The concept of the Kingdom of God was first written about in Exodus.1; a hymn celebrating the crossing of the Red Sea and proclaiming in verse 18 “The Lord will reign for ever and ever” (Jewish Encyclopedia). The concept was later developed by the prophets, especially Isaiah and Jeremiah, and expressed the yearning of the long-oppressed Jewish people for the rule of their God over all the nations.

The Kingdom of God was the central concern of Jesus’ ministry. Mark 1:14–15 records the first words of his preaching ministry: “The time is fulfilled, and the kingdom of God is at hand: repent and believe in the gospel.” There is a disagreement among scholars as to what Kingdom Jesus was preaching. Some possibilities:

1. The dramatic intervention by God in the affairs of humans as depicted in the Synoptic Gospels (Luke 17 and parallels) and the *Book of Revelations*. This vision would point to a psychology of fear, a preoccupation with the division of the saved from the damned,

a focus on imminently future events over which one has no control. Individuals who subscribe to such a belief system would be unlikely to seek treatment as any problem would be seen through the screen of Biblical apocalyptic prophesy.

2. The return of an earthly king like David. Jesus’ disciples certainly understood the Kingdom in this way (Matthew 20:21). Those who understand the Kingdom of God in this way would work to establish a theocracy here on earth. Their focus would be on establishing right action within such a Kingdom and right action to bring such a Kingdom into existence. Illness and emotional problems would be read as a result of failing to follow prescribed moral codes.
3. The peaceable Kingdom, a place as in Isaiah where peace extends even to the natural world, where war will be no more and all the nations will flow towards the Holy Mountain (Jerusalem).

The wolf shall live with the lamb,  
the leopard shall lie down with the kid,  
the calf and the lion and the fatling together,  
and a little child shall lead them.

<sup>7</sup>The cow and the bear shall graze,  
their young shall lie down together;  
and the lion shall eat straw like the ox.

<sup>8</sup>The nursing child shall play over the hole of the asp,  
and the weaned child shall put its hand on the adder’s den.

<sup>9</sup>They will not hurt or destroy  
on all my holy mountain;  
for the earth will be full of the knowledge of the LORD  
as the waters cover the sea (Isaiah 11: 6–9).

4. Even though most of Jesus’ preaching was on the Kingdom of God, he does not specifically define what the Kingdom is, thus leaving the exact nature of the Kingdom open to interpretation. For instance, the Kingdom can be interpreted as current or future reality and an inner or outer reality, an individual or group reality or all of these, leading to a tension between/among these opposites. An example of this is Luke 17:21 “The Kingdom is within you,” which can also be read as “The Kingdom is among you.”

The Kingdom of God is mentioned 58 times in Matthew, Mark, and Luke, and there are 31 references to the Kingdom of Heaven in Matthew. Most are passages about proclaiming the arrival of the Kingdom or more frequently worded that the Kingdom has “come near.” There are many references to entering, seeing, and receiving the Kingdom which seem to suggest that entry is an individual decision and dependent on individual behavior, for instance, the parable of the rich man seeking to enter the Kingdom in Matthew 19:24. There are other references to the Kingdom being a secret as in Mark 4:11 and Luke 8:10 and references to “selling all” for the Kingdom (Matthew 13:14–46).

The Gospel of Matthew alone uses the introduction “The Kingdom is like” to begin longer parables such as the workers in the vineyard and the great banquet, though the longer parables in other Gospels are probably references to the Kingdom even if not actually specified as such. Such parables do not equate the Kingdom with one aspect of the story, say the banquet, but with the whole process of inviting and eating and even kicking out the man without a wedding garment (Matthew 22:2–14).

There is a small collection of similes which appear to give insight into Jesus’ conception of the kingdom of God. The Kingdom of God is like a mustard seed, putting yeast in flour, and planting seeds, a small common object of no special value which when hidden transforms the whole.

Psychotherapy also utilizes this principle. Psychotherapists align with the inborn aliveness in their patients, aliveness that may be difficult to notice with patients who are especially suppressed or injured. The therapist spots the tiny seed of initiative hidden inside and helps the client make room for it to enlarge and transform the whole personality.

In the parable of the seed growing of itself (Mark 4:26–29), Jesus suggests that the Kingdom of God is a natural process of coming to fulfillment and wholeness navigated through the opposites of day and night, sleep and rising, and man and earth, “first the blade, then the ear, then the full grain in the ear.” As members of the natural world, we as humans are imbedded with a natural

growth towards wholeness and fulfillment, born from within. Psychotherapy is a practice that seeks to discover and enhance this process of finding wholeness. Some Biblical scholars may equate this process with the coming to life of the Kingdom of God.

### Klein, Melanie

Pamela Cooper-White  
Columbia Theological Seminary, Decatur,  
GA, USA

Melanie Klein (1882–1960) was born in Vienna, Austria, the youngest of four children, to Moriz Reizes, a medical doctor, and Libussa Deutsch, his young second wife. Moriz was born into an Orthodox Jewish family and was intended by his parents to study for the rabbinate, but he rebelled and attended medical school. Melanie was close to her strong, domineering mother, but emulated her emotionally remote and intellectual father. A brilliant and unorthodox first-generation psychoanalyst, she rose to become one of the foremost theorists and practitioners of her time and is credited with founding the “object relations” school of psychoanalysis. At the same time, her personal life was shadowed by loss and tragedy, and it is perhaps no coincidence that much of her writings focused on themes of depression and manic depression, psychic splitting, the death instinct, envy, and reparation.

Melanie's life was marked by a series of tragic and traumatic losses—the death of her beloved older sister Sidonie from tuberculosis when Melanie was just 4 years old, the death of her father one week after her 18<sup>th</sup> birthday, and then the death of her older brother Emmanuel of heart failure when she was 20. At age 17, Melanie had met and almost immediately become engaged to Emmanuel's friend Arthur Stevan Klein, an industrial chemist and her second cousin. Still mourning her brother, she married Arthur the day after her 21st birthday in 1903. The couple traveled a great deal for Arthur's work, keeping Melanie from pursuing further education in her chosen field of medicine, and the marriage was not happy. Melanie suffered several bouts of depression, especially during her pregnancies. Her daughter Melitta was born in 1904, followed by Hans in 1907, and Erich in 1914. The couple separated in 1919, and finally divorced in 1924, after a custody battle over Erich (who eventually lived with his father in Berlin). Hans died in 1924 in a mountain climbing accident which Melitta, among others, considered to be a suicide.

Klein never completed medical school. However, after moving with Arthur to Budapest during World War I, she entered analysis in 1910 with Sandor Ferenczi, a rising star in Freud's circle at the time. There she found both close friends and the intellectual stimulation she had craved. She began analyzing children—including her own. She met Freud in 1918 at a meeting between the Austrian and Hungarian analytic societies and became doubly determined to train as an analyst (Grosskurth 1986, p. 71). A year later, Klein made a strong positive impression with her first analytic paper entitled "The Development of a Child" (an account of her analysis of Erich) and was admitted to the Budapest Psychoanalytic Society. After separating from Arthur and moving to Slovakia with her children, she was persuaded by Karl Abraham, another intimate of Freud's, to move to Berlin to pursue analytic training. She entered analysis with him in 1922 and started her own practice with both child and adult patients. Her analysis was abruptly cut short by Abraham's death a little over a year later—another traumatic loss—but

she continued a self-analysis along the same lines for many years. Klein's ideas were not popular among the Vienna analysts; however, she gained support from the British analytic community. In 1925, Ernest Jones, a London analyst and Freud's first official biographer, heard her present a paper on child analysis at a conference in Salzburg in 1925. He invited her to present a series of papers to the British Psychoanalytic Society, an invitation she happily accepted. These lectures were subsequently published as her first book (Klein 1984). Other important British supporters included Joan Riviere, Alix Strachey, and Susan Isaacs, all influential women analysts.

In 1925, she fell in love with a married journalist, Chezkel Zvi Kloetzel, but in 1926 she broke off their affair and moved to London permanently. She became the leading theorist in the British Psychoanalytical Society and is known as the founder of the school of theory known as "object relations." She trained many other important analysts in the generation after Freud, including D.W. Winnicott, Wilfred Bion, and Hanna Segal. John Bowlby, founder of "attachment theory" was also closely influenced by Klein. Klein's daughter Melitta became a medically trained psychoanalyst in her own right and was married in 1924 to another psychoanalyst and friend of Freud's, Dr. Walter Schmideberg. In 1928 the Schmidebergs also moved to London, escaping an atmosphere of increasing anti-Semitism in Germany and Austria. Melanie Klein remained in London as an influential analyst and teacher for the rest of her life. She died in 1960, due to complications after surgery for colon cancer.

A famous conflict erupted between Klein and Freud's daughter Anna after the Freud family emigrated to London in 1938 to escape the Nazis, and especially after the 1939 death of Freud, whom both women revered. It was one of many schisms within Freud's inner circle throughout his career and one that resembled an oedipal struggle (although between two powerful and influential women) over who was the true heir. Before World War II broke out, numerous conflicts and rivalries had already begun to emerge between Vienna and London, including

a harsh critique in 1927 of Anna Freud's work by Klein. Both Melanie and Anna were lay analysts (nonphysicians) who worked with children. However, Anna believed that children were too young to be analyzed, preferring a psychoeducational approach to bolster the ego's adaptation to reality, while Melanie had established a method of analysis even with very young children, asserting that children produced symbolic material in their play that could be analyzed from a very young age (Segal 1979). Both women had strong claims. Anna was, of course, Freud's daughter and close companion, and had become a teacher and then Director of the Vienna Psychoanalytic Training Institute, and Secretary of the International Psychoanalytical Association.

To compound the difficulties, Klein's own daughter Melitta publicly joined the ranks of the opposition (which included Melitta's own analysts, Ella Sharpe and Edward Glover). Melitta openly criticized her mother's techniques (e.g., a paper attacking Klein in 1937), and they remained estranged for the rest of Klein's life. Melitta eventually separated from her husband and emigrated to New York, where she contributed to the classical Freudian orientation of American psychoanalysis in the 1960s and beyond. She did not attend her mother's funeral. As a result of increasingly personal attacks between the two sides in London, culminating in the "Controversial Discussions" in the 1940s, the British Psychoanalytical Society divided permanently into three separate training divisions: Anna Freudians (later called "Contemporary Freudian"), Kleinians, and the Middle Group (later called "Independent")—although to its credit, the British Society, unlike many other psychoanalytic institutes, never divided into completely separate entities. These three branches of British psychoanalysis continue today.

Klein's contributions to psychoanalysis were pathbreaking, and because of their often speculative quality, were also frequently controversial. Although she insisted that she was a true follower of Freud in psychoanalysis, her theory made a major shift in the conceptualization of the

primary motivation of human personality from Freud's focus on the drives of sex/libido and aggression. Her own model of personality emphasized an infant's need to connect with others or "objects" (the converse of the subject, the "I"), which existed as mental representations in both the inner (psychic) world and the outer world (real, but filtered through the child's perceptions). Klein's central proposition was that infants unconsciously internalize their primary caretakers and other early figures into their psyches. These "internal objects" continue to live on, unconsciously and quasi-independently, for the rest of the individual's life, shaping the personality. At first, these fantasized objects may be in the form of parts of the parent, such as the mother's breast, which may be experienced through the child's perceptions as (a) good and nurturing, (b) bad and withholding and therefore to be destroyed by biting or scratching, or (c) even overwhelmingly too good and to be spoiled out of envy.

Derived from her clinical work with both adult and child patients, she also speculated about a much earlier passage through Freud's "anal," "oral," and "genital" developmental stages, assigning an early oedipal stage to about 6 months of age. Klein further distinguished two "positions" in earliest childhood (distinct from chronological stages, because they can oscillate). The most "primitive" is the "paranoid-schizoid position," in which the child's psyche must split off into the unconscious the negative experiences of the parent on whom she/he depends and idealize the "good parent." Thus, the child defends against being utterly at the mercy of the "bad parent." The second, healthier or more mature position is what Klein termed "the depressive position," in which the child is able to hold together experiences of the parent as both "good" and "bad" in an acceptance of the tragic reality that perfection is not possible. The child is aided in achieving the depressive position in part by recognizing his or her own destructiveness, and through guilt for desiring to devour and thus destroy the breast, she/he is able to reach the desire for reparation. Klein thus construes guilt, in contrast to Freud's theory, not as a disabling source of

neurosis based on the oedipal stage (around age 5), but as the stimulus for healing internal psychic splitting in early infancy.

The emphasis in Klein's theory was always on the unconscious internal world of the child (especially the "preoedipal child," i.e., the infant and toddler) and by extension also the adult. Fantasy (or "phantasy" in her terminology) was primary for Klein, and actual environmental contributions to the development of the personality and the genesis of pathology were secondary to the infant's inner perceptions (and distortions) of his or her own desires and anxieties, which were then projected onto the external world. Because of this theoretical bent, Klein was also more open to analyzing patients with psychotic tendencies, unlike Freud who viewed psychoanalysis as appropriate only for neurotic patients.

Projection, the psychic defense by which an individual assigns his or her own internal states onto someone in the outer world, was already identified by Freud. Klein extended this in 1946 in a famous paper entitled "Notes on Some Schizoid Mechanisms" (Klein 1975b, pp. 1–25) to include the concept of "projective identification," whereby a person's unconscious joins in unconscious interplay with another person's and invokes feelings and reactions in that other person without conscious stimulation. Projection and projective identification generally erupt from the paranoid-schizoid position, as the role of "good" and "bad" is psychically tossed like a hot potato between himself/herself and others with whom he/she relates. This can result in idealization of the other and denigration of the self or, in its opposite form, viewing the other as a perpetrator and oneself as an innocent victim—with frequent oscillation between two all-or-nothing perspectives. In therapy, this phenomenon is often experienced in the transference-countertransference dynamic between therapist and patient, and by examining his or her responses along multiple registers (thoughts, feelings, bodily sensations, fantasies, dreams), the therapist may come to understand the patient's experience more fully than through conscious dialogue alone.

The significance of Klein's work for the psychology of religion is indirect. A self-avowed Freudian, she did not adhere to any religion in her professional adult years, nor did her writings directly address religion. However, Melanie and her family suffered from the rampant anti-Semitism in Austria and Germany leading up to the Holocaust, and Melanie's student and early biographer Hanna Segal reported that Melanie was critical of Jews who denied their heritage (Segal 1979) and believed that parents should pass on their religious traditions to their children. One of the first "Kleinians," Wilfred Bion, extended Klein's theories to develop a model of symbols for consciousness and unconsciousness—"K" for knowing, or rational thought and "-K" for "attacks on knowing" or irrational thought; *alpha* and *beta* for conscious vs. unthinkable thoughts, and of particular interest for psychology and religion, the letter "O" for the ineffable, or ultimate Truth. Winnicott further developed object relations theory as a more fully relational paradigm (both unconscious and conscious). His concept of a psychological "potential space" of both "me and not-me" paradox, play and creativity (initially occurring between a mother and her infant), has been utilized by a several of pastoral theologians and psychologists of religion, including James W. Jones (1993), Brian Grant (2001), and Pamela Cooper-White (2007). From within the field of psychoanalysis, Michael Eigen (1998) has similarly observed an "area of faith" and a "psychoanalytic mysticism" in the writings of Bion and Winnicott, among others. Another analyst, Ana-Maria Rizzuto (1981), drew on the concepts of internal objects and projection to investigate how individuals form God images from early childhood experiences; subsequent studies by pastoral theologians have expanded the clinical utility of understanding children's and adult patients' conceptions of God as indicators of the texture and dynamics of their earliest object relations.

## Koan

Paul C. Cooper  
National Psychological Association for  
Psychoanalysis, Two Rivers Zen Community,  
New York, NY, USA

## Introduction

The term “koan” derives from the Chinese *ko* (public) *an* (case), hence, literally, “public case.” A public case implies a standard of judgment. In the case of Zen, the judgment refers to the depth of the student’s intuitive understanding. Each koan takes the form of a story, anecdote, or dialog, typically entailing an incident, situation, or conversation between an historical Zen figure and a student. The use of the koan exercise as a tool for spiritual practice developed in tenth- and eleventh-century China. Koan practice instilled new life into a Zen system that had become codified, calcified, dogmatic, and caught up in sectarian disputes.

Koan study developed through a long history of spontaneous question and answer dialogs, in which the question is typically turned back on the student or is given a seemingly illogical response. As teaching stories were collected, formalized, and compiled into anthologies and structured, formal courses of study developed that were intended to simulate and to engender enlightenment experiences in Zen students.

Koan study and practice has developed differently within the Rinzai and the Soto Zen sects. These different approaches have been described as “instrumental” and “realizational.” According to the Zen scholar Hee-jin Kim, Dogen, the founder of the Soto sect emphasizes a realizational approach, but he does not necessarily abandon the instrumental approach that characterizes the D. T. Suzuki presentation of the Rinzai school emphasis on koans as a pedagogical means to the end of attaining enlightenment.

## Practice

After a preliminary period of practice, in the Rinzai tradition, Zen students are given a koan to focus on during periods of zazen (sitting meditation) as the subject of presentation, scrutiny, and discussion during face-to-face interviews and group talks conducted by the Zen teacher. The Zen koan needs to be taken as a matter of life and death by the student. For example, in his commentary to the Mumonkan (Gateless Barrier), an important twelfth-century koan collection, Mumon, the compiler, conveys the sense of urgency and the intense level of energy applied to this task of concentration by comparing the internalizing of *Mu* (no) to “swallowing a red-hot iron ball” (Aitken 1991, p. 9).

The student’s response to any koan reflects deepening or penetrating levels of awareness of reality as a result of cutting through or short-circuiting logical, linear thought. However, as Taizan Maezumi notes, the koan.

... is much more than a paradoxical riddle designed to prod the mind into intuitive insight. The koan is quite literally a touchstone of reality. It records an instance in which a key issue of practice and realization is presented and examined by experience rather than by discursive or linear logic (Yamada 1979, p. vii).

This experientially based insight is referred to by Zennists as *satori* (enlightenment). Accordingly, the Zen master can only witness the student’s level of mastery through presentation

during private interviews, but does not teach the student anything.

In practice, koan study engenders a spontaneous, intuitive knowledge beyond teachings and scriptures. This spontaneous direct knowing is reflected in the contemporary American Zen Master, John Loori’s comment that “We *do* koans, we don’t talk about them” (1994, p. xvii). Koans are designed to defeat rational, linear cause and effect thinking, and for this reason, they frequently appear irrational and meaningless. D. T. Suzuki comments: “For the koan is not a logical proposition but an expression of a certain mental state resulting from Zen discipline” (1994, p. 83).

Similar to the psychoanalytic dialog, both the Zen master and the psychoanalyst are ever on the alert for dialog that deteriorates into intellectualism or logical philosophical discourse. With different goals in mind, and while not disregarding the intellect, both koan practice and psychoanalysis endeavor to go beyond its limitations and break through to a lived and felt awareness.

Stephan Heine writes that “The Zen koan . . . defines the heart of Zen Buddhism and is the single most distinctive feature in the thought and practice of the Zen sect” (2002, p. 1). Why does Zen ascribe such a central place to the koan? As a religion, Zen holds a salvational function. For Zen, the salvational function is articulated in the notion of *satori*. The koan and the associated dialog function to facilitate the *satori* experience. It is from this salvational standpoint that, as Suzuki notes, “. . . the koan exercise came to be recognized as the necessary step towards realization of *satori* in Zen Buddhism” (1994, p. 31).

## Koan Study and Psychoanalysis

Considering the centrality of the koan in Zen practice along with the increasingly deepening interest in the relation between Buddhism and psychotherapy, it is surprising that there is virtually no discussion of koan study in relation to psychotherapy in the literature on Zen and psychotherapy. At present, no systematic study

of the relationship between koan work and psychoanalysis exists with the exception of a brief reference in Erich Fromm's classic *Zen Buddhism and Psychoanalysis* (Fromm et al. 1960). Fromm noted that both psychoanalysis and Zen practice function to make the unconscious conscious.

In examining the relationship with the teacher and the descriptive aspects of satori, we can observe a number of significant connections to psychoanalysis. For instance, satori is expressed in freedom, creativity, and in the arts. Koan practice involves relational dynamics that evolve over time and that parallel psychotherapeutic techniques and aims in certain fundamental ways. Some of the noted shifts in relational dynamics include a movement from contrivance to spontaneity, dogmatism to an iconoclastic orientation; from an over-reliance on intellectualization to expanded emotional expressivity; and from a defensive false self expression to the authenticity of true self experiencing. Donald Winnicott describes the expression of the latter as "the spontaneous gesture" (Winnicott 1965, p. 148). He characterizes the spontaneous gesture as reflective of the True Self expression in action. He writes that "Only the True Self can be creative and only the True Self can feel real" (1965, p. 148). While he does not make a specific reference to Zen or to koan study, he makes the observation that connects his psychoanalytic concept of "True and False Self" to religious experience. He writes that "This concept is not in itself new. It appears in various guises in descriptive psychiatry and notably in certain religions and philosophical systems" (Winnicott 1965, p. 140).

This movement from contrivance to spontaneous authenticity is crucial to psychoanalysis. For instance, Wilfred Bion notes that "There can be no genuine outcome that is based on falsity" (1970, p. 28). The implication for treatment centers on the analyst's capacity for authenticity. Bion writes that "the more real the psychoanalyst is, the more he can be at one with the reality of the patient" (Bion 1970, p. 28). The idea with both Zen practice and psychoanalysis conducted from this perspective is that psychotherapy relies less on preconceived thoughts, beliefs, and ideas and

more on intuition of the moment-to-moment experience.

A common feature of both systems is a notable movement in the dialog from observation to experiencing that closes the gap between objective and subjective self. Parallels can also be noted between koan dialogs and Bion's notion of bridging the gap between an activity that is "about psychoanalysis" and "being psychoanalysis." Cooper (2001) provides a detailed discussion of the gap between being and knowing in relation to Zen and psychoanalysis. Lived experienced truth replaces the accumulation of information, intuitive knowing (*prajna*) replaces conceptual understanding, and unitive experiencing replaces dualistic thinking. Truth experiencing is prioritized both in Zen and in Bion's psychoanalysis. A parallel can be drawn here to Bion's notion of intuition. In expressing the truths of Zen, we become more truthful because we are basically expressing the truth of who we authentically are. As this expression becomes increasingly fresh, alive, spontaneous, and authentic, we expand our capacity, as Bion notes, with respect to psychoanalysis, that is, free from memory, desire, and understanding, and we experience and express a wider range of emotions. What is required of the psychoanalyst is an interpretation that is enlivening, not deadening.

The explicit iconoclastic orientation as articulated in the koan literature coupled with the Zen experiential negation of an inherently existing self or essence and the deconstruction of reified versions of self and object experience resituates the psychotherapist who practices Zen in relation to the therapeutic encounter and radically alters the conception of goals and healing in psychoanalysis. Similarly, for a minority of influential psychoanalysts such as Bion, Lacan, and Eigen, truth lies beyond the parameters of any notion of goal, pathology, or healing. For instance, for Bion, the notion of cure operates as a function of desire and interferes with the lived experience of Truth and at-one-ment. For the Zennist, the notion of cure is a function of attachment and intellect and requires deconstruction. Lacan offers a similar vantage point. He observes that

the analyst's ego functioning should not be considered as an orientation point or as a clinical measure of the patient's health, for normality or for objective reality.

As a result, Bion observes that "The pattern of analysis will change. . . . 'Progress' will be measured by the increased number and variety of moods, ideas and attitudes in any given session" (1967/1988, p. 18). Similarly, Suzuki describes a feeling of exaltation ". . . due to the fact that it is a breaking up of the restriction imposed on one as an individual being. . . an infinite expansion of the individual" (1994, p. 29). With this point in mind, the sixteenth-century Korean Zen master, T'ui - yin notes that.

"What is required of Zen devotees is to see into the phrase that liveth and not into one which is dead." (Suzuki 1994, p. 92).

D. T. Suzuki describes koan study as ". . . a unique contribution Zen has made to the history of religious consciousness" (1994, p. 11). He describes the development of koan study as crucial to the revitalization of Zen, which had, over time, become lifeless and calcified. He attributes this calcification to intellectualism and quietist tendencies. It is interesting to note the pervasive and perennial nature of these tendencies in contemporary psychotherapy. Suzuki notes that ". . . there was a tendency which made for the evaporation of Zen experience into conceptualism" (1994, p. 77). Steven Heine notes that during the thirteenth century, Dogen, the founder of the Japanese Soto sect of Zen Buddhism, revitalized koan study, which also had become lifeless. He accomplished this revitalization by criticizing the derailment of dialog in traditional koan study and by offering novel and contradictory interpretations of traditional koans that he intended to use in order to expand dialog.

One question that is relevant to contemporary psychotherapy is "Can koan practice and study enliven psychotherapy?"

## Kohut, Heinz

Joeline E. Roberts

Blanton-Peale Institute, Association for Psychoanalytic Self Psychology, New York, NY, USA

Heinz Kohut (1913–1981): Born in Vienna, Heinz Kohut emigrated to Chicago in 1939 where he trained in psychiatry at the University of Chicago. In 1946 he entered the Chicago Institute for Psychoanalysis where he would remain as a supervisor and training analyst for the rest of his life.

Kohut received wide recognition late in his life for the development of the theory of Self

Psychology in which he replaced Freud's drive theory with a focus on experience of self. According to his theory, narcissism had its own line of development. There could be no self without another; it was in relationship that the self was formed and developed. Hence, Kohut's vision of treatment emphasized understanding the context of the patient's reaction. For this, the analyst relied on a process Kohut called "empathy and vicarious introspection" in order to understand and explain the patient's subjective experience within the treatment.

Kohut comprehensively outlined his theory in his 1968 paper "The Psychoanalytic Treatment of Narcissistic Personality Disorders: Outline of a Systematic Approach." He said that the self is first sustained by archaic mergers with self-objects. The self then progresses towards more mature self-object experience and is sustained by empathic resonance in adult relationships. In self psychological treatment, the analyst remobilizes his or her unmet self-object needs through the self-object transference. Kohut recognized three lines of self-object transference: mirroring, idealization, and twinship, which engage the analyst's need for, respectively, self-esteem, self coherence, and human likeness.

According to Strozier, Kohut believed that religion's unique function was to hold together, strengthen, and make harmonious man's self.

## Krishna

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Krishna ("dark one, dark blue") was the eighth avatar (incarnation) of Vishnu, the major Hindu deity who preserves and protects the world and comes to earth as *avatars* (incarnations) to help people. Krishna is multifaceted, a trickster, embodying divine love and joy, overcoming pain and evil, protecting cows, and bringing refined *moksha* – liberation from reincarnation. As a godchild, he was born to Devaki, and as a young (low-caste) cowherd, he played the flute for the cows, the other cowherds, and the young milkmaids. As a deity of humor, he teased the milkmaids, who adored him, even stealing their clothes when they were swimming. One moonlit night Krishna fulfilled the milkmaids' yearning for union with him, dancing with and delighting them, which sounds a bit like ancient Greek Dionysian religion. This became the theme of much love poetry and, more spiritually, represents the divine play and love between *Perusha* (soul) and *Prakriti* (primordial nature).

When Krishna was grown, the wicked king Kansa sent many demons to kill him, including the five-headed demon snake Kaliya. Krishna danced on his heads and defeated it so he would not poison the river Yamuna. Finally, he killed king Kansa. Krishna married Radha, who was

**Krishna, Fig. 1** Krishna Statue at the Sri Mariamman Temple (Singapore), courtesy of AngMoKio This figure is licensed under the Creative Commons Attribution-Share Alike 3.0 Unported ([http://en.wikipedia.org/wiki/File:Sri\\_Mariamman\\_Temple\\_Singapore\\_2\\_amk.jpg](http://en.wikipedia.org/wiki/File:Sri_Mariamman_Temple_Singapore_2_amk.jpg))

foremost of the milkmaids and avatar of the goddess Lakshmi (wife of Vishnu). Some Indian women see their husbands as Krishna, and the husbands see their wives as Radha; thus, they see the divine Self in each other (*Santan*).

In contrast to the yoga of austerities or meditation, Krishna's *Bhakti* yoga is the worship through devotion to a particular god, such as Krishna, who is immensely popular in India, for he embraces a wide spectrum of psychological feelings, such as love, spiritual wisdom, and perception of Ultimate Reality. Krishna's popularity grew with the rise of the medieval *Bhakti* movement. *Bhakti* practices, such as chanting the names of deities, are a meritorious path to release from reincarnation and union with the Absolute (Ions 1967, p. 48). The chant "Hari Krishna" means "Holy Krishna." (Fig. 1).

In the Bhagavad Gita (*Song of God*), a very popular Hindu text, Krishna teaches Arjuna many lessons. In battle Krishna rode in the chariot of Arjuna and taught the warrior the essence of

*Bhakti* Yoga or the being yoked to the divine through love and devotion. But first Arjuna resists killing his own kinsmen in the opposing army:

Krishna, Krishna, now as I look on these my kinsmen arrayed for battle . . . my body trembles. . . . What do I want with Victory, empire, or their enjoyment? . . . Vice rots the remnant, defiling the women, and from their corruption comes mixing of castes (*Song* I, p. 31–33).

These two good ethical objections Krishna must answer. First, he replies,

Even if you consider this from the standpoint of your own caste-duty, you ought not to hesitate, for, to a warrior, there is nothing nobler than a righteous war. . . it opens a door to heaven (*Song*, II, p. 38).

The deeply embedded caste system of India that gives social order to its advocates seems to democratic thinkers only social barriers that religions should oppose. Indeed later Gandhi (1869–1948, of the *Vaishya*, merchant caste), when prodded by his son, who wanted to marry a *Brahman* (the highest priestly caste) girl, came to reject the caste system and thereafter would only attend weddings of different castes (Fisher 1954, pp. 109–112). But here this ancient text (c. 200 BCE–200 CE) was not ready for democratic ideals.

Krishna here teaches to Arjuna to do his caste duty but remain detached from worldly affairs:

The truly wise mourn neither for the living nor for the dead. . . . No one has the power to change the Changeless. Bodies are said to die, but That which possesses the body is eternal. It cannot limited, or destroyed. Therefore you must fight (*Song* II, p. 36).

Krishna is referring to the Atman, the spark of the Infinite Brahman in each person, which is unborn, undying. "Do not grieve, he teaches, for: "Death is certain for the born. Rebirth is certain for the dead. You should not grieve for what is unavoidable" (*Song* II, p. 38). The fatalism in minimizing the value of earthly life and not being able to oppose things like war or caste seems psychologically harsh and undemocratic, but these were social constructs of the time.

Krishna teaches him: Karma yoga should involve non-attachment. "You have the right to work, but for the work's sake only. You have no

right to the fruits of work.” Without laziness, we should not be happy or sad about the fruits of efforts. “To unite the heart with Brahman and then to act: that is the secret of non-attached work” (*Song II*, pp. 40–41). This may seem to advocate resignation, but it is teaching on renouncing desire in this world and focusing on the everlasting, Infinite Brahman, beyond birth and death. “He knows peace who has forgotten desire. He lives without craving: Free from ego, free from pride” (*Song II*, p. 44). Psychologically, this teaches orienting the ego to the archetypal Self, the divine within that Hindus call Atman. Even those active in social change might need this, to avoid anger and remain tranquil. Martin Luther King, knowing death threats for his civil rights protests, said: “I’ve been to the mountain-top” . . . . “I’m not fearing any man” (Washington 1986, p. 286). His ego was oriented to God while protesting racism.

Krishna speaks in the voice of the high divinity Vishnu, whom he personifies:

I am the birthless, the deathless, Lord of all that breathes. . . . When goodness grows weak, when evil increases, I make myself a body. In every age I come back to deliver the holy, the destroy the sin of the sinner, to establish righteousness (*Song II*, p. 50).

This is the theme of the divine savior come to earth to aid goodness on earth.

The voice of Vishnu speaks of his presence in all the world:

My *Prakriti* [primordial nature] is of eightfold composition: earth, water, fire, air ether, mind, intellect, and ego. You must understand that behind this, and distinct from it, is That which is the principle of consciousness in all beings, and the source of life in all. It sustains the universe. . . . I am the birth of this cosmos; its dissolution also . . . . I am the essence of the waters, the shining of the sun and the moon; OM in all the Vedas, the word that is God (*Song VII*, pp. 70–71).

Earthly suffering comes from the delusion that this world is ultimately real and its desires are important. Psychologically, ego cannot see beyond its desires and thus suffers. But liberation comes from seeing the Ultimate in all things: “Others worship me, knowing Brahman in all things: Some see me one with themselves, or separate: Some bow to the countless gods that are only My

million faces” (*Song IX*, p. 81). This openness to polytheism as the many faces of the one ultimate absorbs other religions into itself – a characteristic mark of Hindu religious toleration:

Even those who worship other deities, and sacrifice to them with faith in their hearts, are really worshipping me, though with a mistaken approach. . . . Those who sacrifice to the various deities will go to those deities. The ancestor-worshippers will go to their ancestors. Those who worship elemental powers and spirits will go to them. So, also, my devotees will come to me (*Song IX*, p. 83).

Even the Hindu teachings that one must climb the ladder of the caste system through many rebirths, Krishna here opposes:

Even those who belong to the lower castes – women, *Vaishyas* (merchants), and *Sudras* (servants) too – can reach the highest spiritual realization, if they will take refuge in me (*Song IX*, p. 85).

This more democratic teaching was adopted by other Indian religions, notably Buddhism. These teachings are very refined, suited to mystics, but taught to all.

Brahman is beginningless, transcendent, eternal . . . . He is within and without . . . undivided, He seems to divide into objects and creatures (*Song XIII*, pp. 102–03).

The theology of the infinite oneness beneath all manifest reality developed in *Vedanta* Hinduism.

Although there are many rules in the many varieties of Hinduism, from the caste system to ritual procedures, purifications, and patriarchal rule, Krishna teaches in the *Gita* a refined message that is highly revered:

To love me is to know me . . . Now I have taught you that wisdom which is the secret of secrets. Ponder it carefully. Than act as you think best (*Song XVIII*, pp. 128–129).

## Kristeva, Julia

Carol L. Schnabl Schweitzer  
 Pastoral Care, Union Presbyterian Seminary,  
 Richmond, VA, USA

## Kristeva's Life

Julia Kristeva was born June 24, 1941, in Sliven, Bulgaria. Her writings span topics including the following: art and art history; literary theory and criticism, in particular the study of semiotics; psychoanalysis; the abject; feminism; love; the maternal; melancholy; religion; the stranger; culture; and her somewhat autobiographical novels. She has been identified with structuralism but has made significant contributions to post-structuralist thought.

Being the recipient of a doctoral fellowship brought Kristeva from Bulgaria to Paris in December 1965, and she began her studies in January 1966 in literary criticism. In 1973, she was awarded her Ph.D. at which time she became a professor of linguistics at the University of Paris VII where she continues to write, teach, and practice today. The following year her dissertation *Revolution in Poetic Language* was published,

and she visited China. Her trip to China inspired her book *Des Chinoises (About Chinese Women)* and prefigures her lifelong professional interest in the sacred and the feminine.

From 1976 to 1979, Kristeva studied psychoanalysis with Jacques Lacan. Her son was born during this period. Her interpreters herald this time as the beginning of a change in her writing style, evident with the French publication of *Powers of Horror* in 1980 (Kristeva 1982, p. vii). Her early works are deemed more theoretical – and therefore, less readable – bringing together perspectives from Marxism, psychoanalysis (i.e., Freud and Lacan), Bakhtin, and Barthes. Her later works appear “more relaxed, more readable, more concrete, more plural - some would say, more human - than the more theoretical works of the late 1960s and the 1970s” (Crownfield 1992, pp. xii, xiv). *Powers of Horror* and subsequent texts begin to focus on the maternal and the feminine in culture. She has delineated three periods of feminist thought in her essay “Women’s Time,” but her location as a feminist writer is controversial among many feminists in the United States as a direct result of her interest in motherhood (Kristeva 1995, pp. 201–224).

Kristeva’s writings were and continue to be influenced by her childhood. She grew up in a middle-class family which was ardently Roman Catholic; her parents did not belong to the Communist Party, and this reality limited the schools where Kristeva could study. The “better” schools were reserved for children of the party-faithful, which led to Kristeva’s early education in a French language Catholic school. She did, however, participate in Communist Party children’s groups as well as youth organizations. The tension between religion and psychoanalysis, or Christian faith and psychoanalysis in general and in Kristeva’s own life in particular, is illustrated by a comment she made during an interview in 1992:

My childhood unraveled right in the heart of Sofia. For me, Sofia can be boiled down to the Saint Nedelia cathedral, with its little gardens, its snowy slopes on which I would throw my toboggan, its secret rooms, and its nervous believers. My father, a faithful man whose beautiful voice added

to the Saint Nedelia church choir, would bring me to the cathedral before dawn so that I could take communion without being spotted. *I eventually rebelled, not because I was bothered by the dissidence of the act but because of universal reason, which is, I still find, harder to understand and to embody than faith is* (Interviews, 1996, 137–38, my emphasis).

## Kristeva's Work

The dissonance between universal reason and the lived experience of her childhood is still evident in her writings today as she grapples with the dissonance between faith and reason (psychoanalysis). Though Kristeva maintains a posture of an atheist, she acknowledges that contrary to Freud she does not believe religion is solely an illusion which contributes to neurosis (Kristeva 2007, website excerpt). Yet unlike so many feminist writers, she does maintain a conversation with Freud through the influence of her teacher, Lacan. In fact, she contends that the modern-day therapist has superseded the local priest/minister because religion no longer provides a privileged space for human communication and the language system employed in religious discourse ultimately becomes a source of oppression – particularly for women because it excludes the feminine/maternal.

For those who count themselves among the religious (especially Christian believers), Kristeva suggests that restoring religious discourse to its full positive value provides a source of psychic healing. Her proposal for this includes an expansion of metaphor in the therapeutic relationship to include the feminine or maternal and an understanding of the transference relationship as a loving relationship which has as its foundation maternal love (i.e., since all loving relationships have maternal love as their source according to Kristeva). Based on Kristeva's proposal, I have concluded elsewhere that the role of a pastoral counselor (or any therapist for that matter) is "to be a loving, 'forgiving other' - someone who listens with tact or a delicate perception of another's affect. To listen with a for-giving attitude means that I give a gift of understanding to another. I must deprive

myself of my own understanding and judgment even though I continue to ask questions" (Schweitzer 2010, p. xiv). Thus, one hallmark of the therapeutic task understood from this perspective is to become "an other who does not judge but hears my truth in the availability of love, and for that very reason allows me to be reborn" (Kristeva 1989, p. 205). One may want to conclude (and I do) that there is at least a resemblance between Kristeva's understanding of a transference relationship in the analytic process and the Christian notion of *agapé* as well as an analogy between Christian transformation and the psychoanalytic rebirth that occurs in the context of a therapeutic relationship.

## Labyrinth

Kelly Murphy Mason  
Psychotherapy & Spirituality Institute,  
New York, NY, USA

The labyrinth is an archetypal form found in disparate cultures across eras spanning from pre-history to the present day, when it has experienced resurgence in popularity due to interest in its psychospiritual applications. Regardless of how it is styled, a labyrinth is marked by a shape, usually a symmetrical one, containing a unicursal path to or through a center point. This distinguishes it from a maze, which is multicursal and contains dead ends. Following the path of the labyrinth, the traveler is eventually and inevitably brought to the center and then back out again. While travelers may not know where exactly they are on this labyrinthine path, they are never lost, but rather, somewhere along the way they need to travel. As a result, the labyrinth has become common both as a metaphor and as a symbol of the human pilgrimage through life. A great deal of conjecture exists about its history, origins, and purposes, suggesting that the labyrinth has proven fertile ground for the imagination for millennia.

Its universality among prehistoric cultures indicates the so-called classical labyrinth was a primitive form of symbolic communication, perhaps an earliest form of written transmission. It was drawn from a central cross surrounded by

four angles and four seed points that were connected until seven circuits were contained in its circle. Cave etchings of this particular labyrinth appear circa 2000 BCE in Spain (Saward 2002). These symbols appear at approximately the same time in the Indian subcontinent, as well. Later, multitudinous stone arrangements of the similar symbols appeared in Scandinavian soil, often near the coast, leading some to speculate that seafarers would walk them in preparation for their journeys over water.

In mythology, the labyrinth first appears in the Greek lore surrounding the Minotaur of Crete. Unmistakably, the Cretan labyrinth was a built environment, an architectural structure, yet coins from Knossos featured the rounded, two-dimensional form of the classical labyrinth as its signifier. Later, Romans exported labyrinth mosaics throughout the Roman Empire (Kern 2000), from Great Britain to Eastern Europe to North Africa. Some were purported to be sizable enough for people to travel on horseback; others were too intricate to serve anything other than decorative purposes. Roman labyrinths are distinct for their sharp angularity, both in their pathways and their outlines.

The Hopi tribes of North America had a squared version of the labyrinth that they used in addition to the classical labyrinth (Conty 2002); it was unique in having two entrances. The Pima tribes, in their depictions of labyrinths, placed a human figure at the very entrance, in what later became known as “The Man in the Maze” pattern. This man was thought to be

seeking the mythic place of his origin as a place of eternal return. Labyrinths were associated with a variety of burial rituals in Celtic cultures as well as Egyptian society, where they were believed to protect the sanctity of the tomb.

Despite its strong association with pagan rituals, the labyrinth was adopted rather quickly by the early church. In an Algerian church was found a labyrinth dating from the fourth century BCE (Matthews 1970); its center circle contained the slogan "Sancta Ecclesia," translated "Holy Church." The destination of the spiritual journey was no longer reunion with the earth but inclusion in corporate Christendom. Interestingly, there was a profusion of varying forms of labyrinths across different churches during the Middle Ages, some square, some circular, and a few octagonal.

At Glastonbury Tor, thought to be site of the first church built in England, an oval-shaped labyrinth appears to have been carved into the landscape the tower sat atop, so that entrance to it would be gained by walking the steep incline of winding circuits. Such large-scale, three-dimensional labyrinths also appeared in Peru, where they figured as features in the geoglyphs of totemistic animals used in the rituals of indigenous earth-centered religions.

By and large, Christian labyrinths belonged in the interiors of churches rather than their exteriors, although turf and hedge labyrinths were fairly frequently found in English gardens and church grounds. Often, the labyrinth was placed near the entry of the church building. These labyrinths were sometimes called "Chemin de Jerusalem," the Way to Jerusalem, because they allowed European churchgoers to enact a pilgrimage to the Holy Land at a time when both its distance and ongoing Crusades made such travel nigh impossible. Members of the clergy would walk the labyrinth as an Easter ritual representing Christ's descent into hell, bodily resurrection, and ascent into heaven. Many monks traveled the labyrinth on their knees.

Perhaps the best known Christian labyrinth is found on the floor of Chartres Cathedral. Completed sometime in the early thirteenth century, its 11-circuit course led to a 6-petalled rosette in

the center, outlined in more than a hundred lunations. Much speculation has existed around the esoteric numerology and sacred geometry of the various labyrinths that appeared in churches (Lonegren 2007). Whether or not the Chartres labyrinth was devised as a specifically Marinal devotion, it was obviously not cruciform, as was the octagonal Maltese labyrinth so suggestive of more martial Roman forms (Fig. 1).

General consensus holds that the Chartres labyrinth pays homage to the feminine aspect of the divine dimension with its womb-like appearance evocative of not only actual birth and death but also spiritual rebirth. The continuous pathway can be viewed as representative of the original passage through the birth canal. Some have even suggested that the Chartres labyrinth was actually used as a birthing instrument; either way, its feminine form would be unmistakable to worshippers.

Many churches and cathedrals saw their labyrinths removed or hidden in the centuries that followed, quite possibly as part of a larger repression of the feminine principle or a backlash against vestigial goddess worship from older traditions. Evidence exists that some pagans may even have used the labyrinth in their mating rituals. The obvious physicality of a walking the labyrinth might have suggested a sensuous and immediate experience of the Divine that organized religion would attempt to control more closely in the West.

It is precisely such kinesthetic engagement that has recently made the labyrinth so appealing to contemporary travelers whose spiritual yearnings have been unfulfilled by religious dogma and formalized worship. In a contained and sanctified way, it offers travelers a chance to practice walking meditation and full-body prayer. In doing so, it combines active and contemplative approaches to self-realization (Artress 1995).

A labyrinth is clearly an exercise in intentionality. Its traveler is no further along spatially than when the walk was begun and actually backtracks at several different points. The labyrinth thereby challenges some dominant notions of linear progression, time urgency, and outward orientation,

**Labyrinth,**

**Fig. 1** Walking the labyrinth at Cathédrale Notre-Dame de Chartres, France (This file is licensed under the Creative Commons Attribution-Share Alike 3.0 Unported license. [http://en.wikipedia.org/wiki/File:Labyrinth\\_at\\_Chartres\\_Cathedral.JPG](http://en.wikipedia.org/wiki/File:Labyrinth_at_Chartres_Cathedral.JPG))

suggesting that meaningful personal journeys might involve internal shifts that are as significant as external ones.

As a visual metaphor for journeying within, the labyrinth has also served as a powerful imagistic representation of the psychotherapeutic process, as well as the spiritual quest. The circuits of a labyrinth are vaguely reminiscent of the whorl of a fingerprint, that powerful symbol of personal identity (Attali 1999). The possibility of truly knowing one's own self emerges as one looks inwards.

The existence of a sacred interiority becomes recognized and transitional/transformational space gets created in depictions of the labyrinth. Today people may trace finger labyrinths as a meditative practice or else contemplate line drawings of the labyrinth which they can either "walk" with their eyes or consider as a unified symbol of wholeness. Entire classical labyrinths can be easily constructed from just a few simple marks drawn in the earth. The labyrinth can in turn serve as a sacred experience, sacred space, or sacred image.

Such versatility allows the labyrinth to help its travelers bridge some of the mind-body divide, paradoxically by allowing them to ground themselves in the numinous. Circumambulating the labyrinth is a right-brained activity that allows for flashes of intuition. The winding way

becomes clear, and in that process, wandering suddenly becomes purposeful. For this reason, ritual use of the labyrinth now often occurs at liminal times (Curry 2000), whenever people find themselves at a threshold in their lives.

### Commentary

The labyrinth has been called the Mandala of the West because of its apparent usefulness as a meditative tool and nonlinear activity. It seems to be a culturally consonant symbol that expands consciousness and contains the potential for both psychospiritual integration and healing. The strong revival of interest in labyrinths in Western societies has given rise to numerous organizations promoting their use, organizations that are religious and secular alike, resulting in an international movement to increase their availability in shared spaces. Literature on the topic has proliferated in recent decades.

Even as research into the past and future uses of the labyrinth continues, however, it runs the risk of remaining speculative on the question of its distant origins and almost global ubiquity. What seems clear is that the growing popularity of the labyrinth is a response to a contemporary

spiritual yearning to feel more grounded and centered. Through its indirection and reversals, the labyrinth appears to provide people an alternative to the frenetic pace of modern life and a greater sense of continuity with the past, possibly by suspending animation to a degree. Its symbolism has remained alluring and evocative through millennia of human history.

## Lacan, Jacques

John Pahucki  
Department of Humanities, SUNY Rockland,  
Suffern, NY, USA

Jacques Lacan (1901–1981) was a French psychoanalyst associated with the literary and philosophical movements of structuralism and post-structuralism. A notoriously abstruse thinker, Lacan, like many French intellectuals

associated with postmodern thought, has often been accused of being deliberately obscure in his writings. This is particularly true of his major work, the *Écrits*, which is noted for its difficulty.

Lacan is known for his claim of a “return to Freud,” though in actual practice this amounted to a radical reconfiguration of Freudian psychoanalysis as Lacan attempted to effect a synthesis between Freud’s biologically driven psychology and the linguistic theory of structuralists like Ferdinand de Saussure and Roman Jakobson. Freud’s biologically founded subject is thus replaced, by Lacan, with a linguistically constituted subject, with the Freudian drives and even the body itself transliterated or overwritten by culturally specific signifying activities. In this view, the linguistic register of one’s culture channels and determines the directionality and movements that the biological drives assume. The Freudian unconscious, formerly the a priori wellspring of irrational drives and biological pulsations, is also viewed as a linguistic product, an a posteriori consequence of our entry into the linguistic register. The unconscious possesses rules analogous to the syntactical structures which govern the conscious linguistic subject, hence Lacan’s famous claim that the “unconscious is structured like a language.”

Lacan is perhaps best known for the three orders of the *imaginary*, the *symbolic*, and the *real*. The imaginary order is inaugurated by what Lacan described as the “mirror phase” which occurs roughly at six months of age. In this phase the child identifies with a “specular” and exteriorized image of itself, in an actual mirror or in the mirror of the “other,” which it then introjects in order to stabilize and master its bodily sense. The imaginary order, being based on this fundamental misrecognition of the self in the form of a falsifying image, thus results in a state of alienation.

This alienation is compounded by entry into the symbolic order (or linguistic register) which occurs when the child is forced to accept the “law” of the *Name of the Father* (*le Nom du Père*). With the adoption of language, the subject is inscribed or overwritten by signifiers, thus being

made subject to the regulative strictures and organizational principles embedded within the culture's system of signification. The symbolic order is therefore *Other* to the subject, being imposed and not truly adopted. Lacan's ubiquitous use of the term *Other* most often refers to this otherness of language. The direct consequence of entry into the linguistic register is "symbolic castration," a notion which replaces Freud's oedipal drama and its threat of actual physical castration with the subject's loss of *jouissance*, an untranslated term that refers to a preoedipal enjoyment of the object no longer possible for the linguistic subject. In keeping with this rejection of Freud's biological schema, Lacan replaces the organ of the penis with the symbolic phallus, a term which refers to this preoedipal state of dyadic fusion with the maternal object.

The real is much more difficult to describe, as it is the order of experience which completely resists symbolization. It may be the undifferentiated state of being that precedes linguistic acquisition or it may refer to significantly traumatic experiences which resist articulation.

Lacan's theories have generated considerable interest among philosophers, literary and religious studies scholars, and feminists preoccupied with continental thought generally and the post-modern "decentered" subject specifically. His influence is particularly evident in the psychoanalytic work of Julia Kristeva.

## Laing, Ronald David

Daniel Burston

Department of Psychology, Duquesne University, Pittsburgh, PA, USA

## Life and Career

Ronald David Laing was born on October 7, 1927, on 26 Ardbeg Street in the Govanhill district of Glasgow and died on August 23, 1989, in St. Tropez, France. Like his father, Ronald Laing was musically gifted and received a Licentiate in music from the Royal Academy of Music at age 16. At 17, he enrolled in Glasgow University, and at 18, specialized in medicine. Because of the Korean War, military service was mandatory, and so in 1949, Laing did basic training. After a brief apprenticeship in neurosurgery at Killlearn in 1950, Laing spent 1951–1952 as an army psychiatrist. In 1953, now a captain, Laing was placed in charge of the Army hospital in Catterick, in Yorkshire. Soon thereafter, he left the Army for the Royal Gartnavel Hospital and Southern General Hospital (Glasgow), where he worked under Dr. Ferguson Rodger. Rodger brought Laing to the attention of Dr. J. D. Sutherland, the Director of the Tavistock Clinic. With the help of Sutherland, and his successor, John Bowlby, Laing came to London in 1956 to train as a psychoanalyst (Burston 1996).

During his psychoanalytic training, Laing completed *The Divided Self*, a classic in existential psychotherapy (Laing 1960). His second book, *Self and Others*, appeared in 1961 (Laing 1961). From 1962 to 1965, he worked as the Director of the Open Way Clinic, founded by E. Graham Howe, one of the few places in Britain where Freudian and Jungian therapists worked together comfortably. In 1964, Laing and Aaron Esterson, another Glaswegian psychiatrist, published *Sanity, Madness and the Family* (Laing and Esterson 1964). Laing also published *Reason & Violence: A Decade of Sartre's Philosophy* with South African psychiatrist Dr. David Cooper that same year (Laing and Cooper 1964).

## Critique of Normality

In February of 1967, Laing published *The Politics of Experience* (Laing 1967). Though not his best book, it was the most influential, and one feature of the book that gripped many readers was Laing's sweeping critique of "normality," which Laing described as a state of profound self-estrangement or alienation – alienation being a hot topic at the time. By Laing's reckoning, the galloping self-estrangement that plagues Western civilization fosters a progressive attenuation of the average, adjusted person's critical faculties and their openness to transcendental experience, a state more akin to a deficiency disease than to genuine mental health. What is lost to normal people are not merely instinctual urges, or the memory of specific events or losses, as Freud suggested. The awareness of the tragic, the sublime, and the absurd, of the prevalence and persistence of evil, and of the peace that passes understanding – these innately human sensibilities are severely stunted, if not entirely extinguished in the struggle to adapt to an increasingly one-dimensional world.

In retrospect, it is interesting to note how often Laing disparaged normality with religious tropes and metaphors. In chapter 3, for example, he says (p. 68): "We are all fallen Sons of Prophecy, who have learned to die in the Spirit and be reborn in the Flesh" (Laing 1967). And again, in chapter six:

There is a prophecy in Amos that a time will come when there will be a famine in the land, 'not a famine for bread, nor a thirst for water, but of hearing the words of the Lord.' That time has now come to pass. It is the present age (Laing 1967, p. 144).

Without saying so in quite so many words, passages like these implied that the loss of the sacred as a feature of *normal* experience is linked with the problem of individual and collective violence. But according to Laing, the escalating scale and widening scope of violence in our time is *not* the result of innate propensities to violence and indiscipline – a "death instinct," as Freud thought – but of *the violence we do to ourselves* in our efforts to adapt to an increasingly irrational world that is bereft of genuine transcendence.

In other words, Laing implied that there is a strong correlation between the numbing routine, the mindless consumerism and the shabby ethical compromises of daily life in postindustrial society, and the steady proliferation of evil.

That being so, it is important to note that *The Politics of Experience* was published at the height of the Vietnam War, when Christian, Jewish, and Muslim fundamentalism had no appreciable impact on world affairs. For members of Laing's generation, who came of age during the Korean War, religious wars were a distant memory, rather than a growing and undeniable threat to global stability. Much as he lamented the loss of the numinous, Laing was not advocating a return to a repressive, theocratic society or advocating the revival of religious creeds based on the unreflective embrace or vehement defense of particular forms of belief. Had he lived to witness our present global predicament, Laing would probably have characterized the resurgence of Jewish, Christian, and Islamic fundamentalism as a reversion to *pseudo-religious* attitudes and passions, rather than the genuine article.

## Metanoia

In any case, in contrast to mere normality, Laing maintained that true sanity can only be achieved through the dissolution of the socially adjusted ego (or persona) in a process which he termed "metanoia." Ego transcendence, said Laing, can be sought gradually and deliberately through meditation and spiritual practices, or it can occur spontaneously. The mad person, said Laing, is often catapulted into this process unawares and, without skillful guidance, will go astray, exiled indefinitely in the demonic realms that enshroud and obstruct our access to the holy. However, given appropriate care, many psychotics can recover their emotional and intellectual equilibrium without recourse to psychotropic medication or other intrusive or coercive treatments, with the help of a seasoned therapist who is in touch with his or her own psychotic core and is not intimidated or overwhelmed by the severity of the patient's symptoms.

Like Jung before him, Laing borrowed the word “metanoia” from the New Testament to describe the dissolution of normal egoic consciousness. When translated from the original Greek, this word is usually rendered as “repentance.” The problem with this commonplace translation is that it dwells primarily on the subject’s sense of sinfulness and his (or her) earnest desire to shed sinful habits and desires. But in the original Greek, the term “metanoia” connotes an epistemological upheaval, a radical change of perspective, and a total and irreversible change in one’s view of oneself and the world – in short, an epiphany or enlightenment experience more akin to the ancient idea of “gnosis” than to moral reform or reconstruction.

### Laing’s Christian Roots

Though few readers were aware of it, R. D. Laing combined a rare appreciation of Asian wisdom and spiritual practices with a heartfelt immersion in Christian spirituality – a trait that he shared with E. Graham Howe and Alan Watts. Nowhere is this more apparent than in an interview with Yoga scholar Georg Feuerstein, entitled “Sparks of Light,” which appeared in 1983. “Sparks of Light” contains many of his most profound reflections on spirituality, but was not delivered in his usual style. Laing himself acknowledged this, admitting that he was finally expressing himself in a Christian idiom that he had become “. . . less embarrassed about affirming in the course of the last thirty years or so” (Feuerstein 1983).

Why embarrassed? During the Cold War Era, when Laing rose to prominence, people tended to regard anyone who spoke often and earnestly of their faith outside of their immediate circle as being somewhat odd and ill educated. However, this statement also conveys the misleading impression that though his reluctance to speak about it had diminished in the last few decades, his faith had been constant throughout. This is simply not so. Indeed, the cumulative impression one gets is that Laing spent most of his adult life as a reluctant and sometimes deeply anguished agnostic who longed for the consolations of faith, but could not

overcome his doubts and misgivings sufficiently to affirm what he desired to believe – sometimes ambivalently, sometimes wholeheartedly. This is the real source of his “embarrassment.”

What kind of Christian was Laing, when he was not overwhelmed by doubt? As a teenager, Laing was exposed to the Evangelical-cum-fundamentalist variety of Calvinism and to the older “Celtic Christianity” that arrived in Scotland with Brendan the Navigator (c. 484–c. 578) and St. Columba (521–597), both of whom played a significant role in the building of Iona Abbey on the Isle Iona, in the Lower Hebrides. By the age of 14, Laing claimed that he had emphatically Evangelical Christianity in favor of the latter, Celtic variety. This claim is born out of his on again/off again relationship with the Very Reverend George MacLeod (1895–1991), who like Laing, incidentally, was a native of Glasgow who rose to the rank of Captain in the British Army. MacLeod was the founder of The Iona Christian Community, an ecumenical community dedicated to the preservation of Celtic Christianity and the erasure of world hunger and poverty, based on the Isle of Iona in the Lower Hebrides. Though few people are aware of it, Laing spent many weeks there over the course of his career. Indeed, in the early 1980s, Laing even pondered the possibility of situating a foundation to be called St. Oran’s Trust on this fair island.

Laing’s leanings toward Celtic Christianity are also evident in his remark to Feuerstein that we are all one in “the Universal Fire.” Indeed, said Laing, our individual souls are nothing but “sparks” emanating from this universal fire. Classicists contend that the idea that the soul is a “spark” of a Divine Fire probably originates in the Orphic religion, but gets taken up by Plato in the fourth century BCE and subsequently, by the Stoics and neo-Platonists in the Hellenistic-Roman era. While originally a school of pagan philosophy, Neo-Platonism and the emanationist approach to theology later took on Jewish, Christian, and Islamic forms, and as we survey the history of Western spirituality, the imagery of the soul as a Divine spark becomes a common idiom for mystics of all three monotheistic traditions.

Another striking feature of his talk with Feuerstein is that when asked to share the fruits of a lifetime of introspection, Laing responded that he discovered “that hope is justifiable.” The term “hope” does not surface often in Laing’s work, and though he vigorously repudiated the suggestion, many readers – friends and critics alike – found *The Politics of Experience* to be an angry and eloquent expression of overwhelming despair. If so, of course, Laing had clearly recovered some of his optimism in the interim. Meanwhile, the suggestion that hope is justifiable and that this represents a hard-won discovery on his part, says a great deal about him personally.

That being so, it is also instructive to note that Laing tries here – and not for the first time – to link the idea of love to the project of scientific inquiry and that Laing often despaired of getting psychiatrists to see that viewing their patients primarily or exclusively through the lenses of the natural scientific attitude is profoundly dehumanizing. The idea that science is (or ought) to be informed by a loving, reverential attitude toward nature was self-evident to someone like Einstein, but is odd and incongruous to most scientists, so Laing justified this linkage by pointing to the destructive potential of scientific research that lacks this basis. He said:

If you investigate and inquire into the world without love, you don’t find anything worthwhile. If you look at a tree or a frog or anything at all without the eyes of love, then you obtain only loveless, heartless knowledge. When such knowledge is accumulated and applied to practices of scientific technology, it becomes the most destructive form of knowledge ever discovered. Even the worst black magic cannot vie with the destructive capacity of science. Its very method is to destroy what it looks at in order to discover its elements.

## Levinas, Emmanuel

David M. Goodman

Harvard Medical School/Lesley University,  
Cambridge, MA, USA

Emmanuel Levinas (1906–1995) was a Talmudist, ethicist, and continental philosopher whose thought has left a lasting imprint on contemporary philosophy and theology. His sophisticated ethical system that understands the self to be radically responsible for the Other has challenged conventional theories of selfhood, subjectivity, consciousness, ethics, metaphysics, language, and social relations. Furthermore, his ethical philosophy is beginning to find its way into psychological discourse concerning psychotherapy, human development, and definitions of selfhood.

Levinas was born in Kaunas (a.k.a. Kovno), Lithuania, in 1906 to a moderately affluent, Orthodox Jewish family. In his formative years, he was educated in traditional Hebrew school and was also heavily influenced by the work of

Russian novelists such as Tolstoy and Dostoyevsky. In 1923, Levinas traveled to Strasbourg, France, for formal education in philosophy. Shortly after, he went to Freiburg, Germany, where he studied phenomenological theory and methodology under both Edmund Husserl and Martin Heidegger. These experiences impacted Levinas for the remainder of his intellectual career. Levinas translated Husserl's work into French, making him the first to introduce Husserlian phenomenology into the French academy (later read by Sartre and other prominent thinkers). Husserl and Heidegger remained the primary dialogue partners within Levinas' philosophical works. He viewed their thoughts on consciousness, history, ontology, and metaphysics to be representative of the greater Western philosophical tradition he wished to engage and challenge.

Conversant in both Hebrew Scriptures and Western philosophy, Levinas represents a unique perspective on ethics. His project is sometimes described as *translation*, a communication of ancient Hebrew wisdom through the more dominant and universalizing trends of Greek rationality and the academy. Levinas' project continues to be mined for its far-reaching implications upon religious studies, philosophical systems, and psychological paradigms.

The historical context of Levinas' life further enriched the content of his writings and critique. Levinas' loss of his father, mother, and two brothers at the hands of the SS in Lithuania, along with his own imprisonment for 5 years during World War II, left a profound impression on Levinas' thought and interaction with Western philosophy. He claimed that many trends within Western thought had created an allergy to ethics and a form of ethical immunity for persons in the world. He understood many Western systems of morality to be failures and dangerous appendages to the violence making of the ego and human history as a whole. Levinas argued for movement away from the *love of wisdom* that had sustained Western thought since the ancient Greeks (and can be seen in modern science and psychology) to a *wisdom of love at the service of love* recognized within biblical tradition. Levinas called for

"ethics as first philosophy" rather than ontology, traditional metaphysics, epistemology, doctrine, or sacraments.

Levinas' concern about violence, along with his desire to provide an account of human experience/phenomenology that recognized the inherent ethical call in the face of the Other, provided the basis of his first highly celebrated work, *Totality and Infinity*. In this work, he argues that the ego is not at rest within itself, but rather has a metaphysical desire for something beyond its own sameness (or immanence). Though the ego often defends against otherness by reducing the Other to totalizing depictions (through intentional consciousness), there is a compelling command within the face of the Other that calls for responsibility. Levinas understood the face of the Other to bear a trace of the Divine (or infinity/transcendence). The dialogical philosophies of Martin Buber and Franz Rosenzweig were indelible influences upon Levinas' assertions concerning the irreducibility of the Other and the requirement of justice in human relations. As Levinas' work evolved, this responsibility became even more radical and his language for it more intense. By the time he wrote his second major work, *Otherwise than Being or Beyond Essence*, Levinas had come to emphasize the Other as bearing an alterity as radical as God's alterity. Furthermore, the Other's otherness, in Levinas' thought, wounds the banality and complacency of the ego and denucleates and decenters it. The ego loses its primacy and sovereignty and, instead, is hostage, persecuted, and traumatized by its inexhaustible responsibility for the Other.

For Levinas, one's psyche is ethically constituted and called forth into identity. The Hebrew expression, *hineni*, meaning "here I am," was his most succinct definition of the human psyche and the human self. That is, the self is always an ethical responsiveness, not a self-assertion or noun. To argue these points, Levinas engages in complex analysis about intersubjectivity and time, primordial encounter, interhuman subjectivity, and sensate experience.

Interestingly, Levinas peppers much of his philosophical treatises with rich religious terminology and illustrations (e.g., substitution,

expiation, glory, Divine, transcendence, hineni, idol, and Abraham's departure from his homeland). This has created significant contention in the field of Levinas' studies concerning the theological characteristics of Levinas' thought. Some argue that his philosophy was fundamentally Jewish while others want to preserve a purist depiction of his thought as philosophical. This issue is complexified by Levinas' confessional writings and Talmudic commentaries. Levinas was not entirely clear about the relation of his religious beliefs to his philosophical works. However, he was clear that he considered himself a translator of Hebrew thought (ethical concern for the Other as represented in ancient tradition) into and through Greek thought (dominant Western tradition). Though, he did not like the title "Jewish thinker" or "Jewish philosopher" to describe his work.

In addition to the works listed above, Levinas wrote many other social and religious commentaries and philosophical articles and books. By the end of Levinas' career, he had taught in the prestigious philosophy departments at the University of Poitiers, University of Nanterre, and University of Sorbonne. His impact on the landscape of 20th European continental philosophy has been and continues to be quite significant. Such thinkers as Blanchot, Derrida, Merleau-Ponty, Sartre, Lyotard, Marion, Pope John Paul II, and Ricoeur are just a few of the many noteworthy figures within Western thought that came under Levinas' influence.

## Commentary

Levinas did not write directly about psychology in most of his works. Scattered references can be found – mostly of a critical nature – about the naturalistic, mechanistic, and reductive practices of psychoanalysis and behaviorism. Despite this, Levinas' thought has slowly begun to make its way into psychoanalytic dialogues, with comparisons done between Levinas and Winnicott, Lacan, Freud, and Jung. Existential-phenomenological schools utilize Levinas' work to further bolster claims about the irreducibility of the human

person. Conferences and journals are forming that specifically target the interaction between Levinas' ethical philosophy and psychological systems and practices. Often, this interface takes the form of a fundamental challenging of dominant paradigms within modern psychologies. Reductive theoretical systems and practices have come under serious critique utilizing Levinas' methodology. Furthermore, the nature of consciousness, subjectivity, the ego, and the relation between self and the Other are often the topics addressed in these conversations.

Modern psychologies have frequently functioned as an extension of Western philosophical frameworks and out of a long lineage of Greek thought. As such, the Greek emphasis upon generalization, universalization, rationality, and immanence remains the preponderant base of contemporary psychology. Consciousness and rationality have been emphasized alongside of naturalistic and universalizing depictions of selfhood.

Furthermore, the individual ego is often valorized, with individuation and independence as core goals of human flourishing (in Western psychologies). Language of coping, cohesion, adaptation, and integration are among the many descriptors of a higher functioning self within the world. Seldom are theories and practices developed that understand the self as a "moral event" or emergent from ethical interchange and justice. Some theories recognize the need for social interest (e.g., Alfred Adler) or interpersonal engagement (e.g., Harry Stack Sullivan) but are far from making ethics a "first philosophy."

Levinas' critique of Western consciousness and the Western ego as self-reflexive and transfixed with itself is a frequent theme throughout his work. His depiction of an ethically constituted self challenges the fundamental primacy of the ego and construes the ego as vulnerable and exposed to the calling of the Other. Psychological appropriators of Levinas' work often accuse psychoanalysis, cognitive-behavioral theories, and a variety of other paradigms as being caught up in this "egology" wherein the monadic individual and his or her

rationality, affective functioning, and behavioral repertoires constitute the human person. The Western ego, in Levinas' thought, has become an idolatrous entity within which persons became trapped, preoccupied, and tormented. Persons cannot find escape from themselves. Levinas uses the story of Odysseus and his return to his homeland as an example of the prodigal and self-returning version of the ego in Western thought. In contrast, he describes the story of Abraham – who is exiled from his homeland and journeys to a land unknown – as an illustration of a self lived beyond the confines of itself.

Instead of freedom being understood as individuation, living congruently with one's biological needs/drives or self-actualization, Levinas suggested that freedom is born from responsibility for the Other. Ethical interchange and moral attunement are more original than ontological expressions of personhood. Instead of the "I" being sovereign and imperial, it is a response to the imperative found in the needs of the Other. The ego is perpetually called outside of itself and into a selfhood beyond the practices and history of itself (sameness). Levinas utilizes the illustration of God commanding Adam into being at creation, thus showing that the self is first commanded before anything else.

The prophetic quality of Levinas' work and the translation of Jewish ethics into contemporary systems of thought is poignant and a powerful corrective to dominant skews in modern, Western psychologies.

## LGBTQI and Queer Studies

Kelby Harrison

Union Theological Seminary, New York,  
NY, USA

In 1995, Lauren Berlant and Michael Warner wrote that the only way to capture queer theory is through “a kind of anti-encyclopedia entry” because “queer theory is not the theory of anything in particular, and has no precise bibliographic shape.” In the nearly 20 years since Berlant and Warner’s article, queer theory has taken shape – nearly having a canon. This rapidly growing discourse of subaltern, deviant, and/or minoritized expressions of sexual desire – what we usual call lesbian, gay, bisexual, or queer – and the rapidly shifting political environment increasingly allows scholars to ask and answer such questions in public forums without risking professional reprisal.

However, the canon of queer theory is a significantly different body of literature than lesbian, gay, bisexual, transgender, and intersex (LGBTI) studies, which in turn is different from LGBTI religious literature, queer theology, and LGBTI psychology. To create an encyclopedic entry of these disparate bodies of literature is to

first capture the way in which they are intimately entwined with each other. First they are all anchored in the lives of LGBTI and queer identified persons (by self or by others; currently, previously, or in the future) and their plights for meaning-making in a broader culture that is often inhospitable to full flourishing. Second, religious intolerance and homophobia affects LGBTI psychology, identities, and health, while queer studies see queer expressions of sexuality and gender already deeply present in major world religions. Third, LGBTI positive psychology makes the reclamation of religion more possible for LGBTI persons. Fourth, the history of religious influence on sexual practice, sexual morality, and human sexual relationships is writ large in our contemporary culture and understanding of our selves. Take, for example, the strong rhetorical tension of the “culture wars” that pins “the moral majority” against the “homosexual movement.” Finally, the deeply embedded religious assumptions and ideologies of those who have created the history of LGBTI and queer identities (e.g., sexuality) are still a body of work that needs to be written – those assumptions teased out and demonstrated as intrinsically woven into our secular understandings of LGBTI and queer identities.

## Queer Theory

The trinity of texts at the center of the queer theory canon are Michel Foucault’s *History of Sexuality*, v.1 (English translation – 1978), Judith Butler’s *Gender Trouble* (1990), and Eve Sedgwick’s *Epistemology of the Closet* (1990). Despite the 1976 French publication of *History of Sexuality*, the start date for queer theory is said to be right around 1990, the term having been coined by film scholar Teresa de Lauretis. Each text undoes an important cornerstone of assumptions of sexually and gender diverse individuals. Foucault’s *History of Sexuality* traces the influences for the possibility of modern discourses around deviant sexuality, arguing centrally that the repression of the Victorian era actually proliferated discourse around sexuality. Sedgwick’s *Epistemology of the Closet* argues in part that the closet functions as a control

mechanism for everyone's sexuality – it is universalizing, rather than minoritizing. Butler's *Gender Trouble* argues that there is nothing natural about gender, rather all gender is simply a repetition of cultural scripts. Together these texts, now sacred as canon in their own right, work to deconstruct the most prevalent assumptions we have of sexual minorities: that our gender expression is somehow unnatural, that our sexual-social experience is fundamentally different, and that our sexualities are in opposition to prim and proper notions of sexual morality. Other key writers in this field include Anzaldúa, Haraway, Fuss, Berlant, and Warner. This emphasis towards the deconstructive is what sets queer theory apart from LGBTI studies.

## LGBTI Studies

It can be casually, but rather unprecisely, stated that in the USA lesbian and gay studies began in the years just after the Stonewall riots. However, in Europe the date is much earlier, with the 1949 publication of Simone de Beauvoir's *The Second Sex* with its robust chapter on "lesbians" – unquestionably an attempt to explain lesbians from a socially affirmative standpoint. She challenges the stereotype of a lesbian as a woman who wears mannish clothes and has a rough demeanor. Beauvoir writes about lesbian sex with a poetic tone. This kind of positive and affirmative explanation – which still concretely and realistically engages with cultural discrimination and stereotypes – is indicative of LGBTI studies.

Some 30 years later in the USA, key texts of LGBTI studies include Adrienne Rich's "Compulsory Heterosexuality and Lesbian Existence" drawing a direct connection between patriarchal oppression and the displacement of economic, physical, and emotional energies of women towards men. David Halperin's "Is There a History of Sexuality?," investigating ancient world praxes of sexuality, arguing that ancient understanding of human sexual difference looked much more like natural dispositional variation of appetite than does our modern notions of identity constructive sexuality. Gayle Rubin's "Thinking

Sex" – which is a notable crossover piece into queer theory – and works by historian John D'emilio, anthropologist Esther Newton, and art historian Douglas Crimp all have a central and formative place in the field.

Transgender studies have had its own historical development. Once simply known as gender passing, the term "transgender" has gained significant popularity since the 1990s. It refers to people who live across the boundary of gender away from the gender they were born into. Typically if one has had sex reassignment surgery, the term utilized to describe his/her identity is "transsexual." This term can be traced back to sexology in the late nineteenth century. Transgender rights began in 1975, with towns and cities nationwide beginning to adopt trans protective ordinances. Discrimination of transgendered people is still very common, even by large gay rights organizations. Important writers in trans studies include Gayle Salamon, Susan Stryker, and Julia Serano.

Intersex studies focuses on the history of what was once called hermaphroditism and contemporary biomedical ethical issues. "Intersex" designates "a variety of congenital conditions in which a person has neither the standard male nor female anatomy," endocrinology, or chromosomes. Currently, intersex is considered a medically treatable condition by the general medical profession, and surgeries are often performed on infants. Many of these children grow up to have serious sexual dysfunction and experience significant gender dysphoria. Intersex activists advocated changes within the medical profession based on biomedical ethics. Alice Domurat Dreger's edited *Intersex in the Age of Ethics* is an excellent example of the genre.

## LGBTI Religious Literature and Queer Theology

Queer theology is an attempt to reread or simply read theologies – often Christian – as already having embedded within them or having possibility for containing a queer sensibility. Examples include reading sexual and gender ambiguity

into the trinity (e.g., Gavin D’Costa’s essay “Queer Trinity”), the experience of queer love in the metanarrative of Jesus as God-made-flesh (Patrick Cheng’s *Radical Love*), or the possible intersex identity of the body of Christ (Susannah Cornwell “Intersex and Ontology: A Response to The Church, Women Bishops and Provision”).

LGBTI religious literature explores traditional issues within religious social and community life, or passages with sacred texts, and attempts to find reconciliation for excised persons defined as sexually deviant or rereads texts with greater acumen and/or more favorable social interpretations. This genre can also take the form of personal narrative. Kathy Rudy and Robert Goss have both written elegantly in the latter category. One can also do a very smart cultural reading of rhetorical gestures and ideological frames that have become contemporary politico-religious dialogue, such as Mark Jordan’s *Recruiting Young Love*.

Queer theology and LGBTI religious literature are not particularly dependent on queer theory or LGBTI studies. It is clear that the history of religious thinking has had a strong impact on the well-being of LGBTI people and has influenced the motivations and perspectives for doing research on LGBTI identity and behaviors. This relationship could be rendered much more visible in secular and religious scholarship.

## **LGBTI Psychology: History and Contemporary Models**

Our modern intellectual history regarding homosexuality began in the late nineteenth century with sexology. Researchers such as Richard Von Krafft-Ebing and Dr. James Kiernan studied “perversions” and medically categorized deviants. Prior to sexology, the dominant sexual ideology privileged reproductive behavior as moral with all other types of behavior as immoral, a judgment strongly driven by religion. After the invention of homosexuality as an identity (coined in 1869 and reaching popular clinical usage by 1886) and the significant efforts of sexology to understand the contours of “deviant” sexuality, persons with opposite-sex sexual

desire – heterosexuals – began to be understood as the healthiest of citizens, the ones who are natural and worthy of moral and psychological respect. Sigmund Freud, in his *Three Essays on the Theory of Sexuality*, had a strong influence in this regard.

Up to the 1950s, the struggle over homosexual identity remained mired in questions of psychological and biological health. As positive critiques of sexuality began to be produced, the pathologizing efforts of sexology began to fade. The first major change in this thinking was the Kinsey model (1948), which developed sexuality theory along a 7-point scale – on one end falls the pure heterosexual, on the other the pure homosexual. Most individuals fall somewhere in between.

Stage models have been popular in the contemporary psychology of sexual orientation. Vivienne Cass (1979) is the most well known and uses six stages to explain gay identity development, which begins with confusion, develops through acceptance and pride, and ends in the synthesis of sexual identity into a larger understanding of self. Alan Dowds argues for a 3-stage model of gay male identity development: first shame, then compensation for shame, and finally authenticity.

Others have tried different kinds of frames. Anthony D’Augelli, for example, developed what he calls a “Lifespan Model” which he says is a fluid holistic lifelong process of identity development that involves five recognizable behaviors that are interwoven together and can occur at different and multiple times. Finally, there continues to be sex researchers who approach sexuality on a more complicated grid that mirrors the Kinsey approach. Fritz Klein, for example, used seven variables on grid to measure sexuality, all of which are superimposed on a time scale (past, present, future).

## **HIV/AIDS**

The role that the AIDS crisis and HIV have had on the psychology, community life, and scholarly importance of everything aforementioned cannot

be overestimated. The depth of the trauma of HIV/AIDS beginning in the early 1980s and its contemporary role in LGBTI communities have yet to be fully understood or integrated into our history, theory, and theology. It may be many years and generations before we can articulate the full impact. Important contributions to this discourse include Randy Shilts, Tim Dean, Castiglia and Reed, and the ACT-UP oral history project.

## Conclusion

One of the most exciting aspects of these overlapping fields of study that all anchor themselves in the lives of LGBTI and queer people around the globe and throughout history is that there is still a lot of knowledge to be produced by scholars and clinicians. Those interested in studying and writing about such topics should be strongly encouraged.

## LGBTQI Counseling

Elizabeth Maynard

Department of Pastoral Counseling and Spiritual Care, Loyola University Maryland, Columbia, MD, USA

Counseling to address the needs of lesbian, gay, bisexual, transgender, queer, questioning, or intersex (LGBTQI) individuals may have a variety of foci. In addition to the exploration of predictable developmental and interpersonal concerns, counseling with LGBTQI clients often addresses additional stressors or conflicts experienced uniquely by sexual minorities and their

families. These stresses may include coming out to family members, friends, or employers; health-related concerns such as conceiving or adopting children; assuring health benefits and legal rights for nonmarital partners; beginning or continuing a gender transition for transgender persons; responding to harassment or physical violence; conflicts with families of origin; workplace discrimination; and spiritual concerns. The stresses experienced by sexual minorities, including internalized homophobia and homonegativity, have been linked to often underdiagnosed symptoms of depression, suicidality, substance abuse, and sexually compulsive behavior.

Some clients seek counseling because they would like to change their sexual orientation or gender identity. Clients may experience pressure from parents, spouses, or other family members to conform to more traditional or culturally expected gender roles or sexual behaviors. Other clients seek counseling because they would like to live more openly and comfortably as a gay, lesbian, or bisexual person or to begin or continue a gender transition. Religiously committed sexual minorities may seek or be referred to counseling when their religious beliefs or faith community are not supportive of their sexual orientation or gender identity. These conflicts are particularly common among Evangelical Protestant Christians and Muslims, though these conflicts exist for clients of many faith traditions.

Of particular concern to mental health professionals is the question of whether or not sexual orientation and gender identity can be altered. That is, can a person whose primary emotional and erotic attraction is to members of the same sex (or both sexes) develop an exclusive or enhanced attraction to those of the other sex? Further, can a person who experiences an internal sense of disparity between her or his gender identity and biological sex develop a sense of congruence between identity and anatomy? At present, little evidence suggests that an individual's sexual orientation or gender identity may be significantly altered, though the choices that individuals make about sexual behaviors and adherence to social norms are often malleable. Thus, a gay or lesbian person may elect to

participate in heterosexual sexual activities (just as a heterosexually identified person may participate in sexual activities with those of the same sex), without experiencing a fundamental change in the direction of his or her primary emotional and erotic attraction. So, too, a person who is biologically male may choose to dress and conform to the expected gender role for his cultural group while internally experiencing the self as female. However, consistently acting in a way that is different from one's sexual orientation or gender identity often creates anxiety, stress, and depression for the individuals who attempt to do so. Several professional organizations, including the American Psychological Association and American Counseling Association, hold the position that same-sex sexual behavior and attraction are normal variants of human sexuality, and the change of one's sexual orientation is, therefore, not a supportable goal for therapy. However, some mental health practitioners believe that sexual orientation can be changed and offer services designed to facilitate change of sexual orientation (one form of which is known as "Reparative Therapy").

Many clients come from religious backgrounds which limit sexual expression to heterosexual (usually marital) relationships and expect gay, lesbian, or bisexually identified individuals to commit to exclusively heterosexual activity or to choose celibacy. Additionally, few religious traditions, with the exception of some Native American traditions, have been supportive of gender transitioning among adolescents or adults. Religious LGBTQI adults often feel pressured to reject their sexual orientation or gender identity or to leave their religious community if they would like to be "out." However, a growing number of religious communities and para-church organizations accept and support openly LGBTQI individuals without expecting heterosexual practices, celibacy, or gender conformity.

Many religiously committed sexual minorities have spent considerable time attempting to change their sexual orientation or gender identity. Clients often report intensive use of prayer and scripture reading in an effort to change what they view as sinful behavior. A small number of

Christian clients have pursued exorcism in an attempt to banish a “spirit of homosexuality.” Some clients have adopted an image of God which is condemning and rejecting, believing that God finds their sexual orientation or gender identity intolerable and requires change from them. Others adopt an image of God which is loving, but may wonder why God would allow them to suffer discrimination from others. A smaller number of clients adopt the idea that they are made in God’s image. Religiously committed clients may also make decisions about being “out” within their religious community and daily life. Some individuals are “out” everywhere, while others may be “out” in one setting, but not another. Many religiously committed sexual minorities feel that they must choose between their religious commitment and sexual orientation or gender identity, a choice which often creates a loss of at least one essential element of the person’s identity.

Counseling of LGBTQI clients, like counseling offered to other communities of clients, focuses first on the presenting concern of the client or client family. The clinician acknowledges that the client’s concerns may be related primarily to sexual orientation or gender identity, influenced partially by these factors, or have little to do with these aspects of identity. As an ethical practitioner, the counselor assesses whether or not she or he is competent to offer services to the client, negotiates treatment goals that are both consistent with the client’s values and supportable by research and professional practice standards, and makes referrals to allied professionals, as needed. The counseling may serve an individual client, a couple, or a larger family system. Counselors of many different sexual orientations and gender identities may be helpful to LGBTQI clients, often at different stages in the therapy process.

Counseling often focuses on the treatment of specific symptoms such as depression, anxiety, and substance abuse; improving interpersonal relationships between partners or family members; choosing supportive relationships; reconciling religious beliefs with dimensions of identity; and grieving losses of beliefs, communities, relationships, behaviors, or imagined

futures (such as a heterosexual marriage, for some clients). Counseling may also focus on social justice and advocacy issues. Those who counsel LGBTQI individuals and families usually rely on established therapeutic modalities, including psychodynamic, cognitive, behavioral, humanistic, family, and systems approaches.

## Liberation Psychology

Daniel J. Gaztambide  
Union Theological Seminary Program in  
Psychiatry and Religion, New York,  
NY, USA

Liberation psychology is an umbrella term for a cross-disciplinary movement in psychology

which originated in Central and South America as a response to grievous social injustice, civil war, and political turmoil. It is most often associated with the work of Jesuit priest and social psychologist Ignacio Martín-Baró (1942–1989) in El Salvador. Although he is often credited with popularizing the term in social and community psychology, it was “coined” and employed independently by Nancy Caro Hollander in her assessment of the progressive social justice initiatives of psychoanalysts who integrated the psychological insights of Freud with the social and economic analysis of Marx.

Liberation psychology is a broad movement in psychology comprised of multiple schools with different cultural and ideological origins. It is perhaps most often associated with the work of Jesuit priest and social psychologist Ignacio Martín-Baró (1942–1989) in El Salvador, who called for a psychology which relinquished its aspirations for social, political, and “scientific” prestige in order to make “a preferential option for the poor,” those people who are oppressed by unjust social conditions and political regimes. This liberation psychology entailed a fusion of liberation theology, the political analysis of psychology from critical psychology, Paulo Freire’s radical pedagogy, and the methodological tools of social psychology. The social ethics and theological assertions of liberation theology in particular were of great import in the development of Martín-Baró’s thinking, who maintained a close relationship with renown liberation theologian and philosopher Ignacio Ellacuría.

Three tenets of liberation theology crucial to Martín-Baró’s development of liberation psychology were the belief in a God of life and justice who scorned oppression, the importance of orthopraxis over orthodoxy, and the preferential option for the poor. Using these three principles Martín-Baró proposed three essential elements of liberation psychology: a new horizon by which psychology would not concern itself with maintaining a privileged political or social position but with employing itself in the service of the poor and oppressed, a new epistemology that attempts to understand psychological dynamics from the perspective of the dominated

poor Salvadorans instead of the perspective of the dominant elite, and a new praxis by which knowledge and research developed from the perspective of the oppressed then becomes used to empower them by developing critical consciousness regarding their psychosocial-political reality (*concientización*), in order that they may liberate themselves and change that reality. Given these elements, Martín-Baró outlined for liberation psychology three urgent tasks. Firstly, there needs to be a recovery of historical memory, by which one discovers those behaviors of the past which instill a sense of collective identity and help an oppressed community survive and struggle toward liberation. Secondly, there needs to be a de-ideologizing of everyday experience through the subversion of dominant narratives by psychologists participating in the life of the poor, recovering their experience and “returning” it to them, so that they may reflect upon it and form a broader consciousness of their reality. Thirdly, psychologists in El Salvador should shun the importation of ethics, cultures, and values alien to the country’s people and instead use the people’s own values and virtues as represented in the cultural, social, and religious institutions that have aided in their survival during the civil war and struggle toward social justice.

Using this liberation psychology, Martín-Baró developed social psychological research projects that aimed to understand phenomena as varied as the effects of war on mental health (especially that of children), the psychological dynamics of state terrorism and oppression, the ways that psychology can collude with or go against the status quo, the use of religion as an instrument of psychological warfare, and the experiences of the Salvadoran people in the midst of social and political violence. This research was not simply published in academic journals but was likewise used to develop critical consciousness (*concientización*) among the Salvadoran people. Due to the political implications of this perspective for psychology and Salvadoran society, Martín-Baró was murdered in 1989 along with seven others on the campus of the Central American University in San Salvador. His vision,

however, lives on as it has influenced many social and clinical psychologists in Latin America, North America, and Europe.

Parallel to the development of Martín-Baró's thinking, in 1981 the North American psychoanalyst Nancy Caro Hollander became interested in the work of Marie "Mimi" Langer (1910–1987) and other psychoanalysts in the Southern Cone countries (Argentina, Chile, Uruguay, Paraguay, and Brazil) who also struggled against unjust political regimes, by relating psychoanalysis and Marxism in both theory and clinical practice much in the same way that liberation theology had related theology and Marxism in liberatory reflection and praxis. Hollander worked with Marie Langer and her colleagues clinically and academically and, as a result of their relationship, subsequently began writing a group biography detailing their life and work in the midst of war and oppression. In that biography, it was detailed how Marie Langer and many of her colleagues had originally migrated from Europe to South America due to the growing threat of Nazism to Europe and toward their communist and Marxist political views. Much like their counterparts in North America, in South America Langer and other migrating psychoanalysts initially found it necessary to keep a low profile on their Marxist ideologies for fear of retribution from more conservative colleagues and the local right-wing governments.

As conditions in Latin America continued to deteriorate due to civil wars, revolutions, and economic-political oppression, psychoanalysts began to speak out against injustice and take steps to both make sense of the escalating conflicts psychoanalytically as well as develop treatment relevant to the needs of oppressed and displaced people, hence making a preferential option for the poor people of Latin America. Freud's theories concerning the intrapsychic dynamics of repression, splitting, and projection were related to Marx's theories regarding the repressive and alienating dynamics of economic and structural injustice. The function and role of an overly harsh and persecutory superego likewise became contextualized and related to the imposition of the bourgeoisie morality and

right-wing politics of the governing classes. The work of Melanie Klein in particular became very influential in understanding how human destructiveness was affected by interpersonal, economic, and societal dynamics, such as genocidal ideologies molding everyday poor people into soldiers for the all-good regime against the all-bad civilians or insurgents (in many cases seen as one and the same).

In clinical practice, social justice-oriented psychoanalysts in Latin America would contextualize developmental (oedipal, preoedipal) difficulties and mental illness in the historical economic and political oppression that their patients' experienced in society and through family life, providing interpretations that would encourage them to speak and give voice to their psychosocial trauma. Apart from individual treatment, Langer and others also practiced group psychotherapy as a liberating practice, providing a much more socially relevant service extending mental health services to wider communities in need of support. A variety of pragmatic methodologies were developed in relation to the social ambivalence that surrounded treatment with particular clients (whether it was working with a torturer, a victim of torture, or an insurgent), including encouraging patients to become politically active in order to give voice to their fears and anxieties, a move that was found to be clinically useful in helping the healing process, as well as inviting patients to work toward changing their social reality. Due to such consciousness raising and revolutionary clinical work, Hollander used the phrase liberation psychology to describe the labors of social justice-oriented psychoanalysts like Marie Langer, a use that was reinforced after she found that Martín-Baró had coined the phrase earlier to describe his social psychological work in El Salvador.

## Commentary

A liberation psychology of religion would be concerned with the ways that religion could be a force of prophetic and critical consciousness for social change or a tool of psychosocial

domination upholding the interests of those in power. In the specific case of El Salvador, Martín-Baró was concerned with a model of intervention the United States had developed known as “low-intensity conflict,” which emphasized sociopolitical psychological warfare which sought to “win the hearts and minds” of the people who supported the insurgency against the US-backed regime. It would pursue this goal through the use of propaganda, harassment, sanctions, and even torture to make people feel insecure about their basic beliefs and shift political orientation in favor of US interests in the region. Religion, as a central institution for many Salvadorans, enters the picture as one possible tool of such psychological manipulation.

In a series of studies starting in 1984, Martín-Baró and his colleagues did empirical research on the relationship between different types of religiosity and sociopolitical attitudes, which compared Catholic Christian Base Communities (groups that use the perspective of liberation theology to reflect upon their spiritual and material conditions in order to organize social justice efforts) to converts to Evangelical Pentecostalism and charismatic Catholics. These studies took place during a time in which North American evangelical churches intensified missionary efforts into the area, thanks in part to the support of conservative political groups in the USA. It was found that while the Catholic Christian Base Communities displayed a “horizontal” religiosity which emphasized God among the people working toward a more just society, the church as a prophetic voice in society, and the war in El Salvador as a result of structural injustice which must be responded to by a socially active church, evangelical Pentecostals and charismatic Catholics alike displayed a “vertical” religiosity which emphasized God as mysterious and distant and the church as a house of prayer apart from society, with the war a result of man’s sinfulness and divine will, which will end only by praying to God and asking for mercy. As a result of these respective theologies, “horizontal” religiosity tended to lead people from the Christian Base Communities to become conscious of their social conditions, to

organize and mobilize in the interest of social justice, and to have more progressive views on child-rearing, education, work, and politics, while “vertical” religiosity tended to legitimize the policies and behaviors of the government as inevitable and necessary, to become complacent and conforming to the status quo, and to have more conservative views on child-rearing, etc. Type of religiosity, then, was tied to sociopolitical attitudes which either maintained or brought into question the policies and ideologies of oppressive political regimes.

A more psychoanalytic approach to a liberation psychology of religion would attempt to correlate the effects of the different types of theologies and religiosity on the psyche and the way that particular religiosities organize the psyche are related to the economic and power structures of society. For example, one could take James W. Jones’s study of how religion can be both a source of terror and violence or revelation and transformation and relate that analysis to a social analysis of political power. If what Jones calls fanatical religion fosters deep psychological splits in the self between “good” and “bad,” with all the good projected onto an over-idealized God image and all the bad projected outside into groups designated as “other,” it carries the potential of infantilizing adherents before an awesome and magnanimous parental figure, rendering them submissive and unable of exercising critical thinking in relation to other idealized figures, such as the state, an ethnic group, patriarchy, or a nationalistic identity. The over-idealized social institution may then invoke such sentiments to maintain a particular social order and label those who would upset that social order as enemies who must be silenced or destroyed. Alternatively, Jones also refers to religion’s transformative capacity, its ability to create a space from which new insights and truths may emerge in new permutations of consciousness through a relationship – not of submission but of surrender – to a teacher, a text, an empathic community, or a spiritual practice. This transformative function may liberate the true self and allow space for a critical voice to develop which may be able to de-idealize and critically examine

the structures of power and politics within religion, culture, and society. This process may initially be deconstructive as one breaks down the over-idealization of God-images, the ethnic group, or the state, but may also become constructive as new idealizations and permutations of religious experience may emerge from within a de-idealized void. New conceptions of religion may arise with a prophetic vision of a more just society.

### Liberation Theology

Daniel J. Gaztambide  
 Union Theological Seminary Program in  
 Psychiatry and Religion, New York,  
 NY, USA

Liberation theology is a Christian theology that originated in the Latin American Catholic Church in the 1960s, but which can today be found around the world in North America (e.g., Black Liberation Theology), Africa (e.g., African Women's Theology), and Asia (e.g., Minjung Theology). In Latin America it grew out of the efforts of Catholic priests who related theology to Karl Marx's theories of social analysis in order to become more socially conscious of the conditions of political and state oppression and to relate theological reflection about the nature of economic and social oppression to the needs of the Latin American poor for social justice. Considering God to be a God of justice and Jesus as not only the savior of mankind but the liberator of the oppressed, liberation theologians lived among the poor as an act of solidarity, making a preferential option for the poor and protesting the unjust conditions that afflicted them through political activism, community

work, and academics. Liberation theology has also been of interest to social justice-oriented mental healthcare workers, inspiring not only a variety of liberation psychologies (i.e., the work of Ignacio Martín-Baró, Mary Watkins, and Lawrence Alschuler) but also an integration of liberation theology and pastoral care (e.g., the work of Stephen Pattison).

## Libido

Jo Nash  
Sri Lanka International Buddhist Academy,  
Kandy, Sri Lanka

*Libido* is a term used in psychoanalytic psychology to denote the fundamental sexual energy of the human organism, either a sexual “instinct” or “drive” which in simple terms compels us to reproduce the species. In Freud’s economic theory of the psyche, libido is proposed as the sexual source of all mental energy, which flows towards objects of our attention, thereby investing them with interest or *cathecting* those objects. In this way, libido establishes a psychic relationship with the object whether in fantasy or reality. The sublimation of libido into creative activity is the source of civilization for Freud, achieved through the complex processes of displacement of sexual energy away from the gratification of our individual desires, towards servicing the wider purposes of the social groups and institutions to which we belong.

Freud also described how libido cathects zones of the body during the early life of the child in phases called the oral, anal, and genital stages of development. These different stages evolve as the child’s awareness and interest are invested in progressively more complex activities focused on different parts of the body, beginning

with the mouth during feeding and then the anus during potty training, before moving onto the genitals, which continue to absorb more and more attention and interest into adulthood.

For Klein, however, her clinical work with children revealed that the development of these phases was not as staged as Freud proposed but that at any time from early life onwards, a mixture of these phases of interest could be observed, with some impulses prevailing over other impulses at different times, in order to defend the infant, child, and later adult against primitive anxieties of a sadistic nature. Hinshelwood writes:

...the sequence of dominance was the effect of the sadism, the fear of retaliation, and the anguished wish to restore damage. [...] She also thought of the genital phase as a particular upsurge of libidinal feelings, and that there may therefore be a precocious surge towards the genital phase as a reassurance against the sadistic impulses of the pre-genital phases (Hinshelwood 1989: 338–339).

In other words, the premature development of genitally focused sexual activity may indicate that deeper impulses of oral and anal aggression are being warded off by the child, out of a fear of retaliation for the harm the expression of these impulses might cause. For Klein, libido pervades all object relationships channelled through various erotogenic zones of the body at various levels of intensity from early life to death. Libido is depicted as something of a rapacious, greedy, and visceral force fundamental to the presence of life and its complex quest to sustain itself.

In the analytic psychology of Jung, however, the term “libido” is deployed to denote a more generic psychic energy or life force that propels the personality towards individuation through the enlargement of the “self.” For Jung, libido has a spiritual dimension which did not exist for Freud or Klein. In this way, Jung proposes that libidinal energy is invested in all forms of intentional activity, from individual developmental “tasks” such as symbolism and the acquisition of language to increasingly complex creative activities, including art, science, and religion, that aid increased psychological and spiritual

integration. Libido is depicted as a benevolent force which invests both subjectivity and the world around us with the intentional activity of life itself.

## Lilith

Chani Nicholas  
San Francisco, CA, USA

Lilith is an ancient Near Eastern Goddess who reaches into ageless archetypal fears of the night, death, and the wild, untamed natural world. She shows herself in Sumerian, Babylonian, Assyrian, Canaanite, Persian, Hebrew, Arabic, and Teutonic mythology. She is known as a longhaired night demon, child-killing witch, succubus, wind-spirit, seductress, bloodsucker, Impure Female, End of Day, screech owl, or hag. In Hebrew mythology she was the first wife of Adam and the manifestation of the rejected

and disembodied shadow of the Great Goddess rejected by the monotheistic, patriarchal Hebrews (Koltuv 1986). Lilith lives in the wild and is close to nature – she is depicted as having hairy legs like a beast, sometimes winged with talons for feet, reminding us of the nocturnal wisdom of the bird Goddesses before her (Johnson 1988). She is a balancing force to the all-powerful solar God who is divorced from the earth’s sensual nature. As with all ancient figures in mythology, she has gone through many incarnations. She has been used by the patriarchy to exemplify the punishment dealt out to any woman who is autonomous and awakened to their female sexual power. Jungians call her our unincorporated female *shadow* for she, and figures like her, becomes a basin for humanity to deposit our collective fears of the dark.

Lilith originated in Sumeria as the Great Assyrian Goddess Inanna’s handmaiden. It is said that Lilith collected people from the fields to participate in sexual rites in the holy temple at Erech. These rituals belonged to the Goddess and were central to the culture of the time, initiating participants into the mysteries of Her ways. Inanna was primarily a lunar deity, and her mythologies were reflective of the phases of the moon. The importance of these cycles and their interpretations are central to understanding how people’s consciousness was oriented at this time. The mysteries of life, death, and regeneration hung on the appearance and disappearance of this light in the night skies. In pre-patriarchal myths of Goddess, the moon’s waxing was a symbol of Her ability to give life, balanced by the moon’s waning, symbolizing Her inevitable cycle of death that followed. Death in this context was understood as a necessity, for life is predicated on death. This life-giving and life-taking cycle of the moon is mirrored in the earth’s seasons of summer abundance and winter dormancy. Around the world, like Kali in India, the Goddess was whole, dark and light, a reflection of life in the big picture (Baring and Cashford 1993).

The Babylonian hero Gilgamesh and his solar ways eventually drove Inanna and Lilith apart. Lilith appears as a demon living in the *huppulu* tree that Inanna cared for. Inanna was to make her

bed and throne out of it, but when she visits the tree, it is filled with frightful beings: the demon Lilith, a serpent, and a bird, all images of female power. Gilgamesh cuts down the *huppulu* tree with his sword of masculine rational thought and aggressiveness, forcing Lilith to destroy her home and flee into the “wild, uninhabited places” (Gadon 1989). This myth prepares for the dismantling of powerful, autonomous, self-seeding Goddesses such as Inanna and for the future demonization of Lilith by patriarchal religions (Gadon 1989).

In the Jewish *Zohar*, a Kabbalistic work of the thirteenth century, there is an origin myth of Lilith’s that depicts how God diminished the moon’s importance to being primarily a reflection of the sun’s luminosity. Similarly:

God thereupon said to her, ‘Go and diminish thyself.’ . . . Thereupon she diminished herself to be head of the lower ranks. From that time on she had no light of her own, but derives her light from the sun. At first they were on an equality, but afterwards she diminishes herself . . . she reduces her status and her light, and shells upon shells were created for covering the brain . . . After the primordial light was withdrawn there was created a ‘membrane for the marrow,’ a *k’lifah* husk or shell, and this *k’lifah* expanded and produced another who was Lilith (*Zohar* I 19b, as cited in Koltuv 1986).

This is an obvious psychological repression and symbolic split of the organizational powers of the universe – a formal indoctrination of a dual system where the solar male God and his rationality are posited as psychologically and politically superior to the lunar female Goddess, and her twilight mystery Lilith is born from this split, deriving “her energetic force from opposition and suppression” (Koltuv 1986). However, the text goes on to explain the importance of these images in the process of truly understanding the “radiance that cannot be comprehended” (*Zohar* I 19b, as cited in Koltuv 1986), as if these are protective layers of the rationalist ego that can help patriarchal monotheists along the path of self-realization. The solar patriarchal Jewish consciousness suppressed and demonized shadow goddesses, such as Lilith, in a centuries-long effort to elevate the monotheistic Hebrew

Yahweh to absolute goodness, separate from all earthly processes and darkness.

Creation stories of Lilith as the first wife of Adam tell how God “took filth and impure sediments from the earth, and out of these he formed female. As was to be expected, this creature turned out to be an evil spirit” (Patai as cited by Baring and Cashford 1993). Lilith refuses to lie beneath Adam submissively during sexual intercourse, demanding that they are on equal footing since they are both made from earth. Adam rejects her. But rather than conform, Lilith speaks the unutterable name of god and flies off into the far reaches of the desert “to a cave on the shores of the Red Sea” (Alpha Beta Ben Sira, as cited by Koltuv 1986). Rather than hand over her sovereignty, Lilith chooses dominion for herself, defying patriarchal law and forging her own path in the desolate wilderness. She is the wild spirit of nature within us that cannot be tamed. She refuses to be bound in relationship that will only relegate her to whipping post for Adam and Yahweh’s hatred of her regenerative sexual wisdom. Lilith teaches us that isolation and peripheral living is a necessity in finding out who we are. Lilith teaches us how to find our way through the dark. Psychologically, she brings to consciousness more meaning than the moralistic solar divinities that suppress natural forces. As Jung taught, there is gold in the shadow that we ignore at our peril. Today, we are seeing the return of the repressed in feminism, depth psychology, and ecology – urgently needed expansions of collective consciousness.

Once cast out of the Garden, Lilith becomes the night demon who will give men and women erotic dreams. It is said that one should not sleep alone, for fear of Lilith appearing in the night, arousing our suppressed sexual longings. Lilith is a gateway for our sexual autonomy and represents the uroboric wholeness that is in direct opposition to the concept of monogamy that monotheism instated. She is depicted as a psychological shadow in patriarchal moralistic repression – a semen-stealing witch who uses the spilled seeds of men from their sexual dreams to spawn 100 demon babies each night (Johnson 1988).

Lilith is a powerful indestructible force that not even God can remove. After she flees Adam, she reappears as the snake that tempts Eve with the apple from the tree of Knowledge. In art it is often depicted as a serpent with the head of a woman or a woman with the tail of the serpent (Baring and Cashford 1993). Lilith and Eve are inextricably linked, for they are two sides of the same Great Goddess, and she will not let her sister remain innocent in the Garden. Like Persephone eating the pomegranate seed from the underworld, Eve too must taste the scope of life and assimilate knowledge, like an innocent child that must inevitably grow up psychologically and know complex adult consciousness, including sexuality.

In stark contrast to Eve, the mother of all creation, Lilith is portrayed by patriarchal myths as a child killer to be warded off by charms and amulets (Koltuv 1986). It could be said that collective rejection of Lilith is activated, surfacing in the minds of some women who experience postpartum depression, having fantasies of abandoning or harming their children – for someone must feel the repressed collective fears. Myths of Lilith as baby killer and strangler are a distortion of her energy, but the imagery also informs women that in the search for our individuation, we must release the infantile desire to be loved by everyone, to be adored and accepted. When we identify only with Eve, only with the sweet, docile, wife, and mother, then Lilith will eventually erupt unconsciously within us. We can see this enacted through the modern-day experience of PMS. When women bleed every month, there is an opening to get in touch with our inner Lilith. Many women are repelled by their own bodily and psychological shadows, and, instead of using these experiences as a point of transformation, such women are encouraged by patriarchy to be ashamed of the fluctuations of our bodies. But getting past this, as in psychotherapy or feminist circles, can bring a deeper knowledge of feminine wholeness in the gift of life-giving, too long hidden in shadow. Perhaps, when we are broken down physically just enough to feel our own desires to flee and be in solitude or seek

help – perhaps this is the only time Lilith is allowed to reveal herself.

To speak of Lilith is akin to trying to capture the wind, for often she flees from our voice, our mind goes blank. She has been so long repressed and demonized that she does not want to be pinned down or even understood. Our inner Lilith needs to have a say, a voice, or she will shriek at us or through us, like the screech owl she is named after. Lilith is the part of our nature that needs to be wild, untamed, sexually animated, whole, and natural.

## Liminality

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

## Origin

Liminality is a term used to describe the psychological process of transitioning across boundaries and borders. The term “limen” comes from the Latin for threshold; it is literally the threshold separating one space from another. It is the place in the wall where people move from one room to another. Often a door is placed across the threshold to close up and restrict access between rooms. The concept was first applied to psychology as the technical name for the perceptual threshold, the degree of stimulus intensity that would just be noticed as audible or visible or detectable in any sensory mode. But its contemporary usage comes from the anthropologist Arnold van Gennep (1873–1957). In his study of religion as a cultural artifact, he saw that many, if not all, of the rituals across cultures have the function of moving a person from one status or social circumstance to another. His major work, *Rites of Passage* or *Les Rites de Passage* in the original French (1909/1960), sets out the thesis that at a psychological and cultural level, religion and its rituals give us the means by which we cope with change, whether it be from childhood into adulthood, from single to married, and from lay to clerical, and to mourn the loss of a beloved as they transition from this world to whatever lies beyond. His student Victor Turner (1920–1983) expanded upon van Gennep’s analytic framework and integrated it into role theory and the relationship of social action to drama.

## Psychological Liminality

As a psychological capacity, liminality is the ability to bridge between self and the other. At an interpersonal level, this is called empathy. We come to know the other by entering into their phenomenological space to some degree. We begin to see things from their perspective. At the level of social groups, it can be described as the capacity for moving toward an insider’s perspective. Pike (1954) coined the terms “emic” and “etic” to refer to the insider’s and outsider’s perspectives with respect to language, and this now has been broadly adopted in cross-cultural psychology for the knowledge of any social group. So liminality with respect to social groups is gaining the knowledge that approaches what an insider would have; we bridge the gap between our own groups and those of the other. Both the interpersonal and the group levels of liminality require us to see and appreciate the other and to find bridges that would allow harmonious relationships as opposed to conflict. Liminality, therefore, is a requirement for any effective interpersonal or intercultural communication.

At the intrapsychic level, liminality is the capacity to move within and between the boundaries of one’s psychological structure. Lewin (1936/1966) first used the metaphor of space in his topological psychology, defining life spaces and discussing the relative permeability of the boundaries between areas of the person’s experiential world. At one extreme, one has the rigid compartmentalization characteristic of dissociation and multiple personalities; at the other is the failure of boundaries found in borderline personality disorders and termed “confluence” in Gestalt therapy.

In a spiritual sense, liminality is traveling between the world of spirit and the mundane world. This is the path of the shaman both in historical and current traditions. The shaman mediates between the two realms of being in service of the person seeking healing in the mundane realm. Modern shamanic approaches to healing also use this liminal skill of travelling between the worlds as a means of connecting the spiritual to the psychological.

Joseph Campbell's (1949) *The Hero with a Thousand Faces* was much influenced by van Gennep's basic outline of the threefold structure of liminal processes: preliminary, liminaire, and postliminaire. He took the concept and applied it to the transitional phases between the beginning and the end of a journey or transformational process. Liminality is the process of going in between two states and the time spent in that transitional zone when one is neither one nor the other but in the process of becoming. Liminality is the journey of transformation.

Finally, the therapeutic process is itself a literal rite of passage. We can view the relationship of therapist and client as a process of helping the client move from a state of unhappiness to some greater degree of either internal peace or interpersonal harmony and adjustment. The role of patient arises out of the medical role, part of a complementary pair, physician and patient. The various sessions within the relationship, whether in brief therapy or long-term dynamic work, are each small steps in the ritual of healing. Liminality describes any process of transformation from one state of being to another in human society; it is a key psychological concept.

## Lived Theology

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Lived theology is a phrase that describes a process more than an academic discipline. Our lived theology is the enactment of that, which is most significant to us at any given moment and as lived out in our everyday existence, rather than the systemization of creedal propositions of any given faith tradition. Borrowing from the thought of both the philosopher Martin Heidegger (1889–1976) and the theologian Paul Tillich (1886–1965), and others who have furthered their thought, such as Langdon Gilkey (1919–2004), one's lived theology is one's "enactment of significance" in the world.

Theology, or speech about the divine, is traditionally seen as an academic discipline in which authoritative sources are interpreted and subsequently inform various doctrines and practices respective to one's religious tradition. Lived theology is phenomenological in nature, and is aligned with existential, empirical, and phenomenological traditions that view the divine as an experiential phenomenon. The divine is not considered as an *object* of experience, but a *quality* of experience related to living out significance in the world, a living out of what matters most to one in any given situation. In this way, lived theology is not an exclusive property of elite academicians, but an existential of every human being. Hence, if human beings enact significance in every moment of their lives and if we understand *lived* theology as those enactments of significance, we can conclude, therefore, that to be a human being *is* to be a theologian. The human being is *homo theologicus* (DuBose 2000).

To be alive is to enact significance. Theological discernment from this perspective views how one is comporting oneself in one's everydayness as disclosing what Tillich called one's "ultimate concern" (Tillich 1952). These ultimate concerns, or as I call them enactments of

significance, are not cognitively “thought out” propositions described in abstract, traditional religious discourse, but chosen ways of being-in-the-world. Agency inherent in comportment is lived out long before thought about. Such comportments are “prereflective,” as Maurice Merleau-Ponty (1908–1961) argued (Merleau-Ponty 1964). This perspective privileges a different knowing prior to cognitive reconsideration.

Given these premises, enactments of significance are known only after the fact or only when reflecting on comportment as it is in operation or having just passed. Life is lived rather than objectified, as the French radical phenomenologist, Michel Henry (1922–2002), proposed (Henry 2002a). Moreover, when enactments are translated into conceptualizations, such as when an experience of the numinous is translated as “an encounter with the Holy Spirit,” the product of the translation is merely a “representation” of the experience and not the experience itself. Lived theology is not reflection on “that which is over there,” but a living out of significance rather than a living in relation to a representation of that experience.

Lived theology further presumes that if we are inherently theological, then our very nature as human beings is formed and led by what is of ultimate concern in our lives. Viktor Frankl’s (1905–1997) logotherapy is likened to this perspective in the conviction that meaning lures and constructs human development (1946/1997). We live and intend toward meaningful and fulfilling projects and relationships in life. Our enactments of significance, and, hence, any lived theology, are naturally transcendent seeking but delimited by one’s unalterable finitude, facticity, contingency, and “thrownness,” to use phraseology from Martin Heidegger (Heidegger 1962). The very delimitation of one’s “thrownness” enframes the meaningful possibilities of significance enacted in each moment and is free to change as significance shifts.

## Commentary

A word about therapeutic care for, and as, lived theology is in order. Therapeutic practice based

on this model begins and ends with attunement toward enactments of significance in particular life-world comportments. It then explores constrictions, that is, how one’s enactments of significance are restrained, inhibited, or confined. Finally, it has as the therapeutic goal, a free and authentic living into one’s cleared and lightened possibilities within one’s embraced limitations. All symptoms of the suffering soul are constricted enactments of significance and related to the inextricable interplay of death, transcendence, and radical subjectivity and are always and already lived out in equiprimordial ways. An obvious alignment with Daseinsanalytic phenomenology and practice is clear (Boss 1979; Heidegger 2001).

Often, discussants of this issue quibble about whether one considers oneself religious, spiritual, or theological. I choose to use the word “theology,” rather than “spirituality” or “religion,” because I believe the latter two concepts are less personal and too amorphous to disclose the specificity of one’s very particular enactments of significance in the world. Moreover, one’s comportment in existence discloses what one considers significant with much more veracity than what one verbalizes as significant. If you want to know someone’s theology, look at their enactments of significance *in the world*. At no time are we absent from living out enacted significance, even (and especially) in despair. Paraphrasing once again Tillich’s argument that doubt shows the significance of faith (Tillich 1957), I say that despair is an enacted significance *of lost significance*, which is perhaps the greatest of all therapeutic challenges.

## Locus of Control

Andrew J. P. Francis  
 Division of Psychology, School of Health  
 Sciences, RMIT University, Bundoora, VIC,  
 Australia

The Locus of Control (LOC) of reinforcement construct was originally developed by Rotter (1954, 1966) within the framework of his Social

Learning Theory, along a unidimensional internal-external continuum. An important elaboration by Levenson (1981) divided the external contingencies into separate “powerful others” and “chance” dimensions. Broadly, the LOC construct measures the degree to which people believe that reinforcements (rewards and punishments) from the environment are contingent on their own efforts, actions, and personal decisions (internal LOC) on the one hand versus luck, fate, external circumstance, and powerful others (external LOC) on the other. A more internal LOC is generally positively associated with a range of indices of psychological and physical health. It is argued that many of these positive health effects reflect the adoption of more positive coping strategies in such individuals. Conversely, externality is typically associated with negative coping styles and poorer physical and mental health outcomes.

In some LOC scales (e.g., the religious revision of Rotter’s internal-external scale), the external “powerful others” set of contingencies includes reference to a deity. Thus, the individual believes that, to some degree, the circumstances of their life are controlled by a god, goddess, or other spiritual forces. The belief that an external deity may be controlling some contingencies in a person’s life suggests a type of external (powerful other) LOC and might be expected to be associated with generally poorer health outcomes according to secular LOC theory. Certainly Sigmund Freud and Albert Ellis characterized religious belief in terms of defensive functioning and psychopathology, whereas Carl Jung and Gordon Allport suggested that religion may have important psychological functions and produce positive effects on mental health.

Contemporary scientific literature would suggest that degree of religiosity is positively (albeit mildly) associated with better mental health outcomes, in particular where the type of religiosity is “intrinsic” versus “extrinsic” according to Allport’s (1961) taxonomy. It has also been suggested that a person’s dispositional “spiritual/religious coping style” will influence how they respond to stressors and challenges and, in a sense, specifies the nature of the control

relationship they share with their god. In a self-directing style, a person functions in an active manner, independent of god (essentially a form of internal LOC). When a person adopts a deferring style, they will take a more passive role and wait for god to resolve a situation (thus adopting an external LOC). In a collaborative style, the person engages with their god in a mutual problem-solving process (mixed internal-external LOC). A surrendering style involves an active decision to release personal control over circumstances beyond personal control to god (external LOC). Depending on the situation, a collaborative style is generally associated with more positive mental health outcomes, although it has been argued that even the surrendering style can provide relief, comfort, and security in highly stressful situations. No matter which spiritual/religious coping style is adopted, it is also certainly the case that the use of prayer, ritual, and observance can instill an element of control into one's relationship with god.

## Locutions

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Locutions are inner experiences of hearing a divine voice or receiving revelation. The broader category is theophany or epiphany, which means any revelation or manifestation to humans by God or the divine or their agents such as angels. Visions, or apparitions, are epiphanies which are primarily visual, while locutions are the auditory aspect of contact with or from an external transcendent source. The experience can range from very realistic dialog with an angel (including an apparition) to a subtle and sudden feeling of inspiration coming in linguistic form. It is not uncommon for these visitations to be accompanied by other sorts of miracles, such as healing. St. Teresa of Avila is one of the classic examples of a mystic whose experience included locutions. Bernadette Soubirous (1844–1879) was a young French woman who also received locutions attributed to Our Lady of Lourdes. The Virgin Mary in both Roman Catholic, Eastern Orthodox, and Anglican traditions is a frequent source of apparitions and locutions. The Roman Catholic Church has a fairly detailed procedure devised over many years for checking the bona fides of claims for visions or locutions. Less clear cut examples can be found in the frequent use by mystics of the metaphor of the small “inner voice” that guides their spiritual growth and becomes a central part of their experience of the Divine. An example would be George Fox (1624–1691), the founder of the Society of

Friends, of Quakers, who reported hearing a voice that guided him in resolving spiritual conflicts. These inner voices often are heard during a period of quiet meditation or contemplation so as to still the external senses allow one to open up to the Divine.

## Logos

Meredith Lisagor  
New York, NY, USA

### Earliest Use of Term

Logos, a noun, derives from the Greek verb *legein*, originally *to count*, later *to give an account*, finally as *lego*, *to say*. It enjoys an array of nuanced translations: *utterance, word, speech, thought, meaning, reason, argument, ratio, measure, standard, or principle*. Yet whatever distinctions exist among thinkers who employ the term, Logos is consistently used to denote something about creative unifying forces or functions in the composition of reality – cosmologic, religious, philosophical, or psychological.

As a concept, Logos is first encountered in the fragments of Heraclitus of Ephesus (ca. 500 BCE), where it identifies the underlying ordering principle or plan of the universe, which is itself

a hidden unity of opposites in tension. The Logos is not the source of creation, but rather the way in which creation operates, the flux in which “diversity comes out of unity and unity out of diversity” [Frag 10]. Although all creation is elemental of the “One,” humanity must “listen” for the Logos in order to comprehend it.

Platonic and Aristotelian use of the term was largely confined to the fact and consequences of human reason. Stoicism, however, took the term beyond the limits of philosophy. Heraclitus’ Logos became equated with a dynamic divine reason. Here, humanity did not merely participate in Logos, but was infused with it: Discourse, meaning-making, and life in accord with natural law – or the order given the cosmos by an all-virtuous God/Logos – were products of a “seed” or “ratio” of divinity within each human being.

### As Divine in Judeo-Christian Tradition

The divine character of Logos underwent subtle but profound change, when Jewish and Greek thought converged in the works of Philo of Alexandria (30 BCE–50 CE), who enlisted the term to place Torah on equal footing with Greek philosophy. Adapting Jewish Wisdom speculation – and often using “word” and “wisdom” interchangeably – Logos became both the intelligible world in the mind of God, after which the created world was modeled, and the agency by which it was actually made. By Hellenizing notions found in Jewish texts, canonical (e.g., Proverbs 8:22) and apocryphal (e.g., Wis. 7:22 and 9:1), Philo made the Logos a virtual hypostasis of God, His “Firstborn Son,” and “Image.”

Philo’s syncretism had arisen in an environment that also sustained popular belief in Apollo (especially surnamed *Loxias*, *fr. legein*) as the “spokesman” of his father Zeus. Thus, it was a short step to dubbing Jesus the Logos and Son of God – which the prologue to the Gospel. According to St. John (1:1–18) did near the beginning of the second century. Where St. Paul had declared Jesus Christ the one “through whom are all things and through whom we exist” (I Corinthians 8:6), the Johannine authors

(adapting a Wisdom hymn) trumpeted that the creative Word of God became flesh and entered the world it had created; no less, it “was God.”

Early Christian writers would employ Logos broadly and idiosyncratically: Justin Martyr followed a Philonic impulse in his *Apologies* (ca. 55 CE) to liken Christianity to stoic and platonic philosophies; Clement of Alexandria (ca. 150–215) even identified the eternal Christ/Logos as the giver of philosophy to the Greeks; and Christian Gnostics had at least three different notions of Logos – all disdaining the occurrence of actual incarnation. Significantly, Origen (ca. 182–254) saw Logos as a kind of effluence of God’s creativity, truth, and wisdom. It could be called God’s “Firstborn Son,” but in fact it was not only uncreated but coeternal (“there was no *when* it was not”). Moreover, Jesus was not really an incarnation of the Son, but rather a sinless human being who followed the Logos so closely as to be indistinguishable from it. This set the stage for the great Trinitarian and creedal debates of the next two centuries. In the end, Logos language was replaced by the term “Son.”

### Logos and Other Traditions

Development of the Logos concept continued into late antiquity: Hermetics declared that the “lightgiving word who comes from [God’s] mind is the son of God” (Copenhaver 1992, p. 2); Plotinus (205–270 CE) deemed Logos to be a divine entity of creation, unity, and order, but denied it rationality, since reasoning-out should be unnecessary to the mind of God in which all is immediate intelligibility; and the Jewish Wisdom tradition grew to identify the whole of Torah with the plan by which God created the world (Midrash Rabbah).

While one cannot argue a hereditary relationship between Logos and eastern religious thought, Logos is sometimes likened to the ultimate principle of Self in Buddhism, and the Way of Taoism. As the second person of the Christian Trinity, Logos has also been compared to the second facet of the Hindu formula *sac-cid-ananda* or Being-Awareness-Bliss.

### Logos and Depth Psychology

Modern depth psychologists have adapted Logos in a range of ways. Freud makes the most limited use, ironically calling Logos the “god” of his argument for rational acceptance of reality against the illusion(s) of religion. Analytical Psychology often equates Logos with the Self, archetype of psychic wholeness and unity of all opposites. The most noteworthy application of the term may be that of Viktor Frankl. Based on his own experience and observation of fellow concentration-camp survivors, his Logotherapy speaks to a meaning-seeking will at the center of human existence. In even the worst objective circumstances, he contends one has freedom as well a “responsibility” to seek transformative subjective meaning. It is exercise of this will that defines an authentic life.

## Loki

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Loki is the trickster in ancient Norse mythology – Scandinavia's Viking traditions. His legends were preserved by the ninth- and tenth-century *skalds* (bards) (Fig. 1). The early main surviving texts are the Icelandic *Eddas*. Loki is a crafty, seductive, paradoxical, and malicious/heroic trickster among the gods. He can assume different shapes (e.g., fire, horse, or falcon). His literature is a compilation of many free-wheeling themes. We find no tidy well-crafted novel with a clear plot here. Psychologically, Loki's myths express the multifaceted contents of the Norse collective unconscious. Any culture's collective unconscious can easily behave like a rowdy trickster, appearing inwardly or outwardly, shifting shapes, in diverse, baffling, dreamy images, rituals, and narratives. For the Norse, Loki can be a trickster of the big, tough hard-drinking macho warriors, or a distracting, seductive mare who gives birth to an eight-legged horse. He was an archetypal handsome rascal, attentive to the goddesses, who rarely resisted him. He sometimes worked to help the gods but often worked to undermine them and eventually to bring about their downfall in the "Twilight of the Gods." His tradition may have absorbed some elements of the Christian Devil. But whereas Christian faith affirms the dominance of God over the Devil, the Nordic shadowy powers were apparently archetypally stronger than the Christian Devil, so the myths express a cloud of doom about their demise (unless the "Twilight" is a late addition).

**Loki, Fig. 1** From Icelandic manuscript SAM 66. 18th century Norse. Iceland: Arni Magnusson Institute. Public Domain. (Source: [http://en.wikipedia.org/wiki/File:Processed\\_SAM\\_loki.jpg](http://en.wikipedia.org/wiki/File:Processed_SAM_loki.jpg))

Loki was early on imagined as a fire demon. In Norway, when the fire was sparking, people would say that Loki was thrashing his children, suggesting a threat of punishment to children (Tonnelat 1959, p. 266).

Once Loki was trapped by the giant Geirrod who made him promise to deliver the mighty Thor to him without his magical hammer, iron gloves, and belt that made him invincible. Loki deceptively managed to get Thor to agree. But on the way to Geirrod's castle, they met Thor's devoted lover the goddess Grid. She was suspicious and loaned him her instruments of invincibility – gloves, girdle, and magic wand. With these he managed to escape Geirrod's vicious traps and avoid Loki's deception.

The Nordic apples of everlasting youth essential to the gods were guarded by the goddess Idun. Once, when Loki got into a scrape, he had to promise to his captor the giant Thjazi, in eagle form, that he would deliver to him the goddess Idun and her magic apples. So he lured Idun into

the forest under false pretenses, and she was captured by the nasty Thjazi and dragged away. So the gods of Aesir began to grow old, deprived of their magical apples, and they were furious with Loki. They forced him to go and retrieve Idun. So he took the form of a hawk, flew to the kingdom of the giants, and turned dear Idun into a nut and flew back with her in his beak. The angry giant turned himself into an eagle and chased Loki, but thanks to a huge fire built by the gods, his wings were burned and he fell to his death.

Here, the shadow trickster turns from harming the gods to helping them; this echoes Jung's insight that there is a treasure to be found in the shadow and that the inner divine Self regulates conflicts between archetypal instincts.

Loki was at his tricks again when he cut short the tresses of Thor's wife Sif. Angry Thor grabbed Loki and began breaking bones, until Loki begged for mercy. He promised to have the dwarves make Sif's hair of pure gold that would grow like regular hair. Loki hustled over to the forges of the dwarves, sons of Ivaldir. Easy, they said, and offered to make not only Sif's golden tresses but also two gifts for Odin: a magical ship, *Skidbladnir*, that would sail on its own accord and a spear, *Gungnir*, that would never stop until it hit its target. The rascal Loki is forced by the Self figure Thor to call on the craftsmen for help. The dwarves, diminutive but skilled, provided treasured golden hair to fulfill the dreams of every dreamy high-maintenance goddess, effortless energy for every hard-working sailor to move psyche's dramas along, and a satisfying phallic spear for the king of the gods. Loki bet two competitive dwarves that they could not outdo their brothers, but they came up with the magical golden ring *Draupnir*, which would make its owner constantly richer, and Thor's thundering hammer (Tonnelat 1959, p. 267). The golden ring continued its captivating power in English folklore and literature, since what greedy ego can resist the illusion of endless wealth? The thundering hammer will never lose its lightning ability to ram home the nails.

In Asgard, the land of the gods, Thor, the god of thunder and hammer, was once tricked by Loki

when he was challenged to drink a huge horn of beer that turned out to be magically never emptied. Then he was called on to wrestle with an old woman, but for all his strength, he could not move her – rather she forced him to his knees. It turned out that the horn had its tip in the sea, and the old woman was Old Age, who defeats all. The bragging drinkers and the powerful fighters can be overcome by a trickster, who reveals clever skill and fate’s archetypal inevitabilities (Davidson 1969, pp. 66–67).

The construction of a defensive wall around their Midgard was contracted out to a giant Jotunn, who had a giant stallion who could pull a huge load of rocks. But as pay the gods had to promise him the sun, the moon, and the love goddess Freya. But it had to be done by a strict deadline. The gods thought that he could never complete it on time, so they would not have to pay so dearly. But he showed them and moved ahead of schedule. So Loki went into action and turned himself into a mare who flicked her cute tail at the stallion, who then chased her into the woods for a 3-day tryst. This prevented the wall’s completion on time. Then Loki as the mare gave birth to an eight-legged stallion, Sleipnir. Here, the beastly giant helps the psyche build its inevitable defenses, seemingly at no cost. So Loki’s gender-shifting, shape-shifting transformation generates a frisky tryst that creates a magically high-energy beast, the envy of every hard-riding heroic ego. For a male to transform into a female and give birth would shame his manhood in Nordic society (Von Schnurbein 2000), but Loki is a trickster, and they do that, perhaps to mock the norm.

In a comic twist, the god of thunder Thor’s hammer had been stolen and had to be retrieved to protect the gods. Loki found out that the thief Thrym demanded that the gods send him their goddess of love Freya to be his bride. But a clever ruse was hatched. Thor dressed as Freya, leader of the Valkyries, and Loki as his handmaiden. Again, for a man to dress as a woman would threaten his masculinity in Nordic society, so this must have caused considerable laughter (Von Schnurbein 2000, p. 120). Though suspicious of the bride’s huge appetite,

the giants proceeded with the ceremony and placed Thor’s hammer on the “bride’s” lap. When Thor got his hands on the hammer, he killed the giants. Gender-bending disguises are a favorite of many trickster dramatists, such as Dionysus and Aristophanes, and the hammer in the lap of the goddess of love is a surefire way to tickle the audience, as psyche’s trickster knows.

Loki’s amorous adventures were many. God of fire, he seduced the goddess Glut (Glowing), who bore two daughters: Einmyria (Embers) and Eisa (Ashes). Next he charmed Angrboda, a giantess who gave birth to Fenrir the Giant Wolf, Jormungand the evil Earth-encircling Serpent with his tail in his mouth (a life-death *uroboros*), and Hel the Underworld Goddess. Many archetypal tricksters, in world mythology, like Kokopelli in Southwestern Native American tradition, also seduce the girls and cause trouble. Imagine that!

Loki’s most deadly feat involved Balder, whose mother had tried to make him invulnerable by extracting pledges from all the plants, trees, and metals to not harm him. The gods at banquets would hurl weapons at Balder for sport, yet they could not harm him. But Loki discovered a plant that she missed: mistletoe. So Loki made a dart with mistletoe and gave it to Balder’s brother Hoder, who threw the little spear at him and Balder fell down dead, to everyone’s astonishment. The gods grieved and held a great funeral on his ship with his wife and horse set afire, sending them to the land of the dead, ruled by ruthless Hel. So be not proudly inflated, ye gods, for even the greatest strong warrior or god can fall to a tiny trickery, says Loki. Tricks have always been among fighters’ weapons. This scene suggests to some scholars that Balder is a Christ image, and Loki then becomes the Christian Devil, in the theory that Christianity influenced Nordic myth (Von Schnurbein 2000, p. 124).

As the Nordic myths lumber toward their tragic end, a banquet scene displays Loki’s way of ripping off masks of dignity by exposing everyone’s shadow behavior. A dwarf Brokk had angrily sewn up Loki’s lips to stop his nasty talk, but Loki soon tore out the thread. The shadow is repressed, but not for long. His love

of intrigue and betrayal led to his insulting all the gods of Asgard. So he was not invited to Ægir's big feast where only Thor was absent. But he slipped his sneaky way into the crowd by pretending humility and friendship. But Bragi, whose duty it was to welcome guests, refused to welcome Loki, so when Loki raised a cup to the health of each god and goddess, he avoided mention of Bragi, who began to apologize. But Loki turned on him and accused him of cowardice in verbal combat. Loki turned up the heat and reminded every god of his scandalous mistakes. He accused every goddess present of unfaithfulness to their husbands. He savagely boasted of his affairs with most of them. Odin struggled to stop the mounting mockery. Idun, wife of Thor, offered him a cup of mead and urged him to calm down. But Loki would not stop. He lashed out at her, bragging that he had held her in his arms and that she loved it. At that climactic moment, Thor thundered in the hall to raise his deadly hammer over Loki's foolish head. Loki pretended to submit and headed toward the exit. But he let loose with a final threat of doom. Not only would there never be another banquet like this, but this hall would soon be destroyed by fire. Loki's final insult was to announce that the end of the world was about to come. They would all perish in an apocalyptic fire that would be the Twilight of the Gods. Loki the shadow betrayer, cynical trickster, overwhelms the psyche's personas of honor and dignity with his ruthless attacks and unrestrained malice. Sounds like a trickster-loaded political or military battle.

Loki is sometimes pictured tied to a rock with a venomous serpent dripping poison onto him, much like the Greek Prometheus, who stole fire from the gods to give humans, boosting their ego-consciousness (Loki).

The great disaster of these gods, like fire shooting up from a volcano in snowy Iceland, was Ragnarök. This horror involved a tidal wave, a ship steered by Loki, and the rising of the great evil serpent from below. Thor attacked the vicious *uroboros* serpent/dragon Jormungand and killed him, but his poisonous venom also killed Thor. Flames rose as the earth sank

beneath the waves (Davidson 1969, p. 122). The apocalypse theme is common in world mythology and religions, symbolizing the end of an era. Nordic myths, long-steeped in and brazen destruction, suffered from this perilous cloud of doomed fate.

## Love

David C. Balderston  
Private Practice, New York, NY, USA

Love is a powerful force that connects and energizes people. It has long been a theme of religions

and literatures around the world. More recently, love has been studied by social scientists. This article surveys the major meanings of love, as used in various religions and in modern psychological thought.

## Introduction

Love means several different things. Other languages have two, three, or more words with different meanings, where English has only one, to use in many different situations. The authoritative *Oxford English Dictionary* describes over 30 uses of “love.” Like many writers, Scots poet Robert Burns (1759–1796) used literary devices to heighten the effects of his thoughts, e.g., “O, my luv’s like a red, red rose” – here, a simile to dramatize love’s power of attraction. In contrast, a modern definition strives for neutral objectivity: “Love is the creating and/or sustaining of the connections of mutual support in ever-widening ranges of significance” (Carothers 1968). Shakespeare noted love’s irrational mystery: “I know not why I love this youth, and I have heard you say, Love’s reason’s without reason” (Shakespeare, *Cymbeline*, ca. 1609/1974, IV.2.20-22).

