that religious thinkers such as Buber, White, and Hostie had such difficulty

with Jung. The Otherness of God was reduced to the purely logical and formal category of the Kantian *noumenon*, beyond all thinking, imagination, and relationship. However, whereas, for Kant, the phenomenal world of experience was still the open realm of experience and evidence, for Jung the phenomenal world was conceptualized as interior to the psyche. For religious critics, one cannot be a solipsist and have any kind of thoughtful or affectively real relationship with God.

On the other hand, this critical reading of Jung by phenomenologists lacks hermeneutic generosity. As was suggested above, Jung's method is closely aligned with the phenomenological tradition, which his work can enrich in several ways. Jung has much to say about psychological complexes, the archetypal structure and function of our mythic and cultural images, and the patterns of human development and transformation. He thematizes the imaginal structure of human existence, showing that the quiddity of existence is not prior to its imaginal organization and self-disclosure. He then describes with great insight the imaginal patterns of the human world (Husserl's *lebenswelt*), as well as the transhistorical sedimentations that continue to run through contemporary experience and thought. Jung's psychology of religion needs to be understood in these terms. In addition, his theory of psychological types suggests that there may be constitutionally different ways of being a religious person and that at least some of our theological, ritualistic, or experiential differences might be typological.

Finally, both phenomenology and Jung's analytical psychology have evolved over the years. A number of Jungians are phenomenologically sophisticated, and many phenomenologists have a greater appreciation for Jung's work. Jung's philosophical awkwardness is seen through and historically contextualized. To read Jung now, in the twenty-first century, is to reread Jung with a creative and critical engagement that honors his texts while interpreting them anew. In this way, hermeneutic questions and methods are threaded through both phenomenology and Jung's psychology.

## Jung, Carl Gustav, and Religion

Leon Schlamm

School of European Culture and Languages,  
Religious Studies Section, University of Kent,  
Canterbury, Kent, UK

C. G. Jung's writings on religion were primarily focused on the value and function of religious experience in the historical development of human consciousness and particularly in the individuation process. Drawing heavily on Rudolf Otto's (1869–1937) account of numinous experience (derived from the Latin term for deity: *numen*), identifying the qualitatively unique, nonrational, *mysterium tremendum*, and *fascinans* moments of religious experience, Jung celebrated its significance for analytical psychology but, unlike Otto, located its source in the unconscious rather than beyond the psyche. As a phenomenologist of the psyche rather than a historian of religion or theologian, Jung explored

the healing function of numinous experiences which provides the psychological foundation for religious creeds, while bracketing out any examination of metaphysical speculation about the objective reference of such experiences as beyond his professional competence (Otto 1923/1958; Jung 1934–1939, 1938, 1952/1973, 1956–1957, Moreno 1970; Heisig 1979; Stein 1985; Brooke 1991).

### Jung's Definition of Numinous Experience

Jung defined numinous experience, following Otto, as inexpressible, mysterious, terrifying, and pertaining only to the divinity (Jung 1963). Religion, he observed, can be identified with a careful and scrupulous observation of the numinosum, a dynamic agency or effect not caused by an arbitrary act of will. It seizes and controls the human subject, who is always rather its victim than its creator; it is an experience of the subject independent of his will, which causes a peculiar alteration of consciousness (Jung 1938). Identified by Jung with experience of the unconscious, its deeply stirring emotional effect, thrilling power, *mana* (psychic power) equated with holiness, and healing or destructive qualities are unusually persuasive from the psychological point of view (Jung 1928–1930, 1934–1939, 1947/1954, 1952, 1952/1954, 1954a, 1960). Because numinous experiences are independent of conscious volition, transporting the subject into the state of rapture and will-less surrender, they are difficult to handle intellectually; since our affectivity is involved, absolute objectivity is more rarely achieved here than anywhere else. Indeed, they can be overwhelming, an admission that not only challenges our pride but also awakens our deep-rooted fear that consciousness may lose its ascendancy. It is because they may threaten the stability of consciousness that fear of them is justified, demonstrating a holy dread of the numinous. These experiences, identified with experiences of archetypal images understood as *daimonia*, can have a possessive or obsessive effect on consciousness (Jung 1942/1948, 1947/1954, 1952/1954, 1963).

### Numinous Experience and the Individuation Process

However, in spite of these reservations, Jung regarded these fascinating and dreadful moments of numinous experience, triggering the ambivalent conscious responses to them of attraction and repulsion, longing, and horror, as fundamental to an understanding of the individuation process rather than belonging exclusively to the domain of psychopathology. Indeed, towards the end of his life, he declared that the experience of the *self*, intrapsychically encountered as other to the *ego*, carried with it a numinosity of such intensity that it could be likened to the experience of being anchored in God (Jung 1906–1950, 1951–1961, 1955–1966; Papadopoulos 1984; Huskinson 2002; Dourley 2006; Main 2006; Stein 2006).

Nevertheless, Jung's measured appreciation of numinous experience, in contrast to Otto's unqualified submission to it, is evinced by his insistence on the clinical need at all costs to preserve the fragile autonomy of consciousness, threatened with disintegration by the fascinating, yet dangerous, numinous forces of the unconscious. One of the aims of the individuation process is to strengthen, even to extend, consciousness in the face of these numinous psychic forces.

Consciousness needs to maintain its independence from numinous unconscious contents by freeing itself from identification with them, if its conjunction with its opposite, the unconscious, the goal of the individuation process, is to be realized (Jung 1916/1928, 1944). It is this clinical perspective, expressing a "hermeneutics of suspicion" confronting numinous experience (Homans 1985) and a reservation in the face of divine decrees, which, for Jung, separates analytical psychology from Western and Eastern religious traditions. Jung insists that consciousness and the unconscious, equated by him with humanity and divinity, possess equal value and must strive to collaborate with one another in pursuing mutual transformation (Jung 1952/1954, 1963).

Jung's hermeneutics of suspicion is also evinced by his persistent preoccupation with the psychopathology of inflation of the ego by numinous experience and spiritual knowledge,

producing experiences of self-deification and unjustified claims to absolute knowledge (Stein 2006). Overcoming spiritual inflation requires the ego's discrimination between its own boundaries and transpersonal, numinous psychic contents. The ego realizes that however powerful or intense a numinous experience may be, it is not that experience. Distinguishing his own deification experience of 1913 from the individuation process, Jung insisted that anyone identifying himself with a numinous experience is a crank, a fool, or a lunatic (Jung 1925). However much he valued the numinous experience of deification, the task of analysis, for Jung, was to overcome identification with it, to separate oneself from it, and to realize that *I am not the god*. The experience of deification may occur towards the beginning of the analytical process; it certainly cannot be identified with its goal (Jung 1925, 1963; Noll 1994; Stein 2006). Jung's writings on inflation provide some of the most convincing evidence for his deconstructive relationship to religious experience and knowledge.