Here are some of love’s emphases:

1. A *desire for physical closeness* that connects people, to touch and be touched, whether they be sexual partners, parent and child, other family relations, or close friends.
2. *Compassion* of one person toward another, sometimes one who is in need. Altruistic self-sacrifice and empathic understanding of how another feels are components of such love, often recommended by religions.
3. A *mutual affinity* in a friendship that is not primarily sexual but emotional and value-laden, with shared interests and sensibilities and actions of mutual generosity.
4. A *religious regard* for another, where a human and a spiritual being (a god or a saint) are linked in a relationship of gratitude and devotion by the human and scrutiny and/or caring by the spiritual figure.

## Religion

The world’s five largest religions, arranged here from the oldest to the newest, are surveyed for their uses of love. Judaism, which provided the scriptural foundation of monotheism for Christianity and Islam, is also included.

*Hinduism*, the dominant religion of India and of Indians living elsewhere, is a sprawling, decentralized complex of many parts. Hence, the place of love in Hinduism is more diffuse compared to other religions. The following Sanskrit terms suggest the range of loving experiences. *Kama* is sensual pleasure and erotic love. It is also seen as a fundamental life force, a necessary ingredient in other human desires and strivings. *Karuna* refers to compassionate actions to reduce the sufferings of others. *Bhakti* is devotional love, adoration, and service directed at one’s chosen deity. *Prema* is an intense and altruistic longing for God and is considered Hinduism’s highest form of love.

*Judaism*, the religion of Jewish people worldwide, stresses ethical behavior and devotion to a single God, who formed a covenant relationship with “his people” in which he would protect, chasten, and love them while expecting their grateful adoration and obedience to his laws. This is elaborated in the Hebrew *Bible*, where love is translated from the words *ahab* and *khesed* (and their cognates) as desire, mercy, beloved, steadfast love, loyalty, kindness, devotion, and faithfulness.

The great ritual phrase, the *shema* (Deut. 6:4–5), calls upon the people of Israel to love God with all their heart, soul, and might. Elsewhere, God directs them to love their neighbors and also the stranger in their midst (Lev. 19:18 and 34). The prophet Hosea used the imagery of an unfaithful wife, lovingly sought out and forgiven by her husband, to stand for God’s undying love toward his sometimes unfaithful people.

In *Buddhism*, love has a central place: its founder, Siddhartha Gautama (563–483 BCE), is typically referred to as the “compassionate Buddha.” The earlier branch of Buddhism, called Hinayana or Theravada, focuses on love as *metta* (in Pali, or *maitri* in Sanskrit), a kindness or

benevolence toward all. The later branch, Mahayana, emphasizes *karuna*, compassion, and its ultimate embodiment in a bodhisattva, one who has attained full enlightenment. The bodhisattva most identified with loving compassion is Avalokiteśvara (Sanskrit), or Chenrezi in Tibet, often depicted with a multitude of arms and hands, to reach out and help multitudes.

Since Buddhism, a nontheistic religion, teaches that all reality is illusory, one's sense of self-importance is to be devalued, and one is to act as a vehicle of compassion toward others. The various schools of Buddhist meditation, based on deep psychological and philosophical analysis, may focus on neutralizing the mind of its self-centeredness or filling the mind with compassion toward others.

*Confucianism* has long been the dominant religion of China and of millions of ethnic Chinese overseas. Confucius (551–479 BCE) taught a version of right living, preserved in the *Analects*, which emphasized the good of society more than the individual. Confucian ethics codified the “five relationships,” which stressed “filial piety” (love as respect) between pairs of family members and others. Confucius taught that the “way of Heaven” (*T'ien*), or a moral life, should be lived by *jen* (translated as benevolence, uprightness, or love) and *li* (proper etiquette and rituals – to preserve social harmony). The Confucian emphasis, on reciprocity (mutual expectations of appropriate role behavior in social relations), was opposed by the radical views of Mo Ti, who followed Confucius about a century later. Mo Ti (or Tzu) promoted *ai*, a universal love that ignored all distinctions of rank or family position, which he said caused trouble. Mo Ti had many followers, but his ideas died out after the counter efforts of Mencius, a follower of Confucius. This conflict is an example of how different values, reciprocity and universality, can pull love in opposite directions.

*Christianity*, the world's largest religion, relies on the New Testament of the *Bible*, which used two Greek words for “love,” *agape* (self-sacrificing love) and *filia* (friendship love), while ignoring a third word, *eros* (erotic love), also in common usage then.

Jesus, the central figure of the New Testament and the Christ of Christianity, was a Jew living in a Jewish society in the land of Palestine, then governed politically by Roman rulers and religiously by Jewish high priests. Love was a major theme of Jesus' message. In the “great commandment” (Matt. 22:35–40, Mark 12:28–34, and Luke 10:25–28), Jesus rebutted Jewish leaders trying to entrap him doctrinally, saying that people should love God with all their heart, soul, and mind (or strength) *and* their neighbors as themselves – just as the scriptures had said earlier but in two separate passages (see Judaism, above). When asked a follow-up question, “Who is my neighbor?” Jesus told the story of a compassionate Samaritan who helped an injured Jew, even though Samaritans were despised by Jews.

Jesus also preached the radical notion of loving one's enemies (Matt. 5:43–48 and Luke 6:27–28, 32–36). Twentieth-century examples are the effective nonviolent protest campaigns of Mahatma Gandhi and Martin Luther King, Jr.

During Jesus' ministry, his ethical message became layered with the additional identification of himself as the Son of God, as he anticipated his death, as a chronic disturber of the Jewish and Roman status quo, to be the necessary means of conveying God's ultimate message of self-sacrificing love: “For God so loved the world that he gave his only Son. . .” (John 3:16).

After the death of Jesus (ca. 30–33 CE) and his followers' experience of his resurrection, the apostle Paul emerged as the leading missionary to the Gentiles (non-Jews). His letters to the non-Palestinian churches often develop the dual themes of God's salvational love through the sacrifice of his Son, Jesus (now the Christ), plus the need for Christians to love one another. Paul made explicit the universal quality of this love of Christ that recognized no distinctions of gender, ethnicity, or social status (Gal. 3:28 and Rom. 10:12). Paul glorified the ultimate virtue of love in 1 Corinthians, chapter 13. A later apostle also wrote to exalt love, declaring that “God is love” (1 John 4:7–21).

St. Francis of Assisi (ca. 1182–1226 CE) expanded the scope of love to include animals and all of creation.

A tension has always existed between the commandment to love your neighbor *as yourself* and the *selfless* love exemplified by Jesus. A balance is needed between loving oneself too much and not enough: both extremes prevent one from loving God and others, although finding that balance can be difficult.

Modern Christian theology and devotional literature continue to confront this tension regarding “self” and the human tendency for self-serving self-deceptions. Psychology has also studied this tendency. Theologian Reinhold Niebuhr wrote, “Goodness, armed with power, is corrupted; and pure love without power is destroyed” (Niebuhr 1937), a theme developed later by Paul Tillich (1954).

In *Islam*, God (Allah) is always referred to in the Koran (*Qur’an*) at the beginning of every chapter (sura) as “the merciful, the compassionate” or as “most gracious, most merciful.” These phrases come from one of four frequently used Arabic word groups that convey various Koranic nuances of love, from the roots of *hbb*, *rdy*, *rhm*, and *wdd*.

Of the Five Pillars of Islam, the injunction to give alms to the poor is the one most directly connected to loving activity, but the Koran is suffused with themes of benevolence, kindness, and mercy – variants of love.

One movement within Islam is Sufism, which promotes an intimate personal connection between the believer and Allah through a mystical development of love.

*Overall*, the message about love from various religions might be summarized in interfaith terms something like these, with “God” representing the various names and conceptions of the Ultimate Reality or Ground of Being:

Love is what God is – the energy that binds Creation and all its creatures.

Love is what God offers *to* humans – a way to be Alive despite imperfections, anxieties, and suffering.

Love is what God expects *from* humans – respect for the Creator and all Creation, with awe at its vastness and complexity.

Love is what God desires *between* humans – to give unselfishly.

Across the spectrum of world religions, the importance of love – coming from God and human love toward God, self, and others – has been reinforced by many believers through specific methods: reading devotional literature and selected passages of scripture, reciting certain prayers and chants, and repeating certain ritual practices that emphasize love. Psychologically, a critical distinction exists between the effort to produce a desired *feeling* of love, by inculcating the ideal that one *should* feel loving, and the more achievable goal of practicing certain positive, loving-type *behaviors*, which in turn may make it more possible over time to experience loving feelings, along with some acceptance and closeness, toward persons and groups that formerly were avoided, disdained, and considered unlovable. Thus, a prejudice against others (“Do *NOT* love them”) can be neutralized through specific actions, which can enhance the development of loving feelings. This sequence, from deliberate actions leading to predictable (and desirable) feelings, while oversimplified here, is also a basic principle of psychology.

## Psychology

Psychology has studied love from five different perspectives: (1) as an individual emotion, especially in romantic love; (2) as individual behavior; (3) as a relationship between two (or more) people; (4) developmentally over time; and (5) socially as influenced by various social and cultural group norms. Psychotherapists also deal with the absence and failures of love in crumbling marriages, child neglect and abuse, adolescent problems, addictions, depression, and other anxious and lonely states.

1. Love as *a feeling of an individual* is a wonderful, tumultuous experience. In romantic love, a person who has “fallen” in love experiences a heightened sense of well-being: one feels special in the eyes of the beloved, understood as never before, with an improved sense of one’s sexual identity as a man or woman. One may be preoccupied by frequent thoughts

of the beloved or inspired to act in unusual ways on behalf of the beloved. Sexual desire – or at least the desire to touch, be physically close, and kiss – is a major part of romantic love, along with an idealization of the beloved. This is in contrast to a depersonalized lust for a sexual “object.”

The emotion of love contains strong elements of wish, hope, longing, and fantasy. What is often sought is a sense of being made whole, through closeness with another. This goal is also a theme of religious devotion: that divine love will make a flawed human whole, worthy of being loved by another being (human or spiritual) and capable of giving love to others.

Romantic love began in the twelfth century CE songs of European troubadours celebrating the courtly love of knights of chivalry, who labored dramatically to impress and woo their chosen, often married noblewomen. While this love never applied to the rest of the population, it did idealize the quest for a pure love (later portrayed by Dante and Petrarch), and it promoted tenderness and a better view of women (Hunt 1959).

2. Loving *behaviors by an individual* are many: touching and hugging, complimenting, offering help, paying attention to what the beloved is saying and feeling, sacrificing one’s time and money for the sake of the beloved, being on time and especially presentable, being patient with the other’s imperfections, and being willing to apologize for one’s own – to name a few. A lover’s complaints typically are about the partner’s behavior.

Psychology usually sees outward behavior as an indicator of a person’s inner motivation: we often convert our feelings into action. One is held responsible for how one behaves, but not for what one is feeling. Behavior, since it is normally under one’s control, can also be used to change one’s feelings – the opposite of emotions shaping behavior, as in psychodynamic theory (see an integration of psychodynamic and behavioral approaches at Weinberg 1981). Thus, a person can learn consciously to behave, and eventually feel more lovingly.

3. Love is *a relationship between two people* (or between a human and a divine being), and how the two respond to each other can be studied to see their patterns of interaction. Is there mutual respect between the two or domination by one? Is one person’s criticism usually followed by the other’s withdrawal or defensive outburst? Repeated arguments about money, in-laws, friends, or work often conceal an underlying concern: “Do you really love *me*?” In parent–child relations, does the parent feel (and act) mostly with tenderness, or frustration, or detachment? What kind of attachment behavior does the child show toward a parent: secure, avoidant, anxious/ambivalent, or disorganized (Cassidy and Shaver 1999)?

Love is also the commitment to a close relationship, i.e., dedicated to preserving and enhancing the relationship, for the sake of the well-being of both people, for as long as possible. This commitment is also for the sake of the relationship itself, sometimes despite the negative feelings of one or both of the parties involved – perhaps for the sake of other dependents. The commitment to loving another as much as oneself (see above, Love in Christianity) can be sorely tested when a chronic ailment of one person makes the relationship one-sided and the healthy one becomes a caregiver. Typically, long-term caregivers eventually develop “compassion fatigue” (the love wears thin) and become less caring and less healthy themselves. A rebalancing effort is then needed, whereby the caregiver deliberately shifts some attention and caring to himself/herself at least temporarily. Caring (loving) needs to be distributed to both self and the other, so that neither one gets all the attention and neither one suffers total neglect. Love in a committed relationship ideally is a dynamic arrangement with each person giving and receiving love in fluctuating amounts.

4. Love can be understood as *a process of development over time*. Erikson’s eight stages of human development (Erikson 1963) express this idea: adolescence is the stage for developing an identity (finding oneself), during

a period of experimentation after the childhood self has been discarded. But if identity is not adequately developed before entering the next stage, sharing intimacy with a partner in young adulthood, then the lover will not have enough of a developed self to share, and the relationship will suffer. On the other hand, while “puppy love” of earlier childhood may be mocked, developmentally it is age appropriate; it is the extent of love that youngsters are capable of, as they imitate adult behaviors and attitudes.

5. All of the above aspects of love take place within *systems of social expectations*. National, racial, religious, social class, and other cultural norms are always present, exerting limits on the permissible range and appropriate forms of expression of love. The family everywhere is a major human institution, upholding these wider norms and also containing its own private rules, rewards, and understandings of love. When a modernized culture emphasizes individualism, romantic love can happen freely, but where collective stability of the larger family or social system is emphasized, as in traditional cultures, such love is seen as a threat and arranged marriages are more typical.

Culture may also affect parent–child love when it favors one gender over the other. Birth order customs may require that the oldest and youngest child receive different kinds or amounts of love than other siblings (Toman 1976). A child’s inborn characteristics of temperament (Chess and Thomas 1984), intelligence, or sexual orientation may affect the ability of parents to love a child who is “different.” These psychosocial and situational factors contribute to making love a highly complex phenomenon.

Among psychological *theories* about love are these: *Freud* developed theories about basic drives (especially sex), unconscious wishes and fears, and delayed adult reactions to childhood emotional experiences, all with implications for human love. Freud turned the Golden Rule on its head: you will do to others (in the present) as you have been done unto (in your past). *Maslow* posited an ascending hierarchy of human needs, with

love midway (Maslow 1987). *Harlow* showed, by depriving young monkeys of their mothers, that the normal development of an infant requires what might be called primate love – a stable caregiver that can offer regular, warm physical contact; otherwise, adult mating and parenting abilities will be devastated (Blum 2002). *Sternberg* sees three dimensions to adult love: intimacy (sharing oneself), commitment (to the relationship), and passion (physical and emotional) (Sternberg and Weis 2006). In addition, *Rogers* believed that effective psychotherapy requires that a therapist demonstrate “unconditional positive regard,” a professional kind of loving (Rogers 1961).

The opposite of love may be hatred (another kind of powerful interpersonal connection), but sometimes it is the absence of love. A loveless childhood may lead to a loveless adulthood, where a person is unable to care about the feelings of anyone else – in the extreme, an unloving, antisocial personality, previously known as psychopathic or sociopathic. By comparison, the narcissistic personality has mostly given up on ever finding, yet secretly longs for, the love of another person.

Love can be austere: a self-help group uses the concept of “tough love” to help parents cope with the emotional manipulations of wayward offspring. In such situations, religion can remind one of the images of steadfast love, while psychology can recommend empathy, to feel in oneself the other’s distress and alienation, plus the objective compassion of therapy.

The philosophy of existentialism has contributed Buber’s “I-Thou” relationship as a model for responsible loving (Buber 1923/2000) and Sartre’s comment that there was no such thing as love, only loving acts.

In summary, love, while subject to various interpretations by different psychologies (and also religions), is a prominent, complex, and sometimes problematical feature of close personal relationships. Growth in love relationships usually requires persistence in communications of all sorts to nurture the relationship, honesty about one’s shortcomings, willingness to make sacrifices for the sake of the relationship, and

acceptance of a measure of uncertainty in our still-limited understanding of how, why, and when love fails or succeeds.

*In conclusion*, while scientific research will continue to study love's intricacies, and psychological understandings will continue to enhance our ways of improving interpersonal relationships, religion (and popular culture) will continue to put forward the belief that love is both necessary and mysterious – a positive force in human relations that we all can be thankful for.

## Luther, Martin

Daniel Burston  
 Department of Psychology, Duquesne  
 University, Pittsburgh, PA, USA

## The Rise of a Reformer

Martin Luther (1483–1546) was born on March 10, 1483, in the small Saxon town of Eisleben. His father, Hans Luther, a peasant turned copper miner, was shrewd, hardworking, and prosperous. In 1501, Luther commenced studies in philosophy at the University of Erfurt, where Ockham's nominalistic philosophy (or the *via moderna*) contended with the prevailing Thomistic worldview. In 1505, at his father's urging, he embarked on the study of law. One day, shortly after, he was stranded in a field during an immense thunderstorm and was so shaken by the experience that he vowed to St. Anne that he would enter a monastery if she spared his life. The storm abated, and to his father's considerable disappointment, he kept his promise, entering an Augustinian monastery in Erfurt. He was ordained in 1507, and the following year, he followed his mentor, Dr. Johannes von Staupitz, to Wittenberg to found an Augustinian university, which was outspokenly critical of medieval scholasticism and Aristotelian philosophy. For the following 10 years, Luther studied, lectured, and prayed dutifully. But his anger toward Roman – and increasingly Papal authority – grew steadily, influenced in part by *In Praise of Folly* (1511) by Erasmus of Rotterdam, a leading Hebraist and humanist, who criticized the practice of selling "indulgences." On the eve of All

Saints Day in October, 1517, Luther published 95 theses of his own criticizing the sale of indulgences. (The story about Luther nailing his theses to the door of the Cathedral is apocryphal. There were no eyewitnesses!) As his fame and notoriety grew, so did his theological daring. In the space of a few years, he went from criticizing a lucrative and hypocritical (but highly specific) practice of the Church to challenging the basic legitimacy of the Pope's authority, eventually labeling him the "anti-Christ."

## Luther and Erasmus

While he leaned on him initially, Luther broke with Erasmus and the humanists in 1525. Erasmus resembled Aristotle and St. Thomas in having some faith in our innate sociability, in our ability to govern ourselves, and in the efficacy of good works, carried out in the proper spirit, to enoble and edify the human spirit (Green 1964). Some humanists and their fellow travelers, the Unitarians, even allowed for the possibility that Jews, Muslims, and Hindus, if they conducted their lives in a Christian spirit, could commend themselves to God and be welcomed into Heaven in the hereafter.

Heresy! thundered Luther. Salvation is always an unmerited gift of God. There is nothing we can do in this world to really merit salvation. Luther argued that works without faith are of no avail, and indeed are idolatry, and that only those who embrace Jesus Christ as their personal savior will enter the kingdom of heaven. By some accounts, at the end of his life, Luther hated Erasmus even more than he hated the Pope! Another contentious issue was that Erasmus and his circle interpreted scripture allegorically, for the most part, and made ample allowance for the existence of more than one valid interpretation of a text. Though not enamored of Aristotle, whose authority was generally invoked to stifle rather than to promote free inquiry, at least in those days, Erasmus and the humanists also acknowledged the wisdom of many pagan poets and philosophers, arguing that they are perfectly compatible with

a Christian way of life. In short, they were averse to a rigid or doctrinaire attitude toward religious faith. Not so Luther. Though he put a selective emphasis on certain Biblical texts, and deliberately ignored others, Luther maintained that the Bible is the literal and infallible word of God. He also claimed to know precisely what the Bible meant in any given instance, even if the text itself was deeply obscure to other learned commentators who were more deeply versed in Hebrew and Greek – like Erasmus.

Apart from their doctrinal differences, Erasmus was repulsed by the violence of Luther's feelings and exhortations and the copious bloodshed that accompanied the Reformation. Erasmus deplored violence and spotted Luther's tendencies in that direction early on. Reflecting on their disparate agendas, Erasmus said: "I layed a hen's egg; Luther hatched a bird of quite a different breed" (Green 1964, p. 164). Despite these differences, Luther and Erasmus shared the belief that the Bible should be accessible to all. In fact, Luther stressed that *all* men should read the Bible and pray in their own tongue, rather than in Latin. This doctrinal shift not only undermined the Roman monopoly on the reading and interpretation of scripture but placed a considerable premium on literacy, creating an urgent demand for public education – an idea unheard of in feudal times. Fortunately for Luther, it also coincided with the invention of the Gutenberg's printing press, and Gutenberg himself became a staunch ally, printing hundreds of Luther's pamphlets to spread opposition to Rome and its cunning machinations to enslave men's souls. But while it hastened the dissolution of the feudal order (and the creation of public schools), Luther sought to keep certain features of the feudal hierarchy intact. Luther's religious revolution undermined the ecclesiastical hierarchy in Rome but enjoined strict obedience to secular authority – even for unfortunate peasants who were thrust to the brink of destitution and beyond (Green 1964). Indeed, a pamphlet entitled *Against the Thievish and Murderous Hordes of Peasants* (1525) explicitly encouraged German princes to suppress peasant revolts with ruthless violence – which they did, of course.

## Marxist and Freudian Readings

Luther's behavior in the peasant wars (1524–1526) invited a Marxist interpretation, and in 1936, Herbert Marcuse published a brief study on Luther in a series called *Studies in Authority*, published by Felix Alcan (Paris) and reprinted in *Studies in Critical Philosophy* (Marcuse 1973). Marcuse construed Luther's authoritarian tendencies and his growing contempt for the peasantry as an early expression of a nascent bourgeoisie starting to flex its muscles, because it was linked, in his mind, to Roman law, which Luther studied before entering the monastery. (Roman law was used by the burghers of Luther's era to undermine or circumvent the legal constraints on commerce imposed by the Church.) In *Young Man Luther*, the best known biography of Luther by a psychoanalyst (Erikson 1958), Erik Erikson chided Marxists for being one sided and reductionistic in their emphasis on economic motives and inattentive to the powerful "psychic reality" behind Luther's teaching. But even he conceded the element of truth in these approaches.

In 1941, Horkheimer and Adorno drew clear links between Luther's anti-Semitic statements and the then-current Nazi propaganda in a report on their "*Research Project on Anti-Semitism*" (Horkheimer and Adorno 1941). Initially, in more charitable moods, Luther had explained the Jewish refusal to convert to Christianity as rooted in a sensible mistrust for the Papacy and the pagan elements (including "Mariolatry") that Catholicism had introduced into Christian teaching. For a few years, Luther even deluded himself into thinking that once he had purged the Christian faith of these sordid accretions, the Jews would convert *en masse*. However, after many abortive efforts to convert local Jewry, in 1543, at age 60, Luther exhorted his contemporaries:

First, to set fire to their synagogues or schools.  
Second, I advise that their houses also be razed and destroyed.

Third, I advise that all their prayer books and Talmudic writings, in which such adultery, lies, cursing and blasphemy are taught, be taken from them.

Fourth, I advise that their rabbis be forbidden to teach henceforth on pain of loss of life and limb.

Fifth, I advise that safe-conduct on the highways be abolished completely for Jews.

Sixth, I advise that... all cash and treasure of silver and gold be taken from them.

Seventh... Let whomsoever can, throw brimstone and pitch upon them, so much the better... and if this be not enough, let them be driven like mad dogs from the land (cited in Burston 2007: 115).

This inflammatory speech was not an isolated incident. Luther's last sermon was another attack upon Jews, and the Kristallnacht pogrom which swept Germany in 1938 was deliberately timed to coincide with Luther's birthday. Luther's utterances were often read in Protestant Churches during the Nazi era to incite violence and hatred toward Jews (Burston 2007).

Erik Erikson's biography *Young Man Luther* minimized Luther's anti-Semitic outbursts and his destructive attitude toward peasants, dwelling instead on Luther's audacity, originality, resilience, sincerity, and wit. While more sympathetic than many treatments of Luther's life, Erikson did strain credulity at times. He credited Luther's confessor, von Staupitz, with rare therapeutic abilities that supposedly saved the sanity of this prodigiously gifted but deeply disturbed young man and helped him find his "voice" and to trust his own, inner authority, though von Staupitz remained completely loyal to the Church. Odder still, Erikson interpreted a disputed passage in Luther's *Table Talk* to mean that the decisive moment in his religious development – Luther's epiphany – took place while he was evacuating his bowels. Erikson reasoned that for someone who suffers from chronic constipation, having a splendid bowel movement could easily engender a "religious" experience, an idea echoed by Norman O. Brown 2 years later, in *Life Against Death* (Brown 1960). If Erikson was right, Luther was the first (and perhaps *only*) specimen of *homo religiosus* to have his crucial revelation during the act of defecation. W. H. Auden welcomed Erikson's interpretation. According to Auden (1960):

There must be many people to whom religious, intellectual or artistic insights have come in the same place, for excretion is both the primal creative act - every child is the mother of its own feces - and the primal act of revolt and repudiation of the past - what was once good food has become bad dirt and must be gotten rid of. From then on, Luther's fate became his own (Auden 1960, p. 17).

Well, perhaps. But if many people have religious experiences while defecating, very few actually report them. So the question becomes: why did Luther, of all people, have this experience? Or more to the point: did he, really? We may never know, but in retrospect, Luther's epiphany probably did *not* occur in the way or in the place that Erikson imagined it. Luther's account is worded more ambiguously than Erikson allowed and could be construed as saying that the blessed event occurred in meditation cells *adjacent to the monastery's privy* (Green 1964; Marius 1999). But whatever you believe on this point, the fact remains that Luther was an intriguing character. He attacked the selling of indulgences and cult of saintly relics with a clarity and indignation worthy of Voltaire. But he was also deeply superstitious, a believer in witchcraft, who claimed to literally "see" demons and evil spirits lurking about the Prussian landscape. As a good medieval cleric must, Luther dutifully reviled "the flesh," echoing centuries of Christian tradition. But he was bitterly opposed to priestly celibacy, spoke frankly of conjugal pleasures, and, in later years, ate and drank with deliberate abandon to "mock the devil" - or, as Erikson said, to chase away bouts of anxiety and depression. A man of great vigor and industry, who survived three epidemics of bubonic plague and lived to the age of 63, Luther was also a legendary neuroathenic, who was prone to bouts of constipation and dizziness and other diffuse bodily ailments. But for all his faults and frailties, Luther was still

what Hegel termed a "world-historical individual," whose writings, utterances, and deeds transformed the world irrevocably, for good and for ill. His illustrious contemporaries included Copernicus, Erasmus, Thomas More, Rabelais, and Machiavelli - the last of the medievals or first of the moderns, depending on how you juggle your historical schemata. Looking backwards, it is hard to think of a generation who had more impact on modernity than they. And with the possible exception of Copernicus, Luther was the most influential of them all.

## Magic

Jeffrey B. Pettis  
Department of Theology, Fordham University,  
New York, NY, USA

Magic involves the practice of what is perceived to be the direct manipulation of material and spirit realms by human initiative. This action is meant to bring about definitive, tangible results. The Greco-Roman Egypt source entitled the Greek Magical Papyri (second century BCE–fifth century CE) provides an array of kinds and forms of magic used during this time. The spells, for instance, bring favor, produce a trance, drive out demons, question a corpse, induce insomnia, catch a thief, cause evil sleep, break enchantment, and induce childbearing. They occur as charms, oracles, dreams, saucer divination, magical handbooks, magical rings, astrological calendars, horoscopes, lamp inquiry, and magico-medical formulae. Many of the spells require complex procedures. To control one's shadow, the subject must make an offering of wheaten meal, ripe mulberries, and un-softened sesame. After making the offering, she must go into the desert on the sixth hour of the day and lay prostrate toward the rising sun, hands outstretched, saying a formula which begins: "Cause now my shadow to serve me . . ." (Betz 1986, PGM III: 612–632). The shadow will come before the face of the subject

on the seventh hour and is to be addressed with the command: "Follow me everywhere." A charm for sending a dream requires picking three reeds before sunrise and incanting a formula after sunset while facing, respectively, east, south, west, and north (Betz 1986, PGM IV: 3172–3208). The range and extent of forms and purposes of magic relate the human desire to address the complexity of day-to-day life situations. They are meant as wish-fulfillment response to human limitation and anxiety. Coursing through the material there occurs the influence of ancient Egyptian temple religion, worship of the sun, and notions of the regenerative potencies in nature seen in the ritual practices of mummification. At the same time, these magical formulae are representative of a cultural syncretism which includes Babylonian, Greek, Jewish, and Christian religions and as such evidence the extent to which magic was used within the ancient world. By 13 BCE, however, the influence of magic becomes stemmed by Augustus' burning of 2,000 magical scrolls (Seutonius, *Augustus* 2.31). The early church reaction against magic as pagan practice contributes further to the suppression of magical handbooks and magicians. St. Augustine (d. 430 CE) makes it a point to say how the raising of Samuel from the dead by the witch of Endor (1 Sam. 28.8–25) occurred through the work of demons (*Ad Simplicianum* II, III). The Medieval text *De Magis*, which is part of a larger treatise entitled

*Etymologies* by St. Isidore of Seville (d. 638 CE), denounces magic as having originated with *angelorum malorum* (“evil angels”). He says that “hidden knowledge” resulting in the taking of oracles and the raising of the dead (*dicuntur oracula et necromantia*) was first employed by Zoroaster, King of Persia, and even more by the Assyrians beginning with King Ninus (9.1-3). Subsequent church figures including Archbishop Hincmar of Rheims (d. 881) and Bishop Burchard of Worms (d. 1025) rely on Isidore to denigrate magic even further in their own writings. However, by the tenth and eleventh centuries, astrological handbooks reappear within the domain of the church. Demons are perceived to exist under the rule of the church and the raising of the symbol of the cross. Earth magic, which includes the supernatural marking of shrines, wells and springs, *sculptilia*, and *simulacra*, also emerges. The European Enlightenment and its focus upon reason and religious dissociation results in the eventual demise of magic, however, while contemporary intrigue seems to be occurring through attention given to books and films such as Harry Potter.

## Maimonides, Moses

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

## General

Born in Cordova, Spain, Moses Maimonides (1135–1204) achieved fame as a rabbinic authority, legal codifier, philosopher, physician, and astronomer. Religious persecution sent him into exile throughout Spain and northern Africa before he eventually settled in Cairo serving as the physician to the vizier al-Fadil in 1185.

## Philosophical Views

Strongly influenced by Aristotelian philosophy popular in the surrounding Muslim culture, Maimonides is regarded as the supreme rationalist of Jewish tradition. He asserted the doctrine of the incorporeality of God and devoted much of his major philosophical work, *A Guide for the Perplexed*, to reinterpreting biblical passages which suggest an anthropomorphic deity. Maimonides wrote the *Guide* in an effort to resolve the apparent contradictions between Aristotelian philosophy and traditional Judaism which were challenging the faith of well-educated Jews at the time. He argued that biblical texts have a spiritual meaning beyond their literal one – a meaning which points to the ultimate authority of reason. He attempted to prove the existence of God using exclusively Aristotelian terms without relying on the bible. Maimonides maintained that Jewish laws – even those of a seemingly ritual nature – are products of divine wisdom and, thus, wholly rational. In the *Guide* and in his work *The Book of Commandments*, Maimonides dedicates himself to explicating the rational principles underpinning particular Jewish laws.

As in Aristotelian thought, Maimonides believed that moral behavior, while important,

was simply a means to attaining intellectual virtue, the highest ideal. He argued that the mind's ability to reason represents the divine image reflected in human beings, and thus, individuals have a moral imperative to develop their intellectual faculties. Maimonides asserted that morality consists of following the mean which is attained as the well-cultivated mind controls a person's desires. In an exception to this appeal for moderation, Maimonides encouraged his readers to avoid even slight traces of anger or pride, and his later writings display an increasingly ascetic inclination.

In the *Guide*, Maimonides shows special interest in the interpretation of dreams and prophetic visions which he views as wholly natural events. Maimonides diverges from earlier Jewish tradition which generally regarded dreams as manifestations of divine communication. In a process similar to what Freud calls the "dreamwork," Maimonides interprets dream material by retracing how the dream was created in the mind of the individual, focusing on the latent context instead of the dream content itself. He argues that dreams mark the nexus point between the rational and imaginative faculties, two aspects of the mind that the Hebrew prophets and some later rabbinic figures were successfully able to synthesize.

In the *Guide*, Maimonides put forward the argument that ascribing any individual attribute to God denies God's unity and omnipotence. Consequently, one may only speak of what God is not (i.e., God is not nonexistent.), but one commits heresy when attempting to define what God is. Similarly, Maimonides held the Neoplatonic doctrine that evil does not exist independently but simply reflects an absence of good. While arguing that the world as a whole is good, Maimonides attributed the suffering that individuals experience to divine justice and man's misuse of free will. He rejected the claims of previous Jewish philosophers that God intentionally causes suffering to a righteous person in order to reward that person in the afterlife. Maimonides' own view of the afterlife drew heavily from the Hellenistic model of the immortality of the soul, downplaying rabbinic notions of physical resurrection.

## Legal Writing

Maimonides did not write exclusively for the philosophical elite. He is most famous among Jews today for his legal code, the *Mishneh Torah*. This 14-volume work endeavors to distill the whole of rabbinic literature, rich with arguments, tangents, loose associations, and dialog, into a systematic and comprehensive catalog of conclusive legal rulings in clear Hebrew accessible to the lay reader. The topics covered include family law, torts, criminal law, and ritual practice. The code also contains within it a complete system of metaphysics, refutations of Christianity and Islam, and a discussion of eschatology. This project was controversial from its inception, drawing criticism that Maimonides was interpreting previous legal debates idiosyncratically and denying his reader access to dissenting arguments. Nevertheless, the code gained immediate popularity throughout the Jewish world, strongly influencing the language, structure, and content of Jewish legal writings into the modern era.

## Male God Images

Annette Peterson  
Riverside, IL, USA

God images are psychological constructs of thoughts and feelings, coalesced into a complex

relational gestalt. God images were once critiqued by psychologists of religion as projections, personifications to be rejected. Now they are recognized by contemporary psychologists of religion for their ability to provide psychological strength and resilience. They provide structure and improve functioning on the individual and the social level by helping us internalize a moral code and a shared world view.

Male God images hold sway over the mainstream religious imagination, affecting conscious and unconscious cultural mores and theological traditions. Male God images are particularly effective in structuring and strengthening the individual and his/her society. Replicating the Western traditional father's role of provider, role model, and disciplinarian on the cosmic stage, male God images provide a sense of belonging, safety, and a clear moral compass. However, these benefits are not without risk: these God images may also cause us to suffer perpetual childhood, gender imbalance, and guilt/shame complexes.

In the triad of Western monotheisms, Judaism, Christianity, and Islam, gendered and sexualized language is used to express the divine nature. Although Islam eschews divine images, the male referent is used. In the Judaism and Christianity, as in the Bible, masculine language for God is overwhelmingly predominant. God is consistently depicted in a paternal role, as external to but actively involved in his creation. God is a divine king, lord over all the universe, husband to his chosen nation of Israel, and father to us all. The father-child relationship functions particularly effectively as a metaphor for the relationship between God and humans. The term father conveys authority as well as kinship.

The dominant God image of recent history is of a male, divine king, who rules over all, meting out justice, demanding obedience, caring for those on his good side, and smiting those who fail to please. This historical trend dates back several thousand years to early urban civilizations. Although earlier tribal societies favored more animistic (nature/animal Gods) or feminine (Earth Mother) God images, when humans coalesced into larger societies, the male God image

was strengthened as a way of stabilizing the social structure and enforcing a shared code of ethics (Edinger 1996). Cultures who serve a "divine king" will achieve a greater civilization than if these roles are disparate or conflicting.

Although male God images may strengthen us culturally, they can weaken us individually. Sigmund Freud critiqued the male God image of mainstream monotheism as a projection of our earthly fathers onto the heavens. Freud declared, "God is in every case modeled after the father, and that our personal relation to God is dependent upon our relation to our physical father, fluctuating and changing with him, and that God at bottom is nothing but an exalted father" (1918/1950, p. 244).

Freud dismissed God as a glorified father figure and rejected religion as a psychological crutch based in illusory wish fulfillment (1928/1975). He believed that we would remain psychologically crippled until we rejected our parentified God images. Freud compared our projection of the divine father to the story of Oedipus, with God as a psychological creation to assuage our guilt for having usurped our earthly fathers and as a means to maintain a sense of perpetual childhood, buffered and cradled by God. With God the Father as the ultimate authority figure, it is easy to shrug off free will and personal responsibility and bow to God's greater will.

Since Freud, psychoanalytic object relational theory has elaborated and amended the Freudian critique with studies demonstrating the validity of the parental projection theory. However, these studies have correlated God images with early images of both father and mother and often the preferred or opposite-sex parent (e.g., Beit-Hallahmi and Argyle 1975; Rizzuto 1979; Vergote and Tamayo 1981). Further, these studies have corrected Freud by showing the positive effects of the God relationship, demonstrating that it provides psychological strength and resilience.

Carl Jung offered a different perspective on the God-as-father hypothesis. Rather than a larger than life father figure, Jung believed that the God image is an archetype, or symbolic representation, of the self. He wrote, "[O]ne can

never distinguish empirically between a symbol of the self and a God-image, the two ideas, however much we try to differentiate them, always appear blended together” (Jung 1958, p. 156).

If the God image is also a self-image, its examination reveals much about the psyche and its complexes. The God image may reflect our personal world view on a cosmic level, or it may be an idealized image that compensates for our inherent deficiencies.

The male God image appears to be a conglomerate of parental and self-images, a synthesis of our relational experiences and expectations that is coalesced into a singular divine person. The God image provides an anchor in our relation to the divine, yet it is also flexible, changing alongside our own faith development. In theories of faith and spiritual development, the personification of the divine occurs in the middle developmental stages and later gives way to a more universal, inclusive God image (Fowler 1981; Genia 1995; Meissner 1984). With developmental maturity, the God image has greater tolerance for diversity and ambiguity. It is possible that a parallel developmental trajectory also exists in our collective cultural God image development, and gendered, personified God images may gradually give way to more transcendent and inclusive God images (Edinger 1996; Peterson 2005).

## Commentary

God images can deepen our connection to ultimate reality, but they can also limit or distort our ability to encounter it. A God image based on one’s father unavoidably has both positive and negative psychic consequences. Even within a single God image, qualities of God-as-parent have equal and opposite ramifications. For example, a God who provides safety can also be perceived as restrictive; a God who provides for our needs usually requires much in return; a God who gives loving approval can also be a source of rejection.

Similarly, a God image based on our self-image can limit our openness to experiencing the divine.

The masculine emphasis in prevalent God images is symptomatic of psychological misalignment. Jung argued that a healthy God image needed to reflect the balance of male and female, which he called *anima* and *animus*. A gender imbalance results in psychological one-sidedness, limiting freedom of experience and expression. This problematic imbalance occurs on individual and cultural levels and has resulted in fierce polemic debate.

Feminist theologians have argued bitterly against male-only language for God. They believe that God’s maleness deifies the masculine, which appears as divine sanction for patriarchy and the devaluation of women. Male God images, therefore, perpetuate injustices against women in societies across the world.

Mary Daly quipped, “If God is male, then the male is God” (1973, p. 19). The dominance of male God images has been used to elevate men in society under the belief that male authority is God given and sanctioned.

In verbalizing our experience of God, both male and female traits are needed. However evident this may be from a psychological perspective, it remains a source of theological debate in religious circles. Biblical precedent (e.g., 1 Corinthians 11:7) is used to argue for solely masculine names/titles for the divine, even to assert that women do not bear the image of God to the extent that men do. Theologians debate over whether the masculine language is culturally dependent or self-revelatory. In view of the furor involving gendered language for the divine, it is helpful to step back and acknowledge the radical difference between human sexuality and divine reality. God by nature encompasses and exceeds all our efforts to express “him.”

## Mandala

Lee W. Bailey  
Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

The Sanskrit word *mandala* means “circle” – circular images drawn, built, painted, danced, or lived, expressing many qualities of nature and

culture. Many mandalas are unnoticed images of peace, power, oneness, and transcendence. Circular fountains in cities, for example, simultaneously send out a circle of energy and bring to the “center” the community around it. Mandalas are a sacred visual art about the silent center within, the endless circumference without, an art with psychological, biological, and spiritual significance. Some are evident in nature and others products of art and religion. Cultures embroider the form with many unique variations. The focus is often on the center of the circle, which is commonly a geometric symbol of the eternal source. Mandalas with symmetry imply a tension or balance and harmony of spiritual forces. The mandala is an orienting map of the soul, the world, and the cosmos, a microcosm and macrocosm (Fig. 1).

## Natural Mandalas

We live amid nature's own wondrous mandalas – flowers, age rings of a tree trunk, or the cycling of the Earth and celestial lights. Sit quietly and watch a shadow move along and feel yourself sitting on the vast Earth's globe rotating around its axis, through its seasons. Enjoy a campfire circle in the darkness, friends linking souls, and fire thrusting and sparking upward. Feel the cycles of your breathing. Think of the plant cycles, such as trees, that absorb the carbon dioxide we breathe out and produce oxygen for us to breathe in. Sit by a stream and recall the cycle of water rising in mist to the sky, drifting in the wind as clouds, then falling in life-giving rain, flowing over waterfalls to the ocean. Wonder at the complex variety of circular seashells – delicate sand dollars or spiraling conches. Study snowflakes, their tiny, delicate crystalline, symmetrical structure, each completely unique in design. Look at a satellite photo of a vast hurricane swirling in a powerful circle.

As you grow up and grow older, think of the birthdays, births, and deaths of your life as part of Earth's life cycles. These simple yet cosmic wonders are doorways to a higher consciousness and infinite power beyond mundane consciousness. Intuitively, we can see in them reminders of our

**Mandala, Fig. 1** Double sand spiral by Jim Denevan at Ocean Beach, San Francisco, March 6, 2005 (jimdenevan.com. Photo courtesy of the author. Public Domain)

place in the grander scheme of nature. This opens up their sacredness, the geometry of life, and the endless beyond within it. The cosmic cycles of reincarnation are a basic assumption of Asian religions, so historical time and life experiences are believed to be cyclical, not linear.

The ancients personified the sky's magnificent powers with the circles of starry astrological symbols, such as Taurus the Bull, as divinities in daily cycles, and closer stars as gods and goddesses, such as Venus and Jupiter, in planetary processions. The beauty they emanate has long seemed to be a channel to the divine.

Animals also live with cycles. A circular bird nest is the safe haven home for the oval eggs of a new year's generation of the winged nation. The old image of the serpent, which sheds its skin as it grows, in a circle eating its tail, or wrapped around an egg, evokes the cycle of life eating life and birthing it again (*uroboros*). The complex eyeball is a circle that draws the visual and

soulful world into our brains and connects us with the world. Watch the seasonal cyclical migration of birds such as graceful geese, honking in their formations as they fly thousands of miles north and south each year. Remember the hidden fish and whales that also migrate long distances with the seasons to reproduce underwater, replenishing the Earth.

The plant nation also springs forth with many circles, from the sunflower's whirled center to the unfolding delicate beauty of a royal English rose or royal Chinese peony. Flowers, the perfumed sex organs of the plant world, symbolize at weddings the beauty of erotic love and family fertility and at funerals the beauty of human and eternal life. The Christmas tree is a mandala, a miniature cosmos on an axis mundi with lights like tiny suns, globes like planets, and soul symbols such as children's toys all around. The lotus is an image of the divine in Asia. Hindu gods and Buddhas sit on lotus thrones.

The mineral world has its mandalas, also, from common rounded stones washed smooth by running water to precious diamonds, shaped in a circle to reflect the divine treasure of light. Gold wedding rings symbolize the loving union of marriage. The stone seen as the center or belly button of the world, *omphalos* in Delphi, or the central Kaaba stone in Mecca for Islam are world-orienting mandalas. Stone circles, notably England's Stonehenge, over 5,000 years old, apparently a cosmic calendar, mark for the ages the cycles of nature, such as the solstices. Egyptian, Mayan, and many other pyramids are model holy mountains, often four-sided, orienting to earthly directions and pointing above to the eternal divine powers. The Egyptian pyramids are positioned to imitate the belt of the Osiris [or Orion, in Greek] constellation of stars, toward which the spirit of the deceased Pharaoh was to ascend Earth artists are still making mandalas (Fig. 1).

## Mandala Psychology

Carl Jung, after undergoing a confusing period of encounters with unconscious material, began in 1916 to draw mandala images spontaneously, at first not knowing what they meant. As he came to

understand it, he saw the mandala as a picture of the complete soul, conscious and unconscious, with the center as the pointer to an authority far larger than the ego, which he later called the “Self,” or psychological experience of the divine within.

Jung collected numerous mandalas drawn by his patients (Jung 1979, Vol. 9, Pt. 1, para. 627–712). They pictured images sometimes seen in dreams: squares, circles, spirals, flowers, crystalline reflections, geometric multiplications, eyeballs, animals, light rays, serpents, fish, or a glowing egg. Jung saw circular UFOs as mandala symbols in machine form, bringing cosmic energies down to Earth. He found that mandalas reduced confusion and panic and introduced order, balance, and wholeness. Mandalas, he saw, urge one to become more truly what one is, overcoming fear and chaos and balancing opposites, guided by the healing energy of the central image. In his translation of *The Golden Flower*, Richard Wilhelm introduced Jung to Chinese mandalas. Jung envisioned a shadow negative force in each archetypal image, so in our time, a shadow of the mandala would be the swastika, which Hitler took from a Hindu tradition and transformed its meaning into one of hatred and death.

Here is an example of the dynamic energy that a mandala can have. A college girl, scornful of religion, sullen, and sad, had a dream of an energetic three-inch sphere, which she found in a field, which suddenly came alive, pulsating with lightning bolts, driven by dangerous electricity. The threatening ball swooped around her as the sky became menacing. She ran and ran, until the ball faced her as she gave up and repeatedly cried out “I do believe in God!” The sky calmed, the now lifeless ball dropped to the ground, and flowers grew all around. She woke up in a sweat and soon became a Religion major (Federico 2008). This sphere emerged from her unconscious soul with a fright that transformed her consciousness into a search for spiritual peace.

## Indigenous Peoples

Of all the indigenous peoples’ mandalas, we can note a few. Many dance in a circle around a fire,

and some prefer to live in circular tipis. The Mexican God’s Eye of cross-shaped sticks is woven with brightly colored threads, making a diamond shape. The great Aztec Sunstone has at its center the symbol of the present age *Ollin*, surrounding with calendar and cosmic images, two cosmic fire serpents, and pictures of a coming cataclysm. The Australian Aboriginal Tjuringa stone shows the map of the journeys of the Ancestors of the Dreamtime. They build large mandala circles made of natural colors and feathers in the desert, covering two or three acres.

Celtic mandalas are full of endless knots – ropes and vines twined in and out of each other in manifold knots, like a maze or pilgrimage through life, not to be untied, but to be followed in its endlessness. Some have women entwined as in a dance, or men whose beards are entwined with their limbs, as if swimming in a wild lake of seaweed. Others have the tidy order of linear lines and crosses or triangles. Beastly creatures chase each other in a circle, paws entwined. One anthropomorphic mandala celebrated in carved circles on United Kingdom churches, in dances, and in processions, is the Green Man, whose beard is entwined with wings, leaves, and branches. Leaves may grow out of his mouth (Holitzka 1996).

In Native American mandalas, the four directions often appear, pointing to the horizon, the powers and colors of the cardinal directions, and the cosmic forces they embody. Feathers and wings carry the powers of the winged beings of the sky. In the Lakota Sioux shaman Black Elk’s great vision, he saw a cloud tipi in the center of a camp with grandfathers in it who gave him powers, and four ceremonial horses dancing at each of four directions (Neihardt). Some Native Americans make circular dream catchers or outdoor stone circles in places of power. Navahos make sand mandalas for healing ceremonies, seeking to balance spiritual forces to overcome sickness. Some call mandalas “medicine wheels.” The dazzling sun may send its rays in a mandala circle mixed with images of serpents, humans, lizards, and shimmering zigzag lines.

Rock drawings, or petroglyphs, may be mandalas marking a vision, a spirit, an ancestor

spirit, or a deity, such as a rain god. Animals are prominent, such as the wolf, bear, eagle, or buffalo. The peace pipe, bows and arrows, jagged “thunder arrows” of lightning, or a thunder bird illuminate some mandalas. The Great Mother and her growing plants, or male figures, may stand arms upraised or dancing. A ritual such as the Plains peoples’ sun dance has the cottonwood tree in the center, warriors dancing around it in a circle, tipi lodges around them, mountains, and clouds, all pointing upward to the Great Spirit.

Flowers may grace a mandala, or the spiral of a tornado with jagged lightning powers swirling toward the center. Horses may stand in lines facing the central sun, with a surrounding image of a Great Spirit. A basket or plate often has woven images of human figures, spirals, suns, abstract geometric designs, or sacred foods. A Pueblo kachina dancer with elaborate mask and imagery such as wings may dominate a mandala. These images convey the powers of the universe that appear in nature, for in many forms, the ancestor spirits and the Great Spirit live in all the world (Holitzka 2000).

## Judaism

The Jewish Star of David is a mandala, with two inverted triangles intersecting. Jerusalem and its ancient temple mount is the geographic center of historical Israel, so this holy land is the central focus of the faith. Jewish traditional dances frequently move in a circle. The family dining table is also a central focus of Judaism. Torah scrolls are cylindrical mandalas of sacred texts. The menorah candelabrum is a half circle of nine candles, an ancient symbol of Judaism. The tree inspired Jewish Kabbalist mystics to organize their metaphysical vision of the universe as a tree, a circle on an axis. The top is the Ein Sof, the infinite creative spirit, and the various revealed aspects of God (Sepiroth) take their place as branches, until the bottom is reached as the Shekinah, the presence of God for humans.

## Christianity

The labyrinth is an archaic symbol adopted by Christians, a maze, perhaps meant to trap evil spirits. At the Cretan palace of Knossos, there are reports of a labyrinth as a dancing ground, and the myth of the Minotaur at the center. Pliny reports others in Italy and Lemnia, and, like Pliny, Herotodus records a huge labyrinthine building in Egypt (Herotodus 1966, p. 161; Eichholz 1962, Book 36, p. xix; Ramsay 1875, pp. 664–665). Some ancient versions seem to induce confusion and being lost or trapped. Some were later altered to focus on finding the center and then a Way out. They were made with stones and bushes, and one notable one remains in the floor just inside the entrance of Chartres Cathedral in France. The one in Reims Cathedral is more square (Paroisse) with four larger corners, and the Virgin Mary at the center. The one at Amiens Cathedral is square. The winding passages portray the sufferings on this Earth, and the center depicts the divine peace. The journey is a descent into oneself to find inner divinity. A twenty-first-century revival of labyrinth meditative walking began at Grace Cathedral in San Francisco (Artress 1995).

The cross is also a mandala, focusing on the center of meaning in the faith, the incarnation, and sacrifice of Christ, which stripped his humanity bare, returned his spirit to the center of being, and left the Holy Spirit on Earth. The Latin cross has one long side. The Celtic cross has a long side with a small circle around the center of the cross inscribed with designs. Eastern Orthodox crosses may have the four sides of equal length, or an angled short piece on the longer side. The circular stained glass rose window is a large mandala in churches with pictures and colors illuminated by sunlight, developed by Gothic cathedral designers. Cathedral ground plans are cross-mandalas with high ceilings or domes.

## Islam

Muslims worldwide face Mecca when they bow in prayer, forming a vast human mandala. At the Hajj

pilgrimage journey to Mecca, itself a mandala journey, there is the central ritual circumambulation of Kaaba stone in the Great Mosque. The new moon and nearby star are a Muslim symbol, appearing on the flag of Turkey. The huge dome in many mosques symbolizes the arch of heaven, and the typical four minaret towers at the mosque periphery form a symmetrical square. Muslim art forbids human images, so many designs, as on Turkish tiles, include symmetrical plants and calligraphy. Classic carpet designs often have mandala designs. The mystical Whirling Dervishes dance in a circular spinning form.

## Taoism

Chinese Taoism emphasizes the ancient Yin-Yang circle, in which black and white halves flow into each other and each contains a circle of the opposite within itself, showing the inadequacies of rigid dualisms, flowing paradoxically in tension and harmony in the Way of deepest eternal mysteries. The *Tao te Ching* says: “The Tao is an empty vessel; it is used, but never filled. . .hidden deep but ever present” (Lao-Tzu 1972, poem 4).

## Tibetan Buddhism

Today’s most complex mandalas are the colorful Tibetan Buddhist sand mandalas. They are elaborate, detailed circular designs made with colored sand by monks, with well-developed metaphysical interpretations. A mandala in Tibetan Buddhism is a map of the spiritual cosmos, an axis mundi, a cosmic center whose purpose is, like smoke going up the smoke hole of a circular tent, to commune with the transcendent realms. This results in a sacred spiritual transformation for those who make it. Tibetans believe that the mandala was invented by the Buddha, who is said to have designed the first Kalachakra (“time-wheel”) mandala after reaching enlightenment. A *yantra* is a purely geometric mandala, with no deity pictured, typically with several overlapping triangles.

Another type of Tibetan mandala is the “world wheel,” held by the god of death Yama, portraying the various forms of suffering in the world, from the central rooster (lust), snake (envy), and pig (unconsciousness) to death holding all the Earth’s suffering, surrounded by garden-like, peaceful trees, ducks, clouds, and birds.

A master monk supervises the highly liturgical mandala construction for a novice initiate. A deity is commonly pictured at the geometric center and is the central theme of a mandala. The making of a mandala is a ritual of restoring the ideal principles of things to Earth. The adepts involved both bring the cosmic energies down into the mandala and reawaken the immaculate principles within themselves. Giuseppe Tucci describes the ritual of making and contemplating a mandala as an “epiphany”:

...[one] comes to be identified with the center of the *mandala*, the point from which all goes forth and to which all returns and from where the archetypal essence stream forth in luminous rays which pervade the whole world. . . (1973, p. 105).

The mandala is intended to balance, like spokes around the center of a wheel, the confused mixture of earthly passions and consciousness, good and evil. In some mandalas, a god and goddess may embrace in Tantric fashion, making love to release the inherent Buddha nature. Other mandalas reflect the Kundalini tradition of locating various archetypal cosmic powers on the line of the spine, rising from the most coarse to the most refined, each Chakra spot symbolized by a mandala. The most important dynamic of the making and contemplation of a mandala is to visualize a divine principle or Buddha, bring it down from the transcendent realm, realize that it is already in one’s own heart, and awaken it.

## Kalachakra Mandala

The Tantric Kalachakra mandala has roots in Indian tradition. The “wheel of time” was the favorite of the 14th Dalai Lama. Making it is to promote spiritual peace in individuals and on Earth. It portrays a square divine palace within a circle of colorful symbols, full of deities.

Journeying toward the center, the god Kalachakra is visualized embracing his female partner Vishvamata in his arms. He is the sun; she is the moon. Together, they unite compassion with absolute wisdom. In the center is the Tibetan blue *vajra*, symbol of the diamond scepter or thunderbolt. This the participants must melt into, in order to be purified and be reborn beyond this world into the pure essence of the emptiness of the absolute (Crossman). When the mandala ceremony is complete, the sand is swept into a container that is returned to the Earth or waters, an expression of the impermanence of all things, even sacred mandalas.

## Industrialism

The industrial era also has its unconscious mandalas, such as the early oversimplified model of the atom as a miniature solar system with a nucleus surrounded by cycling electrons, symbolizing the foundation of material/electronic existence. The culminating space age mandalas are the images of Earth seen from the moon and about 150 billion galaxies seen from satellite telescopes in deep outer space. Thus, for many, space travel consciousness has morphed from a proud image of technological space conquest to a more awesome vision of the delicacy of our home in the vastness of space, needing ecological harmony, more than the spirit of conquest of nature. So far, the astronaut most changed by his cosmic vision was Edgar Mitchell, aboard Apollo 14, the second trip to the moon, experienced a mystical transformation of his “dyed-in-the-wool atheism.” Looking at the magnificent view of Earth and outer space, he:

experienced a grand epiphany accompanied by exhilaration .... nothing short of an overwhelming sense of universal connectedness. I actually felt what has been described as an ecstasy of unity .... the molecules of my body and the molecules of the spacecraft itself were manufactured long ago in the furnace of the ancient stars that burned in the heavens about me .... There was an intelligent process at work. I perceived the universe as in some way conscious (Mitchell 1996, pp. 3–4).

While in a minority among space scientists and engineers, Mitchell’s psychological and spiritual transformation was profound. On his return, he founded the Institute of Noetic Sciences (<http://noetic.org/>).

## Mandala and Faces

Claudia Bader

Institute for Expressive Analysis, New York,  
NY, USA

This entry discusses how mandalas resonate to the experience of seeing the face. This author has noticed that the face and the mandala share the same underlying geometry, implying another level of the power of the mandala in the human psyche.

Mandalas are geometrically based forms which evoke a sense of the sacred, personally and universally. Mandala is a Sanskrit word for circle or a disk-shaped object. This circle has special qualities, combining the ideas of circumference and center at the same time. Just as the definition is integrative, the form of the mandala integrates opposites in its geometry. The eternal aspect of the circle, which has no beginning and no end, is combined with quadrated forms, most commonly a cross within a circle (Fig. 1). In Buddhist art, they are most often painted meditation devices.

A circle on a page creates an inner and an outer space; in art therapy this quality is used for reflection on the self, as well as the centering and

**Mandala and Faces, Fig. 1** Basic geometry of a mandala

**Mandala and Faces, Fig. 2** Basic circle of the mandala

containing aspects of the form. A recent replication study reaffirmed that coloring in mandalas did reduce anxiety, more than coloring a plaid design or coloring on a blank paper (van der Vennet and Serice 2012) (Fig. 2).

### The Face

The importance of the human face has long been observed. Karen Machover (1971), a pioneer in “draw a person” projective tests, made a number of points about the significance of the face. Faces are the most individually identifiable part of our physical being and the most constantly visible. She stated that subjects, when asked to draw a person, no matter their age, often offer a face or head as the completed drawing. Body parts, such as torsos, legs, or arms, are never drawn on their own to represent a person (Machover 1971, p. 40).

**Mandala and Faces, Fig. 3** Copy of an early scribble

Seeing and being seen is a face-to-face encounter. Before we can crawl or walk, we are held. Much of our time in early life is spent gazing into our mother's face. Winnicott (1971) was acutely attuned to the importance of the face; he made the point that when the infant sees the mother's face, what he sees is himself (p. 112). Winnicott also recognized that there is mutual response between mother and baby, with the face the crux of the communication. Beebe (2005), citing Bower (2001), states "Research using brain imaging suggests that faces enjoy special status in the brain. . . neural activity in the temporal lobes . . . surges twice as much when adults watch faces vs. other objects." She also makes the point that "Facial communication operates. . . largely out of awareness" (pp. 90–91). Eigen discusses the human face, talking about it as the most significant "organizing principle in the field of meaning" (Eigen 1993, p. 56).

In early developmental art, the mandala form and the face are interconnected. Mandala forms emerge very early on, in the scribbling stage which occurs from 18 months to 4 years old on average. These forms are one of the graphic precursors to the first drawn faces, and these earliest faces have a mandalic structure. Children start to draw around 18 months old. Before a child can draw a recognizable face, his or her drawings go through several stages: random marks like squiggles and scribbles (Fig. 3). Children practice combining shapes and squiggles; Rhoda Kellogg (1970) calls these combines. One of the earliest combines has a mandaloid form (Fig. 4).

**Mandala and Faces, Fig. 4** Copy of typical mandaloid scribble (2 years old)

**Mandala and Faces, Fig. 5** Copy of a typical 3-year-old drawing of a human

The earliest images of humans usually have a mandala formation, with a huge head with markings at the approximate place of the cross in a mandala (Fig. 5).

Another aspect of the mandala's power may be connected to the geometry of the face, for the face has a mandalic structure. In learning to draw, artists are trained to see the underlying geometry in physical form. To draw a face with accurate proportions, you learn that the space from the top of the head to the eyes is approximately the same distance as the eyes to the chin (Edwards 1989,

**Mandala and Faces, Fig. 6** The basic geometry of the face as learned in drawing

pp.141–142). As far as a mandalic structure is concerned, the horizontal axis is the eye line and the vertical axis being the line created by the nose. This is similar to the basic structure of the mandala (Fig. 6).

### Psychological Aspects of the Mandala

The levels of psychological resonance of the mandala may be thought of in this way: the circle of the mandala creates a symbolic holding environment like the circle of mother's arms. The face has a loose circular form, and in the face are the eyes, concentric mandalic forms. Finally, the core facial architecture is similar to that of a mandala, the circle with a quadrated form. Thus, the mandala may evoke the face, our earliest mirror, the early holding environment of our mother's arms, as well as the experience throughout our lives of looking into faces, our most human aspect.

### Mantra

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

Many adherents of eastern religions, especially Buddhism and Hinduism, use brief verbal phrases or verses as objects for meditation. Such *mantras* are numerous, but best known are the *Avalokiteshvara mantra* of the Tibetan Buddhists, “*Om mani padme hum,*” and the *Gayatri Mantra* which is widespread among the Hindus:

Om Bhur Bhuva Svaha  
Tat Savitur Varenyam  
Bhargo Devasya  
Deheemani  
Dhi Yo Yonah Prachodayat

Any personally meaningful sacred word or phrase can be used as a *mantra* or as a focus for centering prayer. Well known among Christians is the “Jesus Prayer” described in *The Way of a Pilgrim*, a famous Hesychast text: “Lord Jesus Christ, have mercy on me, a sinner.” In Judaism, the simple word “*Shalom*” can be used repetitively as a *mantra*, or the *Shema Israel* can be said, affirming the unity and love of God. The comparable verse in Islam is called *Dhikr*.

Recent psychosomatic research (e.g., following Benson 1976) has shown *mantra* meditation to be very beneficial in eliciting the “Relaxation Response,” thus attenuating anxiety and improving physical (especially cardiac) health and pain reduction.

## Māori Religion

Regina Pfeiffer  
Religious Studies, Chaminade University,  
Honolulu, HI, USA

### An Intimate Relationship with the Natural World

In the Māori indigenous religious tradition of the islands of *Aotearoa*, commonly known as New

Zealand, one of the more common cosmology narratives situated the beginning of the earth and sky in the darkness, *Pō*, that dwelt between the primal parents, *Rangi* (Sky Father) and *Papa* (Earth Mother). Briefly, in one version retold by Elsdon Best (1924), the two parents clung tightly to one another as their progeny were brought forth in the darkness betwixt their bodies. The all-male progeny, tiring of the cold and dank conditions, and seeing a glimmer of light, decided to separate their parents. *Tāne*, one of the seventy sons, persuaded several of his brothers to assist him in parting their parents. Using four poles held by four of the brothers who later become identified with the directional winds, the progeny struggled to separate the parents who clung even tighter. As a result, the sons were forced to sever the primal parents’ arms in order to part them. For the Māori, the red ochre of the earth and the red glow in the sky came from the blood of the primal parents (Best 1924).

A more recent and briefer version in the text, *Māori Art and Culture*, described how each of the major progeny, *Tūmatauenga*, god of war, *Tangaroa* of the oceans, *Rangomātane* of raw foods and cultivated crops, and *Tawhīrangimātea* of the howling wind, all attempted to free themselves. However, it was *Tāne Mahuta* who successfully pushed and parted his parents (Awekotuku 1996, p. 26). This cosmology expresses a strong relationship with the natural world. Psychologically it implies a primordial struggle to emerge from the archaic darkness or unconsciousness or traditions. The sons who tire of the cold and dank depths see a light and struggle to separate from their parents, or be born into the light of consciousness, even severing their parents’ arms, or their control. Thus, they gain names and become the first differentiated gods – war oceans, food, and wind. These most important powers are close to nature. War is a primeval aggressive instinct, ocean essential territory to master for island cultures, food of course basic to survival, and wind to master for sailing.

### Atua: Gods

While many cosmogony stories did exist, many of them did not provide a detailed list of all the

various gods known as *ātua* in Māori. The term *ātua* described gods in general and could be used to designate the different classes of Māori gods, ancestral, family, or malicious spirits. Best (1924) identified four classes of *ātua*. The highest class of gods had no physicality to them. Whether the Māori did have a Supreme Being called *Io* prior to Western contact remains questionable, but, according to Best (1924), *Io* would be considered the highest of the Māori gods. Best (1924) described *Io* as the first class.

The second class could be identified as departmental, tutelary beings who also had no physicality to them. It was in this class that Best (1924) placed the gods of *Tāne*, *Tū*, *Rongo*, and *Tangaroa* their more common and abbreviated names. *Tāne* was considered the most important of the departmental gods within the Māori religious tradition because of his actions in freeing the primal parents. Among many of the attributes assigned to *Tāne*, a major one was that he was the originator of the forest and trees. The second of these gods *Tū* was the main war god whose name often was lengthened to provide further descriptive aspects of his actions and realm. *Rongo*, the third of these tutelary beings, was the god of cultivation, cultivated foods, and peace. The fourth one, *Tangaroa*, was associated with the ocean, including fish and other denizens. Yet, while these gods were similar in function and name with those of other Polynesian groups, the Māori had no major constructed sites or temples dedicated to the various *ātua*. Instead, the religious rituals were held in places that pertained to the activity of the particular god. For example, the battlefield would be the site of religious rituals and incantations dedicated to *Tū* (Best 1924; Moore 1995) (Fig. 1).

While the higher levels of gods had no physicality, the gods in the lower levels could have had visible forms or were associated with natural phenomenon. Rainbows, water, volcanoes, and lightning – all were manifestations of gods, but not the gods themselves. According to Best (1924), these lower-level gods were more active in human lives. As such, a particular relationship developed between humans and gods. “The feeling of the Māori is very marked

**Māori Religion, Fig. 1** Maori warrior (Photo by Andrew Turner, 2006, Rotorua, Bay of Plenty, New Zealand. Public Domain. [http://en.wikipedia.org/wiki/File:Young\\_Maori\\_man\\_dancing.jpg](http://en.wikipedia.org/wiki/File:Young_Maori_man_dancing.jpg))

in his mental attitude toward the stars and planets, which he greets in song and speech as old, old friends (Best 1924, p. 121). These lower-level gods often were appealed to for signs of good fortune, for protection, and for warnings of impending dangers (Best 1924).

## Tapu

The fourth level included ancestral spirits. Perhaps one of the more well known of these lower-level gods is Maui. Maui's exploits included discovering the secret of fire, snaring the sun to slow its movement across the sky, and fishing the islands from the waters. This god Maui brings civilizing skills, like Prometheus in ancient Greece. Yet, these gods in the lower

levels could be the source not only of good fortune and health but also of disease and death. Illness, misfortune, and death were attributed to two main causes, either an evil demon or spirit or the violation of some *tapu* that resulted in an offense against a god (Best 1924, p. 131). According to Ngahua Te Awekotuku, “*Tapu* has many meanings, references and interpretations. It may be a descriptive or prescriptive condition, making an object, person or environment restricted and inaccessible to human contact, prohibited and out of bounds” (Awekotuku 1996, p. 26). Jean Smith noted that *tapu* and the rules that governed it fell into various fields of practical concern, such as birth and death, status relations, and the preservation of property (Smith 1974, p. 6). Birth and death were examples of the passage between the ultrahuman and human worlds; hence, they were *tapu*. Awekotuku (1996) included these areas as *tapu* and added the body parts and ornaments of a chiefly person, incidental remains of their hair, and nail clippings (p. 27). Furthermore, “pollution of a man’s *tapu* was an insult to his gods” (Smith 1974, p. 27). Persons themselves were *tapu* in the Māori tradition either by birth or by accomplishment. If by birth, then they were *tapu* because of their spiritual *mana*, sometimes translated as power, that resulted from their descent from the gods themselves. In the Māori tradition, the more direct one’s descent from the gods, the greater one’s *mana*, *tapu*, and rank (Smith 1974, p. 27). Albert Moore (1995) noted that *mana* was hereditary, coming from the ancestors and “manifested in the prestige of chiefs and orators,” and that the *iwi*, tribe, depended on it (p. 167). Moore (1995) added that *mana* could be both beneficent and dangerous; hence, *tapu*, sacred restrictions, was necessary to sustain and protect *mana*. However, when a *tapu* had been broken or a contamination of some form occurred, *tapu* removal was required (Smith 1974).

### Memory Carvings

While some of these religious practices and beliefs, such as the four major tutelary gods,

*tapu*, and *mana*, are similar to those of other Polynesian groups, what is distinctive about the Māori religion is the use of elaborate carvings to decorate the major gathering and assembly house, *whare whakairo*, located on the village *marae* or courtyard. Prior to European or Western contact, the houses were those of the chief of the *iwi*, the tribe, to which the people would gather at the *marae*, courtyard for social, political, and military concerns (Moore 1995). Adorning both the interior and exterior of the *whare whakairo* were elaborate carvings that often depicted some of the gods, ancestors, and their relationship with human beings in a stylized manner. A. T. Hakiwai noted that the: “Māori world is a world of unity and coherence. People, the universe, stars, mountains, rivers, rocks and fish are all connected through genealogy, demonstrating the intimate relationship between Māori and the world around us” (Hakiwai 1996, p. 52). These carvings not only expressed this belief but also utilized the unique woods of the islands, *Aotearoa*, and included the red ochre coloring that harkens back to the separation of *Rangi* and *Papa*. Hence, the stories continue to live in the carvings and memories of the Māori people.

Another distinctive feature of the Māori religious tradition can be traced, perhaps, to the cosmogony story of the forceful separation of the primal parents. More warlike than any of the other Polynesian peoples, the Māori peoples were known for the *haka*, a chant. The motions, words, and tonal quality were meant to instill fear in the enemy and strength to the individual warriors who performed the *haka*. While some *haka* did greet guests, the more powerful forms of the chant prepared the individual for war. Psychologically, this strong aggressiveness seems to keep alive the fight to separate from the embrace of the parents (Fig. 2).

### Sacred Land

Yet, when Europeans arrived in *Aotearoa*, the Māori struggled to maintain their religious and cultural identity. One major reason for this struggle was colonization and land development that

**Māori Religion, Fig. 2** Maori ancestor TahuhuNgatiAwa. (House ridgepole of NgatiAwa tribe, Bay of Plenty, New Zealand. c. 1840. Public Domain. <http://en.wikipedia.org/wiki/File:TahuhuNgatiAwa.jpg>)

separated the Māori from the land. In the Māori religion, the close connection between the people and the gods extended to the land as well. Some of the genealogical stories, particularly those of the *ariki* or chiefly line, linked directly to *Io*, the uncreated being (Cadigan 2001, p. 125). Furthermore, according to Tui Cadigan, “Through links to *Io* all things have *tapu*” (2001, p. 125). Thus, land as well as people was sacred. As a result, kinship was not only with the people both as a tribe and family but also with the gods and the land. According to Cadigan (2001), *whanaugatanga*, kinship, was about right relationship “*ki te Atua*, (sic) (to the Supreme Being); *ki nga tangata*, (to people) and *ki te whenua*, (to the land). The word *whenua* means land and placenta” (Cadigan 2001, p. 125). As the European colonizers, called *Pakeha*, claimed

more and more land ownership in the mid- to late 1800s, the Māori were displaced from their native land. For the Māori, Cadigan (2001) noted, selling the land was akin to selling one’s mother. Furthermore, “a landless Māori is literally a non person, there is no ‘place’ they belong” (Cadigan 2001, p. 126). Psychologically and spiritually, the Māori connect deeply with the land as their foundation of personal identity and as their source of life.

The sacredness of the land extended to the mountains of Ruapehu, Tongariro, and Ngauruhoe on the North Island in what is today Tongariro National Park. Mel White (2009) noted that the Māori “look on all three volcanoes with awe and wonder and consider them *tapu*” (p. 82). This area at first was listed by the United Nations as World Heritage Site for its natural beauty. Later, in 1993, the national park was also granted the designation as a cultural site, the first natural site to receive such distinction, because a delegation that included Māori elders was able to persuade the UN committee to make that decision (White 2009). Even though the religion of the Māori no longer exists as it once did, the sacredness and importance of ancestors, family, and land remain an integral part of the identity and spirituality of the indigenous people of Aotearoa, the Māori.

## María Lionza

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

*La Reina Santa Maria de La Onza* (The Queen Saint Mary of the Boar), María Lionza, is a goddess whose worship is very popular in Venezuela and nearby countries. Venezuela was colonized by Spain in 1522, when war and measles greatly weakened the Indigenous population. Slaves were imported from Africa, and relations among all the races over time bred a large class of *mestizos*, or mixed-bloods. Venezuela won independence from Spain in 1830, exported cocoa and coffee, then a major oil boom began after WWI. But society suffers from corruption, crime, and drug traffic (The truth; World Drug Report). Its state oil-producing company, PDVSA, has a US subsidiary named Citco. With a population of 29 million, Venezuela is ruled by descendants of the Spanish Conquistadors. The patriarchal tradition of South America's Catholic Church tends to support the conservative men of the upper class, and political conflict long centered around the socialist President Hugo Chávez (1954–2013). The poverty rate is about 60 %. The government is promoting social programs focusing on health, education,

**María Lionza, Fig. 1** Statue of María Lionza on the Francisco Fajardo Highway in Caracas. (Original as: Estatua de María Lionza en la autopista Francisco Fajardo). (This figure is licensed under the GNU Free Documentation License [http://en.wikipedia.org/wiki/File:EstatuaMaria\\_lionza.jpg](http://en.wikipedia.org/wiki/File:EstatuaMaria_lionza.jpg))

and poverty. The population now is about 68 % Mestizo, 20 % White, 10 % African (Heckel, Lieuwen, Martz & McCoy), and 2 % Indigenous Indians (International). This is the social background for María Lionza's religion (Fig. 1).

There are two major symbolic mythic narratives about María Lionza's origin. The first is common among the elite classes. It describes María as the daughter of a Spanish *hacienda* owner who was "crazy," would run away naked, and be found talking to animals. Many among the Catholic elite scorn her "cult" as "black magic" where they sacrifice animals. This narrative places María as an offshoot of the upper class who rejected their social norms and expresses fear of her "cult" as crude and dangerous.

The second narrative of María Lionza's origin includes various accounts of her as a beautiful

green- or blue-eyed daughter of an Indian chief of the sixteenth-century Yacurá region, struggling for survival against the Spanish Conquistadors (Varner 2009). Since Indigenous and African people typically have brown eyes, the image of María's blue or green eyes suggests that, if the daughter of an Indian chief, she was *mestizo*, probably meaning the chief seduced a white girl, which might anger the Spanish. In this version, she was sacrificed to or was grabbed by a deadly Anaconda snake in a lake. Snakes are highly symbolic of life/death/transformation/mystery. Aquatic Anacondas are some of the largest snakes in the world and crush their victims. María Lionza was resurrected as a goddess of nature, going through death and resurrection as many divinities on earth do, showing their eternal nature as power over death. Or she exploded from inside the snake, showing her great power, and became the El Sorte mountain, where she is now worshiped as a nature spirit, who speaks through mediums and priestesses. Why the appeal? One author says:

Humans go for various reasons: to worship the spirits, in search of *amor, salud y dinero* (love, health, and money), to be cleansed, to talk with the spirits and ask them for advice, and in search of a general sense of well-being (Placido 2001).

This version expresses strong Indigenous closeness to nature. Another myth tells of her as a native girl attempting to intercede with the conquering Spanish armies to save her people but was killed for her efforts. This expresses Indigenous feelings of resentment and betrayal. After death she came back to life as a boar (*onza*) – resurrection again – or as a woman riding a boar or tapir, as is portrayed in the daring statue in the middle of Caracas' highway, where she holds up a female pelvis, and people add wreaths.

María Lionza's devotees see their practice as an overlapping supplement to, not a replacement for Catholicism, which has baptized about 90 % of the population. María Lionza tells her devotees that they must be baptized Catholics and practice a positive morality (Varner 2009, p. 37). In messages sent through mediums, an anthropologist reports that:

She uses a very learned language and says "Let us not make money into a god. It is possible to buy a cross, but not salvation. Do not make promiscuity a god." . . . their practices are about beauty and purity, about order and morality, about becoming clean and behaving properly. It is of this pureness and morality that the spirits speak. . . . Spirits tell married couples to stay together, young girls not to have sex before they get married, young boys not to fool around . . . . Requests or attempts to act against the teaching of the Catholic Church and of mainstream morality are judged very negatively by both mediums and believers (Placido 2001).

Her believers commonly go to church then go pray at María Lionza's altars with her statue. It is a syncretic blend of Catholic beliefs, such as her name María and candles, and African traditions, such as drumming and healing, and Indigenous practices, such as cigars and spirit possession. María Lionza is a living, energetic syncretic goddess with a large following and a powerful psychological gift to give her people. It is not a quiet, reserved religion, but is a dramatic synthetic image emerged from the collective unconscious of Venezuelan history and society.

Most of María Lionza's devotees are people of the large poor class, although all kinds of people come to her ceremonies. On October 12, many celebrate "Columbus Day," renamed *Día de la Raza* (Day of the [meeting of the] Races). But the masses of poor, who live in sprawling, crowded, violent *ranchos* (shantytowns) like "Little Hell," celebrate "The Day of Indigenous Resistance." This is part of the reason for the popularity of María Lionza. She attracts large numbers of devotees, many who feel helpless, victimized, and oppressed. These feelings can lead to passive despair or angry violence. But many find strength in María Lionza's psychological and spiritual healing. Her celebrations can be a wild, anarchic, exotic carnival of wonders.

They come to María Lionza with great collective wounds, inner and outer. For example, in one widely publicized case, Linda Loaiza López, at age 18, in 2001, on her way to register for college in Caracas, was kidnapped and kept by an upper-class man for 3 months as a sex slave, repeatedly raped and tortured. Finally, the police rescued her. Her ears were destroyed, eyes and teeth

damaged, and more. Hospital photos were widely published in Venezuela, arousing outrage. The trial was delayed for 3 years, judges refusing to take the highly charged case. Finally, her torturer, whose father was a high-level politician, was acquitted on the unproven assertion that she was a prostitute (Nichols 2006, pp. 74–75). Linda spent over 580 days in the hospital. An appeal trial in an international court began in 2005, after which her attacker was convicted and spent 6 years in jail. Linda pursued a Master's Degree in International Law and "regained her smile" (Guerrero 2011; Ross 2005). The case was widely seen as a symbol of cruel oppression of women, even among elite women. This is an example of why, as Nichols says: "the native cult of the indigenous goddess María Lionza, which offers an accepted avenue for women's public voice, has continued to grow" (Nichols 2006, p. 76). As a goddess, she offers to women who identify with her a feminine healing path to the divine. She is like a wild sister of Mexico's Our Lady of Guadalupe but both Virgin and passionate Fertility Goddess.

Although the elite class in Venezuela sees María Lionza's religion as a threatening "cult," neutral religion scholars describe religions through the phenomenological method of "bracketing" judgment about the truth or value of a religion. There are no reports of negative "cultish" behavior, in the sense of deception or captivity. But while María Lionza is said to stress a positive morality, as a noninstitutional religion, there is little control over who practices it. Consequently, there is a wide range of believers, as with any religion. Some stress proper morality and not rebellion. Others emphasize Indigenous values. At the other extreme, some "holy thugs" believe in her with a Robin Hood kind of morality (Getzels 2010). Some scholars do not condemn them (Nichols 2006). María Lionza's religion is now legal and practiced on the *Cerro* (Mountain) *de María Lionza* National Monument.

In Caracas a magnificent statue of María riding the boar, bare-breasted (symbolizing nurturing and daring) and holding up a human pelvic bone (symbolizing female birth-giving), was erected in 1951, rising 23 ft on the median of

the Francisco Fajardo main thoroughfare. It is the inverse of the traditional public statue of a macho military hero riding a horse, phallic sword aloft. It is a bold symbol of the power of the archetypal feminine strength of a new religion that gives her devotees emotional strength and self-esteem amidst social harshness (Nichols 2006, p. 79). The pelvic bone that María holds up high in public uplifts feminine strength. The writer Yolanda Pantin urges María's devotees to "Believe, believe in something/that is not corruption" (Pantin 2005, p. 15), and "Hail the queen/Who remains in the waters/I pronounce this prayer/Before your statue" (Nichols 2006, p. 99).

To those who call themselves *marialionceros* (those who practice the María Lionza's religion), she is the central divinity in a trinity including the Indian Chief Guaicaipuro and the black slave el Negro Felipe, both victims of colonial wars. They are leaders of a number of changing "courts" that lead rituals, such as the Indians, the Medicals, the Juans, the Teachers, the Africans, the Saints, the Criminals, and the Revolutionaries (Nichols 2006, p. 78).

María of the Boar represents the divine protection of women, nature, and oppressed peoples who feel helpless. They go to her ceremonies and pray to her for strength. Nichols says: "It is evident that María Lionza represents a protective figure for society's underdogs, women, the native peoples, persons of African descent, the poor, and the disenfranchised" (Nichols 2006, p. 80). Songs, poetry, and TV films celebrating her and her priestesses (*santera*) have been popular (Nichols 2006, p. 94).

María Lionza's religion gives women the opportunity to be priestesses. Mediums (*material*) of the spirit world arise spontaneously, and the priestesses (*bancos*) translate and interpret for the mediums. By becoming María's *bancos*: "the marginality of women from political power is overcome," says Gustavo Martin, and "through a holy path, woman is elevated to power and all the masculine spirits that appear in the cult are subordinate to her" (Nichols 2006, p. 95). The ritual dance and trance possessions "are true acts of catharsis through which individuals let loose their repressions" (Nichols 2006, p. 96). Women

especially shed their passivity and anxiety and regain strength (*fuera*) to endure or overcome suffering. The pained ego-consciousness of these believers is drawn closer to their archetypal Self, where the wounded ego is strengthened. Nichols says:

The figure of María Lionza not only legitimizes the position of women as powerful beings to be respected, but also opens up the possibilities for women's representation beyond the traditionally assumed archetypal trinity of Virgin, Whore, and Nun (Nichols 2006, p. 98).

Mediums say things such as: "I am Yara, from the sky/heaven of the Venezuelan aboriginal Indians. But María, this beautiful Hebrew name, forms part of my true identity." She blends fierce indigenous natural power and Christian spirituality. "María Lionza insists that her followers practice mainstream morality, benevolence and kindness, not anger" (Nichols 2006, p. 97). As a Goddess, María Lionza offers spiritual power, such as the "gift" of being a medium, as a "Queen" she offers worldly power, and as a "Mother," reproductive power and protection (Nichols 2006, pp. 97–98).

Thousands of pilgrims gather at El Sorte mountain on "The Day of Indigenous Resistance" to participate in the indwelling spirit of María Lionza. The air is full of smoke from fires and cigars, the sound of many devotees pounding loud drums, and gunpowder exploding in the open fires – the collective unconscious fires up! The excitement begins with the dramatic rituals of the many "courts," priestesses, priests mediums, and the *Velaciones* (theatrical healing rituals). Cigar smoke is blown around to guide helpful spirits and keep away evil spirits. Perfume and rum are in the air. Some go into trances, trembling with glazed eyes and boldly slice their tongues with razors, so that blood flows down their chests, while the onlookers shout "*fuera!*" Women bring babies to them to be kissed with the mark of blood. At night fires flame high, devotees jump through the flames and walk over the red-hot coals (Cahana). The sounds of one shouted word echo: "*fuera,*" (strength), a plea to María Lionza for *strength* to overcome the oppression they feel.

Numerous rituals of healing are organized by priestesses and priests, where those seeking healing of all kinds lie down, are surrounded with lines of chalk powder, wine, fruit, and candles. Mediums speak the words of deceased ancestors and spirits to advise and comfort the crowd. The next day many sit meditatively, recovering in the cool waters of the Yaracuy River, reflecting on the intense rituals where they have felt María Lionza's *fuera!*

## Martín-Baró, Ignacio

Daniel J. Gaztambide  
 Union Theological Seminary Program in  
 Psychiatry and Religion, New York,  
 NY, USA

Ignacio Martín-Baró (1942–1989) was a Jesuit priest, philosopher, and social psychologist who is most recognized for using the theological-ethical-political insights of liberation theology to develop a social justice-oriented liberation psychology.

Drawing on insights from liberation theology, Paulo Freire's pedagogy of the oppressed, critical/political psychology, and social psychology, Martín-Baró conducted research projects with a "preferential option for the poor" and oppressed people of El Salvador, with the intention of raising awareness and empowering them in the midst of social, political, and war-related trauma. Due to his political positions and socially progressive psychological research, he was murdered by the Salvadoran army along with five other Jesuits and two employees at the Central American University in El Salvador.

Ignacio "Nacho" Martín-Baró was born on November 7, 1942, in the municipality of Valladolid, Spain. He became a novice of the Society of Jesus in 1959 and was transferred first to Villagarcía and then to Santa Tecla in El Salvador for his second year. From 1961 to 1965 he was sent to study at the Catholic University of Quito (Ecuador) and later to the Javeriana University in Bogotá, earning a bachelor's degree in philosophy and a licentiate in philosophy and literature. He returned to El Salvador in 1966 to teach at the *Externado* San José and in 1967 also began teaching philosophy and theology at the *Universidad Centroamericana "José Simeón Cañas"* (UCA or Central American University) in San Salvador, the capital. This was short lived, as Martín-Baró left that very year for Frankfurt and then Leuven to study theology. He returned once again to El Salvador in 1970 to finish his last year of theology, due to encouragement from his close friend, the liberation theologian Ignacio Ellacuría. Due to a prior interest he developed in Bogotá, whereby he consumed a variety of writings from psychology, Martín-Baró began studies in the field at UCA. He earned a licentiate in psychology in 1975, during which time he was also teaching the subject in the National Nursing Academy of Santa Ana. Desiring to expand his knowledge of psychology, he earned a master's degree in social sciences and a doctorate in social and organizational psychology from Chicago University from 1977 through 1979. Although he was in the United States during this time, both his master's and doctoral theses showed a deep concern with the growing

social and political turmoil of El Salvador, as he wrote about group conflict and the living conditions of the lower classes in the Central American country. Although deeply involved in his studies, he was attentive to the latest news from El Salvador.

After completing his studies in the United States, he returned to El Salvador to become a lecturer and head of the psychology department at the UCA. From 1981 through 1989 he acquired numerous administrative and academic positions within the university as well as became member of the editorial board of numerous social science journals, such as *Estudios Centroamericanos* (Central American Studies) and the *Journal of Salvadoran Psychology*. Apart from these endeavors as a scholar, Martín-Baró in his capacity as a priest first served in the district of Zacamil, which lacked a clergyman in the early 1980s, and afterwards performed sacramental duties in the parish of Jayaque, a poor rural municipality some 30 km from San Salvador. It was in this role that he appeared closest to the Salvadoran people, involving himself through pastoral and community care and helping construct necessary structures to improve their living conditions (such as a new bridge, or providing wood and materials to fix their homes, etc.).

As a result of his studies in liberation theology and social psychology, of Paulo Freire's pedagogy of the oppressed, political/critical psychology, as well as his experiences as a Jesuit in El Salvador before and during the Salvadoran Civil War (1980–1992), Martín-Baró developed a system of psychological thought he termed "liberation psychology." In developing liberation psychology, he critiqued the general state of Latin American psychology for its "slavery" and "scientific mimicry" – the uncritical importation of North American psychologies for the purposes of gaining prestige and power, as ideologies alien to the experiences of the Latin American people, with its attending positivism, individualism, hedonism, and ahistoricism. He argued that such imported constructs tended to problematize the experiences of the common and poor people of El Salvador while

ignoring structural injustice and thus serving the interests of the ruling classes. In the stead of imported psychology, he proposed a liberation psychology based on three guiding principles of liberation theology: a Christian God of life who scorns injustice, the primacy of orthopraxis over orthodoxy, and the preferential option for the poor. Based on these ethical and philosophical commitments, Martín-Baró argued that psychology should ally itself with the oppressed people of El Salvador and develop research projects that would help articulate and give voice to their experiences, fostering the development of a critical consciousness (*concientización*) of their personal, social, and political conditions. This liberatory aim would be accomplished by psychology working not for but with the Salvadoran people and their cultural and religious values, recovering their historical memory as people and as communities surviving in limit situations, and by subverting the dominant narratives of the powerful and allowing people to experience their reality in more critical and liberatory ways, giving them the tools necessary for psychological and collective liberation. One particularly important application of this theoretical lens was in the development of the University Institute for Public Opinion in 1986, which Martín-Baró (as the only doctorate level psychologist in the country at the time) used to study popular opinions about the war, the US government's involvement, and the Salvadoran government itself. He in turn reflected these opinions back to the common people in order to inspire discourse, reflection, and critical consciousness.

Because of this liberation psychology, its political ramifications, and the research projects undertaken through this lens, Martín-Baró's life became threatened by the dominant conservative political forces of El Salvador. In order to protect his colleagues and allies at the UCA and himself, he made numerous trips outside the country, especially to the United States, to have intellectual exchanges with colleagues in social psychology and increase the visibility of the work being done in El Salvador. Such academic rapport led to his group and some North American colleagues

extending his public opinion research more broadly to Central America, through the establishment of the Central American Program of Public Opinion in 1988.

Tragically, on the evening of November 16, 1989, Ignacio Martín-Baró was killed along with five other priests and two employees on the UCA campus by US-trained Salvadoran troops. It is reported that he spoke out against injustice to the very end. His last words, spoken over the gunfire directed at his close friend Ignacio Ellacuría, were “Esto es una injusticia!” meaning “This is an injustice!”

## Commentary

George Atwood and Robert Stolorow in their classic text *Faces in a Cloud* argued that all psychological theories are the product (at least in part) of the intricate and idiosyncratic cultural, historical, and subjective experiences of the theorist. Their intersubjective systems approach would contextualize all psychological theories, then, within the respective lives of their theorists. Such an approach to the study of psychological theory would be undertaken not as an attempt to invalidate the theory but to comprehend the theorist’s intent and vision.

Atwood and Stolorow studied various metapsychologies which claimed different universal forces motivated human behavior (Freud’s drives, Jung’s archetypes, Reich’s bioorganic energy, and Rank’s notion of the will) but in the end revealed the deep texture of the metapsychologist’s subjectivity. This subjectivity with its particular personal-social-historical location, it appeared, was in many ways forgotten (was unconscious) in the construction of theory.

In Martín-Baró’s construction of liberation psychology, one does not find decontextualized meta-constructs which claim universal validity and influence on human behavior (something he himself criticized of much North American psychology), but rather a set of assertions and theories developed out of his experiences as a Jesuit priest working with the Salvadoran people in the years before and during the Salvadoran Civil

War. In his writings and work, he himself contextualized his theories as the product of political, historical, and personal circumstances, developing research that unapologetically made a preferential option for the poor and displaced people of El Salvador. He made repeated conscious efforts to construct a psychology that validated the experiences of the Salvadoran people, allowing them to give voice to socially and psychologically repressed emotions and opinions. Liberatory psychological theories were to be crafted not as abstract universal principles developed in order to safeguard a subjectivity that craves recognition and social status but by immersing one’s subjectivity as a researcher in solidarity in the subjectivity of the oppressed. In Martín-Baró’s case the oppressed were not abstract political entities but the particular people suffering under oppressive regimes in El Salvador and Latin America.

Encounters with the Salvadoran people in a religious and rural context and with liberation theology and with liberation theologians such as Ignacio Ellacuría were of crucial import to Martín-Baró’s development both as a Jesuit priest and as a social psychologist. Although he was born and raised in Spain, liberation theology’s God of the oppressed with its preferential option for the poor can be seen as having fomented in him an identification with the people of El Salvador. Alternatively, it could be argued that his empathy and experiences with the Salvadoran people in a condition of sociopolitical oppression made him more attracted to the discourse of liberation theology. From the perspective of relational psychoanalytic research on God-images, the former case could be understood as the image of a God of justice and the oppressed affecting the transference-counter-transference relationship between Martín-Baró and his parishioners in El Salvador, while the latter suggestion could be understood as that same transference relationship affecting his image of God. Intersubjectively speaking, both dynamics could have been present, his experiences among the poor affecting his theology and his theology affecting his experiences among the poor. Martín-Baró’s patterns of relating himself with his environment,

his experiences, and his theology can be seen as deeply affecting his liberation psychology in an especially self-conscious way.

## Mary

Regina A. Fredrickson  
Blanton-Peale Institute, New York, NY, USA

Mary, maiden of Nazareth, Mother of God, preeminent follower of Jesus, has seized the

personal and communal religious imagination of believers. Down the ages and across cultures, Mary has been heralded in painting, poetry, prayer, and pageantry. Most often the intuitive psychology of personal and communal sentiments predates the theological articulation or liturgical celebration of Mary as virgin, mother, and companion.

Whether masterpiece or indigenous work, Mary's person is inextricably bound to her assent to her role in the Incarnation-Redemption and by appropriation to her foremost place within the Church, and within the pilgriming people of God. She is the attentive, inclined young woman whispering a thunderous *Fiat mihi* (Luke 1.38). She is the rounded, redolent Madonna gazing, swaddling, and nurturing her Son (Luke 2.7). She is the restrained, resplendent Hodigitria icon beckoning and presenting her regaled Emmanuel Child (Matthew 1.11). She is the wise woman crone surrounded by prophets and populace, penitents and patrons pictured in catacomb Orans etchings, sketched Coptic depictions, or embellished Renaissance family commissioned works.

The people of the early waves of evangelization were steeped in the mythology and archetypes of the goddess trilogy of maiden, mother, and crone. Agricultural peoples felt the power of the fecund, nourishing and sometimes punishing Great Mother, while others were comfortable with images of the mother-son, queen consort-ruler representations. Vestal rituals and festivals abounded. Paul preached amid Diana's temples. From a psychological developmental lens, the maiden becomes mother then evolving to the wise and companioning crone. Within faithful and orthodox tradition and theology, Mary was never deemed a goddess, yet there were epochs of popular excess, political contrivances, misguided homage, and stark purgings.

## Mary: Maternal Theotokos

British pediatrician and psychoanalyst, D. W. Winnicott, wrote of the intensity and perduring influence of the mother's early "primary maternal

occupation" [with her child]. His works convey the ongoing function of the mother's presence, her ordinary ministrations, and her facilitation of the integration of her child's psyche, soma, and mental development (Winnicott 1992: Chap. XXIV). Both psychological constructs are applicable to the centrality of Mary's motherhood as theologically defined in the patristic church. Her singular relationship to her Son, who was both the Logos and *Verbum* of God, and her evolving presence within the soma of the church were hailed at the Council of Ephesus in CE 431. Mariology followed Christology and Mary was decidedly declared Mother of God, Theotokos, and God-bearer. This proclamation affirmed that Christ was one divine Person, with both a divine and human nature. The emphasis of the council was to refute the several variations of heresy concerning the Person and nature(s) of Jesus. Mary was deemed mother of the fully human incarnate, second creation, and nature of the one Person. The response of the people further enunciated Mary as Mother of God.

The psychological literature is replete with references to the essentiality of the mother. The love relationship between the mother and son was seminal in Freudian thinking. For child analyst, Margaret Mahler, the mother's capacity of attentive empathy made her "a beacon of orientation [for the child] in the world of reality" (Bacal and Newman 1990). The pastor and psychoanalyst Harry Guntrip, writer of the mother-infant dyad, asserted that "the deepest thing in human nature is 'togetherness.' After passing through separation at birth to 'aloneness' . . . there still persists that oneness of the child with the mother . . . It remains as the secret foundation of the stillness, security and peace of the Brughes Madonna . . ." (1992, p. 269).

Scarce are the Scriptural accounts of Mary's lived and shared experiences. Yet, what is recorded of her is analogous to the motherhood constellation posited by Daniel Stern, infant researcher and psychoanalyst. For the new mother, there is the life growth concern for the physical and psychological well-being of her child. There is the oscillating questioning

of her capacity for "primary relatedness" and her efforts to secure the ties of attachment, security, cohesion, and affection. The synoptic Gospel accounts of the Incarnation, the infancy, and early hidden life of Jesus suggest that Mary's relational self was analogous to that of other mothers. She exhibited the normal tensions between her hopes and expectations and her fears and premonitions keeping all these things in her heart.

Stern continues in his delineation of this motherhood constellation affirming that the mother herself demands a "supportive matrix" and that she undergoes an "identity reorganization" as she evolves over time. The pericopes of Jesus' ministry and the subsequent Pentecost event reveal Mary's evolving communal self and the consequent demands for her psychological reorganization from virgin, mother, and preeminent companion to the followers of Jesus.

The mother-child dyad is a continuous flowing of mutual-reciprocal influencing, and while the externals of the early and deep maternal musings and preoccupations may dissipate, they are subject to reactivation over the mother's lifespan. Within the child, these early and intense emotional and neurological working models of the mother's presence, containment, and soothing can be elicited again as the "evoked companion" (Stern 1995, pp. 171–185). Through the centuries, such had been the reactivation of Mary's natural protection and the pilgrim peoples' eliciting of her evoked presence.

### Mary: Strong Maiden

Were we to visualize the maternity of Mary as a triphytic with its two covering panels, the first panel would depict Mary as a daughter of Abraham and virgin of Nazareth. This historical Mary and her choice of virginity is indeed a paradox, personally, religiously, and culturally. Mary lived in a multicultural milieu, a multi-governed political regime, and a marginalized position of poverty, gender, and religion. From another perspective, she was deeply knowledgeable and rooted in the Messianic prophecies and their

reference to the virgin (Genesis 3.15 and Isaiah 7.14). Living near trade routes, hearing many languages, and coping with competing cultural values, Mary could not be naive or complacent about her volitional virginity. This virginity grounded her personal sense of self as a singular “at-oneness” yet positioned her communal self with respect to her people and her God. Upon her visit to Elizabeth, her kinswoman (Luke 1. 46–58), Mary proclaims her integral fullness and magnifies and rejoices in her God. She aligns herself intergenerationally and affectively to our father Abraham and his descendants. She resonates with a fundamental option for the poor and oppressed. She acknowledges that her grace-filled person will be called blessed through the generations.

Reflecting on the poet William Wordsworth’s words, she was indeed “. . . our tainted nature’s solitary boast” (Wordsworth 1977). Her call to this virginity went beyond physical intactness and integrity to that of psychological attentiveness and attunement. It was a transformative source of personal cohesion and spiritual unity culminating in both virginal sufficiency and maternal abundance. Her stance of introspection and interiority moved outward in Mary’s embrace of the virgin-mother paradox and encircled ever-widening communities.

### **Mary: Companion in Our Pilgrimage**

The second panel covering the maternity triptych would elaborate Mary’s position within the ever-widening communities of the followers of Jesus. The wise woman, crone, holds the traditions and companions the pilgrim people. Psychologically and developmentally, she is a grounded, seasoned, and tested woman abounding in lived and shared experiences, relieved of individual family responsibilities and available for those generative and integrative functions in the larger community. From the Pentecost event emerge two Marian considerations. She was among the disciples who “were constantly devoting themselves to prayer, together with certain women, including Mary, the mother

of Jesus” (Acts 1. 14). She is both locus and encounter for the new community of Jesus’ followers, and again, she receives the fullness of the Holy Spirit. She is commissioned to minister among the diverse peoples “from every nation . . . [who] at the sound [of the rush of violent wind] gathered and were bewildered, because each one heard them [the disciples] speaking in the native language of each” (Acts 2. 5). The Pentecost paradigm is the nodal psychological and life cycle event that thrusts Mary into her relational and communal vocation of companion to the journeying people of God.

Jaroslav Pelikan, eminent historian and scholar in the humanities, in his exhaustive and artistic volume on Mary’s place in culture, proposes that the Maryam of the Qur’an and the Miriam of Zion may function “as a bridge builder to other traditions, other cultures and other religions” (1996, p. 67). In the Christmas greeting (2007), “A Common Word,” addressed to the Christian communities, leading Muslim teachers opened their letter quoting from the Chapter of Mary. The metaphor of Mary, as the bridge builder, and its psychological implications are not lost in considering her most documented apparitions. While assent is not incumbent, these apparitions show a predilection for the poor and unlearned, the young, and the indigenous peoples as seen at Lourdes, Fatima, and Tepeyac (Guadalupe).

The merciful and powerful queen, advocate, and refuge theme runs deep in the religious psyche. Personal and communal blessings, victories, rescues, and restorations have been attributed to Mary’s presence and patronage. While miracles and apparitions do not require belief among Roman Catholics, the Church has declared two dogmas for ecclesial assent concerning Mary, namely, the Immaculate Conception (1854) and the Assumption into heaven (1950). The first defines Mary as free from any or all sin from the first moment of her conception and throughout her life. This singly graced position distinguished her and was prescient and orienting for her role in the Incarnation. The second definition, that of the Assumption, follows the long tradition in both the Eastern and Western

churches of Mary's dormition, of her incorruptible body and soul being taken up into the glory of her Son and the fittingness of her hailed position relative to her Son's glory. Neither declarations supported Carl G. Jung's attempts to feminize the Triune Godhead as depicted in the quaternity image of the feminine and the goddess within the Trinity. Both declarations bring to prominence the integrative wholeness of body and spirit, but they have limited accessibility and intensity for the religious imagination of other communities.

Righting this tendency to imbalance in Marian devotion and theology, the Second Vatican Council (1966) in the decree *Lumen Gentium*, the Dogmatic Constitution on the Church, situates the statements on Mary within the schema dealing with the total community of the Church, with her living as a "pilgrim of faith" (no. 58) and being "one with all human beings" (no. 53). In Chapter VIII of the document, the council fathers renew the concept of Mary as model of the Church, citing her obedience, faith, hope, burning charity, and perfect union with Christ (nos. 61 and 63). Such virtues together with her solidarity with the poor, her strength in faith and response to grace, and her call to ongoing justice ministry speak to a wider ecumenical fellowship and are vital to dialog with the present culture. Such virtues appeal to the broader human community, address the ruptures of the human condition and culture, and resonate with acts of global concern, conscience, and care.

Our psychological and religious sensibilities about Mary's companioning function strain between the beautiful enthroned woman ushering Dante in the final steps to *Paradiso* to the graphic and palpable image of Mary the single, unwed mother whose son will be executed, an image offered in Pax Christi reflections. Theologian Elizabeth Johnson gives us a creative and thoughtful biblical paradigm in which Mary is partner and companion, comrade and co-disciple (2003, p. 313). The historical virgin of Nazareth, the theological maternal Theotokos, and the psychologically evoked companion crone ever enfold in our personal and communal imagination.

## Mary Magdalene

Kathryn Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

The figure of Mary Magdalene depicted in the New Testament of the Christian tradition was the first witness to the resurrection of Jesus Christ. Specific New Testament references to Mary Magdalene include the Gospel of Luke 8:2–3 in which Mary Magdalene is described as one who ministered to Jesus. This passage also describes

an exorcism of demons, which, according to current biblical scholarship, may not refer definitely to Magdalene.

Over the centuries of Christian history and reflection, many scholars have accepted the identification of Mary Magdalene with Mary of Bethany and with a woman sinner who anointed Jesus' feet. Yet, Eastern Orthodox Christians and the Catholic Encyclopedia of 1910 distinguish these women as three different persons. Although Mary Magdalene has often been claimed to have been a prostitute, there is no specific biblical reference in the New Testament. This misappropriation most likely arises from the town she originated from. Migdal, originally called Magdala, was a fishing town known for women who consorted freely with men.

In the gospels of Matthew 27:55–56, Mark 15:41, and Luke 23:55, Magdalene and Mary, the mother of James, came to Jesus' tomb at dawn on the first day of the week to anoint his body with oils and spices. The tomb was empty. Magdalene ran to tell Simon Peter and another disciple (John 20:1–2). Then she returned to the tomb and, alone, she waited there.

The brief historical evidence we find about Magdalene paired with poetic imagination and combined with certain concepts of psychodynamic and analytical psychology usher us toward meaning at the most definable character of essences. Interweaving psychology with scripture, we see in the narrative of Magdalene a transformed disposition of mind, body, and soul animated by spirit in relationship to Jesus Christ. Further, Magdalene's relationship with Jesus allows us to discern deeper knowledge and insight about the value of symbol and metaphor.

Etymologically, the Hebrew form of the name *Mary*, or *mirjam*, derives from the Egyptian *mr'* (to be loved) and from *rà a*, to see, the seer (Ricci 1994, p. 129). Her receptivity to "waiting" at the tomb is analogous to the depth psychological notion of "seeing" and "seeking." Her witness to the Risen Christ represents a transformation of consciousness, profound change inclusive of the notion of recollected memory at the level of the archetypal and numinous.

The root of the word memory in its most reduced form is *mr*. Closely associated to this root is the Egyptian *mr'*. Imaginatively splitting the *m* and the *r*, and locating the earliest graphic sign for the letter *M* in the image of water, *ma* also becomes the imitative root for the sound a child makes when it desires the source of its nourishment. The reduplicated form of *mr* is "*murmur*" which can be associated with the sound that water makes (Ricci 1994, p. 129). The two roots combined become a metaphor for the source of nurture, a moist, soothing, maternal, watery reality (Dunne 1988, pp. 116–120).

The letter *R* originally meant "*head*" and is close to the Proto-Indo-European roots *ar-*, *or-*, and *er-*. *Ar-*, which means "*to fit together*," gives us the Latin *ordiri*, the root of "*primordial*." *Primordial* refers to the original order of things, at-oneness, *harmony*. *Primordial* also refers to that which fuels inspiration, what developmental psychologist D. W. Winnicott tells us is the goal of developmental maturity: creativity and *art*.

The basic meaning of *er-* means "*to set in motion*." Also from *er-* comes the Latin *oriri* which means "*to be born*," or "*origin*." If we put the *m* and the *r* together again, we arrive at an image of maternal headwaters giving birth to us, setting us in motion. Psychologically speaking, the transformed Magdalene is analogous to how a mature ego provides a center from which we can generatively unfold, an interior previously unknown or unconscious. This core opens to us in numinous experience, receives us and renews us.

At a deep unconscious level, our "forgotten" or repressed memory strives for *this* source, or perhaps something beyond this foundation. Archetypal spirit – original unity or wholeness – is represented in the first figure a child knows: its mother or primary caregiver. Developmental child psychologist, D. W. Winnicott, reminds us that ideally our biological mother mirrors the archetypal feminine and imparts to the infant the deep inheritance of the self. Yet, due to early developmental trauma, sometimes what we long for can only be experienced as an absence.

Even if we cannot "remember" the source of our being because of developmental injury, there

is yet a bridging possibility that will restore to us what was lost or dissociated. St. Augustine of Hippo claims that what we yearn for is the soul we have been dissociated from at birth. We remain in this state until God belongs to the soul in totality: “O truth, everywhere” (Chadwick 1991, *Book Ten* 26, p. 37).

Reestablishing the psychological traces of murmurings in the treasure house of the imagination – what Augustine identified as *memoria*, the infinite halls of the unconscious – we make our way inward into these spacious caverns, seeking to make conscious what is at “the bottom of the trough.” In the process of depth psychoanalysis and various religious practices, we regress and feel as if we are once again “inside of the mother’s body,” or held by spirit, that feeling of oneness we still had as infants. We can locate a new vantage point from which the ego forms a relationship with the archetypal self of the psyche. Mary Magdalene reconnected to this archetypal self, which crosses the divide between soul and spirit. She ventured into the depths of memory, mourning, and “*mr.*” Whereas the etymological root of *ma-* resonates with the notion of the archaic maternal, *mr’*, in contrast, leads us to the *ground* level, to Magdalene and the empty tomb. Here we find psyche and soul rising to greet the source of spirit.

We can only speculate upon the specifics of Magdalene’s life. In scriptural accounts, there is evidence that something had caused a breakage in her inner world triggering fragmentation for which she sought healing. Whether or not she had been possessed by demons, she had become dispossessed of an authentic self. She needed help to mourn and to remember, to recollect that part of herself that had fallen away. Jesus offered this relationship. Jesus took root in her psychic soils and led her into the well of her own rich archetypal femininity. In learning to yield to the antinomies within her psyche, fertile soil was prepared for spirit.

Mary Magdalene willingly waited at the tomb. As in the Old Irish extension of the root *memor*, or *miraim*, which translates as “I remain,” Mary remained, even though the disciples and other women departed. Remaining provides the

necessary period of preparation and formation for the depth of interior feelings in relation to spirit to evolve.

At the intersection of mourning and remembering, a phenomenon emerges where there is a necessary breakthrough to something else, a new sphere of experience (Haughton 1981, pp. 18–47). Winnicott speaks of this breakthrough phenomenon as “*indwelling*,” meaning that psyche comes to dwell in the body-soma, which leads to an “integrated unit self.” Receptivity does not preclude suffering. Suffering and brokenness at times of psychological crisis, emptiness, or loss translates as living through the death of the ego in its old form, the space of dead-nothing. Magdalene entered “the gap,” the dark interval.

### The Empty Tomb

In John’s account of the Easter story (1991, John 20, pp. 1–18), Mary Magdalene arises the day after the Sabbath and comes to the tomb “while it was still dark” to anoint Christ’s body before his burial. After the disciples depart, Mary stands vigil. Jesus’ crucifixion has caused such a profound reaction that the event of his death is experienced as a *void*.

In Winnicott’s terms, one who feels “dead, empty, nothing” has not arrived at the stage of security that he calls the “I am” state of being. Unclaimed and repudiated parts of the self still accompany the individual preventing wholeness because these parts are yet unintegrated bits of being. The ego suffers tremendous anxiety and threat upon nearing integration of these bits, fearing what feels like certain death. To prevent what the ego perceives as its own potential annihilation, it sometimes defends itself by *breaking down or falling into* the gap of madness.

Beneath the defenses of the person is a “something else” which potentially integrates the dissociated aspects of the infantile or child self which have become split-off. These defenses prevent us from experiencing certain intrapsychic dynamics that lead to mature development and

the depressive position. The depressive position pertains to overcoming the earlier developmental stage called the paranoid-schizoid position, which is equivalent to a less mature psychological constitution. The depressive position also relates to the capacity to mourn.

In "The Manic Defense" (1935, pp. 134–35), Winnicott speaks of the manic defenses as the way human beings typically defend against the depressive position. These defenses are related to omnipotent fantasies, "flight to external reality, suspension of inner objects, and denial of sensations." As means of control, these forms of resistance offer us reassurance through external reality. Rather than experience emptiness, we fill ourselves up; instead of being still, we move; we seek to know and to understand instead of entering the unknown. Above all, we deny death as the ultimate fact of life.

These defenses are resilient because they prevent the innocent pre-egoic self from the beginning of life from being overcome by intense affect that an infant cannot yet tolerate such as severe dissociation. These defenses are still active beneath the surface of the adult psyche. The goal of healing is to get to the experience of emptiness and nothingness and to discover the true self which is creatively alive and real in contrast to the false self of defenses and repression. Only by entering into the original anxiety and experiencing the primal agony can we recollect the missing bits of being and become alive again. Healing entails building belief in good internal objects, lessening the manic defenses, which, in turn, shrinks depressive and persecutory anxieties. We are enabled to link imagination (in contrast to fantasy) to our physical experiences whereby we can create freely from an unlimited imagination, which is preliminary to the evolution of symbolic consciousness. We move beyond shame to healthy guilt.

### **The Stone Had Been Removed**

At the empty tomb, Magdalene faces dread, emptiness, and nonexistence. Fearing that

Jesus' body might have been stolen, she turns to external sources. The two disciples she turns to metaphorically represent the false-self reality. The disciple who outruns Peter represents the manic defenses. He runs ahead, but he does not *go in*; he does not enter interiorly. Simon Peter follows the other disciple and goes into the tomb. Yet, both return to their homes. Magdalene waits.

### **Woman Why Are You Weeping?**

Mary's tears at the empty tomb express grief, loss, and suffering over Jesus' absence. Tears are also a way of seeking, desiring, and restoring. Bending over to look inside, she confronts the darkness. As we enter the empty tomb of our own subjective interior, the ego fears the depths of the unconscious and the death of the false self. Without projections, we feel an acute emptiness.

### **When She Has Said This, She Turned Around**

This phrase represents a first "turning." The first turning still belongs to the transitional arena in which our imagination is churning with new images and feelings. When we continually long for something, it builds its image into us by depositing "a seed" in our psyche. The seed germinates and grows when it finds itself in a nurturing and moist soil (maternal love, Eros, desire, agape love). When the inspired image is secured internally, eventually something new is born of the two, a living third thing which exists midway between our idealized images and the essence of the thing-in-itself (von Baader 1850–1860, p. 8, p. 96).

In contrast, if an infant is surrounded by an environment in which it does not *see itself being seen* by the mother-mirror, but instead perceives an expressionless canvas, then the looking-glass mother becomes an external thing to be looked at but not to be looked into. A seed does not sprout and take root.

## Woman Why Are You Weeping? Whom Are You Looking for?

At this point in the scriptural narrative, Mary Magdalene sees Jesus but she does not recognize him. Jesus asks, “woman why are you weeping, *whom are you looking for?*” In the therapeutic arena, we are often mourning the self we have never known. We struggle to gather up the disparate pieces of self that are dissociated and scattered.

When Jesus asks Mary “*whom are you looking for,*” however, this phrase underscores the distinction that for Magdalene to *remember* and to recollect the unity of her self is distinct from *mourning*. To remember has to do with spirit beyond the psyche, yet bridged by the psyche.

Magdalene first *mourns the dead Christ and seeks “the living among the dead” in order to anoint him*. Only when Magdalene *waits* by the empty tomb of death and descent and faces its depths is she able “to anoint” the dead Christ. Encountering this space of emptiness, where our own images do not reign, allows something more profound to occur within our psyche. “Anointing” the dead Christ has to do with receiving new life, new possibility in this imageless space. The images emerge from the union of psyche and soul, not solely from our egos, and are now in-fleshed.

## Tell Me Where You Have Laid Him and I Will Take Him Away

When she first sees Jesus, Magdalene thinks he is the gardener. Winnicott (1958, p. 133) speaks of how some persons do not recognize that the people who inhabit them psychologically are a part of themselves.

### Mary!

When Mary sees Jesus, he *calls her by name*. As Mary is named by Jesus, he endows Mary with an identity specifically her own. As a distinct and separate being, she is able to *respond* and to name

Jesus in return. Analogous to a child that separates from the mother at the appropriate stage of its development, Mary can now witness Jesus from her own subjective nature as a separate person. Similarly, a therapist, as a significant other, “names” a patient through reliable person-to-person presence, receiving the spontaneous gesture and allowing for the omnipotent infant self to come forward to achieve the developmental culmination of the early stages of life. A container is provided for spirit to enter and to engage with psyche reminiscent of the image of the well-known attribute of Magdalene – the alabastron – a symbol in ancient and modern times of the eternal feminine.

## She Turned and Said to Him, “Rabbouni”

The scriptural narrative does not indicate that Mary has ever turned away from Jesus in the first place. The *pivotal point* is that when the angels first ask Mary why she is weeping, she cannot recognize Jesus as the Risen Christ but only through her own projections, as a gardener. Then, in contrast to a bodily act, when we turn the second time, we come to know that we are separate but related to the *divine* source who meets us in the dark night of the imageless space. There is no one other than God who is capable of being such a reliable and eternal mother-mirror. If we are fully given to this source, we are transformed into the same image. In psychological terms, this moment of self-reflection would be an instant when perception gives way to apperception, when “object” turns into a “subject.”

The text of a prayer by St. Anselm of Canterbury (1033–1109) grasped this complex transformation when he said of Mary Magdalene that “Christ was *hiding* himself from you when you were *seeing* him and *revealed himself* to you when you were *not seeing* him; until he whom you were seeking, *asked you whom you were seeking and why you were weeping*” he could not be anointed. Only when the Risen Christ is present to her *actually*, flesh resurrected in spirit, and *anoints her* does she recognize him.

We can look into the psyche and think we “see him,” but he is hidden from us, for whatever reasons of human defense structures. When Christ does reveal himself, we may *not* “see him” because we are caught in our own projections. The second turning, then, is a profound transfigurative moment for Mary as well as the Risen Christ. We see all essences in their restored, eternal form. It is the eternal essence of the Risen Christ who Mary greets as “Rabbouni.”

### **Master!**

Magdalene returns to the starting point – *memor* – something folding back upon itself. Making conscious the depths of *memoria* gives us witness to the true source that Magdalene perceives when she exclaims, “Master.”

### **Do Not Hold on to Me**

Jesus is both human and divine, never merely an *image* of God, nor merely a psychic internalization. Yet, his image received and internalized in Mary is a portal to the mysteries of the trinity and a presence that will never leave her. “*From now on you do know him and have seen him*” (John 14: 7). This phrase translated in the *New English Bible* as “do not cling to me” urges Magdalene not to cling to old projections, nor to dismiss the efficacy of what she has witnessed thus far.

### **I Am Ascending to My Father and Your Father, to My God and Your God**

Jesus includes Mary Magdalene in his final transformation, indicating the potential for others to become whole selves. The phrase “my father and your father, my God and your God” infers a specific kind of dependency that is beyond psychological categories and belongs more to the arena of faith.

What Magdalene experiences is definitively more than the restoration of the lost object in

the psyche, more than the integration of psychic contents. In the first turning, she mourns the loss of the idealized object in relationship to the historical person of Jesus. She encounters *a new psychological reality*. In the second turning, she encounters *the spiritual reality* of the Risen Christ in which spirit has bridged psyche and psyche, spirit, making it possible for her to participate in *actual* presence, resurrected presence.

As this love comes back into the world, we find a mother restored. His death becomes our death, his resurrection, our resurrection. Our participation leads us into the maternal headwaters to the mother before the mother, the object behind the object, who becomes a subjective interior reality, as well as a lived, embodied reality. Mary Magdalene returns to her community. True to the derivatives of her name, she becomes “*rà a,*” a seeker and seer of internals and externals, a woman of multiple realities, one who participates in two worlds, an inner and an outer world which leads her to exclaim:

### **“I Have Seen the Lord”**

The glory of Christ is not visible in itself. Glory is a reality that can be expressed only as recognized by another, at a juncture where the opposites of otherness are met and suffered. The impact of this notion is that Christ dies and rises in a way that is visible to others, which others can attain.

Mary Magdalene not only witnesses Christ’s second birth, *she rises with him*. As Jesus sheds his burial cloths, Magdalene sheds the skins of her former self. Jesus gives her everything that is *already* hers. She dies unto him whose body disappears, but rises. In his return, she is born with a physical meaning of her own. Spirit conjoins with flesh, and flesh returns to life and incarnates. Her resurrection is different from his and her response has its own characteristics. Mary, too, has risen.

The redemption of matter might be configured in the psychological arena as two persons in relationship who comprise opposite but

complimentary terms. A third constituent arises from the psychic vessel that the two persons create together. The opposites undergo a process of transformation and restoration. As the life-giving essence is restored, a fourth element arises which is spirit in matter. This becomes the basis for our wholeness and grounds us in space, time, and history (Von Baader 1851–1860, 2, p. 243).

In returning, our relationship to material reality changes. We participate in our own freedom and also in a redemptive historical process. As nature is redeemed, so is the creative feminine element, the god-bearer. Mary Magdalene offers an exquisite feminine ground to illustrate the embodiment of a psychological principle: that beyond our internal projections and introjections, beyond history, but in history – *when we mourn, when we remember* – we anoint, *but first we must wait to be anointed*.

## Masochism

Jaco Hamman

The Divinity School, Vanderbilt University,  
Nashville, TN, USA

German psychiatrist Richard von Krafft-Ebing coined the word masochism in 1869 after his reflection on the life of novelist Leopold von Sacher-Masoch (Nacht 1995). A paraphilia, masochism's primary context, is sexual relationships, describing the experience of an individual receiving erotic satisfaction from real or imagined personal suffering, in being humiliated, and in the relinquishment of power. Masochism is often identified with sadism in sadomasochistic relationships (Loewenstein 1957).

As self-inflicted suffering, however, masochism can have a moral character as satisfaction is gained by becoming a victim. In religious masochism, the body is hurt for the sake of the soul (Ghent 1999; Glücklich 2001). In many western as well as eastern religions, experiencing personal pain becomes sacred as the producer of altered states of consciousness, a pathway to detachment, or an agent of purification.

Psychological understandings of masochism are diverse, ranging from the suppression of inner guilt caused by outward aggressive drives (Freudian) (Freud 1957); activity of the shadow and the archetypal need to worship (Jung); the persecution of internal objects (object relations theory) (Berliner 1995); frustration with a primary, non-nurturing self-object (self-psychology) (Menaker and Barbre 1995); a disembodied self (Gestalt theory); or a significant cognitive distortion (cognitive therapy).

Increasingly and especially in the context of religious experience, the portrayal of masochism in pathological terms is questioned.

## Matriarchy

Elizabeth Welsh

Fuller Graduate School of Psychology, Pasadena, CA, USA

The term is defined in three ways. One refers to gynococracy or a family, group, or nation governed by a dominant woman and more specifically a mother who is the head and ruler of her family and descendants. A second meaning refers to matrilineal organization or a social system in which descent and inheritance are passed on through the female lineage. A third meaning, matrifocality, refers to the centrality (though not domination) of women, especially mothers.

Gynocentric organization can be found in many nonhuman populations which are centered around alpha females. Examples include ants, bees, pygmy chimpanzees, elephants, killer whales, spotted hyenas, desert mole rats, and termites. Another notion linked to the hypotheses of matriarchy is parthenogenesis or asexual reproduction in females which continues to exist in most lower plants as well as in some invertebrates and vertebrates. Parthenogenetic reproduction has been connected to the origin myths circulating among primitive cultures which recognized the role of female primacy in the creation of human societies. The idea of the female primeval creative force could be found in many of the earliest human writings and art forms such as those of Ancient Egypt.

The notion of matriarchy in humans emerged within the field of anthropology in the context of nineteenth century theory of cultural evolution. The latter posited that the human species “advanced” from primitive matriarchal social organization to patriarchal systems at the same time as it progressed from a polytheism that included the worship of multiple great goddess figures to a monotheism centered on a single male divinity. Anthropologists have also hypothesized that patriarchal impositions developed as people

realized the link between paternity and pregnancy; however, clear evidence for this theory has been lacking. Nonetheless, in some fields such as comparative religion and archeology, the hypothesis of pre-ancient matriarchal systems has continued to be explored and used as basis for various ethnographic theories which have attempted to resurrect the female elements from a misogynistic and sexist cultural history and reestablish gender balance. In spite of the disparity of views regarding the actual gender relations in pre-ancient societies, scholars generally agree that Neolithic societies were more egalitarian than those of later periods.

Currently, most anthropologists concur that there is no evidence for the existence of matriarchal societies in the primary sense of the term but that matrilineal/matrifocal groups have existed in various places for many centuries. The following are current examples of social structures which have maintained an ancient tradition of passing on of inheritance, name, or group membership through the female line and of giving women central roles in family and community affairs (though religious and political affairs are still reserved for the male domain): various communities in South India (e.g., in Kerala, Tulu Nadu, Mangalore, Udupi, Tamil Nadu) and Northeastern India (in Meghalaya); the Malikun on Minicoy Island; the Minang communities in West Sumatra, Indonesia; the Mosuo people of Southwestern China; the Tuareg communities of Western Sahara; the people of the Huron, Cherokee, and Iroquois Confederacy; and the Navajo, Hopi, and Gitksan groups in North America. Furthermore, in Orthodox Judaism, while the laws of inheritance follow the father, the laws of descent are matrilineal.

Theories of matriarchy have received most attention in the field of archeology. The notion of an archaic matriarchy that was subsequently overturned by patriarchal rule was primarily introduced by Johann Jakob Bachofen in his 1861 publication, *Mother Right: An Investigation of the Religious and Juridical Character of Matriarchy in the Ancient World*. A systematic

study of myth traditions led Bachofen to propose that the prehistoric civilizations were marked by three stages: in the first hetaeric stage, males had unrestricted access to all females; in the second stage, females overturned this unfavorable arrangement and established monogamous relationships and mother right, or matriarchal groups, along with an extremist variant, the Amazons; and in the third stage, matriarchy was permanently ousted by patriarchy with its male-dominated institutions which marked the beginning of women's disenfranchisement.

Although the exact characteristics of these hypothesized archaic matriarchal systems cannot be established with certainty, some general features have been proposed: (1) the female family name is retained; (2) children follow the female line; (3) movable and immovable property remains in the hands of the woman and is inherited by daughters, while sons only receive a dowry; (4) the difference between legitimate and illegitimate birth disappears; and (5) the woman becomes the wooer. The least disputed features are those that pertain to matrilineality. Examples include records concerning the prehistoric Lycian people whose families appeared to be organized according to the matrilineal principle, as evidenced in the Herodotus accounts of the Lycians who did not name their children after their fathers like the Hellenes but after their mothers, and the testimony of Nicolaus of Damascus who asserted that only the daughters possessed the right of inheritance, a tradition traced to the Lycian common law.

Other characteristics are not clear. There are inconsistencies in the delineations of matriarchal features regarding sexual relations. For instance, some scholars like Bachofen argue that it was through matriarchal rule that monogamous relationships were instated not through patriarchy. Others say that matriarchy was characterized by promiscuity, that women were having sex indiscriminately, and that through patriarchy, men established monogamous marriage relationships so as to ensure that their progeny was indeed theirs. In support of this latter thesis, scholars

have turned to the patriarchal rhetoric of various Greek myths which contain traces of possible preexisting or contemporary forms of matriarchy. For example, female rule was equated with animal bestiality and promiscuity which patriarchal rule “corrected” by establishing the institution of marriage (one woman for each man) so that men knew who their children were. Greek myths also reveal that underneath various marital conflicts was the male effort to suppress the woman’s attempts to overthrow the established male-dominant order and the setup of a bestial, promiscuous, and female-dominated arrangement (matriarchy implied). A prominent example is that of Agamemnon and Clytemnestra. Clytemnestra’s reprehensible repudiation of marriage and revenge on her husband for sacrificing their daughter, Iphigenia, were explicitly portrayed as disastrous to cosmic order for the implied reason that her acts were negating the male order and overturning patriarchal institutions and values.

Bachofen’s theory has inspired numerous studies as well as controversies regarding the characteristics of such Neolithic matriarchal communities as well as the historical process that led to their development. Many scholars have subsequently argued that the ancient struggle between matriarchal and patriarchal rule is implicit in the rhetoric of numerous Greek myths. However, most of the arguments for the existence of matriarchal societies are based on speculation.

## Commentary

The question of the existence of matriarchy poses difficulties for feminists because it is asked within a historical framework that is phallogocentric, or based on the accounts and interpretations of ancient texts and artifacts have been written by males. Recent trends in feminist thought (also named “third-wave feminism”) have abandoned matriarchal theories and critiqued the notions of any one gender, race, or social group holding power over another. In fact, the very term “matriarchy,” or rule by a female/mother, implies a notion of power that is more congruent with

the misogynist hierarchies of patriarchy than with any form of female social influence that may have characterized the pre-ancient world. Thus, the language itself used in the discussions of matriarchy is questionable because it emerged within a discourse tainted by oppressive systems of power that were based on exclusion, domination, and violence.

In psychoanalysis also, the question of whether matriarchy ever existed is problematic since from the psychic perspective historical reality is never objective, but it is always an amalgam of actual or imagined events and unconscious fantasies which shape our collective unconscious. The latter is expressed in the myths as well as the interpretive narratives we call “history.” The archaeological examination of ancient myths, art, and artifacts clearly assumes the existence of a “matriarchal consciousness” (which may or may not have had a material component) which early civilizations vehemently attempted to exclude and destroy by means of adopting its opposite: the patriarchal male-centered consciousness. From the psychoanalytic perspective, the very rancor of the misogyny in some early cultures, the extreme forms of patriarchy adopted in certain groups, as well as the eventual universality of the patriarchal system point to a violent repression of the generative powers of female sexuality in the ancient world.

Freud recognized the dynamics of the repression of incest love for one’s mother which characterizes identity development, but his phallogocentric interpretations have offered a limited understanding of the patterns of patriarchal oppression of females. A more recent psychoanalytic scholar, Julia Kristeva, explains that the roots of the cultural abjection and fervent efforts to dominate women stem from aspects of the individual’s early psychic processes of separation from the mother. In early infancy, the newborn exists in a state of undifferentiated physical and psychic fusion with the mother. This maternal space in which the baby is immersed is characterized by fluid physical and psychic boundaries as well as undifferentiated emotions and sexual drives. It precedes language; it is capable of generating the energy which helps

fuel the subject's meaning making, or signifying process, which at this point consists of echolalia, glossolalia, rhythms, and intonations of an infant who does not yet know how to use language to refer to objects. In this early psychic space, the infant experiences a wealth of drives (feelings, instincts, etc.) that could be extremely disorienting and destructive were it not for the infant's tactile relation with its mother's body which provides orientation for the infant's drives. At the same time, as the maternal realm provides emotional exhilaration and jouissance for the infant, it can also become suffocating and stifling as the infant becomes increasingly aware of its separateness from the mother as well as its continued dependence on her. The infant must gradually reject and expel the mother's realm from which it must emerge and separate in order to develop as an autonomous subject. The violence of the expulsion attempts reflects the infant's arduous struggle to resist the powerful pull of fusion with the mother's body and return to the uterine realm of plentitude. Thus, the maternal space represents at once abundance and sufficiency as well as the threat of suffocation and death of the emerging subject. From this perspective, the ancient lure as well as inconceivability of matriarchy and the extreme imposition of patriarchy would seem to have its roots in the psychic rejection of the ever-seductive maternal realm and the idealization of the paternal image in the hope of permanently erasing the threat of undifferentiated/psychotic fusion with the mother. In modern Western consciousness, this dynamic seems to have become even more entrenched and solidified during modernity when philosophical rationalism and scientific reasoning led to the conceptualizations of human identity as a rational and carefully bounded entity that could be studied scientifically.

### May, Rollo

Ronald Baard  
Bangor Theological Seminary - Portland  
Campus, Portland, ME, USA

Rollo May is considered the grandfather of the Existential School of counseling and psychotherapy, which builds upon the classic psychoanalytic movement – a movement he both appreciated and critiqued. He was born in 1909 in Ohio and died in 1994 in northern California. May studied at Oberlin College and served as a high school teacher in Greece for a few years before attending Union Theological Seminary. After graduating from Union, he practiced for 2 years as an ordained minister at the First Congregational Church in Verona, New Jersey, after which he dedicated himself to doctoral studies at Columbia University where he earned his Ph.D. in clinical psychology.

Rollo May was a good friend of the Christian theologian and mystic Paul Tillich, whom May met in 1933 while he was a student at Union. Tillich was also a strong intellectual mentor for May. Later in his life May wrote a memoir of their friendship that was published shortly after Tillich's death.

The foundations of his approach to an existential school of psychotherapy were deeply

influenced by his understanding of the interrelationship of three seminal European intellectuals – Sigmund Freud, Søren Kierkegaard, and Friedrich Nietzsche. May's approach moved away from the medical model of the psychoanalytic school to a more deeply philosophical and theological model. The essential key to understanding the human condition, for May, is the concept of anxiety, which was the topic of his doctoral dissertation.

In an existential approach, with basic anxiety as a given, the person seeking help is encouraged toward her or his unique expression of creativity in life as a way of responding to the challenge of anxiety. He wrote "If you do not express your own original ideas, if you do not listen to your own being, you will have betrayed yourself" (May 1975, p. 12). For May, the focus on creativity kept therapy grounded in the categories of being and becoming, as he consistently argued for an existential and ontological basis for deep healing.

In the last years of his life, May was concerned about the development of a wide plethora of schools of psychotherapy, which he found unhelpful both to the culture at large and to the healing arts. He felt strongly that the discipline of psychotherapy should maintain its grounding in the fundamental purpose of "making the unconscious conscious." He also felt a deep concern for youth growing up in contemporary Western culture, lamenting on their behalf the loss of a sense of deep mystery and, with that, a subsequent loss of hope.

## Meaning of Human Existence

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

The question of the meaning of human existence holds the longest running place on the best seller list of vital questions among human beings, and the plethora of answers to this question have been complementary, redundant, and contradictory and expressed in philosophical arguments, theological apologetics, literary narratives, and a myriad of expressive arts. The meaning of human existence, though, is found by exploring situations in which, as Joseph Campbell (1904–1987) was apt to say, one is experiencing oneself as alive in meaningful and fulfilling ways. The experience of being alive in meaningful and fulfilling ways, however, is still described in nearly as many diverse ways as there are those asking the question, which is as it should be.

Descriptions of meaningful and fulfilling kinds of existence are plentiful in the history of philosophy and religion. These descriptions include notions of Platonic attainment of the ideal good to Aristotelian practices of the virtuous life, from Epicurean achievement of pleasurable absence from pain and suffering to Stoic self-control, indifference, and freedom from obsession and compulsion or the Cynic's self-sufficiency and release from external attractions and controls. For the pragmatist, the

meaningful life is one lived with utility and practicality, while the utilitarian finds meaning in life by submitting to the higher spiritual goal of all actions being done with the intention of achieving the greatest good for the greatest number of people. The existentialist seeks freedom and the transcendent experience of creating one's meaning in life, while the humanist seeks the actualization of one's potential, even to the transhumanist's desire for overcoming all limitation, even death. Logical positivistic meaning is found in objective, empirical verification. The Abrahamic religions find meaning in pleasing and loving the divine, while the Eastern religious traditions include Confucian emphasis on social education and proper relationships, Taoist alignment with the flow of nature, Shinto movement toward collaboration with nature spirits in the path toward immanent immortality, Buddhist awakening from suffering, Hindu liberation from cycles of repetition through alignment of one's soul with the supreme soul, Bahai's spiritual unity of all humankind, to Zoroastrian rewards in blissful life for right actions, and avoidance of the hellish life for destructive living.

The history of discovering meaning in existence is not without the challenge of absurdity, meaninglessness, and despair. More formally expressed in the nineteenth century and early twentieth century, and resurrected more explicitly in postmodernity, nihilism in various forms attempts to deconstruct any conception of transcendent meaning, and most importantly, any meaning deemed static, secure, or eternal. Whether it is a Nietzschean devaluation of all values (Nietzsche 1967), or Heidegger's destruction of metaphysics (Heidegger 1962), or the reduction of value to merely exchange value, or the relativism of linguistic meaning, one is left often with the lived experience of meaninglessness and despair. Yet, the very diversity of meaningful experiences articulated and expressed in history need not nullify the experience of meaning making as central to human well-being. On the contrary, the diversity of searches and

experiences for meaning validates its significance. Sounding somewhat circular, the meaningfulness of the search and expression of meaning in human existence gains its reliability and validity from its inescapable and unavoidable presence across all qualifications of diversity in history, culture, and life span.

Meaning making in psychology finds its most formal handling in depth psychologies of various sorts, including psychoanalysis, Jungian analytic psychology, and a range of existential-phenomenological perspectives. Kegan (1982) has described the process of developmental psychology as a series of meaning-making stages. The most familiar of the approaches to meaning making is Viktor Frankl's (1905–1997) perspective on meaning in human existence called, logotherapy, as formulated by Frankl under the extreme duress of enduring and surviving a concentration camp (1946/1959). Other explorations of meaning making in psychology would include personal construct theory (Kelly 1963) and positive psychology (Seligman 2004) – the latter finding significance in discerning what is satisfying to others.

## Commentary

The aforementioned compressed history offers vital themes or questions for further reflection. Is meaning created or found? Is meaning cognitively constructed or existentially lived out? Is meaning found in the absence of suffering, or does meaning arise from the edifying encounters with suffering, conflict, and pain? Is meaning a product of one's neurophysiology? Is it evoked by intimate relationships or the desire for them? Is it found in cultural discourse, symbols, or artifacts? Commentary on a few vital points of consideration may provide answers to these questions.

The experience and hope for freedom is central to most any description of a meaningful and fulfilling life, even though different types of freedom are meaningful to different persons: freedom

from suffering and political oppression; from oppressive values; from a cycle of rebirth; from one's bodily existence; from disintegration, alienation, and dualism; from violence; from hegemony of ideas and practices; from illusion; or from limits of any sort. But our desires for freedom from situations are accompanied by desires of freedom toward other possibilities: toward a freedom to act, to connect, to decide, to eternal life, to purity, to intimacy, to justice, to synchronicity with nature, to a peaceful existence, to overcome evil, to authenticity, to productivity, to actualize one's potential, to truth, to satisfaction, and to union with the divine.

Our desire for freedom in its kaleidoscopic manifestations reinforces the conviction that transcendence is at the heart of meaning making. The experience of transcendence is the *sine qua non* phenomenon that weds psychology and religion and is the existential life force operative in the formation of *homo religiosus*. Transcendence as freedom, if experienced in the here-and-now mode of existence, is an immanent experience of actualizing possibilities within one's ways of being in the world. Even for those who seek freedom beyond the world, this otherworldliness is existentially experienced at any given moment in this world's modes of existence and finds pathways and expressions of transcendence in our everydayness.

The cultural expressions of meaning and transcendence in and through cultural artifacts suggest meaning is embedded in the world's webs of significance. In this way, meaning is discovered in an already and always preestablished context in which we find ourselves. Webs of meaning differ given particular multicultural contexts, including economic contexts. For instance, in a capitalist economic system, profit bestows meaning, as does promotion, and other such experiences of ascendancy, in what could be considered a "commodified" experience of existence. In other contexts, the giving of gifts without expectations of remuneration or return or payback is shaped by what is considered a "gifting" kind of meaningful and

fulfilling existence. Conflicts about what is meaningful among individuals are inevitable within and among cultures.

Relational patterns also construct space in which meaning occurs, such as in egalitarian and inclusive communal encounters that offer transcendence from hierarchical oppression and ostracization. For others, though, freedom from sharing, belonging, and difference has led to more exclusive and hierarchical patterns of relating, that although oppressive for most individuals, is nonetheless meaningful to those in power. Transcendence in this latter situation may be skewed in that freedom is a freedom to control others. But inviting other possibilities of communal liberation freed from commodification and paternalization as prime bestowers of significance ultimately requires starting from an understanding of the significance of control and destruction for those who exact these patterns of being. Inevitably, conflicts of competing contingencies occur between competing enactments of significance, though resolution of conflict is facilitated more readily when mutual, empathic understanding is risked regarding how the other comes to find his or her respective life patterns meaningful is granted a hearing.

Another point to consider and clarify is that meaning making is more than cognitive formulations of propositions created by the neocortex. Hence, meaning making in existential psychology is often confused with schema formation in the cognitive sciences. Clarifying this distinction is vital. Neuropsychological insights offer us brain mapping of those undergoing experiences of significance, which makes us aware of how embodied meaning making is, but this process extends beyond the activity of the frontal lobe to other emotional and narrative centers of brain functioning. Helpful as this information may be, it would be a mistake to conclude that the brain "causes" meaning. Critiques of unilinear causality and biological determinism take us beyond the scope of this entry but suffice it to note that even within neurophysiology, we know that dendritic branching rewires itself in relation to significant experiences in our lives,

particularly traumatic ones. Significant experiences are experiences in which we have attributed or found meaning in one way or another that can “cause” dendritic rewiring as much as be “caused” by it. It would be more appropriate to speak of our bodying forth in meaningful, transcendent possibilities as co-constructed and pre-reflective. Maurice Merleau-Ponty (1908–1961), the French existential-phenomenologist, brought our attention to how meanings are pre-reflective and lived out long before being conceptualized, which corroborates the neuropsychological findings mentioned above (Merleau-Ponty 1964).

The plurality of transcendent possibilities in meaningful and fulfilling modes of existence still leaves us with the specter of nihilism. If everything is meaningful, then can anything be meaningful? The counterquestion is just as fair and perhaps more accurate in its presumptions about existence: If everything is meaningful, how could anything be truly meaningless? It is a mistake to assume meaning making can be avoided or escaped in existence. Even the apparent absence of meaning is always juxtaposed against an already and always posited presence of meaning. Despair would not be painful were it not for alternative enactments of significance in other desired lifeworld compartments that are absent, lost, or inaccessible for the one in despair. Even in “the pit,” despair discloses its own embedded hope for transcendence. In fact, we enact significance every moment of our lives.

## Meditation

Trish O'Sullivan  
Kwan Um School of Zen, Private Practice  
Psychotherapy, New York, NY, USA

Meditation is a practice wherein active thinking is suspended and mind activity is focused and stilled. There are three meditation subtypes – concentration, contemplation, and mindfulness. Concentration involves focusing the mind on one object, contemplation involves the summoning of an image or thought and then holding or examining it in the mind, and mindfulness is paying complete attention to the here and now including thoughts and feelings without engaging with them. In actuality, these practices are often intermingled. Some religious groups, however, emphasize one or the other, e.g., concentration in Zen meditation, mindfulness in Vipassana or insight meditation, and contemplation in Christian and Tantric meditation.

### Meditation Techniques

Meditation is generally concerned with calming and controlling the mind. There are various techniques for achieving this:

1. Mantra – focusing the mind on a thought, word (s), or sound.
2. Breath – focusing the mind on the breath as it enters and leaves the body (Anapanasati).
3. Image – a spiritual image is focused on in the mind's eye.
4. Guided – a theme or structured map is followed.
5. Mindfulness – observing thoughts and feelings that arise (Vipassana).

### Meditation Postures

The most common meditation posture is sitting cross-legged on a cushion with the hands forming

a mudra in the lap or on the knees. However, there are various forms of sitting postures, including sitting in a chair. Sitting without moving allows the mind to concentrate fully. Other forms of meditation postures are standing, bowing, or walking. Meditation can be continued throughout daily activities through the practice of mantra repetition or mindfulness – present awareness.

### Spiritual or Religious Meditation

There are differences between the emphasis, approach, and techniques used by various religious traditions. Sometimes the meditation practices are utilized by mystics only or otherwise hidden, while some religions consider meditation to be a central practice for all adherents. Goals of meditation practices also vary, and they include contact with the divine, spiritual insight, self-refinement, self-knowledge, purification of consciousness, and/or enlightenment. The practice itself is done within each unique religious framework and has that religion's particular emphasis as well as flavor or imprint.

### Buddhism

The Buddha attained nirvana or enlightenment by meditating. He then devised the Noble Eightfold Path out of suffering of which correct meditation (concentration or dhyana in Sanskrit) is the eighth practice on this path and mindfulness the seventh. Buddhists strive to purify the heart and mind of greed, hatred, ignorance, fear, envy, jealousy, and other attributes of mind that produce suffering as well as to achieve enlightenment by realizing their own true or Buddha nature.

Although the goals are similar, the practice methods within the major Buddhist traditions differ in emphasis and sometimes overlap. There are three main groupings within the Buddhist meditation tradition:

Zen – emphasis on concentration through the practice of zazen or sitting meditation. The word *Zen* is a Japanese term which comes from the Chinese *ch'an* which is a transliteration of the Sanskrit term *dhyana* or meditative absorption.

Vipassana or insight (Theravada) – the practice of mindfulness and analysis of phenomena to facilitate inquiry into the true nature of things.

Tantric or Tibetan – in addition to concentration and Vipassana, the distinctive practices of this branch often include visualization and contemplation of mandalas, deities, etc.

All three of these traditions include metta or loving kindness practices although in different forms, i.e., chanting in Zen, and visualization in Vipassana and Tibetan.

### Christianity

Meditation has not been a central spiritual activity for ordinary people within Christianity where the emphasis is more on prayer, although some of the prayers chanted over and over again silently with the aid of rosary beads are like mantras which concentrate the mind. Religious and mystics have and do practice both concentrative and contemplative forms of meditation. The presence of God is the object of Christian contemplation. There is also the objective of becoming more holy or Christlike. In the Eastern Orthodox tradition, there is a practice known as repetition of the “Jesus Prayer.” “Lord Jesus Christ, Son of God, have mercy on me.” This is similar to a mantra used in the concentrative practices. St. John of the Cross taught silent, imageless meditations not unlike Zen meditation. Similar to Sufism, the basis of Christian meditation is to open one’s heart to both human and divine love. In current times, there has been cross-fertilization from East to West, and many Christian meditation practices now incorporate Eastern techniques while maintaining the unique Christian perspective.

### Hinduism

Most Eastern meditation practices have their roots in ancient India. A classical meditation technique of ancient India is pranava or the repetition of the sacred sound of *om*. Yoga and Vedanta are the two prominent philosophies of the Indian tradition. With both, the goal of meditation is to lose the subject/object distinction and realize the truth of ultimate reality. Meditation is the only way to achieve this goal of Samadhi

or blissful superconsciousness. Patanjali (second–third century CE) is clear in his Yoga Sutras [1.2] that the purpose of Yoga is stilling the mind or “restricting the whirls of consciousness” – “*Yogas citta vritti nirodha.*” With Vedanta, meditation is seen as purifying the mind through intense mental worship, and the goal is union of the individual consciousness with the all-pervading consciousness. This worship entails symbols and images, repetition of a sacred word (japa), meditation on the qualities of the divine, and meditation on oneness with the divine. In Tantric Yoga, yantras (geometric designs representing universal forms) are internalized through intense concentration and visualization.

### Islam

Sufism, considered the mystical form of Islam, incorporates meditation practice. In Sufism, meditation and contemplation are considered essential for purification of the heart. Remembrance of God is the primary focus. There are many forms of meditation/contemplation including breath control, visualization, chanting the names of God, recollecting verses of the Koran, and the use of a *zikr* or phrase concentrating on God chanted either silently or out loud. There is also a mindfulness practice wherein one contemplates the self: analyzing weaknesses and negative qualities with the intention of purging them. Freeing oneself from the illusion of separation from nature and the universe by the suspension of rational thinking in meditation is also a focus.

### Judaism

Jewish meditations come from the tradition of Jewish understanding and include Jewish symbols, words, images, and visualization practices. Regardless of the approach, the focus and aim of Jewish meditation is the union of the self with the divine. While some form of Jewish meditation is believed to have existed in ancient times, over time, meditative techniques became largely confined to esoteric Kabbalah practices. Beginning in the eighteenth century, the Hasidic movement attempted to bring meditation into the lives of

ordinary Jews. They taught prayer as mantra and contemplative forms of meditation aimed at refining character traits and awareness of the divine. This practice consisted mainly of focusing on the letters of the divine name in various combinations: the Tree of Life symbol, a candle flame, or chants. Jewish meditation is today making a comeback based on recorded practices from historical Jewish texts including Kabbalah and meditation practices created by Jewish meditation teachers or borrowed from Eastern traditions.

### **Taoism**

Taoists believe that mind and body are intimately connected to one another. Therefore, in Taoism, meditation is both for improving and for maintaining the health of the body and attaining enlightenment. The focus is on stilling the mind and attaining present awareness by keeping the mind and breath together. This helps to simplify life and increase awareness of path. There are many “inner alchemical” practices as well as physical practices such as Tai Chi, for balancing the Yin and Yang energies and the five elements.

### **Secular Meditation**

Within secular society, meditation is sometimes used for self-improvement purposes. This type of meditation is without spiritual goals and is utilized more to obtain good feelings, to improve concentration and performance in some activity, to help solve emotional or mental problems, or to relieve physical and mental stress.

Meditation is said to have physiologic benefits. It helps slow down the impulse to rush into the next moment, and since much stress is caused by anticipation, it reduces stress and promotes a relaxed state which improves focus and promotes inner calm. Many studies have reported that brain rhythms, heartbeat, blood pressure, skin resistance, etc., are changed by meditation with resultant health benefits. There are ongoing studies on the beneficial effects of meditation and mindfulness to the mind and body.

### **Meditation and Psychotherapy**

The goals of both psychotherapy and spiritual meditation are to decrease suffering and increase happiness. They differ in that many types of psychotherapy aim to strengthen the ego and the self with the goal of improving the client’s personal and social functionality while meditation aims to free the individual from identification with the ego for the purpose of increasing awareness of the self as part of a whole and attaining spiritual realization. They are similar in that with both disciplines, the focus is on exploring consciousness both within the self and between the self and the other. With both, the habits of mind are observed with the intention of letting go of illusion, unhappiness, suffering, and self-alienation. Meditation is a letting-go practice and helps clients to see where they are holding onto opinions and views, let go, and gain a wider perspective.

Knowledgeable therapists often teach their clients meditation techniques for use outside of the office since the meditation process is an individual internal experience. One of the benefits of meditation for both therapists and clients is the improvement of concentration and mindfulness or the ability to be fully present in the here and now of the psychotherapy session. Mindfulness of both the self and each other is an important aid to the therapeutic process for both the client and therapist.

Self-refinement and personality transformation through meditation are goals in many religious traditions, but Buddhism and Yoga both especially emphasize psychology. In both Buddhist and Yoga psychology, freeing oneself from the grip of attachments is central to personal growth and development. Both traditions hold that past thoughts form impressions or samskaras (skrt) which form habitual patterns of thinking and behavior. Through concentrating the mind in meditation, the unconscious can be penetrated and the samskaras loosened, observed, and eventually dissipated. The Sufis through a similar process tap into unconscious forces and become aware of and transcend the egoistic nafs.

The use of meditation techniques within the therapy or advocacy of meditation for clients should be carefully considered. Many teachers do not advocate meditation for those who are emotionally or psychologically unstable as both the detachment process and the surfacing of intense emotions can be overwhelming for unstable patients. There is also a phenomenon known as “meditation sickness” wherein headaches, chest pain, or stomach aches may occur when the beginner practices excessively. This is believed to result from chi or kundalini energy rising too fast.

On the other hand, meditation is said to help patients with objectivity which can increase emotional stability. This skill in observing emotions rather than acting upon them helps to counter-impulsive behavior. Self-detachment rests and rejuvenates the mind. Mindfulness practices are sometimes used in psychotherapy to increase the patient’s awareness of their inner state. Dialectical behavior therapy, for example, teaches unstable clients mindfulness skills in order to increase their capacity for staying in the moment, sitting still with afflictive emotions and balancing the mind. The taking apart of self-concepts in mindfulness meditation allows clients to increase self-knowledge and correct misidentifications with negative aspects of their personalities. One can train oneself to identify and then relinquish painful mental habits. Meditation is also believed to increase compassion towards others, thus, improving relationships.

Currently in the West, there is an increasing interest in the integration of meditation, specifically Buddhist meditation practices, and psychotherapy.

## Meister Eckhart

Marta Green  
New York, NY, USA

### Life

Johannes Eckhart (also called Eckhart von Hochheim, also spelled Ekehart) was born around 1260 in Thuringia in what is now Germany. He entered the Dominican priory around 1275. He studied in the University of Paris, receiving his master's degree in 1302 and the title of Meister meaning Master. In his lifetime, he became famous as an administrator, scholar, preacher, and spiritual director. In 1323, the Archbishop of Cologne inaugurated proceeding against him for heresy. After publicly declaring that he had no intent to preach heresy, Eckhart appealed to Pope John XXII but died some time before he was to appear before the Pope in April of 1328. In 1329, the Pope issues a bull condemning 28 of Eckhart's propositions (Smith 1987, pp. 6–8).

### Thought

Meister Eckhart was most concerned with the *union* of the soul to God. Of the birth of the Word in the soul, he writes, "What does it avail me if this birth take place unceasingly and yet does not take place within myself?" (Eckhart 1980, pp. 293–312).

Eckhart is concerned with knowing God, but for him, knowledge is in the form of union with God. You know about something by joining with it, the way Adam knew Eve. Knowing God cannot be achieved in the outer world but only by turning inward and experiencing God in the "*Foundation of the Soul*." Eckhart conceived the Foundation of the Soul as a place of pure emptiness and receptivity, unformed, unconditioned. Being that humans are made in the image of God, God also has a *Foundation*, a place Eckhart calls "the desert," "the abyss," where God is also purely empty. It is at the Foundation of the Godhead that the Foundation of the Soul finds union with God.

To achieve this place of union, individuals must practice *detachment*. We must detach not only from material possessions, relationships, and our sense of who we are as individuals but even our means of experiencing reality: memory, reason, images, sensations, and perception. We are to become empty, sounding boards for God (Smith 1987, p. 64). Eckhart writes: "Avoid the restlessness of external deeds! Flee and hide yourself before the storm of inner thoughts, for they create a lack of peace! If God therefore is to speak the Word within the soul, the soul must be in peace and at rest" (Fox 1980, p. 298).

When one has completely emptied oneself, then one can receive God (the Word) completely without reservation or thought and "*Breakthrough into the Godhead*." Breaking through means that God completely lives in the person so that the life of God becomes the person's life. "The eye with which I see God is the same with which God sees me. My eye and God's eye, and one sight, and one knowledge, and one love" (Fox 1980, pp. 83–86, Sermon IV). When we are united with God, we can see the world not as creatures, but as God does (Kelley 1977; Smith 1987, p. 65).

There is one more step. Eckhart understands that God does not reside only in God's Foundation but that God flows out into the world. God animates the world by breathing out into it and then withdraws His breath into the silence and emptiness of His solitude. In doing so, God enacts a never-ending eternal process of life and death (Smith 1987, p. 70). As we are

united with God, we also flow out into the world and return back to union with God.

## Relationship to Psychotherapy

Although Eckhart's concern is union with God, not the healing of souls, aspects of his thought can inform the practice of psychotherapy, especially if psychotherapy does not limit itself to symptom relief, but is concerned with the development of the inner world of the patient.

One place where the thought of Eckhart and modern psychotherapy meets is in the commitment to radical interiority. Eckhart's insistence on and detachment from all is not dissimilar to the sort of discipline required of those in psychoanalysis. The analysand is asked to examine the inner meaning of outward events; sometimes to such an extent that the events of one's "real life" became nothing more than a screen for one's projected inner contents. This is certainly a process of detachment from the "reality" of everyday life. All internal contents are examined for their unconscious symbolic value in a detached manner, and interpretations are offered. Eckhart would eschew interpretations and insist on a complete house cleaning, sweeping away all labels and preconceived concepts. Eckhart doesn't even want to label God as "good" for fear that the word would be too confining (Fox 1980, pp. 177–180, Sermon XII).

Meister Eckhart taught a radical presence to God by cultivating a mind completely clean of preexisting categories. In this, his thought is very similar to that of the Easter mystics. The concept of radical emptiness may be of help in the work of psychotherapy. To the extent that therapists are able to become aware of the contents and categories of their minds and detach from them, maintaining an evenly hovering attention, to that extent, they are able to be wholly present to their patients. As Eckhart warned about images, counselors must detach themselves from all images of who they are and of what therapy is and allow each session to come alive in the spontaneity of the moment.

Eckhart's concept of image is also helpful in considering the self-image of the patient or

counselor. Patients are people who have become attached to a few very rigid ideas of who they are and what is possible for them: "I am not good enough." "I am no one unless I am loved." They block out much of life returning to their core images (Shainberg 1983, p. 11f). Clearly, such individuals can be helped by learning to let go of their grip on such limited life scripts. Much can be gained by honoring Eckhart's in-depth understanding of detachment from images especially in detaching from self-images in the service of freeing up inner space for the client. The images must be dissolved not to be replaced with other supposedly superior images, but to permanently free up the inner world of the client, enabling them to live spontaneous, less scripted lives.

While the therapist may detach in approaching the patient and in helping the patient let go of inner clutter, for Eckhart, detachment creates a space for God which he defines as the Word entering human life. To experience the Word, Eckhart counsels not knowing or as his seventeenth sermon is titled: "Letting the Intellect Go and Experiencing Pure Ignorance" (Fox 1980, p. 238). Is this not also a useful model for a therapist? Can we likewise practice entering each session without "desire, memory or understanding" as Bion has counseled to await the birth of the one word that needs to be said in that session? The one word that will define and heal and connect the moment. Is that not the point of the session to sit and wait for the one right word to emerge spontaneously, in the session, out of the communion of the unconscious?

## Melancholia

Nathan Carlin

McGovern Center for Humanities and Ethics,  
University of Texas Medical School, Houston,  
TX, USA

### Notes on the Term

The term “melancholia” comes from Greek and literally means “black bile.” The condition of melancholia in ancient times, according to the medical theory of the four humors, was thought to be caused by an excess of black bile in the human body. Since ancient times, there has been a great deal of writing on melancholia, including works by such thinkers as the Hippocratics, Rufus of Ephesus, Galen, and Avicenna, to cite only a few of the most prominent names (cf. Jackson 1986). While Robert Burton’s (1979) *The Anatomy of Melancholy*, published in 1621, is generally regarded as the most extensive and detailed treatment of the term, Sigmund Freud’s (1963) “Mourning and Melancholia,” published in 1917, is perhaps the work most well known on the issue of melancholia, likely because of Freud’s enormous influence on western culture in general and because of his impact on the practice of psychiatry in America in the twentieth century in particular. In this essay, Freud gave a psychological or mental, as opposed to a biological, explanation for melancholia in that he argued that mourning and melancholia are two kinds of reactions to losing an object, where mourning represents the normal grieving process and melancholia

a pathological response – and he gives psychodynamic explanations for both processes. In melancholia, Freud suggests that one is prevented from mourning because the object is “still in the neighborhood” but is still nevertheless lost, and Pauline Boss (1999), a contemporary therapist, refers to melancholia as “complicated grieving” but notes that complicated grieving can be completely normal in complicated situations involving ambiguous loss.

The term “melancholy” today is often associated with sadness (a feeling or mood) and depression (a clinical disorder or symptom). In clinical circles, the term melancholia has fallen out of favor, much like the terms manic-depression and sociopath. In *The Diagnostic and Statistical Manual of Mental Disorders-IV-TR*, for example, there is no melancholia diagnosis, but there is a subsection titled “Melancholic Features Specifier” that is used to help clarify diagnoses of mood disorders, such as bipolar I and II disorders. However, melancholia as a term is making a comeback. William Styron (1990) writes in his memoir that

“Depression,” most people know, used to be termed “melancholia,” a word which appears in English as early as the year 1303 and crops up more than once in Chaucer, who in his usage seemed to be aware of its pathological nuances. “Melancholia” would appear to be a far more apt and evocative word for the blacker forms of the disorder, but it was usurped by a noun with a bland tonality and lacking any magisterial presence, used indifferently to describe an economic decline or a rut in the ground, a true wimp of a word for such a major illness (pp. 36–37).

Donald Capps and I (Capps & Carlin 2007; cf. Capps 2005) have endorsed Styron’s view in our own writings in the fields of pastoral psychology and psychology of religion. In psychiatric literature, Taylor and Fink (2006) have also endorsed Styron’s view, as they quoted this very passage for one of their chapter epigrams, and they argue that melancholia has a more precise meaning than depression in terms of clinical diagnosis (p. 15). In any case, time will tell what the status of melancholia will be in *The Diagnostic and Statistical Manual of Mental Disorders-V* and beyond.

## Melancholia and Religion

Historically, melancholia has also had religious significance. Jackson (1986) notes that “Whether the gods, a god, or the God, the supernatural being (or beings) visited the distressing state on the sufferer as punishment for his sin or because of his lack of repentance for his sin” (p. 325). Jackson also notes variations on these themes, that sometimes, for example, it was and is still sometimes believed that God can use mental illness as a means for growth or that the Devil, too, may be allowed to test God’s faithful from time to time, as in the *Book of Job*. Such explanations for melancholia will likely sound offensive to the contemporary reader because these explanations appear to be blaming the victim and/or rationalizing, trivializing, or romanticizing suffering.

In any case, mental and emotional disorders in general continue to have religious significance today. While psychological insights into religion have not fared well among theologians (cf. Scharfenberg 1988), Paul Tillich is certainly an exception, and his theological thinking does not blame the victim, nor does it rationalize, trivialize, or romanticize suffering. Tillich’s project was to correlate the teachings of the church with modern day experience, and so he redefined many traditional theological concepts, like sin. He argued for understanding sin as estrangement from God, others, and self. And he also argued that everything in existence is in estrangement. Existence, in other words, is estrangement. The upshot here is that, for Tillich, it would be correct to say that mental illness is a manifestation of estrangement or sin, but it would not be correct to say that it is the result of a particular sin. Tillich wrote regularly for the journal *Pastoral Psychology* in its early years, and he (2000) also wrote at length about the religious significance of anxiety and despair. In terms of the religious significance of melancholia today, particularly for men, Donald Capps, whose work I will discuss briefly below, has written prolifically (see, e.g., Capps 1997, 2001, 2002, 2004, 2005, 2007a, b), and the topics of mourning and/or melancholia have been written about a great deal by both psychologists of religion and pastoral theologians (see, e.g.,

Carlin 2010a, b; Cole 2008; Hamman 2005; Homans 1989; Parsons et al. 2008).

Jackson (1986) also notes Burton’s introduction of the term “religious melancholy” in his *The Anatomy of Melancholy*. Burton defined religious melancholy as a kind of desperation and “sickness of the soul without any hope or expectation of amendment” (quoted in Jackson 1986, p. 331; cf. Rubin 1994). Significantly, then, Capps (2001) has argued for the image of the pastor as an agent of hope (on depression, cf. pp. 101ff.). Depression and melancholia are obviously significant to pastoral care professionals, though mental illness in general receives very little attention in seminary education (Capps 2005, p. 1), even while there are excellent books available (Ciarrocchi 1993; Collins and Culbertson 2003).

## Donald Capps on Male and Female Melancholia

Capps defines male melancholia as a form of religiousness that emerges in men’s early childhood through their relationship to their mothers. This male melancholic religion “may or may not manifest itself in religious observances, commitment to spiritual disciplines, or religious participation in social causes or in acts of personal sacrifice” (Capps 2002, p. xvi). In fact, it is more often the case that men are *not* religious in these conventional ways but are often religious in experiential (in contrast to institutional) ways (cf. Capps 2007a, p. 256). As strange as it might sound, men are often religious in ways that, on the surface, do not resemble religion. But by understanding the origins of male melancholia, one can then see how men are religious in unconventional ways.

When boys emotionally separate from their mothers (normally between ages 3 and 5), they acquire an ambivalent attitude toward their mothers because even though, or precisely because, she is still around, things are not the same. “Why has mother abandoned me?” the boy asks himself. And he also wonders, “Can this loss be reversed – and if so, what can I do to reverse it?” “[T]he very ambiguity of this

situation,” Capps writes, “and the anxieties that such ambiguity promotes are of key importance to the emotional separation that occurs between a small boy and his mother, and this separation is reflected in the form and style of men’s religious proclivities” (2004, p. 108). Since all boys separate from their mothers, all men suffer from melancholia, and all men, therefore, are religious in this sense.

Capps suggests that male religiousness takes three forms, which are all directly related to the boy’s separation from his mother. The first of men’s religious proclivities is the religion of honor. By being a “good boy,” men attempt to “win” their mothers back, perhaps by doing well in school, by earning a lot of money, or by achieving remarkable social standing. The second main proclivity is the religion of hope, and here men attempt to find a replacement for their mothers by finding someone like her or something to replace her. Here men might take interest in literal quests, such as traveling, or the quests can be of a more symbolic nature. The third religious proclivity, which Capps (2002) added in his *Men and Their Religion: Honor, Hope, and Humor*, is the religion of humor, “which stands overagainst the first two ways of being religious in the sense that it humors them” (Capps 2004, p. 108). This way of being religious asks, “Can one really win mother back, and can one really find a replacement?” It may also ask, “And why would one *want* to win mother back?” The religions of honor and hope may have their successes, but they have their defeats and disappointments as well, and one way that a man might cope with the latter is to develop a humorous attitude toward the first two ways of being religious. Here, Capps argues men make light of the commitments and efforts that they engender, and by doing so they save themselves from bitterness and despair. The religion of humor accepts the reality of the loss yet refuses to be defeated by this loss. If male melancholia has no cure, Capps suggests that humor is a pretty good antibiotic. Put in theological terms, if the religion of honor correlates with what Christian theology calls “works,” and the religion of hope fits with a mystical searching, often marked by tentativeness and doubt, the religion of humor,

for Capps, paves the way for the religious notion of grace. The other forms of religion involve doing, whether by working or searching, but the religion of humor is simply being, mocking and relativizing doing. Honor and hope are retained but in a relativized form.

But what about women? Where do they fit into Capps’s theory? In *Men and Their Religion*, a sequel to *Men, Religion, and Melancholia*, Capps (2002) notes psychoanalyst Julia Kristeva’s view on the etiology of female melancholia. In *Black Sun*, Capps notes that Kristeva argues that female melancholia “is traceable to the two to three-year-old girl’s need to begin adopting the dominant . . . language of her culture, which is male-oriented, and thus to leave the security of her mother’s language world” (p. 5). Capps notes that Kristeva cites studies that link signs of depression with language acquisition. If this theory is correct, Capps suggests, then “it would follow that boys adapt more naturally to the symbolic language of patriarchal culture and are therefore less subject to lasting melancholia as a consequence of language acquisition” (2002, p. 5). Capps believes this argument has considerable merit. And it may also explain why more women than men suffer from depression.

In his work on the psychology of men, Capps has been greatly influenced by his mentor James Dittes. On the differences between boys and girls, men and women, Dittes (1996) writes:

Girls have the advantage that their primary caregiver (and life-giver) can be their primary role model. They know they are to grow up female, and to learn how to do that – how to behave and feel and think of themselves as female – they have both model and encouragement at hand in the person they are already closest to and dependent on (p. 24).

“For a boy,” Dittes writes, “it is not that easy. He knows he is to grow up male, and he also recognizes early on that to achieve this he must not honor and strengthen but disrupt the bonds between himself and his primary caregiver, his life-giver” (1996, p. 24). And so, “being male costs a connectedness with life” (Dittes 1996, p. 25). If Kristeva is correct, being female also costs a connectedness with life, but this cost is different than the one men pay, and it is one in

fact that they would share with their mothers, perhaps even strengthening their bond. For more discussion on melancholia and gender, see Schiesari (1992), and for more of a discussion on mourning and melancholia in light of Kristeva's work, see Diane Jonte-Pace (2008).

## Merton, Thomas

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

For Catholics and other Christians, Thomas Merton (1915–1968) has been a role model both

for the contemplative life and for openness to the interfaith dialogue, in particular the sharing and learning from Eastern religions. A best-selling author, Merton first became famous for his autobiography *Seven Story Mountain*, in which he documented his conversion to the Roman Catholic faith. Death touched him early: he lost his mother at age 6 and his father at 15. Both his parents had been artists and Protestants. Tom traveled extensively in Europe and was deeply moved by religious art. After he was orphaned, he was raised by his grandfather and attended private school in England, followed by a flamboyant and disastrous year at Cambridge. He returned to the USA and attended Columbia where, under the mentoring of Mark Van Doren, he began serious writing. While at Columbia, he also turned to Catholicism, and in 1938 he was baptized a Catholic. Three years later, he joined the contemplative Cistercian (Trappist) Abbey in Gethsemani, Kentucky. He chose the strictest order to do penance for his sins.

### Contemplation and Activism

In his 27 years of religious life, Merton struggled with the contrast of strict monastic rule and the role he played in "the world" as he became increasingly popular, writing poetry, fiction, journals, and spiritual prose. Among his fellow monks and priests, Merton (who was known there as Fr. Louis) was both fun loving and deeply serious in this spiritual quest. He became novice master and was much beloved for his wisdom and his wit.

Thomas Merton was highly intelligent, a voracious reader, and deeply interested in all forms of contemplative experience. He corresponded with some of the great spiritual leaders of the East, including Buddhists, Hindus, and Moslems. He was spiritually nourished by this correspondence and by his own exploration of the inner life. In 1960 he was granted special permission to spend his days (part-time) as a hermit where, in addition to praying, he joyfully continued to study, write, and communicate via letters in a vast and burgeoning interfaith

dialogue. The Dalai Lama, for example, treasured Thomas Merton for his intelligence, creativity, wisdom, humor, openness, commitment, and religious zeal.

In the 1960s when the Church was changing due to Vatican II and the USA was changing due to the civil rights movement and the Vietnam war protests, Merton became an activist by the "power of his pen." *Conjectures of a Guilty Bystander* is an example of this social activism. He wrote passionately about the Christian's responsibility for humanity, including responsibility to speak up against injustice, prejudice, and war. Thomas Merton, the man, knew both pleasure and pain in his life; he shied away from neither. As a monk and writer, his genius lay in his capacity to express both intense pleasure and intense suffering, all with a sense for the whole.

### Turning Eastward

Merton found in Eastern contemplation the same emphasis he valued from Western monasticism: silence, solitude, simplicity, emptiness, treasuring the sacred in the ordinary, surrender, meditation, and prayer. In 1968 he was invited to give two talks at interfaith events in Bangkok and India. In preparing for that journey, he read extensively in Tibetan Buddhism and Zen, Islam and Sufism, and Vedanta. He wrote a journal during his travels in the East which was published as *The Asian Journal of Thomas Merton*. In it he reflected on every aspect of his thought and varied experiences. He wrote, for example, about the abiding value of the interreligious dialogue:

... we can see the special value of dialogue and exchange among those in the various religions who seek to penetrate the ultimate ground of their beliefs by transformation of religious consciousness. We can see the point of sharing in those disciplines which claim to prepare the way for "mystical" self-transcendence. . . . Without asserting that there is complete unity of all religions at the "top," the transcendent or mystical level. . . it is certainly true to say that even where there are irreconcilable differences in doctrine and in formulated belief, there may still be great similarities and analogues in the realm of religious experience. . . . [H]oly men like St. Francis and

Ramakrishna (to mention only two) have attained to a level of spiritual fulfillment which is at once universally recognizable and relevant to anyone interested in the religious dimension of existence. Cultural and doctrinal differences must remain, but they do not invalidate a very real quality of existential likeness (Merton 1975, p. 311f).

Merton was on the cutting edge of East–West dialogue, and he opened the door for believing Christians to follow his footsteps in the dialogic encounter with Eastern thought. In October 1968, just after completing one of his planned talks, he went to his room to shower and rest. He accidentally touched a fan in the bathroom that had faulty wiring and was immediately electrocuted. His death was a blow to all who knew him.

But his death itself gave a final exclamation to his closing offering at the first spiritual summit conference in Calcutta. He so eloquently expressed this prayer which remains as his final wisdom for all spiritual aspirants:

Oh God, we are one with You. You have made us one with You. You have taught us that if we are open to one another, You dwell in us. Help us to preserve this openness and to fight for it with all our hearts. Help us to realize that there can be no understanding where there is mutual rejection. Oh God, in accepting one another wholeheartedly, fully, completely, we accept You, and we thank You, and we adore You, and we love You with our whole being. Our spirit is rooted in Your Spirit. Fill us then with love, and let us be bound together with love as we go our diverse ways, until in this one spirit which makes You present in the world, and which makes You witness to the ultimate reality that is love. Love has overcome. Love is victorious. Amen (Merton 1975, p. 318f).

## Method

Brandon Randolph-Seng

College of Business & Entrepreneurship,  
Department of Marketing & Management,  
Texas A&M University - Commerce, Commerce,  
TX, USA

Religion's method is based on faith, while psychology is a science. Therefore, both religion and psychology have a different yet complimentary way of dealing with and understanding existential questions such as the meaning and purpose of life (Greenberg et al. 2004). For psychology, the scientific method, the research process, and critical thinking are all going to be important. The scientific method is a cyclical process with the scientific cycle of theory building consisting of two complimentary forms of reasoning: induction and deduction. Therefore, either factual findings can contribute to theory development (induction) or theory can serve as a basis for hypotheses that may or may not be verified by factual findings (deduction). Programmatic research is a systematic step-by-step approach to theory development (Randolph-Seng 2006). In order to make a contribution to the understanding of human thought and behavior, contemporary psychologists must have a program of research in place (Klahr and Simon 2001). For religion or the religious believer, science-like critical thinking processes are important, but ultimate understanding of self and others must come through a trust and belief in those things that cannot be tested through traditional scientific methods. Evidence for the meaning and purpose of life comes through the fruits (outcomes) of those beliefs (see Matt. 7 King James Version). Religion's method is also a cyclical process with faith and action serving as two complimentary forms of belief. Therefore, the outcome of action based on faith grows into knowledge for the believer. In order for the religious believer to come to a sense of religious knowledge, faith in those things that are not seen or scientifically testable must come first (see Heb. 11 King James Version).

## Midrash

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

Midrash refers to a genre of classical Jewish biblical interpretation which flourished from the third century to the thirteenth century. The term derives from the Hebrew verb “to pound” – suggesting that midrash *pounds out* meaning from the biblical text. The literary form refrains from determining one interpretation as normative, allowing for multiple and mutually exclusive interpretations of the biblical text to coexist.

Rarely does midrash attempt to comment on an entire biblical passage; rather it almost always focuses on a particular word, phrase, or individual verse. Following an extremely close reading of the biblical text, the interpreter will point out a textual oddity such as an unusual word choice, a variant spelling, or an unexpected syntax. Holding the premises that the bible’s author is divine and that the text was composed with ultimate economy, an individual midrash endeavors to show how the apparent error was actually intended by God to teach an additional lesson. The remainder of the midrash will expound that

point, often making liberal use of wordplays, puns, and convergences of sounds. Similar to psychoanalysis, the midrashic process seeks to find latent meaning implied in the manifest material of the biblical text. Few Jews composed works of philosophy or systematic theology prior to the medieval period; midrash serves as the primary window into how the rabbis of the ancient world viewed God, morality, and the world around them.

Midrash can loosely be divided into two categories: narrative (*aggadic*) and legal (*halakhic*). Biblical style is typically laconic. The text provides only flashes of dialog and almost never directly reveals a character’s thoughts or emotions. Narrative midrash attempts to fill these gaps in the text, playfully imagining missing dialog, background stories, and motivations for behavior. One common method is to shift the reader’s point of view, retelling the story from the perspective of a peripheral or altogether invented character. This undermines the reader’s confidence in objective inquiry and directs his or her attention towards the relational field. Like many psychological interventions, the midrashic process provides individuals with license to explore, question, and refashion narratives that may initially appear immutable.

Legal midrash purports to deduce practical rules for worship, daily life, and moral behavior from a biblical text which appeared sometimes too vague and sometimes simply outdated to its rabbinic interpreters. For example, the Bible commands that Israelites refrain from work on the Sabbath, but it provides no definition of work. The Sabbath laws observed today by religious Jews develop directly from midrashic efforts to elucidate specific practices relying on subtle clues within the generally silent biblical text.

Midrashic interpretation is traditionally viewed as divine in origin; consequently, rules derived through legal midrash are considered by rabbinic authorities as if they were stated explicitly in the Bible. Midrash served as a tool to connect sometimes radical innovations in religious practice to the biblical text itself, thus maintaining a direct link between devotee and scripture despite significant transformations in

normative behavior over time. As Jewish tradition evolved through its encounters with other cultures and new technologies, midrash became the primary means by which rabbis validated these developments as consistent with divine will.

## Migration and Religion

Valerie DeMarinis  
Uppsala University, Uppsala, Sweden

### Introduction

The relationship between and psychological consequences of migration and religion are topics of historically long standing. The age of globalization and patterns of forced migration have brought new attention to this topic. The text is organized into the following sections: cultural function and worldview; voluntary and forced migration; host culture analysis and operant refugee paradigm; and mental health, religion, and trauma.

### Cultural Function and Worldview

To understand the psychological implications of the interaction between migration and religion,

the function of religion in cultural context needs to be studied. The pioneering work of Arthur Kleinman in cultural psychiatry (1980) introduced a now internationally used model of the dimensions of culture for analysis of how healthcare systems, types of interaction in healthcare contexts, and patients' cultural understandings of illness and health are constructed. In this model, the symbolic dimension, which includes religious elements and rituals, is pivotal for understanding the deepest levels of how concepts of illness and of health are understood in a given cultural context. As illness and health are culturally influenced constructions, the religious or spiritual way in which these are approached informs the psychosocial and psychoexistential functioning of individuals and groups within the culture. Cultural psychologists Marsella and Yamada (2000) note that culture is a living entity that provides both internal and external artifacts. Included in the external category are societal institutions including religious and healthcare organizations. Included in the internal category are beliefs, rituals, and symbols, including those of a religious or existential nature. A change in one category necessitates attention to the need for change in the other as the internal and external categories are interdependent. The religious or spiritual systems operant in a monocultural or stable multicultural situation provide a means for creating a functioning worldview in which psychosocial and psychocultural understandings and behaviors are contained. Approaching the concept of worldview as a psychological construct, Koltko-Rivera (2004) defines it as a set of assumptions about physical and social reality that may have powerful effects on cognition and behavior. An individual's worldview needs to be studied in relation to personality traits, motivation, affect, cognition, behavior, and culture.

Religious and spiritual beliefs, rituals, and symbols can and very often do function as resources in such mono- or stable multicultural contexts. In cultural contexts where political stability, safety, and religious toleration exist, migration of different minority groups representing different religious traditions can

have a positive outcome for both minority and majority groups. Perhaps the most salutogenic and health-enabling acculturation process, in such cases, would mean that the migrant minority group members find ways to incorporate aspects of the majority culture's external and internal artifacts while maintaining and developing central resources for their psychosocial health and spiritual resilience originating from their original culture (DeMarinis 2003). Thus, a syncretism of cultural resources would emerge over time, experience, and exposure. Majority culture members would also be a part of the acculturation process, learning from and respecting the resources of the minority groups.

### Voluntary and Forced Migration

International migration implies a shift from one cultural context to another. Depending on the differences between the old and new cultural contexts, the role of religion or spirituality can have very different consequences for psychosocial adjustment and development. Migration takes place in both voluntary and forced situations. The term "refugee" denotes an individual who is forced to flee in search of safety, in contrast to someone who chooses of their own volition to relocate. Bascom (2001) provides a helpful overview of the geographical and geopolitical dimensions of refugee (forced) migration patterns.

Migration of any kind can cause a dramatic change in the way in which and means by which a person or a group's religious or spiritual expression may function. The more dramatic and traumatic the situation of migration, the more one may expect situations of dysfunction. As Silove (2005) points out, it is important to pay attention to how changes in existential meaning are being handled, especially in situations of forced migration. Values and belief systems, the inner artifacts of culture, can become dysfunctional, leading in extreme cases to alienation and loss. Thus, addressing these areas in response to trauma may assist with the move from trauma to survival.

It therefore becomes necessary through both social and psychological interventions to include room for religious and spiritual expression in cultural reconstruction and adaptation processes. Elements of humanistic and existential material need to be included in counseling and psychotherapy.

### Host Culture Analysis and Operant Refugee Paradigm

Another important psychosocial aspect regarding migration and religion is the fit between the host culture and the cultures of the migrating groups, with special attention to refugees. This aspect of research has been understudied but is now receiving much-needed attention. One of the central results of a research study on Polish children's attitudes to refugees (DeMarinis et al. 2001) points to the need for an analysis of functioning religious culture when investigating attitudes of the host culture population. Analysis of this dimension is important when conducting research or designing intervention programs in countries that have a defined religious tradition such as Poland but also as in countries that represent a more secular orientation such as Sweden. Concepts and policies such as religious freedom and tolerance may appear as simple and straightforward on the surface but may be impeded by underlying and underexplored worldview conceptions that often contain suspicious attitudes to certain religious traditions or religious expressions.

Host culture analysis in relation to refugee groups needs to be understood in relation to the operative refugee paradigm. Clearly, a paradigm shift has occurred in international responses to refugees. After September 11, 2001, the *security paradigm* has taken form, where refugees are not infrequently viewed with deep suspicion and in the extreme as being terrorists (Frelick 2007). A sign of this paradigm shift is reflected in the decline of asylum applications in the Western industrialized countries. Refugees are often viewed as moral blackmailers, exploiting the

goodwill of the host nations (Ingleby 2005), or as a result of terrorist threats, a major devaluing of refugees among receiving countries has taken place (Frelick 2007).

A comparison of European and North American attitudes to immigration (Livi-bacci 1994) noted that the factors explaining the different immigration policies in North America and Europe are not economic or demographic but stem rather from history, social structure, the functioning of the labor market, and social mobility. European countries tend to perceive themselves as totally formed and not requiring further cultural contribution. Homogeneity in culture, language, and religion is valued. Finally, in Europe, restrictive policies are in perfect harmony with public opinion.

A study of refugee problems in Europe (Veiter 1988) points out the large influx of refugees coming from places with other cultural and religious attributes. Accordingly, the Islamic immigrants often declare themselves as political refugees and hope to be acknowledged as such by the receiving state. The fear of the governments and populations of the receiving countries is that it will not be possible to assimilate refugees who do not belong to the Christian culture of Europe (Veiter 1988).

## Mental Health, Religion, and Trauma

Research on mental health and religion has become timelier because of a resurgence of interest in religious belief and practice in many parts of the world and because of the increased movement of the world's population (Boehnlein 2006). Mental health providers in developed countries increasingly are treating immigrants and refugees whose backgrounds are much different from their own, so it is important for them to understand cultural belief systems, including religious thought and practice that relate to mental health and illness (Bhugra 2004; Ingleby 2005).

During and after traumatic events, individuals frequently report great cognitive dissonance between what they observe and experience in

reality and what they previously believed were stable, secure, and predictable relationships, not only with other individuals but also with the supernatural or the metaphysical (Boehnlein 1987). Incorporating religious and spiritual perspectives in the clinical assessment of patients takes into account the effects of philosophical viewpoints, cultural values, and social attitudes on disease (Fabrega 1977). Religious teachings recognize the transcendental meaning of suffering and the fact that suffering, such as agony, despair, pain, and conflict, belongs to the totality of life (Kirmayer 2008; Rhi 2001).

In PTSD recovery, spiritual awakening can play a role in relieving survivor guilt (Khouzam and Kissmeyer 1997). Traumatic memory and unresolved issues may be helped in psychotherapy through an understanding of and addressing of the rituals of importance to the patient. Working with re-ritualization in the new cultural context, through connection to the patient's religious or meaning making system, may help to create a new perspective and a means of containing painful memory as well as providing a new memory resource (DeMarinis 1996).

Exposure to inexplicable evil, cruelty, and extreme violation can shake and sometimes shatter the foundations of the survivor's existential worldview. The survivor and the community face crises of trust, faith, and meaning (Silove 2005). A very useful conceptual framework for understanding the existential meaning-system in mental health initiatives among refugees in post-conflict societies is the *survival and adaptational model* by Silove (2005). On the level of existential meaning-system, the challenges are to the undermining of cultural and belief systems values. The adaptive responses are existential doubts and the adoption of new/hybrid identities, while the extreme responses are alienation and loss of faith. The social interventions can be made on religious, political, and cultural reconstruction levels. The psychological interventions may include elements of humanistic and existential therapy (Silove 2005).

Several recent studies in different contexts point to the importance of religious coping

strategies and resources in the management of traumatic stress after forced migration: Gozdziaik (2002), Hagan and Ebaugh (2003), Myers (2000), and Shoeb et al. (2007). These and other studies are providing a base for understanding the potential of certain kinds of religious engagement and involvement for identifying resources for coping and moving beyond surviving. However, there is the need for caution in examining these results as so many factors are involved at many different levels. Keeping such cautions in mind, three initial observations can be made. First, that religion and spirituality can be beneficial to people in dealing with the aftermath of trauma. Second, that traumatic experience can lead to a deepening of religion or spirituality. Third, that positive religious coping, religious openness, readiness to face existential questions, religious participation, and intrinsic religiousness are factors that may be associated with posttraumatic growth.

## Mikveh

Lynn Somerstein  
Institute for Expressive Analysis, New York,  
NY, USA

The mikveh, a word denoting “the collection or gathering of water,” is a ritual bath used for purification purposes by women, after their menstrual cycle is completed or after childbirth, making a woman ready to resume intimate relations with her husband, and by men, to achieve ritual purity. Women also immerse themselves before the day of their wedding. Immersion in the mikveh is part of the conversion experience, too, symbolizing the change from the old identity to the new Jewish identity. Immersion in the mikveh marks an intermediate step towards a new state. The entire body, including the hair on one’s head, must be totally immersed in the waters of the mikveh.

The mikveh is a deep pool filled with a mixture of pure springwater or rainwater, called living water and tap water. Tap water alone cannot be used because it is pumped. Mikveh water must flow into the pool by natural means, such as gravity, although tap water can be mixed with what is called “living water.” The emphasis on the use of “living water” symbolizes water from the earth, like amniotic fluid from mother earth.

The narrow deep pool of water symbolizes the amniotic fluid; the pool itself is like the womb, a return to the mother. A person totally immersed in the mikveh is like a fetus inside the mother’s body.

New cooking implements are also immersed in the mikveh to ready them for kosher use.

## Mindfulness

Jo Nash  
Sri Lanka International Buddhist Academy,  
Kandy, Sri Lanka

### Historical and Religious Origins of the Term “Mindfulness”

The Buddhist practice of mindfulness is described in detail in the Satipatthana Sutra (also known as “The Foundations of Mindfulness” translated by Thanissaro Bhikkhu <http://www.accesstoinsight.org/tipitaka/mn/mn.010.than.html>) and also comprises the seventh aspect of the Noble Eightfold Path to end all suffering as explained by Siddhartha Gautama Buddha. Each aspect of the Eightfold Path is an interdependent principle of Dharma practice, and Right Mindfulness involves cultivating insight into how our minds work, using both the conceptual mind and the direct perceptions of our bodily senses. The aim is to refine our awareness of how different aspects of the mind and body inform each other, through observation and acceptance of their fluctuating nature. This enables practitioners to notice the arising and dissolution of changing states of awareness and cultivate an acceptance of the impermanence of bodies, emotions, thoughts, and environmental phenomena. This develops equanimity which is a mind free of attachment or aversion to what occurs. Ultimately it prepares the practitioner for the realization of the peace of Nirvana. Rahula writes, “Right Mindfulness is to be diligently aware, mindful and attentive with regard to (1) the activities of the body, (2) the sensations or feelings, (3) the activities of the mind and (4) ideas, thoughts, conceptions and things” (1959, p. 48).

## Contemporary Psychological Definitions

Mindfulness has now been adopted as a contemporary practice beyond the Buddhist community, used to tackle stress and modify distortions in thinking. It involves paying full attention to the present moment through the direct perceptions of our bodily senses, emotions, and thoughts, without judgment. It is understood as the antithesis of time-referenced action, where our feelings, thoughts, and behavior are rooted in an evaluative assessment of the efficacy of past actions and the anticipation of future consequences, which may be more or less consciously available to us. When practicing mindfulness we observe the present moment in all its fullness to access an awareness unencumbered by the distortions of memory or desire. Mindfulness is thereby the opposite of “mindlessness,” or a mind susceptible to unconscious feelings and reactive thoughts, leading to automatic, habitual, or impulsive actions.

## Mindfulness-Based Health Interventions

Contemporary health practitioners of various kinds understand the latter to be the root of much stress and psychological distress. Mindfulness techniques are being taught by a range of health education professionals to help cultivate the self-management of health problems which may be compounded by the tendency of the mind to react impulsively rather than observe and reflect, from acute stress to chronic pain, substance abuse, and severe, recurring mood disorders.

In more complex cases of recurring major depression, mindfulness techniques have been used as an adjunct to other forms of psychological intervention, primarily in conjunction with cognitive therapy to produce the hybrid “Mindfulness-Based Cognitive Therapy” or MBCT. Recent research has demonstrated that MBCT is especially effective at preventing relapse in patients suffering with a history of three or more episodes of major depression, the most recent of which has not been precipitated by significant life

events (Ma and Teasdale 2004). MBCT helps these patients “. . . learn to be aware of negative thinking patterns reactivated during dysphoria and disengage from those ruminative depressive cycles” (Ma and Teasdale 2004, p. 31). It facilitates this by enabling the patient to experience changes in affect and thinking with acceptance, rather than the controlling, clinging mind of aversion or attachment. This cultivates a decentered approach to fluctuations in emotions and thoughts through an awareness of their impermanence, or ultimately changing nature. It can thereby avert the downward spiral of rumination on previous experiences of feeling “stuck” with negative emotions such as sadness or anger, which has in the past precipitated a depressive mood and developed into a major depression. In short, the adoption of MBCT techniques enables the patient to choose to observe their ever-changing emotions and thoughts rather than become them.

Mindfulness-Based Stress Reduction is a more generic form of healthcare intervention aimed at facilitating the self-management of chronic pain and stress, pioneered by Jon Kabat-Zinn (1990). He describes the practice he teaches his clients at the stress clinic as follows:

. . .the essence of mindfulness is paying attention on purpose. [. . .] being awake, owning your moments. As long as you are awake you can be mindful.[. . .] bringing your attention into the present moment [. . .] it [. . .] does not mean ‘thinking about.’ It means directly perceiving what you are attending to. [. . .] direct seeing, direct hearing, direct feeling (1990, p. 438).

Through the increased awareness of the here and now, we tune into our thoughts, feelings and sensations and those of other people too, so that “we can respond more appropriately to change and to potentially stressful situations, because we are aware of the whole and our relationship to it” (Kabat-Zinn 1990, p. 438). We can make more informed choices about how to act, because we have more information about what is going on inside us and around us, through the cultivation of focused attention on what is there, rather than what we want to be there, or fear may be there. In this way MBSR sidesteps the stress created by the limitations of our time-referenced mind,

which is prone to get stuck in the past or worry about the future, neither of which exists right now.

In summary, mindfulness is an ancient Buddhist contemplative practice that can lead the Dharma practitioner to the fulfillment and peace of Nirvana, as well as having a range of tangible health benefits for the non-Dharma practitioner. In both it requires the sustained cultivation of nonjudgmental attention to the present moment, in all its fullness.

### Miracles

Daniel J. Gaztambide  
Union Theological Seminary Program in  
Psychiatry and Religion, New York,  
NY, USA

In philosophy and theology, miracles are wondrous events generally conceived as violations of the immutable laws of nature by divine or supernatural forces such as god/s or other spiritual beings. Depending on one's philosophical or theological position, they are

argued to either be impossible events without any verifiable evidence due to the contradiction inherent in the notion of violating immutable natural laws or possible events enacted by a deity who has the capacity to momentarily suspend, abrogate, or transform the laws of nature. A psychological approach influenced by this debate over immutable natural laws and the supernatural would be tempted to problematize either party as neurotic and lacking good reality testing, depending again on the philosophical orientation of the psychologist – one who does not believe in miracles might see those who do as irrational and mentally ill and vice versa. A different psychological approach would be interested not in the particular truth claims of philosophical inquiry but on the way miracles and miraculous experiences express the deep structure of a person's subjectivity and their relations to personal, communal, and religious experience.

### Miraj

Ali Kose  
Ilahiyat Facultesi, Marmara Universitesi,  
Istanbul, Turkey

*Miraj* is an Arabic word meaning “ladder, to elevate, or to ascend.” In Islamic literature it is used for the night journey of Prophet Muhammad when he was miraculously taken to the presence of Allah (God) in Heaven. According to the Islamic faith, it is one of the major miracles of the Prophet. It happened on the night of the 26th of *Rajab*, the seventh month of the Islamic calendar, in the year 621 CE, which is one year before the Prophet's migration to Medina. How the miraculous journey occurred is a matter of differing opinions among Muslim theologians. Some

maintain that it occurred only spiritually, while others assert that it happened both bodily and spiritually.

## Stages of Miraj

Miraj happened in two stages. In the first, the Prophet was taken from *Masjid al-Haram*, the mosque which surrounds the *Ka'bah*, in Mecca to *Masjid al-Aqsa*, the mosque just south of the Dome of the Rock, in Jerusalem. This stage, which is mentioned in the Qur'an, is named *al-isra*, the night journey (Qur'an 17: 1). In the second stage, the Prophet miraculously ascends from *Masjid al-Aqsa* to God in Heaven. This stage, called Miraj, is not mentioned in the Qur'an, but it is narrated in detail in various sayings of the Prophet (al-Bukhari, *al-Salat*, 1; al-Muslim, *al-Iman*, 259).

According to the sayings of the Prophet, the Archangel Gabriel took the Prophet to Heaven riding on a mount called *Burak*. He was elevated through seven levels of Heaven where he met seven former prophets; Adam, Jesus, Joseph, Enoch, Aaron, Moses, and Abraham, one at each level respectively. His ascension was accompanied by the Archangel Gabriel until the lotus tree called *sidra al-munteha* in the Seventh Heaven. Then he continued his journey riding on another mount called *Rafraf* and was not accompanied by the Archangel Gabriel until he arrived to God's presence. There, he was given the good news that his people, except those who attribute partners to God, would eventually be allowed into Paradise. It was here where God enjoined five daily prayers. On his descending from Heaven, he rode *Rafraf* until the lotus tree where he took *Burak* again until Jerusalem before returning to Mecca.

While in God's presence, the Prophet was also given the following 12 commandments: (1) Do not worship any God, but Allah; (2) treat parents well; (3) lend help to kin, the stranded one, and the poor; (4) do not be mean and do not waste; (5) do not kill your child due to the fear of poverty; (6) do not approach adultery; (7) do not kill;

(8) do not usurp orphan's belongings; (9) keep your promise; (10) do not deal in fraud; (11) do not follow an idea which you know nothing about; and (12) do not be arrogant.

## Reactions of Muslims and Idol Worshippers

The following day, the Prophet told the Meccans about his journey to Heaven. The idol worshippers tested him by asking questions about a caravan traveling from Jerusalem. His answers were satisfactory, but the idol worshippers did not believe in him even though they cross-checked all with the members of the arriving caravan. Some idol worshippers went to Abu Bakr, who was one of the first Muslims, saying that Muhammad had gone crazy claiming that he had ascended to Heaven. Abu Bakr surprised them saying that he would believe anything Muhammad had said. After this event Abu Bakr was given the title of "The Trustworthy." In general, Muslims believe that Miraj is a test of their faith.

Miraj has a symbolic meaning for Muslims. They are supposed to experience the journey of the Prophet in their five daily prayers, feeling themselves in the presence of God as the Prophet did at Miraj. In order of importance of sacred occasions, it is after the Night of Power (*Lailatu'l Qadir*) when the Qur'an is believed to have been revealed.

## Mirroring

Jane Simon  
New York, NY, USA

The intrigue with the *mirror* leads down a corridor of a long, variegated history to involve the profound subject of identity. Who are we to self? Who are we to the world? What is reality? What is distortion? How much can we alter our perceptions?

The earliest hominid gazed at his image in the still water following a rainstorm. The question of identity and the soul concerned the ancient Egyptians, Chinese, and Aztecs. Present-day astronomers turn their big mirrors out toward space and ask, “Who are we; what is our place in the universe?”

### Uses of the Word “Mirror”

The noun mirror is an object which reflects back to the onlooker a more or less distorted image, most commonly reversing right and left or presenting the onlooker with a “mirror image.” The verb “to mirror” is to offer a verbal feedback, an aspect of the subject *mirrored* by an onlooker.

### Superstitions and the Mirror

Many people from Europe to Madagascar, and sects of Mohammedans and Jews, cover mirrors in the house after a death because they believe the soul of a living person in the form of his reflection may be carried off by the ghost of the deceased which hovers around the house until the burial (Goldberg 1985, p. 3).

Seven years of bad luck to one who breaks a mirror is related to the belief that the image is the soul. Since the mirror supposedly captures the soul, if it breaks, the soul breaks too. British anthropologist Sir James Frazer found that the Greeks believed water spirits could drag a

person’s reflection underwater, leaving him soulless to perish. This superstition explains the myth of Narcissus who perished from the frustration of inordinate love for his mirror image (Goldberg 1985, p. 6). Universal mystery of the mirror involves divination, the art which seeks to foretell the future and discover hidden knowledge (Goldberg 1985, p. 7).

### Philosophy and History

Plato argued that it was often impossible to see the idea, just as the true nature of the sun...cannot be viewed directly...can only be seen imperfectly reflected in a mirror. And by extension, the material world known through our senses was regarded as a reflection of the “other world,” of ideals which we cannot see, feel, or hear unless possessed of universal wisdom. Socrates and Plato asserted that our illusory reality is only the reflection of a greater, abstract goodness that lies in a hypothetical upper world beyond the *mirror-like* dome of the sky. Even though Plato considered this world a mirror illusion, this Platonic concept prevailed for over 1500 years in Europe, in religion, art, and morality (Goldberg 1985, pp. 114, 115).

Socrates urged his followers to study themselves in mirrors in order to make sure their faces did not reflect dishonorable thoughts or deeds, apparently assuming that they could “monitor their inner reality by their outer appearance” (Pendergrast 2003, p. 12).

Seneca, who lived during the time of the Roman Empire (CE 40), thought mirrors were invented so man might gain knowledge of himself and thereby wisdom. With the mirror’s help, the handsome man may avoid infamy; the young man be reminded that youth is a time of learning; and “the old man, set aside actions dishonorable to his gray hair, to think some thoughts about death. This is why nature has given us the opportunity of seeing ourselves” (Goldberg 1985, pp. 112–113).

The *Book of Wisdom* of the second century BCE echoes an aspect of the Platonic mirror.

In CE 54, Paul, at the church in Corinth, addressed his Epistle, “For now we see in a mirror dimly, but then face to face. Now I know in art: then I shall understand fully, even as I have fully understood” (Goldberg 1985, p. 115). In the authorized translation: “For now we see through a glass, darkly” (I Corinthians 13:12).

From these beginnings, the mirror analogy took on significance in Christian thought. From “spotless mirror” in the *Book of Wisdom* was drawn the attribute of the purity of the Virgin Mary.

The metaphor of the mirror lent itself to the Christian belief that all existence is understood as a relation between paragon and image, between a reality and its innumerable reflections. Contempt for the world of matter and belief in the liberation of the soul through asceticism and mystic revelation made this congenial to many believers (Goldberg 1985, p. 116).

Through the writings of Augustine and others, basic theological mirror analogies were formulated: the mirror of the soul and the mirror of the mind. The mirror of the soul was the image of the ideal or archetypal idea. This led to mirrors known as compendiums of knowledge and idealized virtues. The mirror of the mind was ambivalent; it reflected the shadow world of the senses and led to mirrors that warned of the transience and illusiveness of this world. But concerned itself with religious truth. The Holy Scripture was called a mirror from which could be drawn models of holy living either as biography or as religious rule (Goldberg 1985, pp. 118–119).

In Kabbalistic doctrine the goal is to meditate on the Hebrew letters in order to pass beyond the control of the natural mind, first by means of script and language and then by means of imagination to reach the stage where you can’t speak. Through the power of sheer imagination, one’s inmost being is something outside of self which takes on “the form of a polished mirror” (Scholem 1995, pp. 154–155).

Shakespeare’s Hamlet, Yahweh of the Hebrew Bible, and Jesus of the Greek New Testament each provide mirrors in which we see ourselves reflected in their faith and in their

skepticism, with the ultimate hope for transcendence. Jesus Christ may be seen as “a concave mirror” in which we see the distortions we have become (or a “theological labyrinth”), while Yahweh, the Hebrew God, is a “mad moralist” (Bloom 2005, p. 9).

Like Hamlet, Jesus is a mirror in which we see ourselves. “Endless questing for the historical Jesus has failed, in that fewer than a handful of searchers come up with more than reflections of their own faith or their own skepticism.” “. . . Jesus is to the Greek New Testament what Yahweh is to the Hebrew Bible, or Hamlet to Shakespeare’s play: the vital protagonist, the principle of apotheosis, the hope for transcendence” (Bloom 2005, pp. 12–13).

History has altered our perceptions and with it perceptions of soul, self, mirror, and mirroring. At first images reflected in water did not appear to belong to us but rather to the deities.

During the nineteenth century, the concept of the double, an alternate version of self, was perceived to turn against self. The Russian symbolist Andrei Bely produced a body of literature in which the reflected image plays a role often portending a tragic end. Gogol in *The Nose* and Dostoyevskii in *The Double*, through the use of the mirror, describe the worlds of their characters.

In 1924, Otto Rank, a renowned Austrian psychoanalyst, published a psychological treatise *The Double* which theorized that the double or soul and man’s need to immortalize himself led to the development of civilization and its spiritual values. Rank shared the preoccupation of the Russian symbolist writers in his observation that the double represented the problems of man’s relationship to himself. Both novelists and psychologists were affected by the impact of nineteenth-century science which seemed to destroy the soul. The mirror became a symbol of man’s rejection of materialistic reason in his search to repossess his lost soul (Goldberg 1985, p. 242).

When our conception of the universe changed to a more objective view of reality, we were freed of earlier misapprehensions about self, and in turn, our conception of the mirror was altered.

Looking outward, the modern mirror contributes to the broadening of scientific and technological horizons. Looking inward, the mirror remains a powerful tool of introspection, a metaphor to help distinguish outward appearance and inner truth.

## Poetry

Poet Margaret Atwood writes a powerful poem in which she equates the absence of a mirror to living without the self.

To live in prison is to live without mirrors. To live without mirrors is to live without the self. She is living selflessly, she finds a hole in the stone wall and on the other side of the wall, a voice. The voice comes through darkness and has no face. This voice becomes her mirror (Atwood 1978).

I interpret Atwood's words as an expression of our human desperation for "mirroring."

Another contemporary poet, *former* laureate Billy Collins writes about the mirror as an informer in a poem entitled "In the Moment":

As I closed the book on the face  
Of Thomas Traher and returned to the house  
Where I lit a flame under a pot  
Full of floating brown eggs,  
And while they cooked in their bubbles,  
I stared into a small oval mirror near the sink  
To see if that crazy glass  
Had anything special to tell me today.

Theoretically the glass "mirrors" back something we know or informs of what is there, but it may surprise us with *something* we haven't seen before.

In the twentieth century, psychologists became intrigued with the significance of mirroring as a vital process to self-*development*. Today "mirroring neurons" have been anatomically defined and observed in action on a functional magnetic radiological imaging of the living brain.

The study of how mirroring and the activities of mirroring cells affects us has been extended from the major role *they* play during the years of child development to their everyday role in influencing our actions in subtle ways often outside our awareness.

## Mirroring and Development

Does the mirror corrupt or enhance a sense of self for a young child? Psychologist Fritz Wittels\* found as a boy that the mirror helped identify his ego to himself (Goldberg 1985, p. 249; \*year of Wittels' writing is not provided).

Child psychiatrist Robert Coles recognized the role of the mirror in developing a positive self-image. He studied American children of well-to-do parents. These children were exposed to many mirrors in their homes, which were used for inspection of their appearance to "insure neatness and cleanliness" and "as a means of nurturing self-esteem." These children became leaders in society. By contrast, in his study of underprivileged children, Coles found this emphasis lacking (Goldberg 1985, p. 250).

## Psychology

In the 1970s, psychoanalyst Heinz Kohut described the concept of mirror transference in two seminal books, *The Analysis of the Self* and *Restoration of the Self*.

In Kohut's words, "The genetic matrix of the primary defect-stunted development of the grandiose-exhibitionistic aspects of the self-was insufficient mirroring from the side of the mother. . ." (Kohut 1977, pp. 7-8).

Margaret Mahler studied the interaction and interrelationship between mother and infant and categorized a variety of mothering styles based on the mother's ability to recognize and mirror the affect, cognition, and behavior of her young child.

The goal for the mother to respond with sufficient accuracy determines the development of a healthy sense of self for the infant. If her mirroring doesn't relate or approximate the inner feeling state of the infant/child, he develops an inadequate or distorted sense of self.

Mahler cites the example of Charles who could not be alone or in the company of another person for extended periods of time; he had lost his "symbiotic mother" "at a time in his development when this loss was equivalent to

losing part of the self.” He tried to learn how to have emotions. . .to maintain a sense of identity by mirroring others (Mahler 1968, pp. 30–31).

A decade later, child psychiatrist Daniel Stern based much of his study on significant developmental processes of mirroring, attunement, and empathy between infant and caretaker. To a great degree, these processes determine our identity, a sense of who we are and how we interact with others.

Stern elaborates on the development of several forms of the self which are essential for functioning. The self as *agent* grants us ability to perform in the inanimate and social worlds. If this sense is lacking, paralysis may result. The sense of physical cohesion prevents fragmentation with depersonalization, out-of-body experiences, and derealization. Memory aids a sense of continuity and prevents temporal dissociation which is seen in fugue states and amnesias. An affective sense prevents anhedonia and enables a person to connect to the culture, to socialize, and avoid cosmic loneliness.

Kohut, Mahler, and Stern all focus on the preverbal self and damage to the sense of self and psychopathology which result from failure of good enough mirroring whether the problem exists in the emotional/affective, cognitive, or behavioral realm.

Used in the clinical theories of Mahler et al. (1975), Kohut (1977), and Lacan (1977), reflecting back an infant’s inner feeling state remains a key to the infant’s development in learning about his or her own affectivity and sense of self. “Mirroring” then implies that the mother is helping to create something within the infant that was only dimly or partially there until her reflection acted to solidify its existence. Based on these studies, mirroring lies at the basis of healthy development and constitutes the foundation of the authentic self.

## Mirror Neurons

In the 1990s, mirror neurons were discovered by an Italian team who happened to be snacking on ice cream cones in front of macaque monkeys.

These monkeys imitated the scientists by beginning to eat too.

Mirror neurons are housed in several areas of the brain. One of these, the insula, is responsible for social emotions like guilt, shame, pride, embarrassment, disgust, and lust.

We humans are “hardwired” for imitation. Mirror neurons begin working at birth. Watching his mother stick out her tongue, an infant a few days old will imitate her behavior by protruding his own.

Through the operation of mirror neurons, we learn many behaviors. Our survival depends on understanding actions, intentions, and emotions of others which in turn depends on the existence of mirror neurons.

The function of mirror neurons extends beyond *actions* to involve *intentions* and *emotions* which contribute to make us social animals.

According to researcher Rizzolatti, mirror neurons have been found to mediate a broad range of human experiences that were previously thought too subjective to be characterized experimentally. Emotions such as empathy, theory of mind (the ability to perceive another person’s intent), and even the reaction to a loved one’s pain have been characterized at the neuroanatomical level and appear to involve mirror neurons (Blakeslee 2006).

Whether a person performs the action, observes the action done by someone else, or hears a sentence describing the action activates the same mirror regions in the brain which has led researchers to “speculate that syntactic understanding involves mirror regions that are normally associated with action recognition.”

Neuroscientist Marco Iacoboni, who studies mirroring cells in human brains, links empathy with strength of mirror neuron response, and suggests that the mirror system opens the gate to understand other cultures (Blakeslee 2006, p. 4; Hotz 2007).

A kind of mirroring or mimicry, “a synchronized and usually unconscious give and take of words and gestures,” has been found to foster the subtle art of persuasion. Researchers find that when a person’s posture and movements are

mirrored with a 1–2-second delay, namely, to create an imperfect mirror, they are more receptive to the suggestion to try a new soft drink. Subtle mimicry, perceived as flattery, has the opposite effect of social mimicry which is likely to be perceived as mockery (Carey 2008).

### **Biology, Anatomy, and Pathology**

Humans possess multiple mirror systems located in diverse areas of the brain responsible for language, emotions, and perceptions. Researchers seem to agree there are multiple mirror systems and neurons that have connections to thousands of other cells which create intricate constellations of relationships.

Faulty mirroring most likely lies at the root of psychopathology of many diagnoses, perhaps excluding only those which fall primarily in the biochemical realm.

Normal function helps determine what goes wrong in pathological conditions such as autism, a disorder manifested in failure to respond to social cues.

This mirror of neurons may be broken with greater disruption of mirror networks implicated in worse symptoms of autism, that is, more severe impairment of language, behavioral, and social skills.

Unresolved as to etiology and now attributed to the realm of the biological is the malady known as Body Dysmorphic Disorder which manifests as faulty, inaccurate thoughts and perceptions about appearance. Variations on distorted body image include anorexics who look into a mirror and see too much body fat and male bodybuilders who suffer from “bigorexia,” a condition in which their mirror image looks too weak.

Many schizophrenics react oddly to mirrors, sometimes staring at them for hours. Curiously, there are no blind schizophrenics, and in the single known case where a long-term schizophrenic went blind, she went into remission within a few days (Pendergrast 2003, p. 360).

### **Astronomy**

The use of mirrors extends beyond psychology and religion to astronomy. Astronomers attempt to build the biggest telescope with huge mirrors to learn about the universe and the dark energy that seems to be splitting the universe apart. Patrick McCarthy of the Carnegie Observatories told the group, “The most important tool we take to the observatory is an open mind.”

The open mind is a kind of two-way mirror: we present (an aspect of) self to the world and the world reflects back. Our chore, with an openness or questioning of self, to what resides within (our thoughts, dreams, fantasies) with what the environment mirrors back to us about the aspects of self we present to the world is an ongoing dynamic process. Perceptions, like waves of the ocean, can reinforce or interfere or negate our self-concept.

Although the formation of the self depends on the mirroring process, and since the sense of self varies from culture to culture, characteristics of mirroring also vary. For example, the sense of self in India is intricately woven into the fabric of the family. By contrast, the American culture to a large degree focuses on the individual. The process of mirroring is a learning tool. We learn by imitating others, parental figures, and mentors both consciously or unconsciously.

And as one would expect, mirroring is culturally conditioned. An involuntary sense of empathy responds differently depending on whether we’re looking at someone who shares our culture (Hotz 2007).

### **Cultural and Future Implications**

Mirroring affects us to the core of our being, yet the major significance is only beginning to be recognized. To a large extent, murderers and lovers are made, not born (unfortunately, not always mutually exclusive). From the above observations, an understanding and acting upon mirroring may be important in the process of establishing world peace. The history and role of the mirror and mirroring over the centuries

reflects the human evolution from placing our fate in the deities to claiming our role of self-identity down to the unique submolecular composition of each of us and embodies the potential of humans to evolve. Dire world conditions result from the human capacity both to destroy and to rebuild, create, and problem-solve. Based on research in writing this entry, I am hopeful that we have the biological capacity (some of which lies in our mirroring neurons) to achieve increasing harmony in the future.

### Modern Mythology

David A. Leeming

University of Connecticut, Storrs, CT, USA

Inevitably people ask about the existence of myths today. In some cases the response is obvious. Scientists, for example, use “thought experiments,” made-up narratives, to explain otherwise inexplicable mysteries of the reality they alone can see or understand. Einstein’s famous relativity-based twin paradox is an example:

There were two twins. One went on a round trip into outer space. When he got home he was younger than his brother, because

His heart, brain, and bloodflow “clocks” had slowed down during the trip. This is because time has a material or “length” aspect.

The space twin was surprised on his return to discover how much older his brother was (Capra 1975, p. 170).

This narrative is a modern “myth,” because although it did not actually happen, it serves as a metaphorical description of a reality which is otherwise difficult to explain, much as Genesis I “explains” creation to Abrahamic peoples or the Persephone myth “explains” the seasons and perhaps a psychological aspect of the relationship between mothers and daughters in the context of sexuality to the Greeks.

Another such modern myth, one that pervades the modern consciousness, is the Freudian trio of ego, superego, and id in something called the psyche. These “characters,” which do not exist in any physical sense, nevertheless, have been “believed in” as if they were real and are commonly used, for instance, to explain relationships between parents and their offspring or the existence of other realities such as neurosis and psychosis.

Religions have traditionally been the breeding grounds of myths. But when religions refuse to allow their belief systems to grow and develop – that is, when they are “fundamentalist” – they tend to stop the myth breeding process. More progressive religious groups do attempt to allow the emergence of new mythologies, recognizing that to deny the progression of human knowledge, new revelations of truth, is to deny new prophecy. Modern prophets and mythmakers of an ecological mythology, for instance, create narratives explaining or reacting to a new sense of an interrelated universe in which human consciousness is a functional aspect of creation itself. We are created, says religious philosopher Thomas Berry, to “make creation conscious of itself.” Chemist James Lovelock and biologist Lynn Margulis tell the story of the universe named Gaia after the ancient Greek Earth goddess and creatrix. Earth is depicted as a living, even conscious-like entity balancing her own needs in the face of a traditional and unecological patriarchal society’s tendency to believe it owns and controls creation.

New myths can be contained in the symbolic language of traditional organized religions to the extent that these religions free themselves from exclusivity and the mental blindness of fundamentalism. For many progressive religionists, for instance, a new myth of God has emerged in which God is neither male nor female, but a concept unknowable, much like the Vedantic Brahman. Thomas Berry can speak with reverence of the “cosmic Christ.” In certain religious contexts, “modern” myths have existed for a long time, usually in the form of psychological

constructs. The thirteenth-century Sufi philosopher Muid ad-Din ibn al-Arabi could speak of the creation of God in the inner self (Armstrong 1993, pp. 236–239). In the same way, the great scholar of Indian art and religion Heinrich Zimmer said, “We cannot borrow God. We must effect his new incarnation from within ourselves” (Campbell 1968/1970, Vol. 4, p. 626). The fourteenth-century German mystic Meister Eckhart said, “God gives birth to the Son as you, as me, as each one of us. . . as many gods in God.” A later version of a similar concept is philosopher-anthropologist Gregory Bateson’s mythic suggestion that the individual mind is immanent but not only in the body. “It is immanent also in the pathways and messages outside the body; and there is a larger Mind of which the individual mind is only a subsystem. This larger Mind is comparable to God. . . but it is still immanent in the total interconnected social system and planetary ecology” (p. 461).

A more specifically psychological version of the new mythology grows out of Carl Jung’s concept of “archetypes” and a “collective unconscious.” Archetypes are psychological tendencies common to the human species, tendencies which take specific form in images, characters, and situations in the cultural dreams that are myths. A well-known expression of Jung’s idea is contained in the heroic monomyth devised by various scholars, culminating in the work of Joseph Campbell (1949/1972) in *The Hero with a Thousand Faces* and in the works of feminist scholars such as Maureen Murdock’s (1990) *The Heroine’s Journey*. In the monomyth the life of the world hero, a compilation of hero figures from all over the world, is a quest for wholeness or Self, a quest made up of several familiar steps such as the miraculous conception, the search for a something, and the descent into the underworld. These steps are mythic representations of the individual’s potential psychic life story. It might be said that for the great modern psychological mythmakers, anyone searching for wholeness leaves the ordinary world for a journey into the unconscious in search of a lost Self.

## Monomyth

David A. Leeming  
University of Connecticut, Storrs, CT, USA

Mythologist Joseph Campbell has demonstrated that when we consider heroes and their myths comparatively, we discover a universal hero myth that speaks to us all and addresses our common need to move forward psychologically as individuals and as a species. “The Hero,” writes Campbell, “is the man or woman who has

been able to battle past his personal and local historical limitations to the generally valid, normally human forms” (1949/1972, pp. 19–20). The hero does not stand for the status quo; he or she breaks new ground. The striving hero is our cultural and collective psyche out on the edges of knowledge and existence.

Taking a word coined by James Joyce, Campbell calls the archetypal hero the “monomyth.” The hero of the monomyth, our representative of Self, the totality of our individual and collective unconscious and conscious psyches, passes in his “adventures” through a series of transformative thresholds, which are representative of the psychic and, to an extent, the physical life. The middle of the hero’s life, mirroring the passage of our conscious search in the conscious life and the progress of the inner psychic journey into the unconscious, a journey undertaken consciously in the process of psychotherapy, is made up of three essential elements: the *Departure* from home (the status quo), the *Adventure* in the unknown world, and the *Return* with some new understanding. These three elements are framed by an appropriately heroic beginning and ending.

The beginning is often a miraculous conception and birth. The Tewa hero, Waterpot Boy, is conceived when a piece of clay enters his mother. The Aztec man-god Quetzalcoatl is conceived when a god breathes on his mother. A Ceramese heroine, Hainuwele, is born of the combination of coconut sap and a drop of blood. Often the hero, the divine child, is born of a virgin. Almost always he or she comes at a time of great need – the darkest night of the cultural year, a time of general suffering, and a period representing the darkness and, more often than not, the suffering that exists in our unconscious or subconscious individual and collective selves.

The hero birth is the hope for a new beginning, a ubiquitous hope. He or she is our second chance. The hidden place – the stable, the grove of trees, the cave – where the hero is born and the painful times in which he emerges remind us that even the gods require the elements associated with the mother earth (flesh, pain) to enter the world as one of us. The birth also stands for the loneliness and the pain of the beginnings

of the psychic journey towards wholeness, or self-discovery.

Not surprisingly, the newborn hero is almost immediately threatened by the first of the “guardians at the gate” of the status quo, the preconceptions and habits that say “no” to the journey. These guardians are the kings, jealous fathers, or demons who cannot tolerate the presence of a force for new understanding. Thus, Herod sends soldiers to kill any child who might be what the magi have called a new king in the Jesus birth myth. And when other magi announce the birth of Zoroaster to King Duransarum, he attempts to stab the child himself. Sigurd and Moses are hidden away for their own protection.

As a child, the hero must somehow prove himself/herself. Signs of the divine essence must shine through. Krishna, the avatar of the god Vishnu, kills a demoness while still in the cradle. The boy Arthur removes the sword from the rock. Theseus retrieves his father’s shoes and sword. The Irish hero Cuchulainn, still a mere boy, kills the giant watchdog of Culann. Jesus amazes the Elders in the Temple. As the young wife of the Pandava brothers in the Indian epic the *Mahabharata*, Draupadi reveals her inner divinity when, through Krishna’s power, the evil Kauravas fail to strip her of her miraculous sari. So it is that as we begin the journey outlined by depth psychology, we must confront the obvious barriers to the journey – our own monsters of the status quo.

Once adulthood is achieved, the hero frequently undergoes a preparatory period of isolation before receiving a call to action, which the hero sometimes initially refuses. Moses, the shepherd alone in the fields, is called from the burning bush, and his reluctance must be overcome by Yahweh himself. The Ojibwa Hiawatha prototype Wunzh is called during his lonely vision quest, but before he can begin his adult journey, he must wrestle with the corn god, with divinity itself. Jesus must be tempted in the wilderness, and the Buddha must be tempted by the fiend Mara.

All of these events are preparation for the beginning of the hero journey, and our psychic

journey. Like Odysseus, who is reluctant to accept the call of the Greeks to leave his wife, child, and possessions to fight in Troy, or like Tolkien’s Bilbo and Frodo, who would rather not leave the comforts of Hobbit ways, the hero must leave home precisely because he must break new ground in the overall human journey. The old ways must be constantly reviewed and new understandings developed. The Knights of the Round Table must give up the comforts of Camelot for adventure, and Gilgamesh must leave home to seek eternal life.

The adventure of the hero is marked by several universal themes. The first of these is the search. Sometimes the questing hero looks for something lost as we do if we journey into our unconscious world. Odysseus’ son Telemachus, Theseus, and Waterpot Boy all search for the Father. Gilgamesh, Jason, the Knights of the Round Table, and Moses seek objects or places – often lost ones – of potential importance to their cultures such as the plant of immortality, the Golden Fleece, the Holy Grail, the Land Where the Sun Rises, and the Promised Land. More overtly “religious” or philosophical heroes such as the Buddha or Jesus look to less tangible goals: Enlightenment or Nirvana, the Kingdom of God.

The quest always involves difficult trials. There are frightening and dangerous guardians at each threshold the hero must cross – giants, dragons, sorcerers, and evil kings. And there are tests. Herakles must perform the 12 labors, the Grail heroes must prove themselves through various deeds and, like heroes of many cultures, are tested by a femme fatale. This enchantress, a particularly popular nemesis of the patriarchal hero – Adam’s Eve, Aeneas’s Dido, Samson’s Delilah – is the archetypal image of the dangerous alternative to the true goal.

Many heroes must die and descend to the place of death itself, sometimes as scapegoats for the mistakes of others. Jesus and Osiris die, as does the Ceramese Hainuwele. In death, the hero is planted in mother earth, and during that period, which we recognize as the ultimate “dark night of the soul,” a period of dark gestation, he confronts the most terrifying terrors and demons of the underworld and our own depths.

But the hero returns, usually in the spring. He or she is resurrected, as in the cases of Hainuwele and Jesus. Many returning heroes become material or spiritual food for their people: Osiris emerges from the earth as the god of grain, Hainuwele's buried limbs become vegetables, numerous Native American corn heroes and heroines become the staple food for their people; for the Christian the resurrected Jesus is the "bread of life." These are all images of the boon or great gift that the hero or harrowers of the unconscious bring upon returning from the depths of the quest.

As an epilog to the Departure, the Adventure, and the Return, the hero can make a second return, this time to achieve union with the cosmic source of his or her being. Jesus and the Virgin Mary ascend to God, and a legend has it that Abraham did too. The Buddha, King Arthur, and Moses all undergo a kind of apotheosis, a union with the ultimate mystery. Like myths of creation and deities, those of heroes all seem to lead inevitably to that very strangest and most mystical expression of the human imagination, the concept of union which, depending upon era and tradition, has been called by many names, of which Nirvana, Enlightenment, the God within, individuation, self-identity, wholeness, and Self are a few.

## Monotheism

David A. Leeming

University of Connecticut, Storrs, CT, USA

Monotheism is necessarily understood in opposition to polytheism. Do we believe in one god or several gods (or one god more powerful than other gods)? The struggle between monotheism and polytheism can be seen as a metaphorical representation of an essential struggle in the human psyche.

We almost always associate monotheism with Judaism, Christianity, and Islam. The assumption in these religious traditions is that there is one deity, conceived of as a personality with mind, a deity who acts through history and ultimately rules and controls the universe. Because of the dominance of the three "monotheistic religions," there has been a general assumption in the western world that monotheism is an important part of a general path toward enlightenment. Polytheism is a belief system postulating many gods representing the many facets of creation and is often dismissed by the western mind as a "primitive" phenomenon.

Freud, in his *Moses and Monotheism*, suggested that monotheism originated not in Judaism but in Egypt, in the religion fostered by the pharaoh Amenhotep IV (renamed Akhenaten after the Aten, the sun god he worshipped as the one god or at least the most important god). And it can certainly be argued that Ahura Mazda in Zoroastrianism and the concept of *Brahman* in branches of Hinduism can be understood in terms of the monotheistic paradigm. In short, some humans have long searched for a sense of a unified cosmic power, even as other humans – in ancient cultures such as those of the

Mesopotamia, Egypt, and Greece, and animist cultures such as those of Africa and Native America – have been content to see nature and the cosmos reflected in a variety of divine beings.

Psychologically speaking, the belief in monotheism is the result of an archetypal or cultural search for a father – a source of being. This is certainly so of patriarchal cultures, which is to say, most of the world’s cultures.

Mircea Eliade sees the monotheistic god as a sky god, as opposed to an earth god or goddess. In terms of psychic imagery and conception, the sky god is generally visualized as a male who creates *ex nihilo* – from nothing – that is, not from preexisting material but from his mind. And to one degree or another, we are said by the monotheists to have been created in God’s image, that is, with something of God’s creative mind, making it possible for us to continue the creative process. In short, monotheism is a metaphor for who we are, for what Carl Jung and others have articulated in the concept of Self or potential wholeness. Monotheism and the concept of Self imply a rational progress toward self-knowledge. But as world history demonstrates, it can also support tendencies toward exclusivism, intolerance, and lack of imagination – in short, lack of creativity. A father god who, through perceived sacred scripture and religious law, prescribes our actions might be seen as limiting our potential for psychological and emotional growth. It is for this reason that religious and psychological scholars such as David Miller and James Hillman have argued for a “new polytheism” that emphasizes more feminine and earth-based qualities such as feelings and emotions and intuition rather than obedience and unbridled rationalism. In this sense, polytheism stands as a metaphor for a life of many possibilities and perceptions, for tolerance, for freedom from what is seen as a limiting monotheism.

## Moon and Moon Goddesses

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

The Greek astronomer Claudius Ptolemaeus (100–178 CE) writes in his *Tetrabiblos* (“Four Books”) how the moon (*selēnē*) gives its effluence (*aporroia*) abundantly upon the earth: “the rivers increase and diminish their streams with her light, the seas turn their own tides with her rising and setting, and plants and animals in whole or in part wax and wane with her” (Ptolemy 1940, I.2). For Ptolemaeus, the power (*dunameōs*) of the moon consists of humidifying (*tō hugrainein*) and having also the sun’s heat, its action (*diatithēsīn*) for the most part being one of softening and putrefying bodies (1940, I.4). According to Ptolemaeus, the moon is by nature associated with Venus and the person of the mother (*Aphroditēs tō metrikō*), the sun with Saturn and the person of the father (1940, III.4). In Christian Patristics, the moon appears as a symbol of the church which puts to flight all wintry clouds (Methodius of Philippi, *Symposion*,

VIII: 12). In this way, she is likened to her spouse who is Christ the Sun who at dawn releases all “evil odors and vapors that infect (*inficientes*) the mind” (von Franz 2000, *Aurora Consurgens* 4.7–12). She is sister and bride, mother and spouse of the sun, often seen by alchemists as the lover in the Song of Songs. As the vessel and universal receptacle of the sun, she receives and disseminates the powers of heaven. The moon is often a symbol for certain aspects of the unconscious in a man. In females, the moon refers to aspects of consciousness and the sun to the unconscious. Jung says this comes from the contrasexual archetype in the unconscious – animus in a woman, anima in a man (Jung 1963, p. 135). The ancient notion that the moon promotes all plant life led alchemists to regard the moon itself as a plant, having parallels with the “Tree of Eternity” in Hinduism (Easwaran 1987, *Katha Upanishad* II.3.1), for example, and the divine feminine *Malkhut*, the tenth *sefirot* associated with earth and moon on the Cabalistic tree. Compare mystical reading of the tree of Zacchaeus in Luke 19.1–10 by the Christian Flemish mystic John of Ruysbroeck (1214–1381 CE) in his *The Adornment of the Spiritual Marriage*. The moon occurs in a variety of ways as a goddess symbol. In ancient Greek myth, the moon goddess Hecate is the daughter of Gaia and Uranus, Earth and Sky. She is the deity loved most of all by Zeus (Hesiod 2006, p. 411f.), and she has special powers given by Zeus to use as she wills. Originally worshipped as a mother goddess in Asia Minor, Hecate eventually is presented as the goddess of sorcery in Ptolemaic Alexandrian culture. Other Greek moon goddesses include Selen, Phoebe, Artemis, Luna, and Rhea. In Zoroastrianism, the moon goddess Mah possesses, according to Avestan hymns, wealth, knowledge, and discernment. She is the “queen of the night.” In Hinduism, the moon goddess Anumati (“divine favor”) represents spirituality, intellect, children, and prosperity. A variety of masculine moon deities occur in history, including Sin (Arabic myth), Jarih (Canaanite myth), and Thoth (Egyptian myth). Compare the Hindu god Chandra, which although male, has masculine-feminine, androgynous qualities.

## Mormon Identity and Social Context

Arthur Hatton and Michael Nielsen  
Department of Psychology, Georgia Southern  
University, Statesboro, GA, USA

Mormon (The Church of Jesus Christ of Latter-day Saints) history is an enduring source of modern Mormon identity. Mormon children still sing songs about the Mormon pioneer trek to Utah; belief in modern revelation as experienced by

Joseph Smith, the church's founder, encourages modern Mormons to believe that they, too, can have inspiration and revelation from God regarding their personal lives; Lilburn Boggs, the governor of Missouri who had the Mormons violently expelled from that state in 1838, is still spoken of as one of the primary villains of Mormonism in Latter-day Saint (LDS) world conferences as recently as 2008 (Packer 2008). The church's past is honored and celebrated as it shapes contemporary Mormons' view of their place in the world.

The Church of Jesus Christ of Latter-day Saints was organized formally in 1830 in upstate New York by Joseph Smith, Jr., after a series of claimed revelations from God, including a visit from God and Jesus Christ, angelic visitations, and the discovery and translation of an ancient book written on gold plates which Joseph titled the Book of Mormon. As the church sought converts through missionary activity, its rapid early growth was equaled by an increase in tensions with its surrounding culture. Mormons first gathered in Kirtland, Ohio, but were eventually driven to build a new community in Nauvoo, Illinois. Joseph Smith's belief in "continuing revelation" led to the addition of many new doctrines to the church over the course of his lifetime that would become cultural identifiers for the rest of its history, such as a belief in a modern-day prophet, new books of scripture, a belief in a corporeal God who is a glorified man, and secret rituals in temples. Joseph Smith and other church leaders also began secretly practicing "plural marriage," or polygamy, as a new doctrine of the church.

However, the political strength of Joseph Smith and his followers, their peculiar beliefs, as well as accusations of sexual impropriety tied to the practice of polygamy increased tensions with their frontier neighbors and led local law enforcement to arrest and imprison Smith in 1844. A mob stormed the jail and killed Smith and his brother Hyrum. Eventually the remaining Mormons were driven from their homes, their temple was burned, and Brigham Young led the majority of Mormons across the plains to Utah. The Mormons who remained behind in Illinois and Missouri eventually, in 1872, formed their

own denomination apart from the Utah church called the Reorganized Church of Jesus Christ of Latter Day Saints (now Community of Christ) which did not practice polygamy.

The Utah church, which had the freedom to openly declare their practice of polygamy in 1852, built up cities and colonies in and around Utah, fed by a growing influx of converts from missionary work overseas. However, the United States government, opposed to the practice of polygamy and threatened by the growing numbers of Mormons in the area, began to pass laws banning polygamy. As a result, many LDS church leaders were imprisoned during the 1870s and 1880s, and finally, in 1890, the then-current leader of the LDS church, Wilford Woodruff, officially discontinued the practice of polygamy throughout the church. There were Mormons who opposed this action and wished to continue practicing polygamy, and these broke off to form several new sects which continue to practice polygamy to this day, the most significant being the Fundamentalist Church of Jesus Christ of Latter-day Saints (FLDS).

Utah was then admitted as a state in 1896. In 1903, Reed Smoot, a Mormon apostle, was elected by Utahns to the United States Senate, but his affiliation with the church caused enough controversy that a special hearing in the Senate was held to determine his eligibility to be a senator. Mormon temple rites and Smoot's loyalty to the country were examined by a committee that voted to oust Smoot from the Senate. However, this decision was overturned by a Senate vote, and Smoot was allowed to serve as senator, which he did until 1933. The Mormons, who were until then seen as a devious, troublesome, and polygamous sect in the Mountains, now began reintegrating themselves into American culture.

In the early 1960s and 1970s, the church's Priesthood Correlation Department was established and began systematizing Mormon doctrine. This body has exerted significant influence, eliminating doctrines that it considered spurious. The twentieth century marked significant growth in the LDS church, as the church not only aggressively sought converts within the United States but also sent missionaries out to other

countries as well, growing to one million members in 1947 to over 14 million as of 2012. By the end of the twenty-first century, there were more Latter-day Saints outside the United States than within it. In the twenty-first century, the LDS church has continued to gain public attention in several ways: prominent Latter-day Saints, Mitt Romney and Jon Huntsman, Jr., ran for president; the LDS church has invested significant time and effort into social issues such as Proposition 8 in California, which banned gay marriage in that state; and Mormons can be found in music, television, and film.

### Social Issues and Identity

Mormons tend to be social conservatives and, in the USA, show an overwhelming commitment to the Republican Party in politics. Their social conservatism is evident in the operation of the church, with virtually all men – but only men – being ordained to the priesthood. Women serve in leadership roles in the Relief Society (the women’s auxiliary) and in the Primary (the children’s organization), and in those organizations, the budget is controlled by men. Still, it is important not to cast all Mormons in the same mold, as there is diversity among them. This is illustrated in Mormon involvement in “preservation of marriage” campaigns such as occurred during California’s Proposition 8 ballot in 2008. The LDS Church considered the Prop 8 ballot initiative morally objectionable and joined the efforts of other religious groups to deny marriage status to homosexual couples. Despite the fact that Mormon involvement in the state initiative extended well beyond California, some Mormons spoke against their church’s efforts.

Mormon culture or social life also can be characterized by an expectation of conformity to conservative norms. The expectation to conform may be explicit, cast under the umbrella of obedience to God or to God’s prophet, but it also can be subtle. For example, one’s mode of dress or a man’s facial hair can act as social markers in the faith, connoting adherence to the church. The consequences of deviating from those norms

hinge on both the severity of the deviation and the attitudes of the congregation’s leadership.

Mormon identity is characterized by the expression, taken loosely from the Gospel of John, that Mormons must be “*in* the world but not *of* the world.” Since the Smoot Hearings, Mormons have sought to maintain their own unique culture and identity in the face of social opposition and tension while simultaneously integrating themselves into society. Polls continue to suggest that others view Mormons as different, despite the faith’s efforts to distance its historical connection to polygamy, their presence in top positions in American corporations and education and media, and their disproportionate representation in the US Congress.

In the late twentieth century, Christian apologists and former Mormons began using the Internet to sway public opinion. The LDS church responded by increasing its official online presence and with public relations campaigns such as the “I’m a Mormon” campaign in 2010. Leaders of the church encouraged young Mormons to use new technological tools such as social media and blogs to communicate about their lives and their faith. The result is a rich variety of material online regarding Mormonism, from ex-Mormon discussion boards to “Mormon Mommy Blogs,” characterized by largely married Mormon mothers blogging about their lives, families, children, and faith.

## Mormon Mental Health

Michael Nielsen

Department of Psychology, Georgia Southern University, Statesboro, GA, USA

In order to understand members of The Church of Jesus Christ of Latter-day Saints (Mormons), it is helpful to be familiar with what might be called a Mormon theory of development, which marks important developmental milestones (Nielsen et al. 2006). This begins with belief in a premortal existence in which all people lived in

spirit form before being born on earth. Mortality is a necessary step, a proving ground, in which people gain a physical body and learn self-control and obedience to God's laws, as well as to human laws. As part of mortal life, individuals go through rites (e.g., baptism) that have important symbolic and cultural value, and which believers tend to consider to be essential. After death, obedient individuals go to spirit paradise while they await the judgment, while disobedient individuals go to spirit prison. Individuals who are not baptized in mortality wait in spirit prison for someone to be baptized vicariously for them, because baptism is a physical act that cannot be done in spirit form alone. All people are resurrected and are judged by God, after which they will go to one of the three kingdoms according to their righteousness, based on an interpretation of 1 Cor. 15:40–42 (Nielsen et al. 2006).

This developmental “Plan of Salvation,” or “Plan of Happiness,” has psychological implications. Mormons are likely to consider existence as extending before and after mortality and to place high importance on doing good and resisting temptation. Service is thought to bring joy. Sin causes emotional distress, but emotional or psychological problems stem from many different causes and do not necessarily indicate that the person has sinned or has brought upon him- or herself the problem (Nielsen et al. 2006).

Complementing this view of development is Richards and Bergin's (1997) Mormon theory of personality, which describes six facets important to Latter-day Saints. These capture basic tensions in the Mormon psyche.

1. Eternal Identity versus the Mortal Overlay: Individuals are souls with an eternal identity, not merely beings that are conscious during mortality.
2. Free Agency versus Inefficacy: Individuals are able to act and make choices and, by doing this righteously, gain greater spiritual abilities.
3. Inspired Integrity versus Deception: Individuals can be sensitive to “the Spirit of Truth” and accept responsibility for weaknesses, rather than to hide them from oneself.

4. Faithful Intimacy versus Infidelity: Sexual relationships are intended only for marriage.
5. Benevolent Power versus Authoritarianism: Social relationships, whether in families, work, or elsewhere, should allow freedom of choice, rather than coercion.
6. Health and Human Welfare Values versus Relativism and Uncertainty: All people existed in spirit form before birth and have inherent worth and a divine purpose.

Although most Mormons would not be aware of these tensions explicitly, Richards and Bergin suggest that they undergird LDS thinking about people.

### **Empirical Research on Mental Health**

Mental health among Mormons has received some attention by researchers, but few studies have considered the mental health of individuals by religion. One exception to this examined the mental health of 55 devout Mormons longitudinally (Bartz et al. 2010). Their MMPI scores, measured at three points in time across the 17-year period of the study, were within normal ranges, and they showed no variation associated with intrinsic religiousness. The applicability of these results to other Mormons is not clear, as it was not a representative sample, but the study is notable for being one of few longitudinal studies of religion and mental health.

Sometimes researchers use Utah as a proxy for Mormons, given that the majority of the state is at least nominally LDS. From this perspective, it may be instructive that Utah leads the nation in antidepressant use. Regional variation in mental health patterns help to make such trends more difficult to interpret than may at first be evident, as the intermountain west shows higher rates in general of depression and suicide. It may be, however, that among disaffected Mormons, living as a lapsed church member in a highly religious area adds to stress and presents increased risks for mental health problems. It might also be that perfectionism, discussed momentarily, contributes to antidepressant use in the state.

### **Clinical Observations**

The basic beliefs of Mormonism hold potential importance for psychologists working with clients who are LDS. The beliefs are found in abundance at <http://LDS.org>, but it is worth pointing out that they include salvation through Jesus Christ; repentance for the remission of sins; a belief in revelation from God; that God has a plan for humanity, known as the plan of salvation or plan of happiness; the importance of sacred ordinances and life transitions, such as baptism; lifestyle practices; and beliefs about social and moral issues. Therapists engaged in counseling with Mormon clients may find it useful to draw on these beliefs, where relevant. Normal diagnostic methods may be used with LDS clients.

Mormons continue to feel they are “outsiders” in many social conversations, due to their history, and question about whether or not they are Christian. This appears to contribute to Mormons’ suspiciousness of psychologists who do not share their faith. Many Mormons will prefer to see therapists who share their religious beliefs, such as those affiliated with The Association of Mormon Counselors and Psychotherapists or through LDS Social Services, which is part of the church’s social welfare organization.

### **Implications for Counseling and Psychotherapy**

Several useful publications exist for therapists who have LDS clients. They share a common constellation of issues that have been seen in their clinical experience. Perhaps the most common of these is that of perfectionism and shame, which can come via interpretations of scriptural injunctions to “be ye therefore perfect, even as your Father which is in heaven is perfect” (Matt. 5:48). Associated with perfectionism is denial of anger and conflict, which can be an issue in Mormonism even though LDS doctrine does not support the notion that perfection is attainable in mortality.

Sexual guilt and inhibition can be a problem due to strict LDS standards of refraining from sex outside of marriage. If Mormons do engage in sex outside of marriage, including premarital sex, strong guilt typically follows, and the individual is subject to being “disfellowshipped” (a probationary status) or “excommunicated” from the church. Ulrich et al. (2000) offer constructive guidelines for therapists to address this type of situation. Divorce also presents difficulties, given the church’s belief that family relationships can continue in the afterlife. The church’s emphasis on marriage can leave unmarried adults also feeling that they are lesser individuals.

Belief in personal revelation is an important factor in understanding Mormons, who are encouraged to seek a spiritual confirmation in important life decisions. Sometimes this brings comfort and a sense of clarity to personal decision-making, but abuses of authority can arise in the form of LDS churchgoers being domineering or presuming authority over family members or others for whom they perceive they have divine “stewardship.” In such cases, referring them to Doctrine and Covenants 121:37–46 may help limit such abuses.

Gender role conflict and sexism also are issues among Mormons. These highlight the church’s rather conservative approach to gender roles and to many social issues, which may clash with the norms people experience in their world outside Mormonism. In some cases LDS women feel a second-class status due to the lay priesthood nature of the church.

LDS social life provides close families and a sense of community, but this sometimes results in isolation for people who no longer believe or who have deviated from church morality standards. Mormons who leave the fold report problems with family and feel a marginal status. In some cases, individuals remain involved in the church but are closeted disbelievers, participating in church in order to avoid family disharmony or divorce. Barlow and Bergin (1998) suggest that when individuals do leave Mormonism, there may be increased suicide risk because the person’s social support system has changed significantly.

## Mormonism

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Mormonism is a colloquial term for several Christian denominations which constitute

restorationist theology. The two leading groups are the Church of Jesus Christ of Latter Day Saints (LDS) and the Community of Christ, formerly known as the Reorganized Church of Jesus Christ of Latter Day Saints (RLDS). There are several smaller offshoots, including a fundamentalist LDS church, recently in the news from a controversy involving polygamy and marriage of underage girls. All of the Mormon groups claim descent from the teachings of Joseph Smith Jr. (1805–1844), who was the first Prophet, Seer, and Revelator of this dispensation, and accept the *Book of Mormon* and other scriptures noted below.

Restoration theology holds that there have been several “dispensations” of the true religious doctrine and priestly authority to perform sacraments, and within a century or so after the dispensation originated by Jesus Christ, there was a “Great Apostasy” where doctrine was corrupted and the authority of the priesthood was withdrawn by God because of the falling away from the correct path. The next dispensation began with the first vision of Joseph Smith in 1820 and continued through subsequent angelic visits, including the ones leading to finding a set of golden plates containing writing which adherents hold he translated and published as the *Book of Mormon*. Besides that book, two other books, the *Doctrine and Covenants* and the *Pearl of Great Price* are also viewed as canonical scripture, along with the *Bible* (the Protestant version without the Apocrypha). Smith and others founded the LDS church in 1830. Mormons generally claim to have the exclusive truth and authority to conduct the sacraments that result in spiritual growth and ultimately lead to salvation.

Mormon theology rejects many of the doctrines of orthodox Christianity. It does not accept the various creeds propounded by the Ecumenical Church Councils and rejects the validity of Apostolic Succession claimed by both the Roman Catholic, the various Orthodox churches, and the liturgical Protestant churches (Anglican, Lutheran) which uphold the importance of bishops and priestly authority. The basic statement of beliefs is contained in the

Articles of Faith, which is now found in the *Pearl of Great Price*.

LDS theology has a particularly American flavor, in that it offers the opportunity of continual evolution and growth. This is best expressed in a couplet articulated by Lorenzo Snow (nineteenth century/1994), who became the fifth president of the LDS Church, “As man is, God once was, and as God is, man may become” (p. 1). This holds out the possibility of apotheosis as the ultimate goal of spiritual development. When this doctrine is coupled with the doctrine of marriage for time and eternity, rather than till death do us part, then the family can become an eternal unit. The idea that spiritual evolution can lead to become a divinity in one’s own right and create worlds is radically different from mainstream Christian belief.

These teachings, though available in public sources, are part of the esoteric part of LDS practice involving temples. These are buildings for special rites that are open only to devote members of the church who received clearance from their religious leaders. The ceremonies conducted in the temples are secret, though documents purporting to be accurate redactions are available on the Internet. The temple endowments and marriage ceremony are held out as the most important parts of religious development, while the ordinary weekly activities of church members are designed to prepare people for those rites and support their continued involvement in church teachings and practices. The endowments and sealing of marriages are done not only for living members of the church but by proxy for dead ancestors and others, along with proxy baptisms. There have been recent complaints from Jewish groups and others about proxy baptisms.

The public LDS church is organized into local units, known as “wards,” led by a bishop and regional units or “stakes” (these are equivalents to parishes and dioceses in other denominations). In areas where there are fewer members, these are known as missions. There is no professional clergy. Priestly authority is only held by males and is lay, in the sense that all priestly duties are in addition to civil jobs. There are two orders of

priesthood, the Aaronic and Melchizedek. Boys age 12 are ordained into the Aaronic priesthood first as deacons, then passing into the quorum of teachers, then priests. Most males are ordained into the Melchizedek priesthood when they are called to go on a 2-year mission for the church at age 19, though sometimes those who do not go on missions are ordained into that level of priesthood in adulthood. The ranks of the Melchizedek priesthood start with the quorum of Elders, then the quorum of 70s, and the highest order is the quorum of High Priests. Each ward is led by a bishop and two counselors, the stakes by a president and two counselors. The church as a whole is led by the First Presidency, the Quorum of 12 Apostles, their assistants, and other “General Authorities.” The president of the church is deemed the current prophet, seer, and revelator and is believed to guide the church’s activities by divine revelation. The church promulgates changes in policy and conducts major teachings at two semiannual conferences, usually in April and October.

Members are kept very active in multiple meetings at their local level. Each Sunday, men have weekly meetings of their priesthood quorums, families attend Sunday school and sacrament meeting. During the week, there are meetings of the women’s auxiliary, the Relief Society, and youth meetings, primary for preadolescent children, and the Mutual Improvement Associations (MIA) for adolescents and early adults. Various other activities are available, embodying the idea that the church should provide opportunities covering all of life’s domains.

Jackson’s (2008) book is clearly written by an outsider and from an evangelical Christian point of view, but is relatively accurate and nonjudgmental in tone. Mauss’s (1994) account is more of an insider’s one, though his voice is clearly scholarly and reflective on the religion of his cultural background. The McMurrin books (1959, 1965) are from the standpoint of a professional philosopher within the Mormon tradition and are excellent sources for understanding the ideological context of the Mormon religion.

## Moses’ Life Story

Moses’ life fills four entire books of the Torah. His birth is described in Exodus 2 sometime during the fourteenth century BCE and his death 120 years later in Deuteronomy 34. Exodus begins with a genealogy of the descendants of Joseph living in Egypt: “And the children of Israel were fruitful . . . and waxed exceedingly mighty; and the land was filled with them.” (Ex 1: 7). Then, in words

which have haunted the history of the Jewish people, something changes: “Now there arose a new king over Egypt who knew not Joseph” (Ex 1:8).

Pharaoh becomes wary of the increase in the number of Israelites living in Egypt and decrees that all newborn male Israelite children be drowned. Moses is born under this death sentence. His mother hides him for 3 months. When no longer able to do so, she sets him afloat in a reed basket on the Nile. There Pharaoh’s daughter discovers him, saying “He is one of the Hebrew children” (Exodus 2:6). She hires a Hebrew woman to nurse the baby (not knowing the woman is his mother) and brings him into her palace after his weaning. Thus his early life is permeated with a confused Hebrew/Egyptian identity.

As Moses grows up, he is presented as a compassionate person willing to take risks when he encounters wrong, yet judicious at the same time. He sees an Egyptian killing a Hebrew. Making certain nobody is watching, Moses slays the attacker and hides his corpse in the sand (Ex 2: 11–12). However the killing became public knowledge, and Moses is forced to flee northeast to Midian as a stranger and a fugitive. He is nevertheless unable to stand by when he sees the daughters of Jethro mistreated by male shepherds, and helps them “water their flock” (Ex 2: 17–19). Their father is grateful and has his daughters invite him for a meal. Moses marries Zipporah, one of the daughters, and is content, becoming the father of a son named Gershom, because he has been “a stranger in a strange land” (Ex 2:22).

Years later, while tending Jethro’s sheep in the desert, Moses encounters the burning bush on Mount Sinai. There God speaks to him directly, asking him to redeem Israel as God’s agent (Ex3: 7–8). Although he cares about the suffering of his people, Moses challenges God, questioning his suitability for that mission. Moses protests that he stutters badly and that “he is not a man of words” (Ex 4:10). God responds angrily that he will teach Moses what to say and that his brother Aaron who speaks well will be Moses’ spokesman (Ex 4: 12–16).

Moses returns to Egypt, and after being assured by God that it will be safe, the people wanting his death now deceased. On the way, Moses is attacked by God Himself and Zipporah seems to understand some element of commitment on Moses’ part is still absent. She circumcises their son, thus putting an end to the attack (Ex 4: 20–25).

Moses comes to the Children of Israel, telling them God will redeem them (Ex 4:27). However, the opposite seems to occur. Moses and Aaron come before Pharaoh, asking him to let the Israelites go. Pharaoh roughly rejects their request and now orders that the Hebrews be forced to gather their own raw materials in their labor and to work harder (Ex 5: 7–19). Moses complains to God that his interference had only made life worse for the Hebrews (Ex 5: 22–23). God reassures Moses he will cause Pharaoh to let the Israelites leave Egypt (Ex 6:1). In response to Pharaoh’s refusal, God inflicts the ten plagues on Egypt, culminating in poetic justice, with the slaying of the Egyptian first born (Ex 7:1–13:16).

At this point Pharaoh reluctantly lets the Israelites go but soon has second thoughts, sending the Egyptian to bring them back into slavery in Egypt. God splits the Red Sea to allow the Israelites to pass through on dry land (Ex 14:15–22). However, when the Egyptian army pursues them through this break in the Sea, God causes the waters to come together again, drowning the entire Egyptian host (Ex 14: 26–31).

Moses is now summoned by God to Mount Sinai where he remains for 40 days and nights, a period in which he receives the Ten Commandments directly from God (Ex 24–32). When the Israelites below see that Moses has delayed coming down the mountain, they build a golden calf and begin to worship it (Ex 32:1–6). God sees this and announces to Moses His intention to destroy the “stiff-necked” Israelites and start again with Moses (Ex 32: 7–10). Moses pleads for the people of Israel, invoking the founding fathers of Israel, Abraham, Isaac, and Jacob who received God’s covenant and His promise that “He would multiply their seed as the stars of the heaven” (Ex 32: 13). God listens to Moses and spares the Israelites (Ex 32: 14).

Moses then descends from the mountain to deliver the commandments to the people, but upon his arrival he sees with his own eyes what God had told him – the Israelites are worshipping a golden calf which they had built. Moses furiously breaks the tablets and orders the people to choose who are with God (Ex 32:15–25). Moses own tribe, the Levites, join Moses and kill 3,000 people, including family and friends, who do not side with God (Ex 32: 26–27). Moses then successfully pleads with God to spare the Israelites who have sided with Moses and God (Ex 32: 31–33). This entire episode reveals some ambivalence on Moses' part. First he pleads with God to save the people of Israel; then Moses himself orders the death of all those who do not stand with God; finally, he pleads again with God to save the remnant.

God later commands Moses to inscribe two additional tablets, to replace the ones Moses had previously smashed. Moses goes up to the mountain again, for another period of 40 days and nights, and when he returns, he finally gives the commandments to the Israelites (Ex 34). Following this, according to the last chapters of Exodus, the Tabernacle was constructed, the priestly law ordained, the plan of encampment arranged both for the Levites and the non-priestly tribes, and the Tabernacle consecrated. Mosaic Law is laid out in the Book of Deuteronomy.

Numbers 13 finds Moses and the Israelites in the desert south of Canaan. He sends 12 spies into Canaan. After 40 days, they return, bringing back evidence that the land's resources are spectacular. However, only Joshua and Caleb are willing to try to conquer it. The other ten, conditioned by their years of slavery in Egypt, are too timid and compare the Israelites to "grasshoppers up against men of great stature." The people began weeping and want to return to Egypt. God again becomes angry, again threatening to destroy them and make a great nation from Moses and his offspring. Again Moses rejects this offer, successfully pleading for Israel, simultaneously telling the Israelites that they would wander the wilderness for 40 years until the naysayers had died out. Early the next morning, the Israelites said they had sinned and now want to take

possession of Canaan. Against Moses' command, they invade Canaan but are repulsed by the Amalekites and Canaanites (Num 13–14).

Near the end of his life, Moses is warned by God that he will not be permitted to lead the Israelites across the Jordan River, because of his trespass at the waters of Meribah (Deut. 32:51). Instead Moses will die on its eastern shores (Num. 20:12). Moses appoints Joshua, who will ultimately be allowed to enter Canaan, to succeed him as the leader of the Israelites. Moses then dies at the age of 120.

The historicity of the Exodus story, debated by historians, appears in an inscription in the Stele of Merneptah, a stone tablet, in the twenty-third century BCE (Pritchard 1955, p. 378).

## Moses Versus Oedipus

The development of a psychological understanding of Moses is greatly facilitated by comparing his life with that of the Greek Oedipus (whose story lies at the center of Freud's articulation of the Oedipus complex) with regard to four life events: birth, exile, an identity crisis, and reversal of fortune.

### Birth

For both Moses and Oedipus, birth brought danger of death but from different sources. Moses' life is threatened by Pharaoh's decree to throw all males born among the Israelites into the Nile. Moses' mother and sister conspired to save the boy's life, and he is raised in the house of Pharaoh himself. Oedipus' life is threatened by his own father, Laius who perceives his son's life as a threat to his own and therefore orders Oedipus to be killed at birth. Whereas Oedipus is sent out from his natural home in order to be killed, Moses is sent away by his natural family to be saved.

### Exile

Both children, Moses and Oedipus, end up in the house of a king. But the differences are more telling: King Polybus is a good man, who takes in the baby Oedipus, whereas Pharaoh is the

“villain of the piece.” In fact, were it not for Pharaoh’s decree, Moses would never have had to be sent away from his parents’ home. In the Oedipus narrative, it is Laius himself who is responsible for his son’s exile. Significantly, Moses’ biological parents are aware of his whereabouts, while Oedipus’ parents presume him dead.

### **Identity, Authority, and Fate Versus Free Will**

In the next life stage, each character has an identity crisis. Oedipus, while in exile in Corinth, actively goes to seek an oracle, who warns him that he is destined to kill his father and marry his mother. However, the oracle withholds the critical information that Oedipus’s biological parents were not the King and Queen of Corinth. To avoid this fate, Oedipus runs back to Thebes, bringing about what he is trying desperately to avoid: he kills his biological father and marries his mother, bringing about the destruction of his family.

Moses, by contrast, seems guided by his conscience and circumstances and does not consciously attempt to seek clues about his destiny. From the account of Moses going among his Hebrew “brethren,” one can see his latent identification: he kills an Egyptian attacking a Hebrew. Moses subsequently chances upon the burning bush and encounters the Hebrew God, who informs him of his mission to save the Children of Israel from Pharaoh. Despite Moses’ misgivings as to his own abilities, he does ultimately agree to God’s call and leads the Children of Israel out of slavery.

### **Reversal of Fortune: Hope Versus Tragedy**

Oedipus seems to have succeeded in his confrontation with the riddling Sphinx. He correctly answers “man” to the Sphinx’s no-win question “What walks on four legs in the morning, two legs in the afternoon and three legs in the evening?” But by this answer, Oedipus implicitly accepts a curvilinear/decremental view of aging which violates a sense of intergenerational boundaries, converting success into failure. He is given in reward the widowed Queen of Thebes to marry, not realizing it is own mother. Oedipus

cannot escape the tragic fate destined for him and his entire family.

Moses, in contrast, thinks he has failed when following Moses’ intercession on behalf of the Israelites; Pharaoh increases the severity of his forced labor decree against them. Yet God provides the hope to transform seeming failure into success. The Children of Israel in the end succeed in liberating themselves from their slavery in Egypt. Pharaoh’s threat to kill the Hebrew first-born is ultimately visited upon Pharaoh himself and on Egypt.

## **A Call for a Biblical Psychology**

Oedipus is caught up in the fatalistic Greek worldview. Moses, by contrast, is helped by the biblical God to overcome difficult roadblocks. Freud’s emphasis on the Oedipus complex has unfortunately trapped man, allowing only “success in turning one’s hysterical misery into common unhappiness” (Freud and Breuer 2004, p. 306), rather than the possibility of a hopeful transformation heralded by Erich Wellisch’s (1954) clarion call for a Biblical Psychology.

## Mosque

Mohammad M. Faghfoory  
 Graduate Program in Islamic Studies,  
 Department of Religion, George Washington  
 University, Washington, DC, USA

The word *mosque* literally means the place of prostration. There are several references to this term in the verses of the Qur'an. The Qur'an describes the mosque as a place where God's Name is always remembered, "*In houses which God has allowed to be exalted and that His name shall be remembered therein*" (Qur'an, 24:36).

The mosque is a place of man's expression of total servanthood to God. The most highly acknowledged and respected mosque in Islam is in fact the *Ka'bah*. It is considered to be the pivot (*Qiblah*) of the world and the center of the universe toward which all Muslims turn at the time of prayer. Every mosque is in a sense an extension of the *Ka'bah*.

Technically speaking, for Muslims, the entire earth is a mosque as the *hadith* of the Prophet indicates: "*Verily, God placed the earth for me as a place of prostration and purified it*" (Nasr 1987, p. 37). A Muslim can, therefore, spread his prayer mat and pray whenever the prayer time comes and wherever he is, granted that the place is a ritually clean space.

## Psychology

The main objective of prayer in Islamic tradition, like other traditions, is to liberate man from the yoke and limitations of his carnal soul and bring him as close to submission to God as humanly possible. For majority of Muslims this is attained through daily prayer and other rituals which are often performed in a mosque.

When one enters the mosque with the intention to pray, he also takes his soul that is agitated by the problems and distractions of the daily life and seeks to attain peace and serenity. Even the most exoteric Muslim, when he goes to a mosque, he turns inward and tries to cure the ailments of his psyche and soul and integrate them into one healthy center of his being. All elements of a mosque, from the niche (*mihrab*) that directs the worshippers toward Mecca (*Qiblah*) and where the prayer leader (*imam*) stands to the nostalgic voice of the *mu'adhdhin* who calls people for prayer, to the minarets that extend toward heaven, all in all help the worshipper to integrate his body and soul and reach his center where God within us resides.

Islam is primarily an urban religion. While a Muslim does not have to pray in a mosque, however, the necessities of urban life and the grace and blessing of communal prayer (*Jama'ah*) resulted in the construction of

mosques in all cities and even villages throughout the Islamic world as the most important institution in Islamic civilization.

In 622 the Prophet of Islam was forced to leave Mecca, the city he loved, and migrate to Yathrib, a city about 300 miles south of Mecca known after that as the City of the Prophet (*Madinah al-Nabi*). This event, known as *hijrah* (migration), marks the beginning of the Islamic calendar. It was in Medina that he built the first official mosque that became known as the Mosque of the Prophet (*Masjid al-Nabi*) (Eaton 1985, p. 115). It was in this mosque that many rituals of Islam were introduced, the rules of etiquette in the mosque were established, and many functions of the mosque were introduced to the community.

### Rules and Etiquette of Attending Mosque

Attending a mosque requires observing certain rule of conduct and etiquette. First of all, when one enters the sacred space of the mosque, one must remove shoes as a sign of respect. Women cover their hair and in the Sunni world men wear a special hat called *kufi*, which is rarely seen in the Shi'ite world.

In addition, one must be in the state of ritual purity and ablution and always wear one's best outfit and even perfume, as the Qur'an instructs Muslims: "O Children of Adam! Take your adornment at every place of worship and eat and drink, but be not prodigal. Lo! He loves not the prodigals" (Qur'an, 7:31). The Prophet of Islam always wore his best attire and perfume when he went to the mosque for prayer. In addition, one should always carry oneself with dignity and behave in a respectful manner for one step into the house of God as the mosque is often called. One must always observe silence and not raise one's voice, especially when the Qur'an is chanted.

The Qur'an describes the construction of a mosque as an act of worship and a sign of one's faith: "The mosques of Allah are only to be maintained by those who believe in Allah and

the Last Day and establish prayer and give zakah and do not fear except Allah, for it is expected that those will be of the [rightly] guided" (Qur'an, 9:18).

Every mosque is headed by a clergy who acts as a prayer leader (*imam*) and guides people in matters of daily religious life. The most important function of a mosque is, therefore, as place of worship. Every mosque has also always been an educational institution, a community center, and a center to voice popular grievance and political protest and other communal activities. In addition, a mosque is also a center for psychological family counseling and therapeutic services where worshippers bring their problems to the clergy who acts as a confidant of the community in matters ranging from marriage to business to family and marital relationship and the like. This is the reason the construction and maintenance of a mosque has been so important in all Muslim societies since the time of the Prophet.

Mosque architecture varies from region to region in consideration with culture, nature, and availability of materials in each region. The mosque that was built by the Prophet in Medina is the prototype of all other mosques. In the course of time, two major styles appeared, the Arabic style with corridor surrounding an open space open to the heavens and the Persian style of closed dome pointing above. Mosques built later in Spain, Anatolia, and India all followed these patterns but modified them to suite local condition and, taste, architectural details.

The inside of a mosque is composed of a prayer niche (*mihrab*) that faces the east toward the Mecca and usually is identified with a sign designating the direction of Mecca (*Qiblah*). It is where the prayer leader (the *imam*) stands and leads the prayer. Next to the prayer niche is a pulpit (*minbar*) where the preacher sits and delivers a sermon. Both of these structures can be very simple or very elaborate and artistic but their presence is essential to every mosque. The most important external feature of the mosque is one or two minarets where five times a day the call for prayer (*adhan*) invites the worshippers to pray. The entrance to a mosque often opens into

a courtyard separated from the outside world often by thick walls as though embracing the worshippers and providing refuge and protecting them from the noise and distraction of the outside world.

Yet, a mosque is not just a building like any other building. It is not just a prayer center where Muslims gather five times a day and pray. It is a *sacred space* where God's presence is felt at every moment and His Name and Word reverberate. The architectural and artistic expression of the Islamic doctrine may vary in different parts of the Islamic world, but all these variations indeed represent a single reality (*Tawhid*) expressed in multiplicity of forms, colors, and variety of designs (Nasr 2002, pp. 229–230).

Belief in Divine Unity (*Tawhid*) is at the center of the doctrine of Islam. As part of the category of sacred Islamic art, a mosque contains all the elements of Islamic doctrine of *Tawhid*. Like everything Islamic, the Qur'an is the source of inspiration of the architect of the mosque. It is also the Qur'an that defines the soul of the mosque, its structural principles, its form and appearance, color of its tiles, open courtyard, and other characteristics, and transforms an ordinary space into a sacred space. However, the important question is: how does a Muslim architect remain loyal to and observant of the requirements of *Tawhid* while at the same time convey its message in the realm of multiplicity?

Like any other category of sacred art, a mosque has its own sacred language that reminds the viewer of the message of Islam. This message is conveyed sometimes through the presence of Qur'anic calligraphy, sometimes through geometric forms and patterns, sometimes through colored tiles or colored glass windows, and sometimes by empty space (void). Variations in style are the result of the regional, cultural, and geographical factors and the availability of materials. The function and message, however, always remain the same, constantly suggesting God's Unity and His presence.

In the architecture of a mosque, several sciences come together to create the sacred form, from engineering to chemistry, to geometry,

and from design of patterns to calligraphy and mathematics. The principle of *Tawhid* is represented through harmonious presence of geometric forms, which by constant repetition depict remembrance of God. Thus, frequent repetition of geometric forms, flowers, blossoms, and trees gives expression to cosmic order, and like cosmic order beauty, grace, sanctity, harmony, and order are present in the architecture of a mosque. In short, the combination of these forms and colors creates a silent symphony that mesmerizes the soul of the viewers (Nasr 1987, pp. 44–50). They also demonstrate the importance of beauty and harmony in Islamic civilization and Muslim architect's creativity to construct a structure worthy of reflecting the Word of God.

Since Islam is an aniconic tradition, God cannot be represented in form but His presence is suggested in a variety of ways by the artists and the architect. The use of Qur'anic calligraphy and colorful geometric ceramic tiles or floral designs on the walls and dome of the mosque esthetically enhances the beauty of the building, but more importantly and from a psychological and spiritual point of view constantly reminds the worshippers of the presence of God.

The use of colors in the construction of the mosque fulfills several functions – the most visible function of course, is the beauty and variety of colors. There is however a more profound spiritual and metaphysical meaning for the presence of colors in a mosque building. From Islamic point of view, the entire universe is the scene of interplay of divine attributes. God is One, and “there is nothing like Him,” as the Qur'an says (Qur'an, 42:11). Since God cannot be contained in form, time, or space, His presence in the world of multiplicity is represented by His attributes, and each color in a sense represents one of God's attributes. For example, black represents divine power but also mysteries while blue represents divine mercy, green suggests God generosity, and white which contains all other colors in itself, indeed, represents God's Unity and its manifestation in multiplicity. The color gold next to blue depicts divine mercy that wills to manifest itself and so on. Next to one

another they exhibit God's Infinitude (Ardalan and Bakhtiar 2000, pp. 48–49; Lings 2005, Chap. 2).

The floor of the mosque, like its space, is sanctified by virtue of the fact that Prophet honored and blessed the ground by placing his forehead on it in prostration when he performed daily prayer (*salat*). By doing so he “bestowed a special significance upon the floor of his house, through it upon the first mosque, and through the Medina mosque upon the whole of Islamic architecture”. That is the reason the mosque floor is always carpeted and complements its space. Thus, along with worshippers, every component of a traditional mosque ultimately participates in worshipping God and professing testimony to Divine Unity (*Tawhid*).

## Mother

Elizabeth Welsh  
Fuller Graduate School of Psychology,  
Pasadena, CA, USA

The mother is the biological and/or social female parent. From a psychological perspective, the mother is the female caregiver who may or may not be biologically related to the infant but who assumes the parental role. The mother-infant dyad represents the primary form of human attachment based on physical dependence as well as affection, both of which are vital for survival. The word “mother” is also used in reference to the source or origin of things. In ancient religions, the earth was referred to in feminine terms as “Mother Earth” and represented the divine figure that was the source of all life. In addition, ancient myths included various female divinities that possessed maternal qualities or fulfilled mother roles for other gods or for humans. With the rise of monotheistic religions, however, the divine maternal images were eradicated, but in Western Christianity, the icon of Mary, the Mother of Jesus, gradually rose to cult status.

The primary cultural scripts for mothers and motherhood have been shaped heavily by religious discourses or myths, and today, these scripts continue to be reflected in the cultural norms for maternal roles. Although through secularization religion has lost its centrality in society, on the linguistic level, the impact of the religious heritage continues to be felt.

In Western history, until recently, the Judeo-Christian worldview provided the dominant categories for the meaning and role of mothers. However, through the developments in the fields of anthropology and archeology in the nineteenth and twentieth centuries, there has been a renewed interest in studying the ancient cultural myths and religions which in turn have given impetus to a variety of theoretical developments in religious, feminist, and psychoanalytic studies.

The foundation of Freudian theory, the Oedipus complex, is based on an ancient Greek myth.

## Religious Myths and Legendary Mothers

Ancient myths highlight several legendary mother figures that represent powerful creative forces of fertility as well as social influence. Given the precariousness of life in the ancient world, it may be easy to see why the act of procreation and the bringing forth of life through birthing had such a miraculous and divine significance. In Egypt, Isis, also named “the kingmaker,” was the goddess who generated her son, the living king, from the dead body of her brother/husband Osiris. The image of her son’s throne as her own lap on which he sat as an infant and suckled was representative of her function as the pharaoh’s source of power and influence. Isis was a wifely figure whose nature was centered on maternal devotion, but she was also the powerful patron of nature and magic. In Greece, Gaia was the primeval goddess representing the earth, the Mother Goddess, who birthed Uranus, the sky, through parthenogenesis and later lay with her son to give birth to a series of other gods including Oceanus, the World-Ocean, as well as the Titan gods. Also in Greece, Demeter was the goddess of fertility as well as a symbol of the mother who fights to protect the bond with her daughter (Persephone who was raped and abducted by Hades) and revolts against the male usurping power of Hades and Zeus. In the Hindu traditions, Parvati was the supreme Divine Mother who was beautiful and gentle but also fearsome. In the ancient Buddhist myths, Queen Maya was said to have become pregnant during a vision in which the divine Buddha reincarnated as a white elephant touched her and she later given birth to Prince Siddhartha, the Buddha to be. Scholars have pointed out the similarities between Maya and the Virgin Mary who also becomes pregnant without having intercourse. The mythical models of motherhood in the ancient religions were quite diverse and influential.