### Jung's Psychotherapy of Religious Traditions

Again, Jung's critical engagement with both Western and Eastern religious traditions is illustrated by his claim that numinous experiences are typically the product of projections of archetypal unconscious contents onto the outer screen of nature. When coupled with his persistent profession, as a phenomenologist of the psyche rather than a metaphysician, of agnosticism with regard to the objective reference of such experiences outside the *self* or psyche, it is easy to understand why so many of his theological critics, as well as historians of religion, have charged him with psychologism, the act of reducing religious experiences to intrapsychic processes (Buber 1952/1999; Heisig 1979; Coward 1985; Homans 1985; Wulff 1985; Aziz 1990; Brooke 1991; Jones 1993; Clarke 1994; Palmer 1997; Stein 2006). Jung, responding primarily to his theological critics, persistently denied the charge of psychological reductionism on two grounds: first, that the unconscious or the

*self* is unknown, just as God's essential nature is unknown to *experience* rather than to religious belief or doctrine, and second, that the psychological work of individuation is directed towards the integration of projected numinous unconscious psychic contents into consciousness, thus enriching, healing, and intensifying the conscious personality (Jung 1952/1973, 1954b, 1956–1957, 1963). Individuation is a progressive, but never completed process in which divinity is gradually incarnated within consciousness rather than experienced in projection, and consciously related to all other areas of human experience, including instinctual life (Jung 1952/1954, 1963; Dourley 2006; Stein 2006). For Jung, those who have not realized that religious experience is wholly intrapsychic have not plumbed its depths (Dourley 2004).

During the last two decades of his life, Jung became increasingly preoccupied with the treatment of his own Christian tradition as a patient in need of psychological and spiritual healing (Stein 1985), prompting his critics to charge him not only with heresy but also with abandoning his own professed metaphysical agnosticism (White 1959, 1960; Moreno 1970; Heisig 1979; Homans 1985); Aziz 1990; Lammers 1994; Palmer 1997). In spite of his insistence on the common psychic origin and equal value of the deities of all religious traditions (Jung 1938), Jung offered his Christian and post-Christian readers an account of the evolution of the Western god-image challenging Christian salvation history (Jung 1942/1948, 1951, 1952/1954; Lammers 1994; Edinger 1996). Jung argued that Christ, the Western god-image of the *self* for the last two millennia, is incomplete; it lacks the tremendum moment of numinous experience, equated by him with the divine shadow, and therefore fails to express the conjunction of opposites, the goal of the individuation process. Because integration of the divine (archetypal) shadow into consciousness is necessary for individuation, Jung sought to direct his readers' attention to the immensity of God, the conflict between His overwhelming light and dark aspects, arguing that, contrary to the teachings of the Church, we have good reason to fear God, as well as to love Him. Moreover, Jung

linked his observations about the divine shadow with his depth-psychological account of the historical evolution of divine consciousness, of the *individuation of God*, evidence for which he found in Biblical literature. Because God is less conscious than man, He depends on man to integrate His opposites of good and evil, to integrate *His shadow* for Him in order to achieve full consciousness, just as man reciprocally needs the numinous experience of God to transform his consciousness. The individuation and healing of God and man are thus codependent and realized only within human consciousness.

## Jung, Carl Gustav, and the Red Book: Liber Novus

Lance S. Owens<sup>1</sup> and Stephan A. Hoeller<sup>2</sup>

<sup>1</sup>Adjunct Clinical Faculty, University of Utah, Salt Lake City, UT, USA

<sup>2</sup>Independent Scholar, Los Angeles, CA, USA

### Description

The Red Book is an exquisite red leather-bound folio manuscript crafted by the Swiss psychologist and physician Carl Gustav Jung between 1915 and about 1930. It recounts and comments upon the author's imaginative experiences between 1913 and 1916 and is based on manuscripts first drafted by Jung in 1914–1915 and 1917. Despite being nominated as the central work in Jung's oeuvre (Jung 2009, p. 221), it was not published or made otherwise accessible for study until 2009.

While the work has in past years been descriptively called “the Red Book,” Jung did emboss a formal title on the folio's spine: he titled the

work *Liber Novus* (the “New Book”). His manuscript is now increasingly cited as *Liber Novus*, and under this title implicitly includes draft material intended for but never transcribed into the red leather folio proper.

## Composition and Publication

*Liber Novus* contains a literary and artistic recension of what has been called Jung’s “confrontation with the unconscious,” an intense period of imaginative activity accompanied by waking visions that began in 1913 and continued with variable intensity for about 6 years. In his biographical memoir, Jung clearly announced the centrality of these events to his life work. (Jung and Jaffe 1962, p. 170ff). Speaking to Aniela Jaffe in 1957, Jung stated:

The years . . . when I pursued the inner images were the most important time of my life. Everything else is to be derived from this. . . . Everything later was merely the outer classification, the scientific elaboration, and the integration into life. But the numinous beginning, which contained everything, was then (Jung 2009, p. vii).

Nonetheless, throughout his life and for nearly a half century after his death, the details of what happened during this period remained a mystery. Lacking access to Jung’s own primary records, historians, biographers, and critics struggled to contextualize or understand these seminal years of activity and their profound influence upon his later work (Shamdasani 2005).

Jung kept an extensive and detailed record of his imaginative or visionary experiences – an endeavor he initially referred to as “my most difficult experiment” (Jung 2009, p. 200). First, there were six sequentially dated journals, known as the “Black Books” (so named because of their black covers), which he began on the night of 12 November 1913 and continued recording through the early 1920s. The journals are the record of his experiment and might be described as his contemporaneous ledger of a voyage of discovery into an imaginative inner world; in *Liber Novus* he explains, “This inner world is truly infinite, in

no way poorer than the outer one. Man lives in two worlds” (Jung 2009, p. 264).

During the initial months of fantasy activity, Jung conceived of his activity as primarily referent to his personal situation. After the outbreak of world war in August 1914 – an event presaged in visions Jung had recorded during the prior winter – the magnitude and meanings of his experience constellated in a broader context. What he had endured apparently had more than personal import; it was a reflection of a crucial cultural moment and it needed formal record. He began that record by compiling an approximately 1,000-page draft manuscript detailing the initial flood of imaginative material recorded in his “Black Book” journals between November 1913 and April 1914, adding further reflections on its meaning. With this protean draft at hand, he next turned to creating an enduring testament to the experience.

With prodigious artistic craft – employing antique-illuminated calligraphy and stunning imagery – he labored for 16 years translating the manuscript records of his experiences into an elegant folio-sized leather-bound volume. This is the “Red Book,” titled *Liber Novus*, “The New Book.” Despite his extended labors on the transcription and accompanying symbolic artwork, the book was never finished; only approximately two-thirds of the text Jung compiled was transcribed into the Red Book. The remainder survives in his draft manuscripts.