In the Abrahamic traditions, the pagan goddess cults were eradicated though scholars have pointed out that, while the male monotheistic cult took over, the language used to talk about the divine figure retained some inexplicit but clearly maternal elements such as the images of God nursing, gathering, or holding his people. The female biblical figures that do stand out are several women who were important in the development of the Israelite and Islamic nations. Eve, the first woman created by God and mother of all living, has been a disputed figure in theological debates on prescriptions for women’s societal roles because of her depictions in later Jewish, Christian, and Muslim sources as a temptress and an archetype of sin. Feminist theologians have attempted to reconceptualize her as a prototype of motherhood pointing out that her name meant “mother of all living” and that, although her role is not described in much detail, she did play a significant role in naming her sons. In the Bible, the most prominent mothers are the matriarchs Sarah, Rebecca, Rachel, and Leah, the wives of the patriarchs Abraham, Isaac, and Jacob, respectively, as well as the mothers of the budding Israelite nation. Other biblical female figures such as Deborah are metaphorical representations whose “mothering” provides a model for large-scale leadership in the community which greatly differs from the male style of leadership.

Perhaps the most influential mother figure within the Western religious tradition has been Mary, the young virgin who became the mother of Jesus and who remained present at significant points in her son’s life according to the biblical text. From the fifth century onward, Mary became the subject of much veneration in the Catholic tradition which has devoted an entire branch to Mariology, or the study of Mary’s role and significance within the Christian faith. Catholic theology maintains the doctrine of the Immaculate Conception of Mary, or the idea that Mary was born without original sin and remained sinless throughout her life. Mary is believed to have conceived Jesus through an act of the Holy Spirit and not through sexual intercourse; this is

the doctrine of the “virgin birth.” Catholics also maintain that Mary remained a virgin for the rest of her life and was taken up into heaven upon her death. Orthodox theologies reject the Immaculate Conception but affirm the “virgin birth” and celebrate Mary’s “Dormition” (or “falling asleep”) and her being taken up into heaven. The Protestant views affirm that Mary was “blessed among women” and a virgin when she conceived Jesus, but they do not believe in the veneration of Mary or in her role as mediator between humans and God, pointing out that Mary’s role diminished after the birth of Christ. Nonetheless, within traditional Christian discourse, Mary became the antithesis of Eve. The latter was the temptress who was responsible for bringing sin into the world, while the former was a symbol of meekness, holiness, and the way to salvation.

Many scholars have argued that the conceptualization of Eve and Mary within the Western religious tradition has had a strong impact on societal views of women and especially mothers. Feminist critics have pointed out that neither of the two has provided redemptive models for women since they have both been set up to represent two extreme opposites: the one who was deemed responsible for bringing sin into the world versus the asexual, self-abnegating saint. The former represents a condemned view of womanhood, while the other a romantic idealization of motherhood. Most revolutionary feminist thinkers have abandoned the traditional religious motifs of Western Christianity and turned instead to religious themes found in various ancient goddess cults or to their emergence within New Age religions. Revisionist feminist theologians, however, in addition to redeeming these prominent biblical female figures, also attempt to resurrect the feminine and motherly aspects of God which have been traditionally eclipsed by patriarchal categories within the biblical language of God. According to this view, the language of God is inadequate inasmuch as it does not include equivalent images of God as male and female. For example, it is peculiar that in traditional theology, the speech about God as the origin and caregiver of all things omits, as if by default, the maternal

aspect of these images and attributes them to a paternal relationship, as the opening of the Nicene Creed indicates: “God, the Father, the Almighty, maker of heaven and earth, of all that is seen and unseen. . . .” Since religious myths and traditions have a profound impact on cultural conceptions of motherhood and thus on women’s identities as mothers, revisionist feminist theologians want to offer renewed and redemptive perspectives for women and mothers.

## The Psychological Perspective

Much of psychoanalytic theory has dealt with the child’s relationship with the mother. Freud posited that at the heart of psychosexual development was the Oedipus complex, or the child’s desire for an incestual relationship with his/her mother. The dynamics of psychic development emerge out of this basic but prohibited desire which the child learns to defend against through various patterns of repression, displacement, sublimation, and other neuroses. Both boys and girls are primordially in love with the maternal parent, but Freud believed that for girls, this changes when they realize that the mother lacks a penis, at which time they begin to develop sexual desires for their fathers.

In Melanie Klein’s work, the focus shifted to the pre-Oedipal relationship between the infant and the mother, through which the child develops and internalizes a basic psychic structure of object relations. For example, the infant’s sometimes satisfying and sometimes frustrating experiences with the mother’s body become internalized as split-off “part objects” (“good breast” vs. “bad breast”). Through adequate mothering, the infant can gradually begin to integrate these separate experiences into whole internal representations and learns that the mother who is generally loving and responsive is the same one who is sometimes frustrating and disappointing.

British psychoanalyst Donald Winnicott also focused on the primacy of the maternal role in psychic development, coining terms such as “holding environment,” “good-enough mother,” “primary maternal preoccupation,” “subjective

omnipotence,” and others to describe how the mother’s behavior and state of mind function to help the newborn transition from a terrifying world of disconnected experiences to a progressive internalization of objective reality and development of a cohesive “true self.” Winnicott’s concept of the “good-enough mother,” who is neither stiflingly perfect nor abusive and neglectful but who provides an optimal level of frustration, has also served as a model for an effective psychotherapist.

Some psychodynamic frameworks, such as attachment theory, relational psychoanalysis, and intersubjectivity, have begun to recognize that not only mothers but fathers, grandparents, or other caregivers, insofar as they are intensively involved in providing care, can become primary relational or attachment figures. However, psychoanalytic approaches that have continued to draw from Freudian theories maintain their emphases on the mother’s primordial role in the identity formation of infants.

## Mountain, The

Thomas C. Putnam  
Cambridge, MA, USA

Mountain symbolism occurs throughout history: the peoples of one of the earliest known civilizations, the Sumerians, built mountain-like ziggurats in the desert, which they believed to be the dwelling places of the gods; in contemporary times, we climb, conquer, and marvel at the beauty of natural mountains. Mountains symbolize constancy, eternity, firmness, and stillness. They have been used to represent the state of full consciousness: in Nepal, the sacred mountain Everest (“Mother Goddess of the world”) is thought of as the “navel of the water.” The image of the mountain as a “center” is one of the most important and widespread throughout history. Many ancient cultures considered the mountain the “Center of the World.” It often serves as a cosmic axis linking heaven and earth and providing “order” to the universe. Mountains evoke a special sense of awe and power and no single image or meaning can capture or express every facet of its symbolic significance.

Being close to the heavens, the mountain is often the place of revelation, as it was in the epiphany of Moses and the transfiguration of Christ. Jesus retired to the mountains when confronted with a problem that needed reflection. Buddha gave his first significant teaching on the summit of Vulture Peak in India.

Native Americans made frequent pilgrimages to mountains, which they saw as abodes of the Great Spirit. The elders sent tribal members, who were found guilty of wrongdoing, in the mountains to do penance and to benefit from the healing influence of these surroundings. Many believe that the archetypal container is inherent in the image of the mountain because it is ordered and organized by the laws of nature; it reflects the internal experience of a “parental” container. It is important to note, however, that

this image does not imply “paradise” but a “self-regulating” system that provides “continuity of being.” Traversing mountains require human effort and they mark a place in mythological stories where heroes, after the arduous effort of climbing, gain steadfastness and self-knowledge. Mountain climbing gives the ego something to conquer and to move against, potentially imparting a sense of being capable and self-sufficient.

Mountain imagery also represents the unconscious, the earth, our mother, and “mother nature.” We live with these constructs in a “participation mystique.” It is here that the archetypes live and also where the instincts reside. C.A. Meier states, “The wilderness mountain is really the original biotope of the Sou” (Meier 1985, p. 13).

Consequently, mountains can be seen as both a desire and an unconscious attempt to reconnect with the archetypal core of the personality, which also offers recovery of the lost capacity for experience and meaning. In sum, the mountain image gives us a sense of relatedness and ontological security by connecting us to the universe.

## Mu Koan or Joshu's Dog

Paul C. Cooper

National Psychological Association for  
Psychoanalysis, Two Rivers Zen Community,  
New York, NY, USA

### Introduction

A monk once asked Joshu, ‘Has a dog the Buddha Nature or not?’ Joshu said, ‘Mu!’ (Shibayama 1974, p. 19).

The “Mu Koan” or “Joshu’s Dog” introduces the thirteenth-century koan collection, *Mumonkan* (Gateless Gate or Gateless Barrier), which was compiled by the Chinese monk Mumon (1183–1260). This terse koan expresses the irresolvable paradox between dualism and nondualism, which is a common theme throughout the various koan collections. As a basis of practice, it serves to cut through all dualities, the most significant of which is that between being and nonbeing.

Mumon attributes no significance to the order of the koans in *Mumonkan*; however, scholars underline the importance of the koan by its placement as first in the collection. The American Zen master Philip Kapleau observes that “Even to this day no koan is assigned to novices more often” (1966, p. 63).

### Transcending Dualism and Nondualism

For the Zennist, being and nonbeing are inclusive and intertwined. This seemingly irrational paradox flies in the face of the Western positivism that influenced Freud and early psychoanalytic thought. From this perspective, “gate” or “barrier” refers to the discriminating mind which interferes with spiritual freedom. Viewed dualistically as elements, “Buddha nature or not” and “Mu” reflect polarized

extremes of affirmation and negation. However, when understood as a whole, the koan serves as an expression of inclusive nondualism. That is, as a whole, the text of the koan initiates an investigation that induces intuited self-realization. This tactic places total responsibility for spiritual development on the student.

Practice supported by Joshu's Mu dovetails with the psychoanalytic process of developing autonomy, mature relatedness, and accepting personal responsibility for one's actions. For example, through the psychoanalytic process, the patient will become aware of the irrational hold of infantile wishes, the tendency to blame others for one's failures and to establish developmentally more adaptive and constructive forms of human relatedness.

In response to the student's question, Joshu simply says "Mu." Joshu would sometimes say "U" (yes) or remain silent. Joshu's response (Mu, U, or silence) exemplifies the Zen challenge of all reifications and deconstructs all assertions and negations. In this regard, Joshu's response is both informative and performative and engenders what Michael Sells (1994) views as a "meaning event," which he describes as the moment when expression and meaning are fused. Similarly, the meaning event is the moment that occurs during psychotherapy when the therapist's comments and the patient's responses are no longer exclusively hypothetical, speculative, informative, and based solely on discovered "evidence," and words, but are spontaneously emerging expressions of in-the-moment emotional truth, deeply felt, lived experiences that can be transformative for both individuals.

D. T. Suzuki emphasizes this unity and he notes that "Enlightenment was to be found in life itself, in its fuller and freer expressions, and not in its cessation" (1948, p. 85). The notion of "fuller and freer expression" that Suzuki articulates finds a parallel in Wilfred Bion's work. He notes that as a result of the therapeutic encounter, the patient will display a fuller and wider range of emotional experience and he writes that "'Progress' will be measured by the increased number and variety of moods,

ideas and attitudes seen in any given session" (Bion 1967/1988, p. 18).

### Alternative Intuitive Model

As a "spontaneously arising alternative intuitive model" (Cooper 2010), the Mu koan can contribute to enriching our understanding, use, and further development of psychoanalytic theory and technique. For example, viewed holistically, the Mu koan can serve as a prototype for integrating and synthesizing seemingly contradictory theoretical models and for organizing and articulating the resulting technical implications. For instance, contemporary intersubjectivity theorists have offered cogent and convincing critiques of the tendency in the literature on self-psychology and object relations toward reification and personification of the metapsychological concepts of "self" and "object" (Stolorow and Atwood 1992). As a result, the intersubjectivists completely dismiss basic concepts that are central to object relations theory such as projective identification. From the Zen perspective, as noted above, all reifications are ultimately false, and in this respect, the intersubjectivists rightfully question the misuse of these important concepts. However, a total dismissal of these concepts reflects an underlying nihilism, which is also subject to reification. Relatively speaking, as Zennists point out, reification is an active process that functions to defend against existential anxiety. This deeply rooted emotional response to our ultimate insubstantiality cannot be worked out simply through new theoretical constructs. The illusion of solidity and separateness holds very real consequences that require intuitive and experiential responses. We can think of Joshu's Mu and the monks' "Buddha nature" as symbolic of this human tendency toward reification and we can also think of intersubjectivity theory and object relations theory as highly rarified and well-thought-out theoretical manifestations of these basic human tendencies. However, when considered holistically as differing aspects of one reality, they point to varying aspects of human experience.

## Muhammad

El-Sayed el-Aswad  
Department of Sociology, United Arab Emirates  
University, Al-Ain, United Arab Emirates

Muhammad ibn ‘Abdullah ibn ‘Abd al-Muttalib ibn Hashim was born in Mecca in 570 CE and died in Medina in 632 CE. He is the prophet of Islam and the last messenger of God. Muhammad is revered and beloved by Muslims whose worldwide population numbers more than 1.6 billion.

Muhammad is a descendant of the Prophet Abraham through Ishmael’s offspring. Muhammad endured psychological and physical hardship such as orphanhood, exile, humiliation, persecution, and denial of close kin especially when he received revelation. Being an orphan in his early life, Muhammad was sent to Halima bint ‘Abdullah (a woman from the tribe of Bani Sa‘ad) who nursed him as a child (Ibn Hisham 1978). Muhammad was raised by his paternal grandfather, ‘Abd al-Muttalib, until the age of eight. After the death of his grandfather, he was brought up by his paternal uncle, Abu Talib.

Muhammad was a shepherd (in his childhood), a trustful merchant (in adulthood), and a wise leader. The quality of leadership is emphasized in one of the prophet’s sayings (Hadith), “everyone is a shepherd, and every shepherd is responsible for [the well being of] his subject” (*Kullukum rā‘in wa Kullu rā‘in mas’ūlun ‘an ra‘iyyatih*) (al-Bukhārī 1966a, [Kitāb al-Imāra, 20, no. 4496]).

Muhammad was married by age 25 to Khadija bint Khuwaylid, the first person to accept Islam. She gave birth to two sons (Qasim and ‘Adbullah) both of which died at age of two and four daughters (Zainab, Ruqayya, Umm Kulthum, and Fatima). The prophet had a third son, Ibrahim, who also died in infancy, from Maryiah, an Egyptian Coptic woman.

The Prophet Muhammad experienced solitude, meditation, and contemplation in the cave on the mount (Ghār of Hirā’) in Mecca. In this cave and during the month of Ramadan (in the year 610 CE), Muhammad, at age 40, started receiving revelations in the form of the verses or signs (*āyāt. sing. āyah*) and chapters (*sura*) of the Qur’an (word of God, upon which Islam as a monotheistic faith has been established) through the archangel Gabriel (Jibril). The first night in which the Qur’an was revealed is known as the Night of Power (*laylat al-Qadr*). For 20 years, revelations took place intermittently through the archangel Gabriel.

As a human being Muhammad experienced psychological anxiety and fear when he encountered the archangel Gabriel for the first time. While holding Muhammad, the archangel Gabriel revealed to him the first verses of the

Qur'an after asking him many times to read or recite these verses. After the departure of Gabriel, Muhammad, troubled and trembling, went back home asking his wife, Khadija, to cover and wrap him, which she did (Ibn Hisham 1978). Khadija comforted and supported Muhammad in such critical and emotional experiences.

In the year of 622, Muhammad and his followers were forced to migrate from Mecca to Yathrib, later known as Medina, the second holiest site in Islam. The year of migration designated the beginning of the Hijri or Islamic (lunar) calendar. In Medina, Muhammad mediated and made peace between fighting tribes, mainly the Aus and Khazraj, who became known as the "Helpers" (Anṣār). He also established the first Muslim community (*Ummah*) that functioned as a unified and well-organized state (el-Aswad 2012).

Before the Hijra, the prophet experienced what is known as the Nocturnal Journey (*al-Isrā' wa al-mi'rāj* [Qur'an: 17]) on the night of the 27th of the Arabic month of Rajab. The Prophet Muhammad mounted *al-burāq* (a steed or mythical horselike creature) and miraculously traveled from Al-Masjid al-Ḥarām, the sacred mosque in Mecca, to the Al-Aqsa Mosque, the farthest mosque in Jerusalem where he led all prophets in collective prayer. Then, accompanied by the archangel Gabriel, he ascended to the highest point of the seventh heaven, passing through all the heavens, and turned back to Jerusalem and then to his place in Mecca (el-Aswad 2012). Only the prophet was allowed to reach this highest point known as *sidrat al-muntaha*, close to the Gardens of the Abode (*jannat al-ma'wa*). During this heavenly journey, God assigned the five daily prayers to all Muslims. Some Muslim commentators interpret the prophet's ascension to heaven (*mi'rāj*) literally, while others view it as a vision (Ibn Hisham 1978, pp. 3–9; Ibn Kathir 1937, pp. 2–24). The prophet's miraculous travel, suspending the natural laws of time and space, from Mecca to Jerusalem and back, spatially horizontal in nature, linked two sacred places, while his ascension to the heaven, spatially vertical, mediated between natural and spiritual or celestial worlds. By passing with his soul and body

through the divine and lucid levels of heaven, the prophet was assured that heaven and earth are an undivided geography (el-Aswad 2012). Noteworthy is the fact that the prophet died and was buried in Medina.

In Medina, the prophet received a revelation to change the *Qibla* (direction toward which Muslim pray) from the farthest mosque (Al-Aqsa) in Jerusalem to the Ka'ba in Mecca. Muhammad found he had to protect the Muslim community from the aggression of the old enemy, mostly from the Quraish, in Mecca. He defeated the mighty army of the pagan tribes of Mecca in various battles such as those of Badr (in 624 CE) and "the Trench" or al-Khandaq (in 627 CE), for example.

In many cases psychological experience and divine knowledge are intertwined. From the psychological point of view, Jung long argued that the experiences of religion or God are archetypal realities, inherited as psychic structures (which have the possibility of producing images) by all human beings. The experience of God occurs in the psyche but is usually projected outward (Smyers 2002, p. 485). For Jung (2002, pp. 78–79), however, there are two kinds of unconscious: a personal unconscious causing "little" dreams or nightly fragments of subjective impressions and fantasies and a collective unconscious, causing "big" or archetypal dreams concerned with symbolic images or general ideas (containing the accumulation of the experiences of all humanity) whose significance lies in their intrinsic meaning and not in any personal experience or association. Jung (2002, p. 9) states, "the human psyche is unique and subjective or personal only in part, and for the rest is collective and objective."

It is worthy to note that the Prophet Muhammad differentiates between two categories of dreams indicating psychological, social, and spiritual realities. The first category is the dream vision (*ru'yā*) that enjoys higher-order meaning and differs from both regular dream (*ḥulm*) and waking vision (*ru'ya*). The prophet considered dream visions to be sharper, stronger, more veracious, and higher in dignity than other kinds of dreams. He said that a good dream vision is one of

forty-six parts of prophecy (al-Bukhari 1966b, *Kitab al-Ta'bir*, Chap. 2, No. 6983). Muhammad also said that nothing would be left after his death except good dream visions or glad tidings, *mubashshirat* (al-Bukhari 1966b, *Kitab al-Ta'bir*, Chap. 5, No. 6990). This implies that dream visions are a small but legitimate source of divine knowledge. A regular dream may be good or demonic and devilish, based on persons' states of mind. This classification implicates theories concerning which components of the person such as the soul and/or self among other elements and forces, within and without the person, are involved in the dreaming. Though the soul (*rūh*), viewed as being able to move independently and communicate with other beings, spirits and angels, plays a significant role in religious experience (especially dream visions), the self (*nafs*) or psyche inseparable from the body is the core agency in regular dreams that serve as symbolic ways for expressing individuals' emotions and ideas, as well as satisfying their needs (el-Aswad 2012).

The Prophet Muhammad had several dream visions related to various circumstances. In some of these dream visions, he received divine support, immediately before the battle of Badr, rendering his enemy insignificant. "Remember in thy dream Allah showed them to thee as few: if He had shown them to thee as many, ye would surely have been discouraged, and ye would surely have disputed in (your) decision; but Allah saved (you): for He knoweth well the (secrets) of (all) hearts" (Qur'an 8: 43). There is also a dream vision through which the Prophet Muhammad was confirmed entering Mecca victoriously (Qur'an 48:27).

Muhammad has been a most influential person in both religious and mundane domains. His behavior was exemplary showing respect not only to his people or Muslims but also to non-Muslims. Peace (*salām*) was the core value of Muhammad's teaching and behavior while also advocating tolerance, forgiveness, and dialogue. This was reflected in the treaty of al-Hudaibiyya (628 CE) drafted between Muhammad and representatives of the tribe of Quraish of Mecca when he and his followers intended to perform

their pilgrimage. According to the treaty there would be no fighting for 10 years between both sides (Mecca and Medina). Those leaving Mecca to Medina would be allowed to return to Mecca, and those leaving Medina to Mecca would be granted protection. Muslims would be allowed to stay 3 days in Mecca in the following year (which they did), not the year of the treaty. However, the covenant was broken by the Quraish and Muhammad led a mighty army against them in 630 CE; however, there was no bloodshed or actual fight as the Quraish people surrendered. Muhammad forgave the people of Mecca and granted them peace.

Through the revelation and practices of the Prophet Muhammad, the pillars of Islam (*arkān al-islām*) have been established. These pillars include the two testimonies (*ash-shahādāt*) of the oneness of Allah ["there is no god but Allah"] and "Mohammad is His messenger," praying (*ṣalāt*) five times daily, almsgiving (*zakāt*), fasting (*ṣiyām*) during the month of Ramadan, and participating in the pilgrimage to Mecca (*hajj*) for those who can afford it.

Muhammad was highly gifted in the art of persuasion, politics and diplomacy, as well as in grasping people's religious, social, and psychological needs. As a statesman he sent suave letters to the rulers of Abyssinia, Bahrain, Byzantium, Egypt, and Persia, among others, inviting them peacefully to Islam. Muhammad offered material, social, and spiritual rewards to his followers and companions. He was keen to advise people to think of and manage their self or psyche (*nafs*), heart (*qalb*), mind (*'aql*), and soul (*rūh*), which all indicate intellectual and spiritual qualities (el-Aswad 2002). Self-control or the struggle against one's self was viewed by Muhammad as the greater struggle (*al-jihād al-akbar*) for attaining righteousness and perfection. The struggle against the enemy, necessitating positive qualities of physical strength, bravery, and courage, was considered by Muhammad as the lesser struggle (*al-jihād al-aṣghbar*).

For Muhammad, the self (*nafs*) encompasses two aspects indicating that good exists side by side with evil. This is to say that man has been given the ability to distinguish between right and

wrong as represented in having, respectively, a righteous self (*nafs mutma'inna*) and an evil or domineering self (*nafs ammāra*). Both contrary aspects have opposite effects on peoples' daily lives (el-Aswad 2012).

Muhammad was an effective agent in the social transformation of Arabia from the state of ignorance (*jāhiliyya*), idolatry, and polytheism (*shirk*), prevalent in the pre-Islamic era, to that of enlightenment and monotheism (*tawhīd*). For 23 years Muhammad had been guiding and teaching people the principles and values of Islam focusing on love, peace, patience, humility, justice, truthfulness, compassion, integrity, and spirituality. Muslims have been taught by Muhammad to greet each other saying, "may peace be upon you" (*as-salām 'alaikum*). Muhammad emphasized intimate family relationships, advising Muslims to deal with their wives, children, relatives, and other people with kind and merciful manners. It is not a surprise then to know that "Muhammad" is the most popular name among Muslim males, Arab and non-Arab.

## Muir, John, and Spirituality

Anne Rowthorn  
Salem, CT, USA

Everything turns into religion, all the world seems a church and the mountains altars (Muir 1911/1997, p. 336).

John Muir was overwhelmed by the beauty and splendor of the natural world. Such grandeur, Muir reasoned, could only have been created by God and it reflected God's bounty. Like a perfectly tranquil pond, with nary a ripple touching its surface as the sun approaches the horizon in the evening, just before the still of night descends when every rock, every tree, every line of hills is piercingly reflected, so the creating God of the universe is reflected. Or, as John Muir paused and noted, "How wonderful the power of . . . beauty! Gazing awe-stricken, I might have left everything for it. . . . Beauty beyond thought everywhere, beneath, above, made and being made forever" (Muir 1911/1997, p. 160).

The Scottish-born naturalist and founder of the Sierra Club, John Muir (1838–1914), was not only America's most ardent defender of wilderness, he was the first American naturalist to expound the idea that wilderness had value in itself. Until John Muir wrote about America's mountains, valleys, deserts, forests, and canyons, wilderness was commonly understood as something to be conquered, tamed, used, and exploited for commercial gain. It took Muir to commend the idea that nature has meaning, beauty, and worth in itself and, even more, that God is revealed through the natural world. He consistently pointed to the majesty of God and the

sublime glories of creation. Muir did not worship trees, mountains, brooks, and meadows; instead, like them, he clapped his hands in adoration of God, whom he believed had called them into being (Rowthorn 2012, p. 1).

According to Larry Gates, “No American ever experienced wilderness as religious ecstasy more than Muir. He called the Sierras the Range of Light and—as Light in the sky—they evoked in him immense religious longings. Before the magnificence of nature, he found himself dumb with admiration, prostrate before the power of the God who created it all” (Gates 2000, p. 1).

### Conversion to Nature

John Muir was to draw many times on the image of his first sight of the Sierra Nevada in 1868. It was a view that shaped his thinking and sustained him for his lifetime. Arriving in San Francisco via steamer from New York, Muir took a three-month-walk eastwards. When he finally reached the San Joaquin Valley with the view of the Sierra Nevada mountains 100 miles away, he wrote:

The air was perfectly delicious, sweet enough for the breath of angels; every draught of it gave a separate and distinct piece of pleasure. I do not believe that Adam and Eve ever tasted better in their balmiest nook . . . . [It is] robed with the greenest grass and richest light I ever beheld, and colored and shaded with millions of flowers of every hue, chiefly of purple and golden yellow; and hundreds of crystal rills joined songs with the larks, filling all the Valley with music like a sea, making it an Eden from end to end (Muir 1868).

Here he had what was, by his own reckoning, an authentic conversion to the wilderness: Our flesh-and-bone tabernacle seems transparent as glass to the beauty about us, as if truly an inseparable part of it, thrilling with the air and trees, streams and rocks, in the waves of the sun—a part of all nature, neither old nor young, sick nor well, but immortal. Just now I can hardly conceive of any bodily condition dependent on food or breath any more than the ground or the sky. How glorious a conversion, so complete and wholesome it is. In this newness of life we seem to have been always (Muir 1901, p. 20).

Throughout his writings Muir makes repeated references to cathedrals, churches, and tabernacles, and he had no doubt that natural cathedrals

of the wilderness revealed God more surely than even the most sublime human-made European Gothic marvels. He often capitalized the words “nature,” “beauty,” “love,” “soul,” and “universe,” just as he capitalized the word, “God.” For him the perfect synonym for God was beauty. Whether as seen carving the lines of the mountains with glaciers, or in the star-filled night, or in crashing waterfalls, all was beauty (Rowthorn 2012, pp. 33–34). He said everything in nature, “From form to form, beauty to beauty, ever changing, never resting, all are speeding on with love’s enthusiasm, singing with the stars the eternal song of creation” (Muir 1911/1997, p. 226). His companions were what he called “plant people” and sometimes “plant saints,” “flower people,” and “animal people.” He felt a relationship between himself and the birds and animals, even lizards and insects. He observed the order and integrity of their lives and how they cared for their young. Muir also saw the world as constantly being created, its forces moving in cycles, ever rising and falling:

This grand show is eternal. It is always sunrise somewhere, the dew is never dried at once; a shower is forever falling; vapor is ever rising. Eternal sunrise, eternal sun sunset, eternal dawn and gloaming, on sea and continents and islands, each in its turn, as the round earth turns (Wolfe 1938, p. 438).

As Gates said, “To Muir, religious feelings were as natural as breathing. Nature herself seemed constantly engaged in worship. Even trees bowing in the wind were celebrants of a primordial religion” (Gates 2000, p. 2). What John Muir had glimpsed in a flash of insight upon first encountering the huge sweep of the San Joaquin Valley was what he took to be the full, overpowering impact of God. The beauty before him was so magnificent, the experience so total, so beyond human creating, he could only attribute it to God. He had a visceral insight that it was God who was the creator; the primal maker of everything living, of every mountain, glacier, sea and vista, and leaf and butterfly; and the architect of creation. As he wrote in a letter to a friend in 1872:

... fresh truth [is] gathered and absorbed from pines and waters and deep singing winds. . . . Rocks and waters are words of God and so are men. We all flow from one fountain Soul. All are expressions of one Love. God does not appear, and flow out, only from narrow chinks and round bored wells here and there in favored races and places, but He flows in grand undivided currents, shoreless and boundless over creeks and forms and all kinds of civilizations and peoples and beasts, saturating all (Muir 1892).

## Early Influences

From his earliest days as a boy in Scotland, John Muir was drawn to “wildness,” as he called the natural world. Curious and imaginative by temperament, John could not resist the urge to run away to the seashore, marsh, and fields where his soul was nurtured, just as his identity as a naturalist was set on course. Escaping his father’s heavy-handedness was not easy, for the elder Muir believed that all that really mattered was that he learns his lessons well, especially his Biblical lessons (Rowthorn 2012, p. 13).

Wildness was ever sounding in our ears, and Nature saw to it that besides school lessons and church lessons some of her own lessons should be learned, perhaps with a view to the time when we should be called to wander in wildness to our heart’s content. Oh, the blessed enchantment of those Saturday runaways in the prime of the spring! How our young wondering eyes reveled in the sunny, breezy glory of the hills and the sky, every particle of us thrilling and tingling with the bees and glad birds and glad streams! These were my first excursions — the beginnings of lifelong wanderings (Muir 1913/1997, p. 28).

## A Harsh Father

Daniel Muir, John’s father, was a complex, unrelenting, and difficult man, driven by deep religious convictions and always seeking what he considered a better path of being faithful. From his Scottish Presbyterian roots, he sought a simpler expression of the faith more in keeping with early Christian communities. “He belonged to almost every protestant denomination in turn,

going from one to another, not in search of a better creed, but ever in search of a warmer and more active zeal” (Muir 1885). When he learned that the fledgling Disciples of Christ had established centers in Wisconsin, he decided to emigrate. In February of 1849, Daniel Muir set off for the six-week journey with John, age eleven; Sarah, age thirteen; and nine-year-old David. They left behind Ann and the four other Muir children until suitable farmland could be obtained and a homestead built. For the next eight years, Daniel and his sons chopped away the oak and hickory forest, pulled out roots and rocks, built a simple house, and planted winter wheat and corn for the draft animals and vegetables for themselves. In the winter the work was bone chilling and in the summer they baked under the blistering sun. As John Muir wrote in the memoir of his childhood, *The Story of My Boyhood and Youth*:

I was put to the plough at the age of twelve, when my head reached but little above the handles, and for many years I had to do the greater part of the ploughing. It was hard work for so small a boy. . . . And as I was the eldest boy, the greater part of all the other hard work of the farm quite naturally fell on me. I had to split rails for long lines of zigzag fences. . . . I used to cut and split a hundred a day from our short, knotty oak timber, swinging the axe and heavy mallet, often with sore hands, from early morning to night (Muir 1913/1997, p. 106).

The Muir children worked 12–14 h a day on the farm, they were not allowed to attend school, and the only book permitted in the Muir house was the Bible. By the time he was eleven, John Muir had memorized three quarters of the Old Testament and all of the New Testament, which may have helped make him such an empathetic, powerful, and spiritual writer. Years later, he reflected that psychologically, he was able to concentrate his attention due to fear of punishment. “It was all done by whipping—thrashing in general” (Muir 1913/1997, p. 20). But this did not make him an angry man. Instead, he opened his perceptions and his heart to see God glowing in every raindrop.

From our twenty-first-century perspective, we wonder what the psychological effects of his

father's harshness were on John and his siblings, and since Muir wrote very little about it, we can only speculate. We know that all the children left home as soon as they could and that ultimately, Daniel Muir's wife, Ann, also left, but they did not divorce. After the family departed, the elder Muir abandoned farming and became an itinerant preacher and was finally taken in by his daughter, Joanna, in Kansas City, Missouri. Muir had not seen his parents for twenty years, and suddenly in the summer of 1885, he got a premonition that his father was dying and that he wanted to see him. He traveled to Portage and gathered his siblings and then on to Kansas City where on October 6, Daniel Muir died surrounded by seven of his eight children. John was in tears. Joanna recounted that before Daniel slipped into dementia, he confessed his severe treatment of his children, regretting especially the "cruel things" he had said to John (Worster 2008, p. 300).

If John Muir was affected by his harsh childhood and his father's relentlessness, he was not crushed. He probably buried the hurts of his childhood. Perhaps the compelling beauty and majesty of the natural world compensated for his early experiences. Muir was hardy and resilient, and he was overwhelmingly positive.

### Always a Christian

While John Muir's understanding of God was primarily as creator and sustainer of the universe, he never lost sight of his Christian roots, as illustrated by two letters from the Wisconsin Historical Society. The first, written in 1861, is addressed to E. W. and Frances Pelton following the death of their 20-month-old daughter and only child, Fannie:

What can I say, what can I do? Well, well do I know how little letters of consolation can do—your little blessing is away, but Mr. and Mrs. Pelton, you know that Jesus loves this little dear, and all is well, and you will go to her in just a little while though she cannot come to you. Blessed, blessed will you be if washed in Jesus's blood you be found sinless as she. Love Jesus the more. He knows the strength of this love. Think how many dangers and

aches your little dear has been spared by leaving a little earlier than yourselves, and she is safe, all safe and blessed (Muir 1861).

Muir's Christian grounding remained constant, for in the last year of his life he wrote the following to Emily Pelton Wilson:

...How many things have changed since you wrote last. The happy childrens' voices that used to sing with the merry birds as they got posies on our lovely hill are not heard now—now wrinkled [we are,] now borne about by every wind... "We all do fade as a leaf." [Isa. 66:6, citation added] As the leaf on the ripples of a lake, generation follows generation... how good it is to obey and love God who gave His Son to redeem us and fit us to live forever (Muir 1914).

### Finding a Sense of Well-Being and Spirituality in Nature

John Muir took the advice he gave to others, "Try the mountain passes. They will kill care, save you from deadly apathy, set you free, and call forth every faculty into vigorous, enthusiastic action" (Muir 1884, p. 328) and:

It is a blessed thing to go free in the light of this beautiful world, to see God playing upon everything, as a man would play on an instrument, His fingers upon the lightning and torrent, on every wave of sea and sky, and every living thing, making all together sing and shine in sweet accord, the one love-harmony of the Universe (Badè 1924).

## Mummification

Jeffrey B. Pettis  
Department of Theology, Fordham University,  
New York, NY, USA

Mummification is part of ancient Egyptian religious belief concerning the afterlife. It entails

preserving the body of one who has died for his/her journey into the next world. Initially provided for Egyptian Pharaohs, mummification is founded on religious fertility rites and notions of vegetative processes of regeneration. It is understood in relation to the natural ebb and flow of the Nile River agrarian life cycles. Extant ancient Egyptian instructions held in the Cairo Museum tell of the special care given to the procedures of dissection and embalment which constitute mummification (Arabic *mūmiyā*) and the process of desiccation. Every part of the body receives a ritual anointing with special oils and plant derivatives. The spine is soaked with oil. The head is twice anointed. The fingernails are gilded, the fingers are wrapped with linen bandages, each of which is attributed to a single god. The entire body is contained in linen wrappings, excluding the inner organs. These are removed (with exception of the heart) due to the rapidity of decay and held in funerary vases called canopic jars. The jars are a sign of physical immortality and set (with other possessions of the deceased) alongside the mummy in the tomb. In later times, the organs were wrapped in linen cloth and set back into the body. The mummification ritual evidences what is perceived to be the deification of the corpse and connects with the myth of the god Osiris who dies and is brought back to life by the queen goddess Isis. Resurrected, Osiris becomes the god of “the things in heaven and in the lower world” (Plutarch 1936 *Isis and Osiris* 61E). The soul (Ba) of the deceased journeys in order to enter into eternal life – the field of reeds. It must pass through seven gates to obtain lasting union with the sun-god Ra. The names of demons, shades, gods, and monsters encountered on the journey, along with magical formulae to disarm them, are provided to the deceased in such funerary “handbooks” as the *Coffin Texts* (ca. 2000 BCE), the *Pyramid Texts* (ca. 2600 BCE–ca. 2300 BCE), and *Book of the Dead* (sixteenth century BCE). The funerary text is placed between the wrapped hands of the mummy for the journey of the soul which occurs in the “light of day,” so that the journeyer has consciousness while passing through the land of the dark (unconscious) world. Egyptians placed wheat

grains and flower bulbs inside the wrappings of mummies, watering the seeds, and watching for growth as a sign of resurrection. The mummification practice is perceived this way to involve an inseparable connection between matter and spirit. Resurrection occurs through and from the old body, which itself contains the mystery of the new life. In one Coffin Text, the deceased declares: “I live, I die.... I live in wheat, I grow in wheat which the gods sow, hidden in Geb [the earth].” In Egyptian myth, Osiris himself is referred to as wheat and barley. The first century CE alchemical text entitled “Isis to Horus” says how “nature delights (*pereptai*) in nature, and nature overcomes (*nika*) nature” (7). *Mumia* is thought to have contained medicinal value in European pharmacy, and the German-Swiss physician and alchemist Paracelsus (d. 1541) refers to it as having elixir potency (Jung 1963, p. 391). The preparation of the body with cloth wrappings and plant derivatives referenced in the New Testament gospels (e.g., Mark 15.42–47) may be representative of ancient Egyptian mummification practices (cf. John 12.24). Origen of Alexandria speaks of the old body as *seminarium*, seed-plot from which springs new life (Jerome’s *Epistle to Pammachius* IV, 38).

## Music and Religion

Laurence de Rosen  
Paris, France

Since the dawn of time, music has been man’s medium of communication with its divinity/divinities. Views of the origin of both religion and music swing between two poles: the belief in a reality that is essential and independent of an observer and a view that neither music nor religion exists on its own, challenging their independent existence. Both views address the question, did music and religion exist prior to our having discovered them or did they exist all along, whether we knew them or not? In modern psychology, Jung answered this by positing that the world comes into its being when man discovers it.

In monotheism, Music and religion are means of accessing the invisible, unseen, and untouchable, what is beyond what man can comprehend. They both refer to the Almighty God, the Divine, the One which is called in religion and psychology the numinous, holy, and tremendous. Their common ground is archetypal and relates to the experience of loss through rituals of death and rebirth. The relationship between religion and music can be coined as the “spirit” of the “sound.” Both provide a means of transcending human existence. In polytheism, syncretic religions, and animism, there is no need to reach out the invisible in a way the spirit is present and embodied. Immanence represents the other side of the dichotomy transcendence (monotheism) – immanence (polytheism).

The archetypal ground of music and religion:

- Reflects an ordering principle that brings in music, harmony out of chaos, and dissonance and rituals and pilgrimages in religion. This principle moves from fragmentation toward a human need for wholeness. There is an expression of this universal human need in Chinese literature, the *I Ching or Book of Change* (See Chap. 16: Religion and Music).
- Refers to memory: music and religion are intimately entwined with memory. Western

mythology encapsulates this through the figures of the muses, daughters of Mnemosyne, goddess of memory. The oral tradition is still very much alive in the non-Western and Native American worlds, depends on memory, and stimulates it through repetition that is rhythmic and that is built into the body. In the Western world, this tradition is represented primarily by Homer. The oral tradition experiences time, essential in music as well as in religion, as circular, while the written tradition perceives it as linear.

- Embraces a dichotomy, identified at a collective level with the dualities of the Western/Eastern, and the Apollonian/Dionysian as well as in the individual level as an inner struggle such as experienced by Mozart, in which Salzburg came to symbolize sacred music, and Vienna secular. Tension and release, dissonance and consonance, and silence and chant are the kinds of opposites that express the energy carried by music and religion that eventually may find transformation through these channels.
- Holds the experience of mystery, whose Greek root means “to close, to have a mouth and the eyes closed,” probably coming from the onomatopoeia *mu*, symbol of inarticulate sound. There is an intimate relationship between music and faith across all civilizations.
- Appeals to irrational, emotional, and instinctive processes. Because of their archetypal nature, no scientific approach can capture them in their entirety. Indeed, a large part of our understanding of both comes from a place before words. The body, with its taboos and shadows, is the main channel through which music and religion express themselves, by means of voice and dance. In ancient Greece, the secret of the Eleusinian Mysteries could be more readily revealed by dancing than by speaking.

In ancient times, the oral tradition was predominant in both music (poetry) and religion (chant and dance). The figure of the shaman seems to be the oldest to embody the convergence of music and religion. The English word shaman (cf. Eliade, Frazer, Levi Straus) comes from the

Tungusic language of Siberia – *saman* – broadly meaning “mastery over fire,” “magical flight,” and “communion with spirit.” With his ritual of dance, chant, and musical instrument (drums and rattle), the shaman was and still is a healer. Among the 17,000-year-old cave painting at Les Trois Frères in France, we see a shaman playing a resonating musical bow.

With the development of consciousness, music and religion which were combined in the figure of the shaman began to differentiate, *mythos* and *Eros* giving way to *logos*. According to tradition, Orpheus, grandson of Mnemosyne, came out of the shamanic mists, stepping into the fifth century, a period of great changes in the Greek world. Built on the older form of the shaman, the figure of Orpheus stands as the medial term between the Apollonian and the Dionysian modes of thought, holding the tension, prefiguring the dualities of Christianity.

With the emergence of patriarchy, as music and religion became separated and differentiated, oppositions arose: spirit/matter (e.g., Hildegard von Bingen), male/female (e.g., castrato), lyric/melody (e.g., *Querelle des Bouffons*, in France), and so on. Figures, which had combined the agencies of music, religion, and healing, in the past, began to specialize. For example, in the Celtic tradition, the roles of the shaman were split into the druid, who accessed the spiritual and healing realm, and the bard, artist, poet, musician. Under Christianity, a polarization between external/internal, physical/spiritual, emotion/thought, and text/context increased in music as well as in religion, separating one from the other.

In all cultures, a tension between text and music exists in the most primitive as well as most sophisticated forms. On the one hand, chant, a codification or an amplification of words from a litany, represented by the monosyllabic song of the Greek tragedies to the psalmodies of the Buddhist monks. On the other, the enjoyment of singing, independent of text (*melisma*, “*bel canto*,” and ornamentation), can be found in a Gregorian Alleluia, in Islamic and Spanish chant, and in the Messiah of Handel.

## Judaism

For over 3,000 years, Jewish people have come together to worship by way of songs. “Man is like a ram’s horn. The only sound he makes is that which is blown through him,” said a Chassidic master. The horn of ram is the oldest Jewish musical instrument, the shofar, with an extremely profound symbolic, religious, and spiritual significance. Judaism developed an ancient and annotated system (called *trope*) for chanting the Bible, with particular scales and melodies for each book and musical modes (called *musah ha-tefillah*) for every category of prayer and for different holidays, passed on to observant Jews through oral tradition. The rich garden of mystical tradition known as the Kabbalah states, “Come, I will show you a new way to the Lord, not with words but with song” (Chassidic masters).

## Christianity

The Christian tradition, while recognizing the great psychological value of music, has seldom used it for esoteric or initiatory purpose. Like other religions, it experiences the opposition between words and music. Early in Christian history, Saint Augustine declared that “To sing is to pray twice” and sung prayers have always been central. Christian forms of chant wear many faces from Gregorian chant to the African drums and rhythms of the monks in Senegal, from stately Lutheran hymns to gospel music. Among these practices, Gregorian chant is unique in providing an unbroken link not only to the prayers of early Christians but also to the Jewish tradition of chanting texts more than 3,000 years ago. The Bible is full of musical references, particularly in the Psalms, in the Songs of the Songs, and in the Lamentation of Jeremiah. The oldest instrument in the Bible is an organ originally made of pipes. In the New Testament, Paul instructs the Ephesians “to sing and psalmodize to the Lord with your heart and for everything giving thanks in the name of our Lord.” The Christian monastic tradition represents the combined heritage of religious

life and music (Gregorian chants), including the practice of medicine (culture of medicinal herbs). Bach, recognized as one of the greatest composers in Western history, was also a devout Christian and understood the profound meaning of the texts he set to music. The text of the Cantata BWV 20 is amazingly closed to the number 16 of the I Ching: “O Eternity, you word of thunder. . .”

## Islam

The Prophet Muhammad is said to have recited the Qur’an, whose root means “to [recite].” Therefore, Imams are not selected for their musical abilities. Although Islamic tradition in general frowns upon instrumental music and music in general as a sensual distraction from a devout life, there exists a rich tradition of chanting Qur’an and intoning prayers. The Sama is a practice of mystical listening. While Orthodox Muslims have an uncanny relationship to music, most Sufis, a mystical branch of Islam, embrace it (e.g., dervishes).

## African

While chants have been orally passed down from generation to generation since the dawn of history, individuals are also free to improvise and express their own unique style and personality. Drumming uplifts the spirit of African chant on a tide of rhythm more sophisticated than almost anywhere else in the world. And where there are drums playing, bodies start to move. Chanting is always done in groups, rarely, if ever, alone.

## Hinduism

All forms of yoga make use of chant. The word *yoga* means “yoke” or union with God and the purpose of these practices and Sanskrit chanting is to become one with God, the Atman, our own inner self. Of all the religious traditions, there is

none in which chant and dance play a more central role than Hindu/Vedic culture.

## Buddhism

The word “Buddha” comes from Sanskrit word meaning literally “to wake up.” This is the true message of Buddhism. In Buddhism, the chant is a tool for awakening consciousness. Originating in India, Buddhism shares with Hinduism use of Sanskrit and the practice of chanting mantram. Many Buddhist monks practice visualizations and sacred hand gestures, called “mudras,” while chanting. Tibetan monks produce unique deep-throated vocal tones with such powerful harmonics that each voice is able to sound three separate notes at the same time. The overtones that emanate from their voices are extraordinary phenomenon of sound, generating a high level of scientific interest and research. There are many faces and many voices of Buddhist chant. It invokes the clarity, emptiness, and compassion of the Buddha’s teaching. Buddhist chant is slow, meditative, and dispassionate, a far cry from the ecstatic devotional chant practices of Hinduism or the sensual rhythms of Africans.

In psychoanalysis, the relation between music and religion remains relatively untrodden territory. The analytical approach, influenced by its fathers, swings between suppression and repression. Freud was very sensitive to music and could not bear the amount of affect triggered by anything musical, from a singing voice to a performed piece of music. Yiddish and Czech, languages of religious songs and feelings, dominated his early childhood in Freiberg. Music drew him irresistibly closer to his mother and grandmother, symbol of incestual love, object of repression. While son of a protestant minister, Jung was not a musician, as he explicitly said and wrote. Jung emphasized the visual image.

## Music Thanatology

Meg Bowles  
Westchester Institute for Training in  
Psychoanalysis and Psychotherapy,  
New Fairfield, CT, USA

### Definition

Thanatology, from the Greek word “*thanatos*,” meaning death, refers to the study of the death and dying process from various interdisciplinary perspectives including physiology, psychology, and spirituality. Music thanatology is a contemplative practice within the field of thanatology, where prescriptive music, usually via the medium of harp and voice, is delivered live in

clinical settings as a form of palliative medicine for patients who are dying.

While there is little doubt that many forms of live and prerecorded music delivered to an audience can be experienced as profoundly healing, prescriptive music differs in that it is intentionally delivered solely for the dying patient. The practitioner of music thanatology uses her instrument in a way that attunes to the dying person’s unique and individual needs from moment to moment, as opposed to a performing musician who delivers a preset program which is informed and shaped in advance by the energies of desire.

### Origins

Although the field of music thanatology in its contemporary form originates from the visionary opus of harpist, musicologist, and clinician Therese Schroeder-Sheker (Founder and Director of the Chalice of Repose Project™ and Dean of the Chalice of Repose School of Music Thanatology, which has offered a highly specialized and rigorous graduate program in the field for decades), its ancestral roots stretch back to the monastic medicine practiced in the eleventh-century Benedictine monastery of Cluny in Burgundy, France. At Cluny, rituals of prayer and what became known as “infirmarium music” were used in bedside vigils to attend to the physical, emotional, and spiritual sufferings of the dying. The relief of pain in both body and soul was considered essential for the experience of a peaceful and blessed death. The seeds of this holistic philosophy continue to bear fruit today, in the many different branches of modern palliative care. While the field of music thanatology does not seek to replicate the Benedictine approach to serving the dying, it deeply embraces the cultivation of a vital inner life through a contemplative spiritual practice, as an essential companion to doing clinical work.

### Comparison with Music Therapy

Music thanatology shares much in common with music therapy in that both disciplines work

intimately and powerfully with the healing potential of sound. However, music therapy differs in one important respect in that usually the therapeutic process assumes the presence of, and then harnesses, an innate capacity in the patient to be an active participant in the session. The music therapist, in collaboration with the patient, chooses the specific musical interventions which tend to elicit the physiological and emotional responses that are desired. Even during altered states involving deep relaxation or cathartic release, the patient usually has access to an observing ego and can process the experience with the therapist afterwards so that the material can be integrated into consciousness. A music thanatologist, on the other hand, is usually invited to work with a patient in the active phase of dying. The patient may be agitated and in pain, or comatose, or pulled in and out of various altered states of consciousness, or otherwise unable to communicate. As the patient moves more deeply into the territory of a liminal world between life and death, she is in a sacred state of extraordinary vulnerability which needs to be supported as the natural “unbinding” processes in the body and the psyche take hold. Where there is resistance and struggle, carefully chosen prescriptive music will help the patient’s connections with this world to be softened and loosened gently so that the energies moving her towards death and beyond may do so unimpeded.

In order to support a patient’s physical and spiritual transition, or “transitus” (from the Latin *transire*, to cross over), into the territory of death and beyond, a practitioner of music thanatology allows herself to be guided both internally and externally by experiences of attunement and entrainment which mysteriously arise in the vibrational field between the practitioner and patient. The word “entrain” means “to pull or draw along after itself.” Entrainment is a universal phenomenon appearing in nature, where two oscillating bodies begin to vibrate together, in harmony, due to their mutual influence upon each other. Engaging in a process of nonverbal attunement similar to what occurs between mother and infant, the practitioner gradually synchronizes the music to the patient’s

physiology. For example, as the practitioner adjusts the meter and phrasing to mirror the breathing patterns, she observes the patient, whose body is literally absorbing and responding to the music, will often begin to “vibrate” at a frequency of greater relaxation and peace. The breathing slows and eases. This musical flexibility which also includes an adept use of the power of silence and rest tends to draw one into the more fluid, non-ordinary soul space of *kairos* time, as opposed to the linear, precisely metered *chronos* time which can bind one to ordinary reality.

## Conclusion

The practitioner of music thanatology (whether male or female) functions as a spiritual midwife and a comforting maternal presence. Perhaps she (along with the harp, which has a mythology of its own) also carries a bit of an angelic or shamanic projection as well. There is little doubt that the beauty in the music itself, expressed through the exquisitely refined craft of a skilled, trained instrumentalist and mediated by the humble, compassionate presence of a fellow human being who is called to serve, has the potential to create and hold a space for an experience of the transcendent. Although the delivery of prescriptive music is not designed to cure, it does heal by supporting the patient to release her engagement with life in this linear time-space dimension so that ultimately her consciousness and spirit as we know it can become gathered back into the Greater Mystery.

## Mystery Religions

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

Mystery religions flourished in the Hellenistic world. They centered around deities including Mithras (Persia), Atargatis (Syria), Dionysos, Demeter, and Core (Greece), Meter, (Anatolia), and Isis (Egypt). Most of the deities associated with these cults have their beginning as agricultural fertility gods and the notion of the great divine Mother who begets and receives life force. The word “mystery” comes from the Greek *muein*, “to initiate.” Membership in the mysteries occurred on an individual and voluntary basis. Ritual practices, worship, and “inner” teachings were privy only to cult members – this contributing to the prestige of the cult. Subsequently, little is known about worship and the mysteries. Apuleius (Lucius Apuleius Platonicus ca. 123/125 CE–ca. 180 CE), in his *Metamorphoses*, provides a glimpse into the nature of the Isis cult in second century CE. He explains how he was directed in a night dream by Isis “the mother of the universe” to become an initiate (1989, XI. 5) and how he undergoes purification rituals, observes 10 days of celibacy and fasting from meat and wine, and receives secret instructions (1989, XI. 23). At the culmination of the rite, he emerges from the inner sanctuary reborn in “the likeness of the sun” (1989, XI. 24). He writes how he came to the “boundary of death and . . . traveled through all the elements. . . and in the middle of the night came face to face with the gods below and the gods above” (XI. 23). Plato also refers to ecstatic experience and the

mysteries in the *Phaedrus*, where he says one who is taken up with True Beauty (*kallos tou alēthous*) cannot help but be euphoric – something the common world sees as madness (*parakinōn*) not knowing it to be inspiration (*enthousiazōn*) (249D). Plato says that the soul forms wings (*pterōtai*) and that it “throbs and palpitates. . . it is feverish and uncomfortable and itches when they [wings] begin to grow” (251C). The Roman Emperor Marcus Aurelius (161–180 CE), a stoic philosopher, writes how the mysteries place one between dream visions and miraculous healings, suggesting some kind of psyche-soma, liminal experience. In this state of disorientation, the initiate may undergo an altered state of consciousness. Dramatic rituals involving strong contrast between light and dark and movement through interior and exterior spaces become part of a rebirth experience. Initiates of the Anatolian Mysteries of Kybele and Attis enter into the sacred wedding chamber to experience the Great Mother. Fanatical members of this cult flagellate themselves to the point of bleeding, sprinkling their blood across the sanctuary altar. Members of the Mithras cult worship in subterranean caves before a graphic depiction of Mithras slaying the bull. The Mother Goddess Cult of Meter includes self-castrating priests (*galloi*) and from the second century CE on drenched initiates in the blood of a slaughtered bull. The notion of ascending also occurs as a quality of the mysteries. Apuleius speaks of traveling through “all the elements” (*omnia elementa*) (1989, XI. 23), and Plato speaks of the chariot of the soul rising into the region above the heavens (*hyperouranion topon*) which have a colorless, formless, and intangible essence (1914, *Phaedrus* 247C). The Mithras Liturgy found in the ancient source called the Great Magical Papyri of Paris tells of the ascent through seven levels which include the lower powers of the air, Aion, and his powers, Helios, and Mithras (751–834). The mysteries can be understood then as cults which make conscious the symbols and movements of the unconscious and processes these in the formation of rituals as part of religious experience. Not being self-sufficient, the mysteries diminish with the demise of the ancient

world upon which they depend. Following the imperial decrees of 391/392 CE against all pagan cults, they suddenly and permanently disappear.

## Mysticism and Psychoanalysis

Alan Roland  
National Psychological Association for  
Psychoanalysis, New York, NY, USA

### Introduction

In the last 30 years, two broad attempts have been made to challenge the classical Freudian psychoanalytic narrative on mysticism in which spiritual experiences and practices have been viewed as regressive and/or psychopathological, personified by Jeffrey Masson (1976, 1980), noted Sanskritist turned psychoanalyst. The first attempt centered on South Asian studies, particularly, but not exclusively, on major Hindu spiritual figures, similar to Masson. Methodologically, it uses applied psychoanalysis

involving textual analyses and ethnographic interviews. Those who have contributed most directly to this new psychoanalytic perspective are the Indian psychoanalyst, Sudhir Kakar, psychoanalytically oriented professors of religion, Jeffrey Kripal and William Parsons, and the anthropologist, Gananath Obeyesekere. The second movement involves psychoanalysts (Nina Coltart, Paul Cooper, Michael Eigen, Alan Roland, and Jeffrey Rubin, among others), who are involved in one or another spiritual practice, overwhelmingly, but not exclusively, Buddhist, and who work psychoanalytically with some patients seriously involved in their own spiritual disciplines. This movement is thus more clinically and experientially oriented than the applied psychoanalysis of the first group.

In the first group, almost all are in agreement that there needs to be a seismic shift from what they view as a highly pejorative and reductionistic Freudian psychoanalytic rendering of religious experiences and practices. Kakar (1978, 1991) is the first Freudian psychoanalyst to openly challenge the psychoanalytic establishment to accord the mystic a similar respect to that given the artist in the West. They all agree that religious experiences are valid in and of themselves, but all assert that these experiences can at least be partially, if not fully, explained by psychoanalytic considerations. It is to this inherent tension between the spiritual experience being considered *sui generis* and their psychoanalytic explanations of it that shall be addressed in this section of the chapter. With the exception of Obeyesekere and to some extent Kripal, they rely on more current Freudian psychoanalytic theorists than classical Freudian theory. Thus, Wilfred Bion, Heinz Kohut, Jacques Lacan, Anna Maria Rizzuto, and D. W. Winnicott are cited for a new psychoanalytic rendering of mysticism.

### Sudhir Kakar

This chapter shall address what is problematic in this new Freudian psychoanalytic discourse on mysticism before advancing the other perspective. It shall critique Sudhir Kakar as he has

greatly influenced the others through writing extensively on the subject of psychoanalysis and mysticism, beginning with his analysis of Swami Vivekananda in *The Inner World* (1978), then on Gandhi in *Intimate Relations* (1989), and finally on Ramakrishna in *The Analyst and the Mystic* (1991). Kakar is to be applauded for his courage in the Freudian psychoanalytic world for advocating for a radical reconsideration of the mystic. His description of the lives of Vivekananda, Gandhi, and Ramakrishna is very well done in his gifted style of writing. But what happens when he actually applies his psychoanalytic understanding to these three spiritual figures? His analyses are as fully reductionistic as those of Jeffrey Masson. This chapter shall cite just one of what could be many examples.

After disavowing the pathographic approach (1978, p. 164), Kakar cites the following:

With the advent of adolescence... he (Vivekananda) found he could not always cope with the claims of archaic grandiosity and the anxiety and guilt associated with its breakthrough. Increasingly, he experienced periods of hypomanic excitement; once... when he was fifteen... Narendra "spied a large bee-hive in the cleft of a giant cliff and suddenly his mind was filled with awe and reverence for the Divine Providence. He lost outer consciousness and lay thus in the cart for a long time" (1978, pp. 178–179).

Thus, Kakar equates Vivekananda's spiritual experience with archaic grandiosity and hypomanic excitement.

This stems in good part from the second problem in his work, his theoretical understanding of mysticism from a psychoanalytic standpoint. In *The Inner World*, Kakar states "real knowledge is only attainable through direct primary-process thinking and perception..." (1978, p. 107).

In the Hindu ideal, reality is not primarily mediated through the conscious and preconscious perceptions, unconscious defenses, and logical rational thought processes that make up the ego; it emanates from the deeper and phylogenetically older structural layer of personality – the id, the mental representation of the organism's instinctual drives. Reality, according to Hindu belief, can be apprehended or known only through those archaic, unconscious, preverbal processes of sensing and feeling (Kakar 1978, p. 20).

To what extent primary-process thinking and the id constitute spiritual knowing is highly questionable to say the least. The primary process, perhaps Freud's most original discovery, constitutes certain mechanisms (condensation, displacement, symbol formation, dramatization, and such), symbolic processes essential in dreams, symptoms, and in certain ways in artistic creativity. In Freud's view, they give disguised expression to the instinctual wishes; in later contributions (Deri 1984; Noy 1969; Roland 1972), they also give excellent metaphorical expression to various facets of the self. In *The Inner World*, it is Kakar's inaccurate use of Freudian psychoanalytic concepts such as the primary process and the id as a Procrustean Bed to encompass psychological processes involved in spiritual realization that results in his reverting to traditional psychoanalytic reductionism in his analyses of mystics.

His theoretical understanding of mysticism shifts from the use of the primary process and the id in *The Inner World* to current psychoanalytic relational theories in *The Analyst and the Mystic*. Kakar in this latter work fully accepts the reductionistic psychoanalytic premise that spiritual experiences and motivation are essentially a regression to the preverbal, symbiotic experiences of the mother-child relationship.

The vicissitudes of separation have been, of course, at the heart of psychoanalytic theorizing on mysticism. The yearning to be reunited with a perfect, omnipotent being, the longing for the blissful soothing and nursing associated with the mother of earliest infancy... has been consensually deemed the core of mystical motivation (Kakar 1991, p. 29).

Only Kakar puts a more positive spin on this regression than do the classical Freudian analysts, inasmuch as he sees the mystic as able to effect a deeper regression than that which occurs in psychoanalysis to repair what Kakar deems as the essential depressive core of life, and in Winnicottian terms, the mystic is involved in a creative experiencing through this regression to infancy. Again, it is highly questionable whether spiritual aspirations, practices, and experiences essentially involve regression.

## Psychoanalytic Therapy with Indian and American Mystics

From those psychoanalysts and psychoanalytic therapists who have worked with patients deeply involved in spiritual disciplines and who are themselves practicing meditation, a newer narrative has emerged on psychoanalysis and mysticism or perhaps more accurately on psychoanalysis and mystics. In general, the spiritual self of the mystic and psychopathology/normality is seen on two separate continua. Thus, a mystic, even an advanced one, can range from being mentally healthy to having various kinds of psychopathology. Conversely, mentally healthy and mature persons can range from not being in the least interested in a spiritual quest to being very involved. The same is true of persons who are emotionally disturbed.

Correspondingly, the spiritual self of the mystic cannot be reduced to any psychoanalytic theory with the possible exception of Wilfred Bion's concept of "O." Both Kakar (1991) and Parsons (1999) cite Lacan's theory of the real, but according to a recognized Lacanian authority, Paola Mieli, they misunderstand the meaning of the real (Personal communication).

Similarly, attempts to link spiritual experiences with various developmental stages are seen by this group as being highly reductionistic: whether it is Freud's primary narcissism of infantile merger with the mother or a Winnicottian creative experiencing of a transitional space between mother and child or Rizzuto's god images from different developmental stages or Kurtz's (1992) concept of later childhood merger with the extended family. These views simply do not take sufficiently into account the existential nature of spiritual experiences. Nor can these experiences be categorized by regression of one sort or another, or to one or another stage of development, or to one or another kind of inner representation of either the mother or father. If anything, clinical experience indicates that spiritual practices and experiences are a strong counterpoint to regression and childhood merger experiences with the mother.

If psychopathology does not enter into spiritual experiences, where does psychoanalysis fruitfully enter the picture with mystics? First and foremost, it is in their relationships with others, often love relationships affected by earlier difficult family relationships, but also friends and work relationships, any or all of which can sometimes be truly problematic, and also to their everyday sense of self. Psychoanalytic therapy with those patients who are mystics is often of considerable help in their functioning much better in their relationships while simultaneously freeing them to be more involved on a spiritual path.

How then does unconscious motivation and psychopathology enter into a mystic's spiritual practices? Two women in psychoanalysis with highly distressful love relationships were first drawn to Vipassana meditation, which helped them attain an inner calm. On the other hand, an advanced mystic like Shakuntala (Roland 1988) began having spontaneous, intense spiritual experiences by age fourteen while on a family pilgrimage to a shrine of a goddess. Other persons with a spiritual inclination may be drawn to spiritual disciplines out of defensive needs to resolve some kind of psychopathology (Coltart 1996), while still others may become openly psychotic if they have a psychotic core. One patient was attracted to an ashram and guru known for both its spiritual powers and its sexual licentiousness. While progressing there on her spiritual path, she unconsciously repeated the childhood sexual abuse she had once experienced. The decision to embark on a spiritual quest may sometimes result from some of the hard knocks of life, but not always. Even then, the person must be strongly inwardly inclined in this direction for it is still a rare pursuit.

A psychoanalytic discourse on mystics can fruitfully comment on that which has only been minimally discussed, the guru or teacher-disciple relationship. Besides the important teachings that are conveyed by a suitable teacher, there can also be multiple transferences from both the disciple and the teacher, depending on the individual personality. Rubin (1996) has commented on this at length.

To what extent can spiritual practices alleviate emotional problems? While most agree they can be helpful, it is generally considered that they cannot resolve deep-seated psychopathology. Coltart (1996) noted that some people who seek out spiritual practices to resolve their emotional problems would do much better being in psychotherapy. On the other hand, these psychoanalysts have noted that patients involved in spiritual disciplines can usually tolerate a greater degree of anxiety in facing inner conflicts and/or deficits in the psychoanalytic process.

## Mysticism and Psychotherapy

Anthony Badalamenti  
Scientific Support, Westwood, NJ, USA

The goal of psychotherapy is either to relieve distressing symptoms such as anxiety, depression, and phobias or to enable a person to better manage his or her life. These two goals usually overlap and this fact is a key to understanding the general principle by which psychotherapy works. Whatever the issue that brings a person to therapy, the therapist sees the desired improvements as the natural expression of a needed form of personal growth. The work to create this growth uses a person's perceptual and cognitive powers to bring about a change that takes place mostly in the emotional system.

A major difference between emotional and cognitive processing is the degree of automatism versus choice in each. Most people can call upon their ability to understand something by an act of will, that is, by the wish to have the given understanding. This is rarely true of the emotional system, which tends to be evoked involuntarily by perceptions arising either from within a person or from the person's environment. It is the lack of conscious control over emotional responses that troubles people with emotional problems because the wish to be free of a symptom has little or no effect on it. One of the main characteristics of an emotionally healthy person is that his or her emotional responses tend to be adaptive, and therefore welcome, with respect to what provokes them. This is why spontaneity is often taken as a sign of emotional health, where it is assumed that the spontaneous response is appropriate. In this framework, the general goal of psychotherapy is to create a fitting spontaneous response to certain parts of the subject's life. This involves taking measures to realize the potential within the subject to become what is needed to be free of the distressing symptom or presenting complaint. It is this relationship of potential to actual that begins a natural relationship between mysticism and psychotherapy.

The general goal of mysticism is to achieve ever-increasing levels of awareness of the cosmos. This involves training exercises in attitudes and orientations toward the self and the world that promote the emergence of another level of awareness. This other level is best understood as experiential rather than cognitive or emotional or even intuitive, although it is important to note that the experiential level of understanding includes all of these three. Achieving this experiential level of understanding enters a domain where words, emotions, and even intuition can no longer be used to communicate what is apprehended. Here the way cosmic reality is apprehended is neither by words nor by emotions but by a direct experience of the continuity of the psyche with the cosmos.

This mode of knowing and being presupposes a kind of human potential and here the connecting link to psychotherapy again surfaces. Within

psychotherapy, the desired growth, or realization of potential, is located in the emotional system and to a lesser degree in the cognitive system. Within mysticism, the desired growth refers to the entire person. In this sense, the goal of mysticism is a generalization of the goal of psychotherapy. The idea that mysticism subsumes psychotherapy is not new and has long been a familiar to mystics of all traditions. Before the nineteenth century, mystics did not frame this idea in terms of psychology, as now understood, but in more homespun terms such as growing up, carrying one's cross, and coming into one's own. When psychotherapy emerged, adepts in mysticism were quick to see that their tradition was a generalization of the psychological one.

Psychotherapy has a variety of tools, all accessing the emotional and cognitive powers, to use to stimulate needed growth. Mysticism also has tools to achieve its ends but here the two part ways in a paradoxical manner that also brings them back together. Since the object of mysticism is accessed outside feeling and rational knowing, the training for this goal involves weaning a person away from his or her familiar reliance on feeling, thinking, and choosing. A redirection of attention takes place, usually involving long and diligent training before first fruits appear. One of the major tools in all mystical traditions is the koan.

A koan is a riddle presented as if solvable by using cognitive or emotional intelligence. For example, "what is the sound of one handclapping?" or "what did you look like before your parents were born?" The koan is meant to be vexing because its purpose is to bring the subject to see that rational processing cannot be of service in certain parts of life. This is a first step, usually under the direction of a spiritual director, toward disengaging attention from its ordinary use. The long-term goal of the exercises is to get attention off of any one thing, a state usually termed "letting go and letting be." The major reason for this goal is that the more a person holds on to any one state, the more the person interferes with the inflow and creation of more of the psyche. This is another connection with psychotherapy.

One of the major obstacles to successful psychotherapy is the subject's unwillingness to release former ways of living and adapting. As a rule, new and better ways cannot be evolved except by also clearing behaviors that stand in the way. Thus, the idea of letting go and letting be enters psychotherapy at the level of emotional and, to some degree, cognitive processing. Within psychotherapy, one lets go of behaviors that either do not work well enough or that do harm in favor of growing new behaviors that make for a better adaptation. The goals of mysticism include a sound adaptation but this is more of a starting point for what mysticism aims at and here the idea that mysticism subsumes psychotherapy enters in a natural way.

The goal of mysticism is to directly experience the cosmos, an event whose higher levels are outside the domain of words, thoughts, feelings, and images. The onset of mystical experience takes place with the emergence of new perceptual powers in the psyche. The first experiences along these lines involve the intuition of being in which a person begins to experience the "isness" of things. It is very important for the subject to train in moving attention away from emotional, cognitive, and other familiar modes of knowing and adapting for this to take place. The intuition of being is usually the very first of a sequence of experiences that build to mystical experience. The mystical experience proper is more an event of growth than of a new kind of perception, but it is the case that the growth precedes and enables the perception. This kind of perception is an experience outside of and different from all the subjects' prior modes of knowing and apprehending, a thing suggested by the need for some prerequisite growth of the psyche to first take place. This is parallel to many therapeutic events.

Within psychotherapy, a person first realizes a needed potential to live and adapt in a new way before the person becomes able to see what it means. This actualization process is what extinguishes the distressing symptoms and the more willing the subject is to release the prior way of adapting, the quicker this takes place. In the mystical experience, the more the subject has learned

to release prior attachments of *all* kinds, the more quickly the growth needed for the next level of mystical experience takes place. Here again, the idea that mystical experience is a generalization of the therapeutic experience presents itself.

The goal of psychotherapy is to increase the "isness" of the subject in the affective or emotional domain and to some degree in the cognitive domain also. This has traditionally been regarded as the event of turning potential into actual, where the "isness" of the potential is already in place and the therapeutic process results in the "isness" of its actual form. The outcome, in practical terms, is that the subject feels and functions better as a result of the leap from potential to actual in target areas. In mystical terms, the subject's ontology has increased and the subject is literally more than he or she was before the realization of potential took place. Put differently, the subject's powers to adapt increase.

The ontological increases in mystical experience include the issue of here and now adaptation because the entire psyche increases as a result. That is, the mystical experience is enabled by the growth of new psychic capacity whose object is to engage the cosmos itself. However, the psyche is itself an expression of the cosmos and therefore any increase in the psyche affects the person's relationship to all parts of life, simply because all events take place in the cosmos. What this means in practical terms is that the subject's emotional life is not only enriched for adaptation in the usual sense, but more, the emotional system begins to respond to the new life in the psyche that has the capacity to directly experience the cosmos in ways that are outside the reach of the emotional, rational, and intuitive domains. The emotions of awe and trust take on new meanings as the mystical experience develops, just as these same emotions take on fresh meaning as a person grows new here-and-now adaptive powers within psychotherapy.

In sum, the goals of mysticism may be regarded as a generalization of those of psychotherapy, or those of psychotherapy may be regarded as a specialization of those of mysticism. One major difference between the two is that mysticism results in the emergence of

another way of becoming and knowing not achievable by the emotional and cognitive systems alone. One major parallel between the two is that both require the releasing of former ways of living and being; this release being a completely general one in mysticism and a more particular one in psychotherapy. Both mysticism and psychotherapy address the realization of potential, and both regard potential as unlimited, but what potential refers to is man's relation to all things in the first and man's relation to matters of love and work in the second. This too fits the idea that mysticism is a generalization of psychotherapy.

## Myth

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

The study of myth is an ancient topic that has expanded greatly in the last 200 years. The foci of studies are commonly the following: *literary*,

clarifying texts, translating, and categorizing [Greek myths, Irish myths]; *religious*, labeling other culture's religions as false [pagan, heathen, primitive] while typically preserving the truth-value of one's own religion; *psychological*, exploring the psychological themes expressed in myths [Freudian, Jungian]; *sociological/anthropological/political*, bringing out the ideological symbols of social structures such as class, nation, patriotism, and similar themes in myths [Marxist, capitalist]; or *philosophical*, efforts to determine the truth or reality of mythic accounts, historical or imaginative [Plato, deconstructionists]. Some theories of myth focus on stories accepted as myth; others point to mythic themes in unexpected places. Some combine various methods. The emergence of depth psychology gave a new prominence and new important methodology for interpreting myth and religions.

Many theories of interpreting myths see "*mythos* as inferior to *logos*." But the theory that myth is simply an archaic literary genre or social ideology replaced by modern rational thought has been radically questioned by the development of depth psychology. Its opening to the unconscious soul and intuitive blend with reasoning now lets us see "*mythos* dancing poetically with *logos*." In the psychology of religion, the most fruitful approach to myth depends less on rational, conscious, historical, factual *logos* to establish truth but rather moves in the realm of poetic, metaphoric symbolic language – *mythos*, a different kind of truth that still interacts significantly with *logos*, open to unconscious dynamics. Myth is not a literary museum of a consciousness outdated by rational science, but a living symbolic language of a continuing consciousness important to understand. Oedipus, the cowboy, the king, the prophet, and the astronaut, whether or not they have a historical background, have far broader horizons than any factual basis, guiding the soul through collective unconscious paths of tragic, comic, transforming, saving, and heroic journeys. The mythic narratives of historical figures may be far more significant than the bare factual bones of the biographies, offering guidance for the soul.

Myths still need to be distinguished from factual knowledge, as in propaganda or ideology. Myths cannot provide a reliable basis for deductions about historical facts, such as facts about Santa Claus. Yet, myth is indispensable, for it symbolizes the soul's desires, positive and negative. Myths are living, powerful stories, although sometimes unacknowledged and unconscious, articulating essential meanings (Bailey). Awareness of them can prevent disaster and soothe the soul. The modern turning point came with Freud.

### Sigmund Freud

Sigmund Freud (1856–1939), the Viennese physician turned psychotherapist, made the major leap out of *logos* rationalism and materialism in psychology by showing the reality and symbolic meaningfulness of the unconscious mind for medical treatment by taking seriously its languages, such as dreams, errors, and symptoms. He saw the unconscious mind as largely composed of repressed desires. Freud used some myths in his exploration of the unconscious, notably Oedipus, Narcissus, Moses, Eros, and Thanatos. He elevated the Oedipus complex to be the foundation of most all neurosis, myth, art, religion, and therapy. This gave a new, powerful methodology for interpreting myths as expressions of the unconscious mind.

Freud's elevation of the Oedipus myth was part of the end of the Victorian era but finally was too narrow. He universalized his love for his mother and jealousy of his father into the Oedipus complex, which he found to be basic to his patients' neuroses. This was part of Freud's strong emphasis on the centrality of sexuality as the main dynamic of the psyche. He was widely reviled for this during the closing years of the Victorian era in Europe, which stifled sexuality [in public, anyway], but his work actually contributed to the spreading collapse of strict Victorian sexual customs, along with the development of contraceptives and women's education by the 1920s. Openness to sexuality can lead to openness to the unconscious and its mythic expressions.

Freud's residual nineteenth-century materialism prevented him from allowing non-pathological truths to be seen as true in the mythic expressions of the unconscious mind. Rather, he let conscious reason be the final arbiter of truth, which conflicted with his readings of mythic material. In his 1927 *Future of an Illusion*, he argued that religion is a universal neurosis founded on ignorance and weakness. It is an illusion of wish fulfillment, he envisioned, a consolation for fate, and an effort to exorcize the terrors of nature with faith. God is an infantile neurosis, a dreaded yet trusted mythic figure carried over from infancy that maintains the believers' helplessness. A secular ethics is workable and science has no illusions, since conscious knowledge can purge itself of unconscious errors, Freud fervently believed. Uncovering the powerful unconscious mind, Freud kept it in the realm of the pathological, so neither myth nor religion could be allowed to carry much truth-value. "Religion would thus be the universal obsessional neurosis of humanity; like the obsessional neurosis of children, it arose out of the Oedipus complex, out of the relation to the father" (1927/1961, pp. 70–71).

The follower of Freud who made the most out of certain types of myths was Bruno Bettelheim (1903–1990), who wrote *The Uses of Enchantment: The Meaning and Importance of Fairy Tales* in 1975. He defined myths as stories that are pessimistic and superhuman (such as Oedipus), fables as moralistic and cautionary (such as the Ant and the Grasshopper), and fairy tales as optimistic, taking place in the ordinary world, for children and guides to growing up (such as the Three Little Pigs). His Freudian analysis was tinged with the existential principle that fairy tales help children find hopeful meanings and moral education as they grow up. At their best, fairy tales take children's predicaments seriously and provide confidence that they can be overcome. They relieve unconscious pressures and strengthen the child's growing ego. Such problems include narcissistic disappointments, Oedipal dilemmas, sibling rivalries, gaining independence from parents, and increasing a sense of self-worth and a sense of moral

obligations. Fairy tales help release repressed dark feelings and help overcome fears that they present, such as abandonment. They simplify but do not suppress evil. Bettelheim believes that fairy tales should not be prettified, for that makes them too shallow to solve the real problems that monsters and fearful plots present.

Fairy tales offer valuable heroes for children to identify with in combating fears and strengthening their blossoming egos. Fairy tales should not be misinterpreted as neurotic symptoms, Bettelheim stresses, but be seen as positive guides to growth because they help the child feel understood and offer hope for overcoming anxieties. Nor should they be taken as guides to behavior in the external world; they are symbolic expressions of deep unconscious childhood processes. Religious themes in fairy tales are common, such as references to Islam in *The Thousand and One Nights* (Bettelheim 1975) and the references to God and the Virgin Mary in original Grimm's tales, which are often edited out in modern versions. Unlike moralistic biblical tales, fairy tales allow more expression of dark feelings – monsters, beasts, and big bad wolves – and more psychological solutions than divine interference.

## Carl Jung

Carl Jung (1875–1961) was the Swiss psychologist who provided the strongest theory of myth for understanding religion positively. His major theoretical foundation is the archetype: innumerable unconscious, collective, psychological patterns or instincts, positive and negative. An archetype is an invisible [inaccessible in itself] pattern that appears in numerous images. They appear worldwide in myths and dreams, shaped by local cultures.

Unlike Freud, Jung does not see the unconscious as primarily repressed desires but as far more complex archetypal patterns. Myth functions to reveal the unconscious to consciousness and to guide the conscious ego's relation to it by showing its typical patterns. Myth is neither

indispensable nor sufficient for the psyche. The unconscious must cooperate with the conscious ego's guidance also. Unlike many Eastern religions, the ego is not meant to dissolve into the unconscious. While uncovering valuable mythic guides, psychotherapy can provide more functions, such as seeing the symbolism of dreams, symptoms, or myths and integrating these meanings into life.

Jung focuses on the archetypal images of the ego/hero (such as Odysseus), the shadow (such as the Devil), the anima/animus contrasexual lover images in each person (such as Tristan and Iseult), the child (such as Cinderella), the trickster (such as Hermes), the wise old man or woman (such as Merlin), the dual mother (wicked stepmother), and the Self (such as God). The Self is the central guiding, healing archetype for Jung, perhaps the center of the mandala image, that regulates and balances the dynamics of the numerous archetypal patterns that emerge in the psyche. The challenge of psychotherapeutic healing is to identify one's influencing archetypes, become aware of their dynamics and influences on feeling and behavior, help the ego and Self control shadows, and strengthen the positive aspects.

An important part of Jung's archetypal theory is that each archetype has a shadow. Even the Self, paradigm of divinity, has a shadow in doubts, demon figures, and limits to divine power in the world. Jung pioneered the elaboration of the introvert/extravert pattern in his theory of psychological types, and this pattern was widely adopted. The extreme introvert is shy, quiet, socially inept, inward, intuitive, and isolated. The extreme extravert is socially adept, outspoken, concerned with what others think of him/her, often a performer anxious for approval, or a conformist. One-sided people may see the other side as a shadow figure to be fought in outward life. However, the ideal is to balance the two in one's life, so the advantages of each side of the continuum are available to consciousness.

Jung and Freud became close collaborators between 1907 and 1913. Freud hoped that the younger Jung would become his successor, but

Jung developed key disagreements with Freud. His theory of archetypes saw myths as more important collective symbols of many archetypes, as opposed to Freud's central Oedipal theory. He also rejected Freud's emphasis on sexuality as the major psychological dynamic and came to regard religion far more positively as psychological events than Freud, who dismissed it as illusory. Nor did Jung accept Freud's causal-reductive method by which he reduced unconscious images to his theoretical framework, mainly the Oedipal drama. Rather, Jung saw a purposeful dynamic in each archetypal pattern [especially the Self], a teleology of sorts that could point the ego in healing directions, even a transcendent quest for the divine.

The divine Jung sees not just in narrow biblical terms but also as a global phenomenon that appears in endless symbols in dreams, literature, art, and myth. He stresses that he speaks as a psychologist describing a psychological phenomenon, not a metaphysical one, which he said he leaves to the theologians. This wide variety of images of the divine is an important theme for Jung's impact on culture, because it throws open the door to seeing the divine symbolized in many ways – from non-anthropomorphic stones, waterfalls, and cosmic phenomena to anthropomorphic prophets and gurus. This supports the field of comparative and phenomenological studies of religions worldwide as well as the growing feminist quest to positively reevaluate the goddesses.

Jung's view of the collective archetypal unconscious explains the arising of mythic themes around the world without recourse to the theory of diffusion from an original source. Although some myths can be traced along a trail of diffusion [such as Cinderella coming from China to Europe], other themes such as virgin births in the Americas can be explained as archetypal images emerging completely independent of parallel themes on other continents [such as the Aztec virgin birth story].

Jung's view of religion is rooted in his Swiss Protestant emphasis not on formal and textual doctrines, but on personal experiences of the

divine. He was frustrated with the lack of this authentic religious experience and came to see psychotherapy as a way out of superficial, even infantile dogmatism, into a genuine experience and deep understanding of divinity in its many expressions. The psyche, Jung stresses, has a natural religious function, an ability to experience the sacred or numinous. Myth can be seen as symbolic expressions of archetypal powers, real as such, and thus authentic, so changing religion need rely less on historical facts than on informed archetypal experiences. The hero, the savior, the father, mother, guru, etc. are active collectively and "within" – not merely historical figures of the past or of metaphysical constructs. This does not make Jungian "analytical" or "archetypal" therapy a religion, but it is more open to the reality of spiritual experiences. Against Freud, Jung argued that it is not the presence of religious images in the psyche, but their absence and lack of conscious respect for them that lead to neurosis.

As Jung's thought developed, he came to see divinity as a union of opposites, a totality of good and evil, masculine and feminine, and spirit and body, that he had discovered in his clinical and comparative cultural research, pictured in images of the Self. In his important lectures on "Psychology and Religion" in 1937 (1953–1979, Vol. 11), Jung clarified that we cannot know metaphysical entities such as God in themselves. We can only know the psychic images of them that we experience. "Withdrawing projections" from enemies, lovers, or priests also helps uncover deeper truths about one's experience of divinity. The goal of therapy is not perfection or salvation, but completeness, finding the most refined way of integrating unions of opposites, often symbolized by mandalas. This is all essential in a time when industrial society has challenged and weakened the traditional authority of conventional religions.

After 1938, Jung also studied Eastern religions and traveled to India. One theme that emerged from this period was Jung's view that Christ is an inadequate image of divinity because he is one-sidedly good, masculine, and spiritual. A more adequate image would include evil, the

feminine, and the body (1953–1979, Vol. 9, Pt. 2). For him evil is real, and not just Augustine's *privatio boni*, or lack of goodness. Jung saw this also in his *Answer to Job* (1953–1979, Vol. 11, pp. 553–758). Christ's incarnation did not solve the problem of one-sidedness, and Jung explores figures such as Sophia then proposes that Mary complete God's image by becoming the fourth member of the incomplete Trinity, to add femininity and body to God's masculinity and spirituality (1953–1979, Vol. 11, pp. 122–127).

Death is a major concern to the soul. In view of his near-death experience in 1944, Jung concluded that a healthy psyche should decide whether one is related to something infinite or not. We can never know for sure, but such belief can provide essential comfort and peace. Clues from the unconscious, such as dreams, can help. Jung 1961, Chapter X "Visions," and Chapter XI "On Life after Death". Mere mortals may err by falling into one of two camps: by reifying parochial beliefs [such as patriarchy or our version of God] into metaphysical universals or "archetypes," or, at another extreme, rationalistic scientism's omniscient claim to be the only valid method of knowledge.

In the late twentieth century, the major overlapping schools of Jungian psychotherapy emerged: the Classical, the Archetypal, and the Developmental (Samuels).

Jung's fertile thought on religion and myth has continued and is being expanded by numerous successors such as Aniela Jaffé (Jung's biography), Marie-Louise von Franz (folktales), Edward Edinger (the ego-Self axis), Victor White (Jung and religion), Sylvia Brinton Perera (the scapegoat, gods and goddesses), Edward Whitmont (symbolic quest), (Jean Bolen (Greek goddesses), John Dourley, Ann Ulanov (Jung and Christianity), James Hillman (many radical revisions), David L. Miller (polytheism), Thomas Moore (soul and re-enchantment), Clarissa Pinkola Estés, (*Women Who Run With the Wolves*), and Joseph Campbell (*Hero with a Thousand Faces*). Jung's archetypal theory has made its way into numerous approaches to myth and religion, whether acknowledged or not.

## Myths and Dreams

Lee W. Bailey  
 Department of Philosophy and Religion,  
 Ithaca College, Ithaca, NY, USA

### The Common Well

Dreams and myths have striking parallels. They are different, of course, in that dreams are personal and raw products of the unconscious. Myths, on the other hand, may have dream backgrounds, but are the product of sometimes elaborate artistic narrative shaping by consciousness. They develop variants and historical associations with collectives, such as religious texts, rituals, literature, or national legends with political purposes, such as the national hero or goddess. But dreams and myths are both rooted in unconscious depths, the well of the soul, and thus have parallels. Carl Jung made the strongest connection between them. Jungian analyst Marie von Franz saw fairy tales as in-between – less influenced by cultural elaboration than myths, thus closer to their unconscious source: “Fairy tales are the purest and simplest expression of collective and unconscious psychic processes” (von Franz 1970, p. 40). Many later Jungians, such as Andrew Samuels and Jean Shinola Bolen, have emphasized that mythic images are not just a list of images to be checked off from a mental distance but are pervasive themes in everyday life. James Hillman

emphasizes that soul is also in the world, anthropomorphized and personified, and mythic images can help us descend into these depths. It is blindness to identify completely with images in dreams, fairy tales, or myths but, conversely, over-intellectualizing not to feel them at all. Keeping the dreaminess in myths helps prevent over-systematizing and rationalizing them.

The modern connection between myth and dream was articulated by Sigmund Freud, who saw myths as dreamlike events. He saw them as distorted wish fulfillments of whole nations rooted in the unconscious. Otto Rank and Karl Abraham said the same. These Freudians saw an infantile element in myths. Abraham said: “The myth is therefore a fragment preserved from the infantile psychic life of the race, and dreams are the myths of the individual” (Abraham 1913, p. 36, 72). It is useful to contrast the personal and the mythic amplifications of a dream, but not by labeling them “subjective” and “objective.” These labels place the process in the scientific metaphysics that overall strives to deny the meaningfulness of dreams.

Carl Jung also saw the myth-dream connection rooted in the unconscious: “myths are dreamlike structures” (Jung 1953–1979, Vol. 5, para. 28). But Jung rejected the Freudian emphasis on wish fulfillment and the infantile nature of myths. He saw myths as the most mature product of early humanity and a continuing important expression of civilization’s collective unconscious (Jung 1953–1979, Vol. 5, para. 28–29). Jungian analysts methodically use myths to amplify clients’ dreams, bringing out unsuspected unconscious meanings. Myths echo individual dreams, both emerging from the collective unconscious. Joseph Campbell put it in a nutshell: “Dream is the personalized myth, myth the depersonalized dream” (1949, p. 19).

### A Prom Night Dream

An example of this correlation, which Jung would call a “big” dream, is a college student’s dream reported to me that echoes the mythic text of an ancient goddess.

In 1980, this girl wrote that she dreamed that when she was getting ready for her high school prom dance, she grew curious about her home's basement. She crept down the stairs and came to a door at first hard to open, but she pushed again and it flew open into a dark room. She fell inside and caught her shawl on a nail. Curious, she left behind the shawl and entered another dark room. She saw another door that was also stuck at first but soon opened easily. She tripped and lost a shoe, which she left behind. She saw a third door, which was already open. She walked through it and removed her second shoe. Everything was dark and dirty. She found a fourth door, at first locked, but when she pushed again, it also opened. Suddenly a gold necklace she was wearing fell down from her neck and she left it, planning to pick it up on her way back. She looked around and found a fifth door, dirty and slimy. She decided to wipe off the door-knob with her dress, and then she took off the now dirty dress. She then spied a sixth door in the dark room that was slightly ajar. She passed through it but caught her panties on a nail, and they ripped and fell off. She was naked and slowly lifted her head; she was horrified.

She saw heaps of dead and decaying animals, covered with mud and dust. An old decrepit man was sitting atop of a pile. But it could have been a male/female figure. The door slammed shut, and she was trapped, frightened, and naked in this dark, smelly, hellish place. She was stuck there for what seemed forever, though it was actually a few months. She ate the dust and mud just as the old woman/man did.

Back home upstairs, everyone became sick. Her father wondered what had happened to her and recalled her interest in the basement, so he went down the same stairs and followed her trail of dropped clothing through the six doors. As he entered the last door, he too was horrified, for his daughter had become just as decrepit as the old woman/man, in this hellish place. Her father fought with the androgynous beast as he tried to reach her, and he finally won. He put his arms around her and took her back through the six doors. She collected her clothes and dressed. They slowly mounted the stairs, and as they reached the top, she suddenly became radiant and everything became well.

## The Ishtar Myth

Struck by the parallels, I showed this dreamer the text of "Descent of Ishtar to the Nether World" in James Pritchard's classic *The Ancient Near East* (Pritchard 1958, Vol. 1, pp. 80–85). She said that she had never heard this story. Indeed it was an

obscure scholarly text at the time. She agreed with my suggestion that her dream, which on the surface had nothing to do with her personal experiences, was obviously connected with the ancient religious myth. She gave me permission to publish it. Over 20 years later, I found her online and asked her if she recalled the dream. She did not but told me that she had become a successful business woman, married, and a mother, but was not interested in exploring much further personal information.

I described the correlation to a noted Jungian analyst, Sylvia Brinton Perera, author of *Descent to the Goddess: A Way of Initiation for Women*, which analyzes in detail the Inanna-Ishtar myth. She replied that the dream-myth parallel frequently appears for Jungian analysts. In analysis, she added, of course much more personal information would also be explored. Also in therapy, the ego-consciousness may well need to stand back and make discriminations and judgments about both dreams and myths. Both may have shadowy beasts or seductive lovers, for example, projected onto real-world figures that need to be reinterpreted or disconnected.

Pritchard's text has subsequently been amplified in later scholarship by others, notably Samuel Kramer and Diane Wolkstein. This literature reveals fascinating connections with the dream. The Akkadian goddess Ishtar is closely related to the Sumerian Inanna, both early cultures that emerged into Babylonia, now Iraq. Pritchard's text, translated from ancient clay tablets, can be summarized:

Ishtar, queen of life, set her mind to go down to the dark underworld abode of Irkalla, the realm of her sister Ereshkigal, queen of the dead. Hers is the dreadful dark realm from which no one returns, "Where dust is their fare and clay their food . . . (And where) over door and bolt is spread dust" (lines 8–11). When Ishtar reached the front gate of the Land of no Return, she imperiously demanded that the gatekeeper open the gate, threatening to smash the gate and raise the dead. The humble gatekeeper ran off to his queen announcing Ishtar's arrival. Ereshkigal angrily, cruelly replied, "What drove her heart to me? . . . Should I bemoan the maidens who were

wrenched from the laps of their lovers? Or should I bemoan the tender little one who was sent off before his time? Go, gatekeeper, open the gate for her, Treat her in accordance with the ancient rules” (lines 31–38).

The gatekeeper welcomed her to enter, but at each of seven gates, he stripped away one of her royal garments: her great crown, her earrings, her necklaces, her breast ornaments, her birthstone belt, her wrist and ankle ornaments, and finally her dress. At each gate she ritually asked: “Why, O gatekeeper, didst thou take the great crown on my head?” To which the gatekeeper replied: “Enter, my lady, thus are the rules of the Mistress of the Nether World” (lines 42–66).

The goddesses of life finally stood before the goddess of death and angrily flew at her. But Ereshkigal responded by giving orders to release the forces of death against her: “Go, Namtar, lock [her] up [in] my [palace]! Release against her, [against] Ishtar, the sixty mis[eries]” (lines 64–69). When this happened, the energies of reproduction in the world above ceased: “The bull springs not upon the cow, [the ass impregnates not the jenny], In the street [the man impregnates not] the maiden” (lines 71–81). Then the advisor to the great god Ea goes to him and bemoans the lack of the life-force on earth, repeating ritually the above impregnation chorus. Ea responded by sending a eunuch to journey to the underworld, who somehow manipulated Ereshkigal into sprinkling the water of life on Ishtar. The queen then returns above, passing through the same seven gates, and at each one her discarded royal clothes and ornaments are ritually returned to her by the gatekeeper for her to wear.

The text ends with obscure hints. Ereshkigal apparently says: “If she does not give thee the ransom price, bring her back” (line 51), and . . . “On the day when Tammuz (lover of Ishtar) comes up to me, When with him the lapis flute (and) the carnelian ring up to me, When with him the wailing men and the wailing women come up to me, May the reed rise and smell the incense” (lines 61–66) (Pritchard 1958, pp. 80–85).

While the Sumerian and Babylonian versions are very similar, there are important differences between them. In one version, Inanna is hanged

on a hook on the wall, like a piece of meat (Wolkstein and Kramer 1983, p. 60). But these differences have little effect on the thematic similarities with the contemporary dream, which sounds more like the Babylonian Ishtar’s myth.

The more recent work of Kramer and Wolkstein, collecting and assembling tablet fragments, has added new versions and details to the myth. Inanna’s text comes from the older Sumerian culture, dating as far back as about 4000 BCE. The Sumerians apparently invented cuneiform writing and built the first ziggurats. The majority of the fragments of Inanna’s ancient Sumerian tale were first unearthed in the ruins of the city of Nippur, Sumer’s spiritual and cultural center, by a University of Pennsylvania archaeological dig in 1889 and 1890. The Babylonians began invading Mesopotamia with their Semitic language about 2000 BCE and absorbed much of the earlier Sumerian and Akkadian language and mythology. So the latter Babylonian Ishtar’s story is not surprisingly similar to the earlier Sumerian Inanna’s. For example, on Inanna’s way back to the earthly realm, the Anunna, the judges of the underworld, seized her. They said: “No one ascends from the underworld so unmarked. If Inanna wishes to return from the underworld, she must provide someone in her place.” They sent merciless demons above that passed by those on earth who humbled themselves, but they took Dumuzi, Inanna’s husband, who had too proudly usurped the throne. He escaped the demons for a while by turning into a serpent or a gazelle but ended up in the underworld of the dead (Wolkstein and Kramer 1983, pp. 52–73).

The layers of symbolism are many, as Perera shows, but the themes, some in remarkable detail, paralleled in the modern girl’s dream are evident: A woman descends to a dark, unconscious underworld, where “over door and bolt is spread dust.” She passes through six or seven doors, and at each door an item of clothing or jewelry is removed, until she stands, naked as she was born, before a scene of death and a powerful ruling figure. She is held captive among the dead, “Where dust is their fare and clay their food.”

While she is captive in the land of the dead, life is interrupted above. She is finally rescued by a person from above who wrestles with the master of the dead and succeeds in leading her out of that hell. As they return through each doorway, she regains her clothing, images of her identity. The myth has far more collective and religious themes – the queens of life and death, love and grief, the royal clothing and ornaments, the rescuer sent by a god, the obscure ending hinting at the need for a ransom for her return, and a general resurrection.

The dream is more personal and modern, centered on a teenaged girl, on the eve of her ritual prom dance, signifying passage into adulthood, encountering the dark mysteries of the collective unconscious, nakedness, and fertility, where passionate love helps overcome horrifying death, and comforting family – her rescue by her personal father. Freud would stress the Oedipal father-daughter erotic overtones, and Jung the archetypal collective life-death struggle, androgyny, and initiation. The myth is more collective, ritualized, and religious, with feminine images of life and death and their struggle. The seven gates image may be rooted in the seven stars visible to the unaided eye, seen as gates of a cosmic journey through the ancient cosmological image of seven heavenly spheres below the dislike earth. The theme of a ransom echoes later in the theology of Jesus as an atoning sacrifice demanded by a god, and the resurrection expresses the general return from the dead in Western traditions of dying and rising gods. These parallel images arise in both this contemporary personal dream and the 4,000-year-old ritualized, religious myth, indicating the ancient dream-myth connection and the modern mind's astonishing well of

archaic images, bursting up with sparkling, age-old, deep, mysteriously meaningful images, as fearful as death, as beautiful as love.

## Narcissism

Ann Gleig

Department of Philosophy, University of Central Florida, Orlando, FL, USA

Narcissism played a key role in the development of psychoanalysis and has been pivotal to contemporary revisionings of psychoanalytic theory and technique. Freud discussed narcissism in a number of texts including *Leonardo da Vinci and a Memory of His Childhood* (1910–1975), *On Narcissism: An Introduction* (1914–1975a), *Three Essays on Sexuality* (1915–1975b), and *The Ego and the Id* (1923–1960), yet his writings are inconsistent and have been subject to different interpretations. There are disputes on the exact relationship between primary narcissism and autoeroticism; on whether the state of primary narcissism is free of object relations or contains primitive object relations; and on whether primary narcissism is experienced as a prenatal state, by the infant at the breast, or both.

In his first systematic discussion of narcissism, Freud (1905–1975a) distinguishes between primary narcissism and secondary or pathological narcissism. Defining primary narcissism as “the libidinal complement to the egoism of the instinct of self-preservation” (1915, pp. 73–74), Freud states it is a normal developmental state during which the infant takes its own ego as a libidinal object, thereby experiencing the self as perfect and omnipotent. During this stage the

infant does not differentiate between self and object but with the emerging experience of, and attachment to, the primary caretaker, usually the mother, libido is transformed and redirected from the pleasurable and self-sufficient narcissistic stage to the need-satisfying object. Freud called this outward directed libido “object libido” and claimed that there was an inverse relationship between object libido and inwardly invested “ego libido.”

The departure from primary narcissism leaves the individual with a desire to recover narcissistic perfection. One way this is recovered is through the cathexis of an ideal ego – an idealized projected image of the self formed from the internalized demands and restrictions of authoritative figures (a concept which later develops into the superego) – which replaces the actual ego as the object of primary narcissism. Other attempts at recovery include a narcissistic object choice in which the object resembles the subject’s idealized self-image as opposed to the anaclitic object choice in which the object resembles the primary caretaker.

Like object libido, narcissistic libido can suffer from fixation and become pathological. Freud observed that in a variety of traumatic situations – including organic diseases such as schizophrenia – object libido is withdrawn from objects and reinvested in the ego. This renewal of libidinal investment in the ego is “secondary or pathological narcissism,” a regressive state experienced as a grandiosity and omnipotence of the self.

The concept of secondary narcissism has been utilized to interpret a range of religious phenomena including animism, magic, psychologized spirituality, and mysticism. In *Totem and Taboo* (1913–1950), Freud discusses narcissism in relation to omnipotence, claiming that primitives who believed that external events occurred because of the magical power of their own thought processes were suffering from pathological narcissism. More influentially, in *Civilization and its Discontents* (1930–1975), Freud explained the “oceanic feeling” of unity experienced in mysticism as the preservation of and return to the stage of primary narcissism in which boundaries between self and other are undifferentiated. This established the classic reductive psychoanalytic view of mysticism as narcissistic, regressive, and pathological as illustrated by early studies such as Morel’s *Essai Sur l’Introversion Mystique* (1918) and Theodore Schroeder’s *Prenatal Psychisms and Mystical Pantheism* (1922) and the more recent work of Jeffrey Masson (1974, 1980).

The use of narcissism to explain certain types of religion is also found in the work of the Norwegian brothers Harald and Kristian Schjelderup (1932). On the basis of both contemporary and historical evidence, they identify three main types of religious experience: father religion, mother religion, and self-religion, each of which corresponds to a different stage of childhood development. Self-religion, such as Zen Buddhism and yoga, is marked by a quest for and fantasies of self-deification which is a result of narcissistic withdrawal of libido from external objects and a regression to infantile self-grandiosity.

The Schjelderup’s analysis anticipates psychoanalytic readings of contemporary forms of self-spirituality, such as the New Age and the human potential movement, which have also been interpreted as narcissistic. M. D. Faber (1996) argues that New Age thinking is a regression to primary narcissism in which the adult is returned to an infantile state of omnipotence, magical wish fulfillment, and merger with the mother. While Christopher Lasch’s influential *The Culture of Narcissism* (1979) explains the

rise of the new psychospiritual therapies and their quest for self-realization as being both a product and perpetuation of a narcissistic personality structure, that because of recent sociocultural changes has become the predominant psychopathology of contemporary life. To counter this narcissism, Lasch suggests a return to and renewal of Christian commitment and ethics. However, this assumes Christianity is immune from narcissism, an assumption undermined by Paul Pruyser’s (1978) targeting of the narcissistic strands within evangelical Christianity. He claims the evagelical practices of witnessing and testifying are often beset by “reflective narcissism” the need to have one’s own self-love mirrored back in the affirmation and admiration of others. However, unlike self-spirituality, Pruyser argues that Christianity contains abundant resources to counter such narcissistic trends. For example, the story of Paradise in the book of Genesis rejects the desire to become omnipotent and omniscient like God – which Pruyser interprets as a mythic expression of primary narcissism – as the root of original sin.

Interpretations of religious phenomena, therefore, that utilize Freud’s understanding of narcissism are unremittingly negative, focusing on its regressive, defensive, and grandiose nature. However, Heinz Kohut’s (1971, 1977) highly influential psychoanalytic revisioning of narcissism has opened up a much more positive dialog between narcissism and religion. Kohut believed that the pejorative classical Freudian evaluation of narcissism which cast it in an inverse relationship to object love reflected an intrusion of Western altruistic cultural values into psychoanalysis. While accepting Freud’s stage of primary narcissism, Kohut claimed that narcissism followed its own developmental line in which the two primary archaic configurations of narcissism – the grandiose self and the idealized parent imago – had the potential to transform, respectively, into a cohesive sense of self with healthy self-esteem and a set of mature goals, values, and ideals. Crucial to this transformation was the ability of the primary caretakers to act as self-objects. Kohut coined the term self-object to describe how an infant’s

earliest experience of the other is not as a separate object but as part of oneself. Parents are the earliest self-objects, and they perform crucial psychological functions which the child's own psychic structure will later transmute into internal structures. However, if caretakers fail to respond empathetically to the child's experience, or if the child is subject to premature or traumatic separation, the integration of archaic narcissism is disturbed and the repressed strands emerge unresolved in later life, in a clinical condition designated as the narcissistic personality disorder. This is characterized by states of emptiness and despair, feelings of unreality, excessive self-consciousness, oscillation between experiences of inferiority and grandiosity, an intense desire to merge with an idealized other, uncontrollable rage, and an absence of empathy.

Unlike Freud, however, Kohut believed that narcissistic disturbances could be rectified through the establishment of empathetic communication in the analytic relationship which enabled the working through of traumatic failures of early self-objects and a more conscious negotiation of legitimate narcissistic needs. Kohut claimed that a mature ego had the capacity to tame and employ narcissistic cathexes for its highest developmental aims, namely, creativity, empathy, contemplation of one's own impermanence, a sense of humor, and wisdom.

Moreover, Kohut saw mysticism as engaging the developmental line of narcissism and affecting a transformation of the narcissistic elements of one's personality into the higher religio-ethical goal of what he termed, "cosmic narcissism." This is the transformation of narcissism into a type of mature, state-like mysticism in which the subject participates in a supraindividual and timeless existence. Although rooted in the mother-child symbiosis, this differs from the transient oceanic feeling of unitive mysticism which Kohut reads as the preservation of the early mother-child unity. Neither transient nor unitive, cosmic narcissism is an ethical and existential developmental achievement of an autonomous ego. Kohut hoped that the transformation of narcissism into cosmic narcissism would signal

the emergence of a new unchurched tradition of mystical rationality which would replace traditional religions and rejuvenate the West (Parsons, 1999).

Following Kohut, Peter Homans (1979) has claimed that unchurched psychologized religiosity, such as that of Carl Jung, displays an authentic engagement with narcissism. Homans argues that due to secularization traditional religion lost its ability to organize personal and social life, and this has resulted in the emergence of a diffused and heightened form of self-consciousness in which legitimate narcissistic needs are now satisfied primarily in the context of personal and psychological experience. Hence, while psychologized spirituality, with its themes of unity, wholeness, self-actualization, and individuation, is indeed reflective of the contemporary emergence of narcissistic disorders, it is also an authentic attempt to maturely heal and transform them.

The German theologian Hans-Günter Heimbrock (1977) has applied Kohut's revisioning of narcissism to Christianity, claiming that the biblical image of God has advanced along the very lines laid down by Kohut's analysis of transformed narcissism. Heimbrock reads the omnipotent and moralistic God of the Hebrew Bible as an example of archaic narcissism and self-grandiosity. However, through Jesus' crucifixion and suffering, the New Testament God renounces self-grandiosity and frees the individual from the need to shore up the weak self through an omnipotent self-ideal. The suffering of God enables a person to empathize with the suffering of others and to accept one's own finitude both of which represent a mature and creative transformation of narcissism.

Other writers have drawn on Kohut's concept of the self-object to interpret and legitimate religious phenomena. Robert Fuller (1989) claims that New Age healers act as mature self-object for clients, and analyst Sudhir Kakar (1991) has argued that the Indian guru is the primary cultural self-object experience for adults in Hindu tradition and society. Such work demonstrates that narcissism in both classical

and contemporary psychoanalytic theoretical formations continues to play an important role in the psychological interpretation of and dialog with religion.

## Narrative Therapy

Thomas St. James O'Connor  
Waterloo Lutheran Seminary, Waterloo,  
ON, Canada

## Introduction and Assumptions

Narrative therapy is more of an approach than a defined theory (O'Connor et al. 1997). This approach works from the premise that each person's life is a series of stories on many levels similar to a novel with many chapters. Stories are used to make meaning of a situation and to make sense of one's life. Some of these stories and chapters are given to the person by family, context, culture, religion, gender, etc. One of the key aspects of narrative is to re-author one's own story so that one is not living a story that does not fit with one's identity. In narrative therapy, a person and/or family seeks therapy when there is a problem that cannot be fixed. In fact, there is a story around a problem that oppresses the family. This story about the problem also fits into the larger stories about oneself.

In terms of its philosophical underpinnings, narrative therapy is a postmodern approach (White and Epston 1990; White 2007). Stories are socially constructed and are not objective truth. They are interpretations of experience and narrative is a hermeneutical project. This hermeneutical understanding challenges the notion of objective truth and diagnosis based on norms. In this postmodern view, the categories of the DSM IV are viewed as social constructions and not as objective truth.

The most prominent writer in narrative therapy is Michael White, an Australian therapist who with David Epston wrote *Narrative Means to Therapeutic Ends* in 1990. Other names associated with narrative are Thomm (1989), Freedman and Combs (1996), and Andersen and Goolishian (1988). In the field of theology and spirituality, Charles Gerkin (1982) and Thomas St. James O'Connor (1998, 1999; Bloos and O'Connor 2002) have also made contributions using a narrative perspective in theology and spirituality. Since the early 1990s, Michael White's work has grown in popularity in the field of family therapy.

### Michael White and Key Ideas

In examining the work of Michael White, a number of points stand out. White uses the philosophy of Michel Foucault and the anthropology of Jerome Bruner and Gregory Bateson in developing his view of narrative therapy (White and Epston 1990; White 2007). Drawing on Foucault, White believes that knowledge is power and within society there are dominant narratives that privilege certain groups and oppress others. The notion of the dominant narrative is a key idea. In therapy, there is a problem that has developed an oppressive narrative and dominates the thinking of the individual and family. In the midst of this narrative, there is an alternative narrative that has moments when the family and/or individual has overcome the problem. These are called unique outcomes. However, the power of the dominant narrative of the problem is so strong that it often robs the person of memory

of the alternative narrative. The work of narrative therapy is to facilitate the client in uncovering these unique outcomes and developing them into an alternative narrative.

Another key idea is separating the problem from the person. White believes that the person is not the problem; the problem is the problem. Narrative therapy externalizes the problem and takes it out of the person and moves it into the external world. This is done through the use of language. Narrative therapy uses active verbs and not being verbs. Instead of saying the client is depressed, the narrative therapist might say that "depression pushes against John or oppresses John at times or jumps all over Mary or kidnaps Mary." This externalization of the problem, i.e., putting the problem on the outside, separates the person from the problem and moves it from the intrapsychic to the interpersonal. This separation of the problem from the person using active verbs is known as an externalizing conversation. The narrative therapist also seeks to map the influence of the problem on the individual and family. When did depression start pushing against John?

Another key idea is widening the audience for change. White (2007) also describes this as developing witnesses. Narrative therapy seeks to include other people in helping the person re-story the problem. These witnesses often include a team observing the session with the client behind a one-way mirror. This group is called the reflecting team. Reflecting teams offer reflections to the clients on the problem as well as commenting on family members and friends or anyone significantly involved in the story of the problem. This audience is meant to be supportive and to work with the client in reducing the problem. The audience for change or witnesses emphasizes team work which is very important to help make the change. Narrative therapy seeks to develop a team of people (audience or witness) who work together against the problem and not against the client. The client is a main person on the team.

Another aspect of narrative therapy that stands out is the facilitation of personal agency. Some of the research clearly indicates that narrative therapy is very helpful in reducing the presenting problem. Personal agency is facilitated by the

therapist working with the client(s) in developing an understanding of the problem and its effects on the persons involved, drawing on key metaphors of the problem that can be developed into an externalizing conversation and searching for unique outcomes to the problem that are developed into an alternative narrative. Crucial to facilitating personal agency is the involvement of the client. The therapist does not work out of an expert position with special knowledge but rather views the client as the expert on the experience of the problem with a belief that the client already has resources to help with the problem. Here, the therapist works from a position of not knowing and curiosity and follows the maps of the client.

Narrative therapy as constructed by White and Epston (1990) also uses letters and certificates. These are sent or given to clients. The letters most often underline the client's strengths and pose some wonderings about possible directions and are sent by the therapist after a session or sessions. Similar to solution-focused therapy, narrative therapy emphasizes the strengths of the client especially in dealing with challenging problems. It uses scaling questions that put the problem or its effects on a scale of 1–10. The scale is meant to gauge the progress of clients in dealing with their problems. Certificates are used to celebrate the growth of clients. For example, a child who has progressed in terms of management of angry outbursts could be given a certificate celebrating that he/she is now a "temper buster."

## Research on Narrative

The research on narrative therapy is at the beginning. Published research involves qualitative and case studies. O'Connor et al. (1997) found that in a qualitative study of eight clients, narrative therapy significantly reduced the presenting problem. Smith et al. (1992) and Sells et al. (1994) using qualitative research found reflecting teams used in narrative therapy for the most part to be effective. Coulehan, Freilander, and Heatherington (1998) used grounded theory in interviewing

eight clients of Carlos Sluzki who is a narrative therapist about how they changed their views of the problem construction. Results were mixed. Four clients thought that they could see the problem in a more helpful way and four did not. O'Connor et al. (2004) examined therapists' experiences of using narrative therapy utilizing an ethnographic research design. This research indicated that therapists found narrative therapy helpful in reducing the presenting problem and also reported some limitations of narrative therapy. There have been a few qualitative studies of children and narrative therapy (Focht and Beardslee 1996; Lerner 1996; Weston et al. 1998). All of these qualitative studies found narrative therapy helpful to children. In the area of teaching, Morrison et al. (1997) found in a qualitative study that students reported positive learning in narrative therapy.

Case studies on narrative include Kogan and Gale (1997) who did a study of a videotape of Michael White with a client. They examined how White managed talk in the session and used the metaphor of "de-centering." Kahle and Robbins describe a case study of a family where success over the problem is externalized. Michael White has provided numerous case studies outlining the effectiveness of narrative therapy with a wide range of clients.

Little has been written on spirituality and narrative therapy. However, narrative therapy has many commonalities with Judeo-Christian spiritualities. O'Connor (1999) notes the similarities and differences between Dante's *Purgatorio* and narrative therapy. O'Connor argues that Dante's notion of the cure of souls that takes place through climbing mount Purgatory has many similarities in narrative therapy. In particular, the externalizing conversation, the separation of the problem from the person, and the development of personal agency based on strengths are similar to sin as object and the work of grace. Bloos and O'Connor (2002) also examine the use of the labyrinth as a spiritual experience that has similarities to the experience of narrative therapy.

Charles Gerkin (1982) describes a narrative hermeneutical theory of practical theology.

Gerkin's understanding of narrative has many similarities to White's notions as well as difference. For Gerkin, theology is described in many narratives. Working from a Christian standpoint, Gerkin believes that the Christian narrative of creation, sin, and redemption is what gives Christians a sense of identity and is the lens through which one interprets and makes meaning of experience. Gerkin believes in this meta-narrative and argues that identity is rooted in the meta-narratives. Certainly, there are many narratives in one's life. Like White, Gerkin believes that there are a multitude of chapters in our stories. Gerkin's narrative hermeneutical theory of practical theology can be divided into four elements (O'Connor 1998): (1) rooted in the Christian heritage, (2) uses a multidisciplinary approach, (3) based in practical theology and the practices of ministry, (4) and uses the hermeneutical and narrative theory of Paul Ricoeur and Hans-Georg Gadamer.

## Native American Messianism

Meredith Lisagor  
New York, NY, USA

The envisioning of a radical change in world order through the leadership of a divinely-informed prophet or actual messiah is a response to similar spiritual and psychosocial

stressors wherever it is found – across cultures, and from primal to postindustrialized societies. The empirical needs that occasion a collective readiness to receive divine intervention usually relate to the intensity of exploitation a society perceives itself to have suffered from a hegemonic alien culture. And the anticipation of a messianic figure is most usually phenomenal of a general movement to revitalize the oppressed society, which may seek to restore its integrity and sense of autonomy by the following: comprehensively rejecting the alien culture while reviving or recalibrating traditional institutions, practices, and values; or incorporating elements of the oppressive alien culture into a new foundational vision.

The literature, ethnographic and anthropological, points to revitalization impulses in the way of apocalyptic expectations at work in many quarters of the Americas well before encounters with white culture. And of prophet-led movements among indigenous Americans, it has been suggested that nascent messianic impulses in the visionary programs of communities already in crisis may have been ripe for taking a decisive shape and energy from first contact with Christian Europeans, while owing nothing to Christian theology.

Because of the rapid growth and domination of Christian European culture in the Americas after the late fifteenth century, there has, indeed, been debate about the likelihood of messianism in some Northern Native American enclaves being unique and organic. However, cases of messianic movements in Central and South America that clearly predate native first contact with Christianity (e.g., Tupinamba migrations of Brazil searching for the “Land of Immortality and Perpetual Rest”) support arguments in favor of Northern American instances independent of European influences. Of religious and psychological importance is that even where elements of Christianity are identified in an otherwise nativistic movement, selective recourse to the person of a messiah by primal Americans (to someone who straddles the gap between time and eternity, who corrects severe psychosocial imbalance in the subjective field of history) supports the

universality of a human capacity to envision engagement with transcendent reality and its association to a concept of absolute justice.

Messiahs and messianic solutions to oppression can be seen as a natural outgrowth of the prophetic and shamanic domains of tribal structure. Even where the prophet who launched a given movement is not ascribed personal divinity, there seems to be a template for the process by which he arrived at his charismatic influence and the strategy that promised to liberate his people: He received a vision of high detail about why misfortune had befallen his people and what they must do to restore social equilibrium. Often the prophet or shaman was beset by a near-death illness (likely, a somatization of the collective plight) before this presentment, and emerged physically and spiritually revitalized himself. He began to evangelize, and followers experienced an ecstatic charge from him similar to his own from the supernatural sponsor of his vision. The message of salvation was similar from visionary to visionary, frequently demanding the end of inter- and intra-tribal strife, exogamy, any sort of dishonesty, and the drinking of alcohol, (which had quickly become a scourge to indigenous Americans). It alternately encouraged coexistence with enemies, ensured their surrender, or guaranteed apocalyptic destruction of them; sometimes it promised a welcome return of the dead.

More usual in South America was the prophet’s announcement that he was a divine hero or god (often the creator or law giver, as with the Latin American prophets called *pagé*), who had returned to bestow eternal life on the faithful. Generally, South American movements sought an earthly paradise and the patently supernatural benefit of eternal youth, like the Tupis’ ongoing pursuits of the alternatively called “Land without Evil.” And while a more religio-political movement, like that of the early nineteenth-century Incan Tupac Amuru, looked forward to a cosmic cataclysm from which a new world order could spring, native millenarianism of Paraguay and Brazil outside the context of messianism could be merely terrifying: In contemporary literature about the Brazilian

Nāndeva-Guanari, where this kind of mythology conflated with Christian teachings about the Day of Judgment, a fear of returning dead bent on vengeance has been associated with collective depression and suicidality into the twentieth century.

In both Americas, movements that sought to reinstate, reinforce, or perpetuate native culture tended to arise during earlier stages of European impingement and were marked by revolutionary aggression. Those that could tolerate syncretism of European tradition and indigenous beliefs developed later, and/or where social cohesion had become profoundly eroded.

The former type of movement is exemplified by the holy wars of the Pueblo Indians at Taos Mexico in 1680 under the leadership of the messianic Popé, which exterminated hundreds of Spanish settlers, and of the Delaware Indians under a nameless prophet from Michigan, whose 1762 movement aimed to do away with every European influence on tribal culture in the Great Lakes area – and doomed its success by restricting its weapons to bows and arrows against colonial fire power.

An exemplar of syncretistic movements is that of Handsome Lake, a Seneca, whose visions occurred after the American Revolution, a time of deep internal discord, economic collapse, and moral indifference for the Iroquois confederacy as a whole. Although he made no claim to divinity, his visions began after an illness from which he was thought to have died and returned. They instructed him in a new religion of the “Good Message” that borrowed from Quakerism to renovate native religion, retaining what had well-served social and spiritual stability, eliminating contaminants like alcohol, abortion, and witchcraft. It emphasized marriage, adoption of orphans, and care for the aged. It also crafted a social model for the disenfranchised trader-hunter-warrior who would otherwise have been emasculated by cultivation of the land, which was now a necessity.

Still, syncretism could signal intractable defiance to white culture, as with the “Dreamers” cult of Northwestern America, ca. 1870. Its founder Catholic-educated Smohalla was believed to

have died and been resurrected. In his trances or “dreams,” the Great Spirit censured his people for apostasy from native ways. Smohalla instituted religion with Roman Catholic trappings, but doctrine that held whites to be inferior creations and Indians alone to have rights to the land – cultivation of which, as ordered by the whites, was violation of Mother Earth from whose bosom the Indian dead would one day rise. The “Dreamers” cult would be the basis of two armed insurrections near the end of the century.

By far, the best-known Native American messianic movements are the Ghost Dances of 1870 and 1890. They arose in a family of movements that employed lengthy, repetitive, communal dance to effect the prophetic vision – which varied with different tribes’ adoption, but held close to the original script everywhere on the restoration of lands and game to the Indians and, most importantly, on the return to life of their dead. During a period of rapid depopulation, Wodziwob the Paviotso prophet of the 1870 Ghost Dance foresaw the return of the ancestors via train with concomitant destruction of the whites – in which, however, the tools of their culture would be left behind for Indian use. Though variations anticipated rapprochement with whites, when neither had occurred, and social and political traumata continued, the movement died out.

In 1890, the prophet Wovoka claimed to be the messiah awaited by the Mormons (some of whom had joined the original Ghost cult). This time, the movement spread widely with magical details, such as belief in an immunity to the white man’s bullets, that would have disastrous consequences for 350 Sioux prisoners at Wounded Knee, South Dakota. It was not long before the movement died again. The Kiowa of the Southwest would revive the Ghost Dance in 1894 and sustain its practice until 1916; but resurrection failing to occur, the focus of the dance became the trance state achieved by participants and the opportunity thence to communicate immediately with ancestors.

Ascending gradually (even before the advent of the Ghost Dance) as a psycho-spiritual tool in the Native American struggle to resist

assimilation was the ritual ingestion of the vision-producing *peyote*. While the Peyote Cult may not always be classed with messianism, as a medium of personal emancipation in the collective setting of what has become the Native American Church, the drug by all reports is salvational. As dancing was used in the cults of the latter nineteenth century and early twentieth for crossing the barrier to the divine realm, so peyote has been used to this day. Parallels to both practices are found universally, as in the dances of the South-African Bushmen or the use of soma by the ancient Hindus.

The Native American response to the encroachment of Europeans, whose policies in the encounter amounted to ethnic and political castration, can easily be said to model Freud's theory for the etiology of religion. With or without messianic leadership, the renewal movements of the fifteenth to twentieth centuries were driven in classical psychoanalytic terms by anxiety over murder of the primal father as described by Freud in *Totem and Taboo* (and developed further in *Moses and Monotheism*). Under the coercive advances of white settlers, memory traces of a primal conflict had been aroused, and the tribal psyche returned to the repressed trauma of the original sons' dispatch of a father who stood between them and the object of their Oedipal desire, i.e., the mother – indeed, barely disguised here as Mother Earth. Where a charismatic leader arose we would observe the tribe's correlative longing for the return of that father whom it had vanquished. And where a redeemer figure was said to have had a near-death experience or could claim to have died and returned, we would note both an atonement for the ancient murder and full emulation of the father through which the new leader would unconsciously be received as his replacement.

The significance of this kind of person to society, however, should not be dismissed as a mere artifact of psychosocial regression. As the Oedipal drama leads to development of the individual's super-ego, its recapitulation at the social level under the influence of a great leader is the origin of a culture's super-ego

(*Civilization and Its Discontents*). So we may liken the movement of Handsome Lake (or even Smohalla) to the ethical monotheism developed by the Jews under Moses.

Nevertheless, confining messianism to the Oedipal context is relegating it to social order-keeping – making the revival of movements that clearly failed to eliminate exogenous stressors amount to little more than corporate repetition compulsion. To typify these movements as compulsions to repeat is to miss the ways in which they succeeded in counterbalancing the psychosocial problems of forced acculturation. For instance, through the filter of Self Psychology, we recognize in almost all instances attempts to revitalize an *idealized values system*. And movements carried by a charismatic leader demonstrate the collective compensatory activation of an *idealized parent imago*, which, along with an agenda to foster family cohesiveness, is the basis of a society prepared to adjust to any environmental changes.

Implicit in the foregoing is the fact that what compels a people to accept an individual as messiah or charismatic leader rests on the extent to which the person addresses the deepest unconscious needs and wishes of the believers, Oedipal or otherwise. Additionally, it can be said that the degree of a leader's charisma relates to the level of the group's sense of desperation. One precondition for desperation would be the deep cleft indigenous people came to feel between themselves and nature. Erich Fromm who sees the messianic age as a human achievement (not the product of divine intervention) locates the existential problem it is meant to end in the individual's sense of estrangement from himself or herself and nature. It is essentially a problem of *splitting* – here, meaning the dichotomy between one's animal and transcendent natures – and is resolved when one (with one's society) can command reason, love, truth, and justice well enough to attain harmony. The actualization of Fromm's messianic age can be said to have been consistently pushed farther from the grasp of indigenous peoples, each time reason, love, truth, and justice were transgressed from the outside.

What we may conjecture to be the intrapsychic result of such transgressions is social regression to a pre-Oedipal stage. Borrowing from Object-Relations, where relationships are severely disrupted, there is risk of regression to the *schizoid position*, a psychic space of womblike safety but indifference to relationships – between internal and external objects, or self and nature. To defend against what the conscious mind would experience as intolerable loss, the individual or social group could instead withdraw to the *paranoid or depressive position*. Messianism animated by paranoia, with fantasies of persecution projected onto neutral as well as persecutory external realities, would resemble some of the millenarian Tupi quests for paradise, or the early dance movements that promoted emancipation through violence; while regressions to the depressive position (and its remorse) would be characteristic of movements that associated liberation with renovation of social morality, or later dance movements distinguished by some tolerance of acculturation. The choice would depend on a kind of tribal personality style.

Later Ghost Dances invite further Object-Relational review. In the language of D. W. Winnicott, the dance was manifest *potential space*, or that hypothetical realm between internal and external realities in which the psyche both creates and finds play, art, or religion. The shift from a hopeless expectation for the return of the dead to trance-encounters with them connotes the ghost-dancers' creative enlistment of their deceased as revivals of *transitional objects* to reconnect the community with a sense of, at least, its cultural environment's reliability.

From the Analytical Psychology perspective, a messianic movement as a symptom of cultural crisis would be teleological, pointing to, in fact representing, its own solution. A leader who experienced a rebirth or became divine would be symbolic of the *Self*, archetype of wholeness, which for the individual or the collective is "an image of the goal of life, spontaneously produced by the unconscious, irrespective of the wishes and fears of the conscious mind" (Jung 1989, p. 459). Rituals like the Ghost Dance and peyote use would be media through which members of the

community participated in the kind of encounter with objective (i.e., transcendent) reality to which their messiah laid claim through near-death experiences and visions. And whatever the cause of disturbance in the tribal psyche, any socio-spiritual programs stipulating endogamy, marital fidelity, and eradication of practices (such as alcohol consumption) that effected schizoid retreats or the ego's collapse into the unconscious, would be expressions of the integrative drives that gave rise to the messianic movement. Messianic moral prescriptions, then, would betoken progressive rather than regressive tendencies. By this interpretation, retreats to pre-Oedipal positions or abandonment of a movement suggests either psychic unreadiness for a major emergence of deep psychic contents or merely a phase of the regressive struggle that normally accompanies such emergence.

## Native North American Religion

Kenneth H. Lokensgard  
The Department of Religious Studies,  
University of North Carolina-Chapel Hill,  
Chapel Hill, NC, USA

Native North Americans are indigenous peoples. Their diversity is marked. Members of different culture groups speak unique languages belonging to several language families. Their religions also vary, largely because indigenous religions are place based. Such religions help their practitioners live successfully in the environments to which they are native. As the environments and languages through which the religions are expressed and maintained vary, so do the religions themselves. Still, all Native North American religions share an emphasis upon practice rather than belief. More specifically, the religions emphasize respectful, generous actions toward the other inhabitants of indigenous peoples' social and spatial environments. These inhabitants include both human and nonhuman persons. Passed down orally from their ancestors, there is a strong element of "tradition" in religions of Native North Americans. At the same time, the religions are highly adaptable and have continually helped Native Americans meet the challenges of changing social and geographic environments. Thus, "traditional" Native American religions should not be viewed as static or outdated. Most of these religions remain vital and relevant. Yet, some traditional religions were weakened by European colonialism and the sometimes forceful introduction of Christianity to North America. Some scholars therefore suggest that colonialism ultimately caused "trauma" to Native American cultures – trauma that continues to be felt by many today, who still face challenges to their traditional identities and views of the world. Both the practicing psychologist and the scholar of religion and psychology should consider this notion of cultural trauma, when dealing with Native American peoples and

cultures. At the same time, psychologists and scholars should remember that the religions – whether traditional or not – are important means through which Native Americans may deal with such trauma.

In the United States, many individuals self-identifying as Native American (American Indian or Alaskan Natives) belong to one of more than 560 federally recognized “tribes” or nations (Office of the Federal Register 2010a, b). In Canada, there are over 630 federally recognized “First Nations Bands,” in addition to several recognized *Inuit* and *Métis* groups (Assembly of First Nations 2012). Further, in both countries, there are individuals who identify as Native American, but who are not enrolled with recognized culture groups or who belong to groups that do not have federal recognition. Again, then, cultural Native American diversity is immense.

Many Native Americans now practice various forms of Christianity and other religions with origins outside of North America. Other Native Americans practice ancestral and foreign religions at the same time or even in combination. The latter forms of practice have resulted in what scholars often call “new religious movements.” In this age of constant cultural contact, some Native Americans have also combined, consciously and otherwise, elements of different indigenous religions, resulting in manifestations of Pan-American Indian or “Pan-Am” religions. Hence, not only is there diversity between the ancestral religions that are unique to each Native American people; there is also religious diversity between the types of nonindigenous and “hybrid” religions practiced across North America (Deloria 1999; Gill 2003; Lokensgard 2010b).

Native North Americans who continue to practice contemporary versions of their ancestral religions inhabit living landscapes. Not only do they consider most aspects of these landscapes to be alive; they also consider many aspects of their landscapes to be potential persons or social actors. These nonhuman persons possess the capability of helping humans live successfully in the places to which they are native. In these densely inhabited worlds, human and nonhuman

persons are interconnected and constantly in contact. To win help from nonhuman persons, humans must therefore act generously and respectfully. They do so most explicitly in formal ceremonies. However, the need to embrace a religious ethic of reciprocity, and to treat others properly, governs all social protocols, inside and outside of ceremonial settings. Thus, indigenous religious views shape Native American lives at all times, helping traditionalists maintain positive relations with potentially helpful, nonhuman persons, as well as their collective creator (Harvey 2005; Lokensgard 2010b).

Examples of how the views manifest in the practices of a particular Native North American people are found with the Blackfeet or *Niitsitapiiksi* (“Real People”). The Blackfeet consist of four closely related and confederated culture groups, residing in the present-day American state of Montana and Canadian province of Canada. The ancestral Blackfoot religious traditions remain strong among these peoples, despite the presence of various Christianities and Pan-Am religions.

Of course, Blackfoot traditionalists engage in various day-to-day rituals that express the ethic of reciprocity. They also engage in a series of seasonal ceremonies, during which they more formally honor the other persons of their environment, and their creator, in order to give thanks for help received or demonstrate worthiness for help needed from others. During the fall and spring ceremonies, Blackfoot traditionalists open “medicine bundles” (*amopistaanistsi*, in Blackfoot), which contain materials embodying certain nonhuman inhabitants of their world. Such materials may be skins, rocks, earth paints, herbs, and many other things, each of which is the physical home to a corresponding spirit; a crow skin embodies a bird spirit, and rock embodies a rock spirit, and so on. When the medicine bundles are opened, each spirit is treated with great respect, prayed to, and even offered gifts. These gifts are accepted by ceremonial leaders, on behalf of the spirits, and then redistributed to human attendees at the ceremony. Thus, mutually beneficial relations are not only renewed between humans and

nonhumans; they are also renewed between all of the human attendees and even between humans and the Blackfoot creator figure (*Ihtsipaitapiyo'pa* or “The Source of our Life”), who witnesses the entire ceremony (Lokensgard 2010a).

Historically and today, some Native Americans have incorporated elements of Christianity into their ancestral traditions (and/or vice versa). This has resulted in the “new religious movements.” The most prominent example of these movements is the Native American Church [NAC]. NAC members regard the spineless cactus, peyote, as a sacrament, and ingest it during ceremonies. The use of peyote for religious purposes probably arrived in the USA, from Mexico, in the mid-nineteenth century. It then spread north to Canada. Therefore, outside of Mesoamerica, it is a fairly *new* phenomenon. Today, peyote is classified as an illicit, hallucinogenic “drug” by the US government, but a legal exemption is made for the use of peyote in NAC ceremonies (Controlled Substances Act of 1970). In Canada, there are no restrictions regarding the use of peyote. Nevertheless, many North Americans, indigenous and nonindigenous alike, view peyote as a drug. Therefore, members of the NAC face some controversy in both countries.

The extent to which NAC members incorporate elements of Christianity into their beliefs and practices varies. This is because the individual churches are largely autonomous and because the church meetings are shaped by the “road men” who lead them. In all cases, however, NAC members use peyote simply to facilitate prayer and contemplation upon their creator, God, Jesus, or whomever is of the greatest spiritual significance in their world. They do this during all-night ceremonies. Many of their prayers are intended to benefit the sponsor of the ceremony, who may be seeking spiritual help or giving thanks for help received. NAC members never use peyote (which is nonaddictive) recreationally. Indeed, abstinence from alcohol and other drugs is one of the central tenets of all Native American Churches (Stewart 1998).

The incorporation of elements normally unique to one religion into another has also resulted in the Pan-Am religions. These religions are not specific to a particular culture group. Instead, they are practiced across cultural boundaries. The NAC is thus both a new religious movement and a Pan-Am religion as well. There are also those Pan-Am religions, however, that simply result from the combination of elements from different Native American religions. For instance, each summer, various Plains Indian peoples, such as the *Lakotas*, practice a form of the “Sun Dance” that involves “piercing.” In these Sun Dances, participants pierce themselves through the chest or back, tie those piercings to a central pole in a ceremonial space, and dance until the piercings break free. The precise logic behind this act varies across culture groups, but, generally, practitioners do this as a sacrificial sign of thanks for help needed or received from their creator and to express gratitude for the earth’s renewal each spring. This type of Sun Dance is now found among culture groups whose members did not historically pierce during the annual ceremony (as was the case with the Blackfeet) or who did not practice a Sun Dance at all (Lokensgard 2010a; Wissler 1918). Thus, the “piercing” Sun Dance has become a Pan-Am religious phenomenon.

While the traditional and other religions of Native North Americans are vital and meaningful to their practitioners, Native North America is plagued with problems that have resulted from its indigenous peoples being forced by the momentum of Euro-American colonialism to change almost all the ways in which their societies functioned. Native American scholars, psychologists, and counselors have suggested that the idea of “historical trauma or intergenerational trauma” helps explain the presence of alcoholism, drug abuse, and other social ills that exist in Native American communities (Duran et al. 1998, p. 61). They have suggested that this trauma is maintained through “acculturative stress” (Duran et al. 1998, p. 65). It may seem easy to dismiss these notions as being based upon some dubious conception of genetically based

psychological memory, but careful thought shows otherwise. Just as ancestral religions were passed down and adapted carefully and persistently by generations of Native North Americans, so might the negative effects of colonialism have been passed down. In other words, the “trauma” of colonialism might have been unconsciously “taught.”

Psychologists should understand, then, that the difficulties some Native North Americans have in dealing with loss of identity and cultural pride can be difficult to overcome. On the other hand, both psychologists and scholars of religion and psychology should remember that because traditional religions have been adapted to help Native Americans live successfully in social and geographic environments that are, in many ways, different from those of their ancestors, they remain an important means through which individuals can recover identity and cultural pride. Psychologists and scholars should remember too that the various forms of Christianity, new religious movements, and Pan-Am religions can also help contemporary Native Americans deal with the effects of historical trauma. After all, the NAC, which fits into all three of the categories mentioned, deals explicitly with such effects through its emphasis upon abstinence from alcohol and other drugs and through other teachings as well. Thus, *all* of the religions commonly practiced by Native North Americans, whether they are ancestral, hybridized, or simply “new,” can help Native Americans live successful lives in the present.

## Nazism

Daniel Burston  
Department of Psychology, Duquesne  
University, Pittsburgh, PA, USA

## The Menace of Modernity

After the Reformation, the development that shaped European civilization the most was the

Age of Enlightenment, which began around 1720 and culminated shortly after the American Revolution in 1776. The Enlightenment rejected supernaturalism, the divinity of Jesus, and the authority of the Church. Nevertheless, they said there is a natural or built-in *telos* to historical development, called “Progress” – a slow but inexorable process that, through the dissemination of science and literacy, would eventually envelope the whole planet. Among the moral and material benefits, “Progress” would presumably confer is a much greater degree of human equality.

Though it is hard to credit nowadays, many religious people were utterly opposed to the Enlightenment’s promotion of reason and human equality. Medieval Christians believed that all believers are equally important in the eyes of God and that on the Day of Judgment, God will judge each personal impartially, ignoring their worldly status and accomplishments. In the meantime, they said, as far as *this* world goes, it is sinful to question the feudal hierarchy. Individuals can “progress” in their moral or spiritual growth and in their relationship with God. But that is an individual, not a societal affair. Medieval minds dismissed the idea of collective human emancipation, fostered by the growth of literacy and the dissemination of reason, because since the Fall, humankind is enmeshed in a world of suffering and woe, and attempts to improve our earthly condition through “works,” or our own worldly efforts – including science and technology – are sinful and distract us from our true spiritual vocation.

Nevertheless, in the eighteenth century, Deists and free thinkers began to make human equality a political norm or ideal, which meant translating the old belief in equality before God on Judgment Day into a political reality in *this* world. The growing demand for equality took several forms. The first was equality before the law, creating one system of justice, one law for the rich and the poor, commoners and the aristocracy, and increasingly, for Catholics and Protestants as well. In time, this emphasis on equality was extended to *all* religious creeds, including Jews. A second form the call for equality took was in

terms of equality of access or opportunity, which required that the state provide free public education so that members of all social classes would have the chance to improve and to prosper. By the middle of the nineteenth century, Western European (and British and American) Jews benefited enormously from access to public education, and this is a feature of modernity that anti-Semites rejected. From the 1860s onwards, anti-Semites all across Europe, Britain, and the United States argued that Jews *still* belong at the bottom of the social ladder, as in medieval days, and that their current prosperity was a symptom of a widespread social disorder. Indeed, if they will not return to their “natural” place in the social order, Jews should be intimidated, harassed and if need be, slaughtered *en masse*.

### Nazism, Mysticism, and the Occult

Given this background, the Nazi Party was not some weird aberration that sprang up overnight. The Treaty of Versailles made conditions for the spread of anti-Semitism in German-speaking countries more favorable, but in the end, Nazism was a continuation of the older anti-Semitism, albeit with a fierce anti-Christian component that was well hidden from the rank and file. It also had an occult dimension. Much as they feared and detested them, the Nazis emulated the Masons in several respects and borrowed some racist ideas from the Theosophical Society of Madame Helena Blavatsky, a Russian medium, who introduced the Swastika, an ancient Asian symbol, into Western occultist circles. They also had contact with George Ivanovich Gurdjieff B., another Russian mystic, and studied anthroposophy, Sufism, Kundalini yoga, Zen Buddhism, and so on. Most of these eclectic explorations in mysticism, meditation, and the occult were carried on in the SS, under Himmler’s oversight.

Having said that many occult and spiritual practices the Nazi elite embraced were associated with movements and teachers who were not particularly racist, and whose overall objectives focused on individual development, rather than world domination or genocide. So to insure that

these occult techniques were practiced in the proper spirit, the Nazis borrowed even more heavily from ultranationalist German or Austrian occultists and neo-pagans. One was the Austrian writer Guido von List (1848–1919). List founded “Armanist” Brotherhood of Wotan worshippers who were obsessed with racial purity. In 1911, List codified a set of racial and marriage laws that bear an uncanny resemblance to the Nuremberg racial laws that he claimed would be enacted in 1932. (He wasn’t far off!)

Another important influence was Lanz von Liebenfels, a former Cistercian monk who founded the *Ordo Novi Templi*, or The New Templar Order, in 1907. Lanz was the editor of *Ostara*, a journal read by future Nazi stalwarts like Alfred Rosenberg, Heinrich Himmler, Julius Streicher, and Rudolf Hess long before Hitler became leader of the Nazi Party. As Morris Berman points out: “Castration, sterilization and extermination of ‘inferior’ races are all present in *Ostara*. Subsidies for ‘blond marriages’ made available by Hitler in Norway and Holland during the war are advocated, as well as a ban on interracial ones” (Berman 1989, p. 265).

Another important influence on the Nazis was Rudolf von Sebottendorf. Sebottendorf studied Islamic mysticism in Turkey and Egypt and by his own admission, was strongly influenced by List and Lanz. In 1917, as Germany slouched towards defeat, Sebottendorf founded the Thule Society – a violently anti-Semitic, ultranationalist group whose newspaper, *the Munich Observer*, attracted the aristocratic Dietrich Eckart and the lesser known Anton Drexler, a railroad mechanic who founded the ultra-right wing German Workers’ Party. Drexler persuaded Sebottendorf and Eckart that it was time to turn the Thule Society into a mass movement. And when Adolf Hitler wrested control of the German Workers Party from Drexler and renamed it the National Socialist Workers’ Party, *the Munich Observer* became the official organ of the Nazi organization.

And what about Hitler himself? What did he study? As far as we know, Hitler never belonged to any secret society, but was personally coached by his mentor Dietrich Eckart. Just what Eckart taught Hitler is not known, though it is the subject

of some lively scholarly conjecture. In any case, the real inspiration for Hitler’s occult leanings may have been more chemical than personal in nature. While serving as a soldier, Hitler was hit by British mustard gas on October 15, 1918, and became blind. As he was recovering in a hospital in Pasewalk, north of Berlin, his vision was gradually restored, until November, when he learned that Germany had been declared a Republic, which caused him to relapse completely. While lying on his cot in despair, Hitler experienced as a call “from the other world” naming him the savior of the German people. After that, he started back on the road to recovery and, as they say, found “his voice.” Thus a failed artist and a brain-injured veteran was transformed into a charismatic political speaker, who transfixed the entire German people, putting them into a collective trance. The Nazi elite were as transfixed as the general population by Hitler’s hate-filled rants. The main difference between the elite and the rank and file was that the elite were never taken in by Hitler’s public professions of support for Christianity. They knew that Hitler aimed to replace Christianity with an improvised pastiche of Wotanist and occultist beliefs and rituals in the fullness of time.

### Hitler: The Aryan Messiah

Critics and supporters of the Enlightenment have noted that the modern myth of progress is a kind of secularized Messianism, in which the era of universal brotherhood, peace, and prosperity is brought on, not by a divine messenger or intercessor but by the growth of reason, science, and technology. Viewed through the lenses of a secular, scientific mind-set, the Nazi elite’s involvement with the occult represents no more than a foolish reversion to magic and superstition – a puzzling anomaly, given that they were enthusiastic promoters of science and technology. But the tendency to oppose magic and superstition to scientific method is a product of a modern mind-set, and the Nazis were at war with modernity. Indeed, their hatred of Jews and of modernity was inseparably linked.

They blamed Jews for the twin evils of modernity – capitalism and communism – and depicted them as incorrigibly materialistic, opposed to every noble, spiritual tendency in the “Aryan” psyche, which is inherently hierarchical in outlook.

So when all was said and done, Nazism embraced modern science and technology, but rejected modernity’s characteristic emphasis on human equality and the modern separation of the sacred and the secular in the political arena. In its place, they created a neo-feudal system based on hereditary rank and privilege and sought to fuse the sacred and the secular in their political ideology. But instead of reviving the Church, they sought to destroy it and to replace Christianity with a cult of the Fuehrer. As Morris Berman points out, the cult of the Fuehrer was much more than a political movement. It was a state religion. Berman writes:

At the Nazi rally in Nuremberg in September of 1937, a huge photo of Hitler was displayed with the inscription beneath it: ‘IN THE BEGINNING WAS THE WORD...’ William Teeling, who visited Germany in the late thirties, was told by the Mayor of Hamburg: We need no priests or parsons. We communicate directly with God through Adolph Hitler. Dorothy Thompson, writing in the December 1934 issue of Harper’s Magazine (Good Bye To Germany) told the following story: ‘At Garmisch I met an American from Chicago. He had been at the Oberammergau to see the Passion Play. “These people are all crazy,” he said. “This is not a revolution, it is a revival. They think Hitler is God. Believe it or not, A German woman sitting next to me at the Passion Play and when they hoisted Jesus on the Cross, she said: ‘There he is. That is our Fuehrer, our Hitler.’” And when they paid out the thirty pieces of silver to Judas, she said: “That is Roehm, who betrayed the Leader”’ (pp. 277-278)

Berman gives more examples, but there is no need to belabor the issue. Nazi propaganda *deliberately* displaced Jesus with Hitler at every opportunity, because the German populace wanted a *savior*. Hitler and his followers discerned this (largely unconscious) desire and used techniques culled from black magic and modern advertising techniques to create a demonic new race-based religion of state.

Why then, beginning in 1935, did Hitler suppress all secret societies – even the Thule Society – and other racist ones that were

precursors to his movement? Hitler aimed to create a complete police state – one which would harness people’s yearning for a savior and for a sense of belonging to something bigger, something powerful and spiritual. In Hitler’s utopia, no one would belong to any organization that harbored secrets from the state, or nourished competing loyalties or differences of opinion with Hitler – on any subject pertaining to spirituality. For a brief period of time, Hitler was a kind of emperor and demonic pope rolled into one – the final authority on all matters temporal and spiritual. His authority was beyond question and brooked no challenges. The brief but astonishing career of Adolf Hitler and the lingering appeal of Nazism to this day are potent reminders of the limits of progress. As we enter our present “post-modern” historical era, science and technology develop apace, but genuine equality, brotherhood, and peace are as elusive as ever.

## Near-Death Experiences

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

A Professor of Pediatric Physical Therapy had totally repressed the memory of her near-death experience (NDE) as a child, until at

a conference, she laid on a table during a practice session for a cranial-sacral technique. Suddenly she began to smell ether. She asked her standing partner whether she smelled ether, which she did not. Then this memory rushed into her consciousness, and she ran out of the room weeping.

When she was about 8 years old, she had an emergency appendectomy. The doctor used ether as the anesthesia commonly used at the time, which has since been discontinued because of dosage uncertainties. During the surgery, this little girl floated up above her body and drifted toward a stairway she saw, up the steps until she saw an older man whom she vaguely recognized. He held up his hand and told her it was not her time, and she had to go back. So, “as a dutiful little Catholic girl,” she said, she went back to the surgery. She watched what the doctors and staff were doing, and then returned to her body, and woke up. She decided not to tell anyone what had happened, afraid that it would frighten her mother. Years later, when as an adult she recalled her experience, she contacted her childhood physician and asked him about her experience. He said “We almost lost you” (Personal communication).

Near-death experiences such as this are events when a person dies and returns to life. Medical professionals have documented many such cases, but many scientific researchers refuse to accept this evidence, since it challenges the limits of their materialistic worldview in which, if the physical body loses its life force, it cannot be restarted, because that would imply that an immortal soul returned to the body. Of the numerous cases reported, I will outline a few and give you resources to find more. Then we will look at the debates about NDEs, which can be categorized into four major methodological types: Biological, Psychological, Philosophical, and Mystical.

First, what is death? There are two answers. One is the typical medical answer: that state from which one does not return to life. Thus, if anyone does return, by definition he/she did not die, no matter how long their heart, lungs, and brain may have been dysfunctional. Logically, this is the *deductive* definition, since death is being defined as a one-way trip. So any claim to a return from death is by definition impossible. What shall we

call the situation when there are no such classic life signs, but the person returns to life? We call it a near-death experience. The second definition of an NDE is the *inductive* definition, accepting lack of life signs as death, so the physician can sign a death certificate. But if the patient does come back to life, the definition accepts this as new data, a real near-death experience along with the brief death, rather than denying that death ever occurred. The big difference is that NDE survivors typically report remarkable visions and changes in personality, notably a loss of the natural fear of death.

The current beginning of NDE studies began with Raymond Moody, who developed a classic typology of typical NDE experiences in 1975. Few experience them all, but many experience several. They are as follows: (a) *ineffability*, or being hard to express; (b) *hearing the news* of their death announced; (c) *feelings of peace and quiet*, not intolerable pain; (d) *noises* such as buzzing or beautiful music; (e) *tunnel*, a passageway that seems to pull them through to another reality (Fig. 1); (f) *out-of-body experience* – OBE – floating above the dead body, hearing conversations, and moving at will; (g) *meeting others* or feeling the presence of ones who have died before them; (h) *being of light*, most importantly, an awesome, dazzling light, a consciousness of caring, loving, and forgiving; (i) *life review*, a rapid survey of one’s life; (j) *border*, a line which, if crossed, means you will not return to life; (k) *coming back* is difficult, since the beauty and love of the other side convinces many that they do not want to return; (l) *telling others* is difficult, since others are very skeptical and often cause withdrawal; (m) *effects on life*, NDE survivors find no instant salvation, but a broader philosophical and spiritual view of life’s meaning; (n) *no fear of death* is very common; (o) *corroboration* means that NDE survivors can often report external events while they were dead, such as medical procedures. These are most important for research and verification (Moody 1975). One patient said that while dead he floated down the hall where he heard a relative said “kick the bucket.” When the NDE survivor reported these exact words, the

**Near-Death Experiences, Fig. 1** Paradise: Ascent of the blessed by Hieronymus Bosch (after 1490), Nederlands. Palazzo Ducale, Venice. This is a file from the Wikimedia Commons [http://en.wikipedia.org/wiki/File:Ascent\\_of\\_the\\_Blessed.jpg#globalusage](http://en.wikipedia.org/wiki/File:Ascent_of_the_Blessed.jpg#globalusage)

one who said it was embarrassed. This was good external verification, not just the patient's word (Shokey 1992).

One of the most remarkable cases is that of Mellen-Thomas Benedict, who died of brain cancer in 1982, as confirmed to him by his hospice aide. He was dead for about 1½ h, rose up out of his body, and saw the Great Light, and he asked God if he could see more of the universe, so he was ushered around the vast depths of existence. He returned, healed of his cancer, full of insights and faith (Benedict). Other accounts include the NDEs of Betty Eadie, an Irish-Native American who died in childbirth and initially refused to return to this earth, since the other side was so beautiful to her. She had to be persuaded that her

life's purpose was to be a good mother, so she returned (Eadie 1992). Dannion Brinkley, who had been a violent, rough character, was electrocuted by lightning, died, and returned to life twice, and now says "Go die with someone," meaning go comfort the terminally ill (Brinkley 1994).

Research into NDEs was undertaken by many who confirmed that about eight million Americans have had NDEs and that children have NDEs (Morse 1989). The psychologist Kenneth Ring confirmed Moody's typology with scientific methods, with more details, and helped found the International Association for Near-Death Studies. He confirmed that NDE survivors have increased concern for the welfare of others. Later he wrote about NDEs of blind people who reported seeing things while dead (Ring 1984, 1998). Ring sees NDEs as the Light sending a powerful message of hope to our planet. Some have had negative, even "hellish" NDEs, a few researchers report (Atwater 2007). Others have focused more on the direction of what medical professionals can do with this understanding, for example, a most helpful thing you can do if a person tells you they had an NDE is to respect their feelings and do not dismiss them (IANDS).

NDEs have caused some controversy, and research has taken different directions, according to different methodologies (Bailey and Yates 1996).

1. The *Biological* method has been used by the scientists who have a largely materialistic worldview, seeing no afterlife or eternal soul to return to the body after it dies. They usually use the deductive definition of death, so they typically say that if someone returned after being pronounced dead, they were not really dead. They fault most NDE reports as anecdotal and inadequately controlled scientifically, so they are dismissed. They offer theories such as cerebral anoxia or hallucinogenic brain chemistry, such as endorphins (Blackmore). But some physicians, such as Michael Sabom, had patients die and return in surgery. He became convinced that brain neurology is part of, but not enough to explain NDEs, and he became convinced that the soul does leave the body after death (Sabom 1982).

External verification does provide important evidence for any case, as this method emphasizes.

2. The *Psychological* method used various techniques. Kenneth Ring used statistical methods to establish the basic stages, types, the core experience, and aftereffects (Ring 1984). Some psychiatrists argue that hallucinations could produce NDE visions (Siegel 1980). Some Freudians saw NDEs as a denial of death and a hallucinatory wish fulfillment, defending the ego from its impending destruction (Greyson 1983b).

Carl Jung had an NDE while hospitalized, in which he floated up above India, where he saw a meteor-like stone with a cave in it and a meditating Yogi (Jung 1961). Susan Blackmore, a cognitive psychologist, sees the mind as creating models of reality, and the most stable one wins. The NDE comes along and the mind creates another cognitive model to account for the feelings of dying (Blackmore 1993).

3. What is the *Philosophical* method of analyzing NDEs? Empiricists generally reject the reality of NDEs and tend to reduce them to “nothing but” hidden memories, hallucinations, fantasies, or nonsense. Susan Blackmore says that “Feelings of bliss, love and peace are engendered by specific chemicals acting in specific parts of the brain” (Blackmore 1993). Pediatrician Melvin Morse, the first to confirm that children have NDEs, sees the brain’s right temporal lobe as a necessary mediating factor in NDEs, but does not reduce them to “nothing but” brain activity (Morse 1989). Psychologist Ronald Siegel says that if NDEs cannot be shared by other observers, and subjected to objective validation in the external world, they must be purely subjective hallucinations (Siegel 1980). But a Russian scientist, Dr. George Rodonaia, died and observed a baby crying in a nearby hospital room. No one could figure out why, but he could see in his OBE that the child had a broken bone. Later the X-ray revealed exactly the fracture that he indicated (Schokey 1992). Kenneth Ring reported on a woman named Vicky, who was blinded

soon after her premature birth. She later reported two NDEs when she saw her own body, people in the tunnel and in a life review, then flowers, birds, and Jesus radiating light (Ring 1998).

An alternative to empiricism is the philosophy of *a priori* inherited mental forms born with us that organize experience. So repeated cases of similar phenomena, such as the NDE’s Light, may have some reality. Michael Grosso says that Jung’s collective unconscious, full of inborn archetypal images and meanings, could appear in NDEs. Since we can find cases of NDE-like reports across history and globally, this led Grosso to propose an archetype of Death and Enlightenment (Grosso 1992). Today’s phenomenological method is used by Jenny Yates, who shows the archetypal parallels of the Light in the NDE (Yates 1996).

4. *Religious* methods for studying NDEs vary. Some are skeptical or hostile. The Catholic theologian Hans Küng argues deductively that people having NDEs did not actually die, so NDEs are not proof of eternal life (1984). A Protestant review concluded that NDEs do not fit orthodox Christian theology and likely have a natural explanation. At best, they offer a distorted glimpse of the afterlife and trivialize the problem of evil (Clapp 1988). Maurice Rawlings, a cardiologist and conservative Christian, reports that 20 % of the patients he has resuscitated have had NDEs. But he believes half of their experiences to be hellish, which confirms his evangelical theology of judgment and hell (Rawlings 1978).

Other Christians find NDEs to be like biblical resurrections (Wilkerson 1997). A 1981 study concluded that NDEs are authentic experiences of transcendence and can enrich Christian tradition (Hill 1981). Carol Zaleski studied medieval parallels to NDEs, but she sees them as too “modest and anecdotal” (Zaleski 1987). Some Christian theologians object to NDEs because they are too universal and spiritual (Adams 1979). Others accept them for the very same reasons (Flynn). Jews, Mormons, and Hindus can be found who

approve of NDEs (Neumann 1990; Gibson 1992; Sharma 1979). Tibetan Buddhists have shamans who enter trances with no breathing for many hours and have afterlife visions (Delog). Bruce Greyson's research shows that NDE survivors can have miraculous cures and gain psychic powers (Greyson 1983b). Kenneth Ring sees NDEs as "Amazing Grace." Judith Cressey shows a number of parallels between NDEs and classical mystics, such as St. Theresa (Cressey 1994). William James said:

Our normal waking consciousness is but one special type of consciousness, whilst all about it, parted by the filmiest of screens, there lie potential forms of consciousness entirely different . . . . No account of the universe in its totality can be final which leaves these other forms of consciousness quite disregarded. (James 1902, p. 305). In 2012s a neurosurgeon wrote "Proof of Heaven" (Alexander 2012), and a physician wrote "Erasing Death" (Parnia 2013).

## Neurology and Psychology of Religion

Marsha Aileen Hewitt

Trinity College, University of Toronto, Toronto, ON, Canada

Recent developments within neuroscience have had a significant influence on a number of disciplines, including psychological and psychoanalytic approaches to religion, providing new evidentiary frameworks of explanation. While there is as yet no final answer to this question, many neurobiologists concur that while human experience is a product of mind and thus generated by brain activity, it would be misleading to “reduce” mind as strictly coterminous with brain function. A growing number of neurobiologists acknowledge the importance of “affect” – emotions and feelings – along with cognitively based symbolic meaning-making activity as integral to understanding the complexity of human experience (Damasio 1994, 2003; Panksepp 1998; Solms and Turnbull 2002; d’Aquili and Newberg 1993, 1998). While the psychology of religion must take seriously neurobiological accounts of mental states that are experienced and described as “mystical,” “unitive,” “ecstatic,” or “transcendent,” it is also important not to lose focus on the psychological significance of these phenomena.

It is important to recognize that the higher, more complex cognitive functions of mind (associated with conscious thought, logic, and rationality) are not independent of the ancient, primitive emotional base or core structure of emotions which could not exist without them (Damasio 1994, 2003; Panksepp 1998).

William James (1902/2004) anticipates Freud in highlighting the importance of the unconscious processes and powerful subjective feelings that underlie and organize religious experiences. James disagreed with a “medical materialist” approach that exclusively identifies subjective emotional experience with brain function. The growing influence of neuroscience on the study of religion is directing attention to dissociation

and altered mental states as central to explanations of the origins of religion. Michael Winkelman (2004) describes shamanic ritual as organized through neural mechanisms derived from psychobiological dynamics associated with alternate states of consciousness that involve the activation of the “paleomammalian” part of the brain that exists prior to the later development of higher cortical function in humans. When religious practitioners such as shamans enter an altered state of consciousness, their vivid emotional and visionary experiences are part of an upward movement or influence of subcortical emotional circuits on the higher reaches of the brain which for the duration of the experience are stronger than the “top-down controls” of the higher cerebral functions (Panksepp 1998). Brian Hayden (2003) theorizes that in altered states of intense emotional arousal, such as those associated with religious or spiritual ecstasy, neural mechanisms may relax neocortical controls over older brain functions, resulting in auditory and visual experiences that are otherwise “blocked” from the awareness of ordinary consciousness. This is similar to Freud’s argument that unconscious emotional impulses gain access to the upper reaches of the mind in dream states, when the ego’s censoring function is relaxed in sleep.

Cognitive archaeologist David Lewis-Williams’s (2002, 2005) studies of cave paintings from the Upper Paleolithic and Neolithic periods (40,000–12,000 BP) utilize some of the insights of neuroscience in support of his claim that the shamanic beliefs and practices of early hunter-gatherer societies constitute the origins or “ur-religion” of humanity. For Lewis-Williams, belief in supernatural beings is an innate property of the human mind. Given that *Homo sapiens sapiens* populations of thirty to forty thousand years ago were anatomically the same as contemporary humans, with the same brains and nervous system and cognitive abilities, Lewis-Williams concludes that the widespread, cross-cultural existence of shamanism was not the result of “diffusionism.” Rather, the common features associated with shamanic ritual practice in a variety of historical and cultural contexts is based on a universal neurological inheritance

that organizes and supports the human capacity for altered states of consciousness that facilitate the auditory and visual hallucinations of spirit worlds.

Winkelman (2004) agrees, going so far as to state that shamanism lies at the foundations of the evolution of human cognition and spiritual experience. Lewis-Williams's analysis of parietal rock art theorizes that ancient human beings were motivated to enter deep caves where they would enact rituals that facilitated production of visions of the spirit world that they painted on the cave walls. The mind within the cave cannot for Lewis-Williams (2002) be separated from those symbolic caves that were already present within the minds of the individuals who created the paintings. In making these animal images and patterns, the shaman and his followers imposed the contents of their minds on the material world. The cave paintings represent the already neurologically and culturally constituted images of other worlds and realities whose power ancient humans could experience and even regulate for the good of the community. Rituals conducted in the darkness and isolation of the sensorily restricted atmosphere of the caves facilitated the dissociative mental states necessary for visionary experiences, where the rock walls transformed into permeable boundaries between the world of humans and otherworldly spiritual powers. Shamans became socially recognized "experts," ritual practitioners who could "travel" between the planes of a tiered cosmos, facilitating the passage of the spirits of the dead from this world to the next. Their communities believed in their ability to harness the powerful forces of the spirit world for healing the sick, controlling animals, and changing the weather (Lewis-Williams 2002).

Shamans became powerful religious and political leaders with high social status. People could easily believe in the shaman's visions of other worlds in part because of their own shared neurological capacities for altered mental states, such as experienced in dreams and other milder forms of dissociation. Lewis-Williams argues that the universal functioning of the human brain

underwrites and supports the vast culturally diverse expressions of religious experiences of spirits, deities, and transcendent worlds. Part of his argument relies on empirical data derived from modern laboratory studies of human beings in various states of sensory deprivation, including hypnagogic and hypnopompic experiences and their associated entoptic images. The repetition of the markings, swirling patterns, and images found in ancient cave sites bear remarkable similarity to those generated in altered states of consciousness induced in controlled settings (Hewitt 2012). Because of the similarity of these images, and because the brains of contemporary humans are closely similar to those of *Homo sapiens* of the Upper Paleolithic, Lewis-Williams interprets neuroscience as establishing the existence of a universal functioning of the human brain (2002) that explains the origins and widespread persistence of human religious experiences, beliefs, and practices. A number of scholars agree with Lewis-Williams that the wholly interior psychological and emotional experiences of early human beings, along with their efforts to make a shared social and cultural sense and meaning of the contents of their minds, constitute the birth of religion.

Some authors describe intense emotional experiences of transcendent or spirit worlds in terms of Absolute Unitary Being (d'Aquili and Newberg 1993) whose features include the temporary erasure of self-other distinctions, blissful feelings, experience of God, the Void or Nirvana, or Ultimate Other, where an individual may feel taken over or controlled in ways that may vary from ecstasy to terror. This may be compared to Freud's description of an "oceanic feeling," the origins of which he attributes to the early pre-Oedipal phase of primary narcissism. Freud's conceptualization of the dynamic operations of the Unconscious fit well with contemporary neuro- and psychobiological accounts of how subcortical influences put pressure on the higher cortical functioning in certain circumstances. A number of neuroscientists confirm Freud's assertion of the existence of the unconscious regions of mind (Solms 1997;

Solms and Turnbull 2002; Westen 1999). An important feature of the Freudian Unconscious that is relevant to contemporary neuroscience asserts that memory traces of the most primitive human experiences remain preserved within the mind along with conscious awareness. “What has once come to life clings tenaciously to existence. One feels inclined to doubt sometimes whether the dragons of primaeval days are really extinct” (Freud 1937).

Like contemporary neuroscientists, Freud conceived of mental life qualitatively in terms of a representational process derived from bodily based, sensory perceptions (Solms and Neresian 1999), believing that psychoanalysis would one day find its point of contact with neurobiology (Freud 1913).

Contemporary neuroscientists are expanding the cognitive focus of their discipline beyond attention, memory, perception, and language to include emotion. This is promising for the emergence of a broadened interdisciplinary *neuropsychanalytic* psychology of religious experience that attempts to make sense of universally shared, neurologically based unconscious, affective processes that underlie, organize, and give rise to the diverse range of historically and culturally specific religious experiences, beliefs, and actions. A neurobiological theory of brain/mind that is open to dialogical interaction with disciplines such as psychoanalytic psychology allows for theorizing ways in which neurobiological systems that support – but are not dedicated to – religious experiences, beliefs, and actions are universal features of a common human neural structure which are responsible for the origins of what has come to be known as religion.

## New Age Movement

Ann Gleig

Department of Philosophy, University  
of Central Florida, Orlando, FL, USA

The New Age burst into public consciousness in a buzz of media attention around crystals, reincarnation, and channeling in the 1980s, but it has its immediate roots in the 1960s and 1970s counterculture. Tracing this history, Wouter Hanegraaff (1998) and Steven Sutcliffe (2003) have delineated two understandings of the New Age: the New Age in the Strict Sense and the New Age in the General Sense. The Strict Sense New Age refers to an apocalyptic/millennial movement that emerged in the 1940s and 1950s when a number of Anglo-American groups announced they were receiving messages from intelligent beings from other planets who were coming to bring a New Age to the Earth. These groups believed there would be an apocalyptic catastrophe followed by a new era of spiritual evolution, peace, and prosperity with only those attuned to “new age” consciousness surviving. Predominantly populated by white, middle-aged, and elderly adherents and characterized by a culture of austerity and morality that emphasized community and service, these groups reflected a strong British influence.

In response to the absence of an actual apocalypse, the Strict Sense New Age underwent a radical shift, internalizing the apocalyptic narrative and relocating the New Age to the inner psychospiritual landscape. Hence, from the 1970s onwards, the New Age was revisioned as the replacement of an old, rationalistic, negative mind-set with a radically new state of human consciousness – famously characterized as the “Age of Aquarius.” Now promoting a constructive and participatory attitude, these Utopian communities and discourses were assimilated into the wider counterculture identified by sociologist Colin Campbell (1972) as the “cultic milieu.” This refers to a plethora of diverse new religious movements ranging from those stable

entities with definite organizational structures, doctrines, and rules of conduct to much more fluid, inclusive, and undemanding groups. Attracting individuals who are dissatisfied with mainstream options, cultic groups are often in flux and members may participate in more than one group. According to Hanegraaff, it was when the cultural milieu became conscious of itself in the late 1970s as constituting a more or less unified movement that the New Age Movement in the general and popular sense was born.

The General Sense New Age has a dominant American influence, from New Thought to the more recent human potential movement, and has significantly assimilated Asian religions. Adherents tend to be middle class, mostly Caucasian, and value emotional expressiveness, body awareness, and the belief that world transformation is dependent upon individual transformation. Classic texts include David Spangler’s *Revelation: The Birth of a New Age* (1976), Marilyn Ferguson’s *The Aquarian Conspiracy: Personal and Social Transformation in the 1980s* (1979), Shirley MacLaine’s *Out on a Limb* (1986), and James Redfield’s *The Celestine Prophecy* (1995).

Having no founder, no set canon, binding creed, or definite organization structure, the General New Age is broader and more diverse than what is normally understood as a religious tradition, yet one can still identify a number of shared themes/beliefs, practices, and general characteristics. Hanegraaff names one of the defining marks of the New Age as “the psychologization of religion and the sacralization of psychology,” in which personal growth and religious salvation merge to such an extent that it is difficult to distinguish between the psychological and spiritual. He delineates two major lineages for this occurrence: American metaphysical movements and Carl Gustav Jung. The American lineage is divided into two separate but related streams. The first, the metaphysical movements, includes Mesmerism, Mind-Cure, the New Thought movement, and positive thinking/self-help popular psychology. The second, functionalist psychology embraces William James, Carl Rogers, and humanistic psychology.

The second major source is Jung who Hanegraaff sees as the link between traditional esotericism, Naturphilosophie, Romanticism, and the New Age. Jung both psychologized esotericism by presenting an esoteric worldview in psychological term and providing a scientific alternative to occultism and sacralized psychology by filling it with the contents (e.g., archetypes, the transcendent function, and individuation) of esoteric speculation rather than empirical realities. The result was a theory which allowed people to talk simultaneously about God and the psyche, thus anticipating and producing the major themes of the New Age.

Fundamental to these themes is a “metaphysics of mind,” a philosophical idealism in which the distinction between mind and matter and subjective and objective reality is undermined. With mind or consciousness as the ultimate reality, the psychological takes on an unprecedented importance; the psyche is celebrated as the locus of the sacred and reality is seen as created by the mind. This leads to a sacralization of the Self, not the conventional individual ego, but rather an inner divinity, a Higher Self which is the source of all value and meaning. Unlike Asian monistic mysticism which aims at the dissolution of individual consciousness in the universal, impersonal consciousness of the Self, the New Age champions the infinite evolution of a unique individual soul/Self. A core mythology of the New Age is the journey of the Self through many incarnations towards increasing levels of spiritual knowledge with the world being embraced as a school for spiritual growth and life situations framed as being pre-chosen by the Self according to the lessons it needs to learn.

The basic ontology in the New Age is a Neoplatonic model of a hierarchical cosmos with a myriad number of spiritual beings existing on ascending planes of existence, each corresponding to progressively higher levels of spiritual development and culminating in an impersonal monistic Absolute. Pantheism, the concept that the Absolute is identical with the natural universe, and Panentheism, the belief that the Absolute contains but is not reducible to the natural world, are also popular models.

Most importantly, the New Age rejects dualistic and materialist ontologies in favor of holistic and interdependent models.

In terms of practices, Hanegraaff has helpfully grouped an incredibly broad range of activities, from aromatherapy to astral projection to channeling to various forms of “energy work,” into four major streams: channeling, healing and personal growth, New Age science, and New Age Neopaganism. Particularly significant to psychology is healing and personal growth. Hanegraaff has divided the wide array of alternative therapies falling under the broad rubric of healing and personal growth into two main currents: the holistic health movement and the human potential movement. Mention should also be made of “prosperity consciousness,” those American healing systems that claim that the full attainment of health and spiritual well-being includes material prosperity and utilize positive thinking and affirmation techniques to this end. Many of these systems and texts fall under the rubric of “popular psychology,” with a classic example being Norman Vince Peale’s bestseller, *The Power of Positive Thinking* (1952/1990).

Fundamental to the holistic health movement is the belief that each human being is a unique, holistic, interdependent relationship of body, mind, and spirit and that healing is achieved through an alignment with the underlying power of the universe. It stresses the central role the mind plays in healing, believing that psychological conditions can both cause and cure physical illness. Hence, the individual is challenged to discover and take responsibility for the deeper meaning of his/her illness and use it as an instrument for inner growth. Varieties of holistic healing include acupuncture, biofeedback, kinesiology, homeopathy, iridology, reflexology, massage, and bodywork.

Utilizing a range of therapies such as Holotropic breathing, encounter groups, gestalt therapy, Neo-Reichian bodywork, bioenergetics, and shamanic consciousness, the basic goal of the human potential movement is to help people connect with and integrate suppressed and alienated parts of the self in order to develop their full human potential. It is strongly associated with

Abraham Maslow's humanistic psychology with its self-actualization needs and promotion of B-values such as wholeness, aliveness, and uniqueness. With the increasingly assimilation of Asian mysticism, the movement has shifted more and more into the spiritual sphere, reflected in the establishment, in 1969, by Abraham Maslow and Anthony Sutich, of the "fourth force" of psychology, transpersonal psychology, in order to scientifically investigate altered states of consciousness, such as unitive consciousness, peak experiences, mystical experiences, self-transcendence, and cosmic awareness. Seeing Western psychology as only addressing the lower levels of the psyche and being inadequate for dealing with the higher or transpersonal levels which have traditionally been the province of spiritual traditions, particularly Asian ones, transpersonal psychology aims for a more integrated approach to the human being through a synthesis of Western psychology and Asian spirituality.

It should be noted, however, that although transpersonal psychology is commonly associated with the New Age and while they share many overlapping themes, transpersonalists have distanced themselves from the New Age. This is because transpersonal psychology is primarily an academic discipline (recognized by the British Psychological Society but not yet the American Psychological Association) rather than a spiritual movement, and many transpersonal psychologists have critiqued what they perceive as a superficiality and lack of rigor within the New Age movement.

Some general characteristics, mirroring the themes outlined above, have also been identified across the New Age. First, the General Sense New Age tends to be highly *individualistic* where each person is seen as the highest authority for themselves and as the final arbiter of truth and *experiential* with personal experience valued above tradition or dogma. Second, New Age practice tends, at least on the surface, to embrace a *democratic* position that rejects, or is highly suspicious of, various forms of authority, with most New Age practice claiming to be available for all individuals. Third, the New Age tends towards the *relativistic*, where contrasting

claims about ultimate reality are seen as "different," rather than "better or worse" or "true and false." This relativism legitimates the incredible diversity and *syncretic/eclectic* nature of the New Age, whereby elements from different traditions may be simultaneously embraced and/or combined into new and innovative forms of spiritual activity. Finally, this eclecticism exists hand in hand with *perennialism*, where all spiritual traditions are seen as being paths to and manifestation of a common sacred Absolute.

The New Age has come under increasing scholarly attention with a growing number of sociological, anthropological, and historical academic studies produced. In a groundbreaking sociological study, Paul Heelas (1996) describes the New Age as Self-Spirituality: a spiritualized form of humanism that sacralizes the modern values of freedom, authenticity, equality, and the uniqueness and goodness of the individual. From a history of religions perspective, Hanegraaff's (1998) seminal study of the New Age identifies it as "secularized esotericism," the transformation of traditional esotericism as it adapted to a modern, scientific, and disenchanted world. He identifies four mirrors of secular thought through which traditional esotericism was refracted: scientific materialism and positivism, the comparative study of religion, evolution, and modern psychology. In a later analysis, he draws attention to the impact of the capitalist market economy on spirituality during the 1980s and 1990s which has created a "spiritual supermarket," where religious consumers pick and choose those spiritual products which suit their own needs.

There have also been a number of attempts at psychological profiles of New Ager. These are helpfully summarized by Daren Kemp (2004) in his meticulously researched overview of different etic and emic approaches to the New Age. The most prominent psychological claim is that New Age thinking is regressive and narcissistic. Christopher Lasch (1987) states that the New Age attempts to restore the symbiotic state of primary narcissism by denying the reality of the differentiated material world. Similarly, M. D. Faber (1996) argues that New Age thinking

is a regression to primary narcissism in which the adult is returned to an infantile state of omnipotence, magical wish fulfillment, and merger with the pre-Oedipal mother. Leading transpersonal theorist Ken Wilber has described the type of argument employed by Lasch and Faber as examples of the “pre/trans fallacy,” in which prepersonal (narcissistic) and transpersonal (genuinely transcendent) experience is conflated. However, Wilber (1991) himself estimates that four-fifths of the New Age is prepersonal and only one-fifth is transpersonal.

In conclusion, due to its associations with commercialism and predominantly negative media attention, the term “New Age” itself has fallen out of favor. This is reflected in both the academic and commercial worlds: “alternative spirituality” is becoming the preferred term in scholarship, and it is more common in bookstores to see sections marked as “Spirituality” or “Mind-Body-Spirit” than “New Age.” At the same time, practices and themes associated with the New Age are gaining in their mainstream acceptance and integration into existing social and religious structures (e.g., the growing attention to “holistic” practices in mainstream medicine or the increasing use of Asian meditation in various forms of Christian practice). From this perspective, there is little evidence that the practices and concerns of the General Sense New Age are diminishing; indeed, if anything, the movements and practices that fall under the rubric of the New Age are growing and seem sure to shape future religious landscapes.

## New Polytheism

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

*The New Polytheism*, (1975) by David Miller, grew out of the God is Dead movement of the

1960s and 1970s. Professor of Religion at Syracuse University, Miller proposed that, although the monotheistic religions are losing their theological impact, Westerners still think monotheistically, but only on the surface. What does it mean to think monotheistically? It means to think that, like the dogma of one God, there is an intellectual game afoot that there is only one single truth, one valid method of knowing, one dominant culture, and others are wrong. Thus, some religions claim exclusive dogmatic truth, and others are “heathen.” Scientism today adopts the monotheistic tactic and claims that science is the only valid method of knowing the truth (Stenmark 2001, p. vii). Monotheistic fundamentalism makes self-righteous aggressive intrusions into public policy. This exclusivism has brought with it many battles, such as the long-standing monotheistic efforts to eradicate the world’s many ancient religions. But polytheism has continued to operate in the dark recesses of the collective unconscious, as unrecognized archetypal forces driving wars (called Ares in Greece, Mars in Rome), monarchies (Zeus), sexual passions (Aphrodite in Greece, Venus in Rome), even technological inventiveness (Hephaestus and Daedalus in Greece). This awareness has been behind some of the postmodern critiques that conscious logic and ego are not the arbiters of truth as they claim to be. The underworld of polytheism is always moving and shaking from below and is now becoming conscious again.

Rumbling up from the collective unconscious is a new view of polytheism, far from that of the Classics professors who saw the old gods and goddesses as museum pieces. Christian monotheism absorbed and reshaped both Jewish monotheism and Greek reasoning. But now the archetypal powers below the ego’s monotheistic surface are making themselves known as mythic images behind conscious thought.

The twentieth-century psychologist most open to the reality of religion, Carl Jung showed in his archetypal psychology that we can again look at myths as expressions of poetic, *imaginal thought* once denied by rationalistic thinkers. Jung showed that myths are not just the opposite of logic, but their reappearance expresses the very soulful

yearning that rationalism ignores or denigrates, leaving people alienated, shallow, and unable to grapple with life’s deeper meanings. But the myths and divinities whose images Jung interpreted symbolically reveal the soul’s deep shadows, lovers, children, warriors, gods and goddesses, and oh, how they have a subtle way of grabbing your attention. So religion is conveyed in many ways by myths that tell soul’s truths, and the thesis of the *The New Polytheism* is that these gods and goddesses are not irrational “fictions” but symbols of living psychic forces, images of deep ontological beings. They have not gone away, although they were suppressed by monotheistic religions. They have always been working in the dark underworld, the basement of our collective souls. The problem has been that monotheistic rationalism has made it difficult to interpret the ancient mythic images as truths of the soul.

Twentieth-century psychoanalysis opened the door to a reawakened hermeneutic, the interpretation of dreams as sisters of myths, both inhabitants of the polytheistic genre. When dreams and myths are reawakened in dream-oriented psychoanalysis, especially with Jungian influences, then we can see how poetic talk about Aphrodite or Mars, for example, is an expression of lyrical or patriotic thinking of the collective soul about love and war. Aphrodite images the magnetic attraction of passionately falling in love, and Mars symbolizes the angry and fearful power behind the hugely expensive military-industrial complex. Polytheistic gods and goddesses are not just fluffy poetic images pointing to real secular powers in a materialistic world. They are images of dynamic *realities* in a far broader worldview that includes soul’s powers.

These powers are not just “internal,” “subjective” feelings, as the industrial worldview imagined, in order to strip the world of soul so it can be called “objective” and exploited and destroyed for secular power and profit without regret. This is a dying mythic worldview, whose industries and politics in the twenty-first century became openly reactionary, defending its dirty energy and dirty tactics, denying its role in creating the destructive side effects of profit-driven industrialism: threatening global warming and

sickening pollution. The new polytheism is a refreshing, soulful, psychologically astute voice of reawakening consciousness of the wider range of reality, in which “thinking” has many voices, including and psychologically interpreted mythic images. The monotheistic voice echoing from the past, that there is only one way of speaking “truth,” is fading, as the polytheistic voices become louder, in religion, psychology, and politics.

Miller points to many ways that polytheistic voices are appearing today. He uses the classical Greek gods and goddesses, not just because we have so many of their texts but because they are major roots of the Western tradition:

The Gods and Goddesses are not cute allegories and analogies, figures of speech . . . Rather, they are the empowering worlds of our existence; the deepest structures of reality (Miller 1975, p. 80).

The new polytheism brings many benefits. It can enable a lot more tolerance. In the study of world religions, that is already underway, tolerance of other people’s religions has support, rather than monotheistic intolerance. “There is no orthodoxy in polytheistic theology” (Miller 1975, p. 73). In the struggle for the acceptance of diversity, polytheism supports various lifestyles without a single monotheistic “normal” psychology. Polytheistic theology supports a theopoesis in psychology, not a single-minded rationalism of industrialism’s ego psychology. Polytheistic theology will be a political theology, but in the way of Athena, who uses persuasion (*Peitho*), meaning not rhetorical distortion, but acceptance. A polytheistic theology will be of the spirit, but in the multiple-meaning style of Psyche. It will be analytic, but not in the path of ego’s single-minded logic, but in Apollo’s way of saying “know thyself” (Miller 1975, pp. 72–76).

Since Miller wrote in 1975, the monotheistic religions, especially in their most fervent conservative forms, are being embarrassed and weakened by curtains being pulled back on sexual abuses rooted by Aphrodite’s passions or financial shenanigans of the “prosperity gospel,” cheered on by Hermes the trickster and Pluto, god of wealth. The bloated US military-industrial

complex and angry terrorists abroad are driven by Mars’ angry, psychologically defensive warrior spirit and supported by the conservative wings of monotheistic religions, who ignore their religions’ teachings about peace and compassion.

Polytheism is expanding because Jung showed that divinity can be symbolized in many ways:

The Self can appear in all shapes, from the highest to the lowest, inasmuch as these transcend the scope of the ego personality. . . elephant, horse, bull, bear. . . flower, tree. . . mountain and lake (Jung 1959, p. 356).

Jung’s archetypal Self is monotheistic on the surface, as the regulating archetypal center of the psyche. He saw Christ as a major monotheistic version of the psychological Self. But he also stressed that it can be symbolized in endless ways – gods, goddesses, animals, plants, planets, anything that the collective unconscious throws up that is revered, even unconsciously: wondrous night skies, beautiful waterfalls, or cinematic “stars.” This particularly helped open the door much wider to feminist and ecological explorations. But to see anew the sacred dimension in our souls and in the world is *not* to ignore suffering and death. Nor can we minimize the new *ethical* distinctions to be made about our relations to each other and to the world. We must still distinguish between crude and refined psychological energies. But these will be made with wider horizons. We are already seeing these ethical shifts in the feminist and the ecology movements.

A leading trend in archetypal psychology today is the feminist study of goddesses that is producing a large number of books. After Miller’s *New Polytheism* was published, women have been influenced, not only by higher education and contraceptives but also by the spontaneous explosion of the polytheistic psyche into feminism’s search for ancient archetypal goddess guides. Jungian analyst Christine Downing (1984) wrote *The Goddess: Mythological Images of the Feminine*. Jungian analyst Jean Bolen (1984) wrote *Goddesses in Every Woman*. Jungian analyst Sylvia Perera (1981) wrote *Descent to the Goddess: A Way of Initiation for Women*, about the Babylonian Ishtar/Inanna. Merlin Stone (1976) uncovered ignored

archaeological evidence of ancient goddesses in *When God Was a Woman*. Clarissa Pinkola Estes (1992) wrote the fiercely poetic *Women Who Run With the Wolves*. Starhawk (1976) wrote *Truth or Dare*, using Inanna as a goddess inspiration for women's power. New Buddhist women leaders are described in Ellison Findly's (2000) *Women's Buddhism, Buddhism's Women*. Miranda Shaw (1994) wrote a bold book *Passionate Enlightenment* about Tantric sexuality and women.

On the men's side, Jungian analysts Robert Moore and Douglas Gillette (1990) wrote *King, Warrior, Magician, and Lover: Rediscovering the Archetypes of the Mature Masculine*. They argued that the domineering, abusive, patriarchal masculine view attached to monotheism is a boyish, immature defensive masculinity, and polytheistic images of mature masculinity can redirect men toward a mature, refined manhood.

The new polytheism has also opened the door to ecological spirituality and psychology. Mother Earth (Gaia in Greece) has been raised to higher levels of consciousness and named in the reawakening of a spiritual and psychological view of nature's sacred side. Monica Sjo and Barbara Mor (1987) wrote *The Great Cosmic Mother: Rediscovering the Religion of the Earth*. Some authors in monotheistic traditions have called for a renewed sense of nature as filled with sacredness, such as Christians Thomas Berry (1988) in *Dream of the Earth*, and Matthew Fox (1991) in *Creation Spirituality*. Muslims such as Ibrahim Abdul-Matin (2010) wrote *Green Deen*, and Seyyed Hossein Nasr wrote in McDonald's (2003) *Seeing God Everywhere*. Jewish Arthur Waskow (2000) wrote *Torah of the Earth*, and Ellen Bernstein (2005) wrote *The Splendor of Creation*. Eco-psychology is described in Theodore Roszak's (1992) *Voice of the Earth* and in Ralph Metzner's (1999) *Green Psychology*. World religion scholars such as Mary Evelyn Tucker (2011) have written many books on eco-spirituality, such as her book and film with Brian Swimme *Journey of the Universe*. Buddhist ecological thought is reflected in Allan Badiner's (1990) *Dharma Gaia*. Indigenous peoples

around the world have called for renewal of their sense of the sacredness of the world, as in the Haudenosaunee (Iroquois) (1978) *Basic Call to Consciousness*. All these and others are singing the song of Mother Earth, in which life participates – one of polytheism's oldest voices. Numerous books have been written about a blossoming new consciousness of human-animal relations, such as Penelope Smith's (2004) *Animal Talk*. New consciousness of human-plant relations has also blossomed into many books, such as Clive Hicks' (1990) *Green Man: The Archetype of Our Oneness with the Earth*. Once the basement door of polytheism is opened, out fly the many new ways of naming sacred soul, sacred earth, and sacred cosmos.

## New Religions

Benjamin Beit-Hallahmi  
Department of Psychology, University of Haifa,  
Haifa, Israel

## The Phenomenon

Right now, there may be more than 10,000 living religions in the world, each promoting a separate

belief system and having its own organizational structure. What makes a religious group unique are its own distinct beliefs, practices, authority structure, and leadership. Quite often the group's history starts with a new claim to authority on the part of a new leader.

As used here, the term new religions, or new religious movements (NRMs), refers to groups founded after the year 1750. In recent years, such movements have been examined under the rubrics of religious experimentation, marginal religions, or oppositionist religions.

Quite interestingly, most of the religions that have ever been in existence were founded after 1750. The modern age, while being marked by secularization, is also marked by the appearance (and disappearance) of thousands of new religious movements. This may actually be directly related to secularization and the decline in the authority and political power of major historical religions. Democracy and the idea of freedom in religion and political expression create a free market for religious entrepreneurs. While declaring oneself to be in possession of a new religious truth was, in most parts of the world, quite risky or fatal 300 years ago, it carries little risk in the modern world.

In looking at any new religion, we should focus on the most important thing in forming its unique identity, and that is its beliefs. A belief system makes a movement distinct, and these beliefs change little over time, as opposed to other aspects of a group's history, which are likely to change, such as organizational structure. Many aspects of a group's history may be in dispute. Such facts as membership numbers are changing and often impossible to determine. Members of new religious movements, which are historically and developmentally young, show high levels of involvement and commitment, unlike many in the "old," historical religions, and this attracts much attention. Some groups have received much media attention around scandals and crimes. This is because many of these groups deliberately and explicitly challenge existing traditions.

Looking at a particular religious group, our diagnostic and predictive efforts are severely

hampered by the complexity of interactions between beliefs, individual members, leadership, and the surrounding environment. A new group's claim to originality and uniqueness in its beliefs may lead to what the world around it perceives as deviance, leading to friction and arousing resistance. What we have learned over the years is that predicting the future fate or development of a religious movement is impossible. Groups that today seem marginal may rise to prominence, while groups which are at the moment well known decline into obscurity. The history of new religious movements is replete with such cases. Developments in religion today are not just international but global, and belief systems cross borders easily. A little known group in South America or Africa may gain followers in Europe or the United States.

### Research on NRMs

Some NRMs have attracted the attention of researchers in psychology. Such was the case of the group described by Festinger, Riecken, and Schachter in *When Prophecy Fails* (1956). The group was founded by a woman named Marian Keech in the study, claimed to have received messages from a space being named Sananda, a source that was both extraterrestrial (i.e., outer space) and divine (Jesus in Christian tradition) about the coming end of the world. On a specified date, which she announced to the world, all of humanity would perish, save the group membership, who would be taken away in a spaceship. This date was announced (December 1953), and group members expected the end of the world and their own salvation by a spaceship sent by Sananda. After the prophecy failed, some of the group members maintained their faith. The group did not survive this crisis, but its disintegration was not immediate. Actually, the disconfirmation caused some committed members to proclaim their faith even more vigorously by proselytizing.

Mrs. Martin claimed that the world was saved by their full faith. She also made additional predictions about various disasters, which also failed to materialize. These events took place in

Chicago in late 1953, but the leader continued her activities into the 1980s.

There are cases where prophecy failures have not led to a visible crisis or collapse, possibly because the prophecies are only subject to disconfirmation in terms of timing. Thus, a prediction about the coming end of the world in 1984 may be reinterpreted as true in principle and only temporarily delayed by other events. A belief system may be flexible enough to accommodate such failures. Some groups have survived disconfirmation through some effort, but in other cases a direct disconfirmation of claims leads to crisis and sometimes decline or disintegration.

New religions in Western societies, often subject to external opposition, are mostly unstable groups with unstable members, which need extraordinary luck and leadership to survive and prosper. NRMs suffer from high rates of defection, and many religious movements have been started through schisms in existing groups.

We should pay attention to the special situation of NRMs as belief minorities in modern society, which dictates certain behaviors to the groups and their members. This means that NRMs are sometimes not completely truthful about their doctrines or practices, out of concern for possible majority reactions. At other times, deception in fund-raising, practiced by some groups, may be justified in religious terms. New religious movements (NRMs) are groups in which membership, in most cases, is achieved, rather than ascribed, through voluntary conversion and recruitment.

Numerous examples of millennial movements, which followed on the heels of social dislocations, catastrophes, plagues, famines, and massacres, are known. In preindustrial societies, NRMs in recent times have been known as "crisis cults," including so-called cargo cults and ghost dances. Cargo cults and ghost dances represent desperate efforts to cope with terrible realities. The Sabbatian movement in the seventeenth century is another example. It was a messianic upheaval unprecedented in Jewish history, which engulfed the whole Jewish world at the time. A crisis may sometimes lead to a complete surrender, and religious movements may express

resignation and hopelessness. Some religious movements are attempts to respond to crisis by revitalizing collective faiths. An example of a successful revitalization movement is the case of the Seneca tribe in North America, suffering every possible disaster since 1650, and a total disintegration at the end of the eighteenth century, which was reborn in the nineteenth century thanks to a religious vision.

When religious renewal movements appear in modern societies and attract individuals who are sometimes quite well-off, their growth has been interpreted as a response to what has been called ethical and psychic deprivations. In modern society, joining an NRM has been interpreted as a response to crisis situations and individual alienation, relieved in the religious group setting with its promise of salvation.

Among historical cases of crisis religions in modern society, we should mention those in the United States in the nineteenth century, with a wealth of private and collective salvation movements, the rise of Spiritualism, and the founding of so many new religions (e.g., Christian Science, Mormonism, Seventh-Day Adventists, Theosophy), and the United States in the 1960s, another Great Awakening of salvation movements.

When dealing with NRMs, we have to explain not only recruitment and growth but also disaffection and failure, which are quite common. New religious movements in modern societies receive much attention, which is out of all proportion to their success in recruiting members or their overall growth. Many religious groups fail to grow because of their opposition to society around them, which leads to their encapsulation. They are able to survive, but not grow. Another problem NRMs face is that the number of seekers, motivated or open to identity change in any society, is limited, for social and psychological reasons. There are cases where joining an NRM will lead to improved individual functioning and the group environment is clearly therapeutic. There are also opposite cases of deterioration and pathology in individuals and groups where there is clear evidence of destructive and self-destructive behavior.

NRMs are often highly vulnerable, always struggling, and seeking legitimacy while internally preoccupied with issues of authority, leadership, and identity. New religions face both internal and external tensions as they struggle to achieve survival and stability in an environment that is often or always indifferent and nonsupportive and sometimes hostile. This struggle, often marked by desperation as outside pressures mount, colors the psychological development of both the group in its members in most new religions. What defines the dynamics of many NRMs is the actual presence of the founder or founders and the founding generation of members. Most groups are relatively small and so relationships and activities are more intense and personal. Because many members in NRMs are converts and the group relatively young, we can observe high levels of ego involvement, which do not characterize most members of historically established religions. While in “old” religions personal involvement takes the form of an identity label and often little else, in NRMs belonging is central and salient in terms of identity and action, and members typically devote much of their energy, time, and money to the group.

### **Charisma in NRMs**

In terms of their organizational character, NRMs are based on charisma rather than any routinization or evolved hierarchy. In many new religions, leadership is personal and charismatic. Charisma is something that we may find hard to predict but easy to recognize. It is needed to attract new recruits to a small group and keep them and maintain the leader’s authority. In most cases, founders of NRMs have sufficient charisma to attract relatively the numbers of followers necessary to keep the group alive. An effective leader, in this case and in others, creates a mutually empowering relationship with his followers, at least for a while.

The charismatic and direct nature of leadership, in the absence of articulated structures involving multiple levels of hierarchy, will lead to internal tensions. The idea that leaders are

chosen through the power of revelation or religious creativity legitimizes schisms. Being a successful leader facing both internal tensions and a hostile environment is a challenge rarely met. It requires creativity in the midst of competition and resistance, but some leaders, and some groups, have shown remarkable resilience.

One of the more interesting cases of leadership in a new religious movement in the face of adversity and opposition involves the tragic early history of the Church Of Jesus Christ Of Latter-Day Saints (LDS), informally known as Mormons, and sometimes as LDS, "Latter-Day Saints," or "Saints." This Christian-polytheistic millenarian group was founded by Joseph Smith, Jr. (1805–1844), in 1830 in northern New York State. At age 14 Joseph Smith declared he had spoken with God. Later he had other visions, during some of which, he claimed, an ancient book, written on four tablets, was given to him. This text has become known as *The Book of Mormon* and has given its name to the Church.

Smith announced to the world that he was "seer, translator, prophet, apostle of Jesus Christ, and elder of the church." According to some reports, Smith was crowned as a king in 1844. In 1835 12 apostles were appointed and sent to gain converts in the United States. In 1835 Joseph Smith also prophesied the Second Coming. In 1837 the first Mormon missionaries arrived in Britain and met some success, as well as some prejudice.

In its early years, the movement encountered much violence because of its unconventional beliefs and its advocacy of polygamy, which was first renounced in 1890 and then rescinded in 1904. Opposition forced the group to move first to Ohio, then to Missouri, and then to Illinois, where the city of Nauvoo was founded in 1840. In 1844 Joseph Smith and his brother were killed by a mob there. Again the members embarked on a long voyage away from the Eastern United States, led by Brigham Young (1801–1877), and settled in Salt Lake City. In 1850 Brigham Young became the first governor of the territory of Utah, which became a state in 1895.

Over the past few decades, much attention has been given to tragic cases of violence in NRMs, including the murders and terrorist attacks by Aum Shinrikyo in Japan and mass killings in the Peoples Temple, the Branch Davidians, the Solar Temple, and Heaven's Gate. The victims often included dependents of group members and not just members. Deviant and destructive groups such as Aum Shinrikyo and the Order of the Solar Temple must be viewed against a background of severe personal and social pathology related to histories of vulnerability and deprivation among members. When it comes to evaluating the leaders in these cases, using the psychological (hypothetical) systems of individual personality and individual psychopathology in which we analyze our observations, one prominent issue is that of the limitations psychopathology puts on performance. Pathology must limit the ability to carry out complicated acts of destruction, or self-destruction, must be limited. Still, we see cases of religious leaders where presumed insanity still leaves much room for successful leadership and organizational talent, as well as fairly sophisticated acts of violence, which involve planning and preparation.

## Summary

The impact of NRMs is much narrower than often perceived. They are small and marginal and touch the lives of fewer than 1 % of all religious believers. Most are so unstable as to be ephemeral. A look at the history of twentieth century, NRMs is quite sobering in this respect. Movements that once seemed on the verge of becoming global powers are now remembered only by historians. Moral Rearmament (the "Oxford Group Movement"), the best-known NRM of the 1930s in Britain and the United States, is today totally forgotten. The Jesus Movement of the early 1970s in the United States, with its hundreds of communes in major US cities, has similarly disappeared. It seems that high utopian excitement cannot be

maintained for long and that adolescence is more of a factor than is often realized. When enthusiastic members get older, commitment wanes in favor of more conventional pursuits. Nevertheless, like the phenomenon of conversion, NRMs deserve, and get, attention, just because of their rarity and intensity.

## New Testament

Jeffrey B. Pettis  
 Department of Theology, Fordham University,  
 New York, NY, USA

The New Testament consists of 27 writings representative of various cultural and sociopolitical backgrounds. As canonical texts they represent only a portion of early Christian scriptures and were frequently used in preaching, teaching, and worship. The Pauline letters constitute the earliest material, written in the middle of the first century CE. These include 1 Thessalonians, Philippians, 1 Corinthians, 2 Corinthians, Galatians, Philemon, and Romans. Scholars are more divided on the authorship of Colossians, Ephesians, and 2 Thessalonians,

which are attributed to Paul, although probably written near the end of the first century. The remaining writings attributed to Paul and known traditionally as the Pastoral Epistles were probably written early in the second century. These include 1 and 2 Timothy and Titus. The Pauline corpus as a whole evidences the processing of some significant and deeply felt religious experience by Paul. This processing (something Jung might refer to as the reforming of an a priori archetype, *Aion* pars 73) includes the translating and representing of what is understood to be the meaning of that experience by Paul, as well as the way(s) that experiences both forms and is shaped by later Christian communities. Paul offers little detail with regard to his conversion (see Gal. 1.13–17, Rom. 1.1) suggesting the ineffable nature of the encounter. Several decades later the author of Luke-Acts presents a dramatic account of the event, giving nuances and psyche-soma movements to detail the encounter (Acts 9.1–22). These include Paul's being acted upon by what is perceived to be a divine presence, heightened auditory and ocular sensory awareness and disorientation, and a definitive shift of consciousness as one being "set apart (*aphōrizmenos*) for the gospel of God" (1 Cor. 1.1). The experience orients Paul toward a new understanding with regard to the meaning and significance of the life, death, and postmortal accounts of Jesus, whom Paul understands to be *Iēsous Christos*, the "Anointed One" (1 Cor. 3.11). Religious experience occurs as a foundation for other writings within the NT canon. The author of Mark (ca. 70 CE) presents Jesus baptized in the Jordan River as the heavens split, a voice is heard, and a dove descends (Mark 1.4–13). Immediately Jesus is driven into a wilderness encounter with Satan amidst wild animals and angels (1.12–13). The author of Matthew (ca. 90 CE) roots the birth of the "Messiah" in a series of dreams (Matt. 1.18–2.23) which occur within a cosmic orientation and the coming of Magi from the East to worship the child. The author of Luke mixes angelic visitations and the pregnancies of Elizabeth and Mary in an elaborate birth narrative

(Luke 1.5–2.20), while the school of John speaks of the “Word becomes flesh” (*logos sarx egeneto*, John 1.14) and tells of what appears to be a numinous encounter involving touch, hearing, and sight (1 John 1.1–4). This notion of incarnation – interrelating and intermixing earth and heaven – occurs as real, reorienting, and efficacious event for the writers of the gospel narratives who tell in declarative story form (*euaggelion*) the Jesus event. For all these writers the relationship between the human and the divine must be negotiated. This includes the *Book of Revelation*, which as *apokalupsis* (“revealing”) literature having to do with divine intervening and judgment (“a new heaven and a new earth”) gives especial focus to divinity definitively encountering the material realm. For none of the writings, apart from Paul, are scholars certain about historical authorship; rather, observations about religious, cultural, and sociopolitical biases and interests of authorship can be made. The Hellenistic orientation of the Gospel of Luke points toward a Gentile author writing for a Gentile audience. The heightened, visual, and urgent language in the *Book of Revelation* points toward an author connected with a community threatened by and/or suffering some kind of religious persecution. Later writings in the NT tend to emphasize the practice (*praxis*) of Christian faith. First Timothy 2.8–15, for example, has as its focus codes of Christian behavior (see also Eph. 5.22–33, Col. 3.18 ff., 1 Pet. 3.1–7), and the pseudonymous second-century Letter of James is actually an extended parenthesis on moral behavior and how it is a Christian community should live. Other examples include the ritual instituting of Christian baptism (1 Pet. 1.3, 23; 2.2; 3.2), the development of church government (1 John and 2 John), and the Luke–Acts narrative presentation of the emerging church establishing itself in the Greco-Roman world.

## Nietzsche, Friedrich: Religion and Psychology

Charlotte Moore

West Chester University of Pennsylvania,  
West Chester, PA, USA

### Nietzsche’s Psychology of Religion

Friedrich Nietzsche deals with the subject of religion in a number of his works, including *The Antichrist* (1988b), *Beyond Good and Evil* (1987), *On the Genealogy of Morals* (1989), and *Thus Spoke Zarathustra* (1988a). His most straightforward and penetrating analysis of the psychology of religion, however, may be found in his critique of asceticism in the third essay of *On the Genealogy of Morals*. Nietzsche begins his inquiry into the nature of asceticism by asking the question “What is the meaning of ascetic ideals?” (Nietzsche 1989, p. 97).

According to Nietzsche, there are three “slogans of the ascetic ideal,” regardless of the social group or movement in human history adopting it as a practice (Nietzsche 1989, p. 108). These are “poverty, humility,” and “chastity” (Nietzsche 1989, p. 108). The ascetic practices are basically those practices that are generally associated with monks, or members of religious orders, who withdraw into a life of contemplation away from society and adopt customs that are usually contrary to the more instinctual aspects of human nature. Such practices might include celibacy, dietary restrictions, vows of silence, and vows of poverty. This orientation towards everyday life is considered, by those who embrace these ascetic ideals, to be the “most favorable conditions of supreme spirituality” (Nietzsche 1989, p. 112).

Contemplation (which, for Nietzsche, is both religious and philosophical) refers to the practice of focusing all of one’s attention inward, rather than engaging the senses outward. The inner, spiritual realm is prioritized over the external, physical, or material realm that can be apprehended

through the senses. Nietzsche describes contemplation as the “peculiar, withdrawn attitude of the philosopher, world-denying, hostile to life, suspicious of the senses” and “freed from sensuality” (Nietzsche 1989, p. 115). Contemplation is thus understood as a withdrawal from both the human instinctual nature and from the world itself. Nietzsche is critical of anything that urges one to withdraw from participating in life, rather than affirming it. In this sense, asceticism is the highest form of controlling the human instincts – an exaggerated extension of the societal conditioning one undergoes as an individual.

The practice of asceticism begins with the evolution of what Nietzsche refers to as the “priestly caste.” Nietzsche breaks early people into two categories: the “nobles” and the “slaves.” These are metaphors. The “nobles” are creators – creators of values, of their own lives, of practices, and the like. The “slaves” are the “herd” – the followers, or those who seek meaning from seemingly “external” sources (this is in some sense an equivalent of having an “external” locus of control, as it is termed in contemporary psychology). The “herd” is driven by their instinct to survive, which Nietzsche suggests forms the basis for forms of religious ethics that emphasize kindness, compassion, humility, and obedience. The “nobles” are powerful, autonomous people who tend to lead the rest of society – not out of a desire to do so, but because they tend to be innovators that stand out from the current cultural trends.

At some point the “noble” class becomes divided. There arises a set of “nobles” who are not quite as strong or as powerful as the other “nobles,” but still set themselves apart from the “herd.” This group emerges as a reaction to something (to the stronger “nobles,” specifically), rather than a unique and active pure expression of the life force, or “will to power” (the distinction here is active, rather than reactive). The key word for this group is *ressentiment*, or resentment – they resent those who are more autonomous than themselves and create distinctions to make themselves seem somehow “better” than others. They define themselves in opposition to those who they

perceive as stronger. They create values in a similar manner to the “nobles” but seek to control the weaker members of society – the “herd” – by imposing these created values, the ascetic ideals, upon them. They become the priests and philosophers of a culture, holders of such notions as truth and knowledge, and the dictators of social appropriateness. Asceticism becomes the primary orientation of these “priests.” Through self-reflection and contemplation, a behavioral pattern emerges that Nietzsche suggests creates an illusion of consciousness or an inner subjective existence. This is the spiritual reality that was mentioned earlier in this entry – the realm of the ascetic priest and of the philosopher. Nietzsche states that those who claim special access to this realm are the ones who make meaning of human existence for those who cannot make meaning themselves.

Nietzsche’s alternative to asceticism is unclear, due to the fact that those who affirm life and create their own values are unique and sovereign individuals that do not conform to any common patterns of behavior. These individuals are said to welcome hardship, to be concerned with power over themselves (rather than others), and to embrace life in the face of all of its chaos and suffering.

In summary, a critique of asceticism is at the core of Friedrich Nietzsche’s psychology of religion. Ascetic practices are used to control the instincts in a manner that is determined by societal values and behavioral codes. The holders of the doctrines that embody these predetermined values are the priests, philosophers, scientists, and others who claim to know the objective truth about reality. The masses, or the herd, fear for their survival in the face of a meaningless existence and adopt the doctrines of the “priests” rather than create their own. Nietzsche criticizes this behavioral pattern as life-negating or life-diminishing. The uncontrolled instinct for survival diminishes the life force. Paradoxically, the willingness to live and therefore to die in each moment as a celebration of the process of the life power is, for Nietzsche, life-affirming and is the formula for the practices of the “noble,” sovereign individual.

## Nietzsche as Depth Psychologist

Although Friedrich Nietzsche declared himself a psychologist in *Ecce Homo*, few scholars have attempted to outline the details of his psychological theory. A recent publication entitled *Nietzsche and Depth Psychology* offers three ways to approach such a project: suggestions for understanding Nietzsche as a psychologist, investigations into the impact Nietzsche's philosophy had on prominent psychologists (particularly from the psychoanalytic tradition), and psychobiographical analyses of Nietzsche's life and thought (Golomb et al. 1999).

One possible approach to understanding the aim of Nietzschean psychology is offered by Jacob Golomb, who argues that one of the "most significant components of Nietzsche's philosophy" is to carry out the "existential project . . . of enticing readers to reactivate for themselves their creative powers and use them in authentic patterns of life" (Golomb 1998, p. 1). Golomb further suggests that Nietzsche's psychotherapeutic method was to create a suspicion of metaphysics that allows people to recognize metaphysical constructs as existentially and psychologically destructive sources of comfort or consolation – a realization which would, in turn, redeem humanity from salvation itself (Golomb 1998, p. 5). Individuals could then stop hiding behind dogmas and ideologies such as the "ascetic ideals" mentioned above and, instead, act out their creative potential and express their particularity, thereby successfully "reactivating" the elements of their power that were previously repressed by other psychological and societal forces (Golomb 1998, p. 2). Members of the psychoanalytic school such as Sigmund Freud, Carl Jung, Alfred Adler, and Otto Rank employed these (and other) aspects of Nietzsche's philosophy into their own analyses of unconscious drives, repression, and the possibility of creative sublimation.

## Nietzsche and Freud

Three similarities between the psychologies of Friedrich Nietzsche and Sigmund Freud that

have been identified are their discussion of "drives," the need for the discharge of these "drives," and the defense mechanism of repression.

Nietzsche and Freud both identified "drives" as a fundamental force underlying human behavior (Lehrer 1998a, p. 184). Nietzsche's references to "drives" tend to be less specific than Freud's, who limited his discussion of "drives" to the sex and death instincts, *eros* and *thanatos*. In more general terms, Freud defined "drives" as "quotas of affect or sums of excitation," whereas Nietzsche defined them as "a quantum of . . . pent-up force or energy" (Lehrer 1998a, p. 187). Both Freud and Nietzsche also write of catharsis, or the need to discharge these built-up "drives" or forces, which may be discharged in dreams or by way of creative sublimation. If they are not discharged, they turn against the self and lead to the formation of "bad conscience," a characteristic of the "herd" in Nietzsche's philosophy (Lehrer 1998a, p. 187). Both thinkers also explored the societal implications of this process, such as those discussed in the first section of this entry.

Both Nietzsche and Freud also offered analyses of what may be termed repression, particularly as it relates to self-deception, or selectively forgetting that which does not conform to our preferred self-image (Lehrer 1998a, p. 189). Nietzsche labels this internal mechanism the "doorkeeper," whereas Freud refers to it as the "guardian" or "watchman" (Lehrer 1998a, p. 190). This repression, combined with the development of a "bad conscience," leads to what Nietzsche calls resentment, or *ressentiment*, a key feature of the "priestly caste" (Lehrer 1998a, p. 191).

## Nietzsche and Jung

Carl Gustav Jung remarked, in his *Seminar on Nietzsche's Zarathustra*, that Nietzsche was the greatest psychologist that ever lived (Jarrett 1998, p. 321). Despite that comment, Jung did not endeavor to outline the specific implications of Nietzsche's psychological theory, as one

might expect. One psychological aspect of Nietzsche's work that Jung did explore was Nietzsche's experience with archetypes, such as that of the "wise old man" which Jung suggests was the archetype at work in the figure of Zarathustra (Jarrett 1998, p. 21). Graham Parkes proposes that one striking similarity between Nietzsche and Jung was their shared experience of a "personification of the unconscious" (Parkes 1998, p. 205). Parkes further suggests that Jung noticed too many similarities between Nietzsche and himself and was therefore acting out of fear when he failed to further explore the more psychological components of Nietzsche's work (Parkes 1998, p. 225).

### Nietzsche and Adler

Alfred Adler apparently had less exposure to Nietzsche's writings in his early life than other psychoanalysts, such as Freud, Jung, and Rank, but declared, at a meeting of the Vienna Psychoanalytic Society, that "among all great philosophers . . . Nietzsche is closest to our way of thinking" (Lehrer 1998b, p. 230).

According to Ronald Lehrer, Nietzsche and Adler both suggested something along the lines of perspectivism (sometimes called perspectivalism), particularly with respect to "useful fictions," including the selection of memories that support an individual's self-image and life plan (Lehrer 1998b, p. 237).

Adler also made use of Nietzsche's term, "will to power" (Lehrer 1998b, p. 238). According to Ronald Lehrer, Adler first referred to the "will to power" in the context of possible responses to feelings of inferiority but later revised his ideas to include a conception of "overcoming," which he related to the idea that humans are "active, creative beings capable of modifying their environment" (Lehrer 1998b, p. 239). Adler also noted that attempts to exert power over others may be attempts to compensate for feelings of inadequacy that arise when one feels a lack of "productive and constructive forms of mastery" (Lehrer 1998b, p. 239). A healthier, more productive response to those who challenge us may be

found in Adler's notion of the "counterfoil," which occurs when one interprets the "enemy" (to use Nietzsche's language) as a welcomed opportunity for growth or increase of power (Lehrer 1998b, p. 239). Those who express these qualities are comparable to the "nobles," or "masters" in Nietzsche's philosophy.

### Nietzsche and Rank

There are significant references to Friedrich Nietzsche in Otto Rank's personal diaries, indicating the deep influence Nietzsche had on Rank's thinking. Rank considered Nietzsche to be the "first psychologist" because of his affirmation of the will in human life (Barbre 1998, p. 247).

Claude Barbre suggests that the philosophical foundation for Otto Rank's "will therapy" is Nietzsche's conception of the "will to power" and its relationship to human creativity and self-overcoming. Rank, like Nietzsche, likened artistic creativity to human striving for "self-expression, growth and change" (Barbre 1998, p. 249). Claude Barbre states that for both Rank and Nietzsche, will "implies self-realization of the individual in the fullest sense for it implies the courageous living out of the individual's potentialities in his or her own particular existence" (Barbre 1998, p. 254). In other words, Rank suggests that the "will to power" is most clearly expressed when an individual affirms his or her difference or particularity during the process of individuation, an idea which leads to Rank's further distinction between the "negative will" and the "creative will."

The "negative will," according to Otto Rank, seems to arise out of the sense of guilt that a child experiences when expressing an urge towards individuality and through an experience of separateness from the mother (Barbre 1998, p. 256). The "creative will," on the other hand, is a free and spontaneous action that is unique and individual and not predictable by any laws of causality (Barbre 1998, p. 257). Rank's conception of the "negative will" can be understood

in terms of Nietzsche's "herd" or "slave morality," whereas the "creative will" can be understood in terms of "master morality," the "noble," or the "artist-philosopher." Both Nietzsche and Rank see the dialectic of negative and creative will, impulse and inhibition, and action and reaction both in an individual and between individual members of society as the underlying forces in human history (Barbre 1998, p. 255).

## Nirvana

James H. Stover

Department of Philosophy, Wheeling Jesuit University, Wheeling, WV, USA

*Nirvana* (Sanskrit) or *nibbana* (Pali) literally means "extinction" or "blow out." Negatively articulated, it is detachment from the cycle of death and rebirth (*samsara*) and the cessation of suffering (*dukkha*). Positively articulated, it may be rendered as a transcendent, blissful mode of existence. To this extent, it is associated with both liberation and enlightenment and is the goal of Buddhism.

Siddhartha Gautama is said to have experienced two kinds of nirvana. The first nirvana was experienced at the moment of his awakening (*bodhi*) when he was meditating under the Bodhi Tree and actually became a Buddha. Subsequently, no longer bound by ignorance or the desires of this world, he carried on his earthly ministry for the next 45 years in this enlightened state of nirvana. His teaching (*dharma*) was that one could experience awakening or nirvana by practicing the Eightfold Path, a synergism of moral conduct, mental discipline, and wisdom. The second nirvana was that which Siddhartha Gautama (now the Buddha) experienced at death. This *parinirvana* is the doing away with the personality and all links to the phenomenal world. It is the ultimate state or final nirvana.

Having an ineffable character, it cannot be adequately conveyed with words.

Since Buddhism includes a variety of systems, it is not surprising that nirvana takes on various inflections. In Theravada Buddhism, which focuses on individual liberation, it is the arhat (literally, “worthy one”) who usually experiences nirvana for himself. Non-monks rarely experience nirvana but are inspired by the idea that they may someday, perhaps after many reincarnations, become an arhat. Theravada also projects the idea of two nirvanas (see above). The first is nirvana with residue. It is experienced in this life and results from the overcoming (or extinguishing) of desire, hatred, and delusion. Here, although enlightened, one is still experiencing the limitations of the personality: form, sensation, perception, mental formations, and consciousness. The second is nirvana without residue, which is a complete break from the world of death and rebirth, i.e., samsara.

In Mahayana Buddhism we see the development of the bodhisattva ideal rather than the more limited, internal perspective of the arhat. The bodhisattva, motivated by compassion, forgoes nirvana until others experience it first. Everyone is a candidate for nirvana, not predominantly selected monks, since everyone possesses Buddha-nature. In various groups of Mahayana Buddhism, the nirvana/samsara dichotomy is deemphasized. These concepts are perceived more as a matter of spiritual perspective than a polarization of opposites. Hence, nirvana and samsara are both identified with emptiness (*sunyata*). They are best described as interdependent rather than self-existent. Thus, the strict boundary separating nirvana and samsara is removed. This is seen in Zen where nirvana is not only revealed in meditation but through such common activities as eating, drinking, and washing dishes. On the contrary, one Mahayana tradition denies the possibility of experiencing nirvana in this corrupt world altogether. Here, individuals, assisted by Buddhas or bodhisattvas are reborn in a Pure Land, which provides the ideal setting for attaining nirvana.

Although nirvana is generally thought of as a Buddhist concept, its later Hindu understanding

(especially that of Vedanta) is associated with the realization that the soul (*atman*) is one with Brahman – ultimate or absolute reality. Typically Hinduism uses the term *moksa* rather than nirvana. In Jainism, nirvana may be attained by the most accomplished yogis at death. This is an eternal state in which suffering is absent. It is preceded by the continual reduction of life’s activity and many reincarnations.

## Commentary

Jung often stressed the differences between the psychologies of East and West and warned against problems resulting from Western people participating in Eastern practices. Nevertheless, he immersed himself in the study of Asian perspectives and found its rich symbolism provided many helpful parallels, such as nirvana. From a Jungian perspective nirvana symbolizes the mature unification process of individuation. It is the reconciliation of opposites through transcendence, which is indicative of self-realization. Here the symbols of the unconscious are appropriated by consciousness and the ego. Although the ego previously held the central place of the psyche, it now gives way to the Self – that archetype of wholeness which reconciles consciousness with unconsciousness. Just as nirvana in Buddhism is not annihilation, but reconciliation, so too is the process of individuation and the discovery of the Self.

Freud, less immersed in Asian psychology than his former student, indirectly engages this concept by borrowing Barbara Low’s term “nirvana principle.” For Freud, the nirvana principle is ultimately affiliated with the death instinct, which he juxtaposes with the libidinal life instincts. As an unconscious propensity away from the activity of life, the nirvana principle shows itself in such activities as rest, sleep, and even suicide. This retreat from the exasperating striving for life is a natural response and ultimate goal for a return to inactivity, ultimately transforming life back to its previous inorganic state. With the nirvana principle, Eros confronts Thanatos, destruction engages construction.

Both Eros and Thanatos are helpful aspects of life as they provide a necessary balance for activity. Trouble often ensues if they become imbalanced.

## Nonduality

Hillary S. Webb

Goddard College, Portsmouth, NH, USA

While “duality” as an ontological construct refers to a philosophical system in which existence is believed to consist of two equally real and essential substances (such as mind and matter) and/or categories (such as “being” and “nonbeing,” “good” and “bad,” “subject” and “object”), philosophies of “nonduality” emphasize the fundamental nature of reality as being a single, undifferentiated essence or consciousness. Although the term “nonduality” comes from the Sanskrit word *advaita*, meaning, “not two,” forms of nondual philosophies have found articulation in a number of spiritual traditions around the world, including Christian and Jewish mysticism, Sufism, Taoism, Madhyamika Buddhism, and various branches of Hinduism. Certain Western theologians and philosophers (among them Plotinus, Meister Eckhart, and G. W. F. Hegel, to name a few) have also embraced forms of nondualism as being representative of ultimate reality.

It is, of course, important to point out that while a belief system may be identified as “nondual,” the various systems are not necessarily identical to one another. Despite sharing a similar ontological basis, nondual philosophies can be quite different in their particular perspectives and practices. For example, the extent to which each tradition rejects the reality or importance of the material world varies. Some nondual systems deny the ultimate reality of the phenomenal world to such an extent that all “knowledge” attained through the physical and mental senses is seen as being more or less empty of absolute

value (e.g., Advaita Vedanta Hinduism). Others, while ultimately nondual, place greater value on the material realm, considering it to be the means by which one can come to understand the ultimately singular nature of reality (e.g., many of the Mahayana, Theravada, and Vajrayana Schools of Buddhism).

For the purposes of this entry, the term “nonduality” will be used as a way of describing spiritual systems based on the underlying presumption that the phenomenal world of forms is an illusion – albeit perhaps a *necessary* illusion – and that through making shifts in consciousness, one can escape the delusion of separation and distinction created by the dualizing mind (perhaps most importantly and most challengingly, that of having a separate “I”-self) and achieve what Evelyn Underhill (1911/2002) described as, “that perfect unity of consciousness, that utter concentration on an experience of love, which excludes all conceptual and analytic acts” (p. 371).

### From Wholeness to Separation

In his book *Nonduality: A Study in Comparative Philosophy*, author David Loy (1988) provides an interesting deconstruction of what has been suggested are the three stages that the mind passes through in its transition from an initial nondual, undifferentiated state of consciousness to that of a dualistic, ego-identified awareness (i.e., one in which the “I-self” becomes disidentified from all other aspects of existence).

To begin, one’s attention is drawn toward a stimulus. In this nondual state of awareness, there is a split second of “being with” the object or sensation in its “bare existence,” during which time it is unnamed and undistinguished. The object of attention just is what it is, without judgment or distinction. This nondualistic way of knowing is “unassociated with name,” “undifferentiated,” and “non-relational.” It is “immediate apprehension” and “direct sense experience” (Loy 1988). This initial, often unconscious, state of awareness is followed by a second, in which what was initially perceived as

a “pure concept” is now identified and made determinate by giving it a linguistic label. The original, undifferentiated stimulus becomes identified as, say, “cat.” The third and final stage in this process is what Loy describes as “an occasion for entrancement.” While in the first stage, I experience the initial, nondual sensation of a stimulus, and in the second I identify the stimulus and give it the linguistic label of “cat,” in this third stage, an emotional and/or intellectual response based on memory of past experiences attaches itself to the object of attention. For example, I see “my cat” and I imagine him sitting in my lap, purring, and I desire to pick him up. Or, I remember finding a dead chipmunk in my closet the night before and I am angry and shoo him away.

Falsely believing the conceptualizations created by language, memory, and emotion to be reflective of ultimate reality itself, pure consciousness moves deeper and deeper into a self-created illusion, until the world we experience becomes no more than a projection, a habitual fiction of our minds. With the world split up into a multiplicity of forms, linguistic labels, and emotional conceptualizations, life becomes a never-ending struggle between that which is considered to be “good” and therefore desirable and that which is “bad” and to be avoided. The aim of many of the nondual traditions is, therefore, to help the individual return to the initial, *spontaneous* stage of pure awareness that occurs just before the conceptualization process begins. By returning to a nondual state of awareness – one in which no distinctions exist between things (including the self) – the individual will cease to desire one thing over the other and, in doing so, will cease to suffer.

### Nondual Psychologies

What have emerged out of the nondual philosophies’ goal of complete liberation from suffering through achieving a state of “pure perception” (Loy 1988) are psychological approaches to dealing with the human condition. This is especially evident when compared with the more

mechanistic and behaviorally oriented perspectives of traditional Western psychologies, which originally emerged out of a scientific worldview based on the assumption that all human functioning is the result of material causes. Given this ontological presumption that all things can be reduced to the material, some early pioneers in Western psychology (e.g., behaviorists John B. Watson, B. F. Skinner) denied consciousness as a thing in and of itself, believing all psychological states to be products of behavior. Others (e.g., Sigmund Freud) acknowledged the existence of consciousness but attributed mental states to be ultimately rooted in physical and/or external influences such as social environment, biochemical or evolutionary processes, and personal history. In cases such as these, with biological and/or social elements seen as constituting the “first cause” of human suffering, the human psyche becomes entrapped in a kind of psychological determinism based on the assumption that the individual is unable to escape his or her history and/or biology unless some secondary factors are introduced. In contrast, however, within the context of several of the nondual traditions (e.g., Advaita Vedanta Hinduism, Madhyamika Buddhism), cause and effect are considered ultimately illusory. Rather than being a product of his or her environment, biology, or past history, nondual psychologies maintain that suffering originates within the consciousness of the individual and that the answer to suffering lies in making shifts in one’s consciousness to return to a pure, undifferentiated state. Once the individual’s thinking changes, the outer world in which he or she exists will shift to an equal degree (Loy 1988).

And, yet, even this notion of “change” may be considered illusory within the nondual context. While some psychotherapeutic systems seek to first identify deficiencies or distortions in the psyche and then alter the mental behavior seen as responsible for these dysfunctions, nondual thinkers assert that attempts to “fix” ourselves only trap us deeper into our suffering, for to “fix” something implies a distinction between a desired state and an undesired state. But because from the nondual point of view all things

are considered to be ultimately singular and undifferentiated, no one need “become” anything (Ajaya 1983; Prendergast et al. 2003).

As is said in the *Katha Upanishad*, “What is within us is also without. What is without is also within. He who sees difference between what is within and what is without remains trapped in the drama of struggling unceasingly to find that which is already within” (as cited in Ajaya 1983, p. 66).

“Trying to transcend our human shortcomings and imperfections, our ‘sins and defilements,’ does not liberate them,” notes John Welwood (2003) in his essay *Double Vision: Duality and Nonduality in Human Experience*. Rather, he claims, “Only entering into them and suffering them consciously allows us to exhaust their momentum, move through them, and be done with them” (p. 159).

With this in mind, within the nondual framework, “problems” or “dysfunctions” are not considered negative events that must be resolved or avoided, but rather are seen as tools to lead one toward greater awareness of the true nature of the self. Instead of trying to alter one’s mental state, these systems suggest that one just “be with” phenomenal experience without judgment or attachment to outcome (Prendergast et al. 2003).

What may perhaps be the most distinctive and most challenging feature of nondual psychologies is what Underhill (1911/2002) calls the “last and drastic purgation” (p. 396), that is, the individual’s attempt to “disidentify” with the illusion of having a separate ego or I-self. The goal of both nondual psychologies and the more materially/behaviorally based Western psychologies is to help the individual to “know” him- or herself, and yet each does so from a very different frame of reference. While certain branches of Western psychology (e.g., various psychoanalytic schools) focus on helping the individual become *more* identified with the ego (thereby establishing a stronger and more distinctive sense of self) as part of the development of the personality, many nondual traditions (e.g., Advaita Vedanta Hinduism, Madhyamika Buddhism, as well as many of the theist mystical traditions) assert that this reinforcement of the

ego's separateness from the rest of existence reinforces duality and leads to further isolation, anxiety, and, ultimately, suffering. In order for suffering to cease, absolutely and completely, only a total dissolution of ego-hood and return to a state of undifferentiated awareness will suffice. Nondual practices therefore seek to dissolve the individual's sense of having a separate "I-hood" so that the individual can come to identify with his or her more true nature as pure consciousness (Ajaya 1983).

Says the Hindu sage, in Prendergast (2003), "[The ego] robs you of peace and joy... By identifying yourself with it, you have fallen into the snare of the world – the miseries of birth, decay, and death" (p. 83).

For obvious reasons, the separation between the individual ego self and the unified, nondual self is the hardest division of all to reconcile, for it requires that the individual surrender all that he or she identifies with as "I." Through the various meditative and/or ascetic practices, a more comprehensive center of consciousness develops within the psyche of the individual. Subject-object, I-thou distinctions begin to dissolve, until the practitioner experiences a state of consciousness in which all conceptual distinctions disappear. This is the Buddhist awakening experience of *nirvana* or *satori* or Hinduism's liberation from the cycle of death and rebirth through *moksha*. It has been equated with the *illumination* experience described by Christian mystics, as well as the experience of *ein sof* of Jewish mysticism and *fanaa* of Sufism, to name a few. Descriptions of this ineffable state of "no-self" vary from tradition to tradition but are most consistently described as a state of being in which all multiplicity and distinction dissolve and the finite and differentiated I-self enters into divine union with the infinite Oneness of all existence. It is said that one who has achieved this state of consciousness still exists in and interacts with the phenomenal world, but now does not attach him-/herself to the superimpositions created by the multiplicity of forms (Loy 1988).

Says John Prendergast, "When we awaken from the sense of personal identity, we also awaken from all our role identities, even as

these roles continue. We are like the actor who snaps out of his trance while onstage and suddenly realizes that he had lost himself in his role. . . . Freed of the role identity, we are more authentic, transparent, available, and creative in the moment" (Prendergast 2003, pp. 6–7).

While many of the beliefs and practices of nondual psychologies may seem irrational or even insane by non-nondual standards, nondual psychologies have, over the years, had a profound influence on the more human-centered Western psychotherapeutic practices, particularly within the field of transpersonal psychology. More recently, an emerging discipline of psychotherapeutic practice called "nondual therapy" has begun to emerge, one that seeks to integrate the philosophies and practices of nondual psychologies within the consciousness of a Western clientele (Prendergast et al. 2003).

## Numinosum

Ann Casement  
British Jungian Analytic Association,  
London, UK

Numinosum is the term Jung appropriated from Rudolf Otto's *The Idea of the Holy: An Inquiry into the Non-Rational Factor in the Idea of the Divine and Its Relation to the Rational*, produced during the First World War. It is a philosophical work showing the influence of Schleiermacher, Marett, Husserl, and Neo-Kantianism but the central experience depicted in it, referred to as the *numinous*, particularly attracted Jung's attention. Otto adopted the term from a word coined from the Latin *numen* defined in the Oxford Dictionary as a presiding deity or spirit. The Latin dictionary further defines *numen* as "nod" or "will" both of which are important in Jung's usage of the term numinous. For instance, he often refers to a numinous experience as a "hint" that there are greater powers in the psyche than ego is conscious of. He was also influenced by Schopenhauer's use of the term "will" which derived from the numinous depths of the psyche. "Hence it is that we can often give no account of the origin of our deepest thoughts. They are the birth of our mysterious inner life" (Schopenhauer 1883, p. 328).

Otto was a theologian who traveled widely in the West (Europe and the United States), the Middle East (Palestine and Egypt), and the East (India, China, and Japan). As the subtitle of the book shows, Otto pointed to the need to keep the rational and nonrational in some kind of relationship when dealing with religious matters. Furthermore, he depicted the *numinous* as both attractive and repellent in giving rise to feelings of supreme fascination and tremendous mystery,

of nameless dread and fear, and of submergence and personal nothingness before the awe-inspiring directly experienced object, the numinous raw material for the feeling of religious humility. Otto quotes from the philosopher William James as follows: "The perfect stillness of the night was thrilled by a more solemn silence. The darkness held a presence that was all the more felt because it was not seen. I could not any more have doubted that *He* was there than that I was. Indeed, I felt myself to be, if possible, the less real of the two" (Otto 1923, p. 22).

Otto's influence on Jung is to be found in frequent references to the numinous in the latter's work from the mid-1930s on though Jung adapted this to fit with his empirical psychological approach to religious issues. For instance, he states it would be a regrettable mistake to assume from archetypal God images that they prove the existence of God. Instead, they are "...the most we can assert about God psychologically." But "...since experience of this archetype has the quality of numinosity, often in very high degree, it comes into the category of religious experiences" (Jung 1958a, p. 59). Both writers draw on the *Book of Job* from the *Old Testament*, but here again Jung's focus is on the "psychic nature and effects" of "the extraordinary numinosity" of the God images (Jung 1958b, p. 363).

## The Numinous Mystery of "I"-ness

The central place of the numinous in Otto's theological reflections and Jung's psychology has inspired a recent book, *The Idea of the Numinous*, from which the following extracts are taken.

The psychoanalyst, James Grotstein's *Foreword* shows the close connection between Jung and Bion's later work in their approach to numinosity. This is in sharp contrast to Freud as Grotstein makes clear in the following statement: "The concept of the numinous offers a dimension to our unconscious lives that is utterly missing in Freud" (Grotstein 2006, p. xiv). As David Tacey says: "Jung does not challenge us with sexuality, but with something equally primary and perhaps more terrifying; the reality of the *numinous*"

(Tacey 2006, p. 219). Similarly, Grotstein points to the psychoanalytic realization of the primacy of affects rather than the primacy of the instinctual drives arising from the postmodern trend towards subjectivity and intersubjectivity where they “begin to approximate the numinous because they are, originally, infinite in nature – and numinosity does seem to constitute an expression of affect, all be it, an affect of a very particular and ineffably distinctive nature” (Grotstein 2006, p. xii). Furthermore “Jung’s allusions to the numinous are many, and most often concern the emotional, affective experience of the unconscious. . .” (Huskinson 2006, p. 202).

References from other contributors to the book underline Grotstein’s statement as follows: “Jung. . . personally engaged the ‘God within’ in a wholly psychological manner, and while he related to the *imago Dei* with the same passion and feeling for its mystery and awesome emotional power as did Otto, he related to it psychologically” (Stein 2006, p. 43). “For Jung, God seemed to be both divine and, in a terrible way, anything but divine. . . ‘on the one hand a bloody struggle, on the other supreme ecstasy’” (Bishop 2006, p. 120). “. . . archetypal representations referring to Apollo and Dionysus. . . show how they seem to be pointing at underlying psychic structures which are involved in the experience of that emotionally charged and consciousness-transforming *mysterium tremendum* which Otto named ‘numinous’” (Giaccardi 2006, p. 138). “What Jung calls ‘the numinous’ and Derrida the “sublime” . . . engages the passions of . . . the struggle between the logos god and eros goddess. . . wrestling for the soul of modernity” (Rowland 2006, p. 116). “The numinous affects what is uncontrolled in people and so can let loose dangerous psychic reactions in the public” (Main 2006, p. 159).

### Numinosity and the Alchemy of Individuating

Jung’s writings often demonstrate his psychological approach to analysis centered on the numinous as follows: “. . . the main interest of

my work is not concerned with the treatment of neuroses but rather with the approach to the numinous” (Jung 1973, Vol. 1, p. 377). The following writers acknowledge this as in Murray Stein statement: “The individuation process. . . typically includes experiences of a numinous nature” (Stein 2006, p. 34). John Dourley says: “Jung’s equation of therapy with the experience of the numinous and with religious conversion has little or nothing to do with religion as commonly understood” (Dourley 2006, p. 172). “The psychological reality of Christ is the numinous experience of the self becoming incarnate in consciousness” (Dourley 2006, p. 181). And Lucy Huskinson writes: “The numinous object cannot be forced or summoned into consciousness; it is not subject to the ego’s control. Rather, the numinous object is discovered in its autonomous manifestation where it calls the ego into response” (Huskinson 2006, p. 200). As Edward Edinger says about Job in his inspiring “little” book *Encounter with the Self*:

If he were to decide that his misfortunes were all his own fault he would preclude the possibility of a manifestation of the *numinosum*. The ego-vessel would be broken, would lose its integrity, and could have no divine manifestation poured into it. By holding fast to its own experience as an authentic center (*sic*) of being, the Job-ego brings about the visible manifestation of the ‘other,’ the transpersonal center (Edinger 1986, p. 43).

Jung says archetypes possess a certain numinosity so that “(i)t is a psychological rule that when an archetype. . . becomes identified with the conscious mind of the individual. . . (i)t produces an inflation of the subject” (Jung 1958c, p. 315). “I think that Genesis is right in so far as every step towards greater consciousness is a kind of Promethean guilt: through knowledge, the gods are as it were robbed of their fire, that is, something that was the property of the unconscious powers is torn out of its natural context and subordinated to the whims of the conscious mind” (Jung 1953, p. 156). The knowledge meant here is that of greater consciousness which leads to an enlargement or inflation of the ego. This is an inevitable part of the individuating process but not without its

dangers as the ego that remains identified with “unconscious powers” may become grandiose. It is this grandiosity that can be punctured and bring the person crashing down to earth.

## The Concept of Dread

At the time of the Enlightenment, the contents of the Bible, in particular the myth of the fall of Adam and Eve, came under fresh scrutiny depicting as it does the numinous conflict between good and evil. “Our angst-ridden age was heralded by Kierkegaard’s *The Concept of Dread*, which postulates that dread is a *prelude* to sin not its *sequel* and may precede a shift from a state of ignorance to attainment of new awareness” (Casement 1998, p. 70) (Original italics). Adam is forbidden to eat of the tree of the knowledge of good and evil, but he cannot understand this for the distinction between the two would only follow as a result of his eating the fruit. “Thus Adam is in a state of ignorance when the voice of prohibition awakens in him a new set of possibilities, including the possibility of disobedience” (Casement 1998, p. 70). Thus, dread is a prelude to sin which precedes the attainment of new awareness; therefore, it follows logically on that dread is prospective.

This prospective component of numinous dread is akin to Jung’s thinking on the prospective or purposive nature of unconscious psychic contents. Huskinson contrasts Otto’s nonpurposive interpretation of Job’s numinous encounter with God with the purposive orientation of the “Jungian psyche,” stating the latter is grounded in the *holy* as “that which instills meaning and content in the *tremendum* . . . (as the wrath of God) . . . Without such mediation, we are unable to make sense of, and thus utilize, the creative energies unleashed in the numinous experience” (Huskinson 2006, p. 208).

Bishop, in his turn, points to Goethe’s “. . . the Numinous, in the sense of the Monstrous” which links to “analogous experiences in the case of C. G. Jung” and back to the Goethe quotation in Otto’s work: “When our own eyes have glimpsed a monstrous act” (Bishop 2006, p. 118). It is this

monstrous core of the numinous that “shows” (from the Latin *monstrare* to show) ego consciousness the way towards what Jung terms individuation and the fateful transformations that are encountered by any individual journeying along that path. It is in this way that the Jungian psyche relates to the numinous.

## Oates, Wayne

Philip Browning Helsel  
Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

Wayne E. Oates (1917–1999) was born in Greenville, South Carolina, and worked in a textile mill as a child. Abandoned by his father, he struggled in his relationships with siblings (Wayne E. Oates Institute). He served as a page on the Senate floor at the age of 14. This experience inspired him to attend college. A Southern Baptist, he graduated from Mars Hill College and received a Master's Degree from Wake Forest University and then did graduate work at Union Theological Seminary, Southern Seminary, and the University of Louisville School of Medicine. He was the first of his family to pursue higher education. He wrote his dissertation on Freud and religion at Southern Seminary and graduated with a Ph.D. in Psychology and Religion in 1947. He married his wife Pauline and had two boys (Southern Baptist Theological Seminary).

Oates was professor of psychology and religion and pastoral care at Southern Seminary from 1947 to 1974. He joined the University of Louisville Medical School faculty in 1974 where he was professor of psychiatry and behavioral sciences until his retirement (Martin 1999). The author of 57 books, Oates (1971) coined the term “workaholism” with his book *Confessions*

*of a Workaholic*. Oates' corpus spans from the end of the great depression through the economic downturn of the 1980s, so that it represents various cultural periods and addresses concerns related to each epoch in practical language. Much information about his influence on the pastoral care movement available elsewhere (ACPE History Corner).

Oates' work is devoted to the establishment of a fruitful dialogue between the Christian faith and the insights of psychiatry. For Oates, the Christian faith was the distinctive lens through which human flourishing and wholeness could be witnessed, but the insights of psychiatry, existentialist psychoanalysis, and phenomenological psychology were all complementary frameworks that could help understand the human condition and foster wholeness – especially acknowledgment of the person as created in the image of God, redeemed by Christ, and called to vocation. The Bible is the primary conversation partner throughout his corpus; references to the Biblical stories take prominent place in his exposition and also often serve as brief illustrations of his points.

Oates was concerned that we witness the image of God in psychiatric patients and help them to engage in their own religious journeys – connecting them to religious communities – without fostering their delusions. In this sense Oates is an heir of the founder of the modern pastoral care and counseling movement, Anton Boisen, who was a patient himself at Worcester State Hospital and later a resident chaplain of the institution.

In his book *The Bible and Pastoral Care* (1953), Oates invites pastors to use the Bible in pastoral care in ways that honor the spirit of Scripture and avoid legalism. The minister is not simply called to be nondirective but offers hope to persons. The Bible is a crucial help in this act of encouragement. He describes how ministers need to learn flexibility about how the Bible is interpreted and encourages a cultural-historical consciousness in attempting to understand difficult passages that seem to refer to homosexuality.

In his book *Religion Factors in Mental Illness* (1955), a book he dedicated to Anton Boisen, Oates argued that the sane and the mentally ill are on a continuum – with healthy persons simply having more flexibility in their choices as to how they wish to relate to others – and that the patient and the psychiatrist each share the universal tendency towards sin. From this viewpoint, he attempted to describe how religious ideas could be meaningful for psychiatric patients and articulate schema to evaluate the health and even prophetic dimension of various religious concepts used by mental patients. “Both the psychiatrist and the minister need the sense of awe that comes from the mystery which is in each of their tasks” (Oates 1955, p. 99). He used Freud to describe how religion helps a person to separate from his or her own family by establishing a separate identity. The establishment of an identity apart from family is a recurrent theme in his work. He maintained that it was important to connect persons with mental problems to religious fellowships that could support them and invited us to consider the meaning that religious ideas may have for the patient instead of focusing on the ideas themselves. Religion often served as “limit” for patients, a kind of last straw onto which they grasped, but it also had the power to activate their destiny.

*Christ and Selfhood* (1961), written during a sabbatical at Union Seminary and dedicated to Wake Forest professor Olin Binkley, is a theological anthropology that deals with all the major doctrines of the faith in succession under the theme of self-realization in Jesus

Christ. He is concerned that pastoral theologians often abdicate theological interests. With this in mind, he maintains that decisive encounter with Jesus Christ helps a person become a self by accessing one’s history, discovering one’s vocation, and imagining hope for one’s future (p. 156). Therefore, he establishes the theme of a life-changing encounter with Christ as providing the distinctive basis for selfhood and then brings psychoanalytic and Gestalt psychology alongside this theme in order to show how it elaborates the theological point he has made. His theological conversation partners include Athanasius, Tillich, Barth, and Richard Niebuhr. Psychoanalytic psychology elucidates humankind’s bondage to sin so that disease is also a theological problem: “The conflict between God and man is the root of man’s unreal, counterfeit, and fictitious selfhood” (p. 47). Oates maintains that we too often ignore the human aspects of Jesus’ identity formation such as his possible questions about his father’s identity and his likely education by Mary in the themes of the Magnificat.

Written as he was recovering from spinal surgery – Oates suffered from lifelong back trouble – *Pastoral Care in Social Conflict: Extremism, Race, Sex, Divorce* (1966) maintains that pastoral care had become too individualistic and had ignored the “social context” of problems that persons face (p. 11). In this text, Oates’ own background as a poor Southern white plays an important role. He invites readers to consider the different approaches taken to social problems by itinerant “one-cause” ministers and resident pastors responsible for the life of the community (p. 10). He defines the social problems of the day as “dilemmas” that contain incontrovertible ambiguity, and he suggests ways that pastors can maintain neutrality and continue dialogue about issues rather than allowing conversations to devolve into competitions (p. 15). He argues that theological schools should prevent social conflict by integrating before the law forces them to integrate. At the same time, he risks arrogating blackness into a white narrative at times: “the ignorant and the dispossessed white

shared the same fate as the Negro” (p. 61). He uses Freud’s “Civilized Sexuality and Modern Nervousness” to argue that we should find ways of integrating sexuality with the rest of our lives and he argues for the equality of women. Likewise, he argues that churches should take a preventative approach to divorce to providing more early and steady pastoral counseling to couples.

In his *New Dimensions of Pastoral Care* (1970), Oates defines ministry as “fortification” putting “heart into” people and “confrontation,” namely, “bring[ing] persons face-to-face with themselves. . .and with issues of justice. . .” (p. 3). In this book he addresses a recurrent theme of idolatry – a primary human difficulty is that we cannot be “as God” – and argues this is a problem faced by clergy and parishioners alike (p. 24). He addresses excellence and self-supervision in pastoral care, including exploring the care of the minister’s family, and indicates that Christian communities should mobilize to provide care. He addresses “race relations” and describes how the theological curriculum must transform as black students are integrated into seminaries (p. 73). Nevertheless, when he describes the “black ghetto,” he describes their language as “nonverbal” and “preliterate” (p. 80). Oates shows hesitance about pastoral activism lest the pastor loses a sense of neutrality.

*Psychology and Religion* (1973) is a textbook that brings biblical anthropology together with phenomenological psychology to critique distorted misconceptions of religion. Oates chooses this psychological modality because it examines consciousness and unconsciousness together, looks at value systems and how to change them, and provides theologically applicable system of concepts used by ministers/lay alike. He argues that psychological systems can become idolatrous but that the striving towards wholeness is a religious quest: “The redemption of man [sic] from sin and the emergence of a free self in man, respectively, are inseparably tied up with a struggle of the soul in the process of time and becoming” (p. 84). He deals with such diverse subjects as magic, the expansion of consciousness,

charisma, and delusions, and treats them all as aspects of the human search for God.

In his book *The Presence of God in Pastoral Counseling* (1986), Oates maintained that worship is at the heart of the counseling event so that attending to God’s presence is at the heart of the counseling encounter. Based in the love of God and love of neighbor, counseling is a practice that unmasks idolatries and helps persons live into their identities as persons renewed by Jesus Christ. Oates maintains that spiritual direction is the new course that pastoral counseling should take. While this sounds dramatic, the spiritual often takes place almost unrecognizably in the midst of mundane life. Therefore, the counselor must pray that he or she can discern God’s image in the client in the midst of the counselor’s frustration. Since “we remind clients of whatever they perceive God to be,” a kind of religious transference, pastoral counselors should explicitly invite Christ as the “Third Presence” in the counseling encounter (pp. 121–122).

In *Behind the Masks: Personality Disorders in Religious Behavior* (1987), Oates explores the religious needs of persons with personality disorders and explores how pastoral counselors can respond to these needs with pastoral wisdom. For Oates, these persons, borrowing from an early title by Hervey Cleckley, wear sanity as a “mask, not as the outward expression of an inward possession” (p. 12). He explores how the culture plays an important role in creating personality disorders by reinforcing their negative patterns.

Wayne E. Oates was one of the most important bridge figures between theology and psychiatry in the twentieth century. As a Southern Baptist, his conversionist theology provided an important basis across his work and also offered him a flexible option for correlating theology and psychology. His own need to separate from his poor background and family life and yet find ways of honoring that heritage was a recurrent theme in his work. Oates also became intensely concerned with the risk of idolatry in all human ventures and sought to accent God’s living presence in pastoral care and counseling.

## Object Relations Theory

Benjamin Beit-Hallahmi

Department of Psychology, University of Haifa, Haifa, Israel

The concept of “object relations” in psychoanalytic writings means relations with significant others and their internal representations, starting with infancy and the mother (“object” in psychoanalytic writings always refers to another person). Primitive, early, object relations are the starting point for personality development. Whereas, for Freud, the drive-based quest for sensuous gratification conditions the structure of the personality, object relations theorists argued that the individual seeks relationships before seeking gratification. The pattern taken by the individual’s relationship with others, internalized during early childhood, structures the adult personality as well as adult spirituality.

What is known as psychoanalytic object relations theory represents the psychoanalytic study of the nature and origins of interpersonal relations and, more significantly, of the nature and origins of internal, unconscious, structures deriving from interpersonal contacts and experiences. Present interpersonal relationships are regarded as the reactivation of past internalized relations with others. Psychoanalytic object relations theory focuses upon the internalization of interpersonal relations, their contribution to normal and pathological personality development, and the mutual influences of internal fantasies and the reality of interpersonal relations.

Individual personality is formed through object relations patterns which are set up in early childhood, become stable in later childhood and adolescence, and then are fixed during adult life. The functioning of the adult personality depends on the maturity of one’s object relations. Object relations theorists propose that the ego, which is the center of the personality, seeks objects, and this is the basic drive animating the

human personality. The role played by the mother's constant presence during the first stages of life makes it the factor around which personality is organized. The mode by which one manages one's dependence on and differentiation from the mother is the structuring force of the individual mind. Psychoses and neuroses are accounted for by the complications of parental care rather than by eruptions of repressed desire.

Motivations experienced by the individual's body alone are thus deemphasized, and, correspondingly, the formative significance of relating to others is played up. Sexuality is demoted to a secondary role. It may complicate the relationship with the object, but it does not by itself constitute that relationship. Body sensations carry messages, but are not equivalent to the contents of these messages. Communication is channeled through the surface of the body, the sensitivity of which intensifies with the child's age. At all stages, bodily sensation is a means rather than an end of communication.

While classical psychoanalytic theory viewed the personality as an information-processing system, in touch (or out of touch) with reality, in object relations theory the emphasis is on internalized and projected ideas, leading to a total distortion of reality. Compared to classical approaches, object relations theory is even more pessimistic. It views personality as less reality oriented and its structure as determined earlier in life. While in Freud's version the "critical period" in personality development is the Oedipal stage, years 3–6 of life, here it is during the first year that object relations patterns are determined.

The common core of classical psychoanalytic theory and object relations theory can be summarized in the two concepts of a search (for an object or for instinctual gratification) and an experienced distance from the object. Both approaches agree that it all starts with the young child and its understanding of sex, birth, and family relations, with the inevitable results in the form of confused and confusing ideas that stay with us for life. Object relations theory claims that the process

all starts very early, which means that the cognitive confusion is greater and deeper.

Donald W. Winnicott asserted that at the original point from which all humans start, there is already a relationship. The baby is an aggregate of sensations and body parts without an organizing principle, which may only be provided by the parent "who is holding the child" physically and whose presence functions as an external perimeter that contains the various stimuli and so orders them into a meaningful whole. Thus, relationship precedes individuality. There is no such thing as a baby, because there is always, attached to it, someone caring for the baby. The lack of individual separateness in the initial stages of life goes beyond the fact of physical dependence. It involves the absence of inner cohesion.

At this point the child creates what Winnicott calls the transitional object. This object appears when the reassuring internal representation of the mother is projected onto a tangible item, such as a blanket or a soft toy, which the child invests with special meaning and identity. The transitional object helps the child bridge the frustration of parental unavailability. That object is simultaneously internal and external: it carries a subjective meaning, but, being tangible, it is also objectively perceived. In later life the soft toy or blanket is substituted by games, artistic creativity, and intellectual discussion. Such activities provide individuals with spaces where they can externalize their internal images. Winnicott's concept of transitional states and transitional objects has been applied to religious ritual and belief, assuming that religion tries to elaborate an experiential space between the self and reality.

Regarding religious beliefs, most object relations theorists follow Sigmund Freud in viewing any religious belief system as based on projections. While Freud emphasized the projection of the father, the so-called Oedipal object, object relations theory suggests that what is projected is the maternal image, formed earlier in the child's development. The objective existence of the caring figure, without whom the infant

would not survive, is the source of fantasies about caring spirits, who promise eternal love and boundless happiness. As the developing child internalizes hope and trust, she comes to live within an inner psychic universe of unseen, but providential presences. When he is subsequently introduced to supernaturalist beliefs through cultural experience (God, angels), he takes to it naturally.

Cultural fantasies expressed in so-called mystical experiences reflect an attempt to recreate the mother-child symbiotic encounter. The early experience of creating a substitute for the mother, known as the transitional object, is the model for cultural rituals and beliefs. This experience is one case of transitional states, where a real stimulus near the person starts a fantasy process in which object relations are projected on it. This “substance of illusion,” as Winnicott described it, is the starting point for the creation of art and religion. The behavior in an individual of turning to “spiritual search” is most likely to be caused by a loss of a significant other or a significant relationship. This search makes possible an imaginary contact with the lost object. Loss or absence in the child’s relations with parental figures may lead to the appearance of religious experiences.

## Objective Psyche

Michael Conforti

The Assisi Institute, Brattleboro, VT, USA

In 1633, Galileo Galilei was forced to his knees by the Catholic Church and, with his hands on the Bible, demanded to retract his comments that the Earth was not the center of the universe. Drawing on his years of scientific inquiry, he found that it was the *Earth* which rotated around the sun and not the other way around. His was a heliocentric view of the universe, not a geocentric approach. Perhaps using science to refute religious dogma was not the best approach in the 1600s, but Galileo’s search for truth knew no limits. Those near him during the inquisition heard him whisper under his breath the words, *eppure si muove* (and yet it moves), as he completed his testimony to the Papal See.

*Eppure si muove* speaks to the issue of relative and fixed space and movement. The Church needed to see the Earth as center of the universe to justify its position of moral and spiritual supremacy. However, his utterance that “the Earth moves” urges us to reconsider the relationship between relative and objective meaning. This theme remains crucial to our understanding not only of the world but also the human psyche and in many ways has influenced the practice of psychotherapy and psychoanalysis.

Jung’s discovery of the objective psyche closely parallels Galileo’s findings, in that the ego, like the Earth, was not to be viewed as the center of the personality. For Jung, the objective psyche allows us to determine the distinction between a relative and subjectively derived meaning from what is objective and invariant. While in relation to the ego, the matrix for this objective psyche exists independently of the conscious mind, and its contents are not acquired through personal experience. Like a compass pointing due north or a bird’s innate capacity for building intricate nests and traveling thousands of miles during its migratory journeys, there is an internal wisdom and directionality within the psyche – a psychic “due north.”

Like his mentor Freud, Jung sought to understand the workings of a personal unconscious. Our personal history clearly shapes our experience of the world. Freud's theory of the unconscious evolved into a topological model, comprised of a number of invariants, such as the *id*, *ego*, and *superego*. While these can be viewed as inherent, universal components within the psyche, existing much like our biological inheritance, Freud tended to stress the personal aspects of each. On the contrary, Jung's discoveries identified the existence of nonpersonally derived, archetypal substrata inherent within the psyche, which continued to shape and effect the personality even without the conscious awareness of the individual.

Analogous to the workings of the biological unfolding of human life, we see that individual form is directly influenced by our genetic, personally acquired inheritance – blue eyes, brown hair, etc. However, prior to the emergence of these individual features, they exist *in potential* until a series of prefigured, morphogenetically determined processes unfold.

Developmental biologists have discovered that fetuses develop in highly characteristic ways, according to a seemingly predetermined schedule. At about 8 weeks the heartbeat can be heard. At different stages other features appear, as if by magic, in virtually the same sequence as all other babies since the beginning of humanity.

This unfolding of specificity in human form occurs against the backdrop of a set of universal, objective processes encoded within the body. The human psyche also follows a deeply etched riverbed traversed by humanity since the beginning of time. What are these silent codes that guide the development of our physical, psychological, and spiritual life? The plethora of books available on infant and child development informs us about these “predictable,” highly patterned processes.

While the emotions and perceptions of the ego and personal unconscious are influenced by experience and subjective reactions, the matrix from which the objective psyche gathers its impressions and information exists independent of individual experience.

With the eye of a scientist and the heart of a mystic, Jung sought to understand these other

influences that shape human experience. Familiar with the Freudian ethos, he realized that drive theory did explain the commonality of experience found throughout our collective history. Freud looked to drives, especially sexuality, as the primary mover of human experience. Jung understood the limitations of these ideas. Through many years of studying different cultures and religions, he posited the existence of a set of universals within the human psyche. This point was especially evident in one of Jung's last recorded interviews, *Face to Face* (BBC Interview with John Freeman, October 22, 1959). Jung was asked if he believed in God. He smiled and said that he did not *believe* in a God, but *knew* there was a God. Belief, he explained, relied on faith, while knowing is arrived at through direct experience. He explained that every culture throughout history has some form of a God as a central component of their world. The constancy and universality of this *image* of a God suggests that a God or “God concept” exists as a living entity and an objective fact within the psyche.

The extensive body of Jung's writing details those universal portals which every individual must traverse and a methodology for distilling an objective, ontological truth from the Scylla and Charybdis of bias and personal opinion. Like Galileo and the biologists who came after him, Jung demonstrated the effects of these objective aspects of life on individual development. He suggests that the objective psyche functions much like a magnet, constantly oriented towards true north. Consciousness, on the other hand, functions all too often as a faulty compass creating due north wherever one chooses to point it. Truth, meaning, and spirit become relative terms, shaped by the individual's needs. One can take an objective fact, for instance, entrance into midlife, and create one's own meaning of it. For instance one can say, “I don't feel any different” and “I can do almost all of the things I did in my forties.” Or, “I feel so much older and more worn out,” and on and on. Clearly each of us will experience midlife in our own way. The point here is that no matter how we subject this stage of life to the Procrustean Bed of personal

opinion, there remains an objective fact – namely, that one is at the midpoint of life.

Religious traditions have provided a rich body of literature regarding the universal features of these stages of life and an awareness of the deep psychological and spiritual needs related to each stage. Midlife requires us to attend to a particular set of issues that were not part of our concerns during the first half of life.

The existence of an “objective,” ontologically based psychology is now supported by discoveries in the sciences, which address the concept of self-organizing systems. The self-regulatory functioning of the body is one illustration of such tendencies. For example, our blood sugar levels are governed by the presence of what are called *periodic attractors*. Like a pendulum moving 30° to the right or to the left, biological rhythms are governed by an innate ordering principle, which serves to maintain our metabolic reactions within a certain, predetermined range.

Jung’s (1969) work on the symbolism in the Mass provides a compelling illustration of the objective psyche. In his essay, “*Transformation Symbolism in the Mass*,” he looks beyond individual experience to the ontological, symbolic meaning of the Mass. Writing of its psychological significance, Jung states:

... human consciousness (represented by the priest and congregation) is confronted with an autonomous event which is taking place on a “divine” and “timeless” plane transcending consciousness, is in now way dependent on human action, but which impels man to act by seizing upon him as an instrument and making him the exponent of a “divine” happening. In the ritual action, man places himself at the disposal of an autonomous and “eternal” agency operating outside the categories of human consciousness. ... It is something outside, something autonomous which seizes and moves him (1969, pp. 249–250, 379).

Jung takes a similar approach to symbolic imagery found in dreams, fantasies, and hallucinations. Traditional psychotherapeutic approaches seek to understand symbols through clients’ associations. Jung looked to the inherent, innate, and universal meaning of these symbols. This approach is illustrated in the following analysis of a dream.

## Dream

I am visiting Florida during a March vacation. I go to the beach on a lovely sunny day and suddenly see baby turtles emerging from a mound in the sand. Hundreds of them are emerging from the sand and moving towards the sea. It is such a beautiful sight that I am moved to tears.

While it is essential to ask for the client’s associations and feelings about the dream, for this example, I will present the approach used in working with the objective psyche in clinical material.

Since this dream presents the motif of turtles hatching, we need to enter the “field” (Conforti 2004) of turtles born on Florida beaches in March. While it is possible for the patient and analyst to have impressionistic or circumstantial information about this topic, it is important to seek out objective and accurate details about the birth of turtles and the conditions required to insure successful completion of the gestation period. In this dream the turtles hatch in March. However, turtles actually *lay their eggs* in March, and they lay burrowed in the sand as a protection against the hot Florida sun. We also learn that predation results in only 1 out of 10,000 hatchlings ever surviving to maturity. Now with these objective facts, we are prepared to work with this dream.

The material provided by our specialist enables us to see that something within the patient’s psyche, and perhaps also within the analysis, is occurring out of sequence. What has just begun its gestation is now hatching, during a time when prospects for reaching maturation are minimal, at best. The requisite incubation period was, for some reason, interrupted, thus jeopardizing what was seeking expression within the patient.

Let’s now explore the image of the turtle. One of the most salient features of turtles is their shell. Their protection is external, whereas with humans and most other mammals, the protective skeletal structure is internal. In many earlier life forms, protective defenses remained external. So the turtle’s ecto-skeletal make up may symbolize an early and somewhat primitive system of

defense, which is also very vulnerable. In the dream, what is attempting to born is a somewhat primitive and necessary system of defense but one that will, in all probability, not survive.

Recent studies have found that our conscious mind generally perceives only 7.4 % of the information available in our field of data. Translated, this means that the ego is aware of only a small portion of its experiences. Jung's discovery of the objective psyche encourages us to look beyond the confines of what we generally perceive, thus allowing for a wisdom far greater than that derived from our conscious minds.

Religious traditions and the world's great spiritual teachers have always spoken about a world far wiser than the one we habitually inhabit. Spirituality is an accessing of the transcendent. In virtually every religious tradition, one has to undergo a series of rituals meant to lessen the hold of conscious reality to allow for the unknown to enter. Meister Eckhart echoes this point: "All the different religions traditions can be traced back to the experience of communion with the Ultimate. . . (with) the one and the same mystical core-experiences of the sense of ultimate belonging" (Fitz-Gibbon; 2008, p. 196).

Our wisdom traditions seek to move beyond the veil of conscious reality a greater knowledge for our understanding about life. This point is beautifully made in *Saul Lieberman: Talmudic Scholar and Classicist* (2002). Discussing Rabbi Lieberman's approach to reading a sacred text, we find him suggesting that:

(...) We are always on safer ground when the reading is sure, and all that remains for us to do is to explain it. Of course a scholar's understanding of a given text depends on what he brings to it: the more he knows the less likely he is to engage in conjectures not justified by the facts; the less likely he is to doctor a text that should be left alone, the less likely he is to offer a labored, intricate explanation, when he should be saying; "I don't know." On the other hand, the more he knows, the more likely he is to select the correct meaning and when necessary, amend one that has been corrupted in transmission (2002: 4/5).

In summation, Jung's discovery of the objective psyche follows in the rich traditions of scientists, theologians, mystics, and investigators of

the human mind, whose search for knowledge about the psyche brought them into dialog with the eternal wisdom traditions, which have shaped personal and spiritual development throughout human history.

## Occultism

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

The term "occult" means hidden and has been used for over two centuries to describe a variety of esoteric philosophies grounded in the Western philosophical tradition. Esoteric doctrines are passed among a smaller group of people than

the outer more public or exoteric forms of spirituality and philosophy. The word “occult” and its derivatives are often used in a pejorative way by religious conservatives who view the wide range of views subsumed under this label as evil and involving devil worship. Rejection of esoteric forms occurs in many religious traditions but has an especially violent history in the Christian tradition.

Occult philosophy or the Western esoteric tradition (WET) is thoroughly syncretic, blending ideas, practices, and symbols of the divine from several streams. Western culture incorporates elements from both classical Greece and Rome, with ideas and practices taken from Judaism and Christianity. The latter takes its Judaic roots and sought to explain its significance through the language of Greco-Roman philosophy. Into this mix is poured ample elements of Eastern thought and practice, particularly in the 19th century. Religious syncretism characterizes the Western esoteric tradition.

From the Greek inheritance comes the font of much Western magic with Pythagoras (ca. 582–507 BCE). He first used the five-pointed star which has now been adopted by Wiccans and other pagans as a religious symbol. Among the oldest of sources, we have less of his thought preserved. He was insightful and skilled in mathematics, his theorem on right-angled triangles is the contribution for which he is best known, but he also saw the relationship between length of string and pitch, another aspect of mathematics. He founded the first Western mystery school in Croton, Italy.

The mystery religions of classical Greece, the Eleusinian mysteries, those of Dionysus, and the Orphic mysteries were a major countercurrent to the exoteric worship of the Olympian deities. Other mystery religions in Egypt (Isis) and the Levant (Cybele and Attis) came to be very influential in Roman times as well as Mithraism which incorporated much of the earlier Persian dualistic religious stream from Zoroastrianism. By the time of the late Hellenistic world and the advent of Rome as the dominant political force in the Mediterranean, all these streams flowed together and mixed. From this the broader streams of Hermetic

philosophy and Gnosticism emerged as traditions that would be passed on to the West after the rise of Christianity and the fall of Rome.

Plato’s thought tended to dominate the world of Hermetic philosophy through a series of great teachers who were prominent Neoplatonists. The first important figure was Plotinus (205–270 CE) whose cosmology of emanations was carried on by his students. Porphyry (233–309 CE) and Iamblichus (245–325) were among the followers of Plotinus whose work became the basis of later medieval esoteric philosophy. Iamblichus brought in expertise in ritual to a tradition that had been mostly contemplative, the philosophical Neoplatonists. Their influence on occult philosophy is significant. The divine is unitary and ineffable, all other forms of spirit are emanations of the One. The creator God or demiurge is different from the One. From that creator god, other spiritual beings emanate, and ultimately, the material world and all its creatures are formed. In Iamblichus this evolutionary path was expressed by way of a mathematical analogy, unity, dyad, triad, and hebdomad (group of seven). It was also expressed philosophically as *nous* (unity, mind) and *psyche* (duality, subject/object). The goal of life is reunification with the divine; Porphyry believed this could be accomplished through contemplation, but Iamblichus held that ritual (theurgy) is needed. He contrasted theurgy with thaumaturgy, the working of ordinary magic for such mundane things as love, health, and wealth. These were and remain the staples of common esoteric practices. But theurgy, or the divine work, has always been held out to be the loftiest ambition.

There is a strong dualistic trend in Neoplatonism; the realm of spirit and of Platonic forms has a fundamental reality and goodness that the material world lacks. Indeed, the body-mind dualism that permeates much Western thought shows the influence of Plato and his later followers. This dualistic trend found favor with early Christian mystics in the rejection of the temptations of the flesh in favor of ascetic practices. Christians, both orthodox and heretical, as in the gnostics, were influenced by the heightened dichotomy of self-mortification for achieving spiritual growth.

Another stream from classical antiquity feeding into modern occult philosophy is the Hermetic Corpus, or group of writings attributed to Hermes Trismegistus, or thrice-great Hermes; especially important is the dictum from the *Emerald Tablet*, “as above, so below.” This references the basic tenet of magic that action on either the spiritual or material plane can influence the other; this belief underlies the theory of efficacy of both prayer, ritual invocation or evocation, and divination. Gnosticism is a more specific stream within this broad area of occult philosophy and includes Christian as well as non-Christian versions.

The Hermetic tradition became influential in the Renaissance. Marsilio Ficino (1433–1499) translated Plato and the Hermetic Corpus, or body of writings attributed to Hermes Trismegistus into Latin; Giovanni Pico della Mirandola (1463–1499) translated other Hermetic and Kabbalistic works into Latin and works of the classical Neoplatonists into Latin. Finally, Giordano Bruno (1548–1600) went too far in his espousal of esoteric doctrines Hermetic which were deemed heretical and he was burned at the stake for his promotion of Hermetic ideas.

Alchemy was a practical as well as an esoteric discipline and one of its leading exponents Paracelsus (1493–1541) influenced Franz Anton Mesmer (1734–1815) in the development of what is now known as hypnosis. The Elizabethan magicians John Dee (1527–1608) and Edward Kelley (1555–1597) are important figures as well. But the leading theoretician was Cornelius Agrippa (1486–1535) whose *Three Books on Occult Philosophy* (1531–1533) remains a much reprinted classic. Giambattista Vico (1668–1744) is a key figure in the recovery of the status of imagination. His principle of “verum factum” holds that truth is established when an idea is able to bring forth some sort of concrete manifestation or invention. Ideas help create new realities.

In the seventeenth century, the Rosicrucian manifestos stimulated a lot of interest in occult philosophy, though the origins of those documents have never been completely determined. The alleged secret college of adepts sent

teachings to benefit humans. Whatever one makes of their foundational mythos, the Rosicrucian documents circulated widely and would later find echoes in any sort of claim of communications from higher spiritual forces or entities, including the Theosophic movement and many modern authors who channel dictated material (e.g., the Seth material).

The modern occult movement begins in earnest in the late eighteenth and early nineteenth century with such figures as Alessandro di Cagliostro (1743–1795) and Francis Barrett (ca. 1770–1780) who wrote *The Magus* in 1801. Albert Louis Constant who wrote under the name Papus was another early figure in nineteenth-century occultism, and his work on the Tarot remains a classic.

But by far the most important developments occurred in the latter part of the nineteenth century when a variety of movements including Theosophy and the Golden Dawn were started. It was in this late Victorian era that modern occultism got a big boost in popularity. In mid-to late 1800s, the spiritualist movement reached its zenith and the use of mediums to contact spirits of the dead was relatively common, which encouraged many charlatans to practice as well as more sincere believers. Theosophy was a spiritual movement started by Helena Petrovna Blavatsky (1831–1891). She is the first of the modern mediums whose writings claim to be received or channeled from Eastern “ascended masters.” Her cofounder Col Henry Olcott (1832–1907) helped spur on a revival of Buddhism and was among the first Westerners to adopt Buddhism. He even designed the Buddhist flag. The Hermetic Order of the Golden Dawn was a group of ceremonial magicians centered around the figure of MacGregor Mathers (1854–1918). In Bavaria, Adam Weisthaupf (1748–1830) formed an occult group known as the Illuminati. All sorts of conspiracy theorists now use this group as a starting point for their worries. The New Thought movement of Phineas Quimby (1802–1866) sparked a whole host of esoteric schools, including Christian Science.