Jung did not record *Liber Novus* as a private, aesthetic pretension. He clearly addressed it to readers in some future time, though from the beginning he was never quite sure when that time might come (Jung 2009, pp. 212f, 223). During his life Jung eventually allowed only a handful of his students and colleagues to examine the work; after his death in 1961, his heirs refused all requests for access to the Red Book and related materials.

Finally, in 2009 – with full cooperation of Jung’s estate and after 13 years of exhaustive editorial work by Dr. Sonu Shamdasani – *the Red Book: Liber Novus* was published in a full-sized facsimile edition, complete with an English

translation, the concluding portions of manuscripts not transcribed into the Red Book volume, a comprehensive introduction, and over 1,500 editorial notes, including excerpts from Jung's Black Book journals and other previously unknown contemporaneous documents. Editions in multiple languages soon followed. In sum, publication of *the Red Book: Liber Novus* signaled a watershed moment in the understanding of the life and work of C. G. Jung. In its light, Jung's legacy is undergoing an intense reconsideration (Stein 2012).

### The Threshold of Vision

A comprehensive understanding of *Liber Novus* requires consideration of the singular visionary activity underlying the text, the hermeneutic method employed in translating these imaginative experiences to literary form, the signal themes emerging from the book as a whole, and the influence of the entire project on Jung's subsequent work. Among these tasks, understanding what Jung experienced in his "waking dreams" or "visions" – the imaginative activity that is foundational to *Liber Novus* – is perhaps the primary and most difficult one.

For several years prior to 1913, Jung's interest had focused on the evidence he saw in myths, dreams, fantasies, and psychotic delusions of an autonomous myth-making function inherently underlying human consciousness. The psyche – the soul – seemingly expressed itself in an arcane language of myth and symbol. To further understand the psyche, Jung recognized a need to investigate this mythopoetic substratum of consciousness. During the same period, he was increasingly disillusioned with theoretical constructs about the origin and nature of unconscious contents – a disenchantment that led to termination of his 6-year misadventure with Freud. As he explained in the draft manuscript of *Liber Novus*, speaking of his situation around this time, "I had to accept that what I had previously called my soul was not at all my soul, but a dead system that I had contrived" (Jung 2009, p. 232 n39).

Around the beginnings of 1913, Jung noted growing internal turmoil. This crested in October of 1913 when he was overcome by the spontaneous and detailed vision of a monstrous flood of blood covering all of Northern Europe up to the Alps. The same vision recurred 2 weeks later and again lasted for about an hour (Jung and Jaffe 1962, p. 175). The eruption of two visual hallucinations portending vast death and destruction caused Jung to fear that he was "menaced with a psychosis" (Jung and Jaffe 1962, p. 200; Jung 2009, p. 198). Over the next weeks, he outwardly surveyed his situation, seeking some therapeutic or palliative insight. Finding none, he determined to search inward. And so, on the evening of 12 November 1913, Jung sat at his desk, opened his journal, and addressed the mystery petitioning him:

My Soul, where are you? Do you hear me? I speak, I call you—are you there? I have returned, I am here again. I have shaken the dust of all the lands from my feet, and I have come to you, I am with you. After long years of long wandering, I have come to you again. . . . (Jung 2009, p. 232).

This journal entry begins the record that became *Liber Novus*. But the course then before him was obscure. He had no theory or concept to explain what he was doing, whom he was addressing, or how he should proceed. He determined to simply let things happen, let the unconscious have a voice. During twenty-five subsequent evenings, he practiced turning off outward consciousness and engaging any awaiting unconscious contents. Slowly, responses began to come, finding voice through him. He explained, "Sometimes it was as if I were hearing it with my ears, sometimes feeling it with my mouth, as if my tongue were formulating words; now and then I heard myself whispering aloud" (Jung and Jaffe 1962, p. 178).

By early December 1913 Jung discovered that his focused imaginative activity could evoke autonomous visionary scenes, personages, and dialogic interactions. The initial vision is recorded in his journal on 12 December 1913 and recounted in *Liber Novus*: "The spirit of the depths opened my eyes and I caught a glimpse of

the inner things, the world of my soul, the many-formed and changing. . .” (Jung 2009, p. 237)

In the introduction to *Liber Novus*, Dr. Shamdasani further explains:

From December 1913 onward, he carried on in the same procedure: deliberately evoking a fantasy in a waking state, and then entering into it as into a drama. These fantasies may be understood as a type of dramatized thinking in pictorial form. . . . In retrospect, he recalled that his scientific question was to see what took place when he switched off consciousness. The example of dreams indicated the existence of background activity, and he wanted to give this a possibility of emerging, just as one does when taking mescaline (Jung 2009, p. 200).

With almost nightly frequency through January 1914 and then more sporadically until the early summer of 1914, Jung volitionally engaged “visual fantasies” or “visions.” He recorded about thirty-five major visionary episodes in his journals during this period; these accounts along with commentary appended the next year comprise the first and second sections (“Liber Primus” and “Liber Secundus”) of *Liber Novus*. The majority of this material was recorded into the red leather folio. A final section, compiled in 1917 and titled “Scrutinies,” adds account of a second period of visionary activity between late 1915 and 1916. This last section exists in draft manuscript and contains Jung’s summary revelation to *Liber Novus*, the “Septem Sermones ad Mortuos” (Seven Sermons to the Dead). Independently titled and privately printed by Jung in 1916, these summary sermons comprise a vast cosmogonic myth and are the only portion of *Liber Novus* disclosed and distributed by Jung during his lifetime (Hoeller 1982).

### **Thematic Content of *Liber Novus***

While many alternative summaries are possible, the following list reflects themes Jung focused upon in his own consideration of the text.

#### **Reclaiming the Soul**

At the outset of his experiment, Jung recognized the need to reclaim and revalorize something

lost and forgotten by his age. In the opening pages of *Liber Novus*, the primordial power of the “spirit of the depths” confronts the arrogant “spirit of this time” – the secular materialism and positivistic science that dominates European culture. The spirit of the depths instructs Jung to turn away from the spirit of the time and to look into the depths, to speak to his soul, “to call upon her as a living and self-existing being” (Jung 2009, p. 232). *Liber Novus* recounts Jung’s struggle to reclaim the soul; and it exposes the method by which he revalorizes the soul’s mythopoetic and symbolic voice.

#### **Experiencing God**

Early in the dialogue, Jung petitions his soul: “I am ignorant of your mystery. Forgive me if I speak as in a dream, like a drunkard – are you God?” (Jung 2009, p. 233). This question resonates throughout *Liber Novus*. In his journey through vision, Jung confronts God not as a theological concept, but as an experience encompassing light and dark qualities and as a fact in intimate relationship with human consciousness.