Of all the psychologists and psychiatrists, Carl Gustav Jung (1875–1961) has been the

most favorable in his assessment of the value of occult philosophy or the Western esoteric tradition (WET). He made the detailed links between personal unconscious processes and the wealth of cultural symbolism that has been handed down across time and culture. Myth is a primary medium for conveying symbolic meanings in the collective or cultural unconscious. He wrote about how alchemy is an apt metaphor for the transformations of personality than can occur in analysis or psychotherapy.

Witchcraft was revived, reconstructed, or brought out into the open in the early twentieth century, depending on how you view the likelihood of a continuous tradition as Gerald Gardner (1884–1964) claimed. His lineage survives as do numerous offshoots as well as some others who have announced their teachings. By the 1960s and 1970s, a widespread interest in the occult led to a flowering of all sorts of new amalgams of ancient lore. Some sought to reconstruct the ancient pre-Christian pagan religions of Europe, others sought to come up with their own blends of traditions and new age thought.

## Oden, Thomas

Philip Browning Helse

Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

Born October 21, 1921 in Altus, Oklahoma, United Methodist Thomas Clark Oden was the child of pietistic parents who were also union organizers. During high school, he volunteered with the United World Federalist movement, and at the University of Oklahoma, he worked for the Students for Democratic Action. He received his M.A. from Perkins School of Theology in 1956 and received his Ph.D. from Yale University in 1960, studying with Hans Frei and H. Richard Niebuhr and writing on the ethics of Rudolf Bultmann. He taught from 1958 to 1960 at Perkins and then taught during the 1960s at Phillips University. In 1971 he began teaching as a professor of Theology and Ethics at The Theological School at Drew University, and there he remained until his recent retirement (Hall 2011). A prolific author, Oden has written numerous books spanning 50 years.

During the 1960s, Oden wrote several works in which he argued that God's presence in Jesus Christ could be effectively intuited through the therapeutic relationship, which itself could be understood as a sign of God's gracious activity. In *Kerygma and Counseling: Toward a Covenant Ontology for Secular Psychotherapy* (1966), he argued that rather than an *analogia entis* in which we draw parallels between counseling and psychotherapy and infer God's grace from the psychotherapeutic event, we should move the other direction and see God's gracious intervention in the world as a precursor that allows for the therapeutic event of client-centered counseling. Oden dedicated this book

to his psychotherapist among others. In *Contemporary Theology and Psychotherapy* (1967), he uses Bonhoeffer and Chardin to bridge theology and secular psychotherapy by rejecting the two-sphere solution in which God is separated from the world. During this period, Oden joined theologians such as Daniel Day Williams and James Gustafson in theological reflection on secular psychotherapy.

In the 1970s Oden became critical of psychotherapy. In his symposium *After Therapy What? Lay Therapeutic Resources in Religious Perspective*, a group that he gathered at Drew University, Oden (Warren 1974) cited studies indicating that psychotherapy did not lead to faster remission rates for psychological problems and suggested that lay therapy facilitated by groups may be more beneficial than professional care. He quoted extensively from the anti-psychiatry movement and offered Wolfhart Pannenberg's apocalyptic theology as a way for psychotherapy to think more critically about its *telos*. During this time, Oden was influenced by Will Herberg, a Jewish scholar and colleague at Drew, who encouraged him to explore ancient Christianity.

Beginning with *Pastoral Theology: Essentials of Ministry*, Oden (1983) examined the pastoral office using premodern theologians. In this volume, he examined fitness for pastoral ministry, the significance of the pastoral office, the functions of ministry, premodern precursors to pastoral counseling, and crisis ministry. Oden defined ministry as a response to God's grace, arguing that it must be rooted in the Wesleyan quadrilateral of Scripture, tradition, reason, and experience. He lamented modernism that he suggested is individualistic and pleasure centered and understood specialized counseling as a manifestation of a negative modernist trend. By contrast, he maintained that ministry should be grounded in a premodern orthodox consensus. His hermeneutic of retrieval is expressed similarly throughout the following decades: "I have sought to state without embellishment the core of that ancient ecumenical consensus on the office, gifts, and practice of ministry" (Oden 1983, p. 7). In this text, he advocates for lay ministry but distinguishes ordained ministry as significant in

its own right, arguing for the use of admonition, exhortation, and discipline in the pastoral office. Oden establishes his posture as one who "listens" to the common consensus of premodern Christianity and presents it as a resource to those who have been buffeted by modernity (Oden 1983, p. 12). Therefore, rather than interpreting an ancient tradition to be used by persons in the modern era, Oden views his project as presenting the tradition whole as a judgment on modern times.

In *Care of Souls in the Classic Tradition* (1984), a book in Don S. Browning's *Theology and Pastoral Care Series*, Oden explored Gregory the Great's *Liber regulae pastoralis* as a resource for pastoral caregivers since it presents variable diagnosis based on the situation, explores human ambivalence, examines ministry as rooted in Christ's care, and advocates servanthood as the basis for authority. In the book, he explained his theological transition. Oden states that during the 1950s and 1960s, he was the recipient of client-centered therapy and that this was "profoundly important" for him (Oden 1984, p. 22). As we have seen, he dedicated an early book to his Rogerian psychotherapist. During the 1960s he became an enthusiast for a variety of group processes and, as he states, eventually "began to recognize the potential self-deception of [his] own antinomian temptations" manifested in "anarchic politics and messianic expectations about social experimentation" (Oden 1984, p. 22). He credits Will Herberg, who was a close friend from 1971 to 1977 at Drew University, of divesting him of these expectations by urging him to return to historical Christianity (Hall 2011). In this light, he made a "joyful decision" to focus on ancient Christianity in the mode of a "critique of modernity," which he defined as "autonomous individualism, naturalistic reductionism, and narcissistic hedonism" (Hall 2011, p. 24). Oden concludes that modernity is "rapidly losing its moral power" and argues for a return to classical resources, which he indicates have been ignored in the twentieth century (Hall 2011, p. 24). He expects that this shift to ancient traditions would emphasize intercessory prayer in pastoral care, provide moral guidance that urges couples to

remain married, emphasize group process, and include evangelical witness as an aspect of care.

Continuing this reclamation, Oden published a four-volume series that focused on premodern sources: *Becoming a Minister* (1987a), *Pastoral Counsel* (1989a), *Crisis Ministry* (1994), and *Ministry through Word and Sacrament* (2000). In these volumes, Oden continues to apply ancient Christian theology to the modern situation as a corrective. Multiple block quotations – frequently more than one per page – from Cyril of Alexandria, Augustine, Ambrose, Luther, and Baxter dominate the volumes, while Oden’s own analysis is set in small type throughout between the quotations. In this sense, Oden visually represents his own position as a scholar. His work is now simply a receptacle for the tradition so that his own voice becomes the background and ancient texts become the foreground of his argument. In the first volume he quoted extensively from Peter Damian to argue that homosexuals should not be ordained and implied that homosexuality might be contagious (Oden 1987a, p. 184).

While he was assembling this series on ministry, he was also writing a systematic theology grounded in the same patristic resources, containing *The Living God* (1987b), *The Word of Life* (1989b), and *Life in the Spirit* (1992). In the first volume he intended to “express in straightforward terms what Christian thinking has always understood about its own grounding and empowerment” and do so in a way that would be accessible to pastors (Oden 1987b, p. x). In his personal interlude in the second volume, *The Word of Life*, he maintains that his central identity as a theologian has been to “listen” to the orthodox consensus of the conciliar church (Oden 1989b, pp. 219–220). He argues that many patristic sources have been poorly translated and thus inaccessible to the everyday pastor and so he offers his own translations.

Oden continued his mission of reclamation through the *Ancient Christian Commentary on the Scripture* series in which he depends upon patristic sources as the basis for a commentary on the bible (Oden 2005). Recently, he has

explicitly discussed his dependence upon African Christianity from the first several centuries of the Christian movement and tried to acquaint Western readers with the shape of this early Christianity and the continuities between ancient and current African Christianity (Oden 2010). Even as Oden (1995) attempted to reclaim historical Christianity, he has been adamant in his attempts to reform what he considers to be liberal mainline denominations and seminaries. Toward this end he has been an active member of the Confessing movement within the United Methodist Church.

Thomas C. Oden is a theological ethicist who has made his primary concern ministerial identity and formation at the juncture between salvation and health. His earliest statements introduced the boomer generation to the importance of psychotherapy as an arena of God’s gracious activity and provided theological sources for connection therapy and salvation. His later work began to focus more closely on the work of the congregational minister, drawing important correlations between the ministry of pastoral counsel in the modern congregation and the care provided in the ancient church. During this later period, Oden urged pastoral theology to reclaim its continuity with premodern forms of the care of souls by drawing from ancient resources.

## Oedipus Complex

Robert Quackenbush  
World and National Association for the  
Advancement of Psychoanalysis (NAAP),  
New York, NY, USA

Oedipus Complex, in psychoanalytic theory, is based on the premise of incestuous fantasy in which a child desires the parent of the opposite sex. Sigmund Freud (1921–1955), the father of psychoanalysis, held that children pass through a stage from about ages 3–6 in which they develop a lively curiosity about sex. The son desires his mother and wants the father dead. The daughter wants sex with the father and hates the mother. (“Electra Complex” may be used to label the girl’s

feelings). Freud believed that many adult neuroses originate with the Oedipus Complex. He derived his theory from the Oedipus myth revealed in the oracles of ancient Greece.

The tragic story of Oedipus Rex (Oedipus the King) has been told many times through the ages in literature and plays. According to the fifth-century BCE play by Socrates, an oracle tells King Laius and Queen Jocasta of Thebes that a son will be born to them who will kill the king and marry the queen. When the son is born, the king and queen order a trusted slave to take the infant to the mountains to die. The slave takes pity on the infant and gives him to a childless royal couple in Corinth who name him Oedipus. When Oedipus grows into young manhood, he goes on a journey to Delphi and meets an oracle who tells him that he will kill his father and marry his mother. Knowing this, he is afraid to return to Corinth and goes on to Thebes. At the crossroads between Corinth, Delphi, and Thebes, he gets into a quarrel with an old man in a chariot who pushes him aside to go past him on the road. The old man attacks Oedipus with his long scepter. Oedipus grabs the scepter and kills the old man. Still at the crossroads, Oedipus is confronted by Sphinx who demands that he solve a riddle of what walks on four legs in the morning, what walks on two legs in the afternoon, and what walks on three legs in the afternoon. Oedipus guesses the right answer, which is a man (baby – adult – old person), and Sphinx leaps to her death over a cliff. His trails over, Oedipus goes on to Thebes and receives a hero’s welcome for saving the city from Sphinx. He is crowned the new king to replace the old king who has just died. At the same time he marries the widowed Queen Jocasta. They have a happy life together and produce four children. Years later, a plague strikes Thebes. Oedipus learns that the Gods are angry and brought forth the plague because the murder of King Laius has not been avenged. He goes on a quest to find the murderer and discovers that the old man he killed at the crossroads was King Laius, his father, and that he has married his mother, Queen Jocasta. The terrible news reaches the castle and the queen hangs herself in the bedroom she has shared with her son and

Oedipus's father. Oedipus is so horrified by what he has done that he pokes out his eyes with a pin from her body. Blinded, he goes into exile and mysteriously dies in Athens. Thus, ends the myth of Oedipus, who brought about the very prophecy he had been trying to escape from all his life.

Freud (1927–1955) extended the Oedipus Complex into his theories about religion. He called religion “the universal obsessional neurosis of humanity; like the obsessional neurosis of children, it arose out of the Oedipus Complex, out of the relation to the father.” Ernest Jones (1953) wrote that Freud “grew up devoid of any belief in a God or Immortality, and does not appear ever to have felt the need of it.” Thus, Freud looked at all religions with a jaundiced eye. Based on his theory (1923–1955) of the ego, the id, and the superego, he called God the superego. To him the superego is ever observing of the contact between the ego and the id and intervenes when necessary to impose rules and regulations that were learned by every person from their early caretakers during their formative years. The id is our basic needs for survival and comfort and wants what it wants when it wants it. The word “no” is not in id's vocabulary. The ego helps the id to get what it wants in an appropriate manner. Freud's theory places the superego in the role of a father who supervises the interaction between the id and ego.

The theory of the presence of Oedipal phenomenon in religious ideation has not been accepted as a universal construct and has been argued since its inception. Some of Freud's followers, including Otto Rank, Alfred Adler, and C. G. Jung, broke away from Freud and went on to form their own schools based on their own philosophies. Rank (1929) elevated the maternal role at the expense of the paternal by arguing that the experience of birth is the primary psychological event. Adler (1948) explored nonsexual reasons for neurosis, in particular the role of inferiority feelings. Contrary to Freud's emphasis on the sex drive, Adler believed strivings for social success and power as fundamental in human motivation. Jung (1906) did not support Freud's ideas of infant sexuality and went on to develop his own theories about the psyche, which

he called the Self. He said, “as for Freud's therapy, it is at best one of several possible methods and perhaps does not always offer in practice what one expects from it in theory.” Freud (1914–1955) responded by saying, “All the changes that Jung has proposed to make in psycho-analysis flow from his intention to eliminate what is objectionable to the family-complexes, so as not to find it again in religion and ethics.” He explains that to Jung “the Oedipal Complex has a merely ‘symbolic’ meaning: the mother in it means the unattainable, which must be renounced in the interests of civilization; the father who is killed in the Oedipus myth is the ‘inner’ father, from whom one must set oneself free in order to become independent.”

The debate between psychology and religion over Freud's Oedipus Complex theory has been ongoing for over a hundred years. On the religious side of the debate, some analysts and theologians have called for an abandonment of the Oedipal theory. Brothers and Lewinberg (1999) argue that the so-called Oedipal passions result when children, forced to dissociate aspects of themselves as gendered, find these aspects of their self-experience embodied in caretakers. They go on to say, “In light of recent advances in theory and research that starkly reveal the shortcomings of Oedipal theory, we ask the reader to consider laying Oedipus to rest once and for all.” They also question the Oedipus myth by calling attention to Kohut (1981) and his last paper in which he argued that analysts have “reversed their usual stance as regards King Oedipus by taking the manifest content – father, murder, incest – as the essence.” Kohut believed the story's “most significant genetic dynamic feature” is that “Oedipus was a rejected child” and that a replacement is needed for the Oedipus myth.

In keeping with the thoughts of Brothers and Lewinberg (1999), Judith Van Herik (1983) suggests that Freud's psychology and his theories about religion “are about patriarchal culture, and therefore about mental expression and reproduction of gender asymmetry.” She states that Freud's Oedipal theory acts as a constraint that has the same psychical structure as religious attachment

to the father. Freud's psychology, says Van Herik, "is primarily about the socialized son and secondarily about the socialized daughter in a situation where father-son dynamics are primary." More directly, Gary Ahlskog (2001) says that he is not sure there is even one piece of Freudian theory so sacrosanct that it deserves allegiance and discipleship, which "proper" therapists are supposed to endorse. He goes on to say, "Nominating the Oedipus Complex won't do because of the need to specify 'which Oedipus Complex'? - an indefinite and endless task, since variations of sexual, aggressive, social, and intergenerational conflict are as innumerable as there are individuals on the planet." On a positive side, Esther Menaker (1995) says that the individual self is structured by the internalization of emotional experience with significant others – preferable with those who we have admired and to whom we have been attached and that the "other" lives on is immortalized – within ourselves. Theologian Paul Tillich (1956) confirms this by stating simply that it is "the activity of God *within man* that grounds and makes possible the experience of God *beyond man*."

Today, many caregivers in the mental health field do not believe as Freud did and include spirituality with psychotherapy. Hyman Spotnitz, M.D. (1985), for one. He is a pioneer of group therapy and founder of Modern Psychoanalysis that addresses the treatment of traumas incurred from infancy to the Oedipal stage that Freud did not believe were treatable. He believes that Freud was wrong in calling God the superego. To Spotnitz (1990) religion and going to church is ego supportive and a strong ego is what enables a person to tolerate all their impulses, all of their thoughts, all of their feelings, and what everybody else is doing to them.

The debate over Freud's Oedipus Complex is never ending. Through it all, as Spotnitz, Tillich, and others have maintained, every school of thought works in psychology and religion when it is ego enhancing and helps people to find their way in life and to realize their full potentials and to form meaningful, lasting relationships. This is confirmed in a forward Erik H. Erikson (1963) wrote for his book *Childhood and Society*.

He says that Freud was once asked what he thought a normal person should be able to do well. Freud is reported to have said:

"Lieben und arbeiten" ("To love and to work").

## Oedipus Myth

James Markel Furniss  
University of Connecticut, Canton, CT, USA

### The Myth

Oedipus is a mythic Greek character thought to originate in Mycenaean folklore. His story is cited by Homer and was central in the lost Theban cycle of post-Homeric epics, before becoming a subject in tragedies written for the Festival of Dionysius in fifth century BCE Athens, most notably in the three Theban plays by Sophocles. Sophocles' plays provide the best-known modern version of the myth, though the story differs to varying degrees in works by Aeschylus and Euripides as well as in the epics and in the original folklore.

The first of Sophocles' Theban plays in story chronology (though second in order of composition) is *Oedipus Tyrannus*. The play begins as Oedipus, King of Thebes, is asked by his subjects to rescue the city from a devastating plague. Brother-in-law Creon brings news from Apollo's oracle at Delphi that the murderer of previous Theban king (and former husband of Oedipus's wife Jocasta), Laius, must be destroyed before the plague can end. In the course of the ensuing investigation, we learn the backstory of Sophocles' drama.

Laius and Jocasta, King and Queen of Thebes, have been warned by an oracle that Laius would die at the hands of his own child. (One reason offered for this terrible fate, found in other mythic sources, is Laius' former kidnapping and rape of the boy Chrysippus.) When a male child is born to the couple, they send him off to be abandoned on Mt. Cithaeron. The servant charged with the task, however, takes pity on baby Oedipus and gives

him to a shepherd, who then delivers the infant to childless Corinthian King Polybus and Queen Merope. They raise Oedipus as their own. When, as an adult, Oedipus hears a prophecy that he will kill his father and marry his mother, he leaves Corinth to escape the dire prediction but on the road argues with and kills another traveler, who (unbeknownst to Oedipus) is his real father, Laius. Oedipus proceeds to Thebes, where he answers the riddle of the Sphinx, thereby freeing the city of this monster's murderous siege and winning the hand of Queen Jocasta.

Sophocles has Oedipus conduct a determined murder investigation, which reveals the facts of his past one by one. By the play's end, Jocasta has committed suicide and Oedipus has both blinded himself and insisted to new king Creon that he be exiled from Thebes.

In *Oedipus at Colonus*, last in composition and second in story order, we meet Oedipus some 20 years after his exile from Thebes; he is a blind old man being guided by daughter Antigone. When they reach the village of Colonus, Oedipus discovers that he is in a grove sacred to the Eumenides. Here, he claims, Apollo's oracle has foretold his life's journey will end and the hosts of his burial ground will be blessed.

Oedipus's other daughter, Ismene, arrives with news about his sons, Eteocles and Polyneices, and Creon, all of whom have heard oracles about the significance of Oedipus's burial site and who want control of that site for various reasons. King Theseus of Athens then arrives, hears Oedipus's story, and gives his sanction to Oedipus for burial in the holy grove, for which Athens will be blessed in future conflict with Thebes.

Later in the play, Oedipus bitterly denies the entreaties of Creon (who attempts to compel Oedipus to come with him and must be thwarted by Theseus) and Polyneices, who – like his uncle/great-uncle – want to avoid the consequences of Oedipus's burial in a foreign land. Oedipus proclaims his innocence of responsibility for his terrible fate and denounces both Creon and his sons for maintaining his banishment before they knew of his new favor with Apollo. Oedipus condemns both sons to die in the assault on

Thebes Polyneices is about to launch. Zeus's thunder signals Oedipus that his time has come to die. Theseus alone is allowed to see the place of Oedipus's death, for its blessing on Athens depends upon its secrecy.

Oedipus is present in *Antigone* (composed first though last in story chronology) as the spirit of the curse which has been fulfilled in the deaths of his sons in their battle for control of Thebes before the tragedy begins. The play tells the story of Antigone's refusal to accept Creon's decree that Polyneices be denied burial because he had led the attack on Thebes. Their conflict of wills results in the deaths of Antigone, Haemon (Antigone's fiancé and Creon's son), and Eurydice (Haemon's mother and Creon's wife), as well as Creon's ruin by the play's conclusion.

## Oedipus and Freud

The Oedipus myth, particularly *Oedipus Tyrannus*, has had an enduring fascination for western audiences and readers, as evidenced by many retellings of the story and perennial production of Sophocles' original. Sigmund Freud was both exemplar and student of that fascination when he proposed that the Oedipus story – specifically, patricide and mating with one's mother – depicts a universal stage of human development. This proposal occurred as Freud formulated his theories of psychoanalysis in the late nineteenth and early twentieth centuries.

Freud's Oedipal theories begin in *The Interpretation of Dreams* (1899), although there is preliminary mention of them in earlier letters. Freud claims that there exists an Oedipal relationship between all children and their parents in early childhood.

According to my already extensive experience, parents play a leading part in the infantile psychology of all persons who subsequently become psychoneurotics. Falling in love with one parent and hating the other forms part of the permanent stock of the psychic impulses which arise in early childhood and are of such importance as the material of the subsequent neurosis. But I do not believe that psychoneurotics are to be sharply distinguished in this respect from other persons who remain

normal. ... [They] do no more than reveal to us, by magnification, something that occurs less markedly and intensively in the minds of the majority of children. Antiquity has furnished us with legendary matter which corroborates this belief, and the profound and universal validity of the old legends is explicable only by an equally universal validity of the above-mentioned hypothesis of infantile psychology.

I am referring to the legend of King Oedipus and the *Oedipus Rex* of Sophocles.

Freud supports his idea that the story depicts a universal psychic reality by emphasizing the uniquely enduring power of the Oedipus myth to move audiences:

If the *Oedipus Rex* is capable of moving a modern reader or playgoer no less powerfully than it moved the contemporary Greeks, the only possible explanation is that the effect of the Greek tragedy does not depend upon the conflict between fate and human will, but upon the peculiar nature of the material by which this conflict is revealed. There must be a voice within us which is prepared to acknowledge the compelling power of fate in the Oedipus, while we are able to condemn the situations occurring in... other tragedies of fate as arbitrary inventions (Brill 1995, pp. 274–276).

Over time, Freud's Oedipus theories became a crux of his construct for human psychosexual development and crucial in his understanding of neurosis. He also attributed the development of such superego constructs as religion to repression of the Oedipal drives. In the third stage of development ("phallic," age 3–6), children experience the Oedipal "complex," which involves erotic attraction toward the opposite-sex parent and jealousy toward the same-sex parent. In normal development, a "dissolution" of the Oedipus complex takes place when fear of castration by the father (or, for girls, envy of the father's penis together with a belief that castration has already been brought about by their mothers) causes children to repress their incestuous desires. This results in the beginning formation of superego, Freud's conception of an unconscious psychic component which enforces the father's/culture's prohibitions. Freud also suggested that the individual psychic process of the Oedipus conflict and its dissolution originally played out collectively in history. He first addresses this theory in

the final section of *Totem and Taboo* (1913), "The Return of Totemism in Childhood." In this passage, Freud imagines a "primal horde," Darwin's speculative idea of an early human society, in which a group of brothers have banded together and killed their father, who had banished them from the social group to deny their lust for their mother, his mate.

We need only assume that the group of brothers banded together was dominated by the same contradictory feelings toward the father which we can demonstrate as the content of ambivalence of the father complex in all our children and in neurotics. They hated the father who stood so powerfully in the way of their sexual demands and their desire for power, but they also loved and admired him. After they had satisfied their hate by his removal and had carried out their wish for identification with him, the suppressed tender impulses had to assert themselves. This took place in the form of remorse, a sense of guilt was formed which coincided here with the remorse generally felt. The dead now became stronger than the living had been, even as we observe it today in the destinies of men. What the fathers' presence had formerly prevented they themselves now prohibited in the psychic situation of "subsequent obedience" which we know so well from psychoanalysis. They undid their deed by declaring that the killing of the father substitute, the totem, was not allowed and renounced the fruits of their deed by denying themselves the liberated women. Thus, they created two fundamental taboos of totemism out of *the sense of guilt of the son*, and for this very reason, these had to correspond with the two repressed wishes of the Oedipus complex. Whoever disobeyed became guilty of the two only crimes which troubled primitive society (Brill 1995, pp. 884–885).

Freud ends this imagined scenario with his "conclusion that the beginnings of religion, ethics, society and art meet in the Oedipus complex" (Brill 1995, p. 895).

## Oedipus After Freud

Freud's linkage of myth with psychic processes has had a profound impact on subsequent psychology as well as on western culture generally. Over the last century, a great number of thinkers in diverse disciplines have responded to Freud's Oedipal theories either to confirm, deny, or retool

to fit their own purposes. Oedipus has also become, post-Freud, an even more pervasive presence in literature, the fine arts, and popular culture.

One important effect of Freud's Oedipal theories has been their impact on the interface between psychology and religion. The idea that a myth could depict a universal psychic reality raised the possibility that individual psyches are retellings of a greater, mythic reality, where – by searching, interrogating, and recognizing – human beings can find their place in a coherent whole. James Hillman remarks, "What holds us to Freud. . . is not the science in the theory but the myth in the science," and also, "Freud brought in myths and myth brings in God" (1995, pp. 102, 124).

For some in psychology – behaviorists, for example – myth and gods are not objective enough means or content for the conduct of scientific inquiry. Others, however, who share some of Freud's basic ideas (such as the importance of the unconscious) have continued and expanded what the Oedipal theory began in what is broadly referred to as depth psychology. The central early figure in this endeavor was Carl Jung, a one-time disciple/colleague of Freud, who split with his mentor over a fundamental difference in their concepts of human nature.

Jung expanded upon Freud's recognition of the universality of Oedipus in his idea of a "collective unconscious," where primal forms (archetypes) of all human experience exist in a subliminal reservoir, from which individual psyches draw guidance and energy as they seek to realize the potential of their own natures. While Freud implies that the Oedipus myth is a later, cultural construct representing the historical experience of certain instinctive sexual drives, Jung's collective unconscious suggests a more complex origin for myth. In a manner similar to dreams for an individual, myth emerges into consciousness out of the collective unconscious, from whose mysterious depths it derives symbolic content implying a natural teleology not limited to physical evolution of the species. Jung claimed, for instance, that myth and dream contain evidence for the existence of Self, an archetype of the collective unconscious which is

the universal potential for human beings: a perfect merger of individual and the whole of creation, a concept analogous to God.

Jung's extension of the Oedipal theories to the collective unconscious and to his study of world myth and symbology can be cited as having a seminal influence on the development of later twentieth-century psychological fields that emphasize human spirituality over instinct, such as transpersonal psychology and archetypal psychology. Broadly speaking, these may be thought of as religious psychologies in that they premise a link between individuals and enduring, perhaps timeless, forms. In such approaches to psychology, the entire body of human myth – including all the stories of Oedipus – is a context in which the stories of individual lives declare their meaning.

Also, Freud's Oedipal explanation for the origins of religion instigated reactions and accelerated the development of the psychology of religion, a field to which such figures as Erik Erikson and Erich Fromm have made significant contributions. Among contributors to this field are psychoanalytical theoreticians who revise founder Freud's Oedipal theories and – instead of regarding religion as a neurosis to be outgrown – propose a newly harmonious relationship between psychoanalytic theory and religious thought.

## Om

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

In the Eastern religions, which grew out of the Vedic tradition, sound vibrations are thought to have great power in both the spiritual and physical domains. *Om* is believed to be the first sound of the universe, the creative power from which all else emerged. Pronounced A-U-M (Ah-oo-mm), all sounds are believed to be contained in this *Prandava* or primal sound. A favorite mantra (chant) in Hinduism and Buddhism, *Om* is believed to be the Name – the very Presence – of the Absolute. Many individual or communal rituals begin or end with the chanting of *Om*.

In psychotherapy, if meditation is recommended, the practice of mantra meditation may be very calming and/or uplifting for the client. *Om* is an appropriate mantra for many clients. An alternative sacred word for meditation in the Judeo-Christian tradition is “Shalom” which ends with the same sound vibrations.

## Omega Point

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

The forthcoming unity of all humanity was defined as the “Omega Point” by Jesuit paleontologist and mystic, Fr. Pierre Teilhard de Chardin. In most mystical traditions, the idea of union with God is preceded by the experiential recognition of loving unity with all humanity. Sai Baba, for example, recently has stated that:

All the resources of nature like air are available to all irrespective of nationality or creed or race. This is the unity in diversity that has to be realized. . . . All should seek to live as brothers and sisters. No one should criticize any nation, faith or culture. When you cultivate this broad outlook, your culture will be respected by others. It is this spirit of unity that the world needs today (Sai Baba 1995, p. 214).

In medieval times, the Sufi mystic Ibn al-‘Arabi wrote of similar, cross-cultural breadth of love:

My heart has become capable of every form:  
It is a pasture for gazelles and a convent for Christian monks,  
And a temple for idols and the Pilgrim’s Ka’ba  
And the tables of the Tora and the book of the Qur’an.  
I follow the religion of Love; Whatever way  
Love’s camels take,  
That is my religion and my faith (Cited in Halligan 2003, p. 1).

With the rapid advance of globalization, our society is currently undergoing many challenges related to the interface of various cultures, both those within our midst and those external to our borders. Psychotherapy frequently deals with relationship issues that are tinged by cultural differences. When the therapist maintains a broad, accepting perspective, she or he can more readily facilitate resolution to the interpersonal and group struggles that are inevitable as we try to unite into one world.

## Oracles

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

The term “oracle” can refer to a specific person who practices divination or to the mechanism used for divination (e.g., cards, trance possession, and reflecting bowl of water). The oracle is the medium who bridges between the spiritual world and the mundane world, or the one who interprets or reads significance into the message delivered, known as reading the portents.

An important oracle which has received some broad public attention. The oracle of Apollo at Delphi is perhaps the most famous oracle, but that position has been vacant since the Christian Church persuaded the Roman emperor Theodosius I to close pagan temples in 393 CE. The oracle, known as the Pythia, had provided guidance to both persons and city states since the eighth century BCE., so it represents a very long-standing social and spiritual tradition. One of the most famous sayings from classical Greek antiquity was reputed to have been inscribed on the lintel to the temple of Apollo at Mt. Parnassus, where the oracle resided. “Gnothi seauton,” or “know thyself,” echoes across the ages as surely sage advice.

The service (Gk. *chresmos*) provided was “gnosis,” or knowledge (Burkert 1985). There was an implicit assumption that a special type of knowledge was needed to resolve a troubling circumstance in the individual. This shows the therapeutic effect of knowledge, an idea which continued throughout the gnostic traditions of the mystery religions and early Christian heresy. It is also the basis upon which reason was used in philosophy; there is something corrective about knowing the truth, whether it is in abstract matters or mundane affairs needing decision. Healing is a special type of gnosis; it involves two aspects, diagnosis and treatment. The diagnostic phase is easily seen as open to oracular spirituality. The means of healing can be prescribed in dreams as will be described below.

There are many theories about how the oracle entered into an altered state of consciousness. Some of speculated that the temple lay upon a fissure where intoxicating fumes emerged. The priestess would sit over the fumes. Others speculate that the intoxicant was some psychoactive plant, cannabis, or opium being common and known for their psychotropic properties. But evidence remains mixed and more speculative than consistent. Without reference to intoxicants, there is clear evidence of human ability to enter into trance and perform oracular functions, so the specific details are less important.

The Pythia illustrates one type of oracle, a localized connection between earth and spirit. This oracle remained at Delphi and was indeed part of the sacredness of Delphi. At the very heart of the temple of Apollo at Delphi, where the Pythia made her pronouncements, was the Omphalos, a large stone believed to be the navel of the world. This anchored the place at a spiritual level dating back to animistic times, well before the classical polytheisms. Because of this, those that seek advice must come from afar; this creates a link to the act of pilgrimage as a motive force in human spiritual psychology. The record of the pronouncement mostly concerns the issues of important people; Alexander the Great consulted the Pythia or affairs of state. He also later consulted the older oracle of Amun at the Siwa Oasis in Egypt. Little remains of the pronouncements for more mundane querants.

Healing also was a possible focus as in the case of the temples of Asklepios where the oracular function came to the querant themselves in dreams and the divination in the exegesis given by the priest upon awakening in the morning (Kerenyi 1959). Epidaurus was the main site for the cult of Asklepios, though the practical advantages of a dispersed expertise in healing led his cult to spread more widely in the Greco-Roman world of the Mediterranean. The island of Kos had a sanctuary, and in the heart of Rome on an island in the Tiber River, the temple of Asklepios, Latinized as Asklepios, was established. Asklepiian dream incubation illustrates an interesting variation on the oracular process. In most instances the divine speaks through the seer, but in this case, it comes to the seeker by night. Part of the ritual was entering into sleep with a group of fellow seekers.

An oracle who is still practicing is the Nechung oracle. He is the state oracle of Tibet and serves the court of the Dalai Lama as leader of the Tibetan people in exile ([http://www.tibet.com/Buddhism/nechung\\_hh.html](http://www.tibet.com/Buddhism/nechung_hh.html)). The movies *Kundun* and *Seven Years in Tibet* portray this figure. Like many oracular experiences, the film portrays a fairly active trance state with convulsive movements and guttural vocalizations. Like many senior Tibetan religious officials, he is considered a tulku that is a continued stream of incarnated lamas or teachers. Since oracular traditions in this region date back to the aboriginal Bon religion, we can see in this instance a layered texture to the spiritual experience. The Vajrayana Buddhism overlays an earlier animistic spirituality. The modern form of spirituality was influenced by a degree of formalism, yet more archaic forms such as spirit possession are retained and shaped by the newer world view of Tantric or esoteric Buddhism.

In modern revival/recreation of Norse religion, the oracular “seidh” ceremony is used to offer advice on personal decisions. The deities that possess the oracle in Seidh, of course, are Norse or Germanic in mythic frame, Odin, for example. The same basic formula of spirit possession serves to channel spiritual advice and

guidance. The time of spirit possession is a liminal one; the oracle is physically present in the mundane world but is mentally and spiritually engaged in the realm of the spirit and literally sees and hears things from beyond the veil. Indeed, the physical use of a veil to cover the head is a fairly common physical prop for the performance. In the seidh, one person allows him or herself to become possessed for the duration of the ceremony and enters into a trance state for the pronouncements (Paxson 2012).

There is a formal process of querants coming forth and asking specific questions. As with all divination, this is a dialectical process, that is, one governed by the formal social and communicational properties of question and response. The advice of the oracle is couched to be responsive to the needs of the querant, yet bringing in an outside perspective on the decision or trajectory about which the querant seeks guidance. The advice is also vague enough to leave a number of things unclear. This adds a degree of openness to unfolding possibilities that makes the divination of an oracle a flexible guide rather than a deterministic or fatalistic prediction.

## Original Sin

Clodagh Weldon

Dominican University, River Forest, IL, USA

Original sin is the Christian doctrine which says that because of the sin of Adam and Eve, original innocence is lost and all subsequent human beings are born into a state of sinfulness. The doctrine states that human beings do not commit this sin but rather contract it from the Fall of Adam and Eve (CCC: 404). In other words, original sin is an inherited condition.

The doctrine of original sin was most famously formulated by North African theologian St. Augustine of Hippo (354–430) following his conversion to Christianity (Augustine, *Confessions* 8:12). His theology was deeply influenced by Plato's separation of the body and soul, a dualistic vision in which the pure and immutable soul is trapped in the prison house of a corruptible body. Upon his conversion to Christianity, Augustine renounced all pleasures of the flesh and, embracing the spiritual world, chose the celibate life. But he soon realized that the mind could not suppress the desires of the body and concluded from this that there must be some defect in human nature. That defect, he argued, came from original sin.

Although the words "original sin" do not appear in the Bible, the doctrine of original sin is implicit in the writings of the apostle Paul. In his letter to the Romans, Paul says that it is by one man that sin entered the world (Romans 5:12) and that by one man's disobedience, all were made sinners (Romans 5:19). Central to Augustine's argument is the premise that all of humanity was summed up in Adam. Thus, when Adam disobeyed God by eating the fruit of the tree of the knowledge of good and evil, it was not just Adam who sinned but all of human nature that sinned. Augustine argued that original sin was transmitted through concupiscence, an idea affirmed by the Council of Trent (1545–1563). As a result of original sin, humanity is

condemned. Hope for redemption comes with the death of the second Adam, Jesus, who atones for the sins of humanity. Participation in his death by baptism washes away the stain of original sin (Romans 6:3–11).

Not all agreed with Augustine in his day. Most notable was a British monk by the name of Pelagius. He argued that human beings sin not because they are predisposed to do so due to the disobedience of Adam and Eve but because they utilize free will and choose to imitate bad example. He was condemned by the Church at the Council of Orange (529 CE), and it was Augustine's view that prevailed. Some believers today, most notably the Disciples of Christ and Mormons, side with Pelagius in rejecting the doctrine of original sin as unbiblical. They argue that human beings are only responsible for the sins that they commit and not the sins of the fathers (see, e.g., Deut. 24:16; Ezek. 18:20; Jer. 31:29–30).

## Commentary

From Freud's perspective, original sin has a parallel in the guilt of oedipal transference, an idea he articulates in his *Totem and Taboo*. Here, Freud argues that the killing of the primal father creates man's sense of guilt. In "Our Attitude to Death" (14: 292–293), Freud argues that the Christian doctrine of original sin further allows us to deduce the nature of this primal guilt. If humanity, he argues, is redeemed from original sin by the sacrifice of Jesus, then by implication, there must have been a murder. Freud therefore concludes that original sin is the primal crime of the killing of the primal father.

Jung was deeply critical of the traditional Christian doctrine of original sin, his principle critique being that it implied that man rather than God is responsible for evil. However, he thought that if psychologically interpreted, it is "...of profound therapeutic significance" (Jung 16 § 186), particularly if understood as an expression of the archetype of the shadow.

## Orpheus and Orphism

Mark Greene

Counselling and Psychotherapy, Mercury Pier Publishing, Hong Kong Special Administrative Region of the People's Republic of China, North Point, Hong Kong

The image of Orpheus as a semidivine mythological being and perhaps an actual person has inspired countless works of art for well over two and half millennia. Within the domains of myth and art, he is primarily associated with his renowned abilities as poet and musician. Many

versions of his story describe the captivating power his music exerted over anyone or thing near him while he played his cithara. Equally compelling is the story of the death of his newly-wed bride, Eurydice, and his journey to the underworld to attempt her retrieval. He also plays a crucial role aboard the Argos accompanying Jason and fellow Argonauts on the quest for the Golden Fleece. Perhaps most intriguing, from the perspective of religious studies, is his purported role as the founder of a non-Hellenic renunciation cult called Orphism that condemned animal sacrifice and produced a large body of works describing a cosmogony and eschatology that stand in sharp contrast to those described in Homer and Hesiod.

The Orphic doctrine views all of humanity as semidivine in origin due to our having sprung from the ashes of the Titans after they had tricked, killed, and then eaten the infant Dionysos, the divine ruler of the universe. In retribution, Zeus immolated the Titans but only after the infant god had been ingested. Those calling themselves followers of Orpheus based their belief system upon this divine somatic origin myth. Accordingly, the Orphic believer was asked to renounce the mundane and concentrate on cleansing himself of his Titanic ancestry through purification rituals and certain lifestyle choices. Such precepts included vegetarianism and the prohibition from using any sort of animal product, including wool, as it was believed the animal's soul could actually be human and that shearing it could cause the soul harm. The initiate was told of the possibility that several incarnations would be necessary as preparation for his eventual apotheosis. These followers of the priest-initiate Orpheus are also believed to have propagated the literature that scholars nowadays refer to as the *Orphica*. These unearthed texts describe the worshippers' insistence on bodily purification so that the soul could be deemed worthy of returning to its original divine state in the afterworld.

The figure of Orpheus with his lyre first appears in the early to mid-sixth century BCE on the metopes of the Sikyonian *monopteros* at

Delphi, although his name is spelled Orphas (ORΦΑΣ). In Greek literature towards the middle of the same century, he is referred to as "famous Orpheus" by the poet Ibycus. Also beginning at this time, his image is often depicted on vase paintings. No mention of Orpheus is made anywhere in Homer or Hesiod, those two poets whose works provide us with the earliest recorded Greek myths. This is probably due to the rapid southward movement and repopularization of the cult of Dionysos which occurs less than two centuries after the written appearance of Hesiod's *Theogony* and Homer's epics. It is from Dionysos' legendary birthplace of Thrace – a territory considered wild by the Greeks and on the fringes of the geographical domain encompassed by the principal Hellenic cults of worship – that Orpheus is also said to have come.

Whether a historical figure named Orpheus actually lived and delivered the mysteries, or *teletae*, which are said to reside at the ritual heart of such Orphic beliefs is an open question.

## Commentary

Thematically, Orpheus occupies an intermediary position between the Dionysian (earth, moon, body) and Apollonic (sky, sun, spirit) forms of worship. Indeed, most versions of the myths recounting his story acknowledge these contrasting influences upon him in their attribution of paternity to Apollo and his death by dismemberment at the hands of the Maenads (female worshippers of Dionysos). Originally a worshipper of Dionysos, Orpheus travels a narrative arc from the chthonic, earthy domain of Dionysos to the rarefied heights of Apollonian worship.

Images of Christ as Orpheus appear frequently during early Christianity, examples of which can be seen in the catacombs of Peter and Marcellus in Rome and in the catacomb of Domitilla. In most cases, Orpheus is seen holding his lyre surrounded by animals that sit calmly at his feet. Arguably, there are many thematic parallels

between Orpheus' life and those of the life of Christ. Although Orpheus communicated his message in song and word and Christ just with words, the results were captivating for all those within earshot and highlighted by accounts of miracles surrounding their actions. Both were said to have ventured to the underworld and both died violent deaths on behalf of the salvation of their respective believers.

Viewing the story of Orpheus psychoanalytically reveals a fixation based on the unsuccessful resolution of psychodynamic conflicts experienced during the oedipal stage of psychosexual development. The death of Eurydice on their wedding day may indicate a son who is still sexually fascinated with the mother and for whom the wife's image carries no potency. The hero's descent into Hades where he converses with the king and queen of the underworld represents the ego's attempt to negotiate with the subconscious aspects of the parental images that comprise his superego. The warning to not turn back and look at Eurydice as he leads her to the upper world is reminiscent of the incest taboo. That Orpheus does indeed turn to look back at Eurydice suggests an attempt to resolve his oedipal anxiety by actually violating the taboo. Losing his wife a second time causes him to suffer a great depression.

The Orphic doctrine's primary tenet of repeated reincarnation with an eventual return to godliness stated as a goal appears an attempt to reduce the individual's anxiety over dying. The image of returning to a divine state functions as compensation for life's mundane qualities and the individual's limitations, especially mortality. Curiously, Orpheus establishes a cult of renunciation. In Freudian terms, this is reminiscent of the child's attempts to manipulate the parent by controlling the amount and types of food ingested. This behavior indicates further regression to the anal and oral stages.

From the point of view of Jungian psychology, Orpheus is a hero who conquers his desire to return to the mother and thus provides a template for the successful canalization of libido that is necessary for the individual's

individuation. In the case of Orpheus, the obstacle to the flow of libido is represented by Eurydice's death on their wedding day. Her death by snakebite indicates that the complexes awakened in Orpheus are from those domains occupied by images of both the father and the mother. These constellate on the son's wedding day and propel the narrative forward until resolution is achieved at the threshold between the lower and upper worlds when Orpheus looks back at Eurydice. That this look back prevents Eurydice from joining Orpheus in life can be seen to represent his failure to integrate the anima's position into consciousness. Still, as a variation on the night sea journey motif, Orpheus' journey to the underworld does result in the tempering of his soul. In accordance with the motif of the hero's journey, Orpheus is ultimately reborn as the head of a mystery cult. In this sense he successfully canalizes the blocked libido by sublimating it to a higher cultural purpose.

The figure of Orpheus the poet/musician distinguishes himself from other Greek heroes in that he feels compelled to transcend the boundary between the upper and lower worlds for love. In some versions of the myth, he undertakes this journey for the love of his wife. In others, he descends to the underworld to secure special consideration by Persephone for his followers upon their entry into Hades. In both of these examples, Orpheus transcends the physical boundary defined by death in an attempt to intercede for the benefit of others. Perhaps for this reason, and coupled with his reputation as a poet and a musician, his image is often co-opted as an emblem of romantic creativity and inspiration, two qualities revered and required by all artists.

In modern interpretations of the myth, a rich panoply of images emerge depicting other, hybrid modes of masculinity – characterized by corporeal depth and spiritual inspiration – that manifest themselves as amalgams of solar (traditionally masculine) and lunar (traditionally feminine) aspects of psyche. Indeed, the image of Orpheus brandishing a musical instrument

instead of a sword to overcome the obstacles he encounters is emblematic of a form of masculinity that successfully integrates these two poles. In this view, Orpheus' look back to Eurydice is an act that follows conscious deliberation, an act that paradoxically results from and causes an integration of unconscious elements into consciousness. Here, Orpheus is now privy to the secrets of the underworld and understands that Eurydice's death is part of her own process within a larger framework. His look back allows her to return to her path, although the cost to him is great. Sacrificing his personal wishes propels Orpheus fully onto his path of individuation, or self-actualization, in that he finds his true calling as the founder of a mystery cult with the image of Eurydice and her assumed eventual apotheosis functioning as an inspiration.

## Orthodox Christian Pastoral Care

Philip Mamalakis

Hellenic College, Holy Cross Greek Orthodox School of Theology, Brookline, MA, USA

Orthodox Christian pastoral care is, essentially, an encounter of persons: the person of the pastor, the parishioner, and the three persons of the Holy Trinity. These encounters can be brief, ostensibly insignificant public encounters, or deep private conversations. Smaller encounters set the stage for deeper encounters in times of struggle or distress. The primary role of the pastor is one of prayerful presence as he enters into the tension of these pastoral encounters, situating each encounter within the life of the parishioner and the life of the Church.

These encounters can be experienced but not fully defined because persons are created in the image of God, who can be experienced, but not be fully explained or defined. Orthodox pastoral care treats people, not problems or diagnoses, and healing occurs within this encounter of “knowing” and being known in relationships. Pastoral care is focused on bringing healing through reconciling persons with God and his Church. Naturally, expressing feelings, gaining insight, changing destructive cognitions, and solving problems are aspects of this process of personal encounter of reconciliation, wholeness, and healing. However, the pastor focuses on facilitating openness, rather than solving problems.

### Pastoral Care as Being Transformed in the Tension

People come to pastors for assistance because they are experiencing distress, or tension, within themselves or their relationships. Tension is considered negative, and our instinct is to fear it, to hide it, or to run from it, which only prevents us from being fully known and fully transformed. Pastoral care is an entry into, and an experience

of, the tension between being and becoming associated with our human condition and vocation. Human beings are created in the image of God and called to grow into the likeness of God. Each person is both the chief of sinners (I Tim. 1:15) and called holy, a saint (I Cor. 1:2). Within each of us is both sin (I John 1:8) and the Kingdom of God (Luke 17:21).

St. Paul says, “I would not have known sin except through the law” (Rom. 7:7). The institution of the Mosaic Law makes the tension manifest. This tension is not a problem, but a place to live, to learn, and to love. The tension becomes destructive when we deny or avoid it. The goal of Orthodox pastoral care is not to solve the tension, but to glorify God and to love in the tension. The tension creates a space for us to exercise our freedom. Avoiding the tension by acting out on desires or impulses in destructive ways destroys relationships, undermines intimacy, and enslaves persons to sin and addiction.

Pastoral care is an encounter of the struggle between sinner and saint without denying the experience and significance of human brokenness or the reality and significance of the true self we are called to become in Christ. No matter how hard we try, we cannot be without sin, and even if we give in to every temptation, we cannot erase the image of God in us. We cannot completely condemn, nor fully accept, ourselves as we are. The truth lies in accepting the tension as the battleground in which we live. The process of pastoral care is the process becoming or emerging as true selves within this tension.

Tension is a natural aspect of all relationships. Pastoral care with couples is a process of assisting couples in recognizing the tension and responding in love toward each other in the tension. The tension becomes creative when we recognize it, not as something destructive but as reality and the source of our growth and transformation. Attempts to escape, or flee, the tension by dominating the other, or becoming passive, serve to destroy relationships, growth, and healing. This tension is the cross of Christ, through which we encounter a real resurrection in ourselves and in our relationships. Avoiding the

cross eliminates the possibility of a resurrection. And, for the Orthodox, the Cross of Christ is always intimately and inescapably connected to the resurrection. The path of the cross is a path of joy and life rather than misery and suffering.

Orthodox theology, dogma, canon law, and tradition are oriented toward this pastoral encounter and find their full meaning within this pastoral encounter. Pastors may make use of secular and psychological theories and methods of human persons, illness, and healing within this pastoral encounter. While we cannot claim to fully define this pastoral encounter, we can describe it as holistic, relational, narrative, theological, ecclesial, eschatological, sacramental, ascetic, and penitential.

### **Holistic**

Orthodox pastoral care concerns itself with the whole person, physically, psychologically, and spiritually, within a particular familial, socioeconomic, and social setting and ecology. Issues of race, class, and gender find their place within this holistic encounter, while remaining focused on the person of the parishioner. The personal does not become political, but for the Orthodox, the political is personal. Hard and fast distinctions between pastoral care, pastoral counseling, spiritual direction, and confession are foreign to Orthodox pastoral care. Holistic pastoral care requires the involvement of lay professionals who bring their expertise to bear on the pastoral encounter in support of persons. This includes, but is not limited to, social workers, psychologists, psychiatrists, and family physicians. The pastor draws from any and all of these resources and must collaborate with other professionals in his care.

### **Relational**

Orthodox pastoral care, by definition, occurs within the relationship of the pastor and the parishioner in the context of each person’s

relationship to God. Pastoral care is relational because God is relational and we encounter Him in relationship. In this way, it is the very relational nature of the pastoral encounter that is healing. The Orthodox understand persons to be relational beings, persons created in the image of a relational God, called to the fullness of life in and through relationships with God and others. All relationships in this pastoral encounter share equal importance, necessitating the pastor to have a close relationship with God and the parishioner. The pastor's relationship with God, more so than any formal study, is the source for the spiritual guidance. The skills and characteristics associated with healthy relationships, including openness, vulnerability, intimacy, boundaries, listening, and attending, are critical for pastors in this encounter. Relationships within the entire life of the parishioner are aspects of this encounter, and pastors attend to these relationships. Healing is understood as restoring and reconciling persons within their relationships.

## **Narrative**

While this pastoral care encounter cannot be reduced to stories, it is an encounter expressed and communicated through stories. The pastor is a listener. He listens to the story of parishioner, to his own story, and to the Gospel story. Troubling aspects common to all persons are issues of loss, grief, pain, suffering, shame, betrayal, abandonment, and guilt. The pastor listens for those aspects of the parishioner's story that have yet to be told, typically the more painful, shameful aspects of story. Pastors listen to the affective experiences and cognitive interpretations of the parishioner.

Listening to the story of the parishioner is an act of veneration by the pastor and an invitation to new experiences and meaning making as parishioners open their stories to the healing story of the Gospel. Pastoral care is an integration of our stories into the Gospel story. The Gospel story is life giving and invites new meanings, new interpretations, and new experiences to both pastor and parishioner. The pastor draws out, or calls

forth, new, untold aspects of the parishioner's story and reinterprets past events according to the story of God and his saving acts in history and the Church. While teaching the story of Christ and the Gospel is an aspect of this encounter, more basically, pastoral care is a living encounter of this story of Christ in the world. The story of the pastor, as well, is enriched and expanded in this encounter. In this sense, pastoral care is not something the pastor does to the parishioner but something the pastor encounters with the parishioner. Only within, and until he hears, the story of the parishioner can the pastor offer appropriate guidance. The canons and pastoral guidelines of the Orthodox Church find their place within the unique story of each person.

While Christ, or persons, cannot be reduced to stories, neither can we escape stories. What makes this pastoral care encounter Orthodox Christian, in part, is the specific Orthodox story of humanity and God's saving acts in history that guides the pastor.

## **Theological**

The pastor lives out of and perceives the world through the Orthodox theological story or world view. Orthodox theology of persons, sickness, health, and healing informs the pastor's interpretations, meaning making, diagnoses, and assessment. Persons are comprised body and soul and become fully human through union with God through the Church. Orthodox theology including, but not limited to, anthropology, sacramental theology, ecclesiology, and pneumatology is best understood, not as separate academic disciplines but in the context of this pastoral encounter. The Orthodox Christian story is theological and is known and experienced in the life of the Church.

## **Ecclesial**

Pastoral care is Orthodox because it occurs within the life of the Church, as both institution and mystical body of Christ. The pastoral encounter, although private, is a communal event situated

with the community of faith and connected to the sacramental body of Christ. Rather than a reality separated from the rest of our life, liturgy and Church reveal the reality of God's kingdom as something we experience directly with our whole lives. Pastoral care is patterned after this liturgical offering. We participate liturgically and pastorally as we offer back up to God our broken selves, our suffering, and our sins and receive his healing presence. Healing occurs as persons are restored into the sacramental, prayerful, and worshipping communion of the Church. Pastoral care is the process of integrating persons into the worshipping community. The Church, as Eucharistic community and body of Christ, is understood to be source of all healing. We respond within the internal and interpersonal tension, not as individuals but as persons connected to the life of the Church. For the Orthodox, persons do not serve the needs of the Church. Rather, the needs of the person are fulfilled within the life of the Church.

### **Eschatological**

Orthodox pastoral care is oriented toward the Kingdom of God, not just as a future event but as a present reality within the sacramental body of the Church. True holistic care cannot be limited to just this fallen world. The kingdom of God as a lived experience, now and in the future, informs pastoral care of present struggles. The Orthodox do not define persons according to their fallen state, fallen desires, or struggles but according to their vocation. Our sainthood is an eschatological reality and our sinfulness an earthly experience. This eschatological orientation creates and maintains the tension that enables us to transcend our fallenness. The pastor guides the parishioner to respond within the tension according to the values and virtues of the kingdom of God. The tension is the context for purifying our souls as we choose to walk according to God's commandments. An eschatological orientation holds firm the perspective that we grow and heal as we respond to current struggles with meekness, peacemaking, gentleness,

long suffering, self-control, patience, and kindness. This is not passivity, but strength that is expressed as forgiveness, mercy, and love. It is the eschatological orientation or pastoral care that enables the pastor to attend appropriately to all the real struggles that we face today.

### **Sacramental**

We encounter the divine reality of God through symbol and image and participate in that divine reality sacramentally. As Orthodox, the Church is the one sacrament within which we become Christ's body. We become fully human through uniting with Christ sacramentally through the Eucharist as we live out our vocation in daily life. The Church reveals the sacramental nature of all of reality, namely, that God reveals himself through physical matter and we encounter Him through symbol and image. The Church serves to restore communion between God and humanity through the sacrament of Church. Yet, this sacramental encounter with the living God requires human cooperation and participation. That participation is the response, in the pastoral encounter within the sacramental life of the Church, of turning toward God in the tension.

### **Ascetic**

The Orthodox understand that struggle is in the nature of this world and in the nature of the path of healing and growth. Seeking the kingdom of God in the face of present difficulties requires effort. Asceticism is the struggle to pursue what is true, good, and healing in the face of sinful temptations and desires that hurt or harm the self and others. True asceticism fosters connection to others. When couples resist the temptation to attack or betray each other and struggle to offer themselves to each other, they grow in intimacy and closeness. Pastoral care seeks to direct parishioners along the path of true asceticism as an affirmation of the self and a denial of sin. Pastoral care is ascetic because it demands a selfless sacrifice of the pastor toward the

parishioner. Healthy relationships require self-offering which requires that we struggle to resist the temptation to hide from or to use, abuse, or reject each other.

## Penitential

The Orthodox recognize the ascetic process of turning away from destructive desires and turning toward God as a process of repentance. The pastoral encounter is an ongoing process of turning toward God in the tension. The pastor guides the parishioner to offer up his or her sin, mistakes, and very brokenness to God within the tension. The Orthodox approach confession therapeutically, rather than juridically. Confession is a process of allowing ourselves to be known by the pastor and by God. Confession is an act of hope and joy and an affirmation of God's love and healing rather than a process of shame and guilt. All of the Christian life, and by extension the pastoral encounter, is oriented toward facilitating openness through confession and repentance. Self-knowledge is the fruit of repentance.

Orthodox pastoral care encompasses the whole of the Orthodox tradition and life of the Church, and all of the life of the Church finds its place in this pastoral encounter. The Church seeks to transform persons in the midst of the struggle through relationships that foster a deep communion between persons within the deep communion between God and all of humanity.

While the beliefs and practices of Orthodox Jews date back to the very inception of the Jewish faith, the term "Orthodox Judaism" is of modern origin. First coined in the 1800s by assimilated German Jews interested in an updated form of the Jewish religion, "Orthodox Judaism" initially

connoted overly strict adherence to a system of doctrine and law that was no longer relevant in the period of the Enlightenment (Spiro 2010). Perhaps because of the unflattering connotations of the term “Orthodox Judaism,” many modern-day Orthodox Jews refer to themselves as “Torah Jews” or “Observant Jews” – implying that rather than adherence to an outdated system of ritual, Orthodox Jews live in accordance with the timeless Will of God as revealed in the Torah, or God’s Law given at Mount Sinai.

There are several sects of Orthodox Judaism, including Ashkenazi (European descent), Sephardic (Middle Eastern descent), Hasidic (followers of Israel Baal Shem Tov), and Religious Zionist. However, what unifies all Orthodox Jews is the belief in the divinely given and binding nature of the Torah. As such, Orthodox Jews organize and live their daily lives in accordance with *Halakha*, or Jewish Law, as mandated by the Torah and interpreted by the rabbinic sages, also known as the Pharisees. This is in contradistinction to Reform and Conservative Judaism who do not view the entire corpus of Torah and rabbinic interpretation as binding.

The sources of *Halakha* are many. The Torah, or Five Books of Moses, is traditionally understood as containing 613 principle commandments. The Written Torah is supplemented by the Oral Torah, which includes explanations of the commandments as well as their applications. The Oral Torah exists today in written form, as recorded in the *Mishna* in approximately 200 CE and later in the *Gemara*, sealed in approximately the year 500 CE (together comprising the *Talmud*). In addition to the Written and Oral forms of the Torah, Orthodox Jews believe that the Torah vests in the rabbinic sages the authority to institute laws and practices not found in the Torah. The rabbinic holiday of *Hanukah*, for instance, is an example of this authority (Babylonian Talmud, Tractate *Shabbat* 21b). One final source of Jewish Law is known as *minhag* or custom. For Orthodox Jews, customs make up a rich part of Jewish life, are seen as significant, and are studied for their meaning.

## Basic Practices

There are several practices essential to the daily lives of Orthodox Jews. *Kashrut*, or the system of Jewish dietary law, instructs a Jew regarding the kinds of fish and meat that may be eaten (Leviticus 11:1–46, Deuteronomy 14:3–21). *Kashrut* also mandates the total separation of meat and dairy foods, including the separation of kitchen utensils and dishes into separate “milk” and “meat” categories. Orthodox Jews do not consume packaged foods or dine in restaurants that are not under kosher supervision.

Communal prayer is also essential to daily life for Orthodox Jews, as three times a day, Jewish men gather in groups of ten or more to recite prayers. While Jewish women are also obligated to pray, it is not incumbent upon them to assemble publicly as it is for men. While the text of public prayer is fixed, personal prayer emanating from the depths of one’s heart and expressed in one’s own words is certainly permitted, if not encouraged.

Another crucial part of an Orthodox Jew’s regular routine is the observance of the weekly Sabbath, known as *Shabbat*. During this 25-hour period from sunset Friday evening until the stars come out on Saturday night, Orthodox Jews recall the Divine “Work of Creation” (Genesis 2:1–3). To emulate God, who ceased creating on the very first Sabbath, Orthodox Jews refrain from a host of creative activities, including cooking, writing, gardening, or even striking a match (Exodus 20:8–11, 35:2–3; Deuteronomy 5:12–16). For Orthodox Jews, the Sabbath is a day of quiet and rest, as well as family time, Torah study, and festive meals cooked before the onset of the Sabbath.

Also essential to regular Orthodox Jewish life are the laws of *Taharat Hamishpaha*, or Family Purity, which governs marital sexuality between husband and wife. Briefly, the Torah commands the married couple to abstain from marital sexuality during menstruation. Menstruation is followed by “seven clean days” and then an immersion in a mikveh, or

ritual pool, after which the couple may resume marital sexuality (Leviticus 15:19–29, 18:19, 20:18; Babylonia Talmud, Tractate Niddah).

## Holidays

The major celebrations of Judaism can be divided into two main categories: Biblical holidays and rabbinic holidays. The Biblical holidays can be separated into two subcategories: the “Three Festivals” and the “Days of Awe.” Regarding the “Three Festivals,” the Torah commands the Jewish People to celebrate the festivals of *Pesah* (Passover), *Shavuot* (Pentecost), and *Sukkot* (The Feast of Booths) every year. Each festival commemorates a different aspect of the Israelites’ Exodus from Egypt and forty-year sojourn in the desert as described by the Torah, and each festival coincides with a different phase of the agricultural cycle in Israel (Exodus 23:14–17; Leviticus 23:1–22, 33–44; Numbers 28:16–31, 29:12:38; Deuteronomy 16:1–17). The “Days of Awe,” including *Rosh Hashanah*, the Jewish New Year, and *Yom Kippur*, the Day of Atonement, are an intense period of repentance, forgiveness, and rededication to God (Leviticus 23:23–32, Numbers 29:1–11).

Finally, there are several holidays whose source is not Biblical, but rather rabbinic in origin. These include *Hanukah*, the celebration of the redemption from the ancient Greeks, and Purim, which celebrates the rescue of the Jews from annihilation during the time of the Persian Empire (Esther 9:20–32). Also decreed by the rabbis are a series of fast days observed in memory of different tragedies that befell the Jewish People throughout history. The strictest rabbinic fast day is that of *Tisha b’Av*, which recalls the destruction of both the First and Second Temples in Jerusalem.

## Role of Clergy

The “rabbi,” or Orthodox Jewish religious leader, may serve in a number of different roles. Perhaps the most common kind of rabbi is the

congregational or pulpit rabbi, whose job is to serve as a religious guide and teacher of his synagogue (the place of Jewish worship) and to provide his congregants with answers in questions of Jewish Law. Other rabbis serve as teachers in *yeshivas*, or religious academies, where young men gather to study traditional Jewish texts. Still other rabbis serve neither in teaching nor in congregational capacities but earn the title of “rabbi” after completing a program in rabbinic ordination.

While Orthodox Jewish rabbis are always male, their wives, known as *rebbetzins*, often serve women in educational and guidance capacities, too. Even so, *rebbetzins* and other well-educated Jewish women do not render decisions in matters of Jewish Law.

## Gender: Relationships Between Men and Women

Orthodox Jews place a very strong emphasis on modesty and appropriate boundaries between the sexes. Accordingly, Orthodox Jews frequently send their sons and daughters to separate schools, particularly after nursery school. Physical contact between boys and girls that are not of the same immediate family is forbidden.

Once they reach the age of about 18 or 19, Orthodox Jewish men and women begin to date for the purpose of marriage. Dating is typically facilitated through a middle party known as the *shadkhan*, or matchmaker, whose job is to suggest matches and serve as a reference for young couples as they get to know one another. Because premarital sex between couples is forbidden, engagement periods are typically short.

In many homes, family responsibilities are divided evenly between husband and wife. While a woman is certainly permitted to pursue a career, the primary responsibility for earning a living (if one spouse cannot work, for example) rests with the husband.

The obligation of Torah study is more demanding for men than it is for women. Nevertheless, many women, like men, invest significant amounts of time studying in Jewish subjects, and

many women enroll in seminaries to do just that. A woman's entitlement to hold Torah scrolls, although common practice within the Reform movement, is an issue of controversy among Orthodox Jews (see Reform Judaism).

## Practices Regarding Death

The Jewish way in death is very respectful of the dead and of the living, somber yet hopeful. Once a death has occurred, Orthodox Jews typically proceed to the funeral as quickly as possible, though not before the body is ritually cleansed and wrapped in simple white shrouds. According to *Halakha*, embalming and cremation are strictly forbidden. For the survivors of the dead, a period of mourning begins at the moment a loved one expires and continues until the burial. At that stage, a mourner is exempt from many religious duties, as his primary obligation at that time is arranging for the burial. Following interment, a 7-day period of mourning, called *Shiva*, begins when close relatives of the dead are visited by friends and relatives. Successive periods of mourning follow that are less intense, such as the 30-day period and the year period. For the loss of a parent, all mourning ends after 1 year, though memorial prayers are recited on the date of death in subsequent years.

## Alcohol/Drugs

Although wine is a sacrament in Judaism and is used in a host of Jewish rituals, Judaism frowns upon drunkenness and gluttony, encouraging a path of moderation instead. As Jewish Law charges Jews with maintaining and protecting their physical health, the use of illegal drugs is forbidden (Code of Jewish Law, *Hoshen Mishpat*, 427:8).

## Psychology

Orthodox Judaism has a positive attitude toward self-actualization and has a rich tradition of

psychological insight that parallels many schools of modern psychology including cognitive-behavioral therapy and psychodynamic therapy. In addition, Orthodox Judaism is not opposed to the use of psychotropic medications. Nevertheless, in many Orthodox Jewish communities, there remains a stigma in seeking psychotherapeutic and psychiatric services, though in some communities this stigma has abated in recent times.

Therapists treating Orthodox Jews should be especially sensitive to their strong commitment to personal responsibility, standards of modesty, Torah study, and normative *Halakha*. Common presenting problems include depression and anxiety associated with perceived religious failings, compulsions related to religious scrupulosity and issues of religious identity (Rabinowitz 2000).

## Conclusion

In summary, Orthodox Jews take pride in a tradition of adherence to the Will of God, whose Torah or Instructions, they believe, were given to the Jewish People at Mount Sinai some 3,300 years ago. Chief of an Orthodox Jew's goals in life is living in accordance with *Halakha* or Jewish Law, both in terms of the strict letter of the law, as well as in its spirit. Indeed, Orthodox Jews endeavor to serve God in every moment of the day, whether they are studying the Torah or at prayer or whether they are eating or working to provide for their families. Orthodox Jews are availing themselves of psychotherapy in increasingly larger numbers, aware that psychological problems, as well as treatments to alleviate them, are quite real.

## Orthodoxy

Elisa Bernal Corley  
Castaic, CA, USA

“Orthodoxy” means “right belief.” The term comes from the combined Greek words *orthos*, meaning “right, true, straight,” and *doxa*, meaning “praise.” In early Christian history, it was used in contrast with heresy, which literally means “choice.” The classical view of orthodoxy refers to the right belief that Jesus taught his disciples and handed down by them to the leaders of the Christian church. Its most basic form is found in the credal statements adopted by the

four ecumenical councils of the early Church and held by the majority of the believers in early Christian period.

In the history of Christianity, belief in orthodoxy is tied with the idea of primacy or originality. Early Christian theologians emphasized the view that orthodoxy is *primary* and heresies are deviations and corruptions of the original and pure orthodoxy. Eusebius, Bishop of Caesarea (263–339 CE), established this view of orthodoxy during the time of Emperor Constantine (c. 275–337). The former is considered the most influential proponent of the standard that orthodoxy is primary and innovation is heresy. Other prominent Church Fathers like Irenaeus (c. 130–200) and Tertullian (c. 155–222) expressed the same opinions regarding the opposition between orthodoxy and heresy.

Orthodox Sunnis of Islam and Neo-Confucian scholars also tie orthodoxy with the idea of primacy and early origins. Orthodox Sunnis represent their faith as pure and primary because it has remained unchanged from the beginning. For Sunni Islam, ideal faith meant adherence to the time-honored practice of the tribe and clan. In fact, the word *Sunna* means “beaten path or standard practice of the Prophet.” Thus, orthodox faith is one that is free from any historical developments or innovations. Any innovation or change to the primal path established by the Prophet is heretical. This tradition of Sunni orthodoxy emerged during the latter half of the ninth century.

The Neo-Confucian scholars of the Sung dynasty (960–1279) also affirm the primacy of Confucianism in the world. Chu-Hsi (1130–1200), who synthesized Buddhist teachings with Confucianism, designated the “Transmission of the Way” as the core concept of *Tao* learning. He gave it the name *Tao-T'ung*. The *Tao-T'ung* is understood to have been transmitted from the ancient sage kings to Confucius and his original heirs. The works of the Sung thinkers who inherited this philosophical tradition were deemed orthodox in contrast with the writings of their rivals. The principal Neo-Confucian scholar of the modern times, Mou Tsung-san (1909–1995), formulated a new version of the *Tao-T'ung* but continued to highlight the importance of traditional Chinese philosophical lineage in establishing orthodoxy.

Thus, for early Christians, orthodox Sunnis, and Neo-Confucians, any claim to primacy of teaching must be authenticated by the manner of transmission, which assumes the direct contact between the master teacher and his disciples. The idea of chain of transmission or chain of traditions validates the truth of orthodoxy. Modern ideologies and scientific history also reveals the pursuit of the same standard of transmission.

In addition to the notions of primacy and fidelity, a third feature, unity, was essential to the establishment of Christian and Sunni Islam orthodoxy. In early Christianity, unity of faith and practice was contrasted with the multiplicity that characterized heretical groups and their teachings. Similarly, in Sunni Islam, the concept of *ijma'* or consensus became a central pillar of orthodoxy. In their writings, Sunni scholars are known to diminish the sectarian controversies plaguing the early history of Islam, in order to promote a more harmonious picture of Islamic faith and tradition.

## Commentary

Since beliefs are often translated into some form of social behavior, concern for tradition, fidelity, and unity within religious orthodoxy remain relevant to identity formation and social adaptation. Studies have shown a positive correlation between religion and life satisfaction, revealing that a person's quest for the meaning of life is strongly associated with psychological well-being. Current research also demonstrates that religion plays a role in the development of a person's meaning system, which in turn allows the believer to weave a coherent life story. In other words, religious tradition helps individuals construct their own sense of order as well as find meaning out of life's failures and achievements.

Devotion to religious orthodoxy, coupled with personal faith and church involvement, is important to the formation of a person's identity. As part of the religious community, people can learn about who or what they are. Such religious identification influences how they interpret the world. Studies reveal that those who consider themselves as

having more orthodox religious beliefs have no problem attributing life events to divine intervention. They are willing to give up total control, believing that with denouncement of the self comes greater mastery of life. In addition, as people root their own personal experiences within a fixed and broader narrative, community teachings and practices become part of the person's orienting system for relating to the world. Thus, they are able to face personal limitations and move beyond themselves to find solutions for life's problems and crises. Worldly cares and troubles do not threaten their unity, fidelity, and commitment to faith. In a sense, religious truth becomes a most powerful coping and defense mechanism for the preservation of one's self.

Nevertheless, external forces can challenge the potency of religious orthodoxy as a coping mechanism. Although many studies found that orthodox beliefs help individual attain psychological well-being, there are also those that find religious orthodoxy, in the fundamentalist form, to be more authoritarian and dogmatic and more racially prejudiced.

When a believer is intent to preserving religious orthodoxy, like the attempt of early Christians to rid the Church of heretics and infidels, an inflexible and rigid personality may develop. Such inflexible and rigid personalities seem to be more common among the Christian fundamentalist groups, for example. Research has implicated the latter with prejudice and more discriminatory attitudes towards Blacks, women, and homosexuals. Personal rigidity leaves a fundamentalist susceptible to prejudice when responding to peoples and perspectives perceived as threats to religious traditions.

When people are unwilling to question what is believed to be true teachings about God and humanity, and to discard an inherited set of life's practices, they become vulnerable to the rapidly changing and diverse world. They can acquire "closed minds" and develop a defensive constricted personality generally linked with a religiously orthodox upbringing. In the attempt to protect what is considered the greatest significance to the individual, ideological self-identifications may flourish among the religious orthodox and conservatives.

## Osiris and the Egyptian Religion

Alane Sauder-MacGuire  
New York, NY, USA

Although the Osiris story represents only one stream of a complex and multifaceted ancient Egyptian religion, the story is perhaps the Egyptian myth that most permeates later religions, alchemy, and the psychology of Carl Jung.

The cosmology in which Osiris originated was located at Heliopolis. There the followers of the

creator god, Ra, first achieved the unification of upper and lower Egypt and set up a capital which remained the major theological and academic center through many dynasties.

The creation of the world in this cosmology began with the masturbation of Ra or Atum. From his seed Shu, the airs, and, his sister, Tefnut, the moisture, were created. They were the first couple. They, in turn, gave birth to Geb, the earth, and his sister, Nut, the sky. Geb and Nut bore Osiris, Isis, Set, and Nephthys. Osiris married his sister, Isis, and his younger brother, Set, their sister, Nephthys.

Osiris and Isis were the parents of Horus. In one version of the myth, Isis and Osiris fell in love in the womb of Nut and produced Horus in utero.

Osiris was a talented musician who came to rule an Egyptian land afflicted by cannibalism and other ills. He converted the Egyptian people into civilized ways not by force but by persuasion and by his music.

After he had brought civilization to Egypt, he left the lands of Egypt under the rule of his sister-wife, Isis, to continue to spread civilization throughout the world. His brother, Set, coveting both Isis and the kingship, devised a plan to murder Osiris. He lured him into a box that he then cast into the sea.

Isis and Nephthys searched for Osiris and saved him, but the frustrated and vicious Seth again captured Osiris and this time cut him into pieces that he scattered throughout Egypt. A grieving and sorrowful Isis collected the scattered limbs of his body and bathed them with her tears.

However, she could not find the phallus so she fashioned one out of wood. Although she could not revive Osiris to the state of living, she was able to vivify him sufficiently as to impregnate herself.

In this version of the myth, Horus was born of Isis's efforts and he avenged his father and fought the forces of chaos represented by a battle with his evil uncle, Set. In the Egyptian mythology, the soul resided in the eye, and Osiris was said to be located in Horus's eye. The struggle between Seth and Horus was

prolonged and both suffered grave wounds. Eventually, a council of the gods declared Horus the victor. Thus, order was restored.

After Isis impregnated herself, Osiris descended into the underworld and became its god. Through this mythic understanding of Osiris's death and resurrection as the god of the underworld, the Egyptians explained the path of the sun and its renewal from its setting in the evening to its rising in the morning.

It was believed the evening sun penetrated a cave in the west and over a period of 12 h passed through the underworld from which it emerges the next morning, regenerated. At midcourse, the sun met Osiris and drew the energy from him for its renewal.

Also in his role as ruler of the underworld, Osiris was thought of as the judge who allows or disallows the dead the passage into the rebirth of an idealized afterlife.

Philosophically, the Egyptian religion professed the belief that the gods had laid down universal laws of order and justice (*maat*) at the moment of creation. The conflict between the forces of evil or chaos as represented by Seth and Osiris represented the disruption of this order, the redemption by Horus, the restoration of it. This also provided a way of understanding the chaos that at times affected the Egyptian political system.

The Egyptian political system itself was based on an identification between the rulers and the Osiris/Horus myth. The Egyptians believed their pharaoh to be both human and divine. Horus was the chief god of the upper world and became the symbol of kingship with which the living pharaohs identified with. Osiris who resided in the underworld was identified with the living pharaoh's deceased father.

The pharaoh was assimilated into Osiris in the afterlife. The process was dynamic with the living king understood as Horus in life and then Osiris after death. Most pharaoh's coffins were fashioned in the shape and pose of Osiris with his distinctive flail and crook held in arms crossed at his chest as a symbolic representation of this transition. It was from this relationship between the upper world and the underworld

that the pharaoh derived his power and wisdom in the Egyptian imagination.

In classical antiquity, Osiris's fame spread outside of Egypt through the writings of Plutarch and Apuleius among others. In fact, the myth of Osiris became the basis of a religion of salvation widely practiced in the ancient world.

## Commentary

The mystique of the Egyptian kingship exemplified for Jung, the force of the archetype in creating a symbolic image that can channel human experience. An archetype can be defined, as a predisposition to experience, and the symbolic image it creates is the best possible description of that experience. In the case of the Egyptian kingship, this would be the experience of the mysterious incarnation of the divine within.

In this mystique of kingship, Horus incarnated in the form of the pharaoh, and then at his mortal death, the pharaoh was reincarnated into the eternal realm of all pharaohs past held in the image of Osiris.

Thus creating a mythic picture and explanation of the soul's experience of eternity.

Because of this move from eternal being into mortality and then to immortality, Osiris acts as an archetypal image for the human experience of having an eternal soul within a mortal body. His story creates a philosophical metaphor for this human experience that defeats rational understanding. In other words, it creates, in a mythic form accessible to the individual psyche, a way of reconciling the experience of being alive with the knowledge of physical death.

Important, too, for the myth's psychological power is the fact that good eventually outweighs evil – meaningfulness prevails over meaninglessness. The archetypal battle of good and evil so much a part of the Christian era was arguably missing from the Hellenistic world, the Christian era's closer ancestor.

Osiris was originally the good divine king of the upper world who kept the cosmos in order. He was also fertility god associated with the force that generated the growth and life of crops.

His brother, Set, represented the forces of chaos and was associated with the desert, which for the ancient Egyptian was associated with all manner of evil.

To understand the importance of Osiris/Set/Horus myth as an archetypal image to the ancient Egyptians, it is helpful to take into consideration just how perilous the climate and conditions they lived under were.

For the Egyptian, the sun was a destructive as well as creative force. To produce crops, the rains had to come and the Nile had to flood. This allowed the land which every summer the relentless sun turned into desert to flood and be saturated, restoring its fertility. This usually happened, but frequently enough it did not and the result was disorder and famine.

Thus, the Egyptians had much less faith in the cycle of nature than the Europeans did. The sun, without adequate rainfall to produce the floods, turned the fertile land into a dead zone indistinguishable from the surrounding desert. The myth of Osiris, his destruction by Seth, and the redemption of Seth's evil by Horus as described above invested a meaning to the cycles experienced by the ancient Egyptian. The drama of the two brothers, Osiris and Seth, provided a mythic understanding of the perilous fertility cycle which was at times disrupted by disorder as it held the hope of a reordering in the eventual dominance of Horus.

Jung believes that the Christian era itself owes its significance, in part, to this archetypal form of kingship and the antique god-man mystery that has its roots in the story of the Osiris/Horus myth.

There is in the relationship between Horus and Osiris a symbolic equivalency to Christ and God the father. In Genesis, the Judeo-Christian god created an order, which became disrupted by Satan, an equivalent of Seth, and was then to be restored by the birth of Christ. The Christian story like the Egyptian myth represents the idea of the good god restoring the original order of creation after it is disrupted by an evil divinity.

From another perspective, Osiris, himself, represents, as did Christ, the god who incarnates and then dies a brutal death to be reborn back into immortality.

Unlike the other Egyptian gods, Osiris shows vulnerability. Though not as immanent as Jesus because Osiris was always god, he shows pathos. He alone of the Egyptian gods does not transcend the vicissitudes of human existence – specifically death. He, in fact, seems completely defenseless against his evil brother, Seth, and without the intervention of Isis would have been completely destroyed.

At the same time, Osiris represented fertility and life. Therefore, even as he was dead, Osiris was the source of life. The ancient Egyptians believed he was the source of growth and reproduction for all animals and plants. He was both dead and the source of life.

As such, Osiris can be understood as a vivid and complex achievement of the Egyptian imagination. He answered the psychological paradox and dilemma of grappling with death even as an eternal life force is experienced.

In sum, the ancient Egyptian imagination created in the archetypal image of Osiris a symbol that explained not only the experience of their particular existence but also the universal experience of humanity in reconciling the immortal experience of soul with the knowledge of physical death. It also provided a mythic carrier for the archetypal battle between good and evil.

## Our Lady of Guadalupe

David A. Leeming

University of Connecticut, Storrs, CT, USA

Our Lady of Guadalupe is the psychological underpinning of the Mesoamerican collective Self. In the context of the Christianity that arrived with the Spanish conquistadors, she represents the psychological bonding between the Mexican people and the sacred power of the Mother.

The story goes that early one morning on December 9, 1531, a newly Christianized Aztec peasant, Juan Diego, was walking up a hill in the Tepeyac area near what is now Mexico City when he heard singing. Soon a voice called to him from a cloud and a brown-skinned woman appeared, announcing that she was, in fact, the Virgin Mary. She asked that a church be built for her on the spot where Juan Diego stood. Juan Diego rushed to tell his bishop of the apparition, but the skeptical bishop demanded concrete proof. Juan Diego tried several more times to convince the bishop but had no success. Finally, on one occasion the lady appeared again, and when Juan Diego told her of the bishop's desire for proof, the Virgin instructed him to go to the top of the hill where he would find special Spanish roses that could not possibly bloom there in winter. These he was to deliver to the doubting bishop. Juan Diego cut the roses and placed them in his *tilma* (cloak). When later he opened his *tilma* to reveal the roses to the bishop, an imprint of the Virgin Mary appeared on it. The bishop now believed in the apparition. Eventually, the Basilica of Our Lady of Guadalupe was built, and it became the primary pilgrimage site in Mexico. The *tilma* image displayed there is easily the most popular religious image in Mesoamerica.

There are many scholars who point out that the area in which Our Lady of Guadalupe is said to have appeared was once sacred to the Aztec Earth Mother goddess Tonantzin.

Jacques Lafaye (1976), for instance, in his *Quetzalcoatl and Guadalupe*, suggests that

...as the Christians built their first churches with the rubble and the columns of the ancient pagan temples, so they often borrowed pagan customs for their own cult purposes.

It may well be that the story of Juan Diego's vision was a convenient means of displacing one local goddess for another localized and, therefore, believable figure, a de facto goddess whose appearance was Aztec rather than Spanish.

Be that as it may, Our Lady of Guadalupe has been a powerful force for healing and emotional support, for Mexicans and Mexican-Americans in general and perhaps especially for Mexican and Mexican-American women. Surrounded by a mandalic aureole, she is a symbol of inner wholeness, a symbol of the possibility of coping psychologically when all other support fails. The image of the brown goddess on the Aztec peasant's *tilma* speaks to Mexicans as no other vision of Mary can. It says

I am always here with you, protecting you, and you are important whatever your emotional or physical status.

## Paganism

David Waldron  
Department of Social Science and the  
Humanities, University of Ballarat, Ballarat,  
VIC, Australia

### The Origins of the Term Paganism

The term pagan etymologically derives from the Latin adjective *Paganus* which, typically, is taken to mean of the rural countryside. It is also a term which has been used pejoratively from its inception as uncivilized, uncouth, and rustic. However, this interpretation has come under criticism by historians Robin Lane Fox and Pierre Chauvin due to the term being utilized widely in Early Christian Rome when the bulk of the urban population remained pagan in today's terms. Like Chauvin, Ronald Hutton proposes that a more accurate meaning of the term in antiquity is that of followers of the customs and religions of locality (i.e., *pagus*) rather than one of the many cosmopolitan, universalist, and transcendent faiths of the early Christian period (Hutton 1991).

### Paganism and the Countryside

The perceived high prevalence of localized pre-Christian customs, idolatry, and ritual surviving in the countryside led to the association of the

*Paganus* with the uncivilized and rural. This distinction between rural and urban religious practices also links closely with the intensely urban and cosmopolitan demography of early Christianity. In the early Christian era, the term pagan came to represent those who still practiced the predominantly rural and localized expressions of pre-Christian belief in contrast to the predominantly urban and educated Christianity of the Middle Ages. In this sense, western thought has typically presented a universal divide between Christianity and, by association, the other Abrahamic faiths of Islam and Judaism and that of the incredibly diverse and wide ranging other faiths of antiquity, indigenous cultures, and contemporary pagan revivals. The adoption of this dualist distinction by cotemporary pagan revivalists has led to numerous conflicts between western pagan revivalists, eager to integrate traditional pre-Christian religious practices with pagan revivals, and members of indigenous cultures and non-Christian religions (Mulcock 1998, 2001).

### Paganism and the Abrahamic Faiths in Antiquity

With regard to interpretations of the paganism of antiquity, the central distinction that can be made with the Abrahamic faiths is that of locality and cultural pluralism. This distinction is pointed out by Martin Bernal in his discussion of the rise of the transcendent monotheistic and dualist

cosmopolitan religions of the second and third centuries CE, particularly in Egypt, the supposed heartland of the temple based urban paganism of antiquity. He argues that by the third century, the breakdown of traditional local structures of social and religious practice combined with rising urban cosmopolitanism placed enormous pressures on the localized basis of the traditional pagan religious institutions. These pressures were linked to long-term class and social tensions that gave Christianity and other universalist faiths, such as Manichaeism, an appeal when linked with Hellenic philosophy, with which the traditional localized temple religions could not compete. This in turn led to class prejudice and hostility to the old pagan religious practices that were inevitably strongest in the rural sector where traditional structures of community, folklore, and religion held sway and the localized ethnic identity of the religions of the *pagus* held more significance than in the cosmopolitan urban sectors (Bernal 1991).

This construction of a duality between Christianity (or more broadly Abrahamic faiths) and paganism and its pejorative use against non-Christian peoples, customs, and faiths came to dominate perceptions of religious diversity in western thought. A vast array of divergent religious practices, customs, and folklore were linked together by association as the antithesis of Christian values, culture, and ideals. Even where pagan writers were rehabilitated by the intelligentsia, as with the Greek and Roman philosophers and poets such as Virgil, Aristotle, and Plato, the reappropriation of pagan writers was carefully constructed within a dualist worldview of Christian and pagan. In this sense, the term pagan was reconstructed as the shadow side of Christian civilization with the term applied indiscriminately to disparate religious traditions. The notion of the pagan also came to serve as a crucible of symbolic and psychological projections of varying constructions of Christianity. These ranged from demonized images of traditional societies and non-Christian civilizations such as the Norse, to extensively idealized representations of pagan Greece and Rome.

### **Paganism as a Pejorative and Reactionary Term**

In this sense, as well as becoming a pejorative construction of anti-Christianity, ironically enough utilized by Protestants in their criticism of Catholicism as “pagan,” paganism also came to represent a symbolic construction for people’s frustration and dissatisfaction with what they perceived as the ills of Christian society. If Christianity, and by association western civilization, was intolerant, destructive, patriarchal, and rapacious, paganism could then be perceived in antithesis as matriarchal, tolerant, and living in harmony with natural world and society. This particular construction of paganism came to predominance during the massive social upheavals of the nineteenth century and the rise of the Romantic movement in literature and philosophy. Even as early as the seventeenth century, there were prominent cultural trends that described the Noble Savage as evidence of the innate goodness of man in his perceived natural state. In the seventeenth and eighteenth century, writers such as Gabriel de Foigny, Jonathon Swift, Denis Diderot, and Jean-Jacques Rousseau commonly utilized primitivist and utopian notions of “natural man” based on the descriptions of “pagan societies” living close to the earth and following nature. These “neo-pagan” movements served to connect an idealized past to the present through ritual, symbolism, and aesthetics, constructing an alternative vision for society and an alternative struggle for cultural and social renewal. This construct attempted to ground itself in notions of historical and cultural authenticity and autonomy as set over and against the repressive and destructive aspects of western modernity, caricatured as universalist reason or an irrational, violent, and patriarchal Christianity.

### **Neo-Paganism and the Contemporary Pagan Revival**

The term neo-pagan appeared in the late nineteenth century and was used to refer to Romantic

discourses that supported the idea of a pagan revival as an antidote to the ills of industrialization and the perceived restrictive nature of conservative Christian morality. During this period, a plethora of new movements arose seeking to reclaim the past as a means of transcending the social ills, conflicts, and destructive aspects of the tumultuous present. These ranged from extensive searches for a historical authentic pagan religious practice to searches for pagan survivals in the present. There was also widespread embracing of the religious practices of indigenous peoples perceived to offer an antidote to the ills of Christianity and industrialism. Perhaps the most famous of these new movements was Gerald Gardner's Wiccan movement founded in the 1950s which came to be the foundation of the later pagan revival in the 1960s and 1970s. Central to these movements was the sense of looking back to an idealized past as a means of shaping the future and transcending the ills of the techno-centric or Christocentric present. While a full discussion of the myriad movements and versions of neo-paganism is beyond the scope of this entry, there are four main approaches to the past, to symbolism, and to symbolic constructions of identity in neo-pagan movements (Waldron 2000).

*Reconstructionist:* Those groups who rely on traditional historiography and empirical veracity in defining their historical legitimacy and socio-cultural identity. Also included in this grouping are the various national and ethnic groups such as Odinist, Celtic, or Creole-based practitioners who utilize the recreation of magical ritual as a means of defining a national cultural identity in the confines of traditional historiography.

*Traditionalist:* These groups derived from ritual magic intensive witchcraft such as Gardnerian and Alexandrian Wicca. These groups tend to be more concerned with the precision of ritual activity and magical practice than the veracity of their historical claims. Some people have used the term "traditionalist" to describe those claiming to have a hereditary or preindustrial background to their witchcraft beliefs.

*New Age/Eclectic:* These groups are heavily reliant on the work of Carl Jung and his theory of the collective unconscious. New Age/Eclectic neo-pagans are particularly concerned with the psychological impact and universality of symbols. They posit the psychic truth of symbolic representations manifested in history and other cultures as the ultimate source of authenticity in ritual opposed to the empirical veracity of truth claims.

*Ecofeminist:* Those groups that are particularly concerned with the plight of women and utilize the symbol of the witch as an ultimate expression of the persecution of women within patriarchal culture and society. These movements typically focus on the capacity of ritual and historical reclamation to empower women to deal with the social and environmental ills created by patriarchal forms of social control.

While these four models of neo-pagan approaches to symbolism and historicity have different structures for legitimating historical interpretation and ideological/cultural perspectives, there are several elements which link them together. The first is a belief that the application of the enlightenment and industrialization represents a distancing of humanity from its more authentic and natural existence uncorrupted by the influence of western civilization. Secondly, the neo-pagan movement is generally unanimous in the belief that western Christianity is guilty of suppressing much of what is free, creative, and autonomous in human nature – in support of a static oppressive patriarchal system of morality and social control. Thirdly, the witch crazes of the early modern period are taken as representative of a conscious attempt to oppress and destroy the vestiges of pre-Christian nature religions. And finally, the reclaiming and recreating of the pre-Christian agrarian past is perceived as the best way for contemporary society to evolve in such a way as to transcend the ills caused by the oppressive aspects of Christianity, the enlightenment, and western modernity.

While most of the neo-pagan movement's attempted initially to ground themselves in claims to empirical historical authenticity, recent

historical findings led to the collapse of many of the arguments upon which the movements were based. Most notable of these was the almost complete collapse of Margaret Murray's thesis of the witch persecutions of Early Modern Europe being an attempt by the Catholic church to stamp out surviving pagan practices (Ankarloo and Henningsen 1990 and Ginzberg 1992). In the aftermath of this collapse, many neo-pagans have abandoned empirical history as the basis of religious legitimacy and shifted onus for perceived veracity of ritual and symbolism in the psychological impact of the symbolism and ritual as archetypal forms. Often, this approach quite consciously embraces the analytical psychology of Carl Jung (Waldron and Waldron 2004). Perhaps the most recognizable exponent of this is Wiccan author Vivian Crowley, author of *The Old Religion in the New Age* (1998). This approach tends to focus on the psychological power of ritual and symbolism to evoke psychological truths while utilizing postmodern critiques of positivism to critique empirical constructions of the past by professional historians. Similarly, Michael York in "Defining Paganism" argues that definition rooted in the cultural forms and rituals of a particular movement is impossible. Instead, he argues that what links neo-pagan movements together is their shared attitude towards culture, nature, and spirituality, defined as "an affirmation of interactive and polymorphic sacred relationships, by individuals or communities, with the tangible, sentient and/or non empirical" (York 2000).

## Paganism Old and New

This particular approach illustrates just how far the original distinction between the religions of the *pagus* or locality and the Christian or monotheistic has shifted in terms of defining what paganism means. It also illustrates just how far many schools of pagan thought have shifted from ritual, philosophical, and symbolic legitimacy rooted in historicity and ethnicity. That being

said, it is worth noting that this approach is largely rejected by reconstructionist neo-pagans who immerse themselves in the material culture of the various paganisms of antiquity. These movements are typically closely attached to empirical forms of historical legitimation as both an expression of religious belief and ethnic identity, albeit often a reclaimed version.

The primary ideological basis of neo-pagan is the belief that it is necessary to gaze inward and to appropriate images from the past to find forms of identity and symbols of meaning perceived as natural, culturally authentic, and in opposition to the forces of the enlightenment and industrialism. Conversely, this also involves a belief in the veracity of symbols, images, and feelings over empirical experience and logic and thus emphasizes the feminine aspects of the psyche over the masculine. Like much of western romantic literature, neo-paganism is fundamentally dominated by a reification of beliefs and images. Quintessentially modern ideological and symbolic sociocultural formations are reinforced by interpretations of a past that is dogmatically protected as a particular symbolic construction that is defined as authentic. Similarly, neo-paganism and romanticism both share a focus on the new and the modern. While neo-paganism and romanticism gaze into representations of the past for symbols of authenticity and meaning, they are far more than simply a reaction of traditionalism against industrialization and the objectification of society. What they represent is a search for cultural authenticity and creative autonomy and a redefinition of the modern as a search for that which is creative, authentic, and autonomous.

## Pan

Sukey Fontelieu  
 Pacifica Graduate Institute, Carpinteria,  
 CA, USA

The goat god Pan was a god of flocks and shepherds in ancient Greece. His cult began in Arcadia and was elevated from its rustic status after the Battle of Marathon when the Athenians, out of gratitude for Pan's help in their victory, dedicated a cave, Long Cliffs, to Pan beneath the city of Athens (Herodotus 1992). His cult took root and rapidly spread through the Mediterranean basin.

Pan was above all a chthonic nature god. His body was half divine and half goat. He lived outside of the civilized world, sometimes near its borders in huts or hidden, shady glens, but also dwelled in the wilderness in dark caves and on mountain peaks. He was a solitary and rustic god. From his earliest origins he was expected to induce fertility. Pan is an archetypal image of nature's cornucopia of sexual heat, which ensures life will endure. In character, locales, and functions, Pan is seen in service to nature.

## Fear and Panic

Pan is associated with panic and all its legion of psychological burdens. Panic is with him from the moment of his birth when his mother took one look at him and, as told in the Homeric hymn, "sprang up and fled" (1976, p. 63). Pan suffered the loss of his mother because his body was monstrous (even Hephaestus with his broken body could still count on his mother's love), which led to a recurring motif for Pan of unrequited love for the feminine. Paradoxically, Pan was the beloved of the gods. In the Homeric hymn Pan's father, Hermes, wrapped him in the pelt of a hare and carried him up to Mt. Olympus where he charmed the Olympians with his laughter and was named Pan, which the hymn tells us meant "all."

But the themes of panic and a lack of self-control dogged Pan throughout his myths. His unbridled sexuality created panic in the objects of his desire. Yet panic is also a tool that Pan skillfully wields in his role in battle, where he found victory without the aid of his keen-eyed marksmanship but rather by instilling fear and confusion in the hearts of the enemies of his friends. Pan did not instigate wars or fight for his own gain, but his role as an arouser of fear naturally led him to the battlefield. As well as his intervention at the Battle of Marathon, he was also present during Zeus' rise to power and assisted him in his battle with the Typhoeus (or Typhon) (Kerenyi 1998) and was a general

in Dionysus' army in his invasion of India (Polyaenus 1994), and Pausanias reported Pan's aid in a battle with the Gauls. He caused panic to enter the hearts of the Gauls, so they could no longer understand their mother tongue and killed each other instead of the Greeks (1935/1961 [VIII: xxiii]).

## Pan and the Nymphs

Pan was said to have caused *panolepsy*, a seizure that brought laughter and ecstatic rapture. The nymphs were also, and more commonly, associated with inducing altered states in humans. Both *panolepsy* and *nympholepsy* were believed to be gifts that inspire. But these healing trances were also feared because they were thought to sometimes cause a person to be carried off by Pan or a nymph. Untimely deaths were attributed to them (Borgeaud 1979/1988). A recurrent theme, linking danger and ecstasy with Pan, echoes through his stories. Pan's intensity, often dangerous, is a touchstone for the life force. It is associated in different myths with creativity, fertility, and survival.

Pan played his pipes at the center of the nymph's dances yet even then was not allowed to touch them. The nymphs, besides representing the freedom of feminine sexual expression, were nurses and mothers to Greek gods and heroes. They were a soothing balm, a natural force that emitted from thousands of springs, rivers, trees, and knolls. These healers were also associated with the power to engender metamorphosis and served as a balance or an antidote to the overreaching excesses of Pan. His self-absorbed sexual intensity is feared by them, and yet he is the one they run to in the evenings when he returns from his day's hunt, joyfully dancing to the strains of his pipe. The nymphs are near to Pan, but untouchable, even though they are all divinities of fertility.

Pan's myths recount his overwhelming sexual desire and consequent pursuit of many nymphs. The extant primary sources, from Pindar, c. 522–433 BCE (1997a, b) and Apollodorus, second century BCE (1997), to Nonnus in the

early fifth century (1940/1962), do not report any stories where Pan actually rapes the nymph he is chasing after. The pattern in the myths follows this recurring storyline: he chases a nymph and out of fear she asks for help and is metamorphosed. She is still alive but in a different form, transformed by the interaction. Her new form has less of its own power of volition. For Pan, his chases turned up empty. Yet, rapist is a common epithet today for Pan (Hillman 1988) and is perhaps the way he is most often considered.

## Genealogy

In genealogy the Greeks were less inclined to insist on historical veracity than is the prevailing sentiment today. They frequently imagined numerous sets of parents for their gods and goddesses. Pan is a case in point and is a god with more sets of mothers and fathers than most (Nonnus 1940/1962). A popular version of Pan's birth in ancient texts named Penelope, the reserved wife of long-suffering Odysseus, as his mother. She is best known for the subtle wiles with which she handled her suitors while she waited and waited for her husband's return from Troy. Her history with Hermes and Pan is less known, though well recorded by the ancients. The historian Herodotus, b. c. 484 BCE, is the oldest source. His histories (1921/1960) makes reference to "Pan, the son of Penelope (for according to the Greeks Penelope and Hermes were the parents of Pan)" (p. 453 [II. 145]).

## Squilling Ritual

*Pan Agreus* (the hunter) was invoked when the Arcadians needed to find game to supplement their sparse agricultural returns. If the kill was small and so meat on the table was sparse or the hunters returned empty handed, then the young men of the village would perform a ritual called *squilling* (Edmonds 1912/1977). This involved a ceremonially circumambulation of a statue of the god while whipping him around the genitals

and shoulders with large onions still attached to their stalks. The onions, squills, were believed to be a healing agent and were used to ward off evil spirits and to promote growth and, like nettles, were an irritant to the skin (Dioscorides 1934/1959).

## The Death of Pan

Plutarch, a Greek scholar and priest of Delphi, in 83 or 84 CE, recorded the legend of the death of Pan (1936/2003). He told of a group traveling by ship who heard a voice call out that the “Great Pan is dead!” and that the ship’s helmsman was to sail north and call out these same words when they reached Palodes. He did so and his call was met with “a great cry of lamentation, not of one person, but of many” (1936/2003, p. 403 [419D]). This story is an anomaly in Greek theology, since the gods were believed to be immortal (Borgeaud 1983).

On the one hand, the story of the death of Pan had no verifiable impact on the cults of Pan, which are known to have continued to thrive (Pausanias 1935/1961). On the other, the legend’s historical context places it in close proximity to Jesus’ crucifixion. Both happened during Tiberius Caesar’s short reign. The juxtaposition of these two events led to speculation and conjectures about Pan by early Christian writers such as Eusebius in the third century and in medieval times by Rabelais to a fascination with Pan among the Romantics (Russell 1993), and even today we can witness Pan’s reemergence in modern stories such as the film *Pan’s Labyrinth* (Navarro et al. 2006).

Pan and Christ are associated with each other by some of these thinkers. Both were thought of as shepherds, both offered their bodies as sacrifice, and both were thought of as containers of “all” to their worshippers. Pan has also been associated with the Christian devil, both in countenance and in spirit.

The death of Pan would not be worth noting as anything more than one of the historical record’s many oddities except that, over the centuries, it has obstinately continued to linger; it has been used to argue positions diametrically opposed to

one another. The fascination with his death indicates that the story has an archetypal nature because it refuses to die.

## Panaceas and Placebos

David Berman  
Department of Philosophy, Trinity College,  
Dublin, Ireland

Of the two terms in the title of this entry, panacea is probably the clearer and least equivocal. By panacea is meant a medicine, treatment, or therapy that can cure or alleviate all illnesses. From that definition, it is clear that any alleged panacea must work, according to present-day scientific thinking, at least partly as a placebo. A placebo (Latin for “I will please”) can be defined as a medical treatment that works (satisfies the patient) not through its apparent agency but by the belief in its efficacy. And since no medical scientist of repute would seriously hold that there is any one medical treatment that can relieve every known illness, it follows that if a treatment appears to be working universally, or even widely, it must be doing so at least partly as a placebo, by virtue of the belief in it.

Yet panaceas have been proposed in the past. Here I look at two panaceas, arguably the two most serious and instructive of the past 300 years. The first was proposed by George Berkeley, now best known as the philosopher, the father of idealism, who denied the existence of matter. But in his lifetime, Berkeley was better known for his advocacy of tar-water as a universal medicine, which he published in *Siris* (1744). The other panacea was developed by Mary Baker Eddy, the founder of Christian Science, who published her treatment for all illnesses in *Science and Health* (1903).

## Berkeley's Tar-Water

Tar-water is made by mixing wood tar with cold water and allowing the tar to settle, after which the clear infused water can be descanted and drunk. In *Siris*, sect. 71, Berkeley (1744) says that “there will not perhaps be found any medicine more general in its use, or more salutary in its effects,” than tar-water, and catalogues the many illnesses it has cured. But he stops short of saying directly that it is a panacea. However, in his later *Letter to Prior* (1744), sect. 11, he is prepared to “speak out”: “I freely own that I suspect tar-water is a panacea.” And in the pamphlet’s next section, he says: “Having frankly owned the charge, I must explain . . . that by a panacea is not meant a medicine which cures all individuals (this consists not with mortality) but a medicine that cures or relieves all different species of distempers.”

Berkeley had two justifications for this claim: one theoretical and the other empirical. The theoretical reason is complex, involving chemistry, botany, physics, philosophy, theology, and Scripture. But, as I have suggested elsewhere, the main idea is that tar-water is the closest natural, ingestible thing to fire; and as fire, Berkeley believes, is the natural substance closest in nature to God, it follows that tar-water is drinkable spirit or God, and that is why it is so efficacious as a medicine. Berkeley’s empirical justification was the experiments on tar-water which he carried out on himself, his family, his neighbors, as well as the cures that were gathered by his friend Prior from those who had benefitted from his medicine.

## Eddy's Christian Science

If anything, Eddy’s panacea was and is even more ambitious than Berkeley’s. For not only did she believe that Christian Science could cure all physical ills, but she also believed that it was effective even against death itself. And one main way that Christian Science works is by bringing its subjects to the truth that matter is an illusion. This follows largely from the principle

that God is a perfect, infinite spiritual being, the creator of this world; so everything in this world is perfect. Therefore, since matter and illness are imperfect, it follows that they do not exist. Hence, for the Christian Scientist, whole-heartedly embracing these truths about matter and God is the way to health and immortality. But there is also a third key element in Eddy's cure, which is what gives it its name. This is the role played by Jesus Christ, who showed how apparent illness and death in the world can be overcome by the belief or faith of the sufferers. In short, Jesus found a way to eliminate the illusion of illness and death. Christ was a scientist. What he discovered was essentially Christian Science, which was lost until it was rediscovered by Mrs. Eddy.

### Placebos and Panaceas

We now need to look at the two panaceas from the perspective of medical science in order to see how far they must be considered placebos.

The judgement of medical science on tar-water, briefly, is that it can be useful externally against certain skin diseases and internally against chronic coughs and chest diseases; but as one medical writer put it, its "therapeutic properties are, however, too limited to account for more than a small proportion of the diseases given by Berkeley and Prior" (Bell 1933).

So, the inference is that the great majority of cures must have been brought about by placebo action. But if medical science judges that tar-water was partly a placebo, its verdict on Christian Science must be that it is a pure placebo, since it does not use any physical agency.

That tar-water worked largely as an impure placebo would not have been welcome to Berkeley, even though he believed that ultimately the only real cause is mental or spiritual, in fact God. But his argument in *Siris* is that tar-water works not by any actual physical agency it possesses but only because its observable, sensory properties are followed unerringly by observable physical cures, whose explanation lies in the laws of nature established by God.

So, despite Berkeley's positive attitude to mental agency, he shows no sign of appreciating placebo action either in *Siris* or any other work. Probably the main reason for this is his sensitivity to the criticism that his idealist philosophy seems to break down the hallowed distinction between reality and appearance. Hence, Berkeley is reluctant to recognize the power of the human mind in affecting the physical world. Berkeley is prepared to acknowledge that we have agency, but only over our thoughts or mental images, not the sense data which for Berkeley constitute the physical world.

Another way that Berkeley's concern for keeping the objective, physical realm safe from human agency comes out in his attitude to miracles. As an Anglican clergyman, Berkeley does not deny that there have been miracles, and he believes that God did in the past sanction those of Moses but especially those of Jesus Christ and his disciples. But for Berkeley, miracles ended in the first century CE, one reason being that their continuing occurrence would undermine our confidence in the objective or natural realm, upon which we depend.

Christian Scientists have an entirely different attitude to what are called miracles, placebos, and faith healing. But here, especially, we need to recognize the equivocal nature of these terms and put aside their negative connotations. If a putative placebo does actually work by the action of mind or spirit, then I think a Christian Scientist could agree that placebo action is an acceptable description, although for her a more accurate description would be cures resulting from Divine Truth and Science.

Of course, for medical science this is all perfect nonsense. Illness and disease as material conditions can only be cured by material agents. Miracles and faith healing are superstitions. Here the issue becomes complicated, because we are getting into a deeper debate, where materialistic or natural science itself has to be – at least for the purpose of this debate – called into question. If that is not done, then this ceases to be a debate and becomes a begging of the question, which, no doubt, most scientists would say is entirely appropriate.

## Material Versus Mental Agency

Yet where the naturalistic attitude of science becomes doubtful is just in the area of placebos, which seem to work not by material but by mental causation, by belief. This suggests that the human mind can bring about cures that appear miraculous. And although this is denied by medical science, it does seem that the mind can, working through belief, cause certain observable physical changes in the body. This was dramatically demonstrated to the first important champion of placebos, H. K. Beecher – best known as the author of the influential 1955 article, “The Powerful Placebo” – when he was working as a medic during World War II. On one occasion, there was no morphine to give a soldier who required a major operation. In a moment of inspiration or craziness, a nurse injected the soldier with a harmless water solution, which amazingly produced virtually the same effect on him as morphine. This converted Beecher to the power of placebos.

This crux comes out in a related way in probably the second most important medical article on placebos, that by Levine et al., published in 1978. Levine’s team administered a placebo and found, as expected, that it produced a decrease in pain in their subjects, as well as increasing their endorphins, the body’s natural morphine. Going further, however, Levine and his colleagues then injected the subjects with nolahine, which works against morphine. The result was that the subjects’ pain returned. The conclusion, which was hailed as an important step towards discovering the mechanisms of placebos, was that the endorphins were the physical agents producing the placebo effect. So the endorphins, it was hoped, would be the beginning of the trail leading to the chemical agents that work directly on illnesses responsive to placebos.

What appears to have passed unnoticed, however, is that, *prima facie*, the endorphins came into being directly from mind action – from belief. But if so, then why, in principle, could not the agency that works DIRECTLY on the illness also be belief or some other form of mind agency?

For Berkeley, all power or agency in the physical world is mental, namely, God’s; but God produces the train of sensory data in accordance with His laws of nature; hence, physical cures must be brought about in this indirect, law-abiding way. To be sure, God could allow a change or violation in these laws, thereby permitting a human agent to effect a cure more directly, as with Jesus’s miracles, but He does not now, as that dispensation ended with Jesus’s disciples.

Most natural scientists, especially nowadays, would take a far harder line on this, holding that there is no such spiritual agency and hence no way that the natural laws and processes can be contravened even for such good ends as cures. Thus, in his helpful book *Placebos* (2003), Dylan Evans, speaking for natural science, tells us that “We know now that the processes of thinking and wishing that Descartes ascribed to the ethereal, invisible mind are, in fact, complex patterns of electro-chemical activity that swirl around in the lump of fatty tissue we call the brain” (p. xi). So for Evans, materialism has been proved to be true and dualism and idealism false. Hence, there MUST have been something material operating in the belief of Beecher’s soldier which caused his body to behave as though it had been given morphine. This material something, which we know introspectively as belief, must have been the actual cause of the numbing of his pain and the endorphins which Levine’s team discovered in the placebo effect. But so far no scientist has found this material stuff, either in the brain or anywhere else, which we, in our quaint folk-psychological way, identify as belief. Hence, what Evans and other materialists take to be proven science is in fact an article of faith.

Indeed, I think we can go further and say that materialism and medical science can themselves be described as placebo sciences in the same way as they would describe Christian Science as a placebo science – given, that is, one important condition being fulfilled. The condition is that idealism should prove true. If that were the case, then matter and hence material medicines would be placebos, as things that do not exist, but which

are vitally practical to believe in, as enabling us to live in and make sense of the apparent or sensory world. And, in the final analysis, that is what Berkeley held.

## Pantheism

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

Pantheism is the religious doctrine that the divine is infused within all existent beings. The phrase “the divine” is used as a short-hand label for both theistic (personal) and nontheistic (impersonal) definitions of the sacred ground of being. Virtually all pantheistic thought involves a belief in the immanence of the divine, though the doctrines are distinguishable. In some forms of immanence,

particularly within theistic traditions, the deity is not limited to being infused into the material world; it can be beyond it as well. In the case of pantheism, however, there is an identity between the phenomenal world and the divine. God is the natural world personified.

A distinction needs to be made between true pantheism, which equates the divine with the totality of the natural world and pantheism which accepts that idea but adds that the divine is both immanent in the world yet still somehow transcendent in some manner. This view allows some “otherness” to god beyond his or her presence within the natural world. In pantheism, god suffuses the world but is not exhausted by the immanence in the world. There is a sense in which the fullness of god goes beyond the material world of nature.

Pantheism is also contrasted with the view of strict creationism, which holds that the divine is the source of, but cannot be identified with, the natural world. God, being eternal and infinite, cannot be limited by being part of his own creation. He stands over it as ruler and Lord. In western monotheisms (Judaism, Christianity, Islam), creationism is a foundational doctrine rooted in Biblical and Q’uranic texts. But God is not the same as his creation.

True pantheism, as distinguished from pantheism, is found in only a few positions, as it requires exclusion of the concept of transcendence and confines understanding of the divine to the totality of existent and experienced objects in the world. The identification of the natural world with the divine is appealing to secular thinkers who still have a sense of awe at the majesty of the created world, including life and consciousness.

It is not surprising then that early in the Enlightenment when secular thought was emerging, a pantheistic school emerged. Deism is a spiritual philosophy which fairly clearly identified the divine with nature. The God of the Deists creates and sets in motion the world and its deterministic causal mechanisms and laws but does not actively intervene in human history. A Deist who coined the term pantheism was John Toland (1670–1722). His views on both politics and

religion were quite radical for his day. But he sought to keep a religious sentiment based in nature and aided by reason as opposed to based in obedience to and faith in established authorities. He founded the Ancient Druid Order, so his views would today be closer to the sort of Gaian nature spirituality of neo-pagans.

Among those philosophers who are clearly pantheists and who Toland refers back to would be Spinoza and Leibniz. Baruch de Spinoza (1632–1677) was born to Portuguese Jews, though he spent most of his life in the Netherlands. His religious ideas were far enough outside the Judaism of his own day that he was excommunicated from the synagogue in Amsterdam. He rejected Descartes dualism and held instead a type of naturalistic monism, where all the world in its diversity was nonetheless dependent on one substance behind the variety of manifest beings and objects.

Such a comprehensive and abstract concept is, of course, difficult to hold on to, so the experience of pantheism is generally fleeting and imperfect. Humans have found the metaphor and primary cognitive structure of personhood to be more compelling, and so theistic spirituality and religious formations have predominated throughout history. The pantheistic vision is a heady one and not shared by most exoteric religious forms and expressions, which are decidedly personalistic.

The philosophic concepts involved in defining pantheism as well as its alternatives require a discussion of primary theological distinctions, whether there is a divine realm of being or not, and if so, what is its nature. The empirical study of the variety of comparative world religions suggests that the primary boundary is between the sacred and divine, on the one hand, and the secular or mundane, on the other. If we look at the variety of world views held by most people, this primary distinction can be sustained a major dividing point. But within those who espouse one or another of the spiritual world view, the next division of ideas is between those who espouse the existence of personal or impersonal basic natures of the divine.

The impersonal nature of the divine is found in such concepts as “chi,” “ki,” “prana,” “pneuma,”

and other labels. Those terms come from Chinese, Japanese, Indian, and Greek cultural spheres, respectively. These embody a force which was also described by Newton and the other formative thinkers in the modern scientific world view. Indeed, the very nature of the modern scientific world view is the metaphysical existence of impersonal forces which determine the manifestation we experience as the phenomenal world. So the spiritual philosophies which incorporate an impersonal force as a significant concept are part of a pantheistic tradition. In Christianity, by counter example, the role of the impersonal force in traditional eastern and pagan western philosophies has been replaced by the person of the Holy Ghost as the third person in the orthodox definition of the Christian trinity of Godhood.

Theistic religions see the divine as manifested in the form of persons. These are the one God in monotheistic traditions and the family of gods in the polytheistic traditions. From a psychological perspective, theism is quite understandable. We understand ourselves as persons, which means we experience our ability to create and govern and rule and determine. These are the qualities we project onto the divine and transcendent realm and whatever quality it has. As human beings, we can only relate to the greatest concept of existence beyond ourself and other than ourself as if they were like us, as sentient, active agentic persons. But that very ability to experience the divine as other as person requires an accommodation with the experience of the divine as immanent.

In theism, pantheism is generally thought of as the suffusion of the divine spirit within creation, including human beings. The classical example comes from Hinduism where the seed or “atman” of Brahman, the divine ground of being, is implanted in each individual human soul. This provides the motive force for the individual to seek reunion with the divine through the course of spiritual evolution across many lifetimes via reincarnation (Daniélou 1964). The mystic vision of the unity of all things can be seen as the experiential side of the idea of pantheism.

A related idea is panpsychism, which holds that everything in the universe has some form of

consciousness or mind. The early psychologist, Gustav Fechner (1801–1887), held this belief. Edwards (1967) quotes him directly in a rapturous meditation on a water lily during which he accepted the possibility of a mental or psychological life in some manner for lower orders of animate beings. Panpsychism is the chief assumption of animism as a worldview (Pepper 1942). All things are alive and have or are spirits in their essential nature, including things science and common sense deems inanimate.

### Paracelsus

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

Paracelsus is the professional name of Theophrastus Phillippus Aureolus Bombastus von Hohenheim (1493–1531), a German alchemist,

physician, and occultist. The professional name was a reference back in time to the Roman physician Celsus (ca. 25 BCE–50 CE). He adopted much of the previous theories of magic passed on from classical antiquity in the writings of the Hermetic corpus and Neoplatonic thought. He wrote at a time when alchemists were beginning extensive studies with metals, and he sought to propagate a theory metallic magic to supplement or supplant the older magic which concentrated on empirical herbal lore and angelic or spiritual manifestations. In addition to his own work on the newly discovered property of magnetism, he served as an influence for Franz Anton Mesmer's (1734–1815) dissertation for the doctor of medicine degree. Mesmer's theory of animal magnetism served as the initial basis of the psychological technique now known as hypnosis.

### Paranormal Experience

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Although the word itself did not come into common usage until at least 1920 (from the Latin *para*: counter, against), the cluster of phenomena generally agreed upon as being “paranormal” has appeared in every culture, age, and era of which we have written record. As is the case in every historical excavation, one must take note of the fact that the taxonomies used are indeed our own and, in the particular case of this category, entirely new. What we in the modern age consider outside or next to the limen of experience, other cultures included with the mysteries of the circulation of the blood and the wind, harsh demarcations being the province of the modern age. Generally speaking, however, the paranormal is an umbrella term used to describe unusual

experiences or events that resist scientific explanation. The term is frequently found in conjunction with parapsychology, the scientific field dedicated to the gathering and analysis of paranormal data, under which the following are generally categorized: telepathy, extrasensory perception, psychokinesis, ghosts, hauntings, spirit possession, xenoglossia, angel hair, cryptozoology, paracryptozoology, materialization, UFOlogy, automatic writing, channeling, telepathy, spirit photography, spirit possession, medical intuition, psychic surgery, lycanthropy, and some, such as ball lightning, which have recently been empirically confirmed.

The investigation into the paranormal has taken many forms, from the stringently scientific to the Fortean practice of gathering anomalous anecdotal evidence. The difficulty lies in winnowing away what is (not) to be included in the study as well as what lens should be used. As a recent Gallup poll (2005) indicates, among ten listed paranormal phenomena, 73 % of people believed in at least one, while only 1 % believed in all. Obviously, there is little consensus – even within the religious and psychological communities – as to what warrants actual investigation. And certainly efforts at debunking paranormal claims have exposed many charlatans, leading many in the scientific community to summarily dismiss the entire project.

Collective perceptions of the origin, manifestation, and even veracity of these wide-ranging phenomena are intimately dependent on the sociocultural ecologies within which they occur and arguably determine the very possibility of the event in question. The literatures of ethnopsychology are replete with examples of paranormal “afflictions” that manifest in one culture, but not in any others (e.g., Windigo). Still others, such as the “night mare” appear to arise cross-culturally, though not by diffusion, lending the interpretation that these “events” may be rooted in physiological, rather than in esoteric, processes – or of course, in the night mare herself.

Several theoretical orientations are possible when apprehending the paranormal.

## The Orthodox Approach

These are the “traditional” explanations as they surface from culture to culture. An example, in the Christian tradition, is the interpretation of possession as not being caused by unresolved psychosexual suppression but by the actual presence of a discrete demonic entity in the body of an individual. Different religious systems offer different explanations of paranormal events. Whereas Sai Baba’s ability to materialize objects is understood in Hinduism to be a result of a perfected understanding of the intrinsic unreality of whatever it is he is materializing – and as evidence of *siddhis* or yogic powers – other religious systems might see this as evidence of Satanic intervention or, less spectacularly, simple chicanery.

## The Bicameral Mind

A novel theory that seeks to understand the origin and persistence of clairvoyant phenomena by right-hemispheric dominance in the brains of those genetically predisposed to this type of experience. More finely nuanced depictions of neurological correlations to paranormal phenomena will undoubtedly be revealed as the fledgling field of neurotheology experimentally matures.

## The Pluralist/Inclusivist Approach

This approach aligns itself with the constructivist tendency to view language as the arbiter of what is real. In this model of culturally dependent ontologies, certain phenomena exist because there are certain *words* that circumscribe their manifestations.

## The Psychoanalytic Approach

The hermeneutic of suspicion. A powerful tool for the exploration of the underlying neurotic conflicts and wish-fulfillment fantasies seen by

this school as the actual bases for all events erroneously perceived to be paranormal. This approach is related to other psychological theories that ground belief in the paranormal as evidence of psychopathologies such as schizotypal personality disorder or schizophrenia.

### Progressive Paradigms

When viewed from within the cause-and-effect-bound Newtonian cosmology, these phenomena simply do not seem to “fit”; they are *para*, in every sense of the prefix. With the advent of quantum theory, however, the mystery becomes not why these events happen but why they do not happen more often. A science of possibilities, quantum mechanics allows for what once was once seen as *para* to fit snugly within the realm of the expected.

### Commentary

If taken seriously, the claims of paranormal research impact every domain of human knowledge and experience, challenging us to expand our notions of the body, the mind, and indeed the universe itself, beyond our linear geometries; from the relationship of man and machine (see Pears) to occult influences on evolution (see Noetic Institute), investigation into the paranormal is becoming increasingly integral to evolving understandings of consciousness itself as well as understandings of the chimerical helices of matter and mind.

### Psychology and Religion

With the advent of the fourth force in psychology (the previous three being behaviorism, psychodynamism, and humanistic psychology), the inclusion of the transpersonal has been taken seriously for the first time in the discipline’s history. Whereas psychoanalytic theory offers richly nuanced and psychologically mature analyses of

the paranormal, it is reductive nonetheless, while the other two simply do not deign to discuss it. Transpersonal psychology allows for the existence of the “paranormal” as standing outside the limen of egoic experience – in other words, outside the “visible” bands of the spectrum of consciousness. Whether they be unconscious projections of the lower spectra (as may be the case with possession) or transrational transmissions of higher states of being, or simply transmissions from higher beings themselves, transpersonal cartographies of consciousness are theoretical maps of the intersection of psychology and religion that describe, in Wilber’s famous phrase, the marriage of sense and soul.

For psychology, the resuscitation and integration of the paranormal from out of the pseudoscientific hinterlands demand radical reformulation of the psyche. One might even argue that the “repression” of this dimension of experience has returned as any number of “disorders of the spirit” – addiction, narcissism, etc. (see Hillman).

For religion, an honest understanding and inclusion of the aforementioned demands both self-reflection and eventually change – self-reflection in the sense that there must be more to the human condition than dreamt of in their philosophies, and change in the sense of expanding theological purviews to include the possibility of multiple truths.

And as for where they intersect, both religion and psychology are potentially transformative in their respective understandings of the paranormal, psychology lending academic rigor and a scientific orientation to its study, while religion a sensitivity to the subtleties of spirit.

Perhaps the most pragmatic approach is to use a theoretical “toolbox.” Are Yeti sightings to be lumped with those of UFO’s – or do they mean different things and require different lenses? A psychoanalytic approach might make sense for a poltergeist or channeling (reference) but not for remote viewing or spirit photography. And of course, the question becomes then, is a psychoanalytic reading as reductive as it sounds? Or does a truly comprehensive estimation have room for this perspective as well as

something else? Whatever hermeneutic one employs to read, it will certainly color the way it is read; which is why, if anything, a perspectival plurality should be conscientiously employed when doing so.

## Participation Mystique

John Ryan Haule  
C.G. Jung Institute Boston, Chestnut Hill,  
MA, USA

## Mode of Thinking

“Mystical participation” is an idea introduced by Lucien Lévy-Bruhl in 1910 to identify what it is about the mentality of so-called primitives that makes them understand things differently from Westerners. Lévy-Bruhl began his lifework as a professional philosopher in search of “unimpeachable truths” that would be universally human in their validity. To escape his own cultural limitations, he began studying the reports of missionaries and colonialists working among preliterate peoples in Africa, Australia, the Americas, and Oceania – all baffled by what they took to be absurd beliefs on the part of the natives. Finding the same sorts of “absurdities” in all parts of the world, Lévy-Bruhl proposed that while Europeans find meaning in events by looking for causal, empirical theories to explain what made them happen, “primitives” find meaning by seeing empirical events as

“participating” in a larger, invisible reality – something on the order of myth, made up of what he called “collective representations” – very similar to Jung’s idea of archetypal images. By 1927 he had identified the powerful emotions that accompany mystical participation as the crucial factor in “primitive mentality.” He argued that *participation mystique* is in some ways superior to our European way of thinking, insofar as it gives natives’ experience a greater depth and meaningfulness than our materialistic empiricism allows us.

### Shared Identity

C. G. Jung borrowed the term for his psychology and expanded its meaning, although he was aware of what a controversial figure Lévy-Bruhl had become – unjustly burdened with a racist reputation for having described “primitive mentality” as “inferior” to the European sort. In Jung’s hands, participation mystique came to mean not only “mythic thinking” but also the partial loss of individuality that people commonly suffer in crowds, tribes, and families, usually without knowing it. Jung found participation mystique to be characteristic of all human psychology, modern Westerners included.

Most frequently, when used in a Jungian context, participation mystique refers to a regrettable state of unconsciousness: as when parents cannot appreciate the individuality of their children but see them primarily as advertisements for their own honor or shame, or when an analyst becomes so unconsciously identified with an analysand as to lose the capacity for objective critique. In truth, however, every interpersonal relationship has elements of participation mystique in it; and when one recognizes this element and makes use of it, a higher level of consciousness can be attained. A state of participation mystique between mother and infant is an essential part of the bonding between them, and it is the platform of trust and immediate understanding which makes their emotional/gestural communications possible and effective. The infant is socialized

and begins to learn language within a cocoon of participation mystique.

Similarly, the rapport or transference relationship between analyst and analysand inevitably involves mystical participation. Whether one thinks in terms of empathy (literally, “feeling into” another person’s state of mind) or of an “interpersonal field” of mutuality, there is always a background condition in which the distinction between “me” and “you” is greatly diminished. By directing attention to the background state of participation mystique, an analyst is able to gain access to the analysand’s condition and by articulating it raise consciousness. Toward the end of his life, Jung often spoke of this participation mystique-based transference relationship in terms of a two-million-year-old man, the personification of the collective unconscious, who brings to the analytic meeting the wisdom of the human race. The mutual field becomes an age-old source of insights relevant to both parties.

### Society and Myth

Every society that shares a mythic narrative which gives meaning and shape to its communal life inhabits a world of participation mystique in both senses of the term: (1) the members share a mutual identity to a greater or lesser degree and (2) they make sense of their communal life and the events they experience by reference to “collective representations” derived from their myth. Meditative states of consciousness are more easily and dependably achieved in ashrams and monasteries where all participate in the same rituals and practices, because the communal activities build a participation mystique with a character that supports those states. Shamans exploit the background state of participation mystique when they make visionary journeys on behalf of a patient to diagnose an illness or to seek out and retrieve a lost soul. Yogis and Sufi masters confer meditative powers upon their disciples by *shaktipat* (Sanskrit, “transmission of psycho-spiritual energy”), which is a form of participation mystique.

## Participatory Spirituality

Zayin Cabot  
East-West Psychology, California Institute of  
Integral Studies, San Francisco, CA, USA

### Introduction

Participatory expressions of spirituality have begun to flourish over the last few decades through the collaborative efforts and individual journeys of a network of scholars and practitioners. Several authors have made important contributions to the ongoing definition of participatory spirituality (including but not limited to Ferrer 2002, 2008, 2010, 2011; Ferrer et al. 2004; Ferrer and Sherman 2008; Heron 1996, 1998, 2006; Reason 1994b, 1998b; Reason and Bradbury 2001a; Sherman 2008; Tarnas 2001, 2002). By way of orienting the definition given here,

I adopt a three-question format borrowed from an earlier definition (Reason 1998b) of participatory spirituality that includes the questions of methodology, epistemology, and ontology. The order in which these questions will be introduced is not arbitrary. Important methodological and epistemological (outlined below) choices have been made within the network of those developing a *participatory sensibility* or *participatory approach*. By placing these methodological and epistemological choices before the practice of philosophical speculation and definition, the path is made clear for a contemporary (critical) metaphysical realism.

### Methodology

In an early essay on the phenomenology of a shared gaze, John Heron (1970) describes the inherent limitations that arise from a narrow logical empiricism wherein the analytic observer is set over against public objects “out there.” Jorge Ferrer and Jacob Sherman (2008) write that the “participatory turn calls us to move beyond objectivism and subjectivism” (p. 35). Heron (1970) speaks of this “move beyond” as a “more radically constituted empiricism” and in collaboration with Peter Reason (Heron and Reason 2008) describes the participatory methodology of cooperative inquiry (Heron 1992, 1996, 2006, 2007; Heron and Lahood 2008; Heron and Reason 1997, 2001, 2005; Reason 1988b, 1994a, 1998a, 1999, 2003; Reason and Torbert 2001) as follows: “Cooperative inquiry is a form of second person action research in which all participants work together in an inquiry group as co-researchers and as co-subjects” (p. 248). Heron and Reason emphasize this participatory approach by pointing out that such inquiry is developed and executed with self-determination of all participants engaged in an inquiry. Ferrer (2001, 2002, 2008, 2011) pushes the definition of exactly what or who is considered a participant further when he includes three important realms of inquiry: intrapersonal, interpersonal, and transpersonal. In each of these three contexts, a diversity of participants (e.g., instinctual and emotional body, other-than-human

players including trees, birds, and ancestors, as well as a diversity of spiritual ultimates) are invited into the inquiry. In similar critical reevaluations of who/what can be considered as a participant, Jürgen Kremer (2002, 2003) writes of *participatory/shamanic concourse* and *ethnoautobiography*, Ramon V. Albareda and Marina T. Romero in collaboration with Ferrer (Ferrer et al. 2004, 2005, 2007, 2010) engage multiple levels and expressions of human experience through their interactive embodied meditations, Gregg Lahood (2007, 2008) examines various *cosmological hybridizations*, and Ann Gleig (2012) reconciles participatory engagement and critical distance (insider-outsider boundaries) and in collaboration with Nicholas Boevig (see Gleig and Boevig 2009) calls for an emphasis on spiritual democracy. Each of these practices develops what Heron (2006) has called “reciprocal participative empathy” and Gleig (2012) has termed “reciprocal relationships” among *participants* (as broadly defined here).

## Epistemology

Richard Tarnas (1991) has written that a “participatory epistemology ... incorporates the postmodern understanding of knowledge and yet goes beyond it. The interpretive and constructive character of human cognition is fully acknowledged, but the intimate, interpenetrating and all-permeating relationship of nature to the human being and human mind allows the Kantian consequence of epistemological alienation to be entirely overcome” (pp. 434–435). In their *extended epistemology*, Heron and Reason (2008) outline four different ways of knowing that are engaged through inquiry cycles of action and reflection. They include *experiential* (knowing grounded in experiential presence in the world), *presentational* (experiential knowing articulated in image, movement, art, etc.), *propositional* (conceptual/theoretical), and *practical* knowing (knowing how-to-do, with an emphasis on “I do” rather than “I think”). By emphasizing this extended epistemology, Heron and Reason seek to honor and contextualize interpretive and

constructive epistemologies (propositional ways of knowing) within the more concrete and intimate (but less critical/reflexive) experiential, presentational, and practical ways of knowing. In similar fashion, Ferrer (2002, 2008, 2010, 2011) clarifies that even the most participatory ontology or framework will privilege some ontological claims over others, and so he seeks to minimize overly abstract hierarchies through his *emancipatory epistemology*. Ferrer’s epistemology relaxes rigid conceptual frameworks or truth claims by looking to transformational outcomes rather than ontological claims to make qualitative distinctions.

## Ontology

It is essential for those operating under the auspices of a participatory approach to define participation. One way to flesh out a working definition is to consider the who (participant) and the where (locus of participation) of participation. Participatory methodologies and epistemologies like those referenced above have led Heron (1996, 2006) to define participant and loci of participation as *presences in communion with other presences in a great field of mutual participation*. Ferrer (2002, 2008) has used the term *participatory events* to underline his multivalent understanding of participant and has come to understand the loci of participation of our shared *participatory predicament*. Both Heron’s and Ferrer’s understanding of participant and locus of participation require an *enactive* (Maturana and Varela 1987; Stewart et al. 2010; Thompson 2007; Varela et al. 1991) understanding of actuality. In Ferrer’s (2011) words, “participatory events can engage the entire range of human epistemic faculties (e.g. rational, imaginal, somatic, vital, aesthetic, etc.) with the creative unfolding of reality or the mystery in the enactment – or “bringing forth” – of ontologically rich religious worlds” (p. 2). This definition underlines the co-enactive/co-creative nature of a participatory realism. It also points toward an ontological pluralism of multiple spiritual ultimates or worlds. Following Ferrer, participatory spirituality tends toward a creative participatory pluralism.

## Participatory Network

Participatory spirituality, as defined here, has developed over time through the collaborations and individual journeys of a burgeoning network of scholar-practitioners. Many of the authors mentioned so far have overtly committed themselves to a participatory approach, and yet as Ferrer and Sherman (2008) have noted, there are many other themes in the academy that lend themselves to a participatory sensibility. They have underlined seven trends in particular: (1) the postcolonial reevaluation of emic epistemological frameworks, (2) the postmodern and feminist emphasis on embodiment and sacred immanence, (3) the resacralization of language, (4) the “pragmatic turn” in contemporary philosophy, (5) the renewed interest in the study of lived spirituality, (6) the question of religious truth in postmetaphysical thinking, and (7) the irreducibility of religious pluralism. Sherman (Grace et al. 2011) has added to this list the need to include important trends in philosophy of science (e.g., Latour 2010; Stengers 2011) and contemplative studies (e.g., Grace and Brown 2011; Roth 2008) within future conversations around participatory spirituality. Important trends in qualitative research (e.g., Reason 1988a; Reason and Bradbury 2001, 2006, 2008; Reason and Rowan 1981), ecopsychology (e.g., Abram 1996; Adams 2005), indigenous studies (e.g., Bastien 2003; Marks 2007), contemporary Christian theology and spirituality (e.g., Burns 2002; Dreyer and Burrows 2005; Miner 2004), and anthropology and ritual studies (e.g., Appfel-Marglin 2011; Grimes 1995; Lahood 2007, 2008; Tambiah 1990) must also be included. Other themes could certainly be found to help round out this list.