#### **Renewing the God Image**

In a keynote fantasy, Jung meets Izdubar, an ancient god from the East. The meeting goes tragically wrong – confronted by Jung’s toxic modernity, Izdubar is stricken and sickened unto death. The dying Izdubar asks Jung if his Western lands have gods. Jung replies, no, just words. Having lost contact with the experience of deity, only verbal concepts remained. Jung undertakes the healing and regeneration of the stricken god. A theophanic recognition ensues: “I am the egg that surrounds and nurtures the seed of the God in me” (Jung 2009, p. 284).

#### **Imitating Christ**

His visions inexorably led Jung toward confrontation with the *imitatio Christi*; this becomes a leitmotif throughout *Liber Novus*. Jung surveys what it means to be not just a Christian believer, but a Christ – a full and conscious participant in the act of redemption. Near the

end of *Liber Novus*, Christ appears in a vision and is addressed:

My master and my brother, I believe you have completed your work. . . . What one individual can do for men, you have done and accomplished and fulfilled. The time has come when each must do his own work of redemption. Mankind has grown older and a new month has begun (Jung 2009, p. 356).

### Harrowing Hell

In an astonishing passage, Jung declares: “No one knows what happened during the three days Christ was in Hell. I have experienced it.” Indeed, two evenings after witnessing a rebirth of the God – which he describes as a vision of “eternal light, immeasurable and overpowering” (Jung 2009, p. 286) – Jung descends into Hell; he confronts the ultimate darkness of evil. This horror he must acknowledge as resident within himself and all humankind. He concludes, “Man must recognize his complicity in the act of evil” (Jung 2009, p. 291). The work of redemption demands conscious confrontation with the existential fact of evil.

### Conjoining Opposites

Throughout *Liber Novus* Jung attempts to come to term with what has been rejected, with the opposite, the adversary: the missing half that brings wholeness and heals the wound of one-sided consciousness. He explains, “You begin to have a presentiment of the whole when you embrace your opposite principle, since the whole belongs to both principles, which grow from one root” (Jung 2009, p. 248). In *Liber Novus*, unification of the opposites has not only personal developmental implications but also a profound soteriological function.

### Prophesying a New Age

*Liber Novus* has a distinctly prophetic tenor. While Jung adamantly rejected the mantle of prophet, his “new book” certainly challenges readers with its prophetic voice. On the first folio page of *Liber Novus*, Jung begins by quoting Latin Vulgate verses from Isaiah and the Gospel of John – prophetic words read over two

millennia as prelude and prologue of the Christian age. Even the title – *Liber Novus*, the “New Book” – asks readers to contextualize his text against historically received testaments of prophetic vision. A comment by Jung, recorded in 1923, places the book’s tenor in an even stranger perspective: Jung privately avowed to a close disciple his impression that the guiding figure behind *Liber Novus* “was the same who inspired Buddha, Mani, Christ, Mahomet – all those who may be said to have communed with God” (Jung 2009, p. 213).

Among many possible readings, *Liber Novus* can be read as a prophetic book. And throughout *Liber Novus* one paramount prophetic declaration recurs: the Christian age has reached its terminus; the aeon of Pisces is nearing its end. Humankind stands at the difficult threshold of a new age of consciousness, heralded by a transforming divine image. Jung had seen it (Owens 2011).

### Influence on Jung’s Later Work

C. G. Jung has most frequently been categorized encyclopedically as psychologist and founder of analytical psychology. But *Liber Novus* – described by its editor as “the book that stands at the center of his oeuvre” – is distinctly not a clinical or theoretical work of psychology. The word psychology does not appear in the text even once. If this is the foundation to Jung’s lifework – or, as Jung said, “the numinous beginning, which contained everything” – then his work has to date been inadequately contextualized and too narrowly characterized (Shamdasani 2012b).

Between 1913 and about 1920, Jung’s engagement with imagination and its mythopoetic voice offered direct empirical evidence of an apparently autonomous psychoid realm underlying consciousness. Though it was a rare experience, focused engagement and dialogue with this otherwise inherently unconscious dimension opened measureless perspectives on the nature of consciousness itself. While potentially overwhelming and disorienting, the process of accessing and interacting with this realm – through functions of dream, fantasy, imagination, and vision – had

a transformative and expansive effect on human consciousness. This Jung witnessed with his own life.

Jung's experiment, formally documented in *Liber Novus*, provided him with a unique perspective on mystical and revelatory religious experience and on the general human propensity for mythic and imaginative expression. The primary hermeneutic task of translating into text and symbolic image his own encounter with mythopoetic imagination subsequently informed his recognition and appreciation of other similar enterprises in history. His extensive writings on mythology, Eastern and Western religious traditions, alchemy, Hermeticism, and Gnosticism are all influenced by a hermeneutics of human imagination and vision grounded in his own experiences recorded in *Liber Novus* (Shamdasani 2012a).

The reassessment of Jung's life and work under the revelatory light of *Liber Novus* is a generational task only recently begun. As this effort proceeds and the foundation of C. G. Jung's hermeneutic enterprise is better understood, it is likely that the influence and appreciation of his work will reach far beyond the cloisters of analytical psychology. As Sonu Shamdasani suggested shortly after publication of *Liber Novus*:

If, as Jung claimed, Dante and Blake clothed visionary experience in mythological forms, could we not pose the question: Did Jung in turn attempt to clothe visionary experience in conceptual psychological forms? If so, the power and significance of his work does not reside in his concepts, which are familiar to us, but in the visionary experience which was at the back of them (Shamdasani 2010).

## Jungian Self

J. Pittman McGehee

Research Center, Saybrook Graduate School,  
San Francisco, CA, USA

The Self for Jung was the archetype of wholeness and the organizing principle of the psyche. In volume 12, paragraph 44 of his *Collected Works*, he writes: “The self is not only the centre, but also the whole circumference which embraces both conscious and unconscious; it is the centre of this totality, just as the ego is the centre of consciousness” (1953/1970).

This paradoxical concept is both the essence and the totality of one's personality. The Self

initiates life and it is life's goal. Jung's concept of individuation depends on one becoming one's true, autonomous, and authentic self. The ego is the organ of consciousness. The goal of the second half of life is for the ego to subordinate itself to the supraordinate Self. In his autobiography, Jung writes: "In those years. . . I began to understand that the goal of psychic development is the self. There is no linear evolution; there is only the circumambulation of the self."

The Self is a transcendent or divine quality. Jung referred to the Self as the "Imago Dei," or the image of God within the psyche. Borrowing from theologian Rudolph Otto's book, *The Idea of the Holy*, Jung posited that the self possessed a numinous quality. Numen is divine power or energy. This numinous energy of the self has the power to generate, transform, and integrate psychic life. This is the religious nature of the psyche.