## Critical Perspectives

Several critical perspectives have arisen with regard to participatory spirituality. Ken Wilber (2002) has written that Ferrer’s work in particular falls into performative self-contradictions. Wilber understood Ferrer’s first book, *Revisioning*

*Transpersonal Theory*, to be an attempt to do away with all hierarchical distinctions while holding the participatory approach as superior in some important ways. This critique gets to the heart of the reason for introducing methodology and epistemology before ontology in this definition. Participatory spirituality begins as a methodological critique that leads to more inclusive epistemologies. Heron and Reason’s extended epistemology and Ferrer’s emancipatory epistemology do not seek to discount propositional/theoretical hierarchies. Rather, participatory epistemologies seek to contextualize critical abstractions in relation to more concrete and intimate ways of knowing. In a somewhat similar critique, Gerry Goddard (2009) sees the assertion of participatory pluralism (multiple spiritual ultimates) as no less biased than the assertion of one single Ultimate. Ferrer (2011) finds this line of critique important and writes that a participatory approach does not seek to refute some one spiritual ultimate outright, but rather seeks what Heron (2006) has called “an open-ended, innovative spirituality” (p. 2) that keeps the conversation open by rejecting problematic perennialist equivalencies that conflate distinct spiritual goals and ultimates found in various traditions. Furthering this line of questioning, Zayin Cabot (2013) has written a process-oriented critique of Integral Theory, where a concern for creative innovation and genuine pluralism (participatory enaction) is placed in dialogue with Integral Theory’s *Integral Enactive Theory* (Esbjörn-Hargens 2010), *Integral Perspectivism* (Wilber 2006), and its overarching commitment to one spiritual Ultimate.

## Conclusion

The threefold definition offered here begins with methodology because in important ways the participatory sensibility or approach begins as a methodological critique of postmodernity and what is experienced as its inherent cognicentrism (Ferrer 2003, 2011; Ferrer and Sherman 2008), “pride of mind” (Ferrer 2008; Romero and Albareda 2001), “Euro-centric scholarship” (Reason and Bradbury 2001), and/or “distancing,

disassociated objectivity” (Kremer 2002). By beginning with participatory methodologies, an honoring of multiple ways of knowing arises. In honoring multiple ways of knowing, more inclusive, participatory epistemologies enter the horizon. Extended epistemologies that embrace multiple ways of knowing, multiple inquiry outcomes, multiple spiritual goals, and the incredible diversity of lived experience (both potential and realized) lay the path for viable contemporary metaphysical speculation. Participatory spirituality thus far finds its ontological speculations leaning toward Ferrer’s (2002, 2008, 2011) “relaxed universalism” and genuine (participatory) pluralism.

## Pastoral Counseling

Don Allen Jr.

Christian Life Center, West Chester, OH, USA

Over the centuries pastoral counseling has been one of the main responsibilities of pastors throughout the church. Jesus provided pastoral counseling to his disciples and to the crowds that followed Him. He talked regularly with those who were physically sick and emotionally hurting. The Apostle Paul also gave pastoral counseling to his young students and preachers such as Timothy and Titus. He also gave pastoral counseling through his letter to Philemon to address the issue of Onesimus returning home. He even gave pastoral counsel to Peter as he attempted to correct the issues facing the church in book of Acts.

Throughout all church history, pastoral counselors have been the foundational and focal point of helping people deal with all sorts of issues and problems. Pastors are frequently the first person church members will seek help from when dealing with grief and death issues, crisis situations, marriage struggles, family issues, health problems, job-related problems, etc.

The goals of pastoral counseling are really quite simple:

1. To develop a relationship based on trust that supports the person seeking help
2. To provide wise Biblical counseling and spiritual resources for church members and others seeking help
3. To provide a safe environment offering confidentiality to people dealing with problems and issues

Pastoral is defined as “Relating to the care of souls, or to the pastor of a church; as, pastoral duties; a pastoral letter” (<http://dictionary.reference.com/browse/pastoral>).

Counseling is defined as “professional guidance of the individual by utilizing psychological methods especially in collecting case history data, using various techniques of the personal

interview, and testing interests and aptitudes” (<http://www.merriam-webster.com/dictionary/counselor>).

According to American Association of Pastoral Counselors, “Pastoral Counseling is a unique form of psychotherapy which uses spiritual resources as well as psychological understanding for healing and growth” (<http://www.aapc.org/about.cfm#intro>).

When you combine the two words, you have a pastor (shepherd) caring for the souls (members) of his/her congregation by providing a listening ear, guidance, prayer, hope, and wisdom in how to deal with crisis, family issues, spiritual dilemmas, etc.

It is recommended that we give the same consideration to people with emotional/mental health issues that we do when we help individuals deal with physical problems (such as a physical illness). Just as pastors refer people to seek appropriate medical care, we need to refer people to seek appropriate help to deal with issues of mental illness. As pastors, it is important to understand that unless we have had specific training in the field of mental health, it is dangerous (and, in some cases, criminal) to deal with mental health issues as well. Over the years, there have been a number of cases where churches and pastors have been sued and lost because of the information and advice they provided to someone dealing with a mental health problem.

Another essential area of pastoral counseling is hospital and nursing home ministry. Pastors are generally the first ones called to come and minister to a patient just before a surgery. Pastors are summoned to comfort the sick and dying. He/she will address fears and spiritual conditions and provide comfort from a spiritual perspective. Pastoral counselors often deal with the aftermath of a patient’s hospital admittance or the grief of a family mourning the death of a loved one.

Pastoral counselors are also often called upon to minister in the prisons. He/she is asked to provide wisdom, comfort, hope, and Biblical outlook for the inmate and the suffering family on the outside. The word chaplain refers to that person who feels a special call to minister in

jails, hospitals, military bases, and workplaces. The chaplain’s role is to provide support, encouragement, spiritual perspective, and Biblical guidance in their place of ministry.

A relatively new and developing part of pastoral counseling is the professional pastoral counselor. This individual often has a practice of pastoral counseling, which is not only their ministry, but also their employment. A professional pastoral counselor is often employed by the local church or social agencies that specialize in helping Christians or other religious groups address their issues in an office setting. The professional pastoral counselor studies counseling from a Christian or Biblical view and challenges clients to seek out answers and spiritual truth. Many states require that pastoral counselors be certified or licensed just as other professional counselors. A few states even offer credentials for those serving in the developing field of pastoral counselors.

## Education Requirements

There is a wide range of education and training available for pastoral counselors, including seminars, workshops, distant learning programs, and college level programs covering undergraduate, graduate, and doctoral programs. Many major Christian universities and seminaries offer degree programs in pastoral counseling or Christian psychology. It is very important to review the college or seminary’s accreditations and to understand the state laws regarding licensure of pastoral counseling within the local church and at private agencies.

## Types of Counseling Performed

The content and practice of pastoral counseling is as diverse as psychology. There are generally three distinct groups: the first group is typically referred to as “Bible Only.” This group uses the Scripture as their only tool for counseling. A foundational verse for this is “All Scripture is God-breathed and is useful for teaching, rebuking, correcting and

training in righteousness” (II Timothy 3:16). The Bible is their main authority and they feel that one can find all the answers to life’s questions within the context of Scripture. The second group believes it is appropriate to take from both the Bible and the scientific discipline of psychology to help people address the problems they are dealing with. This group has no conflict using cognitive therapy to help individuals address substance abuse problems or Gestalt therapy to address an individual’s personal decisions in seeking direction for their lives. The third point of view is that a counselor should only use only proven psychological methods to treat mental/emotional problems. This group views pastoral counseling as only an extension (not an integral treatment partner) of the mental health community.

Several therapies are commonly used by pastors when they provide pastoral counseling. Some of those therapies include:

- Rational emotive behavioral therapies
- Solution focus or brief therapies
- Cognitive behavioral therapy
- Person centered counseling
- Gestalt therapy
- Behavior therapy
- Reality therapy

There are also several professional organizations for pastoral counselors:

- American Association of Pastoral Counselors (AAPC)
- Association for Clinical Pastoral Education (ACPE)
- Association of Professional Chaplains
- American Association of Christian Counselor
- National Association of Nouthetic Counselor (NANC)
- Association of Biblical Counselors (ABC)
- National Association of Catholic Chaplains

Professional journals of interest in the field of pastoral counseling include:

- The Journal of Pastoral Care Publications, Inc. (JPCP)
- The Journal of Pastoral Counseling
- The Journal of Pastoral Theology
- The Journal of Biblical Counseling
- Christian Counseling Today

## Pastoral Counseling and Addiction

David Lee Jones

Austin Presbyterian Theological Seminary,  
Austin, TX, USA

In *The Science of Addiction: From Neurobiology to Treatment* (2007), Erickson argues that the term *addiction* is too “ill-defined” and “imprecise” to be scientifically valid. He further notes: “You won’t find it mentioned in the best diagnostic manual on mental disorders.” The term addiction, in Western culture, has become so ubiquitous that it refers to anything from entrenched drug or alcohol dependence to compulsive, out-of-control behaviors like “internet addiction,” gambling, sexual compulsion, or obsessive reliance on a cell phone. Erickson notes that the word addiction has become “too broad, too vague, and too misunderstood” to be scientifically useful.

When referring to a person being physically “addicted” to alcohol or other drugs,

Erickson (2007) prefers the term “chemically dependent” – meaning the person has a “brain disease.” When a person is using drugs or alcohol in destructive ways but shows no evidence of a brain disease, Erickson prefers the term “drug abuse.” These distinctions aid pastoral counselors to speak intelligently with other professionals in the field of chemical dependency counseling.

It is important for pastoral counselors to be well informed on the current language, terms, and research in drug dependency and abuse treatment. Most pastoral counselors have some acquaintance with “Twelve-Step” programs like Alcoholics Anonymous and its many spin-offs and probably know something about 28-day treatment programs.

Motivational interviewing (Miller and Rollnick 2002) is an empirically based and substantively tested form of communication which has shown to be extremely effective in helping persons who abuse drugs make better life choices. Its techniques can be learned and applied by pastoral counselors.

The treatment of chemical dependence and drug abuse is a specialized field which mandates specialized training and supervision; however, pastoral counselors can offer unique and helpful contributions in the following ways.

Pastoral counselors can acquaint themselves with the philosophy, spirituality, and practices of Twelve-Step programs by attending “open meetings.” Pastoral counseling with a care-seeker who is simultaneously “working the steps” can effectively complement each other. Most Twelve-Step meeting times and locations are available online. A key to helping persons attending Twelve-Step meetings is to encourage them to get a “sponsor” – a person whom they can contact when tempted to use and one to whom they covenant to some degree of regular accountability.

Alcoholics Anonymous owes its core spiritual principles to a turn of the century, evangelical Christian movement called “the Oxford Group” which Bill W. encountered at Calgary Episcopal Church in New York City in the 1930s. Bill became a lifelong friend of Calvary’s rector,

The Rev. Dr. Samuel Shoemaker, one of the group’s biggest proponents. The Oxford Group’s Four Absolutes (Absolute Honesty, Purity, Unselfishness, and Love) were ultimately retooled into the famous Twelve Steps.

One of the intersections of religion and AA is that they are both concerned with human emptiness. One way to understand a psychology of addiction is to view it as an unrelenting desire to fill a deep and abiding void or emptiness. Paradoxically, addiction often begins as a misguided or misinterpreted way to find a better life – albeit through self-destructive means. If addiction is an attempt to “fill” human emptiness, then it is no accident that many forms of alcohol are called “spirits.” Both religion and addiction share a common interest in seeking to “be filled” in order to have a better life.

Further, another way to understand addiction psychologically is to view it as an obsessive avoidance of pain. Underneath most, if not all, addiction is a compulsion not to feel. Alcohol, drugs, and addictive behaviors become so entrenched precisely because they have the capacity to anesthetize painful emotions, thoughts, and memories and allow persons to “take the edge off” or “forget about life for a while.”

Ultimately, psychological and spiritual healing for recovering persons depend on certain therapeutic capacities upon which both psychology and religion generally agree, i.e., the ability to face “inner demons” and pain through courage, honesty, integrity, empathic support, and making better life choices through the restructuring of previous relationships, habits, routines, choices, and behaviors. AA calls itself a “fellowship” because it provides a safe, nonjudgmental community for recovering persons to learn to be brutally honest by openly sharing their life story; accepting responsibility for their actions; discovering that they are not god; admitting their loss of control over their lives; repenting of hurtful past actions through confession, restitution, and reconciliation; finding strength in a power outside of oneself; combating immature isolation through

connection and accountability to both the AA fellowship and a sponsor; and by bringing this message of healing and hope to others. AA insists that “the best way to keep your sobriety is to give it away.” Both Twelve-Step programs and modern psychology have advanced the treatment of many forms of addiction by rightly understanding them as “diseases” rather than moral flaws or defects of the will.

Counselors and pastoral counselors should familiarize themselves thoroughly with resources in their communities that serve persons wrestling with addictions. Making contact with public mental health centers, private treatment facilities, and local “detox” centers, as well as local clinicians (psychologists, psychiatrists, clinical social workers, and addiction counselors) who specialize in this field, is important. It is also helpful to know those qualified to conduct interventions, the process by which dependent persons can receive “after hours” help, and what assistance is available to those without insurance.

Pastoral counselors may wish to get involved in programs that facilitate local faith communities combining resources to offer help for dependent persons and their families. Many denominations have staff and programs dedicated to helping local faith communities reach this target population. The Rush Center of the Johnson Institute (Allen and Merrill 2005) developed a program called “Faith Partners” that advances the mission of helping faith communities “reduce alcohol and other drug problems among the people they serve.”

Because chemical dependence and addictive behaviors have damaging emotional, behavioral, psychological, and spiritual repercussions for the entire family, it is essential that therapists and pastoral counselors seek to offer family therapy or provide appropriate referrals to the care-seeker’s family. Whenever addiction surfaces in one family member, varying degrees of “denial” and “enabling” surely exist in others. Pastoral counselors must see dependence and its consequences “systemically” – i.e., how both “over-functioning” and “under-functioning” exist in

family members simultaneously. Helping family members see the dependent condition and its related destructive behaviors through a non-blaming stance of a brain disease while maintaining the tension of holding the addicted person to appropriate levels of accountability for his/her behavior is key. Most treatment programs refer the family to groups like Al-Anon or Al-Ateen or offer family therapy or both during and after treatment. Often there are financial and legal matters which have negatively affected the entire family as well which must be addressed.

Pastoral counselors are uniquely equipped to deal with the spiritual wounds nearly always associated with any form of drug abuse or dependence; alienation from others, self, and God; spiritual emptiness and existential loneliness; guilt; depression; forgiveness; denial; betrayal; deception; loss of trust; lying; guilt; shame; loss of authentic self; isolation; and deterioration of spiritual practices, values, and morals. There are a number of excellent texts on addiction and its treatment written by pastoral counselors trained in this field. May (1988/2004) has noted that one way to understand addiction theologically is to see the addicted person as participating in a form of idolatry – the drug is worshipped as a type of “false god.”

Recovering persons are helped best through multidisciplinary approaches which include structured social support, internal reflection, brutal honesty and accountability, specialized counseling, identifying and attending to relapse triggers, identifying and addressing previous destructive behaviors, and developing new life interests and relationships not related to their drug of choice.

## Pastoral Counseling and Personality Disorders

Carol L. Schnabl Schweitzer

Pastoral Care, Union Presbyterian Seminary,  
Richmond, VA, USA

Borderline personality disorder (or BPD) is one of the ten personality disorders identified in the *DSM-IV-TR* (including paranoid, schizoid, schizotypal, antisocial, histrionic, narcissistic, avoidant, dependent, and obsessive-compulsive). It is a “cluster B” disorder meaning that individuals who have one of these disorders have difficulty with impulse control and emotional regulation. Antisocial, histrionic, and narcissistic disorders comprise the remaining cluster B disorders. BPD is viewed by many as a controversial diagnosis (Paris 2010, pp. 25–43). As one woman who lives with the disorder describes it, borderline personality disorder is “the diagnosis that dares not speak its name” (Van Gelder 2010, p. 16). In this brief discussion of personality disorders and pastoral counseling, I will focus on BPD as an example of a disorder often associated with “clergy killers” or those individuals in a congregation who possess the ability to stir up unhealthy or abnormal conflict in congregations when they perceive that they have been abandoned or rejected by the minister (Rediger 1997, p. 57; Schweitzer 2011, p. 272). Cluster A personality disorders are characterized by social awkwardness or social withdrawal which means individuals who suffer from these disorders would be less likely to be participants in a faith community and less likely to reach out to a minister or pastoral counselor for help.

Roth and Friedman (2003) observe that there is a “gender inequity” in terms of the higher incidence of the BPD diagnosis among women which may be related to a history of sexual abuse but they also issue a caution: “There is certainly a correlation . . . but a simple and direct association is an oversimplification, and does not take

into account factors such as the nature and severity of abuse; other types of trauma and neglect also enter into the picture” (pp. 10–11). This is noteworthy for a pastoral counselor or minister because a woman who is being abused by a significant other may reach out first to a minister. Why? There is less of a stigma associated with doing so and access to a minister may be less restricted than it would be for a secular mental health professional. Approximately 25 % of those diagnosed with BPD are men. Some of the “gender inequity” may result from the fact that men seek treatment less frequently than women, they are less likely to speak about feelings (and here we need to be mindful of the reality that many who suffer from BPD do not recognize the feelings they are having), a clinician’s bias to diagnose BPD more frequently in women, and the “male code” that subscribes to cultural influences which determine that anger is one of the few acceptable emotions for men to demonstrate (Kreger 2008, pp. 42–43). Thus, pastoral counselors and ministers need to attend to gender differences in treatment even while recognizing that most current research focuses on women with the disorder. In religious traditions that do not ordain women, some of these gender inequity issues may be innocently and/or unconsciously reinforced.

The confusion or resistance to the diagnosis of BPD itself is a result of its etiology and the history of research related to the disorder. As Paris contends, “[n]o one believes any more that patients lie on a border with psychosis” and the term borderline “fails to describe the most salient features of the syndrome: unstable mood, impulsivity, and unstable relationships” (2010, p. 3). There is a consensus among researchers (Kreger 2008; Manning 2011; Paris 2010; Roth and Friedman 2003; Widiger and Simonsen 2005) that the vagueness of the criteria (symptoms or dimensions) related to the diagnosis contributes to misdiagnosis since BPD is often diagnosed as something else (e.g., bipolar disorder, dysthymia, depression, PTSD, psychosis). Even more alarming is the reality that BPD is,

in some instances, dismissed entirely because there is still much to be learned about the disease. As Roth and Friedman observe, “some aren’t sure how to treat it, and given the disorder’s complexity, many are hesitant to” (2003, p. 9). This difficulty describes the clinician’s dilemma, but the reality that “symptoms play out in as many different ways as there are individuals with BPD” underscores why diagnosis and treatment are so difficult (Roth and Friedman 2003, p. 12). Moreover, as Paris notes, “BPD is highly comorbid with other disorders, particularly depression” which often results in treatment that addresses a different disorder (2010, p. 26). In addition, he remarks on the “lack of a clear boundary” for diagnosing BPD which is ironic in view of the reality that individuals who suffer with BPD often have difficulty accepting and/or maintaining clear boundaries in their relationships. The broad range of personality trait disturbances as well as symptoms which overlap with other disorders lead Paris to conclude that “co-occurrence” is preferable to comorbidity when describing conditions that exist concurrently with BPD (2010, p. 27).

Roth and Friedman provide a succinct summary of the fairy-tale personalities that Christine Ann Lawson (2000) employs to describe borderline traits. These types are the following: (1) The waif who “feels like a helpless victim . . . may appear social but never really engages with others on a deeper level . . . complains and waves away suggestions or offers for help. The waif feels hopeless and anticipates negativity.” (2) The queen feels empty yet entitled; when challenged a queen will portray the challenger as an enemy. (3) The hermit may appear paranoid and feels fear; this person will perceive threats where others do not (because threat does not really exist). This type will be possessive and domineering and often engages in excessive self-protection. And (4) the witch who “feels white-hot rage” and “seems to emerge from the waif, queen, or hermit when triggered by perceived rejection or her own self-hatred” (Lawson 2000, pp. 21–22). These types – at least to some

extent – depict the symptoms that individuals (both men and women) with cluster B disorders have in common. They are frequently “impulsive, angry, lying, needy, reactive and have relationships marked by instability. They desire to be the center of attention, but they have few close friends. Family members are often worn out by the frequent emotional explosions. Individuals with a personality disorder often engage in high-risk behavior that results in harm to self and others” (Schweitzer 2011, pp. 279–280). They do not respond well to constructive criticism or helpful suggestions and will frequently lash out at those who attempt to offer critique in response to their own requests for assistance.

What does their marked instability suggest for pastoral counseling? Just as their interpersonal relationships are unstable, so are their religious affiliations and spiritual lives. These individuals are likely to move from one faith community to another when they are challenged or they perceive any type of slight. When abandonment or rejection fears are triggered, God is also perceived to be distant or absent. These individuals often demonstrate an inability to claim personal agency thus blaming God and others in their cast of ever-changing interpersonal relationships for their self-created or inflicted hardships. This does not minimize the reality that they are frequently individuals struggling to find peace and healing as they recover from abuse. Thus far we have examined briefly the symptoms that constitute a personality disorder. In the literature on personality disorders, much more is written about the experiences of individuals than actual treatment because there is still much to be learned. Nevertheless it remains to provide a brief overview of how one approaches treatment.

Paris provides a helpful summary of evidence-based practices that have been demonstrated to be successful with BPD including cognitive behavioral therapy and dialectical behavior therapy which was developed by Marsha Linehan as a treatment specifically designed for those suffering from BPD. He is emphatic that the first step in treatment needs to be focused on helping those with personality disorders learn to

label their affect (Paris 2010, p. 174). Manning has adapted some of Linehan’s practices for individuals who have a loved one that suffers from BPD. She has proposed five steps for effective responses to borderline behavior which can be adapted by ministers and counselors in their work with individuals who have personality disorders: (1) Regulate one’s own emotion by practicing emotional regulation in situations that do not involve someone who has BPD or in situations that are not characterized as a crisis. This is accomplished by pausing to take a deep breath, focusing on physical sensations and body posture, half-smiling (sending a calming message to the brain), and self-validating. (2) Validate the person with BPD by first learning to validate oneself or others who do not have BPD by finding something to acknowledge. (3) Learn to ask and/or assess needs when someone asks for help by asking clarifying questions focused on what would be helpful. (4) Learn to brainstorm and/or troubleshoot solutions in a collaborative manner and begin to anticipate issues that could impede a resolution. And (5) request information that gives definition to the counselor’s role and develop a plan for follow through on the outcome of the plan. This may also be understood as a “check-in or follow-up” (Manning 2011, pp. 72–78). Manning and Paris both focus their treatment suggestions on BPD, but their overall approach to treatment is beneficial when working with any of the cluster B disorders.

Paris includes many helpful case illustrations in his discussion of therapeutic interventions, but particularly informative and practical for pastoral counseling are his summary bullet points that remind us there is no single way to talk with clients who have BPD but it is essential for counselors to build a therapeutic alliance by being validating and practical. Paris values a counselor’s ability to be “natural, humorous, and forthright” (2010, p. 182). The therapeutic task is focused on “modifying problematic traits and patterns: emotional dysregulation, impulsivity, and conflictual interpersonal relationships” (Paris 2010, p. 182). Lastly, Paris contends that clients “should be encouraged to ‘get a life’ while in treatment and not wait till they feel better.

Problems in recent life events are an opportunity to learn new skills and alternative behaviors” (Paris 2010, p. 182). From the perspective of a pastoral counselor or minister, this task of “getting a life” may include learning to give back to a community of faith that has been supportive during a time of crisis. The positive values which emanate from being able to give include an improved sense of self-esteem or confidence, an ability to claim agency in one’s personal life, an ability to receive grace, and the potential to establish roots in a specific community of faith because there is an ability to tolerate both the “good and bad” in interpersonal relationships without fearing rejection or abandonment.

## Pastoral Counseling to Men

Philip Culbertson

Counsellor Education Program, The University of Auckland, Auckland, New Zealand

The field of Men’s Studies in both psychology and religion has gained increasing attention following the rise of Second-Wave Feminism in the 1970s and 1980s. Today, the field remains relatively polarized, particularly within the church. In that original period, Griffiss (1985) made a distinction between Constantinian (essentialist) models of pastoral care and liberation models. Following Griffiss’ lead, this entry will be presented from a liberation model, which is better suited to a variety of men’s needs and their performances of masculinity. “In this model, persons are called into the freedom of the future, while social and ecclesiastical structures are viewed as tentative and revisable” (in Culbertson 1994, pp. 9–10). The fields of biomedical research, psychology, communication linguistics, and behavioral and cultural anthropology suggest that men and women function in different ways. For example, men have much higher rates of suicide, alcoholism, homelessness, and crime,

implying that constructivist and cultural more than biological mechanisms are at work.

The epistemology behind this entry will therefore be one of constructivism (in keeping with Piaget's theory that knowledge is constructed by the learner) – that is, that males of all ages act out a variety of “performances” of the expectations and assumptions that the culture in which they live foists on them, as opposed to “essentialism,” which views the many ways of being male as innate and biologically inherent. Each man has a range of ways in which he can “perform” his masculinity, though few men are immediately aware of *all* of the performance choices available to them, particularly since gender taxonomies and cultural dictates mask the available varieties. A “man,” however defined, can be a man in many ways, as dictated by culture, socioeconomic status, gender assumptions, desire, sexual attraction, educational level, social cohort, institutional coercion, and life experience. We are men, and yet we are not alike. Pastoral counseling and the psychology of masculinity finds its challenge in the richness of this diversity.

### **The Stages of a Man's Life**

Men today live in a world of “pluralistic post-modernism” (Schweitzer 2004). Choices and opportunities never available to our male forebears are suddenly foisted upon us, and what it means to be a man in today's world can be confusing and occasionally overwhelming. From a liberation standpoint, the only assets the vast majority of males have in common are the X chromosome and a penis. Yet the old schema of developmental stages still exert a certain influence, and how we are expected to “be” as individuals of the male sex still retains not only a power over us but also a usefulness in terms of organizing our thinking around a very complex topic. The following is based on Erikson's (1980, 1982) stages in the life cycle.

#### **Young Manhood**

Three recent studies have addressed the spirituality of late-high-school- and college-age men,

a group singularly absent from most churches (Astin et al. 2011; Jones et al. 2012; Longwood et al. 2011). These studies suggest that young adult males are often exploring their senses of spirituality outside of the institutional church, finding spiritual health in friendships and romantic relationships; in music, sports, and nature; and in organized discussion groups on alternative spiritualities. Those providing pastoral care to young men must be willing to listen not only to a critique of the shortcomings of the institutional church but also to engage a broader definition of spirituality that is not couched in traditional theological categories.

#### **Establishing a Professional Life**

Previous generations of men have often found fulfillment through professional or vocational life. Yet those working with men also know how many men, in their professional or work life, feel “isolated, worn out, exploited by “rich money,” helpless, and at a loss as to what to do about any of it” (Boyd 1995, p. 38). In short, their career has left them feeling like they have lost touch with the men they longed to be. The generation of men now in the 20s and 30s continues to look to the activities that previously nourished them outside the church: friendships and romantic relationships, organized discussion groups on alternative spiritualities, music, sports, and the exploration of nature. These men can benefit from pastoral counseling, but often in a wider context than traditional pastoral care. They see few members of the church of their own age and tend to approach clergy as though they were old-fashioned parents rather than spiritual companions. They also may be more focused on getting their personal identity and spirituality sorted out first before they begin to consider settling down with a romantic partner.

#### **Being a Partner**

According to a US Census Bureau survey (2011), 27 % of all households in the USA are single people living alone. The number of single people in most American congregations frequently does not reflect these statistics. However, people of all ages in the church may turn to their pastor for

guidance in establishing or maintaining a long-term relationship. The two most common reasons that men take a committed partner are shaped by the heteronormativity of various American cultures: attaining a sense of normalcy and fathering children. Yet finding a partner also offers a chance to connect with the feminine and to father children (Culbertson 1994, p. 59ff). At the same time, men's primary relationships can be threatened by being too symbiotic so that the boundary is lost between them and their partner, by poor communication skills about each partner's behavioral likes and dislikes, by a sense of entitlement that stems from culture's privileging of males over females, by anxiety around issues of space and boundaries, and by being disappointed that marriage does not actually guarantee the romanticized bliss that gets attached to it.

### Responsible Male Maturity

While Berne's (1963) Transactional Analysis was more popular in the 1970s and 1980s than today, his schema remains useful in the field of marriage counseling. Particularly in a world where so many people carry a sense of "entitlement," the TA role of "adult" seems to be increasingly out of people's reach. Rather, people too often, especially when they are in pain, resort to either their "child" or their "parent," both roles carrying a heavy burden of self-licensing. Borrowdale (1994) observes that "The values that sustain marriage include loyalty and faithful commitment, truthfulness and integrity, respect for the other person, and a proper appreciation of one's own needs. Is it a coincidence that, apart from the last one, these values are precisely those which get little public attention in society?" (Borrowdale 1994, p. 85). The general narcissism that presently infects Western society makes Borrowdale's "values" seem old-fashioned, and yet the life of the New Testament Jesus was modeled on the same qualities that Borrowdale identifies as sustaining marriage.

### Becoming a Parent

A family is an emotional system; as children, we are shaped not only by parental strengths and

nurturing but also by parental disappointments and shortcomings (see Culbertson 1994, p. 46ff). We men *do* disappoint our children, which some developmental psychologists claim to be part of the natural processes of individuation that ultimately allow us to leave home and become our own person. Pastoral counselors who have trained in Family Systems Theory (Bowen 1985; Friedman 1985) will understand this well. Surely we all hope that someday we will be able to forgive our parents for their shortcomings and value them for the ways in which they gave us vision and resilience.

Good (2006) points out that "family values" is not a biblical term. No word in Greek or Hebrew corresponds exactly to the modern word "family," nor is there any word that corresponds to "values" (pp. 13–14). Family values as we know them today are a modern construction and very much shaped by the culture in which the family lives in addition to inherited patterns of relating. The term family values, then, should be used in counseling only to articulate the specific values of a particular family, embedded in a culture and the family's own unique history. Sometimes these are good values and sometimes they are not, but they are a significant part of the "living inheritance" that each counselee carries and are thus worth exploring in the pastor's office (cf. Staley 1999).

### Fathering

Men in the church find a certain image of fatherhood in the overarching biblical portrayal of God – one with high expectations for "His children's" behavior, loving but conditional, and somewhat distant. This portrayal of God reinforces much of the heritage of hegemonic masculinity, perhaps making men who wish to father differently from this model feel somewhat insecure. However, fatherhood, like masculinity itself, is a social construction. Miles (1996), challenging the traditional interpretations of the character of God as Father, portrays God as calling people to adult values and behavior, "adult" to adult, and then giving them enormous responsibility by turning the world and its future over to humanity itself. In this representation,

God asks human adults to grow up and take responsibility for themselves rather than being stuck in relational dependence. With all this fluidity, new opportunities have opened up for men to be more directly involved in the nurture and maturation of their children.

### Transitioning to Elder Status

This transition is often marked by “retirement,” though the meaning of that word is increasingly less clear as people struggle in the present economy. Older men often do not often fare well as they age. Unlike the more traditional cultures of the world, where elders are honored for their wisdom, elderly men in the USA are often marginalized or ignored and thus lose their familiar sense of who they are. This might explain why 84 % of the total suicides among the American elderly are males (Kimble 1990, p. 113; Vaachahaase et al. 2011, p. xix). Men in this age group are not often accustomed to expressing their emotions constructively, being needy, or feeling sidelined.

The aging male body carries a lifetime of memories and meanings. In the pastoral relationship, men may be emboldened to again befriend their bodies as they change with age, finding narratives embedded in their flesh, the telling of which can give them a new sense of purpose (Culbertson 2006b; see also Lopate 1996). As a man’s life draws to a close, he faces the final crisis stage: integrity vs. despair (Erikson 1982). If he chooses integrity, he can contemplate his accomplishments and become able to develop integrity if he sees himself as having led a successful life. If he sees his life as have been wasted or unproductive, or feels that he did not accomplish his life goals, he will become dissatisfied with life and develop despair, often leading to depression and hopelessness. Erikson understood that this stage of life was retrospective, designed to allow us to die a good death if possible. But as advances in medicine and health-care life increasingly extend life, despair can instead lead to that spiritual malaise that Frankl (1985) called “the feeling of meaninglessness” (p. 164).

### The Measure of a Man

Most recent publications about men and masculinity understand masculine gender as a social construction – something that does not automatically come with having male genitals but is held out in the direction of young boys as something to grow into. Gilmore (1990) argues that hegemonic masculinity demands that males grow successfully into three roles: Provider, Protector, and Impregnator. Some biological males grow into these roles with relative ease, but most pay a price – emotionally and/or physically – for the efforts to attain something as ephemeral and amorphous as “masculinity.” Social constructionism (Berger and Luckmann 1966) understands that the assigning of specific roles and authority to males happens unconsciously, heavily influenced by cultural definitions. Indeed, recently in the United States, the role of “Impregnator” as the proof of a man’s fertility has been reframed as “Procreator,” making the writing of a memoir as important as the siring of sons. Social constructions are underpinned and shaped by personal and cultural narratives.

But as the field of Men’s Studies in Religion matures, we are increasingly aware that the stories we tell about ourselves are mediated by cultural assumptions about gender and sexuality. In examining the Western cultures of White masculinity, Bannister (2007) remarks, “The construction of masculinity as independent of circumstances remains a central feature of Western culture—whether its Hollywood action heroes, All Blacks, Kiwi blokes, or more broadly the intellectual power of science and rationality to exploit nature and transform the world according to human desire” (p. 3). But masculinity looks quite different in non-White cultures. For example, Maliko (2007) points out that the Samoan male body is judged on its usefulness, not its aesthetics. De la Torre (2009) also emphasizes the usefulness of the Hispanic male body, for it is the responsibility of “those with cojones to care for, provide for, and protect” those who have less social power (p. 447), and in this way become embodiments of the crucified

Christ. Liu et al. (2010) describe Asian males' struggle, particularly living in America, to claim a masculine identity that does not recapitulate White stereotypes about Asian men, yet does not simultaneously change them into people who would be identified in traditional Asian cultures as too feminine. In her book *We Real Cool* (2004), bell hooks writes about how a heritage of racial discrimination and stereotyping has forced African American males to become "real cool" caricatures of themselves, particularly in relation to women, all the while mismanaging the ways in which White culture continues to marginalize Black male voices.

### The Pastoral Care of Men

This entry has argued that a man will benefit most when the pastoral counselor adopts a postmodern approach to gender and identity issues. As well as understanding the social constructions of gender and sexuality, the pastoral caregiver will benefit from some training in Family Systems Theory, Narrative Theory, and Object Relations Theory (for all three approaches, see Culbertson 2000). Most men have been trained in their families of origin to suppress deeply their feelings and emotions. Recovering awareness of feelings and emotions can be difficult, for patriarchal masculinity trivializes the world of inner experience as making men more vulnerable (Culbertson 1994, pp. 13–14). Because men are often emotionally repressed and trained not to care about their physical selves, getting them to ministers who might provide help in their confusion can be difficult. Some men find that talking intimately with a male minister raises the specter of homophobia. Others find that talking with a female minister threatens their manhood.

Thus, male Christians will often approach pastoral counseling not even knowing how to deal with their own sense of primal loss (see Corneau 1991). As well, many men are "alexithymic" – that is, poorly equipped to discover their feelings and to language them (Culbertson 2006a, pp. 9–10).

They may bring a sense of fear, loss, shame, confusion, and powerlessness to their minister, asking the minister to do most of the hard work of counseling because the men themselves are at a loss where to begin.

Ministers may need to model emotions for the male counselees. They may also need to find the balance between seeming too directive in the counseling session and creating a space in which men can feel safe about opening up. Ministers may also need to set clear boundaries – for example, no threats of violence against anyone, an understanding about what confidentiality means and why both the clergy and the laity are bound by it, and the importance of taking counsel with people who are trained rather than with family members or bar buddies. Men need help and clear structures in finding themselves (Gelfer 2009), and clergy need professional supervision and support in working with issues of gender and sexuality.

Finally, pastoral therapist Christine Neuger has identified nine critical aspects to encourage the appropriately sensitive pastoral care of men in the church (1997):

1. Let go of your own culturally ingrained assumptions about gender roles and sexual norms.
2. Focus on what might help men help themselves.
3. Men need to be viewed as individuals who are gendered, rather than genders struggling to be individuals.
4. Invite the counselee to bring his body into the counseling space. Too many men are disembodied.
5. Avoid using the power of your role to reinforce or punish gendered or sexual behavior according to your own interpretation of social norms.
6. Work cooperatively to achieve values and choices appropriate to the careseeker.
7. Remain conscious of and sensitive to the careseeker's emotions, particularly when they do not match your own assumptions about what gendered thinking or behavior should look like.

8. Be sensitive to the person's internal influences vs. his external influences, as well as the meaning he attributes to his own life story.
9. Learn all you can from what happens in the interpersonal – i.e., in the space between you and the careseeker.

## Pastoral Counseling: Third World Perspectives

Esther Acolatse

Duke Divinity School, Durham, NC, USA

If pastoral counseling, as the literature points out, is the “healing, sustaining, guiding/shepherding and reconciling” (Clinebell 1966, 1984) undertaken by professionals who use spiritual resources as well as psychological understanding for healing and growth, then pastoral counseling in the so-called Third World – currently an anomalous phrase – can be seen as dating back to the work of traditional diviners/healers/priests within these contexts. The history of formal pastoral counseling practice and its coupling with academic discipline in most Third World contexts or Majority World (a much more politically correct designation), however, dates for most countries, to encounters with Western missionary influence and most recently a postcolonial/postindependence phenomena largely after the 1960s.

Most of these more modern pastoral counseling approaches take Western psychological theories and practices as their point of departure in as much as current practices are provided by certified pastoral counselors, many of whom are

mental health professionals, who have also had in-depth religious and/or theological training. Yet the lack of many clinically trained counselors mean that much of pastoral counseling follows the nouthetic pattern of applying insights from sacred texts to presenting problems within culturally acceptable norms. Overall, there is prominence given to religious faith and principles rather than psychological insights. However, the attention to the psychology of the religious believer is not overlooked.

In Africa, for instance, pastoral counseling has moved through three stages of development, the first rooted in European/Western theories of personality which are applied to the African context (Nomenyo 1971; Tjega 1971). The second stage manifested as academic exercises which seek to offer descriptions of mental and psychological ailments to which African thought and traditional therapeutic modalities are applied (Mwene-Batende 1981). This dates to the 1958 Bukavu and 1959 Tananarive pan-African conferences on mental disorders and psychiatry in an attempt to address mental health issues on the continent with attention to particular personality traits of the African peoples. Finally, the thirteenth stage integrates the two systems employing biblical concepts which it couples with a psychodynamically oriented psychotherapy from which it seeks to offer guidelines for pastoral praxis (ma Mpolo 1984). In many respects, this approach closely resembles the psychospiritual ethos of African life and thought, exemplified in African healing practices.

In the Latin American context, Liberation theological sensibilities and feminist voices on the one hand and the largely Evangelical voices that occupy most seminary spaces on the other, frame issues of pastoral care and counseling. While these two groups agree that the heart of pastoral care issues center largely around the concern of suffering and poverty that stem from the macroeconomic and political structures of the society, the former emphasizes the transformation of the sociopolitical structures as the way to ameliorate the situation, while the latter assumes that conversion experiences with accompanying behavioral changes at the individual level is, what

is, needed to make enduring changes. These differing philosophical/theological views thus produce different approaches, emphasis, as well as focus for pastoral counseling. At the same time, the two predominant denominations, Catholic and Protestant, bring varying responses to the identified sociopolitical and economic problems.

The development of pastoral counseling in East Asia follows an almost similar trajectory as the previous two contexts, with the exception of the clear emphasis on the familial approaches and with pastoral counseling being both a task of the church and the state, especially in the more urbanized centers and in Australia and New Zealand, becoming a concern of the Department of Justice's unit of Marriage guidance (Southard 1970).

Additionally, unlike pastoral counseling in the Western world, counseling practice in the two-thirds world favors and accents a community/familial approach. In both Chinese and African cultures, for instance, it is the overall impact of individual life on the family as a whole that is of consideration even in individual counseling. But the rapid urbanization in some of the city centers calls for attention to the cultural changes taking place – the emancipation of women, independence of children from extended familial matrix to a more nuclear family model which needs to pay attention to the individual in new ways.

There is also concern for a more directive and connectional approach in counseling rather than the approach that requires the care seeker to do the intrapsychic work in a clinical setting facing a seemingly aloof counselor. Usually a family member may initiate care seeking, and the interpersonal space between seekers and carers is a little less formal (Augsburger 1986; van Beek 1996). In such collectivistic cultures, with structured gender and age role relations, counselors do well to be attentive to age and gender in counseling relations as well as in among family members in the counseling setting. The importance of the specifically religious resources leading to a favoring of the nouthetic approach in the Christian tradition as well as its coupling with inductive guidance is noted by these authors. The growing industrialization and urbanization comparable to that in suburban America leads to a need for other than pastoral

counselors affiliated with the church for direction, and in some places in East Asia the tide was turning toward psychotherapeutic services as far back as the 1970s (Southard 1970). It means the utilization of both the inductive and educative approaches in support of each other is needed than preferring one to the other.

Of importance to pastoral counseling is diagnosis as how to unearth presenting problems. Etiology and the diagnosis in traditional settings as found in most Third World settings, however, cannot be effectively uncoupled and it is mainly within diagnosis that the interplay of psychology and religion is most observed. The dynamic cosmology composed of seen and unseen forces and belief in the effects of the latter in weakening humans, thus making them vulnerable to ill health, whether physical or psychical, requires not just a psychosocial but also psychospiritual approach to diagnosis and care. The use of psychodrama with spiritual undertones by appeal to the gods and ancestors, for lifting up personal, family, and sociopolitical issues, action/reflection to effect change at the individual, familial, and cosmic levels, has been noted (Ma Mpolo 1991). There is also the call to turn to the reinstating of the traditional concepts which entail a mentored conversation of community members aimed at ameliorating issues through what is identifiable as narrative counseling (Mucherera 2010) and the therapeutic palaver (Janzen 1978). Where other psychological and somatic causes are present, there is tendency to frame and find ultimate causality in spiritual factors and the individual's vulnerability to these evil spiritual powers (p'Bitek 1970). The counselor's ability to work with spiritual and psychological resources in tandem for diagnosis and therapeutic intervention is key to pastoral counseling in such contexts where belief in the spiritual dynamistic forces characterize common life (Acolatse 2010, 2011; Berinyuu 2002). In a sense, it is a return to the inherent psychosocial and psychospiritual underpinnings of health and wholeness within African traditional societies – a complex of priests/diviners, herbalists/healers, and an assortment of therapeutic groups that attend to the task of diagnoses and

treatment of both physical, psychical, and various other personality disorders.

In the above-designated contexts, especially in most of Africa and Latin America, in particular, issues surrounding pastoral counseling still have to do with how to navigate postcolonial effects on identity and the interstitial space that postcolonial subjects still occupy. Residual issues of biculturalism and multi-religiousness in personal and religious identity that require attendance for deep psychological and spiritual scars to be healed (Lartey 2006; Mucherera 2001) but which also require that critical engagement with other disciplines for a thick descriptive analysis for developing a new pastoral theology of care and counseling, as well as psychodynamic understanding of integrative consciousness for these contexts is key. An ongoing dialogic stance between traditional and Western worldviews and their integration, where necessary without overvaluing one at the expense of the client, is prerequisite for sustaining pastoral counseling in context as well as charting a course for its viability as a formal academic discipline with ability to contribute to knowledge in the field. Such integrative work is already present in the works of Acolatse, ma Mpolo, and Lartey from the African continent. Of importance are the latter two's call to the Western world to pay attention to the emerging issues in Africa and the import of that move to the discipline of pastoral counseling in general (Lartey 2002, 2006; ma Mpolo 1991). It requires that approaches to the care of persons that are emic to the African context and mindset be forged not by first being refracted through Western theories and approaches, but from the ground up built on African understandings of personhood and religio-cultural reality. This way the theories for care and counseling speak directly out of and to the situations with which the African can relate without undue pause.

The future direction of Pastoral counseling in the two-thirds world, which is becoming increasingly industrialized and urbanized and yet continues to live in pockets of deep traditional, though in its psychic functioning, means continually coupling new modalities with the traditional ways for helping distressed persons in need.

Here then, pastoral counseling may need to address the issue of understanding of family, a concept which is already expansive, in light of rapid industrialization and secularism and influx of Western ideas as it affects migration and identity. In the case of Africa, for example, attention is to be given to the above, in light of the HIV/AIDS pandemic, issues of human rights vis-à-vis the numerous genocides and related trauma, gender violence and its related issues of sexuality as well as the entanglements of and repercussions of religious pluralism, and the political ferment. An unavoidable aspect of the future direction of Pastoral counseling, in Third World perspectives, needs to attend to globalization and economic issues and their effect on clients and counseling practices on the one hand and the kind of scholarship that will change the emphasis and focus of pastoral counseling to accommodate changing needs on the other.

Finally, we note that Third World contributions to the pastoral counseling field can be found in the current turn to cross-cultural pastoral counseling in light of migrations of cultural/religious minorities to the West and the changing demographics and the shifts in the cultural and religious landscape of these host cultures. Attention to pastoral care in cross-cultural mode enjoined in the literature, pioneered by migrant scholars in the West, focuses on attending to the particulars and distinctives of cultural minorities, in order to provide appropriate care. But as Lartey (2002) points out, such attempts to address distinctive among people groups, carry enormous drawbacks because it easily polarizes people into us and them, and often ignores the intra-cultural differences among minority cultures, not to mention the real tendency to unwittingly continue the stereotypical stance for which attention to cross-cultural issues are mandated.

## Pastoral Diagnosis

David Lee Jones  
Austin Presbyterian Theological Seminary,  
Austin, TX, USA

Nancy Ramsay writes “Diagnosis is an evaluative process of discerning the nature of another’s difficulty in order to provide an appropriate and restorative response” (Ramsay 1998). She further argues that: “Diagnosis is never neutral. It always reiterates the anthropological and philosophical assumptions of the practitioner.”

Corey et al. (2012) define *psychodiagnosis* as: “the analysis and explanation of a client’s problems;” it usually includes “identifying possible causes of the person’s emotional, psychological, and behavioral difficulties,” and it entails suggesting appropriate therapeutic options to address the identified issues or problems. They define *medical diagnosis* as: “. . . the process of examining physical symptoms, inferring causes of physical disorders or diseases, providing some kind of category that fits the pattern of disease, and prescribing an appropriate treatment.”

Pastoral diagnosis differs from secular medical or psychodiagnosis because of the explicit theological and religious presuppositions and assumptions of the practitioner and the context in which the care is offered. Pastoral diagnosis is a process of combining theological reflection with the language and wisdom of other helping professions with a view towards seeing and treating persons holistically when crafting a practical response or therapeutic intervention. The word “pastoral” infers that the person discerning another’s difficulties is either a pastor or one authorized by a faith community to provide pastoral care.

Diagnosis, then, is a “hermeneutical process” (Ramsay 1998) of discernment, which is highly contingent on the lenses through which the practitioner views a person seeking care. Further, how the care-seeker’s situation or difficulty is named will greatly determine the type of care or intervention the practitioner develops to respond to that person’s difficulty or situation.

Pruyser (1976b) noted that the religious practitioners he supervised in clinical settings were often reticent to tap the richness of their own religious tradition’s experience and wisdom when working in multidisciplinary contexts, and he encouraged and challenged pastoral practitioners reasonably to claim and articulate their theological and spiritual perspectives in order to enrich and deepen the diagnostic process.

The *Theological Dictionary of the New Testament* (Kittel and Friedrich 1976) notes that the word “diagnosis” derives from the Greek terms *dia* (through or by the means of) and *gnosis*

(to know through careful and verifiable observation). Pruyser (1976b) notes that in any field of knowledge, the term diagnosis points to a discerning and discriminating capacity “to distinguish one condition from another.”

Schlauch (1993) notes that the Greek word *diagignoskein* means “to perceive or know apart.” Nathan (1967) suggests that diagnosis means “to discern, distinguish, or differentiate” with a view towards “grasping things as they really are, so as to do the right thing.” Knowing things “apart” suggests a comparative process where certain issues are lifted out of context to highlight them in order to understand them more fully. Schlauch writes: “. . . something is now figure as compared to ground, or foreground as compared to background.”

The practice of diagnosis has both its proponents and detractors. Those who favor employing diagnostic procedures generally argue that employing such procedures enable practitioners to obtain sufficient information about the care-seeker’s past and present condition to craft an appropriate treatment plan. Further arguments for diagnosis are that diagnostic labels embrace a wide spectrum of symptoms or characteristics, are intended to be descriptive, give clarity to a person’s condition and such clarity may lower the care-seeker’s anxiety, and provide some hope in predicting both the course and outcome of a person’s difficulty.

Although most practitioners employ some form of diagnosis, some caution its use so that it does not unnecessarily label or harm those seeking care. The projective nature of those offering the diagnosis has already been noted. The act of offering diagnosis implies one person having power over another. The practitioner offering the diagnosis can be unduly viewed as “the expert” who knows what is best for the other, and subsequently care-seekers can potentially lose their voice in the treatment plan. Some argue that diagnosis can woodenly categorize persons in a system of rigid categories such that care-seekers lose their particular distinctiveness and uniqueness. The potential harm here is that human beings get reduced into limiting diagnostic categories.

Employing pastoral diagnosis of respectfully means “knowing” persons deeply “through” the complexity of their multifaceted stories, personalities, experiences, histories, social locations, beliefs, faith journeys, and spiritual perspectives by being in critical conversation with the language and observations of other helping professions. Pastoral diagnosis employs the best of what the helping professions have observed and catalogued about the complexity of the human condition and filtering it through one’s religious world view and spiritual lenses with critical openness and self-awareness.

## Pastoral Psychotherapy and Pastoral Counseling

Ryan LaMothe

Pastoral Care and Counseling, St. Meinrad  
School of Theology, St. Meinrad, IN, USA

Socrates was reputed to say that “the beginning of wisdom is the definition of terms.” I suspect, given the Socratic method, that the beginning of wisdom is the double realization that definitions carry the illusion of certainty and elude univocal agreement. Definitions, we know, vary according to the historical and cultural contexts and traditions and sometimes as a result of conscious whims and unconscious desires. Yet, the Sisyphean work of defining concepts is nevertheless necessary, for without definitions we begin to lose clarity of who we are, what we do, and where we are headed. The plasticity of defining terms, which did not dissuade but instead emboldened this Athenian gadfly, is immediately evident when faced with defining pastoral counseling and pastoral psychotherapy, especially in such a short entry. It seems to me that

a wise approach takes into account, if only briefly, the history and traditions from which these concepts are founded. More specifically, I locate and depict these concepts within the Judeo-Christian traditions and describe how each concept took on particular meanings given the social and scientific changes in Western societies during the nineteenth and twentieth centuries in general and in the United States in particular. My overall aim is to provide some of the key contours that help differentiate both pastoral counseling and pastoral psychotherapy.

The term “pastoral counseling” is not found in Judeo-Christian scriptures, yet there are many examples of diverse forms of counsel. God, sometimes directly and other times through intermediaries, advised and admonished Moses (Exodus, 3:1–8) and David (2 Samuel 12). The prophets, like Isaiah (12:13–22), Ezekiel (7:2–25), and Amos (5:7), reproached and warned Jewish rulers and the Jewish people. Jesus, the wise counselor (Gerkin 1997), gave advice to his disciples (Matthew 5:1–14), reprimanded the Pharisees and Sadducees (Matthew 3:7), consoled the grieving (John 11:20–57), imparted wisdom to the crowds (Mark 1:22), and encouraged the wayward (Luke 24:13–35). St. Paul’s pastoral letters exhorted, praised, warned, and advised Christians in Rome, Corinth, and elsewhere. The desert mothers and fathers, such as Theodora of Alexandria, Melania the Elder, St. Simeon the New Theologian, St. John Climacus, and St. Gregory of Nyssa, proffered counsel to other monastics and to people of God. In the sixth century, Gregory the Great wrote the book, *Pastoral Care*, which was used for centuries to train clergy. In this book, Gregory (1978) described a pastoral method for giving counsel to individuals in distress. This excessively brief overview of scripture and the early Church makes clear that pastoral counseling or, more broadly, giving counsel (Capps 2001) was an integral part of communal life and something expected of those identified to lead and care for the community of faith (see also Clebsch and Jaekle 1994).

The Reformation, with its shift toward emphasizing and privileging the Word of God (*sola*

*scriptura*) eventuated in greater stress in the clergy’s role in giving counsel to congregants and less prominence in the role of sacraments in giving care. In his book, *A History of Pastoral Care in America*, Brooks Holifield (1983) provides numerous illustrations of clergy who understood themselves to be physicians of the soul and thus interested in both pastoral diagnosis of maladies of souls and pastoral methods for providing effective counsel. During the colonial period in the United States, for example, Reverends John Dodd and Thomas Hooker engaged in *pastoral conversations* with the aim of curing troubled souls (Holifield 1983, pp. 32–34). Pastoral conversations were occasions for offering expert counsel; these ministers and others (e.g., Samuel Willard; William Ames; Holifield 1983, pp. 41–51) published case studies demonstrating effective pastoral counseling methodologies and techniques. During this period, pastoral conversations or counseling clearly fell under the purview of pastors, which then meant that they had a theological and ecclesial responsibility to be experts in diagnosing maladies of the soul and in developing interventions that invited cure and, if not cure, solace. In brief, forms of pastoral counseling during early America were largely in continuity with Gregory the Great’s view of attending, listening, and conducting theological assessment, all aimed toward cure of souls.

In the West, the late nineteenth and early twentieth century saw the rise and cultural dominance of the human sciences for understanding and responding to human suffering. William James, Morton Prince, James Jackson Putnam, Pierre Janet, Jean-Martin Charcot, Sigmund Freud, Alfred Adler, Carl Jung, and many others developed theories and methods – under the umbrella of science – that dealt with diagnosing and healing psychological maladies. These new ideas and methods influenced many Liberal Protestants. Oskar Pfister, a Swiss Lutheran pastor, first became enamored with Sigmund Freud’s psychoanalytic theory and later with Freud himself. Pfister (Breger 2000; Meng and Freud 1963) believed deeply that psychoanalytic theory and conceptual tools could be used by clergy in giving counsel to parishioners. Across the Atlantic,

the Emmanuel Movement (1905) in Boston represented an attempt to make use of the psychological sciences in counseling ministries (Holifield 1983, pp. 201–209). This movement, which eventually spread throughout many US cities, contained the notion and premise that clergy already conducted “psychotherapy” – the gospel of faith as therapeutic (Holifield 1983, p. 202). Many Protestant ministers recognized the value of psychological methods and techniques in giving counsel to congregants, and this appreciation found its way into “seminary curricula in the 1920s and 1930s, where seminary-trained pastoral counselors found homes in congregations where they became resident psychologists” (Townsend 2009, p. 16). During this period, pastoral counseling gradually edged away from something that all pastors engaged in during their ministry to a specialized ministry that required specific knowledge, training, and skills, as well as a particular ministerial identity. This specialized ministry sought, with varying success, to bring theology and psychology together with the aim of providing wise counsel to individuals, couples, and families struggling with emotional and relational difficulties.

This view of pastoral counseling gathered steam and, by the middle of the twentieth century, there was a movement to professionalize pastoral counseling. Members of the American Foundation of Religion and Psychiatry (AFRP) were instrumental in forming a new guild in 1963: the American Association of Pastoral Counselors (AAPC). The emergence of AAPC made explicit and further concretized significant changes vis-à-vis traditional notions of pastoral counseling. First, pastoral counseling, as a specialized ministry of the clergy, now had a professional organization that established bodies of knowledge, criteria for membership, certification, and accreditation. Ordination was not sufficient to call oneself a pastoral counselor, and, as a result of professionalization, pastoral counseling was no longer something that all pastors did in the course of their ministry. Gradually, AAPC let go of the clerical requirement for certification, opening its ranks to lay women and men, but

this only furthered the view that pastoral counseling was a specialized ministry. Another consequence of pastoral counseling becoming a guild or professional occupation was the loosening of accountability for ministry vis-à-vis communities of faith and their respective traditions and polities. The pastoral counselor, in other words, was professionally accountable primarily to the credentialing body and secondarily to his/her particular community of faith and its polity.

The issue of community and accountability was a reason why several prominent pastoral theologians did not greet the emergence of AAPC with enthusiasm. For instance, Seward Hiltner argued passionately that professionalization would shift accountability, violating a fundamental ecclesiological premise of pastoral counseling (Townsend 2009, p. 27). Prior to this, pastors giving counsel were accountable to their communities of faith, and, indeed, their very ministry emerged from and was grounded in their respective communities of faith. Wayne Oates also believed that a professional organization that certified specialists in pastoral counseling would undermine the ecclesiological premise that all ministry is grounded in the community of faith (Holifield 1983, pp. 346–347). As Townsend (2009) noted, pastoral counselors’ “primary responsibility was to the psychological needs of individuals and only secondarily to the broader mission of the institutional church” (p. 27). It now became possible for a pastoral counselor to be in private practice, which in previous centuries would have been inconceivable. Before, it was ordination along with the authority of the polity and community of faith that established a pastor’s ministry of counseling. The emergence of AAPC, while retaining the importance of the community of faith, shifted pastoral counseling from a ministry within the role and identity of pastors to a distinct ministry with a professional identity, methods, and practices, thereby loosening the ties to church institutions and communities.

In the twenty-first century, the professionalization of pastoral counseling continues with a number of states licensing pastoral counselors, slackening further the ties to church institutions

and communities of faith. There have been other changes. During the 1960s, 1970s, and 1980s, pastoral counselors relied heavily on psychodynamic theories and concepts and secondarily on theology to understand and respond to diverse forms of human suffering. Since then, AAPC has moved away from its heavy reliance on psychodynamic theories and embraced other theories and practices of therapy (e.g., cognitive-behavioral, solution-focused, narrative, and structural family systems), as well as other theological or religious perspectives and traditions (e.g., Buddhist). There has also been greater openness to a) psychotherapists interested in religious and spiritual issues and b) counselors from other religious traditions and communities (e.g., Jewish, Muslim, Buddhist). Pastoral counselors now can come from diverse religious traditions and establish their identity and credentials through a professional organization like AAPC. While these significant changes in the understanding of pastoral counseling signal discontinuity from earlier forms of giving counsel, there is continuity seen in the ongoing interest and development of diagnostic methods and communicative interventions aimed at healing, liberation, solace, and insight.

The notion and practice of pastoral counseling have been around for centuries, but the idea of pastoral psychotherapy emerged after the mid-twentieth century. References to pastoral psychotherapy began appearing in journals during the 1970s (Houck and Moss 1977). Carroll Wise (1980), a professor at Garrett Biblical Institute, wrote *Pastoral Psychotherapy: Theory and Practice* wherein he identified a specific form of religiously and spiritually informed counseling aimed at psychologically therapeutic interventions. Like the concept of pastoral counseling, definitions of pastoral psychotherapy varied (Schlauch 1985). For instance, a prominent pastoral theologian, Pamela Cooper-White (2011), recently attempted to differentiate pastoral counseling and pastoral psychotherapy. While all forms of “pastoral care and counseling are intended to foster growth, healing, and empowerment,” she wrote, “the special charge of pastoral psychotherapy is to help, accompany,

and support individuals (couples and families) in recognizing and healing especially painful psychic wounds and/or long-standing self-defeating relationships to self and others” (Cooper-White 2011, p. 5). Cooper-White further clarifies pastoral psychotherapy “as a mode of healing intervention that is specifically grounded in psychoanalytic theory and methods. . . and held in a constructive, creation-affirming theology” (p. 155). The distinction Cooper-White makes between pastoral counseling and pastoral psychotherapy appears, then, to be framed largely by frequency, length of time, and extent and depth of the wounds of those seeking help and not necessarily by theory and methods used.

The contrast between pastoral psychotherapy and pastoral counseling, while not definitive, can move us to clarify their respective ministries. Pastoral psychotherapy is a specialized ministry conducted by highly trained, credentialed, and licensed ministers, providing healing for individuals, couples, and families confronting significant and pervasive psychological and relational struggles. Despite Cooper-White’s argument, this specialized ministry can be informed by psychological traditions that are not psychoanalytic. Pastoral counseling likewise involves theologically and psychologically educated ministers, though they deal with more routine and less severe relational problems, suggesting shorter duration of care, fewer educational requirements, and, perhaps, no professional certification or licensing. The latter definition recognizes that Christian communities have provided counsel from Christianity’s earliest origins, and the former takes into account the current need for more specialized theological and psychological education in providing best practices in giving counsel to individuals, couples, and families who struggle with more complex psychological and relational issues.

Pastoral counseling and pastoral psychotherapy will continue to undergo changes with regard to how each is defined and practiced. Despite differences, the thread that connects these two definitions and demonstrates their continuity with depictions of pastoral counseling in centuries past is that they involve practices aimed at

(a) understanding diverse human maladies from theological and psychological perspectives and  
 (b) addressing these maladies through various communicative, relational methods, and strategies with the aim of providing solace, healing, vitality, and/or freedom.

## Patience in Sunni Muslim Worldviews

El-Sayed el-Aswad

Department of Sociology, United Arab Emirates University, Al-Ain, United Arab Emirates

Patience is one of the predominant themes of the Sunni Muslim worldview. The population of Muslims worldwide is more than 1.5 billion. The Sunni, derived from the Arabic word “*Sunnah*” meaning the tradition of the Prophet Muhammad, is the largest branch of Islam, constituting 90 % of the religion’s followers, stretching from Indonesia to Morocco. Muslim merchants, skillful in trade, and Islamic mystics, with their peaceful manners, played an important role in the spread of Islam in various countries, including India in the early seventh century (el-Aswad 2012b, p. 358). The Shi’a is the second-largest denomination of Islam. Countries with a Shi’a majority include Iran, Iraq, and Bahrain. Shi’i Muslims are followers of Ali ibn Abi Talib (d. 661), the Prophet Muhammad’s cousin and son-in-law. They believe that Ali should have been the first imam or successor of the Prophet. For the Sunni, Ali is the fourth of the rightly guided caliphs (el-Aswad 2012c, p. 350). Although the conceptualization of patience is embedded in the Shi’i worldview, here I focus on the concept of patience or self-control as represented in the worldviews, discourses, and everyday lives of Sunni Muslims. “Worldview” indicates belief systems and related symbolic actions; it is an interpretative and integrative paradigm encompassing the assumptions through which people view the world in which they live and with which they interact (el-Aswad 2002, 2012a, pp. 1–2).

The Arabic word *ṣabr* (derived from the root *ṣ-b-r*) implies two intertwined meanings, one material and the other ideational. The material meaning refers to the aloe plant (*ṣabbār*) as well as to the bitter, laxative drug or medicine made from the juice of aloe leaves. Ideationally, *ṣabr* means patience, steadfastness, and self-control. The concept of patience has multiple meanings and nuances, including self-command, forbearance, endurance, clemency, kindness, tranquility, and serenity (el-Aswad 1990, pp. 40–44). The English word “patient” denotes two different meanings, self-control and a sick person. A person might be sick but not patient, and conversely, a person might be patient but not sick. However, the Arabic word *ṣabr* or patience does not refer to a sick person.

According to the Sunni worldview, patience, a core concept in Islam, leads to peace or peaceful relationships between people and is considered to be “half of faith.” In the Qur’an, it is said, “Our Lord! pour out on us patience and constancy, and take our souls unto thee as Muslims” (7:126). Patience, encompassing psychological, emotional, social, ethical, and physical factors, is among the central themes of the Qur’an. Those who are patient are rewarded and blessed infinitely by God. They are also promised the attainment of paradise for enduring any misfortune that may have befallen them. The significance of “patience” is also expressed in various Muslim exegeses including those of Abu Ḥāmid al-Ghazālī, a great medieval Sunni scholar. Al-Ghazālī discussed the virtues of patience (*ṣabr*) and gratitude (*shukr*) in great detail, using examples from the Qur’an and the Prophet’s Tradition or *Hadith*.

Patience embraces twofold dimensions, one is inactive or negative (associated with bitter or unpleasant experiences) and the other is active or positive (associated with sweet or fruitful outcomes). Passive or inactive patience refers to the ability to willingly refrain from or forgo specific actions in response to both uncontrolled and controlled conditions. Restraint or tolerance in the face of provocation is a good example. To be patient is to abstain from saying or doing something (usually forbidden). Patience or self-control

is required to resist temptation and avoid committing taboos or prohibited behavior (*ḥarām*). Also, in the case of sickness, the sick person is expected to show patience by waiting calmly (without complaining) until he/she recovers. Observing or maintaining modesty and chastity requires patience for not doing what is considered to be shameful or prohibited. During difficult and stressful times, Muslims are reminded to be patient and hopeful. Patience is frequently equated with silence (*ṣamt*), the ability to keep silent (*kitmān* or *katūm*), and managing one’s anger or rage (*katm al-ghayz*). In many social contexts, Muslims view silence as a sign of contentment and acceptance.

Metaphorically, patience (*ṣabr*) is associated with the gallbladder (*marāra*) indicating bitterness in the sense of overcoming a sour or bitter experience. To express such an unpleasant experience, Sunni Muslims say, “patience is bitter” (*aṣ-ṣabr murr*). Women, using folk sayings to express their relief and release of stress through the experience of conversing with somebody, say, “if my neighbor were not (with me), my gallbladder (*marāra*) would burst.” This indicates that social relationships help people endure the calamities they might experience.

Active patience refers to the positive actions of people, who, without complaining, are involved in arduous, serious, and difficult activities, including economic, educational, and social endeavors (el-Aswad 1990, pp. 51–59). In such cases, patience is metaphorically described as a “key to a happy ending or relief” (*aṣ-ṣabr muftāḥ al-faraj*), meaning that what was possible or potential (having an unexpected positive outcome) has become real or actual prosperity. Not only economic success but also bravery, especially in defending one’s country or family, necessitates active patience.

The positive aspect of patience, however, does not mean that it is more prevalent than the passive aspect. Both of the two aspects are complementary and constitute the meaning of patience as being shaped by the Sunni culture or worldview. With both the positive and negative aspects of patience, “self-control” is the focal point. Using a proverb to express the values of self-control and

endurance, a Sunni person says, “to be patient with myself is much better than asking people to be patient with me.”

Patience is a key factor in psychological development especially in dealing with discomfort, pain, and suffering as well as in attaining inner strength and internal peace. The physically or emotionally injured person who displays a great sense of integrity and patience during a crisis becomes the exemplary role model for the Sunni Muslim. Through pain and suffering people develop a deep sense of passion, compassion, and understanding. Patience, therefore, indicates the psychological state of being emotionally stable and freed from the anxiety that one might experience in dealing with uncertain circumstances and events of daily life. It is interesting to note that when Muslims get hungry either after hard work or between meals, they say, “let us have *taṣbīra*,” which means a light meal or snack. *Taṣbīra*, derived from the Arabic word *ṣabr*, means making someone patient.

Patience (*ṣabr*) is not just a virtue to be maintained but also a practice. Put another way, patience can be achieved through practice and exercise. Observing and maintaining social, spiritual, and religious values such as piety, tolerance, modesty, and chastity require ongoing practice. Peaceful relationships between people are maintained by observing the virtue of patience. For instance, when a person becomes angry for whatever reason, he is usually reminded by people with whom he interacts to be patient and not to show any sort of unjust or irrational reaction. Muslims frequently quote the Qur’an: “I swear by the time, Most surely man is in loss, Except those who believe and do good, and enjoin on each other patience” (103:1–3). Further, the Islamic holy month of Ramadan during which Muslims practice fasting, one of the five corners of Islam, is called the “month of patience” (al-Ghazālī).

Sunni Muslims value the temporal dimension of patience. The “practice of patience” requires time, the waiting for something to be done or the anticipation of what is desired or hoped for. Patience heals but necessitates time. On various occasions, Muslims use proverbs expressing the

optimistic-temporal frame of patience. Some of these proverbs include “patience is kind” (*aṣ-ṣabr tayyib*), “patience is beautiful” (*aṣ-ṣabr gamīl*), and “patience is sweet” (*aṣ-ṣabr ḥulw*). For Muslims, hope and anticipation demand consideration and endurance (*ṭūl al-‘umr tiballagh al-‘amal*). Hastiness or rashness of any sort is considered not only a violation of the value of patience but also a result of the devil’s prompting. Impatience results in failure, or as Egyptian Sunnis say, “a hasty person cannot lead camels.” The idea of a stretch in time is represented in what Sunni Muslims call a long breath (*naḥās ṭawīl*). The self or psyche (*naḥās*), soul (*rūḥ*), and breath (*naḥās*) are metaphorically used in the context of practicing patience. One’s self or psyche must be governed and controlled, while his soul (*rūḥ*) is given extra time to reflect and cope with unpleasant and critical situations.

In their daily practices, Sunni Muslims seek to transform the virtue of “patience” to be a “pattern of behavior” or “personality trait” through which they show how to cope with hardship and sufferings. Popular maxims such as “patience is a virtue” denote the “desirability of the trait” (Schnitker and Emmons 2007, p. 177). A persistent and determined person can be depicted as having the traits or behavior of Ayub, the Prophet Job, who patiently and fully submitted himself to God during the plague or crisis that threatened his health, family, and possessions. Job (Ayub) is praised in the Qur’an: “Truly We found him full of patience and constancy. How excellent in Our service! Ever did he turn to Us!” (38:44). Interestingly, some Muslims are named after the Prophet Ayub. Also, some men and women are named after the trait of patience. For example, a man can be called Ṣabrī or Ṣābir (patient). Also, a woman can be named Ṣābra, Sābrīn, or Sābrīyah. One of the ninety-nine glorious and beautiful names of God is *Aṣ-Ṣabūr* (the Patient), and a person can be named “Abd aṣ-Ṣabūr,” meaning the slave of the Patient (el-Aswad 1990, pp. 258–260).

In their quest for exoteric and esoteric knowledge, Sunni and other Muslims confirm the practicality of patience. The notions of patience and divine or hidden knowledge are inseparable from

the overall mystic tradition of Sunni Muslims. This is clearly evident in the mystical story of al-Khiḍr and the Prophet Moses. Al-Khiḍr, the evergreen but invisible Walīy, believed to be alive and attentive to whoever mentions his name, is known as the “Pious Slave” (*al-‘abd aṣ-ṣāliḥ*), upon whom Allah has bestowed divine mercy (*raḥma*) and hidden knowledge (*‘ilm ladunnī*) and whom Moses met at a place where two seas conjoin. Al-Khiḍr explained to the Prophet Moses, through three exemplary events, the hidden or unseen but real dimension of life. In the story al-Khiḍr expressed his fear that Moses would not be patient with or able to understand his seemingly illogical deeds. If Moses could not show patience, trust, and understanding, al-Khiḍr would depart from him. The events were that al-Khiḍr scuttled a fishing boat owned by some poor fishermen, killed a young man, and then fixed and restored the fallen wall of a city known for its corruption. Moses, overwhelmed and confused, questioned al-Khiḍr who, before his departure, explained what he did. He scuttled the boat in order to save it from an unjust ruler who wished to confiscate the good boats in the city. The young man was killed because he was not good to his pious parents and intended to commit a crime that would disgrace them. Finally, al-Khiḍr restored the fallen wall because there was a treasure buried under it. That treasure belonged to two orphans who would suffer economic hardship in losing it. The underlying message of this narrative is that, beside the common sense knowledge that depends on the logic of daily experience and observation, there is spiritual hidden knowledge guided by inner insight and revelation that requires great patience. At the literal and visible level, al-Khiḍr’s actions seem to be illogical and evil, but at the deep, symbolic, and hidden level, they are not (el-Aswad 2012a, pp. 84–85).

## Pele

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

She always has the last word. She is unpredictable, impulsive, violent, fiery, and irresistible. But she is also loving. At a sensuous dance ceremony, she fell in love with a handsome young chief Lohi’au. But after a brief romance, she was drawn away to fight several battles. On her return, she found that her beloved had died of grief over her disappearance. But she found his spirit and returned it to his body, restoring him to life. She is Pele, the Hawaiian goddess of fiery volcanoes, revered to this day by Hawaiians.

Pele is the ancestral spirit, the grandmother (Tu-tu) who accompanied the sailing boats from the Polynesian Tahiti group of islands, before 450 BCE. They settled in the Hawaiian Islands, built up from millions of years of volcanic eruptions

**Pele, Fig. 1** Hawai'i Volcanoes National Park. Public Domain. <http://www.nps.gov/havo>

that transformed into beautiful islands west of Mexico. As an ancient song goes, “From Tahiti comes the woman Pele/From the land of Bora-Bora” (Kane 1987, p. 11).

It is said that when Pele’s volcanic fire cools into ash and cracks, her lover’s seeds take root, grow into green life-forms, and slowly transform the ash into soil. The highest volcano is Pele’s home, Mauna Loa, 13,277 ft above sea level, and on its slope is Kilauea. Both peaks have active pools of red-hot lava (Fig. 1).

Pele is a soulful personification of nature, an archetypal expression of human soul about the terror and unpredictability of volcanoes blended with romance, ancient psychology, and religious reflections on ultimate reality. The creation account tells of the original infinite nothingness, a darkness in which intelligence emerged, then the Earth-Womb mother and the Light-Sky father. From their embrace was created this world of opposites. From the Great Mother Kane, the Creator was born, the eldest and ruler. Then came Kanaloa of the Ocean, then Ku, patron to human works, and Lono, patron of farming and healing. These gods came to Hawaii in wild thunderstorms and lightning flashes.

Also came the goddess Hina or Haumea, patroness of fertility and other women’s works, and La’ila’i, mother of humankind. These deities had a power called *mana* that passed down to the

bloodlines of the high-ranking families. *Mana* is the power that motivates everything in the universe. Pele was born from Haumea in the ancient island homeland and came to Hawaii long after the elder gods and goddesses. Her brothers are the spirits of thunder, fire, explosions, and rain.

Pele’s sisters include Laka, goddess of fertility and, like Pele, patroness of the dance. Kapo is a goddess of sorcery and dark powers in many forms. Pele’s favorite is Hi’iaka, spirit of the dance, carried by Pele as an egg from Tahiti; she was born in Hawaii. A mortal sister was Ka’ohelo, transformed upon her death into the ‘ohelo bush that grows high on the volcano’s sides; her edible red berries are thrown into the fiery crater to honor Pele.

## Persona

Ann Casement  
British Jungian Analytic Association,  
London, UK

Persona is the term Jung used to denote the outer face that is presented to the world which he appropriated from the word for the mask worn by actors in antiquity to indicate the roles they played. Jung conceived of it as an archetypal meaning that it is universal and it is the archetypal core of persona that facilitates the relating that has evolved as an integral part of humans as social beings. Different cultures and different historical times give rise to different outer personas as do different life stages and events in an individual's development. However, the archetypal core gives the persona its powerful religious dimension that raises it from the banal, workaday outer vestment of an individual via its connection to the depths of the psyche.

In his writings on persona, Jung often emphasizes its superficial aspects as, for instance, in his paper *The persona as a segment of the collective psyche*, where he makes the point that the contents of the persona are similar to the impersonal unconscious in being collective. "It is only because the *persona* represents a more or less arbitrary and fortuitous segment of the collective psyche that we can make the mistake of regarding it in toto as something individual" (Jung 1953, p. 157) (Original italics). He goes on to say: "It is. . . only a mask of the collective psyche, a mask that *feigns individuality*, making others and oneself believe that one is individual, whereas one is simply acting a role through which the collective psyche speaks" (Jung 1953, p. 157) (Original italics).

He goes on to say the essential components of the persona may be summarized as a compromise between individual and society, a semblance, and a two-dimensional reality. However, in the course of analysis, the persona often begins to break down with the result that the conscious mind can become suffused with material from the collective unconscious. The resultant release

of involuntary phantasy material seems to be the specific activity of the collective psyche. As the influence of the latter increases, the conscious personality loses its power of leadership and is "pushed about like a figure on a chess-board by an invisible player" (Jung 1953a, p. 161). Jung illustrates this process with case material from a patient whose persona was identified with that of the supremely wise, grown-up, all understanding mother-daughter-beloved behind which her authentic self lay hidden. Her transference onto Jung consisted of the intellectual father who would collude with her intellect as her actual father had done. In the course of analysis, she had dreams that brought up material from the collective unconscious which in turn led to her realizing her own real potential instead of her previous role playing.

From these brief comments, it can be seen that persona has a paradoxical nature in lying between consciousness and the contents of the unconscious so it is important to stress that the persona is not itself pathological but may become so if an individual is too identified with their social role of mother, lawyer, teacher, and so on. This kind of persona identification which is concerned with conscious and collective adaptation leads to rigidity and an ego which is capable only of external orientation so that unconscious material will tend to erupt into consciousness rather than emerging in a more manageable form.

## Persona Versus Vocation

As has been said above, the persona is the psychic mechanism that consciously adapts an individual to the demands of the external world, but being an archetype, a part of it lies in the unconscious. There may come a time in any individual's life when conscious adaptation proves insufficient and the unconscious part of the persona becomes active often through neurotic symptoms which can lead the person into therapy. Jung's view of anyone seeking that kind of help was that they were ultimately seeking a spiritual solution to problems. Paradoxically, the path to the inner spiritual quest for anyone lies in the unconscious

part of the persona: “But since the soul, like the persona is a function of relationship, it must consist in a certain sense of two parts - one part belonging to the individual, and the other . . . in the unconscious” (Jung 1971, pp. 167–168).

On the whole, Jung’s view of persona was somewhat negative equating it with unconscious adaptation to mass demands. He poses the question of what induces anyone to emancipate themselves from the “herd and its well-worn paths” (Jung 1954, p. 175), the latter induced by identification with a collective persona. The answer lies in “*vocation*” (p. 175) which “puts its trust in it as in God. . . vocation acts like a law of God from which there is no escape” (p. 175). This vocation or inner voice is a different one to the voice of the persona (from the Latin *personare*: to make resound) which can boom loudly in order to compensate for feelings of inferiority: “. . . whenever people are called upon to perform a role which is too big for the human size, they . . . inflate themselves - a little frog becomes like a bull. . .” (Jarrett 1988, p. 1213).

The religious life is the one that follows its own destiny by separating from identification with the herd persona. As Jung says: “We can point to Christ, who sacrificed. . . to the god within him, and lived his individual life to the bitter end without regard for conventions. . .” (Jung 1958, p. 340). And as Jung goes on to say about the god archetype: “. . . since experience of this archetype has the quality of numinosity, often in very high degree, it comes into the category of religious experience” (Jung 1958, p. 59). What the conscious part of the persona may regard as evil is a perception based on it not conforming with what an individual considers to be good so that paradoxically it is through confrontation with and conscious integration of the evil and, therefore, rejected parts of the personality that a truly religious and meaningful attitude to living evolves. As Jung states: “. . . all religious conversions that cannot be traced back directly to suggestion and contagious example rest upon independent interior processes culminating in a change of personality” (Jung 1953b, p. 175).

## Jekyll and Hyde

A fictional example of where an individual cannot perform the task of confronting the evil that lies in the psyche is attested to by Murray Stein in his writings about the persona in his book *Jung’s Map of the Soul*, wherein he highlights Jung’s special interest in this phenomenon which has to do with playing roles in society. “He was interested in how people come to play particular roles. . . and represent social and cultural stereotypes rather than assuming and living their own uniqueness. . . It is a kind of mimicry” (Stein 1998, p. 111). He goes on to say that character is often situational and cites the Jekyll and Hyde story as an extreme form of that. In looking more closely at that particular story, one could say that Jekyll was identified with the persona of the caring doctor whose sole aim was to be in the service of humankind. He was in denial of his more animal instinctual side, which, through being repressed, grew in force until eventually it got the upper hand and gained control of his whole personality. The latter exemplifies what Jung calls *shadow* which stands in relation to the persona as polarities of the ego, and in this way, they represent a classic pair of opposites. Where there is a weak ego, shadow and persona can split into extreme polarities leaving no possibility of a dialog between the two as in the fictional case of Jekyll and Hyde. It may be of interest to note that Robert Louis Stevenson said that much of his writing was developed by “little people” in his dreams and specifically cited the story of *Dr. Jekyll and Mr. Hyde* in this context. This writer has speculated on his use of the name “Jekyll” for the human side of the character he was depicting as it bears an obvious resemblance to the word jackal. It may be that, in choosing this ambiguous name, Stevenson is drawing attention to the animal nature from which the persona evolves.

## Soul as Persona

Jung’s interest in the persona arose out of his study of multiple personalities and dissociation

in an individual which, in turn, was sparked by his experience with the French school, in particular the work of Pierre Janet. “One has only to observe a man rather closely, under varying conditions, to see that a change from one milieu to another brings about a striking alteration of personality...’Angel abroad, devil at home” (Jung 1971, p. 464). Different environments demand different attitudes which depend on the ego’s identification with the attitude of the moment. This personality splitting is by no means only abnormal but led Jung to state that “such a man has no real character at all: he is not *individual* but *collective*, the plaything of circumstance and general expectation” (Jung 1971, p. 465) (original italics).

Jung links *soul* to *persona* by differentiating the former from *psyche* in the following way: “By psyche I understand the totality of all psychic processes, conscious as well as unconscious. By soul, on the other hand, I understand a clearly demarcated functional complex that can best be described as a ‘personality’” (Jung 1971, p. 463). Jung gives an instance of a man whose persona was identified with the soul leading to “a lack of relatedness, at times even a blind inconsiderateness” (Jung 1971, p. 467). This kind of rigid persona can result in a person “who blindly and pitilessly destroys the happiness of those nearest to him, and yet would interrupt important business journeys just to enjoy the beauty of a forest scene” (Jung 1971a, p. 467). In other words, persona identification with soul can lead to a deep aesthetic sensibility but also to a lack of heart and a capacity for relatedness.

On the other hand, a lack of connection between soul and persona can have grave consequences as Jung demonstrates with Spitteler’s prose epic *Prometheus and Epimetheus*. In this work, Prometheus is depicted as having sacrificed his ego to the soul, the function of inner relation to the inner world, in the process losing the counterweight to the persona, which would connect him with external reality. An angel appears to Prometheus saying: “It shall come to pass, if you do not prevail and free yourself from your forward soul, that you shall lose the great reward of many years,

and the joy of your heart, and all the fruits of your richly endowed mind” (Spitteler 1931, p. 23). As Jung points out, the soul, like the persona, is a function of relationship and hence consists of two parts – one belonging to the individual and the other to the object, viz., the unconscious.

In conclusion, it should be clear from the above that the development of a well-functioning persona is an essential task for any individual but in the process two major pitfalls must be avoided. The first is an overvaluing of the outer persona which leads to dissociation from its unconscious side and hence from connection to the symbolic life; the second is an undervaluing of the persona which can result in dissociation from the external world of reality. Jung cites Schopenhauer’s claim that the persona is how one *appears* to oneself and the world but not what one *is*. In view of this, it is wise to bear in mind the well-known saying that one should never judge a book by its cover. As Jung states: “. . .the temptation to be what one seems to be is great, because the persona is usually rewarded in cash” (Jung 1959, p. 123).

## Personal God

Kenneth L. Nolen  
Salinas Valley Memorial Healthcare System,  
Salinas, CA, USA

A personal God is a supreme being with self-consciousness and will, capable of feeling, has the attributes and desires of a person, and enters into relationships with individuals and people groups. Although not all Christians believe in a personal God, the belief is integral to and most prevalent in Christianity. Atheists do not believe in God or gods. Agnostics believe that there is a God or gods but that they are unknowable, and Deists believe in an impersonal supreme God that exists and created the universe, but does not intervene in its normal operations. Other god or gods may have human characteristics and feelings that encompass the entire range of human attributes, emotions, and abilities but lack the holiness and relational attributes of the unique God of Judaism and Christianity.

A major survey by the Pew Forum on Religion and Public Life finds that six in ten adults in the United States believe in a personal God. However, to say that God is a person is to affirm the divine ability and willingness to relate to others and does not imply that God is human, evolved from humanity, or is located at a specific point in the universe. Although the Christian concept of a triune God, Father, Son, and Holy Spirit, could imply a belief in three

gods, Christian creeds are quick to clarify that there are not three gods, but only one God existing in three persons. In this sense, the word "God" must apply to a person or a whole composed of interrelated persons. A personal God has all of the maximum attributes of a human person and in addition is omniscience, omnipotence, omnipresence, eternal, and morally perfect. The belief in a personal God presupposes that God is active in the affairs of humanity while enacting an eternal plan for humankind and all of creation. God, who has attributes of male and female, is usually referred to in the masculine. He is actively sustaining and preserving his creation for his own purpose. Since God is divine and may have attributes unknown and unknowable by humanity, God must be self-revealing.

Christians believe that God is self-revealing in nature, in special relationships with individuals and groups of people, but especially in Christian scriptures or Bible. Although the Christian Bible does not try to prove the existence of God, it does give insights into God's nature and attributes. From this self-revelation, God is described as a spirit, who wants to be known by humanity, who has a name or names, and who is wise, faithful, truthful, patient, good, loving, gracious and merciful, holy, righteous, and just. Many of these same moral attributes are found in the characteristics of humankind, but God's attributes are exceedingly greater in intensity and holiness. The God of Judaism and Christianity emulates the positive absolutes that humanity strives for but fails to achieve.

## Commentary

The presuppositions that an investigator brings to the discussion will have a bearing upon his or her belief or disbelief in a personal God. Psychology and religion have had an ongoing tenuous relationship. At times, their relationship could be described as warfare between science and religion with psychology attempting to replace religion or at the very least enter into the discussion of the origins and functions of

religious beliefs and practices. For some, a personal God is an anthropomorphic human creation and a mere reflection of humanity and has no place in the world of science. While others who understand the positive effects of faith and belief, blend psychology with religion until a belief in a personal God is no longer necessary. At other times, psychology and religion agree as they consider spirituality a central part of the human journey seeking ways in which psychology could deepen the understanding of the foundation and positive effects of religion on the human condition including the belief in a personal God.

### Personal Unconscious

Brandon Randolph-Seng

College of Business & Entrepreneurship,  
Department of Marketing & Management,  
Texas A&M University - Commerce, Commerce,  
TX, USA

The unconscious has a long history in psychology. Although Freud is credited for his contributions on the understanding of the unconscious, contemporary psychology has failed to find evidence for much of Freud's assertions concerning what the unconscious part of human beings contains. The unconscious is now considered to be indicative of automatic thought processes. Automatic thought is generally characterized as nonconscious processing. Automatic thought processes involve reflexive responses to certain triggering conditions. These processes require only that a stimulus event or object be detected by an individual's sensory system. Once that triggering event is detected, the process runs to completion without awareness (for a review, see Wegner and Bargh 1998). Such nonconscious influences on thoughts can, in turn, automatically influence behavior. One frequently cited demonstration of this effect involved the priming of some participants with the concept of the elderly. Results showed that these elderly-primed participants subsequently walked slower than did control participants (Bargh et al. 1996).

What are the nonconscious components of thought for religion and the religious believer? Is it possible that mental representations that shade the way an individual interprets a variety of situations, such as religious beliefs, could have automatic influences? Research in this area suggests the answer to this question is yes, particularly for religious individuals. For example, using a method designed to measure implicit (i.e., automatically activated) evaluations, Hill (1994) found that religious and nonreligious people made similar implicit evaluations towards religiously neutral objects. In contrast, implicit evaluations of religious objects were stronger among

religious people than among nonreligious people. Going one step further, recent research has shown that subliminal (i.e., outside of conscious awareness) presentations of the concept of God actually reduce causal attributions to the self for believers of God (see Dijksterhuis et al. 2005). Can religious representations in turn automatically influence behavior outside of awareness? Research once again says yes. Subliminal presentation of religious words (e.g., amen, faith, saved) has been shown to increase prosocial behavior (helping, honesty) and does so without participants' conscious awareness of such influence (Pichon et al. 2007; Randolph-Seng and Nielsen 2007). Furthermore, these behavioral effects are not moderated by self-reported religiosity (Randolph-Seng and Nielsen 2007; Shariff and Norenzayan 2007).

## Peyote Ceremony

Richard W. Voss<sup>1</sup> and Robert Prue<sup>2</sup>

<sup>1</sup>Department of Undergraduate Social Work, West Chester University of Pennsylvania, West Chester, PA, USA

<sup>2</sup>School of Social Welfare, College of Arts & Sciences, University of Missouri – Kansas City, Kansas City, MO, USA

The Peyote ceremony has been described in a number of ethnographic works (Anderson 1996; Hultkranz 1997; Schaefer and Furst 1996; Steinmetz 1990). While the interpretations these works offer are suspect for their ethnocentrism, the ritual descriptions are largely consistent with observations of the ceremonies. The second author has attended peyote ceremonies, on both personal and professional levels, as both an invited guest and as part of his research, and will describe the process of the peyote ceremony. The conduct of the peyote meeting is fairly simple when compared to the complex rituals many of the shamanistic societies of the plains have or had (Wissler 1916).

The ceremony is typically held in either a plains style tipi or a Navajo hogan, although some chapters have buildings set aside for their services. In any case, there is always a dirt floor, and participants sit or kneel on blankets for the duration of the 8–10h service. Exceptions are made for elderly, who may sit in a chair, or for prepubescent children, some who will lie down being their adult guardians, being allowed to sleep. The ceremony itself begins with the lighting of the fire at sunrise on the morning of the service. A fire-keeper tends the fire throughout the day praying. Participants arrive in the hours preceding the service proper, which usually begins at about 4 h before midnight. There are

opening prayer songs, prayers, and words of instruction by the Roadman. Each person present is usually acknowledged and made welcome, with special attention being given to the elderly, youth, those who have traveled far, and individuals new to the religion.

A roadman is a man qualified to conduct the ritual who serves in the role of facilitator more than medicine man, priest, or minister, although some Roadmen are also highly skilled shamans and orators. The service continues with the sponsoring party saying a “few” words about the nature of the service, why, and in some cases for whom the service was called. Peyote Way services are not routine, for the most part, but are called a specific purpose of healing, thanksgiving, or celebration. While the opening of the ceremony is happening, corn husks and tobacco are passed to all participants, who roll prayer smokes. Some participants carry ground peyote into the ritual that they add to the prayer smokes. These prayer smokes are then smoked in unison with all participants addressing the Chief Peyote to intervene on behalf of their prayers. The Chief Peyote is a whole dried peyote plant placed prominently on the altar (viewed as the symbolic road of life) and is not thought of as a deity itself but as an intercessor to God.

Many peyotists profess to be Christians and view the Chief Peyote to be a manifestation of Christ. Once the initial prayers and songs have been said, the peyote is passed around. Referred to as medicine in both English and most indigenous languages, the peyote is consumed either green or fresh, in powdered form, in slurry of ground peyote or as a tea. Medicine is passed around after several rounds of singing; however, individuals can usually ask for more throughout the ceremony. Once the medicine has been passed, a staff, fan, and rattle are passed sequentially to each participant who then prays silently or sings four songs, accompanied by a drummer.

The Peyote Way services use a water drum, usually made of a cast iron kettle and partially filled with water, which produces a unique droning sound. The drummers are usually highly skilled and fast-paced beat contributes to the transcendent state. The drumming, rattling, and

singing continue for about 4 h until midnight when there is ritual water brought in by the sponsoring woman or the wife of the Roadman. Participants usually leave the tipi to stretch, or relieve themselves. The service resumes following the short break and continues in a similar manner to the first round. The water woman brings in more water at sunrise, again offering words of gratitude and thanksgiving, usually addressing each participant personally. She then smokes over the water and which is then passed around for participants to take a drink. The water is followed by a ceremonial meal consisting of dried pulverized deer meat, corn meal, a fruit pudding, and a sweet desert. Then the service is ended, but the ceremonial space is not disbanded until after the participants have taken a lunch meal.

The atmosphere of the service is usually quite reverent and sedate. This is in striking contrast to the atmosphere when the service is completed which is quite animated, with humor being the order of the day, with old and new acquaintances poking good-natured fun at themselves and each other. People appear quite emotionally open during this period. Individuals that I have known for years and thought to be quiet and reserved openly shared personal challenges or intimate concerns about themselves or others. The ceremony seems to help participants become more vulnerable and emotionally connected with one another. Caution is advised in assuming that this animation and openness is caused by the intoxicating effects of peyote alone. The same behavior can be observed following other intense indigenous rituals (e.g., sun dance, Vision Quest, or Sweat Lodge ceremonies).

## **Ceremonial Use of Peyote and the Professional Healthcare System**

### **Beginning Discussion**

There is evidence that the medical community in the United States is ambivalent about how to comprehend and view the ceremonial use of peyote (Salladay 2005; Yuill 2006). How should a professional healthcare provider react or

respond when he or she learns that one's patient is active in the peyote religion and periodically attends a peyote ceremony? While there are emerging studies that show that the ceremonial use of peyote does not correlate to increased risk of psychological or cognitive deficits (Halpern et al. 2005), there is also evidence that the illicit use of peyote (outside a ceremonial context) is associated with low levels of social support, low levels of self-esteem, and low identification with American Indian culture (Fickenscher et al. 2006), more research needs to be done looking at the interactions between peyote and prescribed medications.

Peyote has been classified under federal law as a Schedule I controlled substance; however exemptions have been enacted, through the American Indian Religious Freedom Amendments Act of 1991 (AIRFAA) to protect members' exercise of traditional peyote ceremonies of the Native American Church. While there are exemptions for members of the Native American Church of Native American descent, the interpretation of this federal legislation has been subject to various interpretations by the states (Parker 2001). Parker notes, "While current exemption structure seems to provide ample protection to Native Americans practicing peyote religion, continuing challenges to the constitutionality of the exemptions by non-Native Americans indicates that Congress could strengthen and clarify the exemption to avoid future problems and court challenges" (2001, p. 13).

## Peyote Religion

Richard W. Voss<sup>1</sup> and Robert Prue<sup>2</sup>

<sup>1</sup>Department of Undergraduate Social Work, West Chester University of Pennsylvania, West Chester, PA, USA

<sup>2</sup>School of Social Welfare, College of Arts & Sciences, University of Missouri – Kansas City, Kansas City, MO, USA

## Peyote Way: Background and Cultural Context

The term "Peyote Religion" describes a wide range of spiritual practices primarily from

tribes of the American Southwest that has expanded into a kind of pan-Indian movement under the auspices of the Native American Church (NAC). Peyote Religion, formally recognized as the Native American Church (NAC), incorporates the ritual use of peyote, the small spineless peyote cactus *Lophophora williamsii*, into its spiritual and healing ceremonies. The Peyote Ceremony is led by a recognized practitioner who is referred to as a Roadman, who is sponsored by an individual or family requesting a ceremony, usually for some specific need or healing or to recognize some event, such as a birthday or an important life transition.

Derived from the Aztec word *Péyotl*, the Peyote Way religions have expanded their spheres of influence from an area around the Rio Grande Valley, along the current US-Mexico border, to Indigenous groups throughout Central and North America (Anderson 1996).

The ritual use of peyote has roots in antiquity. A ritually prepared peyote cactus was discovered at an archeological site that spans the US-Mexico border dated to 5,700 years before the present. Other archeological evidence, paintings and ritual paraphernalia, indicates that the Indigenous people of that region have been using both peyote and psychoactive mescal beans ritually for over 10,500 years (Bruhn et al. 2002).

The Peyote Way is a complex bio-psychosocial-spiritual phenomenon that encompasses much more than the pharmacology plant. The contemporary peyote practice found in the United States, Canada, and by Mestizo peoples in Mexico differs significantly from the older rites that continue to be practiced by the Huichol, Cora, and the Tarahumara in Mexico (Steinberg et al. 2004). The forebearers of the modern Native American Church were the Lipan Apache, who brought the practice from the Mexican side of the Rio Grande to their Mescalero Apache relatives around 1870. From the Mescalero, it spread to the Comanche and Kiowa in Oklahoma and Texas. It quickly spread to most of the Eastern Tribes forcibly relocated to the Oklahoma Territory. The quick spread from the Mescalero to most of the Oklahoma Tribes has been attributed

to the loss of traditional religions due to oppression (Anderson 1996).

The psychedelic properties of peyote are just a part of the whole spiritual package “this is not to say that peyote does not facilitate visions but rather that it is only one influence in a total religious setting” (Steinmetz 1990, p. 99). It is important to note that describing peyote as a “psychedelic” while accurate is fraught with problems, particularly when the Peyote Religion is studied outside its indigenous context. Here, one needs to differentiate the ritual use of peyote by Indigenous practitioners, called Roadmen, and Native American Church participants from use or abuse of peyote by curiosity seekers and experimenters who are simply seeking a “high” devoid of a ceremonial and cultural context. Peyote has been described as both a psychedelic as well as an entheogen. An entheogen is a chemical or botanical substance that produces the experience of God within an individual and has been argued to be a necessary part of the study of religion (Roberts and Hruby 2002). Elsewhere, an entheogen has been defined as a psychoactive sacramental plant or chemical substance taken to occasion primary religious experience. Within such an understanding, the complementary use of Peyote Ceremony within the context of mental health treatment has been viewed as a form of cultural psychiatry (Calabrese 1997). Other entheogens include psilocybin mushrooms and DMT-containing *ayahuasca*, which, similar to the use of peyote, have been used continuously for centuries by Indigenous people of the Americas (Tupper 2002).

### **Civil Rights Versus Indigenous Rites: New Pathways for Treatment**

Mental health practitioners from across disciplines may view Peyote Religion and the Native American Church with some degree of suspicion, if not, with downright skepticism. Mack (1986) discussed the medical dangers of peyote intoxication in the peer-reviewed *North Carolina Journal of Medicine*. Mack refers to the users of peyote as “the more primitive natives of our

hemisphere” (p. 138) and gives repeated attention to details of nausea, vomiting, and bodily reactions that happen, at doses that he failed to mention were 150–400 times higher than the ceremonial amount reported nearly a century prior (Anderson 1996). So, there is need for reasoned and open discourse on this important resource and potential partner for the mainstream mental health practitioner.

Psychiatric researchers, Blum et al. (1977), looked at the mildly psychedelic effects of the peyote, coupled with Native American Church ritual and exposure to positive images projected by the skillful use of folklore by the Roadman. They found these components facilitated an effective therapeutic catharsis. Albaugh and Anderson (1974) hypothesized that the effects of peyote created a peak psychedelic experience that were similar to those found when using LSD as an adjunct to psychotherapy with alcoholics. In their study of a group of lifelong drug and alcohol abstaining, Navajo et al. (2005) found no evidence of psychological or cognitive deficits associated with regularly using peyote in a religious setting. However, the placement of peyote, LSD, and other psychedelics on the Schedule 1 classification of drugs has eliminated public funding of psychedelic research (Strassman 2001) and has limited scientific inquiry on the effects of such. The current biomedical opinion on efficacy of entheogens is inconclusive (Halpern 2001), and yet there is limited evidence that further study is warranted. Wright has suggested that the behavioral sciences should once again open its mind to the incorporation of mind-expanding substances in the psychiatric or psychotherapeutic treatment milieu (2002). As science takes a more benign look at the effects of traditional healing practices and brain chemistry, new pathways for treatment and renewed discussions about traditional indigenous healing methods may be opened up for study (see Hwu and Chen 2000).

## Pharmacotherapy

Carol L. Schnabl Schweitzer  
Pastoral Care, Union Presbyterian Seminary,  
Richmond, VA, USA

A pastoral counseling treatment plan that includes an option for pharmacotherapy presents several issues for consideration at the outset. By definition, this will be an interdisciplinary, combined, or “integrated” approach that necessitates a consultation with a physician – preferably, a psychiatrist since they are the physicians who specialize in pharmacotherapy for psychiatric disorders. As Riba and Balon (2005) contend, a combination of psychotherapy with medication is “more efficacious and beneficial than each modality alone” (p. vii) but many medical residents and educators decry the “‘loss of mind’ in the increasing emphasis on the biological basis of mental illness and the shift toward somatic treatments as central therapeutic strategy in psychiatry” (p. ix). If the suggestion that secular forms of treatment emphasize medical modalities at the expense of “talk therapy” raises issues and concern among those in the medical and psychotherapeutic communities, the intensity of concern is likely to rise more quickly among pastoral counselors, especially those who may emphasize a biblical or spiritual approach to counseling. Moreover, it is just as likely that a pastoral counselor who maintains a friendly posture or attitude toward collaboration with a physician and the possibility of pharmacotherapy will encounter resistance from clients based

on misinformation, theological orientation to the world, and/or their general predisposition of suspicion aimed at psychotherapeutic methods of treatment. A few pointed illustrations will suffice to make the case that there is tension and competition among differing viewpoints from within as well as external to faith communities.

Pastoral counselors are not univocal in their approaches to counseling; some are inclined to eschew any insights from psychology or psychiatry as David Winfrey (2007) acknowledges in an article which describes the United States Southern Baptist Convention’s complete rejection of psychotherapeutic methods. Winfrey cites a trustee from Southern Seminary (home to Wayne Oates considered to be a founding father of the pastoral counseling movement) who stated: “In this psychotherapeutic age, it is really important that we think as Christians, that we employ authentically Christian thinking, biblical thinking to human life, and that we do this in a way that, without apology, confronts and critiques the wisdom of the age and seeks the wisdom that can come only from God and from God’s Word” (p. 24). Thus, God’s Word alone is sufficient for healing. Illness may be understood to derive from an individual’s struggle with sin from this perspective. Faith heals by reconciling the sinner with God. This view, while often most directly associated with more conservative theological traditions that take a narrow or more literal view of their scriptural documents, is also espoused by some who are more readily identified with mainline (and more moderate) Protestant views. Walter Brueggemann (1995) is one such representative insofar as he has stated: “Hope is not something one does at the margins of life when our resources fail, but it is definitional for persons in covenant with this God. I submit that despair and its psychologically acceptable form, depression, are in fact covert acts of atheism in which we conclude that nothing can happen apart from us and no one is at work but us” (p. 157). As I have suggested elsewhere, to take up a position that equates despair and depression with covert acts of atheism is either misinformed or irresponsible since many who are familiar with the wide range of this biblical

scholar's work may be influenced by this claim in such a way that they decline to seek help when it is needed. Thus far we have seen opposition raised to psychotherapeutic treatment modalities and/or understandings of mental illness from two very different theological orientations along a broad continuum. Theologians and pastoral counselors are not unique in raising doubt or suspicion concerning contemporary treatment methods.

Psychiatrists, physicians, and psychologists are also among those who sound the alarm concerning the need for caution when considering pharmacotherapy. A recent article by Richard Friedman (a professor of psychiatry at Weill Cornell Medical College), which appeared in *The New York Times* (2012), highlights a disturbing trend in the manner in which antipsychotic drugs are prescribed for off-label treatments – specifically for generalized or social anxiety disorders. Friedman cites “the landmark Catie trial” which “failed to show that the new antipsychotics were any more effective or better tolerated than the older drugs” in treating symptoms of schizophrenia including “apathy, social withdrawal and cognitive deficits” (p. D6). Though this second generation of antipsychotic drugs (often referred to as atypical) was initially deemed safer than first-generation antipsychotic drugs, they have been demonstrated to include risks such as increased blood sugar, elevated lipids and cholesterol, and weight gain but have not eliminated the risk of a permanent movement disorder (tardive dyskinesia) associated with the first-generation drugs. Nevertheless, Friedman cites the disquieting increase in the number of prescriptions for atypical antipsychotics from 28 million in 2001 to 54 million in 2011. He acknowledges that these drugs have been beneficial for the treatment of schizophrenia, bipolar disorder, and treatment-resistant depression but urges patients and doctors alike to proceed with caution when using them for off-label treatment of “low-grade unhappiness, anxiety and insomnia that comes with modern life” (p. D6). Friedman's work highlights one level of concern for pastoral counseling and pharmacotherapy.

There are other concerns for combined therapy approaches addressed by Riba and Balon which include the reality that there are no recognized guidelines for determining best types of care based on symptoms, diagnosis, age, gender, or comorbid psychiatric or medical disorders when it comes to making determinations about integrated versus split care. This is further complicated by the fact that there is too frequently little collaboration between various professionals who are competing for clients in a climate where triage and treatment are dependent upon an individual's ability to pay or the limits imposed by insurance companies (Riba and Balon 2005, p. 3). Cost for medications limits their availability for many, and as Friedman suggests, there is a tendency to prescribe newer and more expensive medications even in situations where the data to support using these drugs in off-label treatments is weak or nonexistent. These concerns do not take into consideration the additional layer of a religious worldview for pastoral counselors (and their clients) when an attempt to collaborate with other mental health professionals is sought after. Riba and Balon suggest three major challenges for combining psychotherapy and psychopharmacology which need to be considered by pastoral counselors who wish to engage in an integrated approach: (1) the question of which professional will be responsible for providing a specific treatment (some psychiatrists do provide for more than a 15-min medication monitoring session), (2) the question of the timing and staging of the treatments in combination (e.g., begin at the same time or separately?), and (3) the matter of how individuals present for treatment (Riba and Balon 2005, p. 2). In other words, is the individual receptive to a combined or interdisciplinary approach? These challenges may pose difficulties in an environment that is generously disposed toward an integrative treatment; they can pose serious risk where there is a lack of cooperation and/or collaboration between patient and treatment professionals. Thus far we have considered some of the challenges, which originate primarily from the position of the counselor and his/her ability and/or willingness to work collaboratively

as well as the medical community's concern for a diminishing focus on the "speaking cure" or the mind in psychotherapeutic responses. It remains to examine the perspective of the one who seeks treatment.

What are often referred to as "aggressive direct-to-consumer advertising campaigns" (Abramson 2008; Friedman 2012) are likely to have an effect on those seeking pastoral counseling to the extent that these individuals may be more resistant to talking and more inclined to be looking for a prescription cure-all. Abramson observes that marketing campaigns "even pathologize normal human experiences such as menopause and aging, reframing the transitions of a healthy life into medical problems that require diagnoses and drugs" so much so that we are alienated "from the meaning inherent in the landmarks of a healthy life" (2008, p. 209). Friedman notes that "combined spending on print and digital media advertising for these new antipsychotic drugs increased to \$2.4 billion in 2010, up from \$1.3 billion in 2007" (2012, p. D6). Abramson's research is not focused solely on psychopharmacology but rather on pharmacology in the scope of the practice of medicine. Nevertheless, much can be gleaned from his research especially if we consider one treatment anecdote that bears directly upon pastoral counseling and the significance of establishing a relationship that bears the marks of collaboration and partnership.

Abramson writes about a relationship that evolved with one of his patients – "Sister Marguerite" – which underscores the "importance of shared values in the challenge of providing good medical care. Visiting her family, attending mass, meditating in the chapel, and being an active part of her community – these were the things that gave Sister Marguerite a sense of meaning. . . Sister Marguerite and I were partners in her care, working together on the same project . . . our partnership became all the more rewarding because she was so open about the deeper values that made the project worthwhile for her" (Abramson 2008, pp. 9–10). He cites this as an example of providing good care, which has begun to appear antiquated in stark contrast to the care espoused by

pharmaceutical companies and the medical "industry" itself. Abramson desired opportunities to engage his patients "in constructive dialogue about their health risks and habits" but found it increasingly difficult to do so in direct proportion to the allure of "direct-to-consumer" advertising beginning with the early part of the first decade of the twenty-first century (Abramson 2008, p. 10). Pastoral counselors would do well to attend to Abramson's concern for the erosion of relationship and collaboration between patient and physician or in this instance between patient and counselor.

Abramson's focus on relationship and the "deeper values" held by his patients that provide a sense of meaning – and I would add, purpose – need to be at the center of pastoral counseling. The centrality of relationship may be a value that is privileged by those in the pastoral counseling community who tend to view psychology and pharmacotherapy with an inordinate amount of suspicion or hostility. The addition of pharmacotherapy to pastoral counseling does offer hope to those who struggle with debilitating mental illness, but it is not a panacea for the "low-grade unhappiness" identified by Friedman (2012, p. D6). Pastoral counselors who desire to work collaboratively with other mental health-care professionals do need to seriously consider the three major challenges outlined earlier when negotiating this decision with their clients. Pastoral counselors also need to recognize that we are not immune from the direct-to-consumer advertising campaigns that have eroded the relationships between physicians and their patients. What is at stake in these interdisciplinary conversations and relationships are questions of religion and health or sin and salvation and which professional's values will be privileged in a counselor-client relationship.

## Phenomenological Psychology

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Phenomenological psychology is a type of human science psychology that emphasizes close attention to, and rigorous, detailed description and understanding of, personal lived experiences within respective lifeworlds. One's lived experience within one's lifeworld is how one experiences and makes sense of everyday events *as it is to the one experiencing* those events or happenings. Entry into meaningful experiences is accessed by descriptive approaches, rather than explanative ones, and through intuitive, empathic resonance with the intersubjective meaningfulness of an individual's enactments of significance in the world.

The formal discipline of phenomenological psychology was founded by Wilhelm Dilthey (1833–1911; 1989). Dilthey distinguished between the natural sciences (*Naturwissenschaften*) and the human sciences (*Geisteswissenschaften*), believing the latter to be the more appropriate approach to understanding human existence. He used hermeneutical theory, or the art and science of interpretation, as the earlier hermeneuticist and theologian Friedrich Schleiermacher (1768–1834; 1893) understood it, and broadened its scope. For Schleiermacher, interpretative skills were tools used for textual analysis, particularly sacred texts, and interpretation was partly accomplished through empathic resonance with an author's intentions for textual meaning. Dilthey expanded the interpretive process beyond textual analysis to include an analysis of human experience as disclosed in actions, experiences, products, and cultural artifacts. For Dilthey, though, meaning cannot be experienced directly and must be “de-coded” through interpretive inquiry. On the other hand, Dilthey argued that what allows for empathic and communal sharing at all is that, mediated as it is, we all share a common human existence (Burston and Frie 2006). Moreover, Dilthey rejected any sense of unconscious representation, thus founding a central tenet of phenomenological psychology, namely, that what shows itself in existence is inextricably intertwined with the *ways* in which we experience those things (Burston and Frie 2006).

Edmund Husserl (1859–1938; 1962) furthered Dilthey's project and, through the influence of his teacher Franz Brentano (1838–1917), developed what became known as transcendental phenomenology. Husserl and his teachers were influenced by Immanuel Kant's (1724–1804) work on the possibilities and limitations of knowledge. Husserl insisted that the phenomenologist remain focused on “the things themselves,” bracketing biases and assumptions that would prevent a clear perception of things as they presented themselves to our consciousness. For Husserl, borrowing from his teacher Brentano, experience, or consciousness, is intentional, which is to say that experiences, objects, persons, things, and events are taken up by each of us in meaningful ways. We are always “about” some directive. Objects,

for instance, are objects for us, have a certain calling to us, and are placed within a particular project and direction or goal of significance for us. Husserl fused the traditional distinction between noesis, or the thinking process itself, and noema, or the meaning attributed to objects experienced in consciousness. This move steps beyond a Kantian loyalty to the conditions of knowledge over the objects of knowledge and, instead, refigures knowledge as a co-construction between how we experience things and how the things themselves shape and delimit how we experience them.

Transcendental phenomenology developed into phenomenological research methodology. The challenge for transcendental phenomenological psychology became how one could move from particular experiences to general claims. Although we may have different lived experiences of any given event, human experience is structured in such a way that if we can understand the general structure of how things come to be experienced as they are, potentially anyone undergoing the same experience could find resonance with any other person having encountered it. The experience of being anxious, or angry, or desirous, albeit from differing life stories, nonetheless has the potential of sharing a common human “way” of undergoing these experiences. Arriving at this common structure of experience for any given event, though, necessitates an act of “bracketing” pre-understandings, biases, prejudices, or other assumptions about how an experience should be, in order to clear a space for things to show themselves as they are to us.

Martin Heidegger (1889–1976), Husserl’s student, concurred that experience was structured but understood this fact in very different ways. Heidegger became known as the founder of hermeneutical or existential phenomenology and saw all experience as conditioned by common, existential givens: temporality, spatiality, mortality, coexistence, mood/attunement, historicity, and bodyhood (Heidegger 1962). Heidegger thought that the idea of an objective, isolated, egoistic person that is separate from the world in which he experiences things as

a dualistic illusion and instead considered the person-world co-construction an inseparable process.

Heidegger described this process as being-in-the-world, with “being” described as a comportment of existence rather than an isolated and self-contained ego, and thus preferred to use the intentionally untranslated German word *Dasein* or “being there” for “being,” in order to accentuate a process rather than a “thing.” Existential-phenomenological psychology became a practice of interpreting the presencing of *Dasein* in eventful situations. Interpreting *Dasein* required an acknowledgment of one’s own biases and pre-understandings, rather than rid oneself of them, as any understanding presupposes an already pre-understanding. Our pre-understandings are ways in which we enter a phenomenon we want to understand better and use what we do know about it as points of entry. One leads with the bit of awareness and experience one knows of a phenomenon and dialogues with the undulation of concealment and disclosure.

## Commentary

Contemporary expressions of phenomenological psychology include methodological applications to a wide range of psychological subjects, such as assessment, diagnostic, and research practices (Fischer 1994; 2006), Jungian studies (Brooke 1991), stress (Kuglemann 1992), and in critically analyzing technological impact on lived experience (Idhe 1995; Romanyshyn 1989). There are a plethora of countries around the world in which formal phenomenological organizations are operating and in which research is thriving. One only need explore the umbrella organization known as the *Organization of Phenomenological Organizations* or peruse the *Journal of Phenomenological Psychology* to find how many possibilities are available for interested human scientists.

Phenomenological psychology as a collective field of research today centers around the debate of whether the focus should be on description or

interpretation. Most theorists agree that the dichotomy is false. Any description is an interpretation, and an interpretation, at least in phenomenological circles, is descriptive rather than explanative and is an invitation to further disclosure rather than a reductive pronouncement of “what is the case.” Reliability and validity are understood in very different ways than in natural science research. What is true is not what can be objectively isolated, operationalized, and controlled in order to pin down unilinear causal relationships as is the case in logical positivistic styles of scientism. Truth as valid and reliable, for a phenomenologist, rests in how well one is able to describe the depth and breath of a phenomenon as it shows itself in the world. The structure of an experience is discerned through imaginative variation in which every manner of a phenomenon’s presentation is considered from all advantage points until no matter how one looks at it, certain meaningful aspects of the experience are always present. One’s validation as a phenomenological researcher comes when a human experience is so well disclosed by way of rigorous description that any human being undergoing that experience can find it familiar. Nevertheless, there is always a mystery to phenomenological disclosure in that the undulation of concealment and disclosure is never finished.

The spiritual themes within phenomenological psychology are numerous. To start with, the phenomenological psychology of religious experience has a long and brilliant history and includes Friedrich Schleiermacher (1768–1834), William James (1842–1910), Gerardus van der Leeuw (1890–1950), Rudolf Otto (1869–1937), Mircea Eliade (1907–1986), Paul Tillich (1886–1965), Langdon Gilkey (1919–2004), and David Tracy (1939–), just to name a few scholars. The process itself can be compared to a type of spiritual discipline. Within the emphasis on bracketing to allow things to show themselves lies the heart of a spirituality of freedom, respect, and mystical – though not mystifying – openness. Meaning making and the primacy of validating lived experience privileges depth relating in

intersubjective ways. Phenomenological psychology warns against the hubris of a “god’s eye view,” in which we presume to step out of our horizons or perspectives to “know” about phenomena more objectively. On the contrary, objective knowing misses the richness of truth revealed to us subjectively. Knowing about swimming theoretically is very different from jumping in a pool and doing it. Subjective experiencing does not mean isolationist experiencing. We co-construct experiences and thus build communion in our co-dwellings as we ready ourselves to receive revelations of Being itself.

Finally, the French phenomenologist Michel Henry (2003) has taken phenomenology in its most radical direction to date, thus challenging many foundational assumptions of phenomenological psychology, while ironically returning to Husserl’s thought to do so. For Henry, life is “invisible” in that it is lived rather than abstracted, conceptualized, or objectified. Interestingly enough, Dilthey was found of a similar way of thinking, noting often the Latin phrase, *individuum est ineffabile* to describe the unfathomable nature of human existence (Burston and Frie 2006). Henry’s work not only radicalizes phenomenology but also radicalizes Christian thought as his work is in essence a radical phenomenology of Christianity (Henry 2003). If Life is invisible, then I would argue that it is likewise immeasurable and incomparable. We may hear the sound of it and may very well succeed in describing it to some extent, but we cannot know from where it comes or to where it will go from here.

## Pilgrimage

David A. Leeming

University of Connecticut, Storrs, CT, USA

Pilgrimages in various cultures are remarkably similar in essential form. The pilgrimage, whether to Lourdes, Jerusalem, Banaras, Ise, or Mecca, involves three essential steps, suggesting a rite of passage and a process of curative renewal. The first step involves a significant separation of the pilgrim from home and ordinary life and the journey to a sacred center. The separation can be signified by particular clothes, by rituals of departure, or by any consciously unusual behavior. It is usually characterized by a deep sense of religious community, a concept suggested by the etymology of the word religion, suggesting a binding back or gathering together under the influence of the numinous. The second and most important step is the interaction with the sacred, the given culture's spiritual energy source. Typically this aspect involves certain ritual acts, most notably circumambulation, a gathering up of energy in the creation of a living mandala of completeness, a ritual cleansing, or ablution in preparation for a new beginning and the recitation of certain sacred formulae or mantras. The third step is the return home. The return is always marked by a sense of renewal. The pilgrim has been re-created by the encounter with the numinous center of the collective being.

It is important to differentiate the pilgrimage from its close relative, the quest. Both the questor and the pilgrim go on journeys that can be difficult, even treacherous, and both have some goal

in mind, but the questor is in search of the goal while the pilgrim knows exactly where it is and how to get there. The questor never knows what might happen on the journey, whereas the pilgrim's "progress" is essentially a ritual process. One might say that the labyrinth is the pilgrim's signifying model while the maze is the questor's.

Important examples of pilgrimage exist in most religious systems. The Hindu might visit Banaras (Kashi) and bathe ritually in community with thousands of fellow pilgrims in the sacred living waters of the Ganges. There he will recite certain mantras and circumambulate important shrines. If particularly devout, the pilgrim might make a point of literally circumambulating sacred India herself, creating a gigantic mandala of completeness by visiting the seven sacred cities. The Buddhist can visit the footprint of the Buddha on Adam's Mount in Sri Lanka. For the Christian or Jew, the footprint is said to be Adam's, and for the Hindu, it is Siva's. Again, circumambulation and mantras are important, and sometimes ablutions. In keeping with ancient traditions of prescribed visits to the Temple in Jerusalem, the Jew in our time will visit the Wailing Wall of the Old Temple. The Christian will circumambulate the sacred places in Jerusalem associated with the passion of Jesus or visit curing shrines such as Lourdes or, like Chaucer's famous pilgrims, travel to the shrines of martyrs. People of animistic traditions tend to see the whole world as a sacred place, so that anywhere one is can be a pilgrimage site, and buildings, such as Navajo hogans and Pueblo kivas, are themselves metaphors for constant pilgrimage to the center.

Perhaps the most elaborate pilgrimage is the Hajj, one of the five essential "Pillars" of Islam. For this pilgrimage, taken by the community of Muslims, there are special requirements for the home-leaving and the journey, very specific rules of behavior while at Mecca, clear rituals that involve ablutions, various sub-pilgrimages to outlying areas, and a sacred mantra of humility and obedience recited during a circumambulation of the Kab'ah, the structure in the great mosque of Mecca that is the center of the Muslim world. As in the case of all great pilgrimages, the

Hajj-pilgrim, or Hajji, returns home renewed and re-created by his experience. It should be noted that back home, the Muslim makes the pilgrimage symbolically and spiritually every time he faces Mecca and prays.

Liturgies are, in fact, often symbolic pilgrimages. The Eucharist of the Catholic tradition, for example, is an elaborate symbolic communal pilgrimage to the sacred center, reinforced even by the architecture of the various types of church building. Holy water at the door (in ancient times, the baptismal font was there as well); the ablutions of the priest; processions; the circumambulating of the altar, or sacred center, during its censuring; and the complex system of mantras all suggest the pilgrimage.

Having once more noted the aspect of community or *communitas* in pilgrimage, it must be noted that this element is associated more with external as opposed to internal pilgrimage. External pilgrimage has been called "exteriorized mysticism." To the extent that such a characterization is valid, interior pilgrimage might be equated with mysticism itself. Thus, the pilgrim who travels to Mecca or Banaras is acting out the interior journey taken by the Yogi or the contemplative nun to the sacred center. The process for the mystic, which involves *communitas* only in the sense that nuns or monks, for instance, are a community of contemplative prayer, nevertheless resembles that of the external pilgrim in its basic plot. The interior pilgrim establishes a separation from ordinary life by accepting some prescribed discipline, involving such matters as clothing, breathing, posture, or particular objects of meditation.

The pilgrim then proceeds to the sacred center found within. John of the Cross enters upon the Dark Night of the Soul, the purifying process by which God prepares the mystic for union. The Hindu ascetic – the Yogi – never moving from one place, can visit the seven sacred cities. The Mevlevi (Mawlawiya) Sufis or Whirling Dervishes are perhaps unique in that each dancer turns on his own axis entering a trance-like ecstatic state even as he circles the sacred center in an intricate expression of perfect community with his fellow interior pilgrims. Upon his return,

the interior pilgrim, whether the Yogi, the Mevlevi, or the Christian mystic, like the external pilgrim, is a person who has been renewed by the numinous power of the center.

The idea of the pilgrimage as spiritual therapy, then, is universal, and humans of all sorts – mystical and otherwise – have traditionally turned to pilgrimage as a source of curing. People go to Lourdes and other holy places to be cured of physical disease, of course, but the more typical pilgrim is the one who is experiencing a malaise of the soul or the psyche. A person who is in this sense “lost” takes a journey to his/her culture’s spiritual center, participates in the prescribed activities, and returns home in a centered state. A similar goal is achieved through participation in religious ritual. It is not surprising that Jung and other modern psychotherapists have suggested religious activity for persons whose backgrounds provide an opening to the numinous through such activity.

An attempt to interpret the pilgrimage psychologically can begin with the assumption that human beings are naturally attracted to the phenomenon by reason of their consciousness of what Aristotle called “plot.” A defining characteristic of our species is our universal and perhaps even obsessive concern with questions of beginnings, middles, and ends. We see life as a journey, and to the extent that we are goal oriented, we see it sometimes as a quest, but often as a pilgrimage. For the human species, pilgrimage may be said to be an archetypal pattern, a representation of an essential collective psychological tendency. We understand that if we are in any sense broken – collectively or individually – we would do well to take the difficult journey to the center and work towards a state of renewal or re-creation. As in the case of all pilgrimages, to reach this center, we are greatly helped by an experience of the numinous, whether induced through sectarian religious activities, meditation, love, music, or various kinds of mantra. When we speak of the individual journey, our pilgrimage analogy is that of the interior pilgrimage, which, in psychological terms, becomes a journey to the Self. The Self is the totality of personality from which we can

receive the ablative power that renews and leads towards Individuation, that is, Self-realization. In short, the psychological pilgrimage, if accomplished, takes the individual to a curing circumambulation of or assimilation of the sacred center of one’s very Being.

## Plato and Religion

Rod Blackhirst

Philosophy and Religious Studies, La Trobe University, Bendigo, VIC, Australia

Plato (428/427–348/347 BCE) was a Greek philosopher, a citizen of Athens, and a follower of Socrates. He founded the Academy, a school for statecraft, circa 387 BCE, his most famous student being Aristotle. His work – in the form of dialogues – has had an immeasurable influence upon Western civilization. The modern philosopher, Whitehead, once famously quipped that “the whole of Western philosophy is nothing but a series of footnotes on Plato.” The same might be said of other fields of learning where Plato’s

thought has been seminal. He has made a profound contribution to both the arts and sciences, including psychology. Many aspects of his thinking foreshadow modern theories. In psychology, for example, his teachings regarding *eros* as a foundation for human motivation clearly foreshadow the theories of Freud, or, as some prefer, Freud's theories are a decadent version of Plato's earlier theory. In religious thought, Plato has long been acknowledged as prefiguring aspects of the Christian faith, even to the extent that some churches have canonized him as a pre-Christian saint. More generally, he has influenced important streams of mystical thought and spiritual psychology in Judaism, Christianity, and the Sufi schools of Islam.

It should be noted that while we commonly attribute theories and ideas to Plato himself, these are usually taken from the words of Socrates as presented in Plato's philosophical dramas and that, in a famous passage in a letter to a friend called Dion, Plato states that his own ideas are nowhere to be found in his dialogues. This is the so-called Socratic problem – to what extent does Plato's Socrates speak Plato's mind? All the same, the teachings and arguments of Plato's Socrates are, for convenience, referred to as "Platonic," and it is common to refer to the "Platonic tradition" of thought that has its roots in Plato's dialogues. This tradition extends across the last 2000+ years of occidental culture and has penetrated most fields of learning. Nearly all of the dialogues might be construed as contributing to Platonic psychology, but the main contributions are found in the dialogues called *Republic*, *Phaedo*, *Phaedrus*, *Symposium*, and to some extent *Timaeus*.

Plato (i.e., Plato's Socrates) argues that there is a mental, supra-physical realm of "Forms" or "Ideas" or "archetypes" that is beyond the restraints and limitations of time and space and that the spatiotemporal realm is related to this archetypal realm as a copy is related to a model. Plato's psychology, like his political philosophy and everything else, needs to be understood in the context of the metaphysical framework of this pervasive "Theory of Forms." For Plato, for example, human beings – as creatures of time

and space – yearn for eternity and for the pure reality of the Forms. This is the basis of all human motivation. It is why the hero does brave deeds – he seeks the immortality of fame. And it is at the root of the sexual drive – lovers seek a surrogate immortality through procreation. By extension, the religious impulse is an expression of the same urge but on a higher plane.

An important corollary of the Theory of Forms is the Theory of Recollection. This states that human beings possess a faculty (*nous*) that comprehends the traces of the Forms in their physical copies. When we see beauty in a rose, for example, it is because the rose *reminds* us of the Form of Beauty, i.e., Beauty Itself. The Forms are structural and innate. Plato is at pains to insist that our senses are unreliable and that the mind, not the senses, is the agent of cognition. When we see a circle our eyes merely register an unintelligible set of data; it is our mind (or the faculty of *nous*) that matches this data to its innate knowledge of the Form of Circle, thus making the sensory impression intelligible. That is, Plato proposes that we are born with a stock of (supra-physical) mental templates and that these are the basis of all cognition.

Exploring this theory throughout his dialogues, Plato next proposes that there must be a hierarchy of such Forms and that at the pinnacle of this hierarchy there must be a Form of the Forms, namely, what he styles "the Form of the Good." The theory seems to be an adaptation of aspects of ancient Greek religious thought where natural phenomena were understood as expressions of various simple allegorical deities such as Love, Night, and Chaos. For example, Plato's Forms of Sameness and Difference (two of the most basic Forms) seem to be extrapolations from the deities Love and Strife, a principle of union or similarity and a principle of dissolution or differentiation. In a similar way, Plato's creator-god, the "Demiurge," appears to be a philosophical rendering of the Olympian craftsman god, Hephaestus. Whereas Greek religious thought personified such principles, Plato's Forms are nonpersonal archetypes. His "Form of the Good" is very like the Judeo-Christian/Islamic notion of God but, importantly, has no personhood.

In modern terms, we would say it is an “abstraction” but for Plato this is exactly wrong since the world is “abstracted” from the Forms not the other way around.

There are several descriptions of the human psyche given in the dialogues, most notably in the form of allegories. In the *Phaedrus* (246a–254e), Plato compares the human soul (*psyche*) to a chariot with a charioteer driving two horses, one white and one black. The white horse is well trained, while the black horse is ill-bred and unruly. The charioteer represents the intellect or reason (*nous*) that must reconcile conflicting impulses as it steers the vehicle (body) through life’s journey. In the *Republic* (514a–520a), Plato offers a parable of the human condition in which prisoners have been held in a cave since childhood and compelled to watch a puppet play of shadows on the cave wall. Not knowing any better, they mistake this for reality. It is only with great effort that they might escape from their bonds and eventually discover the source of these shadows and, beyond the cave, the light of day. This is an epistemological parable but also a model of human psychology with the shadows on the wall representing the conscious realm, that small portion of the mind we regularly assume to be reality with the rest of the cave representing other hidden levels of consciousness.

This line of thinking is often criticized for being counterintuitive, dualistic, and life-hating. The world is a mere copy of the “true” world which is beyond death. The body of flesh, with the vicissitudes of pleasure and pain, is a prison in which the mind is trapped. In the *Phaedo*, Socrates seems to regard life as a disease and as a punishment with death as a cure and a release. Platonic psychology, therefore, is deemed anti-naturalistic. To a great extent, the entire modern scientific enterprise can be seen as a process of shedding the influence of Plato in that it situates man in a natural context and attempts to understand human beings as a product of natural rather than supernatural forces. For Plato, the natural world is derivative and therefore fundamentally unreal – he presents the study of natural science (*phusis*) as an inherently unworthy enterprise that offers a “likely tale” at best.

There are readers of Plato, however, who argue that on closer examination this dualism is only a first step in the Platonic enterprise and that, ultimately, Plato is fully aware of the shortcomings of the Theory of Forms. In the dialogue called *Parmenides*, in particular, Plato seems to demolish the theory and looks beyond the duality of copy and model. Others point out that Plato is not a pessimistic philosopher with a bleak view of the human condition. One of the most notable correlatives of the Theory of Forms and its culmination in the Form of the Good is the Socratic dictum that ignorance is the root of evil. According to this theory, no one does evil willingly; rather, the evil-doer has made a miscalculation and mistakenly supposes that his evil deeds will bring himself or others some good. This is a profoundly optimistic view of the human state since it proposes that people can be taught to be good, that education is the key to human advancement, and that evil-doers can be shown their miscalculations and that they will then correct their ways since they, like everyone else, are in pursuit of the transcendent Good (whether they are aware of it or not). For Plato, the highest human achievement is the “Vision of the Good,” the pneumatic apprehension of the Good Itself, equivalent to the mystical vision of God in religious systems.

Regarding popular religion, the indications throughout the dialogues are conflicting. Socrates is presented as being dutifully obedient to the established religious cults and yet elsewhere is so opposed to anthropomorphism that he would ban Homer and other poets from his ideal society. In an infamous provision of the dialogue called *Laws*, atheism is made a crime punishable by execution. In Plato’s account of the trial of Socrates, Socrates is accused of introducing false gods and, by implication, impiety regarding the established religious order.

The influence and reputation of Plato has declined especially since World War II and the publication of such works as *The Open Society and Its Enemies* by Karl Popper (1945) which paint him, with some exaggeration, as the father of both right- and left-wing totalitarian ideologies. The main exception to this waning influence has been a revival and reinterpretation (some

would say perversion) of Plato's political philosophy through the teachings of Leo Strauss, regarded as one of the intellectual founders of contemporary neoconservatism in the United States. Strauss' studies concentrate on the so-called Noble Lie passage in the *Republic* where Plato justifies rulers creating myths to pacify the ruled. For Strauss, an atheist, this is the role of religion. Most people, he argues, are not psychologically or emotionally equipped to be atheists and to face the bitter meaningless of existence; it is better if the rulers of society maintain religion as a "Noble Lie" to help preserve psychological stability in individuals and cohesion in society as a whole. This is surely a far cry from Plato's intention, but it illustrates the ways in which, for good or for bad, Plato's works continue to stimulate contemporary ideas.

## Plato on the Soul

John Pahucki

Department of Humanities, SUNY Rockland,  
Suffern, NY, USA

The ancient Greek philosopher Plato (424–348 BCE) wrote copiously on the question of the human soul. The soul is given substantial treatment in many of his dialogs – the *Phaedo*, *Republic*, *Symposium*, *Phaedrus*, and *Timaeus* primarily, though the *Meno*, *Ion*, and *Philebus*, as well as other dialogs, are at least tangentially concerned with topics related to his view of the soul as well. Of these treatments, two particular items of interest to the student and historian of psychology are his "tripartite" theory of the soul and his epistemological theory of anamnesis, or learning by recollection.