One cannot know an archetype, only its images. There are many images of the Self: the mandala, king, hero, prophet, and savior. Jung considered the Christ and the Buddha as symbols of the Self. In volume 9 part II of his *Collected Works*, entitled "Aion," Jung devotes his most extensive treatment on the "phenomenology of the self."

Robert Hopcke in his work, *A Guided Tour of the Collected Works of C. G. Jung*, writes: "While

the editors of the 'Collected Works,' do not capitalize self, - in English the consention has since developed of referring to the individual ego as the 'self,' with lowercase s, and the archetype as the 'Self,' with a capital S" (Hopcke 1989).

## Ka'bah

Ali Ayten

Department of Psychology of Religion, Marmara University, Istanbul, Turkey

It is the one and only pilgrimage site for Muslims located in the city of Mecca, Saudi Arabia. It is an ancient cubic-shaped building called the House of God (*Baitullah*). The word *Ka'bah* means cubic.

It is not known who built the Ka'bah first, but it is known that it was established before Prophet Abraham and was rebuilt by him and his son Ishmael. After Prophet Abraham, it was rebuilt three times by the Arab tribes. The Ka'bah was visited according to the principles of monotheism from the time of Abraham until the idol-worshippers of Mecca took it over to accommodate idols in and around it. When Prophet Muhammad conquered Mecca after migration to Medina, he removed all idols, and it remained in the hands of Muslims since then. After Prophet Muhammad, its original form and size (11 × 12 × 15 m) was preserved except for some renovations, and it was covered with a black cloth.

According to Islamic faith the Ka'bah is the first place of worship on earth (Qur'an 3:96). And the city of Mecca is called *Umm al-Qura* (mother of cities). The visit to the Ka'bah is called *hajj* (pilgrimage). The pilgrim is called *haji*, which is a highly respected title in the Islamic world that encourages one to live a moral and religious life by keeping away from sinful acts. Muslims who

can afford it financially and physically are enjoined to visit the Ka'bah once in a lifetime on the specified days in each year. Visits to the Ka'bah at other times are called *umrah*. Muslims throughout the world face toward the direction of the Ka'bah for the five-daily prayers. This act of prayer and coming together for pilgrimage every year gives the worshippers a sense of union and brotherhood. The Ka'bah is, in this sense, not the end point, but a starting point to the transcendent. And as the times of five-daily prayers are set according to the daily movement of the sun, there are always Muslims somewhere in the world facing the Ka'bah at anytime of the day. In Sufi psychology, the Ka'bah is metaphorically associated with the heart in that breaking someone's heart is believed to be equal to demolishing the Ka'bah.

Currently, around three million Muslims of different colors, races, and nations visit and circumambulate the Ka'bah each year. Pilgrims wear white garments during *hajj* which represents the fraternity of all races and nations. Pilgrims also place their hands on the black stone (*Hajar al-Aswad*), which is believed to have descended from the heavens, located in the east corner of the Ka'bah at every turn of circumambulation to renew their submission.

## Kabbalah

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

An esoteric rabbinic tradition, Kabbalah (Hebrew, *kblh*, “receiving,” “tradition”) became manifest especially in late twelfth and early thirteenth century CE Provence in southern France. Based on the mystical interpretation of the *Torah*, the disclosing of Kabbalic secrets occurred as a response to the influence of Maimonides (1135 CE–1204 CE) and his philosophical reading of the *Torah*. Early Kabbalah literature includes *Sefer ha-Bahir* (*The Book of Clarity*), patterned after ancient rabbinic Midrash, and also the series of writings from the family and close circle of Rabbi Abraham ben David of Posquieres (ca. 1125 CE–1198 CE). The most important writing is the *Zohar* (Hebrew, “brightness”), a writing coming out of the Kabbalists in Castile, Spain. The *Zohar* consists as a collection of texts written in Aramaic and Hebrew dating from a period between about 1280 CE and 1310 CE. Its central symbol, the Kabbalah tree, consists of the ten *sefirot* or aspects of the divine personality. Nine of these issue from *Keter* (“Crown”), the first *sefirah* on the top of the tree which is one with *Ein Sof*, the endless and infinite reality of God. The sixth *sefirah* *Tiferet* (“splendor”) exists below *Keter* and is understood as being the central “beam” in the divinely constructed universe. Its central location within the tree forms two triads through which cosmic life force courses into the final two *sefirot* of *Yesod* and *Malkhut*. The *sefirot* of *Malkhut* (“kingdom”) receives all the flow from the upper *sefirot* and rules over the lower worlds. She is also called *Shekhinah* (“presence”), the queen and feminine element which in the early Midrash is said to abide with Israel into exile. The Kabbalists eventually merge the *Shekhinah* and the community of Israel, thus giving divine status to the human community – something unique within Jewish tradition. The *Zohar* begins with Genesis 1:1 and the divine name *Elohim*, “God”

which refers to the third *sefirah* of *Binah*, the Divine Mother. Between the two occurrences of the divine name in Genesis 1:1 are 13 words, which are the 13 qualities of compassion (Exod. 34:6–7). The *Zohar* significantly expands previous Kabbalah traditions with its focus on the *mysterium coniunctionis* and the uniting of the male sixth and ninth *sefirot* with the female tenth *sefiri*. Distinct from the philosophical Neoplatonic Kabbalah of the Catalonian circles, the Castilians show intrigue with teurgic, quasi-magical influence in relation to the divine and how such influence creates union and subsequent flow of blessing upon the lower world. As a mystical writing, the *Zohar* represents and occurs as a medium of religious experience inseparably connected with unconscious movements of the writers (and reader). These movements are brought forth into conscious expression through the highly symbolic language and experience of language of the book. The *Zohar* came to be regarded within Judaism as revealed text having authority comparable to the *Bible* and the Talmud. As a religio-spiritual tradition, it is preceded by Merkabah, “chariot vision literature,” and followed by Hasidism with its concern for the omnipresence of God and the notion of unbroken discourse/communion between humanity and God.

## Kabbalah and Psychology

Charlotte Moore

West Chester University of Pennsylvania,  
West Chester, PA, USA

Kabbalah is an esoteric form of Jewish mysticism that emerged in the twelfth century and that focused primarily on esoteric interpretations of the *Torah*. Kabbalists employed various forms of meditation and prayer to induce mystical states of consciousness and initiate a process of psycho-spiritual transformation.

The Kabbalists posited a tripartite division of the soul, not unlike the theories of Plato and Aristotle in ancient Greek philosophy (Tishby 1995, p. 128). In Kabbalah, the parts of the soul were called *nefesh*, *ruach*, and *neshamah* (Tishby 1995, p. 127). Some Kabbalists add to this the *guf*, or physical body (Halevi 1986, p. 35). The idea was that although the soul functions as a unity, it holds within it divisions, each with their own function and *sefirotic* attribution. Kabbalistic psychology seeks to understand the manner in which these divisions interact, with the goal of the psychological process being to balance these components such that the individual can receive and live in accordance with divine will, guided by the “highest,” most divine aspects within the human psycho-spiritual constitution.

The *guf*, as mentioned above, is the physical body (Halevi 1986, p. 35). Closely related to the physical body is the *nefesh*, which is considered to be the “lower” part of the soul, with its function being similar to the animal or instinctive consciousness. It is “attached to the body, preserving it and satisfying its needs” (Tishby 1995, p. 120). Thought to be an almost untamed or wild part of the human psyche, it was sometimes even associated with evil, or the *sitra ahra*, or “other side” (Tishby 1995, p. 127). Contemporary psychologists and Kabbalah scholars often compare the *nefesh* with the *id* in Freudian theory and the instinctive unconscious in Jungian theory given its relationship to those functions within human consciousness associated with survival,

such as the autonomic nervous system, reflexes, and reactive patterns (Halevi 1986, p. 112). Comparisons are also drawn between the *nefesh* and the Jungian shadow, since its functions are largely unconscious (Halevi 1986, p. 137).

The *ruach* is generally considered to be the human faculty of self-conscious awareness, or self-consciousness. In Jungian terms, it is associated with the Self, rather than the persona, or personality (Halevi 1986, p. 108). It serves as an intermediary between the *nefesh* and the *neshamah*, as is therefore the “middle” part of this tripartite unity (Tishby 1995, p. 121). It is said that the task of the *ruach* is “to illumine the *nefesh* and to sustain it with light and influence that flow down upon it from the *neshamah*. To match this bridging and intermediary role, it is often described as the throne of the *neshamah*, or the luminary of the *nefesh*” (Tishby 1995, p. 121). It is sometimes also associated with the emotional or intellectual functions and is further subdivided into various components of self-awareness, such as desire, imagination, and intellect (Tishby 1995, p. 121).

The *neshamah* is said to be the highest part of the soul and is even sometimes considered to be the soul itself (Tishby 1995, p. 113). Tishby says, “it is the power of the *neshamah* that enables man to study Torah and observe the commandments. . .the *neshamah* is active in the perception of the divine mystery” (Tishby 1995, p. 120). The *neshamah* could, in Jungian terms, be likened to the spiritual or intuitive consciousness and is an aspect of the psyche that guides humans to seek spiritual wisdom and union with the divine. Given that, it seems logical that “once man [i.e., humanity] has arrived at a perception of the divine mystery through knowledge of the secrets of the Torah he [or she] is able [or] . . .obliged, to activate his [or her] soul into unifying the *sefirot* and . . .carry out those theurgic tasks which constitute the supreme and final good” (Tishby 1995, p. 120).

Some scholars add to this a *yechidah*, the highest and most spiritual aspect of the psyche, associated with the Jungian collective unconscious. In this scheme, the *chiah*, or life-force, is the divine will and serves as a complementary force to the *neshamah*, the intuitive or receptive faculty (Halevi 1986, p. 185).

The manner in which the *sefirot* are unified, from this perspective, is by way of the attributions of the parts of the soul to the *sefirot*. There seems to be some controversy regarding these attributions, as different passages in the *Zohar* and other various Kabbalistic texts offer contradictory interpretations. The most common and agreed-upon system of attribution places the *yechidah* at *Kether*, the *chiah* at *Hokhmah*, the *neshamah* at *Binah*, the *ruach* at *Tiferet*, the *nefesh* at *Yesod*, and the *guph* at *Malkuth*. Other sources suggest that the *neshamah* is at *Binah*, the *ruach* at *Tiferet*, and the *nefesh* at *Malkuth* (Tishby 1995, p. 125). The *sefirot* are seen as emanations of the divine, with *Binah* being a divine feminine mother principle, *Tiferet* being a son (of *Binah* and *Hokhmah*), and *Malkuth* being the daughter, lesser mother, or Kabbalistic bride. If the parts of the soul are then mapped out onto that, one could conclude that the higher soul emanated first but was a hidden light within, a spark of the divine, followed by the divine will and a receptacle or divine form. The *ruach* would then be an intermediary function, as suggested above, and the *nefesh* would be in one sense a receptacle (or perhaps a mirror) for the light of *neshamah* through this mediation or a polar opposite principle, which would give it the connotations of evil it later inherited. The process would be one of the psychodynamics, in which the instincts and the spiritual impulses are reconciled in one's life, as one attempts to attain knowledge of the Godhead within and then live a life that is governed by that "highest" dimension of the Self.

## Kabir

Ali Kose

Ilahiyat Facultesi, Marmara Universitesi,  
Istanbul, Turkey

It is an Arabic and Islamic name for tomb. It is a usual practice to bury the dead since ancient times due to hygienic reasons and out of the fear of the unknown. Judaism, Christianity, and Islam upheld this custom. Though there are differences among religions regarding the nature and the condition of the tomb and how the corpse is positioned, the common goal is to make the corpse invisible. In Islam, the corpse is positioned to face the *Ka'bah* in Mecca toward which Muslims turn for five daily prayers. Muslims often write the words "*Huwa'l-Baki*" on the gravestone in Arabic meaning "only God is eternal" like Christians write "Rest in Peace."

According to Islam, the tomb is a window to the hereafter. Muslims are strongly recommended to visit cemeteries to say supplicatory prayers for the soul of the dead and also remember death, though one may send supplicatory prayers afar. The first chapter of the Qur'an, which is only seven verses, is the favorite supplicatory prayer. One who visits a cemetery is supposed to say words of greeting in Arabic like "*salam alaikum*" (may peace be upon you), believing that the dead hears the greeting person. All these beliefs and rituals allow the feeling of contact with the deceased, and this contributes much to the psychological well-being of the bereaved.

## Islamic Funeral

The Islamic funeral has two parts. In the first part, the dead is brought to the mosque yard for the funeral service, and a prayer called

“*salat al-janaiz*” (funeral prayer) is performed followed by a speech by the Imam (one who leads prayer) about death and the hereafter as well as paying tribute to the dead. Perhaps the most interesting moment of the funeral at the mosque is that the Imam asks the congregation and the kin whether they bear witness that she/he was a good person as well as requests them to forgive the deceased for his/her unjust acts to them. Muslim society attaches great importance to funeral prayer, and all these rituals allow the congregation psychological satisfaction for fulfilling their final duty to the deceased. In the second part, the dead is taken to the graveyard for the burial ceremony. During burial, some chapters from the Qur’an are recited both by the Imam and friends or relatives. Right after the burial ceremony, a ritual called “*talqin*,” which is inculcation of the articles of the Muslim faith to the dead, is performed by the Imam. In this ritual, the Imam speaks up to make the dead ready to answer the questions of the angels of interrogation. According to the Islamic creed, the dead is interrogated by angels in the grave. The sinful fails and the virtuous succeeds. The former is punished while the latter is rewarded. A saying of Prophet Muhammad goes: “The tomb is either a garden of paradise, or a trench of hell” (al-Ajluni 1932, Vol. II: 90).

## Cemetery Visiting

Cemetery visiting is so vivid in the Islamic world that one may witness a huge crowd on religious festivals, on the eve of the fasting or sacrifice festivals in particular. This visit on the eve of the festivals has a psychosocial meaning as well. On the days of religious festivals, younger ones visit parents and elder relatives among others to show respect. By visiting the cemeteries on the eve of the festivals, one includes the deceased ancestors. One who visits the grave of one’s friends or kin feels relieved by offering prayer and thinks that his/her prayers are to free the deceased from spiritual punishment.

Muslims are strongly recommended to keep cemeteries clean and tidy. A story of Prophet

Muhammad sets an example in this regard. Right after a burial ceremony, the Prophet tidied up a stone surrounding the tomb. One companion asked why he had done that, saying that it had not been a damage to the corpse. The Prophet answered saying, “Though it is not a damage for the corpse, it is a damage for the onlookers” (al-Sharani 1954, Vol. I: 142–143).

## Kali

Mari P. Ziolkowski  
 Sofia University (formerly Institute of  
 Transpersonal Psychology), San Francisco,  
 CA, USA

In India one of the accepted divine symbols is of a dark woman, nude, with flowing hair, four-armed, with two hands in the act of blessing and two holding a knife and bleeding head, garlanded with a necklace of skulls, dancing with protruding tongue on the prostrate figure of a man. Frightening as she may seem, she calls our attention. Sister Nivedita says:

Whether we know it or not, we belong to her. We are her children, playing round her knees. Life is but a game of hide and seek with her, and if we chance to touch her feet, who can measure the shock of the divine energy that enters into us?

Deep in our hearts is rooted the assurance that the moment will come – her mystic name will fall upon our ears (Sister Nivedita 1950, p. 20).

Kali Ma. How is it that an image so fierce can invoke the energy of the Mother? How is it that an image so fierce can evoke the energy of the mystic? Is her appearance to be taken at face value – is she a warrior goddess from the matriarchal tribal cultures of India? Or should her iconography be viewed more symbolically? Black because as all colors disappear in black, all names and forms disappear in her? Free from illusion in her primordial nakedness, is the severed head she holds indicative of the annihilation of ego-bound evil force? (Mookerjee 1988, p. 62).

How should we interpret her demon-destroying stories in the sacred scriptures of India – the Vedas and Puranas? For example, in the *Devi Mahatmya* she jumps out of the forehead of the Goddess Durga to fight the demons on earth that are out of control (Kumar 1981, pp. 30–31). In the *Mahabharata* Kali rises again when a demon king won't take no for an answer to his marriage proposal and sends his forces to subdue the Goddess in Her beautiful form as Gauri. She becomes so angry that out of her brow springs Kali, gaunt of body and red-eyed, with tiger skin, and garland of skulls, ready to assist with sword, noose, and club. Because the demons can reproduce when a drop of their blood is spilled, Kali must get creative. She throws the demons into her mouth and laps up their blood to destroy them! (Kumar 1981, p. 53).

Are these stories about the archaic female-centered South Asian matriarchal cultures resisting takeover by invading patriarchal male-centered Aryan cultures? After all, in medieval Shakta traditions Kali was considered to be a direct descendant of the early Mother Goddess cult of the matriarchal agricultural peoples that are still present in India today (Payne 1997, p. 69). Or are they illustrating for us that there are times in the history of the planet when only female warrior energy can defeat the demons of war, greed, and oppression? Or shall we return to Kali as symbol and imagine that these stories

about Kali defeating demons are really about Her ability to subdue our own inner demons with splendor? Is working with Ma Kali then really about working with our shadow?

And what does her role as an independent, sexual goddess have to teach us? In the Tantric *Mahavidya* (Wisdom Goddess) tradition, Kali is noted as primary. Her characteristics include her dominant position over her consort (Shiva) and her strong sexual appetite. Free from social and ethical roles – Kali is a breaker of boundaries and social models and dwells outside the confines of normal society (Kinsley 1997, p. 80). Though not many Indian women would take Kali as a role model, when Westerners consider her, what impact does her power, her focused use of anger, and her sexually liberating nature have upon us? What archetypal energy does She release within us? The answer takes us closer to center.

Behind the surface of this powerful death-dealing Goddess we find an all-encompassing loving energy: virgin creator, sustaining mother, and absorber of all. Many of her Hindu devotees in fact approach her as Mother. Is this because in India it is acceptable for a mother to be so fierce? Yes. However, it is also because the Indian perspective is not so dualistic as Western thought. This is why She can be seen in the Hindu tradition as the All: Cosmic Creatrix, World Mother, and Warrior Goddess supreme.

As She also appears as a force of nature, and the energy coiled in the chakra at the base of our spine, Kali's multivalent nature continues to reveal. As Kundalini, Kali is said to be part of the "Great Mother" energy "out of whose womb the universe emerges as a continuous unfolding of the immanent All" (Scott 1983, p. 24). She is responsible for maintaining the harmonious balance of force fields within the earth itself – life fields, thought fields, and surface energy lines (Scott 1983, p. 106). Such primal identification suggests an ancient energy, a goddess sourced deep in the collective human soul.

Western writers in the area of women and religion offer more guidance for understanding this Goddess. They remind us that in order to discover what the story of a deity from another

culture has to teach the reader, it is important to engage Her mythology, Her psychological ramifications, and the reader's own dreams and life experience. Through "myth-mirrors" like the Goddess, the reader can experience a new frame for their life experience and existential longings (Gross 1996, pp. 232–33).

For Western feminists, Dark Goddesses like Kali are said to be the primordial goddess from which everything emerges and to whom all returns – the nurturing Earth Mother who brings forth all life, as well as the destructive power of death. A goddess of death and transformation, of transition and renewal, the Dark Goddess is said to contain all contradictions within Herself. The call of this goddess can be heard in the deep, serious, will-to-live rising from within the body of the planet. Pushing through us for healing and realignment with nature, it is only our willingness to face the Dark within ourselves that will liberate us in the end (Noble 1991, p. 7).

Interaction with Kali energy is also an attempt to recover divine imagery more compatible with the reality of female power, anger, and assertion in western consciousness. Kali's reminder of the Earth Mother's power of rage readied for action, poised against the backdrop of a plundered and wounded planet, is a vision of spiritually energizing female power far removed from the benevolent mercy and accepting patience of most Christian female images! (McDermott 1996, p. 289).

Kali in fact ends up challenging all social norms for women. As demon slayer, Mother Goddess but without children, wife of Shiva but rarely with him (the dominating one in the relationship and the initiating partner in the cosmic dance) – living outdoors and in the cremation grounds – Kali is in the active, powerful role. She excels in all the male domains. By not conforming to the established role of women in Hinduism or in any other culture informed by monotheistic traditions, she reverses and upends the patriarchal order (Gupta 1998, p. 31).

Seen inwardly, the Dark Mother in archetypal western psychological terms is viewed as "a place of magic, transformation and rebirth, that which is secret, hidden, dark; the abyss. . . ." (Starck and

Stern, 5). On the personal level Kali plays a strong, healing psychological role in the lives of women as they come to accept the parts of themselves that have been repressed and feared. On the collective level, Her transformation of western women's painfully fragmented collective consciousness helps undo the domineering monotheistic patriarchal perspective (McDermott 1996, p. 291).

Jungians say that great resolve is needed to enter into this shadow dance – the darkness of one's own chaos. But as we do, the power of the root chakra rises, and it becomes the undulating wave of the supreme Dark Goddess, the Kundalini. Creativity and freedom that women seek do not lie in the patriarchal path of control. Rather, they lie in letting go and descending into the chaos of the maternal matrix. We are invited to participate – to yield to the frenzied beat of the mother's dance (Woodman and Dickson 1997, p. 179).

In Jungian thinking, it is said that the activation of an archetypal energy releases great power. As women access the Dark Goddess archetype – Mother, Warrior, and Cosmic Creatrix – as Her energy rises from body, psyche, and spirit, its effects are felt in all worlds. Our rage, our battle cry for change, our independence, and our open hearts – the Dark Goddess can hold it all. Women and men – hold on for the archetypal rising of the Dark Goddess Kali Ma into our psyches, our spirits, our age! (Woodman and Dickson, p. 223).

## Karma

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Karma is a core doctrine to Indian spirituality and has a similar meaning in both Hindu and Buddhist thought. It represents the idea of universal justice, the belief that in the end, good will be rewarded and wrong doing punished. Karma is an impersonal force operating to meet out consequences of actions. It is in contrast to the views of the Western Abrahamic religions (Judaism, Christianity and Islam) where a personal God judges individual souls at the end of time and assigns rewards or punishments according to one's deeds in life. Karma is automatic and not a judgment of one's conduct but merely a consequence arising out of action. It is often spoken of as the law of return, that whatever you put out toward others in conduct will come back eventually. Unlike the Western monotheism which posits only one life for

each individual, in Eastern traditions the individual has an entire series of lifetimes in which to improve their spiritual and ethical development. The wheel of existence in both Hindu and Buddhist thought is a series of births, lives, and deaths over endless eons. The individual soul or karmic core gets passed along through successive incarnations until spiritual development leads to final unification with the transcendent ground of Being. In Hinduism this is viewed as Brahman, and in Buddhism, this is simply termed enlightenment, or the fully awakened state. Karma has become a popular term in New Age spirituality; all actions can be good or bad karma, depending on their ethical quality.

## Kierkegaard, Søren

Tadd Ruetenik

St. Ambrose University, Davenport,  
IA, USA

Danish theologian Søren Kierkegaard is often referred to as the father of existentialism, and not the father of depth psychology. His 1849 book *The Sickness unto Death*, however, is an exposition of human consciousness that is comparable to the work of Freud in important respects. Both Kierkegaard and Freud stressed the relative impotence of the ego in relation to nonrational forces in the mind, and both attempted to provide a remedy for this precarious

condition. What makes Kierkegaard's work in depth psychology unique is its explicitly Christian focus. *Sickness* is marked with the subtitle *A Christian Psychological Exposition for Edification and Awakening* and provides a detailed account of the disease of despair, which is understood as Godlessness. Another of Kierkegaard's works, *Fear and Trembling*, takes the Genesis story of Abraham's attempted sacrifice of Isaac and provides a beautiful depiction of psychological endurance in the face of absurdity. It, like *Sickness*, operates on the belief that human existence is fundamentally paradoxical. For Kierkegaard, to be human is to be in a permanent state of cognitive dissonance and on the verge of losing one's mind. To be saved, one must accept the dissonance and lose one's mind for the sake of gaining faith in God.

### Despair and Human Existence

Human existence involves an uncomfortable synthesis of the eternal and temporal, and because of this all human beings are in despair, whether they admit it or not. Commonly, people believe that despair comes from fearing death and brooding about the temporality of their existence. But according to the Christian perspective presented in *Sickness unto Death*, despair comes not from consideration of death and temporality but from consideration of one's inability to die. Like a man on his deathbed, whose finite body writhes in pain but who is not yet granted the freedom of death, the Christian lives with the understanding that in the face of despair, death is actually the last refuge. Death is the goal, but it is an unreachable one. A Christian's blessedness, that which sets her apart from all others, is her consciousness of an eternal self. Paradoxically, this consciousness is the sickness unto death.

People make impotent attempts to avoid this fundamental paradox by constructing false personalities that deal with their condition by either rebelling against it or weakly resigning themselves to it. To avoid either of these types

of folly, one must have faith, namely, the faith that with God, all things are possible. Kierkegaard likens this faith to the act of drawing a satisfying breath after a period of stifling anxiety. With God, one can breathe again, and the panic disorder of infinitude is cured.

Kierkegaard was a man beset by anxiety and depression throughout his short life and surely intended *Sickness Unto Death* to be, as much as anything else, a guide for other sufferers. Kierkegaard (who is as usual speaking through a pseudonym in this work) advocates that one must abandon the laborious process of trying to create a false personality. There is a greater control that takes over when one is brave enough to give up the ego's precarious tyranny.

### Despair and Faith

Kierkegaard's *Fear and Trembling* provides another detailed explanation of the process of losing one's mind to find God. The inspiration for this story is the biblical account of Abraham's attempted sacrifice of his son. The book is especially sympathetic to the anxiety that Abraham must have felt while going up the mountain, following God-given orders that are, on any honest appraisal, ethically abominable. The faith that guides Abraham through the trip is impossible to explain and lends itself only to poems of admiration.

Abraham's faith is, after all, a monstrous contradiction. It is not merely an example of temporary cognitive dissonance to be overcome by intellectual growth but an absolute paradox, inaccessible to thought. One cannot appreciate the story without seriously considering whether Abraham is simply a murderer, one who is killing not only his own future but also that of his people. Abraham maintains the infinitely optimistic and absurd belief that by losing his son and his people, he would get them both back. Such a belief is rationally unwarranted and yet, according to *Fear and Trembling*, is the requirement for faith.