Plato's tripartite theory is given most explicit expression in Book IV of the *Republic*. According to Plato's view, there are three elements which constitute the life of the soul. Of these the one that is unique to human beings, and thus privileged by Plato, is *reason*. Plato's accent on reason would be the impetus behind Aristotle's – and historically, the Western tradition's – characterization of man as *animal rationale*. The other aspects of the soul are the *spirited* element, which seems to correspond to the emotions, and the *appetites* of the body which we share in common with the beasts. Reason and the appetites are often in conflict, with the spirited element capable of lending its weight to either side in this internecine struggle of the soul. The individuals lauded by Plato are those in whom reason successfully reigns, though these would seem to always constitute a minority.

Plato's theory is a historical curiosity, as it seems to anticipate Freud's psychodynamic model of the mind and its intrapsychic conflicts among the id, ego, and superego. Indeed, Freud may have been aware of Plato's theory as he employed a metaphor similar to the one from Plato's *Phaedrus* where the philosopher compares

the appetites to an obstinate horse who must be firmly guided by the charioteer of reason (a second horse, corresponding to the spirited element, does not resist the commands of its master).

Plato's epistemological theory of *anamnesis*, or learning by recollection, is based on what has come to be described as the *learning paradox*, first formulated by Plato in his dialog the *Meno*. There Socrates asks the question how learning is possible. If we are seeking after something we do not know, we will be unable to recognize it if and when we do encounter it. If we do recognize it, we must have had some previous knowledge of it in order for this recognition to occur in the first place. Either way, learning seems to be a paradoxical enterprise. This leads Plato to present his own theory of learning as recollection based on his belief in the reincarnation of the soul. In dialogs like the *Symposium* and *Phaedrus*, Plato will argue that learning/knowledge is possible based on our pre-earthly existence in the realm of divine forms. These forms are the templates of all sensible objects, undergirding the sensible realm and giving the world its rational structure. When the soul incarnates in matter, it temporarily "forgets" its previous experience of the forms. Learning occurs when certain earthly experiences "trigger" these memories. Anamnesis is thus a form of "cryptomnesia" as described by Jung. It should be stated that Plato's belief in the transmigration of the soul had strong precedent in the Pythagorean cult as well as other mystery cults extant at the time.

The linguistic and cognitive theorist Noam Chomsky has identified his own "innateness" theory of linguistic acquisition as based on a kind of Platonic learning paradox. According to Chomsky's theory, linguistic ability may be structurally fixed or "hardwired" into the mind; we may be able to postulate a "universal" a priori grammar based on what has been described as "the poverty of the stimulus." Put simply, we evidence a degree of intricacy and depth in our knowledge and utilization of language far in excess of what we could have formally learned.

## Polytheism

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Polytheism is the worship of many forms of the divine. Etymologically it means many gods, but to say that is to delve into the nature of personhood. Among the polytheistic religions are nearly all of the indigenous religions usually termed "animistic" as well as the major religion of Hinduism and the many modern Neo-Pagan religions. Most of the pre-Christian religions of Europe and the Near East had a plurality of deities organized into pantheons. Many had familial relationships to link them together. Much of the world's mythological literature chronicles the origins and actions of the many families of deities worshipped in the ancient world. Pepper (1942) in his summary of epistemologies set out six world hypotheses, four of which he felt were minimally acceptable in rational discourse and two unacceptable because of their reliance on faith. Each of the six world hypotheses (similar to the modern concept world view) is grounded in a root metaphor. The two unacceptable world views were animism and mysticism. The former was based on the metaphor of the person, which makes it particularly relevant to polytheism. He was less clear on the distinction between animism and mysticism but seems to refer to the distinction

between the natural religions and revealed religions. His identification of the concept of the person as being at the heart of a spiritual world view was correct. Indeed, to understand theism whether mono- or poly- requires understanding the nature of the person.

Pepper's psychologism was saying that because we experience the divine in us and we are people, we project out onto the world our own experience of personhood. We attribute all the experiences we have to the powers which are divine. Since we have consciousness, our gods must have consciousness, and since we have choice and agency, our gods must have nothing less than that since they are transcendent to us and greater than us, much like a whole is greater than the sum of its part. Whatever is divine must be no less than what we are and must be anywhere from somewhat to immensely greater than us.

There are several types of spiritual world views, so polytheism must be set into its context. Though it may not have been the first spiritual view to arise historically, the belief in some impersonal divine ground of being that is the source of life, and all that is, is possible. The clearest example of non-theistic belief comes from Chinese traditional religion and philosophy. Chi (Jap. ki) is the impersonal force that animates all living being and is imbued within even inanimate matter as well. This life force is also found in the Indian concept of "prana," common to both Hindu and Buddhist philosophy. It is also found in Stoic philosophy as "pneuma." Both literally mean the breath of life.

To some with a completely secular scientific world view, the very laws of nature may be likened to an impersonal divine ground of being in an existential sense. This is basically the position of either pantheism or its close variant panentheism. Spinoza and Leibniz are two early modern philosophers who represent this stream of belief. This is also the position of the Deists, that group of Enlightenment thinkers who first articulated a basically secular philosophy while preserving that sense of reverence and awe to the existence of life itself. These positions hold that the Divine is immanent within the natural world.

What, of course, makes the respect for the impersonal forces behind life and existence divine is the religious experience. Both James (1902/1958) and Otto (1917/1958) support the notion that the beginning of the life of the spirit is a religious experience – not belief, not acts, but the experience of awe in the face of the great *mysterium tremendum*. Belief in the near universality of religious or spiritual experience makes us all mystics at the core; some may tenderly stick their toes in these deep waters, while others jump in with both feet in ecstatic joy.

The next question is whether we ascribe personhood to the divine force or forces and whether belief in an inanimate divine force or power is incompatible with personhood. On the basis of the principle that the lesser is included in the greater, the burden of proof rests with those who would exclude an impersonal force as not present with the divine person(s) to say why.

Assuming that the divine can take on the qualities of a person, the next question is one or many. This is related to the philosophical debate as to whether the "physis" or stuff of the universe is one or many, perhaps no more resolvable now than to the Pre-Socratics who took up the question in the first millennium BCE. It is also related to the related debate between Parmenides and Heraclitus as to whether stasis or change is more fundamental. Belief in stasis tends to favor ontological monism, which would include monotheism. Belief in change tends to favor polytheism by providing the means by which the divine may be ever present, though the actors may shift among the many masks of God (Campbell 1955, 1962, 1964, 1968).

The historical records support a vigorous and ancient period where polytheism was the dominant spiritual world view. Part of the rhetorical appeal of monotheism is the rejection of the confusion multiplicity of divine coupled with a moral rejection of the all too close modeling of human foibles and flaws into the biographies of the gods. But across the widest reach of the planet and throughout all human times, polytheism has continued despite competition from monotheism with its aggressive proselytizing.

One instructive development was the synthesis of Hindu polytheism to harmonize with an underlying spiritual monism. Behind Brahma, Shiva, Vishnu, and all the other Hindu gods was Brahman. Although it was based in earlier statements in the Upanishads, it took Adi Shankaracharya to provide a coherent integration of polytheistic outer forms with a single unifying singleness beyond all concept or duality, the ground of being. So even in the midst of polytheism one can see a sort of monotheism as consistent. It should be noted that Brahman, like prana, chi/ki, and pneuma, is impersonal in nature, beyond all human concepts. In Buddhism, the Vajrayana as well as Mahayana schools accept an impersonal unity beyond the obvious multiplicity of the world. The Vajrayana Buddhism of Tibet in particular has a whole catalog of personal forms of the deity and an equal number of demigods, dharma protectors, dakinis, and so on. Yet with Nagarjuna's Madhyamakha philosophy, the unity of non-duality and emptiness provides a fertile ground upon which phenomenal existence can play out our many incarnations in the samsaric wheel of life. In the Western Esoteric Tradition (WET), or occultism as it is often known, the first model of this same sort of coexistence of impersonal monism as an originating point for a phenomenal polytheism is the Neo-Platonic hierarchy of emanations found in Gnosticism in its many forms.

The next question is whether there are any true polytheisms, given that the most sophisticated forms of philosophy and theology among historically and culturally polytheistic religions. The answer is yes, at least in the sense that in polytheistic systems there is at least a modeling of the male/female dimorphism of human persons. If we allow that the divine can be said to be a person, then why would we use just one gender? Many contemporary positions within the Western monotheisms that are response to the feminist critique of patriarchy allow that what may have been historically gender-biased language can be best understood as inclusive of both genders or beyond both genders, whether we

continue to use the male-oriented language or modify our liturgies and prayers. The whole leverage about Brown's *DaVinci Code* sought to raise the magnitude of awareness about the divine feminine. Polytheism provides the minimal coverage of both genders and in nearly all historical settings had several families of deities modeling the diversity of the human family, complete with extensive genealogies.

One curious case is Mormonism, the major type of restorationist theology in Christianity, and associated with the Church of Jesus Christ of Latter Day Saints (LDS). They are explicitly and clearly monotheistic in the aim of their worship, but their theology implies a Heavenly Mother as well a Heavenly Father. Implicit is an unknown possibility for an endless series of gods of both genders stretching back in ageless time and moving forward as individual humans deceased, now existent, or yet to come achieve salvation at the highest level, in the celestial kingdom. Mormonism expresses a radical doctrine of spiritual evolution arising out of its American historical roots and a philosophy of progress (McMurrin 1959, 1965).

Contemporary Neo-Paganism or earth-centered religions are all clearly polytheistic in their worship and spiritual focus. The primacy of the Goddess and her male consort, with a variety of names from Celtic or other cultures has led Wicca to be termed a duotheism. There are many reconstructionist groups that come with many names; those in the Norse or Germanic traditions prefer being called heathens. The varieties of traditions in occultism (cf.) as it is often called, likewise, are polytheistic; each honoring a pantheism found in one or another of the pre-Christian religions of Europe of the Near East. Important contemporary discussions of polytheism from insiders' perspectives come from Greer (2005) and Paper (2005).

In summary then, the veneration, worship, and mythological narratives of multiple gods and goddesses are alive and flourishing through contemporary animistic aboriginal or native religions, through highly evolved religious traditions such as Hinduism and many forms of

Buddhism where multiple deities are yet subsumed into a nonpersonal divine ground of being beyond human labels or names. It has also been reconstructed as part of a revival of earth-based religious movements founded in Western Europe and America from the nineteenth century onward. Even an explicit monotheism such as Mormonism contains some elements of polytheistic theology. So polytheism is alive and well. It was never completely supplanted by monotheism, though the two forms of theism are shaking hands in some instances.

## Positive and Transcultural Psychotherapy

Sam Cyrous

International Academy of Positive Psychotherapy, Wiesbaden, Germany

### Nossrat Peseschkian: His Life and Work

Positive and Transcultural Psychotherapy is mainly a psychotherapeutic method and theory created by Nossrat Peseschkian M.D., Ph.D. (Iran, June 18, 1933 – Germany, April 27, 2010). Born and raised in Iran, Peseschkian moved to Germany in 1954 for his studies in medicine, where he became a specialist in neurology, psychiatry, psychotherapy, and psychosomatic medicine. He was also a faculty member of the European Evolution Conference of Psychotherapy, held in Hamburg between July 27 and 31, 1994, next to Ellis, Lowen, Frankl, Masters, Madanes, Szasz, Beck, Wolpe, M. Goulding, Yalom, Selvini, Masterson, Minuchin, Marmor, Meyer, Stierlin, Lazarus, Glasser, Kernberg, Gendlin, Watzlawick, Trenkle, Grawe, Hillman, Haley, Meichenbaum, Polster, Rossi, and Zeig.

Due to his own transcultural situation (Germany-Iran), Peseschkian coordinated a cross-cultural research in more than 20 cultures, with conclusions that become summarized in what is known as Positive and Transcultural Psychotherapy, a conflict-centered and resource-orientated psychodynamic method with humanistic roots, “that encompasses a range of possibilities, from individual treatment at one end of the scale to ecotherapy at the other” (Peseschkian 1996, p. 16). It integrates cognitive-behavioral aspects on the basis of a positive, transcultural approach.

With this in mind, its terminology has been developed to be accessible and comprehensible to everyone, therapists from all scientific and methodological perspectives, as well as to patients and other people, regardless of their cultural and social backgrounds.

The main objective of Positive and Transcultural Psychotherapy is to promote physical,

mental, social, and spiritual health of individuals, families, and groups, by promoting awareness that humans have the potential to elicit noble values, as well as of mutual understanding and tolerance between different cultures. These ideas are rooted on the Bahá'í religion to which Peseschkian was enrolled. Being a Bahá'í, he regarded “man as a mine rich in gems of inestimable value” (Bahá'u'lláh 1983, p. 122), and all mankind as equal citizens, of one common country – one may find in the Bahá'í scriptures “The earth is but one country, and mankind its citizens” (Bahá'u'lláh 1983, p. 117).

In 1999, a joint endeavor by the University of Erlangen and the Center for Positive Psychotherapy in Wiesbaden published a longitudinal quality assurance and effectiveness study, held in 1997, showing “a distinct reduction of symptoms as well as improvement with regard to the way the subjects experience and behave” comparing those patients who ended Positive and Transcultural Psychotherapy treatment to those of a control group. The findings indicate lasting stability of the therapeutic effects, which were detected up to 5 years after the treatment. This study ended up awarded with the Richard-Merten Prize 1997, a medical quality assurance and research award in Europe.

On an international level, Positive and Transcultural Psychotherapy is represented by the World Association for Positive Psychotherapy and the International Academy of Positive and Transcultural Psychotherapy – The Peseschkian Foundation. According to the data provided by the International Academy, Positive and Transcultural Psychotherapy has been accepted as a scientifically based psychodynamic method of psychotherapy by government institutions in Germany (such as the State Medical Chamber in Hesse), the European Association of Psychotherapy, and the World Council of Psychotherapy; it has been introduced to 80 countries, with 40 independent affiliated centers throughout the world, especially in Eastern Europe – in countries such as Bulgaria, Romania, Ukraine, Kosovo, and Russia; it is one of the most well-known and well-established psychotherapeutic methods. Its books count to 25 major books, translated into 20 languages.

Nossrat Peseschkian has also received many prizes, among which the Order of Merit of the Federal Republic of Germany, in 2006.

## Applications

Positive and Transcultural Psychotherapy is based on the conception that all men are good by nature and they have two basic capabilities: to love and to know. One may consider this conception of man to be rooted on one of the three Obligatory Prayers Bahá'ís must choose on a daily basis that states that humans are created with the ability to know and love God (Bahá'u'lláh 1993), as well as the Oriental Traditions Bahá'u'lláh, the founder of the Bahá'í Faith, recalls in the Seven Valleys, in which a pilgrim goes into a journey towards God; in this journey, he must pass by seven cities, or valleys, being the first ones Search, Love, and Knowledge. Hence, one may consider all men are capable to love (representing emotions) and to know (representing cognitions), Peseschkian's basic capabilities.

In this model, conflicts are interpreted as challenges to the development of such capabilities. Every situation endows a possibility to transcend and grow. It may be considered close to the conception of finding meaning through suffering, developed by Viktor Frankl, to whom Peseschkian was acquainted.

The positive process allows the person to accentuate the common grounds for understanding within the social environment and family and thus to produce a basis for the therapy of different disorders and ills. Positive and Transcultural Psychotherapy has proven to be highly effective within and out of therapeutic settings. Its accessible nature endows Positive and Transcultural Psychotherapy to also be applied, on the one hand, to conflicts and disorders related to substance abuse and other forms of dependencies, marital problems, educational problems, depression, phobic disorders, sexual disturbances, and psychosomatic complaints and, on the other hand, to problems concerning foreign labor, with foreign aid for development, difficulties

which arise in interactions with members of other cultural systems, problems with intercultural marriages, and the overcoming of prejudices. It has also been used as training and coaching, as well as in transcultural and international situations – prejudices, materialism, fundamentalism, migration, and worldwide development.

The concept of Positive is forwarded by this model as factual, actual, and, hence, the opposite to chimerical. In the Bahá'í Texts, one could find the assertion that “Every age hath its own problem, and every soul its particular aspiration. The remedy the world needeth in its present-day afflictions can never be the same as that which a subsequent age may require. Be anxiously concerned with the needs of the age ye live in, and centre your deliberations on its exigencies and requirements” (Bahá'u'lláh 2006, 1.4).

The school of Positivism, founded by Auguste Comte, conveys the creation of a logical harmony in the essence of the individual as well as the community spirit – the positive spirit. This leads to finding meaning and establishing harmony between existence and motion, interrelating organization and life, and solidarity between order and progress (Peev n.d.). Thus, the human spirit is understood as inseparable, united, and complete, and so should the social system be. Such a perspective would demand to accept both the contributions of Western and Eastern philosophies, interests, and values in a transcultural world, synthesized in the visions of Positive and Transcultural Psychotherapy.

### **Specific Models, Methods, and Techniques**

This shift from a monocultural and monocausal consideration to a multicultural and multicausal one allows to conceive man as more than only an isolated individual, taking into consideration interpersonal relationships he establishes throughout his life. Very similar to the system approach, which envisions the transmission of concepts through one generation to the other, Positive and Transcultural Psychotherapy also views symptoms as transmitted and then

reworked in the family situation. It is therefore of utmost importance to understand the meaning of the symptoms and the concepts behind them, since they are closely related to the ways one may deal with conflict, the modal dimensions, and the actual capacities.

Potentially common to all humans, actual capacities are norms of socialization which are learnt and developed throughout the individual's lifetime, acquiring a specific meaning for each person and each situation. They are in a total of 26 positive values or virtues, including emotionality, modeling, patience, time, contact, sexuality, trust, confidence, hope, faith/religion, doubt, certitude, unity, punctuality, cleanliness, orderliness, obedience, courtesy, honesty/candor, faithfulness, justice, diligence/achievement, thrift, reliability, precision, and conscientiousness.

With such a positive view of man, Positive and Transcultural Psychotherapy advocates that patients bring with themselves not only disorders and conflicts but also the capacity for dealing with the conflict – the so-called principle of hope. Within such framework, therapy should endow clients to give up their role as patients and become the therapist for themselves and their environment, moving from a top-down model of therapy to a sort of self-help system.

This is possible due to the microtrauma theory, which focuses on both the conflict the client talks about and in the dynamics within. The assertion behind it is that pathologies are lead by more than one traumatic experience of one individual, but by the sum of everyday hassles. Illness would, then, reflect the quality of relationships within the family and society and, hence, be adapted to each patient's unique universal character.

In this sense, the role of the therapist would be to identify the family's existing potential for self-help and, at the same time, work through existing conflicts, pinpointing one or more of four domains of life quality. Some develop somatic symptoms (body senses dimension), others react by escaping to work or going deep into it (achievement dimension), others run into relationships or withdraw from them (contact dimension), and a fourth group goes into manifestations of the spirit, either in religiosity or in fantasies

(spiritual dimension). This is summed up in the balance principle, which states that one should attain a balanced focus on all four of the dimensions in order to come to a conflict-free life, which is not easily possible because we have the natural tendency to differently learn and acquire knowledge. Savi (2010) states four ways through which, according to a Bahá'í philosophy, one could attain knowledge: through our body senses; the intellect, through which we can see the abstract reality of things, allowing us to achieve more by developing our potentials; insight, which allows the development of the spiritual dimension; and holy scriptures, which sometimes are transformed in traditions that may guide relations between fellow men.

Positive and Transcultural Psychotherapy also uses specific techniques, such as positive reinterpretations and metaphors, usually in the form of transcultural stories, wisdoms, and folk knowledge. The former, in close connection to systemic ideas (Simon et al. 2002), intends to provide “stimulus for rethinking old concepts and for seeing if there aren't alternative interpretations and forms of treatment available for the patient” (Peseschkian 1996, p. 116). With it, depression is no longer seen the sense of inability or a passive attitude of spiritual and emotional stress, but the ability to react with deep connection to one's own emotions. Fear of loneliness is not the fear to be abandoned but an expression of necessity to develop relationships with other people. Female frigidity is more than the incapacity to feel sexual pleasure; it is the ability to say no with one's body. This new vision enables the patient to distance himself from his problems and eventually leads to an expansion of his perspective on them. The logotherapist Elizabeth Lukas (2003), with whom Peseschkian came into contact, mentions that “much effort in argumentation, exemplification, and opposition by the therapist side” (p. 153) is needed in order to make this technique effective, since logical arguments cannot be enough. Peseschkian solves this problem by using more figurative means, such as the stories mentioned above.

Stories, metaphors, examples, and wisdoms from different cultures serve to project needs

and mold useful meanings to the patients, so they can reflect on them, learn conflict management strategies, and serve as models that may reveal possible solutions while acting as mediators between the therapist and the patient – empowering the latter without directly attacking his resistances. Throughout history, stories have been used by religions in order to provide explanations to life events while providing moral standards for their societies to act. Used therapeutically, these stories allow its listener to use them in the future, when he (on a more or less conscious level) considers them important, independent of the presence or opinion of the therapist. In the same sense, Bahá'ís believe that this is a feature of modern ages, when we no longer need clergy to guide, but we can use our awareness to seek the truth by ourselves, being forbidden of imposing our conclusions or interpretations of stories and principles to others.

Stories, like religious traditions, are more than mere descriptions of facts. They demonstrate a path to change problematic reference points by trying to diminish tension: listening to the stories, the person finds himself surprised and ends up changing his perspective, by finding the answers within himself. The same is also true to Positive and Transcultural Psychotherapy.

## Possession

Craig Stephenson

Le Presbytère, Mondion, France

In common usage, "to possess" means "to hold as property," "to own," or "to occupy." The English word derives from the French *posséder* and originally from the Latin *possidere*, from *potis* meaning "able" and *sedere*, "to sit." The metaphoric image which resides behind the concept of possession is perhaps, then, of a being successfully claiming space, perhaps "sitting" in a position of power. Hence, the suffering and distress associated with "possession" we attribute to foreign entities or partial aspects of the personality occupying the seat of selfhood by virtue of a tyrannical overthrow. For example, in the Christian tradition, according to the Synoptic Gospels of Mark, Matthew, and Luke, Jesus cures people suffering from various mental and physical ailments caused by occupying demons (*daimonia*) which he drives out of them; in the Gospel of John, while Satan as "adversary" confronts and tempts Jesus, he enters Judas (John 13:27). Inherent in the Christian understanding of evil, then, is the notion of an "obstruction" (*skandalon*, Matthew 16:23) that "holds," "claims," or "occupies" the embodied self (Kelly 2006).

The subsequent language of possession in the history of European religion has been far more fluid than one might imagine, and the set texts identifying orthodox criteria for establishing

legitimate cases of possession were very much of a specific time and place. For example, in Christianized Europe's early Middle Ages, the possessing devil's field of action is defined as the imagination, not the body or corporeal reality. As portrayed in the writings of Tertullian, Augustine, and John Cassian between the third and fifth centuries, the devil is most importantly a deceiver who employs *fantasmata* in order to take possession of the soul, and it is particularly in dreams that we fall prey to the devil. True dreams come from God; the devil fills dreams with false and tempting images. However, in 1233, the pontifical constitution *Vox in Rama* described the ritual homage to Satan as a feudal *osculum* in reverse (that is to say, by kissing the devil's buttocks), and what the Church once considered nocturnal dream voyages were now redefined as sectarian meetings marked by physical (not imaginary) acts of incest, sodomy, infanticide, and cannibalism. By 1484, according to the Papal Bull *Summis desiderantes affectibus* promulgated by Innocent VIII, witches and sorcerers abjured their faith by inviting the devil to enter their bodies. Since the body became increasingly the subject of diabolical attack in the higher Middle Ages, terms such as "possession" and "obsession," which had been used almost synonymously to describe the intermittency of manic attacks, come to be more highly differentiated. Etymologically, *obsidere* denotes "to sit at or opposite to," "to sit down before," or "to besiege" as when an enemy force sits down before a fortress. Hence, an obsessive spirit is perceived as assailing, haunting, and harassing a person from outside, while a possessing spirit is considered to have taken up residence inside the human body. Such distinctions are not so very far away from current Western psychopathological diagnostic criteria which differentiate, for example, between paranoid feelings of being persecuted from without and delusional notions of being preoccupied by thoughts which are not one's own but which one believes have been inserted into one's mind. While psychiatry co-opted the word "obsession" and stripped it of its religious connotation, the word "possession" has remained outside psychiatric discourse (until its recent tentative entry into

the appendix of the DSM IV as a dissociative disorder currently under review).

The most important source for contemporary literature on possession is anthropological. As a social anthropologist, I. M. Lewis (1971) argues in an objectivist manner that possession and shamanism are two components of ecstatic religion which can best be interpreted from within a structural functionalist framework of delineating power and social status. From within this perspective, possession functions as an obliquely aggressive strategy with which disempowered or marginalized individuals, especially women, seek to redress their political subordination within oppressive, predominantly patriarchal cultures. Lewis defines the suffering caused by possession as linked to status deprivation and portrays possession cults as socially motivated maneuvers which heal, at least in part, by enhancing the social status of sufferers, recasting them in fantasy or belief as humans “seized by divinity.”

Paul Stoller (1989) emphasizes the particularity of Songhay possession in Tillaberi, Niger, as a fusion of human and spirit. Possession as “fusion” signifies a white-heat meshing of elements foreign to each other, an active seizing, a loss of identity for each of the elements, a loss of soul, and an interpenetration. Stoller describes how the Songhay sorcerers perform rituals of separation or cleansing to alleviate suffering caused by fused states, for example, leading their mediums to a crossroad where they fling millet seeds (which correspond in number to the possessing spirits) onto an anthill and flee from their state of fusion and oneness to the enclosed compound, to a separated state of twoness. Stoller investigates possession through its theatricality, the possession troupe functioning like a repertory company, the *zima* as stage director and dramaturge, and the mediums as actors. The ceremonies are theatrical events in which possession troupes offer healing through compensatory existential reenactments of an ancestral world, replete with historical, sociological, and cultural themes, in which mediums learn to fuse with and later separate from a collective *imaginaire*.

Janice Boddy (1989) delineates in terms of cultural symbolism and morality several levels at

which *zar* possession in the northern Sudanese village of Hofriyat performs a therapeutic function. For instance, when *zar* spirits usurp and block a woman’s fertility, the husband must enter into an exchange relationship with her spirits and thereby implicitly renegotiates his relationship with his wife, both human beings being equally powerless before a transcendent third, the *zar*. Boddy argues that Lewis’s social functionalist analysis of *zar* possession is inadequate because it glosses over the issue of belief. *Zar* practitioners, though not with conscious intent, take the potentially destructive ambiguities in a marriage and open them up to a symbolic performance and subsequently to interpretations which might lead the marriage in a positive direction. The performance does not necessarily resolve the conflict or its ambiguities, despite the adoption of a spirit idiom. Part of its therapeutic potential resides in the fact that the ceremony articulates a possible world and a possible way of orienting oneself within it. If the husband chooses to receive this other language elucidated by the adepts, the marriage relationship may be enriched by new meanings and by new ways of communicating.

According to Boddy, the *zar* possession cult is a resource used only by specific individuals within the culture. A spirit must make sense to those whom it encounters; the sense it makes is a product of human and spirit collaboration. Consequently, possession by a *zar* requires control on the part of the possessed. The hosts must have the ability to enter trance, at the same time remaining alert to their surroundings. Even when the spirits descend, the hosts are expected to be sensitive to cues from other spirits and the audience of human observers. Seriously disturbed people would focus on their own intentions and neglect those of the spirits and would be classed as misdiagnosed, seen as engaging in idiosyncratic fantasy which the *zar* patently are not, or accused of playing with the spirits and provoking their wrath. Individuals who can successfully enact such dramas become increasingly familiar with the “roles” they may – as spirits – be required to play. Paradoxically, then, the possessed are able to bracket their own substantial concerns and suffering in deference to those of the *zar*.

Central to the experience of possession is the diagnostic act, that is to say, testing the spirits, to see whether they are of God (1 John 4:1). Boddy emphasizes that the Hofriyati differentiate between *zar* spirits (whom the culture believes can be integrated through ceremonial marriage) and others (such as black *jinn* which must be exorcized if possible) and that the diagnostic act of giving the spirit its right and proper name, of differentiating between *zar* spirits and black *jinn*, already contributes a positive effect to a suffering individual. Subsequent marriage with correctly identified spirits in a rite of passage suggests that the status of the sufferers changes paradoxically for good and that thereafter the spirits will not simply possess them; rather, they will allow themselves to be invoked, and the interplay will be potentially productive.

In analytical psychology, Jung describes a similar apotropaic effect of diagnosis, a partial alleviation of suffering when a repressed complex is identified and thereby acknowledged by ego consciousness: "The true symbol, the true expression of the psychological fact, has that peculiar effect on the unconscious factor, that is somehow brought about by giving it the right name" (Jung 1984, p. 581). And describing the psychological life process of differentiating and, as much as possible, integrating otherwise dangerous and difficult unconscious complexes/spirits into consciousness (a process he called "individuation"), Jung argues that the goal is best symbolized by the alchemical image of a "marriage of opposites." By the time he writes *Aion* in 1951, Jung has revised that notion, taking it from a universalist symbol of marriage as representing ordered wholeness, to cross-cultural images of an intricate and never-ending interplay of opposites, of an Otherness inherent in experiences of selfhood.

Writing about cannibalism, Claude Lévi-Strauss argues:

It would be tempting to distinguish two contrasting types [of societies]: those which practice cannibalism - that is, which regard the absorption of certain individuals possessing dangerous powers as the only means of neutralizing those powers and even of turning them to advantage - and those

which, like our own society, adopt what might be called the practice of anthropemy (from the Greek *émein*, to vomit); faced with the same problem, the latter type of society has chosen the opposite solution, which consists in ejecting dangerous individuals from the social body and keeping them temporarily or permanently in isolation, away from all contact with their fellows, in establishments specially intended for this purpose (Lévi-Strauss 1955, p. 388).

Michel de Certeau (1970) applies Lévi-Strauss's structuralist distinction between ingurgitating and vomiting to the most famous case of possession in the Western history of religion, the possession of the Ursuline nuns at Loudun, France, in 1631. Certeau suggests that there exist two opposing responses to the suffering caused by spirit possession: to vomit out and exorcize the spirit or to absorb, literally incorporate, and integrate the spirit as Other, in an attempt to neutralize and even turn to one's advantage its dangerous power. Most of the iconography of the Christianized West confirms the extent to which its societies have one-sidedly identified with anthropemy, although there exists with the canonical literature the possibility of divine as well as demonic possession. In this regard, Lacan (1966), as the great reader and interpreter of Freud, rescues psychoanalysis from the positivist medical interpretation that rendered Freud exclusively "anthropemic" in his approach to the unconscious; that is to say, Lacan corrects the inclination to read Freud as characterizing all psychological symptoms as foreign elements which ought to be expelled.

The goal of contemporary psychotherapy is for the patient to be "self-possessed": at its most banal, this suggests the ability to habitually exercise control of one's self, as when, for example, one is said to possess oneself in patience; at its most profound, it evokes the image of selfhood as "able to sit" squarely in its own seat. In this context, it may be important to note that the English verb "exorcize" comes from Greek *exorkizein* meaning "an oath" and is translated into Latin as *adjuro* or *conjuro*. Etymologically, then, the verb *exorkizo*, "to exorcize," originates in attaching the prefix *ex* meaning "out" to the root [*h*]orkos, "the demon of oaths."

The Greek divinity Horkos is the demon-son of Eris, goddess of Discord or Strife, who punishes those who do not honor oaths they have sworn. But his name also denotes “fence” or “bulwark,” suggesting that taking an oath functions as a protective enclosure. The etymological image behind exorcizing is of casting “out” a “demon” but also of “invoking and putting on oath.” That is to say, hidden behind the one-sided anthropomy of the Christianized West may reside also the image of an exorcist solemnly (by naming God) invoking a devil ironically in an attempt to thereby establish a truth.

## Possession, Exorcism, and Psychotherapy

Stephen A. Diamond

Center for Existential Depth Psychology  
Los Angeles, Los Angeles, CA, USA

### What Is Exorcism?

*Exorcism* – the ritualistic expulsion of malevolent spirits inhabiting body, brain, or place – has been practiced in some form throughout human history and is probably the primeval prototype for psychotherapy. Exorcism is a traditional treatment for possession by evil spirits or demons and was a method employed for millennia by prehistoric shamans, witch doctors, priests, and medicine men prior to and during ancient Greek and Egyptian cultures. Hippocrates, the father of Western medicine, was purportedly first trained as an exorcist.

Exorcism is deeply rooted in demonism and demonology, presuming that the “victim’s” symptoms are caused by evil entities that have invaded and taken possession of body and soul. Jesus of Nazareth reputedly practiced exorcism in healing “demoniacs,” as described in the New Testament: “They brought unto him all that were diseased, and them that were possessed with devils. . . And he healed many that were sick of divers diseases, and cast out many devils” (Mark 1:32, 34). The Roman Catholic, Anglican, Lutheran, and Protestant (especially Methodist, Charismatic, Evangelical, and Pentecostal) Church still practice exorcism in extraordinary cases deemed – usually after at least some scientific scrutiny and in keeping with current Vatican policy – to be bona fide demonic possession. References to exorcism and possession can also be found in Judaism, Hinduism, and Islam, as well as Scientology.

Exorcism entails forcing the evil spirits out of the victim by religious ritual, prayer, supplication, admonition, threats, bargaining, enticement, confrontation, and other means. Typically, the victim’s symptoms of possession worsen as an

exorcism is initiated and the ceremonial symbols of the higher power (incantations, holy relics, crucifix, holy water, Bible, etc.) are introduced. Rage is notably and predictably the predominant response to exorcism, traditionally known as the “rage of the demon” resisting expulsion, and the possessed person is frequently physically restrained so as to prevent hurting themselves or others while in this furious state. *Exorcistic catharsis* consists of the unbridled expression of the typically uncharacteristic anger or, rather, the demon’s rage expressing itself violently and autonomously through the victim. However, unlike in psychodynamic psychotherapy, there is no conscious ownership of the previously repressed anger required during this primitive process: the rage belongs instead only to the demon, to whom it is solely attributed, not to the victim. Once the victim is cathartically purged (abreaction) of the demonic (see demonic) rage, he or she returns, at least temporarily, to a previous – albeit still relatively unconscious, naïve, and tenuous – state of precrisis psychological equilibrium, the demon or devil having presumably been driven out.

### Demonic Possession

The idea of demonic possession is a theological or spiritual explanation for human evil, suffering, and aberrant behavior. Possession has been a well-documented phenomenon occurring across cultures in virtually every era. But the term *possession* is seldom mentioned in the mainstream psychiatric and psychological literature. Instead, psychiatry and psychology speak of *obsession*, which has similar intrusive, involuntary, ego-dystonic qualities. Mild cases of demonic possession were referred to by the Catholic Church as obsession as far back as the fifteenth century, and psychotherapists still use that diagnostic term today. Or we refer to “multiple personality disorder” (dissociative identity disorder) in which one or more so-called subpersonalities temporarily take total possession of the person against his or her will. Or we diagnose bipolar disorder in those possessed by mania, irritability, or melancholy

and intermittent explosive disorder to describe someone possessed or overtaken by uncontrollable rage. Indeed, the subjective experience of possession – being influenced by some foreign, alien force beyond the ego’s ken or control – can be considered more or less a phenomenological aspect of most modern psychiatric disorders. Today, this *possession syndrome* (Diamond 1996) is seen by psychiatrists and psychologists as a mental disorder more often than not caused by some underlying neurological or biochemical aberration. Biochemistry, in the form of the tiny neurotransmitter, has become our demon *du jour* to which all manner of psychopathological evils are attributed. But despite its obscurity in the psychiatric and psychotherapeutic texts, it must be admitted that the enigmatic experience known for millennia as “demonic possession” persists today in differing forms and varying degrees. The only difference is the way in which we now attempt to explain and treat it.

### Exorcism Versus Psychotherapy

At least since Freud’s day, it has become commonplace to refer metaphorically or poetically to struggling with one’s vexing psychological problems as wrestling with “demons.” Carl Jung (1921, 1971) theorized that, from a psychological perspective, “demons are nothing other than intruders from the unconscious, spontaneous irruptions of unconscious complexes...” (cited in Diamond 1996, pp. 64–65). Psychotherapy, a structured process of psychological treatment originating in the pioneering work of Freud and Jung, has been practiced now for little more than a century and has deep roots in and remarkable similarities to exorcism. According to psychiatric historian Henri Ellenberger (1970), “Exorcism is the exact counterpart of possession and a well-structured type of psychotherapy.” He explains that the exorcist typically addresses the possessed and the demons in the name of a “higher power,” as, for example, when the priest invokes the power of Jesus Christ in the Christian ritual of exorcism. Complete conviction in both the demonic and spiritual power and confidence in

his or her own skills are essential for the exorcist's success. Psychological and spiritual support for the victim is provided, while at the same time, the possessing evil spirits are verbally attacked, challenged, named, and provoked to speak directly to the exorcist. In some cases, contentious negotiations are engaged in between the demonic powers and exorcist, in an effort to force them to release their disturbing and debilitating grip on the victim. This demanding, dangerous, arduous process can last for days, months, or years and is not always successful.

Much the same may be said about the psychotherapist. Despite the ostensibly secular, scientific persona of most contemporary practitioners, scratching the surface of rationality and objectivity reveals a latent exorcist. Psychotherapists also speak in the name of a "higher power," be it science, psychology, or some metaphysical belief system. They too firmly believe in the reality of the pathological problem manifested in the patient's symptoms and suffering and in the therapeutic power of diagnosing or properly naming it. And they dispense encouragement to troubled patients while joining with them in a sacred "therapeutic alliance" – the common healing denominator in all types of psychotherapy – against the wicked and destructive forces bedeviling them. Psychotherapy can, like exorcism, consist of a prolonged, bitter, soul-wrenching, sometimes tedious, battle royale with the patient's diabolically obdurate behaviors and emotional "demons," a war frequently waged over the course of years rather than days, weeks, or months, and not always with a victorious outcome. And, as in exorcism, there is recognition especially by psychodynamic psychotherapists of the very real dangers and risks of "psychic infection" or *countertransference*, which can cause the therapist to suffer similarly disturbing, subjective symptoms during the strenuous treatment process. Hence the ever-present importance for both the exorcist and psychotherapist to perform his or her sacred duties within a formally ritualized structure, frame or sacred container (*vas temenos*); to make full use of collegial support, cooperation, and consultation; and to maintain inviolable professional boundaries. To paraphrase

Freud: No one wrestles with demons – not even the demons of others – and comes away unscathed. The so-called psychological infestation (countertransference) is an occupational hazard shared by both the exorcist and psychotherapist that can subtly undermine or sabotage the healing process and must therefore be consciously recognized, monitored, and constructively resolved.

Italian psychiatrist Gaetano Benedetti (1960) compared exorcism to his own therapeutic work with schizophrenics. Benedetti points out the many parallels between the process of exorcism and psychotherapy, noting how both the exorcist and psychotherapist must tend first to themselves spiritually or psychologically prior to entering the chaotic inner world of the victim or patient. The standard worsening of symptoms as the process proceeds is psychologically understood as a form of *resistance* to the treatment or remedy. The psychotic or demonically possessed person attempts to overpower the therapist, who must maintain control of the process, set consistent limits and boundaries, and not retreat from or submit to the patient's anger, rage, and aggression. Both the exorcist and psychotherapist align themselves with the healthy part of the personality against the evil or pathological aspects, repudiating all destructive, defensive expressions of the latter. Toward the end of such intensive treatment for schizophrenia, during the final "rebuilding" phase of what psychologist Jack Rosberg calls Direct Confrontation Therapy:

the patient doesn't understand all of what has happened and is happening to him, and he [or she] is very angry with the therapist. . . . The patient must be kept from regressing and must be increasingly motivated to get out into the world. . . . Thus, slowly, gradually and painfully, healthy defenses are substituted for unhealthy [ones], and strengthened (cited in Diamond 1996, p. 213).

Born-again Christian psychiatrist M. Scott Peck (1983) noted that, unlike exorcism, traditional psychotherapy "is conducted in an atmosphere of total freedom. The patient is free to quit therapy at any time. . . . Except for the threat of refusing to see the patient anymore, . . .

the therapist has no weapons with which to push for change beyond the persuasive power of his or her own wits, understanding, and love” (cited in Diamond 1996, p. 214). In stark contrast, exorcism makes full use of power to overcome the patient or victim’s illness. Almost always conducted by a team or group as opposed to the one-to-one relationship of psychotherapy, exorcism controls the situation completely. Whereas the duration of a psychotherapy session is typically predetermined:

The length of an exorcism session is not preset but is at the discretion of the team leader. In ordinary psychotherapy the session is no more than an hour, and the patient knows this. If they want to, patients can evade almost any issue for an hour. But exorcism sessions may last three, five, even ten or twelve hours. . . . Exorcism is psychotherapy by massive assault (Peck, cited in Diamond 1996, pp. 214–215).

As in exorcism, the constructive use (but not abuse) by the therapist of power is essential in psychotherapy, particularly in the treatment of the most debilitating mental disorders.

In Christian exorcism, writes Peck, “the exorcism team, through prayer and ritual, invokes the power of God in the healing process. Indeed, as far as the Christian exorcist is concerned, it is not he or she who successfully completes the process, it is God who does the healing” (Peck 1983, p. 186). This attitude can also frequently be found in secular or even atheistic psychotherapy, with the healing power being attributed not to God, but to the palliative nature of the treatment process itself. Peck draws a distinction between human evil and supernatural, metaphysical or demonic evil, the latter being the cause, he contends, of *genuine possession*. Peck further distinguishes demonic possession from mental illness, stating that though in such cases “there has to be a significant emotional problem for the possession to occur in the first place, . . . the proper question to pose diagnostically would be: ‘Is the patient just mentally ill or is he or she mentally ill and possessed?’” (1983, p. 121).

For Dr. Peck and others of his spiritual persuasion, the demonic – unlike the daimonic – is purely negative, a power so vile it can only be exorcized, expelled, and excluded from

consciousness. It has no redeeming qualities and is unworthy of redemption. On the contrary, the *daimonic* includes the potentially healthy, vital, creative, compensatory, empowering life forces whose conscious integration is required for any true, lasting therapeutic transformation. Psychiatrist C.G. Jung and existential analyst Rollo May (1969) both provide psychologically sophisticated, secular theories of human evil and daimonic (as opposed to demonic) possession which, unlike Peck’s, do not demand literal belief in the Devil or demons.

Out of vogue for centuries since the Enlightenment, exorcism is experiencing a twenty-first-century rebirth in Europe, Australia, the United States, and elsewhere. Growing numbers of postmodern pilgrims are turning desperately to exorcism to try to alleviate their psychological or spiritual suffering, due, in part, to a growing dissatisfaction with contemporary psychiatric and psychological treatment. William Peter Blatney’s popular film *The Exorcist* (1973), derived from his book about an actual case, as well as films like the *Exorcism of Emily Rose* (2005), present a highly dramatized picture of possession and exorcism, restimulating public fascination with this bizarre phenomenon. Based on the current resurgence in exorcism – being met reportedly by an acceleration in the formal training of priests as exorcists by the Vatican – it appears that, for many, the archetypal myths of “demonic possession” and “exorcism” offer a more meaningful and compelling explanation for such numinous experiences than do the banal scientific theories of biological psychiatry and cognitive-behavioral psychology. If psychotherapy as a true healing of the *soul* or spirit (*psyche*) is to survive and thrive into the future, a seemingly dubious prognosis at present, it will need to more deeply apprehend and address the archetypal *possession syndrome* and the perennial problem of human evil.

## Post-Jungians

Lee W. Bailey  
Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Carl G. Jung was such a prolific source of ideas in twentieth-century psychology that subsequent generations of Jungian analysts and scholars were bound to take divergent paths. There existed around the year 2000 more than 2,000 Jungian analysts worldwide in 28 countries. Another approximately 10,000 psychotherapists and counselors have been more or less influenced by Jungian psychology. They share many common

themes, such as archetypal theory, but vary in their priorities in many ways. Jung's usually unacknowledged influence in the broader field of psychology appears in theories such as introversion and extraversion. But his emphases on the unconscious and religion has largely excluded him from the strongly scientific psychologies. Jung's influence in culture studies was strong on authors such as Mircea Eliade in world religions and Joseph Campbell in mythology. The rise of feminism, following increasing women's increased educational opportunities and widespread use of liberating birth contraceptives, combined with Jung's broad influence culturally. Thus, the collective unconscious has responded by stimulating a growing exploration of goddesses in patriarchal societies.

A preliminary sketch of post-Jungian development in psychology is threefold:

1. *The Classical School*, formerly called the Zurich School, has tended to explain and amplify Jung's theories.
2. *The Developmental School*, formerly called the London School, emphasizes the need to add theories of development, especially in the area of childhood psychology. They borrowed many theories from Freudian principles and modified them.
3. *The Archetypal School* emphasizes a more radical postmodern approach to Jung's theories (Samuels 1985).

Over time, these three groups have grown less distinct, overlapped, and come to share certain common elements, such as myth studies and the feminist alterations of Jung's theories. Their priorities can be grouped into theoretical and clinical emphases.

## The Classical School

This post-Jungian group, mainly trained in Zurich, following Jung, emphasizes the *theories* of (a) the concept of the Self, (b) the definition of archetype, and (c) the development of personality, in that order.

Their priorities in *clinical* practice emphasize (1) the concept of Self, (2) sticking to imagery,

and (3) the focus on transference and countertransference.

The Classical Jungians include figures such as Edward Edinger, Esther Harding, Joseph Henderson, Jolanda Jaffé, Sylvia Brinton Perera, June Singer, Ann Ulanov, Marie-Louise von Franz, and Edward Whitmont.

Classical Jungians, or “Analytical Psychologists,” accept Jung’s theory of the innumerable archetypes, as opposed to Freud’s limited scope, opening a wide horizon for exploring dreams. Jung’s central Self archetype is seen as regulating and harmonizing conflicts. They compare baffling dream images to similar mythic symbols in “amplification” that helps deepen their meanings in the given life context. Rather than reduce dream images to a conscious schema, as Freud’s Oedipal Complex dictated, Jungians listen to the raw unconscious with a more constructive approach, going past the personal unconscious to the images such as the persona, shadow, great mother or father archetypes, and eventually to the Self. But first, attention to images and feelings is emphasized, rather than translating them easily into conscious theoretical concepts.

I remember a “big” dream in therapy: I was walking on a mountain ridge, looking for Michelangelo’s heroic young “David.” Instead, I saw a little statue of Michelangelo’s “Moses” seated on my shoulder. From deep within came the feeling that I had outgrown my father, but he was still a “chip on my shoulder.” Only later did I think of the archetypal father-son constellation, guided by the healing Self. First I had to *feel* the meaning of the images.

Jungian theory overall includes (1) polarities of positive/negative, instinct/spirit, and individual/collective, (2) complementarity, in which balance between extremes is a psychic tendency, and (3) interaction between various archetypal complexes. The ego is led past its natural defenses and narcissism, and the archetypes are guided in therapy to cooperation, listening to each other, rather than the ego’s trying to convert the unconscious into conscious control, in Freudian fashion. Ego, the center of consciousness, relates to the outer world as a reality check and also moves between the world and the Self, the central archetype in

the collective unconscious, and ego’s primal source that regulates and balances archetypal dynamics.

Jung’s personality typology seeks a balance in therapy between introvert/extravert, thinking/feeling, and intuition/sensation. In life and therapy, the personal and collective ego (symbolized by the mythic hero) typically easily encounters archetypes such as the persona (social mask, e.g., doctor), the shadow (dump for all negative fears and feelings, e.g., monsters and devils), and the anima or animus (the contra-sexual archetypes, e.g., ideal lovers). These and other new archetypal images from the depths emerging in therapy are probably surprising to the ego but are important to bring to consciousness.

The Self is the central archetype that regulates and balances inner conflicts. It may be symbolized in innumerable ways, such as the circular/cross mandala. Therapy seeks to help the ego relinquish its illusions of psychic control and, by feeling the archetypal messages from below, promote growth and integration, coming to see the Self’s connection to the divine, and to serve it. Without indoctrination, the important experience of the unconscious hopefully leads the ego to feel the presence of the sacred in life in many ways, healing and guiding.

One woman dreamed of an energetic floating sphere (Self-mandala), swirling with electrical charges, that pursued her, shattering glass, until she backed into a corner yelling “All right, I believe, I believe in God!” This dream brought her peace and confidence. Empathy with other people, animals, and nature increases a sense of the mystical *unus mundus*, or one world below the surface of ego’s surface dualisms. The Self should not be used to deny the importance of other archetypal complexes, but can lead to individuation, or one’s unique healing psychic constellations (Samuels 1985, pp. 23–132).

## The Developmental School

This group, mainly trained in London, prioritizes its *theoretical* focus thus (a) the development of personality, (b) the Self, and (c) the archetypes.

Their priorities in *clinical* practice are (1) analysis of transference and countertransference, (2) symbolic experiences of the Self, and (3) sticking to the imagery. There has been significant exchange and blending of post-Freudian child psychology with Jungian views.

Developmental post-Jungians include such figures as Michael Fordham, M. Jacoby, Erich Neumann, Andrew Samuels, and E. Seligman.

Jung did not focus much on personality stages and development. He did, however, expand from Freud's focus on childhood dynamics to include the whole spectrum of life and from Freud's mother emphasis to the father archetypal dynamics. Out of this came later various midlife crisis, geriatric, and end-of-life grieving psychologies. Developmental Jungians borrowed Freudian themes to understand infancy and childhood. They also shared theoretical and clinical principles with Heinz Kohut, Melanie Klein, Donald Winnicott, and other Object Relations psychologists.

One debate was over whether a therapist can talk accurately about an *empirical* observation of a "child" or whether a therapist's *empathy* is presenting archetypal images from the collective unconscious (Samuels 1985, pp. 144–147). Another is whether the ego develops in predictable stages or not (Samuels 1985, pp. 140–142). Jung's view that the child's psyche is shaped by the parents' psychopathologies is now an acknowledged principle of family therapy (Samuels 1985, p. 154).

The child's earliest bond with the mother is an archetypal given, but for Jungians the mother is not psychologically dominant; rather, the bond has a mutual feedback. She can provide essential empathetic "mirroring" of the child's expressions that promote acceptability and healthy growth. If the child's parents or environment do not activate security and confidence, the child may well grow up with a weak ego, unable to deal with life's difficulties, or narcissistic defenses (Samuels 1985, pp. 158–160). Overall, mother provides a model for the daughter and the father for the son, positively and negatively. Mother models a son's anima, and father models a daughter's animus. These views of feedback

and interaction eventually shaped family therapy, when it moved away from the Freudian cause/effect model (Samuels 1985, p. 166). The child must de-integrate from the family *participation mystique* and separate from the parents in order to grow up.

Freud saw the importance of patient-therapist transference, or projection of unconscious images onto the therapist as love, hate, or other feelings, that need to come to consciousness. Jung went farther, adding the importance of the therapist's countertransference, or similar feelings for the patient, which Freud had discounted. So therapy shifted from a Freudian authoritarian relationship, with the therapist sitting out of sight of the patient on a couch, to a far more egalitarian relationship. Seated face-to-face, both client's and therapist's reactions, loving, infantile, bored, or angry, are important for the Jungian therapist to consider (Samuels 1985, pp. 133–172). Developmental psychology has expanded to become an important type of psychology.

## The Archetypal School

The post-Jungian archetypal school's emphases in *theoretical* priorities are (a) the archetypal images, (b) the Self, and (c) the development of personality (with little attention paid to the latter two).

In *clinical* practice the archetypal school's priorities are (1) sticking to the imagery, (2) symbolic experience of the Self, and (3) analyzing transference and countertransference (Samuels 1997, p. 10).

Notable figures in the Archetypal School include James Hillman, A. Guggenbuhl-Craig, Patricia Berry, Henri Corbin, Wolfgang Giegerich, Rafael Lopez Pedraza, and David Miller.

Archetypal psychologists see Jung's emphasis on the Self as a product of Western monotheism and have thus emphasized polytheism as a way of imagining the unconscious as full of many archetypal patterns, in various constellations. So various gods and goddesses, ever-present numinous images, are given more attention than the classical Self. Mars is present in war, Aphrodite in

love, and Artemis in women's athletics. David Miller wrote *The New Polytheism* on this theme. Therapy is not seen as theoretical progress through classical archetypes such as persona, shadow, and anima/animus toward the Self, but rather a journey of the ego into the depths, where it loses its controlling fantasy, with no expectations of what images might emerge. There is a strong emphasis on "sticking with the image" that appears rather than fitting it into a theoretical concept.

James Hillman urges depth psychology to move out of its medical background and into a sense of the soul's poetic and religious roots, speaking less of "symptoms" and more of imagination and culture. Influenced by postmodern philosophy, Hillman reminds Jungians of what Jung said that we can never perceive or know an "archetype" as a substantive thing, for it is only a theoretical construct, like Plato's forms, so we can only experience and speak of "archetypal images" – not a shadow but an image such as a "devil." Nor is therapy always so set on healing but may just stay with a pathology's falling apart until the soul's images reveal their needs.

Archetypal psychologists reject the subject/object language of standard psychology's Cartesian philosophy. Psychotherapy is not a science but a hermeneutics, interpreting soul's personified images – warriors (Mars), lovers (Venus), and tricksters (Mercurius). Moving deeper into the soul is not just as having an inward feeling but also being part of the whole world. Feeling beauty or threat is part of the *anima mundi* – soul in the world. Archetypal psychology is not humanistic but sees the gods as "cosmic perspectives in which the soul participates" (Hillman 1975/1977, p. 169).

Hillman and Michael Ventura wrote the challenging book *We've Had a Hundred Years of Psychotherapy and the World's Getting Worse*, where they critique psychotherapy's focus on inwardness to the neglect of the world's relations with the soul. We are abused less by our personal lives, they say, than by our collective systems, such as industrial society's ravaging the environment. Hillman says he gets depressed when he is in a city full of pollution because depression is

not just an internal, subjective psychology but the soul's response to the world. Environmentally oriented sciences are now showing how problems such as autism may well be rooted in widespread largely ignored environmental pollutants (Belli 2012).

Hillman (2004) challenged conventional thinking farther in his *A Terrible Love of War*, where he argued that war is normal, inhuman, sublime, and a religion. Archetypal psychology takes us for a ride, rocking the boat of many complacent assumptions, from subjectivity and environment to war.

## Postmodernism

Galit Atlas-Koch  
New York, NY, USA

Postmodernism refers to a body of ideas that represent a new era succeeding modernism and in response to it. Postmodern thought characteristically undermines modernist assumptions concerning the universal, rational, nonhistoric foundations of human society. It is based on perception of multiplicity, complexity, or chaos of experience, rather than unity or organization, while repudiating meta-narratives. Postmodernism inclined towards relativistic, irrational, and nihilistic conceptions of human reality. Postmodern theorists reject the concepts of foundational knowledge, essences and universals, cause-and-effect relationships, and the notion of scientific progress. They prefer theoretical pluralism over the claims of any single explanation and assert that all knowledge is partial.

There is no absolute agreement as to precisely when the postmodern era first appeared on the time axis. In economic-political terms, the main reference point is the Second World War, during which acts of slaughter and warfare on an unprecedented scale were committed in the name of different ideologies, including the Holocaust and the atomic bombs over Hiroshima and Nagasaki. This war left the Western world pessimistic about progress, rationality, and science. The renouncement of Newtonian science's mechanistic thought and the changeover to electronic and photonic thought (the relativity revolution, the quantum revolution, and the digital revolution) are considered significant points in postmodernism. Another reference point is the end of the cold war between the Soviet Union and the United States and the latter's becoming the only superpower as well as the demise of the imperialistic era and the establishment of new countries around the world – the formation of a new political world, divided into hundreds of autonomous political and cultural units, seeking pluralism and acknowledgment. Emanuel Kant is considered to be one of the

first postmodernists, as well as Friedrich Nietzsche who was the first to criticize modernist thought.

For those who lived during the nineteenth century, “god died,” as articulated by Nietzsche, and science provided a hedge to nihilism. In modern times, scientific truth resided in the space previously taken by religious truth. While in the modernistic era many believed that science could provide humans with the tools through which to gain access to the enigmas and structure of the universe, one of the main tenets of postmodernism is that there is no one objective truth. Accordingly, it is now plausible to assume that postmodern Western religious pluralism led to a search for spiritual alternatives such as Westernized versions of Hinduism and Buddhism.

Postmodernism asserts that every view of the world is a view from a specific perspective and that there is no external viewpoint from which one can see everything objectively. Michel Foucault wrote that there is no truth to uncover but rather control mechanisms that produce truth. This conception emphasizes the relation between words and truth, as discourse is produced through language, usually the language of hegemonic groups, thereby increasing their power.

The postmodern claim concerning science is that science, like literature and art, is a text that each reader interprets on his or her own through deconstruction (the disassembly of the text and its restructuring) in any way one wishes. Science, they believe, depends on contemporary needs and social interests. Therefore, science does not provide correct objective knowledge, but rather depends on society, and each period has the science that befits it and that maintains power in the hands of the dominant elites.

Postmodern psychology emphasizes process over structure in conceptualizing the mind and nonlinearity over linearity in conceptualizing development. While modern psychological concepts, as expressed by Freud and developmental psychologists such as Piaget, articulated set developmental stages of the human psyche, postmodernism rejects the assumptions regarding an invariant, stable core – one self. This newer way of thinking concerns itself with the meaning

of different kinds of discourse and interactions with the world and with the conception of multiple selves.

Freud viewed the intellect and the brain as objects of scientific research in the modernistic sense. To him, the analytic method provides a “correct” understanding of the mind. By contrast, relational psychoanalytic theory is considered to be a postmodern, post-scientific theory, and as written by Mitchell, Aron, Benjamin, and others, it stresses our inability to stand outside nature so as to objectively describe what happens within it. All types of knowledge are therefore pluralistic, not singular; contextual, not absolute; constructed, not uncovered; changing; and dynamic. Michael Eigen and Lew Aron are both important postmodern psychoanalysts who also consider religious themes in their writing. Among other prominent postmodern thinkers whose ideas are reflected in the psychology literature are Martin Heidegger, Michel Foucault, Friedrich Jameson, Jacques Derrida, and gender researcher Judith Butler.

## Poverty

Robert Kaizen Gunn

United Church of Rockville Centre, Rockville Centre, NY, USA

After a brief consideration of how poverty is viewed in five world religions, some psychological aspects of poverty will be considered.

### Attitudes and Actions Concerning Poverty Among the Five Major World Religions

Poverty is a major concern for every world religion. Every religion makes room for a conscious consideration of what one is to do with and for the poor. Each religion gives instruction regarding the proper attitude and action to take regarding the poor. These attitudes and actions affect one’s own life, for faithfulness in each religion requires attitudes and actions of compassion and the sharing, to whatever degree, of what one has with those who have significantly less. Poverty thus directly affects oneself. Indeed, for most religions, one’s attitude and actions toward the poor is an essential element in the determination of one’s own spiritual development and destiny.

### Poverty in Judaism

- The concern for the poor is closely linked to the maintenance of justice:

you shall not side with the majority so as to pervert justice; nor shall you be partial to the poor in a lawsuit. . . . You shall not pervert the justice due to your poor in their lawsuits (Exodus 23: 2b-3, 6).

(All quotations from the Hebrew and Christian Bibles are taken from *The New Oxford Annotated Bible* 1994).

from the profit of their trading they will get no enjoyment. For they have crushed and abandoned the poor, they have seized a house that they did not build (Job 20:19).

Thus says the Lord of hosts: render true judgments, show kindness and mercy to one another; do not oppress the widow, the orphan, the alien or the poor. . . . (Zechariah 7:10).

- Leaving fields and crops for the poor is a religious duty:

In the seventh year you shall let (the land) rest and lie fallow, so that the poor of your people may eat (Exodus 23:11).

When you reap the harvest of your land, you shall not reap to the very edges of your field, or gather the gleanings of your harvest. You shall not strip your vineyard bare, or gather the fallen grapes of your vineyard; you shall leave them for the poor and the alien: I am the Lord your God (Leviticus 19:9–10).

- God is compassionate toward the poor and judges those who oppress them:

May he defend the cause of the poor of the people, give deliverance to the needy, and crush the oppressor. . . . for he delivers the needy when they call, the poor and those who have no helper. He has pity on the weak and the needy and saves the lives of the needy (Ps 72:4,12, 19, 21).

Incline your ear, O Lord, and answer me, for I am poor and needy (Psalm 86:1).

This was the guilt of your sister Sodom: she and her daughters had pride, excess of food, and prosperous ease, but did not aid the poor and needy (Ezekiel 16:49).

Hear this word, you cows of Bashan who are on Mount Samaria, who oppress the poor, who crush the needy. . . . (Amos 4:1).

## Poverty in Christianity

- The poor receive God's favor:

Blessed are the poor in spirit, for theirs is the kingdom of Heaven (11:5). Go and tell John what you hear and see: the blind receive their sight, the

lame walk, the lepers are cleansed, the deaf hear, the dead are raised and the poor have good news brought to them (Matthew 5:3).

Blessed are you who are poor, for yours is the kingdom of God (Luke 6:20).

- Disciples are sometimes urged to become poor themselves:

He ordered them to take nothing for their journey except a staff; no bread, no bag, no money in their belts; but to wear sandals and not to put on two tunics (Mark 6:8–9).

You lack one thing: go, sell what you own, and give the money to the poor and you will have treasure in heaven; then come, follow me (Mark 10:21, cp Luke 18:22, and John 12:1–8 where words are spoken by Judas).

- Poverty for disciples is recommended because it is following Jesus' example:

For you know the generous act of our Lord Jesus Christ, that though he was rich, yet for your sakes he became poor, so that by his poverty you might become rich (1 Corinthians 8:9).

- The surrender of private ownership to communal property is a natural expression of the new life found in Christ:

Now the whole group of those who believed were of one heart and soul, and no one claimed private ownership of any possessions, but everything they owned was held in common. . . . There was not a needy person among them, for as many as owned lands or houses sold them and brought the proceeds of what was sold. They laid it at the apostles' feet, and it was distributed to each as any had need (Acts 4:32).

- And yet there is a place for extravagance and abundance:

Now while Jesus was at Bethany in the house of Simon the leper, a woman came to him with an alabaster jar of very costly ointment, and she poured it on his head as he sat at the table. But when the disciples saw it, they were angry and said, 'Why was the ointment wasted in this way? For this ointment could have been sold for more than three hundred denari, and the money given to the poor;' and they scolded her. But Jesus said, 'Let her alone; why do

you trouble her? She has performed a good service for me. For you always have the poor with you and you can show kindness to them whenever you wish; but you will not always have me' (Matthew 26:9–11).

- A distinction is made between those who are materially poor and those who appear to have everything, but have nothing:

For you say, 'I am rich, I have prospered, and I need nothing.' You do not realize that you are wretched, pitiable, poor, blind and naked (Revelation 3:17).

In a contemporary expression of Christian concern about poverty, people at Union Theological Seminary in New York City started The Poverty Initiative to raise awareness and take action on behalf of the poor. Their perspective is reflected in an essay entitled "Who Are the Poor?" written by Willie Baptist and Liz Theoharis, August 2008:

If you can't get the basic necessities of life, you're poor.

The poor and dispossessed today differ from the poor and dispossessed of the past. They are compelled to fight under qualitatively new conditions and to creatively wield new weapons of struggle. In other words, the socioeconomic position of the low waged, laid off, and locked out is not that of the industrial poor, the slave poor, or of the colonial poor of yesterday. The new poor embody all the major issues and problems that affect the majority of other strata of the country's population.

Presently, we are experiencing the wholesale economic destruction of the so-called middle class in this country. This is huge in terms of political power relations and of strategy and tactics. This "middle class" is beginning to question the economic status quo. The point here is that the economic and social position of the poor is not one to be pitied and guilt-tripped about but that it indicates the direction this country is heading if nothing is done to change it. Poverty is devastating me today. It can hit you tomorrow. The crisis of healthcare is currently the cause of half of all the bankruptcies in this country (see [www.povertyinitiative.org](http://www.povertyinitiative.org) and [www.universityofthepoor.org](http://www.universityofthepoor.org)).

## Poverty in Islam

According to Osman Guner, in an essay on "Poverty in Traditional Islamic Thought: Is It Virtue

or Captivity?" the Islamic words for poverty occur in the Qu'ran 12 times. Two of those times refer to spiritual poverty, meaning human finitude and humans' absolute need for Allah; the other ten refer to material poverty and how Muslims should help them. Additionally, in the Sufi tradition of Islam, the giving up of property and goods is an essential aspect of emphasizing one's utter dependence on Allah.

For most Muslims, however, there is nothing wrong with acquiring material goods, and material well-being is seen as an imperative. Nevertheless, greed and oppression are considered unlawful, and poverty is considered a social anomaly that should be changed. The poor are looked upon with favor both in this world and the next: "While the food of the poor will be delicious, the food of the rich will not be. . . . Allah certainly gives the deliciousness of the food of the rich to that of the poor. . . . The superiority of the poor over the rich will continue in the Hereafter too. . . . the poor of your community enter the Paradise five hundred years before the rich."

According to one author, Islam has the key to solving the world's problems of poverty and hunger through its tradition of *zakat*. *Zakat* is an obligatory gift to be distributed among the poor and needy. Muslims are expected to give 2.5 % of money that they have had in their possession for over a year. The author concludes:

Now consider this simple fact: Forbes Magazine reported that in 2004 there were 587 billionaires worldwide, with a combined net worth of \$1.9 trillion dollars. If in 2004, these 587 richest people in the world paid *zakat*, we would have had \$47.5 billion dollars distributed among the poor ([http://www.al-islami.com/islam/islam\\_solves\\_poverty.php](http://www.al-islami.com/islam/islam_solves_poverty.php)).

## Poverty in Hinduism

Hinduism has sometimes been accused of creating and exacerbating poverty because of its caste system. In Hindu tradition, humankind is divided into four castes, called *varnas*: the highest is the Brahmin, which is for priests, teachers, and wise

men. The second is that of *Kshatriya*, which is for warriors, rulers, and leaders. The third varna is *Vaishya*, which includes merchants, farmers, and those who work in commerce. The lowest varna is *Sudra* for those who do manual labor and service. One is born into one of the levels at birth based on one's karma, that is to say, the effect of how one has lived in previous lifetimes. Each varna has its own set of rules and expectations, its particular *dharma*, which, if one follows it well, will enable one to be born at a higher level varna in one's next lifetime.

Thus understood, although people in the lowest level often live in serious poverty, in Hindu thought it is not a source of disapprobation since everyone is, in every varna, in each person's current lifetime, working out their own karma and anticipating raising the level of their varna in the next lifetime. Westerners may see a parallel between the Hindu notion of karma and the tradition in both Judaism and Christianity that assumes one's status of both physical and economic well-being to be determined, when negative, by one's own sin or the sins of forebears.

Far from seeing poverty as a virtue, however, Hindu thought emphasizes the value of acquiring wealth and a better standard of living, often through prayers to Lakshmi, the goddess of wealth.

As Hindus have experienced globalization, however – both in terms of Hindus going to other cultures and others coming to them through business and media – there is a significant shift taking place in the understanding of caste and its place in Hindu spiritual development.

## Poverty in Buddhism

Buddhism's attitude toward poverty stems from its understanding of all existence according to the first two of the Four Noble Truths propounded by Shakyamuni Buddha in the fifth century BCE. Taken together, the first two Noble Truths comprise a profound critique of the role of poverty in the conditions of all people around the world.

The First Noble Truth is that all of life is *dukkha*, usually translated as suffering, sometimes

as anxiety, frustration, of dissatisfaction. Poverty – meaning not having enough material goods for health, safety, and the kind of well-being needed to realize oneself – is bad, therefore, because it usually entails suffering and the loss of conditions needed to flourish. It was Shakyamuni's experience that ascetic practices did not, in themselves, lead to enlightenment, and therefore even voluntary poverty – the deliberate surrender of worldly goods – for the Buddhist requires the meeting of ordinary conditions for health, safety, and well-being, which is called the “middle way” in between ascetic denial and personal riches.

The Second Noble Truth is that the cause of suffering is *tanha*, perhaps best translated as “craving” or “desire.” In the Buddhist analysis, poverty is one of the primary conditions that give rise to craving, because one's ordinary needs for food, clothing, shelter, and care have not been met. Thus, poverty is bad because it gives rise to the kind of craving that increases suffering, leading people to extreme behaviors that add suffering to oneself and others.

Any social, economic, and political conditions, therefore, that create poverty are bad because they thereby increase the suffering in the world. Thus, Buddhists are urged to engage in “right livelihood,” ways of making a living that do not create further suffering in the world, as part of the Fourth Noble Truth concerning the following of the Buddha Way. It follows from this concern that a society that is built on creating desire in order to induce people to acquire goods and be consumers of more goods than are needed will be a society that increases the suffering in the world. When the wealth of the few requires the inordinate consumption of the many because of artificially induced desires, poverty becomes a necessary corollary to wealth.

It is one of the primary insights of Buddhism that dualistic views – perspectives or attitudes in which reality is divided into two opposing positions – will necessarily increase the suffering in the world, because one side has been reified, elevated into a fixed position, at the expense of the other. Buddhist analysis pays keen attention, therefore, whenever dualism appears, and finds

there another cause of suffering. Seen this way, poverty is but one side of human life, of which the other extreme is riches, and the Buddhist point of view is that such dualisms are entirely interrelated and interdependent, such that you cannot have one without the other. Poverty so seen is a direct outcome of the accumulation of wealth by one group at the expense of another.

For Buddhism, such a proliferation of wants is the basic cause of unnecessary ill-being. This implies that poverty can never be overcome by proliferating more and more desires which are to be satisfied by consuming more and more goods and services. . . . In short, there is a fundamental and inescapable poverty “built into” a consumer society (Loy 1999).

In this sense, even the affluent suffer in a consumer-oriented society, because their desires are never satiated. The poor in material goods suffer additionally because they do not have their basic needs for safety, health, and well-being met. Moreover, the many efforts by governments and institutions such as the World Bank to eliminate poverty may be seen as serving the needs of development for the purpose of creating and sustaining consumers, thus increasing the wealth of the rich, while making others poor.

Global poverty is thus conceptually necessary if the world is to be completely commodified and monetarized. . . . The poverty of others is. . . necessary because it is the benchmark by which we measure our own achievements. . . . In all these ways, then, we need the poor. . . . among the causes of poverty today are the delusions of the wealthy. . . . (therefore) we should not allow ourselves to be preoccupied only with the poverty side of the problem; to correct the bias, we should become as concerned about the wealth side: the personal, social, and environmental costs of our obsession with wealth-creation and collective growth (Loy 1999).

### Some Psychological Aspects of Poverty

The Buddhist concern for dualism finds its psychological corollary in the Jungian concepts of *persona* and *shadow*. Carl G. Jung, founder of analytical psychology, noted that personality may be divided between the *persona* and the

*shadow*. The *persona* is the “mask” or “face” that one presents to the world and includes all aspects of the person which the person consciously wants to be seen. It generally includes everything about one that may be expected to receive approval and consists, therefore, in all aspects that one considers good and acceptable. The *shadow*, on the other hand, contains all those attributes about oneself of which one disapproves or those of which one believes others will disapprove; it includes all things about which one might feel shame and which one therefore hides or denies. When it comes to the poor, the psychological situation was articulated by Malthus:

Even in the relief of common beggars we shall find that we are more frequently influenced by the desire of getting rid of the importunities of a disgusting object than by the pleasure of relieving it. We wish that it had not fallen in our way, rather than rejoice in the opportunity given us of assisting a fellow-creature. We feel a painful emotion at the sight of so much apparent misery; but the pittance we give does not relieve it. We know that it is totally inadequate to produce any essential effect. We know, besides, that we shall be addressed in the same manner at the corner of the next street; and we know that we are liable to the grossest impositions. We hurry therefore sometimes by them, and shut our ears to their importunate demands (Malthus 1992: 283, quoted in Johnson 2007).

Poverty thus constitutes society’s shadow, for the poor elicit an uncanny loathing on the part of those who are not poor. The loathing is uncanny precisely in the way Malthus describes, in which the giving of a “pittance” does not relieve the “painful emotion at the sight of so much apparent misery.” It is uncanny further because, as Malthus says, the sheer scope and intractability of poverty baffles the mind, invoking an unshakeable ambivalence.

The direct experience of the people who are poor – if one is not – is unsettling. To put oneself in their shoes is to imagine who and what we are underneath our clothing, our roles, our relationships, our money, credit rating, or house or car – it is to become aware of how thin and arbitrary the line is between the haves and the have-nots. In manifesting this core vulnerability and fragility, the poor live close to the border of life and death, which is the province of all spirituality. (It is to be

that intimate with the divine that some people choose poverty voluntarily).

The psychological point reinforces the Buddhist point regarding the dualism of poverty and wealth: the persona by definition requires the shadow. Indeed, the persona requires the shadow, for the persona itself is based on what it consciously declares it is not, namely, it is not the shadow. Without the shadow, the persona would not exist; without the persona, the shadow would not exist. They are interdependent. The rich require the poor psychologically, just as the poor require the rich.

Insofar as an individual accepts this division of reality into personality/shadow and rich/poor and identifies with only one aspect, one will be locked, psychologically, into only one half of one's actual possibilities and in denial about the other half. For the wealthy, they will be locked into maintaining their persona aspects: qualities of competence, superiority of ability and virtue, worthiness, and the right to all that is considered good in life, including creativity, power, dignity, and pursuit of happiness. To maintain the split, to make sure the shadow is suppressed, whole systems of thought will be devised to justify their position and to manifest *les droits du seigneur* – the rights of the lord. This psychological position will seek manifestation in every aspect of the social structure, from the economy to the politics to the arts and religions. All of society will become organized around the split between the persona and shadow, and the rich and the poor, in such a way as to insure the split and thus insure each side remains what it is and remains separate from the other.

The poor, for their part, insofar as they accept this division of reality, will become entirely identified as the poor, with all the psychological expectations demanded by their status as separate from the rich. They will not expect themselves to have a voice in the society nor a place; they will not expect to be treated with full human dignity; they will not expect to contribute to the arts nor have any place in religion except that of helpless victim, and thus they will adopt a form of a religion that reinforces their helpless status.

Consciousness and liberation for all people require the integration of split-off aspects of the personality. Programs to help the poor or end poverty will necessarily serve the divided psyche unless it speaks to the psychopathology of the division itself. Such a perspective cannot be imposed from only one aspect of the population, but must come from the ground up, from the people as a whole.

It is almost impossible to understand the psychological power built into the dynamics between the persona/shadow dynamics of the rich and poor. It is cross-cultural, at least among developed nations. It is built into the nature of what it is to be human, because to be poor is to express and manifest the core powerlessness and vulnerability of the human condition and to recognize how tentative and fragile human life is.

A psychological consideration of the persona/shadow dynamics of the rich and poor requires a spiritual vision, a vision of the whole, in which wealth and poverty are each integrated in relation to the other in mutual interdependence, and only from such a vision can the division between rich and poor even be imagined.

## Power

Lori B. Wagner-Naughton  
Western Connecticut State University, Danbury,  
CT, USA

Defined as the ability to influence other's thoughts, feelings, or behaviors in order to achieve one's own agenda. Power can be communicated through indirect methods (i.e., non-verbal behaviors) or direct verbal exchange. Intimate relationships, such as spouse, parent, or sibling, may engender a different influence compared to religious or political leaders. French and Raven (1959) assert that there are five social bases of power that influence relationships. These include reward, coercive, expert, legitimate, and referent. Raven (1999) further explains how reward power can be defined through rewards or approval from others, whereas coercive exchanges encompass punishment or disapproval. Expert power gives strength to the "influencer" through their knowledge or skill set. Legitimate power signifies a hierarchical structure or position within the relationship. Lastly, referent power describes the influential nature of identifying with or caring about another individual.

## Prajna

Paul C. Cooper  
National Psychological Association for  
Psychoanalysis, Two Rivers Zen Community,  
New York, NY, USA

Prajna is the Sanskrit term for wisdom, intuitive knowing, intimate knowing, "quick knowing" (Evans-Wentz 1954, p. 208), or simply "wisdom" (Okumura 2010). For the Zen practitioner, it is the direct seeing into reality "beyond words and letters." Prajna stands in contradistinction to knowledge based cognition or discursive, linear thinking, which from a Buddhist perspective would be considered dualistic and therefore limited. Prajna is the intuitive wisdom that reveals the truth of reality as embodied in the doctrine of emptiness and dependent-arising and that frees one from suffering. Prajna derives through the personal experience of meditation practice. The important Buddhist scripture, *Prajna-paramita Sutra (Perfection of Wisdom Sutra)*, describes prajna as unsurpassed and unequalled.

A direct parallel to psychoanalytic thinking can be found in the writings of the British psychoanalyst Wilfred R. Bion who makes a distinction between "K," knowledge that is known discursively and through the senses, and "O," which is his symbol for ultimate Truth and that can be intuited but not known. He writes: "O does not fall into the domain of knowledge or learning save incidentally; it can 'become,' but it cannot be 'known'" (Bion 1970, p. 26).

## Prayer

Allan Hugh Cole Jr.  
 Pastoral Care, Austin Presbyterian Theological Seminary, Austin, TX, USA

Prayer is a central act of religion that involves seeking and responding to the presence, interest, will, purposes, and aid of the Divine. It entails orientation toward the transcendent realm, whereby expression is given to one's own, and others', struggles, regrets, needs, and desires. This expression occurs in individuals and groups, in verbal and nonverbal forms, through conscious and unconscious states, and according to ritualized and non-ritualized methods. Motivations and effects of prayer may be understood in religious and psychological terms.

## Religious Understandings

William James called prayer "the very soul and essence of religion" (James 1902/1987). Viewing prayer religiously can involve to appeal objective and subjective factors (Pratt 1920; Wulff 1997). Objective factors generally pertain to two matters. The first is the belief that prayer is offered to, received by, and acted upon by an ontologically real and supernatural divine being. Many religious traditions, particularly monotheistic ones (e.g., Judaism, Christianity, and Islam), refer to this being as God. When human beings pray to God, they do so to one that exists and functions outside of their own subjectivity. They seek an encounter with or relationship to an objective, transcendent, but living and acting entity. A second matter involving objective factors of prayer concerns its effects. Appeal is made to tangible external criteria to discern prayer's

benefits, such as improvement in physical or emotional state, or provision for one or more needs. In many Jewish and Christian religious traditions, prayer is viewed as a human response to God's acting on our behalf, such that God always acts first and, even in prayer, human beings act subsequent to God's initial action. Even so, many of these same traditions subscribe to belief in divine passibility (i.e., God's capacity to feel and empathize). God's nature is such that human prayer can affect God's will and purposes and enlist God's concern and help.

Subjective factors of prayer relate to how it involves and changes the one who prays. Søren Kierkegaard, a nineteenth-century philosopher, claimed that one should pray out of devotion to God, but especially to bring one's own will, efforts, and needs in line with those of God (Kierkegaard 1990). Kierkegaard held that prayer does not change God, for God is unchangeable. Rather, prayer changes us. Herein lay its purpose and value.

Twentieth-century theologian Paul Tillich echoed this perspective. He claimed that in prayer we surrender to God, "the ground of being," and are taken into God's creative acts (Tillich 1951; McKelway 1965). In prayer, we become part of God's "directive creativity" in the world. Kierkegaard and Tillich stressed the role of human subjectivity in religion. Kierkegaard anticipated psychological perspectives on matters of religion, faith, and practices such as prayer, while Tillich appropriated these perspectives for theology and the philosophy of religion. Support for the veracity of both objective and subjective claims concerning prayer is found in sacred texts of many religions.

## Psychological Understandings

Psychological perspectives on motivations and effects of prayer consider how it relates to religious practices and experiences, but especially as these involve what transpires within the praying subject with respect to cognitive, emotional, relational, and behavioral states.

Some psychological perspectives, particularly those tied to Freudian thought, view prayer negatively. Like all religious beliefs and practices, it is said to involve an infantile form of seeking wish fulfillment (Freud 1961). In this view, one pursues in prayer the presence and provision of an all-powerful deity that compensates for human limitations and unmet needs or desires. As we look to parents to meet our needs in childhood, we look to God as we age. Such pursuit is viewed negatively because of its basis in irrational thinking and delusion and its appeal to superstition or magical powers.

Other psychological perspectives hold a more positive view of prayer and stress its potential benefits for human well-being. Some like William James and other psychologists of religion who were his contemporaries have suggested that prayer is “the religious experience *par excellence*” (see Capps 1982). Others have found that prayer is a common source for religious experience, second only to music (Argyle 2000/2004; Greeley 1975). Prayer promotes a particular type of consciousness, including inward communion marked by earnestness, openness, and expectancy; and something is “transacted” in prayer that involves “spiritual energy” and which can promote therapeutic gain (James 1902/1987). Moreover, prayer may lead to enhanced self-awareness, which can include a deeper consideration of held values, ideals, goals, and responsibilities (Jung 1961/1989). Prayer can also promote “active cognitive coping” (Argyle 2000/2004) and cognitive restructuring, particularly as understood by principles of cognitive therapy (Beck and Emery 1985; Cole 2008a, b). In this view, how one feels and acts is directly related to how one thinks. As one becomes more aware of one’s thoughts, patterns of thinking, and how these inform one’s feelings and behaviors, one may then alter how one feels and behaves by altering what and how one thinks. Prayer has the capacity to foster thinking, and thus feeling and behaving, in more faithful, peaceful, healthy, and whole ways. Seeking a type of cognitive restructuring through prayer parallels what occurs in various methods employed in a therapeutic setting.

## Types of Prayer

In the early twentieth century, the German historian of religion Friedrich Heiler (1892–1967) proposed a typology of prayer consisting of nine distinct forms (Heiler 1932). These include primitive, ritual, hymns, Hellenistic, philosophical, prayer of the religious expert or genius, prayer of great poets and artists, prayer in public worship, and prescribed and meritorious prayer. Heiler’s typology still has value, but a simpler and perhaps more relevant approach considers four primary types of prayer: meditative, ritualistic, petitionary, and colloquial (Argyle 2000/2004; Poloma and Pendleton 1991).

In meditative prayer, one attends to acts of contemplation and seeks the presence of God and communion with God. Meditative prayer usually results in altered states of consciousness. Although practiced less frequently than other types, its effects can be significant (Argyle 2000/2004). In ritualistic prayer, spontaneity gives way to more formulaic, if not prescriptive, forms. Ritualistic prayer also tends to be practiced among groups whose leadership consists of an identified priestly class that regularizes expectations and practices of prayer life (Heiler 1932). This form of prayer is often practiced in particular places held to be sacred, which informs a degree of emotional investment and perceived power in praying that otherwise may be lacking (Argyle 2000/2004). Petitionary prayer is the most spontaneous form. In using it one makes explicit requests of God for intervention or help, but this generally lacks critical reflection (Heiler 1932). Whether offered by individuals alone or collectively by a group, it usually involves more intense emotional states, and it often issues from a need for God’s aid amidst a perceived threat (Heiler 1932). Colloquial prayer shares many qualities with petitionary prayer and especially relates to efforts for “religious coping” (Argyle 2000/2004). As the most common form of prayer, it involves talking with God as a friend or close associate and using a familiar tone with ordinary language (Poloma and Pendleton 1991). A major study has shown that among conservative Protestant Christians, experience with prayer is

predictive of overall existential well-being, whereas for mainline Protestants, prayer is less predictive of well-being than regular church attendance (Argyle 2000/2004; Poloma and Pendleton 1991).

## Predestination

Mark William Ennis  
Clinton Ave. Reformed Church,  
Bergenfield, NJ, USA

Predestination (election) is an ancient Christian concept that is perhaps the most widely misunderstood of all Christian doctrines. In the Christian Canon it is mentioned first in the Pauline literature, Ephesians Chapter 1 in which Paul defines the Christian community as being “preordained” by God for adoption since before the beginning of creation.

In many respects this assurance to the congregation in Ephesus establishes the “legitimacy” of Gentile Christians amid an atmosphere of largely Jewish Christians. As Jews became a chosen people because of the unilateral covenant that God made with Abraham and his descendents, so God now makes a unilateral covenant with Gentiles. Gentile Christians are thus “predestined” and are the equals of God’s chosen people: the Jews.

The church in Ephesus to whom this was written suffered under great persecution in the Roman Empire. Paul’s assurance of God’s choice of them serves to give courage to this persecuted community. Viktor Frankl observed during World War II that harsh conditions can be endured with the knowledge of a deeper meaning to life. Love, he reasoned, could enable people to live through conditions that might seem to be unlivable.

In early Christian times, the Church Fathers wrestled with the concept of predestination (election) feeling the tension between this doctrine and “free will.” Others confused this doctrine with “fatalism” in which one’s life is scripted by God and each second of life is predetermined.

Scripture however says nothing of a life script. It speaks of God's irresistible love that will ultimately bring those elect to salvation. It describes the ultimate destination but does not in any way suggest a scripted life.

During the Protestant Reformation, John Calvin, in order to combat what he perceived to be the salvation by works taught by the Roman Catholic Church, expanded this doctrine to include a "double decree" of predestination (election). This double decree put forth the thesis that as some people are predestined for heaven, others are predestined for damnation. Calvin, although putting forth this idea, did warn that speculating on the roster of such a list would not be productive.

In later years Arminian thought challenged Calvinists. James Arminius, who studied under Beza, a student of Calvin's, put this thought forth. Arminius argued that God's grace was indeed resistible, and humans ultimately participate in their own salvation through their decisions. Thus began in the Netherlands, the controversy between Arminianism and Calvinism led to the Synod of Dort (1618). This synod affirmed predestination (election), repudiated Arminianism, and cemented the rift between believers in each of these schools of thought.

In the twentieth century, Swiss theologian Karl Barth again tackled the doctrine of preordination (election). He upheld the double decree of election but argued that in the atoning work of Jesus, God leaves the list of those damned under the double-decree vacant, thereby opening up the role of the elect to all people.

The doctrine of predestination (election) represents the full unconditional love of God for an individual. Much like a child yearns for parental acceptance, so those adhering to this doctrine know the true joy of acceptance by their creator. They are chosen, as were the ancient Jews through the Abrahamic covenant. In a world where often we see the breakdown of traditional social groups and institutions, this doctrine emphasizes belonging and can be seen as an antidote for an anomic person. During personality development the knowledge of this connection by election gives a person a grounding of belonging.

## Prejudice

Brandon Randolph-Seng  
College of Business & Entrepreneurship,  
Department of Marketing & Management,  
Texas A&M University - Commerce, Commerce,  
TX, USA

Psychologically, prejudice can be defined as a predetermined judgment of a group of people including its individual members. This preconceived judgment is usually considered to be negative. Within religion, many historical examples of prejudice can be found from Christian persecution of Muslims to Muslim persecution of Jews. Therefore, a powerful

justification for prejudice is the religious belief that God has ordained a specific social order. However, a powerful justification against prejudice for a religious believer is the belief that God has ordained that “all are created equal.” Many historical examples could also be cited as evidence to this association (Meyers 2008). What then is the connection between prejudice and religion? The answer to this seeming contradiction can be resolved upon closer examination of the psychological components of an individual’s religious belief and action (Donahue and Nielsen 2005). Individuals with an intrinsic religious orientation understand all of life by their religion. Religion is an essential part of their orienting system towards themselves, others, and the world at large. Individuals with an extrinsic religious orientation on the other hand see religion as a means to other types of ends like social activity or power (Allport and Ross 1967). Compared to more extrinsically motivated religious individuals, these intrinsically religious believers tend to be less prejudice. Therefore, depth of religious commitment may be the key to either making or unmaking prejudice in religious domains (Meyers 2008).

## Primal Horde Theory

Benjamin Beit-Hallahmi

Department of Psychology, University of Haifa, Haifa, Israel

In *Totem and Taboo* (1913–1955), Freud analyzed the phenomenon of totemic religion, characterized by the centrality of the totemic animal, symbolizing the clan, in worship, and the incest taboo applied to all members of the same clan. This could still be observed directly among preliterate cultures in our time. Freud asserted a connection between totem, taboo, and paternal authority.

He suggested that this connection stemmed from human prehistory, when humans lived in large groups, the primal horde, dominated by one older male, who could monopolize all females (this was first proposed by Charles Darwin). This tyrannical father was murdered and then eaten by the resentful young males, his sons, who then possessed all females, including mothers and sisters. The murdered father was then symbolized in the totem animal, which holds the authority within the horde. Through the sacrifice of the totem animal, the sons could try to allay their burning sense of guilt and to bring about a reconciliation with their father.

The primal crime and the resulting guilt were the starting point for civilization, morality, the incest taboo, and religion. The guilt-stricken brothers agreed to a social contract: Stop the war of all against all and to prohibit copulations within the clan, thus controlling, if not conquering, the disruptive and destructive impulses of sex and aggression.

The primal crime left a legacy found everywhere in culture. From the prehistorical to the more abstract and symbolic, the functions of commemoration, appeasement, and renunciation of instinct remained integral to the cultural compromise of the Oedipus complex expressed through religion. Religious myths and rituals obsessively reenacted the primal crime, and the totemic meal, in which the primal crime was celebrated and atoned for, became the Christian Eucharist, and the Jewish Passover.

While Freud's assertions regarding the events of human prehistory have been rejected by most scholars, his psychological observations regarding the dynamics of totemism and ritual have been treated with respect.

Some of the best known anthropologists of the twentieth century, while critical of Freud's thesis about the primal crime in the primal horde, embraced his phylogenetic insights. These included A. L. Kroeber, Ernest Becker, Meyer Fortes, and Derek Freeman. Margaret Mead speculated that Freud was, after all, right about the "primal crime," except that this deed was committed much earlier in the evolutionary history of humanity. It was a prehuman horde, when sexual maturity was reached at age 7 or 8, and life was much shorter. And the deed was committed repeatedly, as each generation got rid of the earlier one over hundreds of thousands of years, until these prehumans became real humans.

## Primordial Waters

David A. Leeming  
University of Connecticut, Storrs, CT, USA

All cultures naturally recognize water as a necessary source of life and survival, making

it a useful symbol of creative fertility – spiritual and psychological fertility as well as physical fertility. At the same time, large masses of water are uncontrollable and, therefore, aptly representative of chaos – the chaos that precedes creation. Together, these two symbolic functions lead us, like the cosmic egg symbol, to the idea of potential, as yet unformed reality. The primordial waters figure strongly in creation myths from all corners of the world. The waters speak to the larger metaphor of creation as birth. We are all born of the maternal waters, and so, in creation mythology, worlds are typically born of the waters.

In the earth diver type of creation myth, a diver, usually a humble animal, is sent by the creator to the depths of the waters to find soil with which to begin the creation of Earth. In several Native American myths, a toad or a muskrat, for instance, succeeds after much difficulty, in penetrating the waters, like the lonely sperm which penetrates the egg, and brings back the fertilizing germ of creation, a tiny bit of earth, a fetus to be nurtured. In India, the Garo people say it was Beetle who succeeded in the dive. The Gond people say that the creator, sitting on a lotus leaf on the waters, sent the crow to find the seed of life. The Birhor creator also sits on the lotus, by means of which he himself has emerged from the waters, and he sends the lowly leech to find the germ of creation. In a Hungarian myth, the sun takes the form of a duck and makes the successful dive for the "seed." Out of this small beginning in several Native American myths – particularly of the Iroquoian speaking peoples – a woman who falls from the sky, the heavens, now an Earth Mother, directs the process of creation and civilization resulting from the bit of earth. The maternal birth-giving waters are, after all, feminine.

In a Polynesian myth of Samoa, the creator broke out of a cosmic egg and allowed parts of the shell to "fertilize" the Primordial waters causing the formation of the Samoan Islands. Some Samoans say that the creator himself dove to the depths to find the stone that would form the basis

of creation. A myth of the Papago of Arizona tells how in the beginning darkness rubbed with the primordial waters and so impregnated “her” with the first human. A Mongolian myth relates how the creator simply stirred the waters – perhaps a veiled image of intercourse – and filled them with creation.

The primordial water can stand as a symbol of the possibility of rebirth, a psychological and spiritual new beginning. Baptism contains the elements of this symbolism. The initiate dies to the old life in a kind of symbolic drowning but is reborn from the maternal and cleansing water as a new “whole” being. The water is also an archetypal representative of the unconscious, in the depths of which the earth diver – the individual – can, sometimes at great risk, discover the seeds of individuation. The waters are the amniotic fluid in which preconscious Self is formed and from which conscious Self will emerge.

### Progoff, Ira

Steven B. Herrmann  
Oakland, CA, USA

Ira Progoff’s (1959) *Depth Psychology and Modern Man*, behind his theory of “dynatypes,” is the presence of the archetypal image of the American Bard, for which Walt Whitman serves as an exemplar. Progoff grasped that Whitman had “reached a stage in his inner development that enabled him to recognize, and spiritually participate in, the holistic process of the cosmos” (Progoff 1959, p. 91). Whitman’s participation in the Divinity within the Cosmos, and his celebration of his own life, as a speaker of Divinity out of his own essential Nature spoke directly to Progoff and made a profound impact on him. Progoff’s theory of *dynatypes* may be traced to a study by Jan Christian Smutts, *Walt Whitman: A Study in the Evolution of Personality* (Smutts 1973), and Carl Jung.

Progoff had been inspired to explore the process of organic evolution in human nature in depth as a social psychologist and psychotherapist after his meeting with C. G. Jung, in Zurich in 1951, when he recognized that the process of individuation could also be *evoked* through a literary channel outside analysis, namely, through writing.

Creating a new method to *evoke* the individual Personality in a natural way, through Journaling, outside the container of analysis, is where Progoff made his greatest contribution to twentieth century humanistic thought. The aim of his technique of Journaling is to evoke the inborn blueprint for wholeness in the human being. In *Depth Psychology and Modern Man*, Progoff advanced his original hypothesis that the psyche is made up of “dynatypes” or “enacting images” that form the basic patterns for completeness in all humans. He developed this notion with C. G. Jung’s fundamental conception of the psyche, at the Eranos Conference of 1946, in hand, where Jung had pointed out that there are inherent

propensities for human action, analogous to patterns of behavior in the animal world, patterns of activity which are inherently unconscious and that cannot become conscious, except by means of images. These *dynatypal images*, Progoff argued, operate out of a “psychoid continuum,” which is only “psychelike,” that is, neither fully instinctual (biological) nor psychological. By this, Progoff means that dynatypes have two complementary feet: one foot rooted in material reality, the other in psychic reality. These two feet make up what Jung referred to as the unitary nature of the psyche: the “*third area within and between ordinary and non-ordinary reality: the Psychoid*.”

Although Jung had worked out his main points about the archetype, as early as 1919, Progoff’s extension of the central notion of the dynatype added a new dimension to the idea of vocation as a psychological and spiritual path. Progoff incorporated Jung’s concept of the archetype and Whitman’s idea of the evolution of the Personality into his theory of “dynatypes,” suggesting that – like all animals – we carry within us “images of activity” that form the basic ground plan for our existence:

There is the dynatype of the seer and the dream interpreter, a figure whose prototype is Joseph in the Bible, and who Sigmund Freud re-enacted in recent times. . . . Corresponding to this there is the dynatype of the seeker for truth in various forms. The seeker for truth in nature is expressed in modern times as the scientist, and in earlier times as the astrologer and alchemist (Progoff 1959, pp. 185–186).

Progoff saw plainly enough that the dynatype is what gives us all coherence. It is the unifying factor in every human being. Dynatypes are what make us all separate, unique, and different – distinct from everyone else. All life strives for individual distinction: a *vocation to live by*. Vocation is an experience of the Self that can only be communicated to the world through a *calling*, and as the central mystery of life the dynatype can never be fully known except by means of *symbols*. Dynatypal images have two main constituents, in Progoff’s view: the known and the unknown, the relative and the absolute.

The known aspect relates to the conscious ego, the absolute to the Self, the essential design of totality in the human personality that touches the Cosmos at its greatest interior and exterior depths. The dynatype *calls* each person to conscious Self-realization from the core of Personality. For each individual, then, vocation partakes of the absolute knowledge of the Self as the nuclear image of personality creation.

The impersonal “voice” of the dynatype that speaks during the writing of an epic poem, for instance, as a living expression of the omnipresence of the Divinity in All, comes directly from the transpersonal world. One of the best examples of this kind of subjection to a higher spiritual power in Western poetry may be found in Whitman’s poem “By Blue Ontario’s Shore,” where he actually hears the voice of “the poets of countless generations” or the *Dynatype of the Poet* of all ages summoning him to “chant” the Civil War victories of “Libertad”:

By blue Ontario’s shore,  
As I mused of these warlike days and of peace  
returned, and  
the dead that return no more,  
A Phantom gigantic superb, with stern visage  
accosted me,  
*Chant me the poem*, it said, *that comes from the  
soul of  
America, chant me the carol of victory,  
And strike up the marches of Libertad, marches  
more powerful yet,  
And sing me before you go the song of the throes of  
Democracy*  
(Whitman 1982, pp. 468, 474, 484).

The inception of Progoff’s intellectual development began with his first major publication in 1953, *Jung’s Psychology and its Social Meaning*, where he started to focus early in his career on the explication of Jung’s understanding of the “God-archetype in relation to mystical and cosmic experiences” (Progoff 1953, p. 210). Progoff saw in Jung’s work that the world was undergoing a death to its various god symbols and was standing on the verge of spiritual rebirth. “When a god dies,” Progoff writes “the structure of value looses its support; its vital quality is gone; it looses its meaningfulness, its authority, and its ability to inspire. . . . New gods will in time be

brought to birth; Jung is sure of that. The human race can do nothing else, unless it exterminates itself” (Progoff 1953, pp. 217, 219).

The dynatype and the “protoplasmic image” are analogous concepts: “The life of the scientist is the unfoldment of such an image. It is his dynatype, the image that propels him forward from within, directing him toward goals he can see only dimly and distantly but to which he is dedicated with all his being” (Progoff 1959, p. 209). Progoff’s aim was to integrate the fields of psychology, science, and religion:

Increasingly the modern person will feel at home on the dimension of spirit having his way there integrally via the depths of the psyche. He will have forged out of his personal experience a new awareness of what spiritual reality is, not as an object of dogma but as a place of meeting in the depths of man where meaning unfolds (Progoff 1963, p. 226).

In 1973, in *Jung, Synchronicity, and Human Destiny*, Progoff went further to elaborate Jung’s theory of synchronicity with remarkable precision, particularly as it applies to the process of human Destiny as a whole. This book was written in manuscript form by 1953, and Jung saw then that Progoff was one of the few who really understood his concept of synchronicity. In this seminal book, which I see as his masterpiece, Progoff tells a very interesting story of how, one day in 1953, he had been sitting with Jung beside the Lake of Zurich when Jung suddenly turned to him and asked if he had ever used the *I Ching*. Progoff replied “No,” to which Jung answered, then “let’s do it.” Based on his experience, Progoff wrote convincingly: “the *I Ching* oracle can be truly meaningful in reflecting the wide breadth of time in which a person’s destiny is unfolding” (Progoff 1973, pp. 24, 26).

By 1953 Progoff had found the key for his notion of the dynatype, when he wrote that when psychic energy reaches the non-psychic level, it passes beyond the psychological realm into the psychophysical realm that unites psyche with the realm of Cosmos. It is in this transpsychological realm that the dynatype touches upon the realm of the Real or what Jung calls the archetype of Destiny. In Jung’s view, fate and

Destiny cross our paths every day and face us with ethical decisions, without which we might never become personalities and achieve full Self-consciousness. As Jung saw it, we are blessed by fate and we suffer from it, and the same is true for human Destiny: fate and Destiny may be *felt* to be either a charisma or a curse. We cannot know our fate any more than we can know our Destiny. Fate comes to unbidden and the same is true of human Destiny: it comes to us from the objective psyche and the world, of which we are an integral part. One aim of analysis is to help patients make what is objective real, to manifest one’s Destiny pattern through a vocation to live by, and if one does that one lives in Tao.

From the beginning of his published work, Progoff was moved to speak for the field of transpersonal psychology as “a method that is *beyond psychotherapy* because it takes a *transpsychological* approach to what has been thought of as psychological problems. Here the word *transpsychological* means that it brings about therapeutic effects not by striving toward therapy but by providing active techniques that enable an individual to draw upon his own inherent resources for becoming a whole person” (Progoff 1975, p. 9). Progoff ends his basic text by quoting Emerson’s essay on *Self-Reliance*: “Nothing can bring you peace but yourself” (Progoff 1975, p. 15).

## Projection

Lee W. Bailey  
 Department of Philosophy and Religion,  
 Ithaca College, Ithaca, NY, USA

Projection is the term used to describe a common psychological dynamic, well known in psychotherapy and critical studies of religion. It means the attribution of qualities of person A to person or thing B that can be traced back to the unconscious contents of person A, such as love, hate, or divinity. It is a useful theory that describes both normal and pathological ways of involvement in the world, such as falling in love at first sight. It has been used to attack religion as “nothing but” illusory projections of an infantile father complex, but recent thinkers have challenged this view. Pre-theoretical “projections” are described in ancient literature.

### Ancient Greeks

Pre-theoretical “projections” are described in ancient literature. Xenophanes proclaimed: “But if cattle and horses or lions had hands, or were able to draw with their hands and do the works that men can do, horses would draw the forms of the gods like horses, and cattle like cattle, and they would make their bodies such as they each had themselves” (Kirk and Raven 1957, p. 169). Xenophanes’ critique is not atheist, but is an effort to clear away attributions [“projection” is a modern term] that distort his view of a refined

monotheism: “One god, greatest among gods and men, in not way similar to mortals either in body or in thought” (Kirk and Raven 1957, p. 169).

Plato reports on a Sophist argument that the differences between different tribal gods reflect merely tribal qualities: “This party asserts that gods have no real and natural, but only an artificial being, in virtue of local conventions, as they call them, and thus there are different gods for different places, conforming to the conventions made by each group” (1961, *Laws* X, 889E).

Plato also describes what psychologists commonly call “projection” in a lover’s passion, rooted in an unconscious complex: “So he loves, yet to knows not what he loves; he does not understand, he cannot tell what has come upon him” (1961, *Phaedrus* 255D). Lovers attribute qualities to their beloved ones, Plato says, because they are unconsciously adoring a god:

All this, mark you, they attribute to the beloved, and the draughts which they draw from Zeus they pour out, like bacchants, into the soul of the beloved, thus creating in him the closest possible likeness to the god they worship (1961, *Phaedrus* 253A).

Similarly, Freud says centuries later, parents project royalty onto “His Majesty the Baby,” because “they are under compulsion to ascribe every perfection to the child” (1974, Vol. 14, p. 91). Like Plato’s lover, Freud’s theoretical parents project godlike perfections onto their beloved children.

Plato’s lover is projecting forth a flowing stream that originates in Zeus, for example, and floods his beloved with a passion. But “he cannot account for it, not realizing that his lover is as it were a mirror in which he beholds himself” (1961, *Phaedrus* 255D). Like Freud, Plato recognizes that the lover is unconsciously looking in a mirror, but unlike Freud, Plato believes that what we call “projections” originate in gods, not in subjectivity.

### Ludwig Feuerbach

Plato’s theory was theological, but in the nineteenth century, Ludwig Feuerbach reversed

Plato's theology, arguing that "The personality of God is nothing other than the projected personality of man" (1841/1957, p. 226). Unlike Xenophanes and Plato, Feuerbach did not want to clear the way of projections, so we could see a purified divinity or Being. On the contrary, he was immersed in the materialist subject-object metaphysics that sought to reduce religious ontology to the metaphysics of subjective contents. He stresses not just the illusions of such projections. The positive contents of religion Feuerbach wants to return to human self-awareness:

God is the manifested inward nature, the expressed self of a man - religion the solemn unveiling of a man's hidden treasures, the revelation of his ultimate thoughts, the open confession of his love-secrets (1841/1957, pp. 12–13).

Although Feuerbach's theory of projection was adopted widely by atheists, ironically he did not use the term "projection," which was available in German as *projizieren*. His English translator George Eliot provided this word. Feuerbach used the terms *Entäusserung* ("externalization" or "alienation") and *Vergegenständlichung* ("objectification" or "alienation"), so his theory is better termed one of "theological alienation." Marx borrowed this.

## Camera Obscura

Where did the image of "projection" originate that was attached to these early psychological and religious insights? Two old related machines were the experiential collective source: the *camera obscura* and the "magic lantern." The *camera obscura* is a dark room with a small hole allowing the external scene to be projected onto an internal screen. In the tenth century, Alhazen experimented with solar eclipses projected into a dark room. Roger Bacon also experimented with the dark room, using mirrors (Bacon 1614). Leonardo daVinci also experimented with a small *camera obscura* and made the first surviving comparison to the human eye:

When the images of illuminated bodies pass through a small round hole into a very dark room, if you receive them on a piece of white paper

placed vertically in the room at some distance from the aperture, you will see on the paper all those bodies in their natural shapes and colors, but they will appear upside down and smaller . . . the same happens inside the pupil (DaVinci 1490).

Descartes explored the *camera obscura* with an ox-eye in the aperture to invert and focus the image. He considered the results unreliable, but John Locke believed the images to be reliable pictures of the outer world, which supported his psychology of representation. The *camera obscura* was a widespread instrument by the Renaissance era and fed both the collective images of mental projection and of mental subjectivity.

## The Magic Lantern

While the *camera obscura* received external images into a dark room, the "magic lantern" projected images, painted on mirrors or glass, into a dark room, often with dramatic intent. The Dutch physicist Christian Huygens first combined the elements of candlelight, lens, and picture on glass around 1659. The Jesuit Athanasius Kircher published the first illustration in his *Ars Magna*. The magic lantern spread around Europe with traveling magicians and carnivals using images such as angels and demons that produced shocking effects on audiences. Diderot's *Encyclopedie* explained the technique in 1753, but many were still in the dark (Fig. 1).

A Belgian magician named Etienne Robertson's traveling *Phantasmagorie* show used the magic lantern dramatically. He tossed chemicals into a brazier in front of an audience, producing smoke, and images were projected from concealed magic lanterns onto the smoke. Demons, skulls, skeletons, and dead heroes appeared in the smoke (the "smoke screen"). Spectators sank to their knees, drew their swords, or covered their eyes in terror. Such shows multiplied, and their tricks were exposed in popular magazines (Barnouw 1981). By the nineteenth century, the magic lantern was spreading the idea that angels and demons alike were "nothing but" projections from a magic

**Projection, Fig. 1** Magic Lantern machine (Diderot 1753)

lantern into a dark room. Thus, Feuerbach was able to translate this collective image into a philosophical theory by 1841 (Fig. 2).

## Sigmund Freud

By 1895, when the movie projector was finally working in Edison's lab, Freud's first formulation of the theory of psychological projection also appeared that year. He proposed that paranoia uses projection as a defense: "The purpose of such delusions," Freud writes, "is to fend off the idea that is compatible with the ego, by projecting its substance into the external world" (1974, Vol. 1, p. 209). Freud added to the popular image of projection by a magic lantern and to Feuerbach's philosophy of projection from subjectivity, not only psychological depth, but the notion of projection as a mental "mechanism," modeling on nineteenth-century technological inventions (such as magic lanterns). He used the theory commonly from clinical analyses to cultural criticisms of religion:

I believe that a large part of the mythological view of the world, which extends a long way into the

most modern religions, is nothing but psychology projected into the external world (Freud 1974, Vol. 6, pp. 258–259).

Here Freud illustrates the positivist effort to reduce religion to subjective contents using the theory of projection. Projection became a major argument for atheism in the twentieth century by reducing gods to subjective illusions. It also offered a useful perspective for cleansing religions of inappropriate projected accretions, such as nationalism and racism.

The theory of projection was applied in the clinical development of analysis of psychological transference and countertransference between patients and therapists. The "withdrawal" of projections was the description often used in the therapeutic work of "owning" or recognizing one's own unconscious feelings initially experienced in other people or in the world in many developing schools of psychotherapy.

## Carl Jung

When Jung developed his theory of the collective unconscious and archetypes, he welcomed Freud's theory of projection but modified it. Like Freud, he saw projection in culture saying: "All human relationships swarm with these projections" (Jung 1953–1978, Vol. 13, para. 507). Projections generate "blinding illusions which falsify ourselves and our relations to our fellow men, making both unreal" (Jung 1953–1978, Vol. 7, p. 373). Jung agrees with Freud that in transference, projections are often rooted in unreal infantile and erotic fantasies. However, he rejected Freud's theory that projection is primarily a defense mechanism, infantile and personal in content. Jung also rejected the view that projections are caused by individual repression, as he realized the collective, impersonal contents in projections. Patients not only fell in love with him but also fantasized that he was a devil or a savior (Jung 1953–1978, Vol. 7, p. 99). Not only illusions but also strengths may appear in projections, Jung found.

**Projection,**

**Fig. 2** Phantasmagorie, Magic show frightening spectators using magic lantern projecting demons onto smoke (Robertson 1831)

Jung did keep projection largely in the subject-object metaphysics (Jung 1953–1978, Vol. 18, p. 367). However, he occasionally questioned this dualism, saying: “The word ‘projection’ is not really appropriate, for nothing has been cast out of the psyche” (Jung 1953–1978, Vol. 9, Pt. 1, p. 53). He came to reject the positivist view of projections as “nothing but” subjectivity. Throughout his work, Jung says that gods in themselves are beyond the grasp of human consciousness but have real psychological, symbolic meanings that are important, not illusory.

After his 1944 near-death experience, Jung’s mystical explorations into alchemy led him to see projections not as simply part of the subject-object metaphysics of empirical sciences. He saw projections as part of an ontologically deeper participation in the depths of existence. This was expressed in the paradoxical and obscure symbolic alchemical language that he translated. Here *proiectio* is part of the casting forth of the philosopher’s stone (which is not a stone but a wisdom) into the banal world, which transforms it into a precious mystical treasure, including awakening to the *unus mundus* (one world), below its multiplicity. Jung agrees with projection theory’s separation of inner from outer, but he is also compelled to describe the one world containing the collective unconscious, below the subject-object divide. This paradox of the one and the many and their

relations is a deep mystery explored by philosophers since Plato. Jung enriched its psychological dimension.

The Jungian analyst Marie-Louise von Franz explored projection thoroughly in 1980. She shows the value of projection theory and touches on the difficulty of its subjectivism: “outward-material and inner-spiritual are only characteristic labels” (Von Franz 1980, p. 91). This theme makes projection less of a serious critique of religion. The archetypal psychologist Wolfgang Giegerich criticizes the theory of projection as the servant of physics, withdrawing soul and Being from its mechanistic framework.

Object-relations psychology expands projection theory with Melanie Klein’s theory of introjection (the opposite of projection), the process of taking external images and reality into the inner world of the self.

## The Netherlands

In the Netherlands after World War II, the study of projection theory was greatly expanded (but not translated from the Dutch) by several thoughtful scholars, notably Simon Vestdijk, Fokke Sierksma, and Han Fortmann (Bailey 1988). Vestdijk and Fortmann, for example, both stressed that projection is not a psychological fact, but an explanatory hypothesis.

In his 1947 *De Toekomst der Religie* (The Future of Religion), Vestdijk criticized absolute metaphysical religion as a projection but argued for a mystical, introspective religion that withdraws projections in Buddhist fashion. The book evoked a storm of protest in Holland.

Fokke Sierksma's 1956 *De Religieuze Projectie* (Religious Projection) placed projection in a framework of a psychology of perception, taking it out of the theory of being a pathological defense. Han Fortmann, a phenomenologist of religion, influenced by Jung and Heidegger, dismantled the subjectivist philosophy underneath the theory of projection in his 1968 *Als Ziende de Onzienlijke* (As Seeing the Invisible). For him, projection is not a subjective interiority projected into an objective world, but participation in qualities in the lived world (*Lebenswelt*). Participation in the world, as in ritual, is not just primitive, delusory, or infantile, but a normal way of being-in-the-world, as in Feuerbach's and Buber's I and Thou relations, Freud's "oceanic feeling," Jung's collective unconscious, Heidegger's ontology, Vestdijk's mysticism, and Sierksma's perceived world. There are no subjects, no objects, no projections, for these concepts are reified theories of the mechanical metaphysic. Thus, a door to religion in a new key is composed. The theory of "projection" is a useful tool in psychotherapy and religion to separate personal feelings from outer situations, but its philosophical foundations have been deepened enough to challenge its use in dismissing religions.

## Projection and Han Fortmann

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Han Fortmann (1921–1970) was a major Dutch thinker who completely rethought the psychological theory of projection and religion and overcame the old Freudian way of saying that God is a “projection” of the infantile father complex from the subjective psyche. Fortmann put the theory of projection on completely new ground, beyond the Cartesian subject/object dualism. He was a creative and prolific writer, and Professor of the Psychology of Religion and Culture at the Catholic University of Nijmegen (1957–1970). He was largely unknown to English readers, since his major work was not translated into English until 1991 as *Envisioning the Invisible*.

Fortmann’s work on projection was the third in a Dutch series of three books on the theme. First, Simon Vestdijk (VEZ-dike) wrote *The Future of Religion* in 1947. He took the (at that time) scandalous post-Freudian and post-Christian position, exploring world religions, that “metaphysically projecting man stays put in his religious development because he has placed his religious ideal outside of himself” (Fortmann 1947, Chap. 43, section 4).

Secondly, Fokke Sierksma (SEER-ks-ma), in *Projection and Religion* (1956), built a new view

of projection on Kant’s a priori rational categories, necessary to thought, such as space and time, saying, like Vestdijk, that these can be seen as normal projections, not Freudian illusions. Sierksma placed projections into the psychology and phenomenology of perception. He sought to develop a more scientific, biological basis for projection as a part of every animal’s *Merkwelt* (marked world), a framework of meanings necessary for stability, both in logical and religious thought. So, for example, hungry Eskimos project the image of an angry sea goddess under water, withholding food. This keeps chaos at bay in their *Umwelt* (surrounding world). Sierksma saw that some humans, notably mystics and Buddhists (as Vestdijk also said) can step back from such projections and “deproject.”

Fortmann wrote a major reevaluation of the theory of projection in psychology and religion, leaping past Freudian subjectivism into twentieth-century archetypal psychology and ontological phenomenology. He rejects both the “wholly other” God of remote transcendence and the Cartesian construct of the subject/object dichotomy, upon which Freud’s theory of projection rests. Projection is not an empirical fact, Fortmann says, but a hypothesis, needing reevaluation of its foundational thought. Projection of emotional subjective contents onto a theoretically dead objective world or heaven is a badly distorted psychology, religion, and philosophy, Fortmann argues. It is a useful mental tool for scientific thinking, we might say, to make distinctions between bias and world, but it is not total; it does not “go all the way down.” As Jung (1953–1979, 1961) came to believe in his later days, the world of the collective unconscious is *unus mundus*, a whole in which we participate deeply in our holistic oneness with the world. This is where religious experiences emerge, in the one world of our souls and the stars. The deepest spiritual truths are full of the clouds of mystery, paradox, and *coniunctio oppositorum* that mark the collective unconscious, inwardly and outwardly expressed in symbols, myths, rituals, and religions. Psychology is not a matter of subjective dynamics, not just the Oedipal complex, not just human archetypal images; rather these grow out of a planet full of

mystery and wonder. We *participate* deeply in psychology, both within and without.

Fortmann restores the experiences of participation mystique from Levy-Bruhl's early mistake of seeing as a "prelogical mentality." He agrees with Levy-Bruhl's late reevaluation (1949). Both argue that participation is constantly present underneath modern consciousness. "The unconscious" is a fiction, he says, a Cartesian effort to squeeze the world of soul-world relations into subjectivist philosophy. Mythological images not integrated into consciousness are not really interior. Such collective images participate in the world's deeper nonhuman wholeness. We swim in it like the mythic fish who does not know what water is. Archaic, "primitive" *participation mystique* is not just a bygone phenomenon dismissed by science. Fortmann agrees with Levy-Bruhl that participation is mythical consciousness. He draws on Jean Przyluski (1940), who differentiates different levels of participation, and Paul Tillich, who calls on participation in theology (1957, pp. 176–178). (A more recent work on participation is by Skolimowski (1994)). As in transference and countertransference, participation is a strong bond of relatedness, not a subjective projection. It is usually unconscious and needs to come into awareness. "Projection" is a theory that strives to do that, but it uses the wrong subject/object philosophical basis.

Fortmann reviews Jung's theory of projection as it moves from a Freudian view of subjective "value added" to objects that makes them problematic and in need of therapeutic "withdrawal" back into the subject, who then becomes conscious of new inward depths (Fortmann 1991, Chap. 26). But the notion of "withdrawal" back into the subject, while it helps dispel mass consciousness and awaken one to unconscious contents, nevertheless is part of the scientific project's disenchantment of the world. The archetypal lover does not just receive projections but bathes in the common waters of *participation mystique*. Gods are not just projections of the archetypal inner Self, but swim in these oceanic waters, mingling human psychology and transcendent mysteries. But they need to be *experienced*. Religious *belief* is

a dogmatic equivalent to the absence of authentic religious *experience*, as Jung and Fortmann both stress. Dogmatic images must be read not literally but symbolically, for we are living in a time of a "renewal of the gods." Ancient archetypal religious images are losing their power. Knowing is not feeling, as we discover in psychotherapy. Dogmas such as the virgin birth, salvation by a god-man, and the trinity, without the psyche's *experience*, are no longer authentic, says Fortmann: "A turning back to the archetypes through self-knowledge, contemplation, and meditation will re-establish the connection between the conscious mind and the unconscious, giving rise to new symbols for eternal truth" (Fortmann 1991, pp. 26–28).

Fortmann expands his thesis with Martin Heidegger, who "vanquishes the subject-object split" (Fortmann 1991, Chap. 29). Heidegger thinks the phenomenological concept of hermeneutics deeply. "Hermeneutics" is the examination of a methodology's basic principles that differ, for example, in art, science, and religion. Thus, the study of religion cannot be a scientific question, which some atheists and some psychologists neglect to consider. Heidegger presses phenomenology into *ontology*, that is, more intuitive reflections on ultimate reality, or "Being," in contrast with *metaphysics*, which is a more rational study of ultimate reality. In his monumental *Being and Time* (1927) and later, Heidegger speaks poetically, using words in new ways, pressing thinking toward new paths. His language is likely to cause the reader some anxiety. But he sees anxiety itself as what seems alien but is the presence of "uncanniness," in the call of conscience (Heidegger 1962, p. 321). Even more deeply: "Uncanniness is the basic kind of Being-in-the-world, even though in an everyday way it has been covered up" (Heidegger 1962, p. 322). So Being-in-the-world is going to be uncanny, strange, and weird, like what the uncovering of we call "unconsciousness," as in dreams and a new awareness. When we intuitively read a person's gestures and perceive, for example, shame, fear, or love, this is Being-in-the-world disclosed, uncanny because it is normally concealed (cf. Freud's 1919 "Uncanny" (*unheimlich*)).

Heidegger rejects the mistake of post-Cartesian philosophies that attempt to isolate humanity in a subjective shell, for the human subject is never without world. Humans are always in the world and society; there is no total withdrawal, no total innerness. Human existence is a being-in and a being-with. We may partly place ourselves cognitively outside the world for scientific analysis, but underneath this standing back is a much more fundamental relatedness. *Dasein* is his term for human existence, meaning “being-there,” which is a “non-closedness” (*Erschlossenheit*). Being-in-the-world is the basic state of *Dasein* (being-there). Thus, the old philosophical problem of how the subject knows the object is a non-question, for consciousness is at the beginning outside. The world reveals itself through an “attunement” which is always there and in which we constantly participate. Care is the Being of *Dasein*, and conscience is the call of care, that brings forth the authentic potentiality-for-Being. One might interpret what depth psychology calls the withdrawal of projections, when one discovers unknown images, understandings, and cares, as Heidegger’s “call.” He says: “‘It’ calls against our expectations and even against our will. . . . The call comes *from* me and yet *from beyond* me” (Heidegger 1962, p. 320).

Understanding (*Verstehen*) is not an internal mental activity, but a way of Being-in-the-world. Nor is language a transfer of information, but is a participation in Being, full of overtones and implications, logic, and soul. Humans are neither the center of all that is nor the measuring-stick of truth and value, as the scientific revolution seeks to work out in technology. Now we can see how the ecology crisis is partly a result of the subjective view of knowledge, putting psyche at great risk of narcissistic ignorance of our deeper Being-in-the-world, dependent on clean oxygen, water, food, etc., in danger of destruction by industrialism’s toxic domineering psyche. Knowledge is not a narrowly logical grasping of the world as if it were opposite us to be grasped, but an experience (*Erlebnis*) of the unconcealing presence of Being. Thus, the secular effort at de-deification (*Entgötterung*), combining rationalist aggressiveness and monotheistic attacks on other

religions, has attempted to strip the industrial world of experiences of this presence of Being or freeze experience in dogmatic frameworks. The diminution of the authentic sacred presence of Being, says Fortmann, is the greatest disaster of the modern era.

Fortmann reminds us that the erroneous dualistic philosophy underlying the Cartesian disaster is repeated every time we think of the concept of projection and withdrawing projections back into subjectivity. We can and should stand back and detach a bit from our participation in experiences, such as love or fear, and think meditatively about them. This is the dance between imaginative, mythic Being-in-the-world and conscious, critical Being-in-the-world. But finally there is no possibility of strong “objectivity,” for we are always Being-in-the-world. There will always be archetypal enchantments, poetry, beauty, love, passion, paradox, and mystery just under the surface of consciousness, in the implications, the nonverbal hints, the intuitive feelings, and the hunches – erotic, technological, aggressive, or religious. We could not avoid despair without these depths, for they give us the essential meanings of life.

For Heidegger “projection” (*Entwurf*) is a potentiality-for-being thrown up by *Dasein*. It discloses possibilities (Heidegger 1962, p. 376) such as designs, plans, proposals, and interpretations. Mathematics is a projection of *Dasein* (Heidegger 1962, p. 414). Psychology and spirituality are projections of possibilities, or better said, the “presence” of ontological Being-in-the-world.

Thus, Fortmann redesigns the old theory of projection into the emerging presence of Being-in-the-world.

## Prophets

Miriam Dean-Otting  
Religious Studies, Kenyon College, Gambier,  
OH, USA

## Eleventh–Ninth Century BCE

The most highly developed manifestation of prophetic activity in the ancient Near East is to

be found in the Hebrew Scriptures. In examining the words and actions of these ancient prophets, one can discern many psychological factors that describe and explain prophetic behavior. These include possession, ecstatic behavior, altered consciousness, obsession or compulsion, having an unmediated relationship with the Divine, visionary experience, and irrationality. For the earliest prophets, we can begin with Abraham and Moses and conclude with Deborah, Samuel, Nathan, Elijah, and Elisha. There is a single reference to Abraham as a prophet, “for he is a prophet and he will pray for you, and you shall live” (Genesis 20:7). According to Genesis 15, Abraham has an ecstatic experience, especially if the Greek translation (*exstasis*) of the Hebrew *tardemah* (deep sleep) is taken into consideration. The case of Moses warrants particular attention, both as a paradigm for other prophets and as an anomaly: “Never since has there arisen a prophet in Israel like Moses – whom the Lord knew face to face” (Deuteronomy 34:10).

Each of the other prophets listed above is an example that contributes to a composite portrait of the eleventh–ninth century BCE prophets. For instance, Deborah, seated under a palm tree in the hills of Ephraim, functioned as a judge and advisor (Judges 4 and 5). Samuel was dedicated to the Lord and served in the Temple at Shiloh, where he was called to be a prophet (I Samuel 1–3). Saul is seized by a prophetic frenzy, caught up with the guild prophets (e.g., I Samuel 10:9). He also practices necromancy when he causes the medium of Endor to call up Samuel from the dead (I Samuel 28). David’s court prophet, Nathan, condemned the actions of his king and employer. Questioning the authority of the ruler and advocating for the powerless, Nathan thus embodies two of the characteristics of the later Hebrew prophets (II Samuel 11–12). Elijah, “troubler of Israel” (I Kings 18:17), and Elisha, his heir, work magic, perform miracles, and speak unwelcome truths to the kings of Israel. In addition, their ecstatic behavior is a model for the visionary experience of the prophets described next.

## Eighth–Sixth Century BCE

Fifteen books in the Hebrew Scriptures are named after individuals, with Isaiah assigned to three distinct historical periods. In chronological order, these books are Amos, Hosea, I Isaiah, Micah, Zephaniah, Nahum, Habakkuk, Jeremiah, Ezekiel, II Isaiah, Haggai, Zechariah, Malachi, III Isaiah, Obadiah, Joel, and the folktale of Jonah. There is a breadth of prophetic voice and a range of personalities and professions found in the prophetic canon. For instance, Amos claims to be simply a shepherd and a farmer: “I am no prophet, nor a prophet’s son; but I am a herdsman, and a dresser of sycamore trees, and the Lord took me from following the flock, and the Lord said to me, ‘Go, prophesy to my people Israel’” (Amos 7:14–15). Isaiah, on the other hand, is a priest in the Temple in Jerusalem, truly part of the institutional religion (Isaiah 6). Jeremiah laments and suffers abuse. Both Jeremiah and Ezekiel go into exile. Jonah sulks.

### Characteristics of the Prophet

A prophet is not a fortuneteller or is the prophet particularly interested in the distant future, except in so far as it is influenced by actions taken in the present. In fact, the portrait of a prophet is rather complex. First of all a prophet must experience some kind of *calling*. In the biblical tradition this comes from God. This *calling awakens the prophet to injustice*, elicits both a feeling of *impending doom* and a *deep compassion for the oppressed*. *Drama and passion energize the message of the prophet*. The task is onerous and, thus, prophets frequently express *reluctance to accept the role*. Even so, a prophet is *compelled to speak* out and may seem, to others less sympathetic, to be a fanatic or zealot. In psychology, we might deem this obsession. The prophet’s words carry a clout that does not spare those responsible for the suffering of others. Yet it is important that the prophet’s *perspective is rooted in a broad*

*view of humanity*; she or he *must work for the good of all people*. Furthermore, a prophet must be *selfless* and *self-confident* but also *provocative*. The prophet’s *charisma* draws followers but, nevertheless, the prophet frequently experiences *loneliness* and *may even be cast out*, for the message is one that few want to hear. Above all, the prophet’s message *challenges the status quo* and *questions the authority of those in power*. Prophetic arguments are *articulate* and *persuasive*, often *fueled by ecstatic behavior*, supported by visions, and voiced in *powerful poetic meter*. Finally, a prophet most often *rejects the designation* and *never receives remuneration* for prophesying. Above all, prophets emphasize *justice, righteousness, humility*, and *kindness*. A summary of these central concepts is voiced in Micah: “He has told you, O mortal, what is good; and what does the Lord require of you, but to do justice, love kindness and walk humbly with your God” (6:8).

### Psychology of the Prophet

The prophet’s relationship with the Divine, the prophetic call, ecstatic behavior, visions, and poetry are all facets of what we might treat in any study of the psychology of the prophet. Passages from the texts of the classical Hebrew prophets illustrate these characteristics.

The prophet’s relationship with God is profound and often disturbing. “The lion has roared, who will not fear? The Lord has spoken, who can but prophesy?” (Amos 3:8). A shocking example, even if it is only a metaphor, is the expectation that Hosea’s life will mirror God’s relationship with Israel: “Go, take for yourself a wife of whoredom, for the land commits great whoredom by forsaking the Lord” (Hosea 1:2). The central phrase *neum Adonai* (“thus says the Lord”) repeated throughout the prophets and many other metaphors leave no doubt that according to the biblical perspective, the prophet is a vessel for God’s words. This implies that prophet must lose sight of all personal needs and be subsumed in divine expectations.

Most prophets experience a call, but the circumstances vary considerably. For instance, Isaiah encounters a numinous vision of God in the Temple in Jerusalem, his lips are seared and purified by a burning coal born by a fantastic creature, and he is forewarned that the people will turn a tin ear to his prophecy (Isaiah 6). Jonah responds to his call by fleeing in the other direction (Jonah 1), a radical and physical denial of the call. Jeremiah is summoned as a youth and learns that he had been appointed a prophet even before he was born. He depicts his call as a physical gesture, "Then the Lord put out his hand and touched my mouth; and the Lord said to me, 'Now I have put my words in your mouth'" (Jeremiah 1:9).

Often ecstatic behavior precedes the voicing of the prophetic message, and this is where we can point to a kind of possession, what might be called, in psychological terms, an "altered consciousness." "As for me, I am filled with power, with the spirit of the Lord, and with justice and might" (Micah 3:8). Jeremiah echoes a metaphor common in the prophets, the swallowing of God's words: "Your words were found, and I ate them, and your words became a joy and the delight of my heart; for I am called by your name, O Lord, God of hosts" (Jeremiah 1:16). Significantly, he denies that he has used wine to evoke this state: "I did not sit in the company of merrymakers, nor did I rejoice; under the weight of your hand I sat alone for you filled me with indignation" (1:17). Several psychological states of mind that might be called "unbalanced," irrationality, enthusiasm, possession, in sum, a variety of states of altered consciousness, activate prophetic speech. The words of the prophets are met with utmost seriousness, whether out of fear or reverence. Ecstatic behavior, then, enhances rather than diminishes the power of the message.

Out of ecstasy come visions, and prophetic texts are rife with revelations of both wrath and restoration. Perhaps the most well known is Ezekiel's colorful vision of the fiery chariot (Ezekiel 1), but plenty of visions are more mundane by comparison. Everyday objects might become catalysts for vital lessons, such as when

Jeremiah visits the potter's house and watches as the potter reshapes a spoiled vessel. This sight is understood symbolically as an indication of God's intention to break down and rebuild the people Israel (Jeremiah 18:1–12). For Joel armies of locusts, surely observed in times of natural disaster, become signs of invading armies (Joel 1). Visions reveal much about the environment of ancient Israel and demonstrate the practice of the prophets to be out and about, in the marketplace, at sacred centers, at the city gates, and walking the streets, anywhere where people are gathered, so that an audience is always at hand.

Many of the passages cited in these samples are rendered in the meter of Hebrew poetry, an aspect of biblical prophecy that lends the prophetic words dignity and elegance. It is poetry that allows the prophet to ascribe to God both the power of a warrior and the empathy of a laboring woman: "The Lord goes forth like a soldier, like a warrior he stirs up his fury; he cries out, he shouts aloud, he shows himself mighty against his foes. For a long time I have held my peace, I have kept still and restrained myself; now I will cry out like a woman in labor, I will gasp and pant" (Isaiah 42:13–14). Hebrew poetic lamentation meter enhances the grief already inherent in Amos' words: "Fallen no more to rise is maiden Israel; forsaken on her land, with no one to raise her up" (Amos 5:2).

Questions have been raised about whether prophetic possession should be described as a kind of neurosis or madness. Clearly prophetic behaviors are not average or muted in any way. For instance, some assert that Hosea's willingness to marry a prostitute, as a concrete symbol of Israel's rejection of God, was indicative of his madness. Isaiah's walking naked for 3 years to call attention to the captivity of the Assyrian king could indicate some exhibitionism. But this is mere speculation at a distance of well over 2,000 years and is, perhaps, not so instructive. At most it seems that we can only point to some marginal behaviors in addition to the characteristics of possession, ecstatic behavior, altered consciousness, obsession or compulsion, having an unmediated relationship with the Divine, visionary experience, and irrationality outlined above.

## Protestantism

Jaco Hamman  
The Divinity School, Vanderbilt University,  
Nashville, TN, USA

Protestantism is a general term describing the third main form of Christianity alongside Roman Catholicism and Orthodox Christianity. It originated in the sixteenth century when in 1529 German princes presented a *Protestatio* or letter of protest against the Catholic Church's prohibition on innovation in the field of religion. This act by the "Protestants" – later also called "Evangelicals" – initiated a movement called the Christian Reformation asking "Who is the true and holy church?"

Despite holding worldviews ranging from open and liberal to nationalist conservative and even fundamentalist, Protestantism is most often characterized by the following: proclaiming that all glory belongs to God (*solī Deo Gloria*); salvation is by grace alone (*sola gratia*); the centrality of the spoken and written Word (*sola Scriptura*); freedom and independence; truth and the church are ever evolving; baptism and communion as the only sacraments; and placing a person's relationship with God above allegiance to the church. These traits can be summarized as only grace, faith, and Scripture should govern life inside and outside the church. The church, therefore, is not the carrier of grace and salvation. In light of this belief, baptized believers are called, through the priesthood of

all believers, to be instruments of grace and salvation empowered by God's Spirit.

A strength of Protestantism is its critical nature, but the same orientation has created lack of unity in dogma and institutional structure. After nearly 500 years of experiencing schisms and internal conflict over doctrinal issues such as infant or adult baptism and the nature of Holy Communion, Protestantism incorporates many different traditions. Their traditions have a unique character as they developed around spiritual leaders in a specific social context. Groups include Anglican (Episcopal), Congregationalist, Lutheran, Methodist (including the Salvation Army), Reformed (Calvinist/Presbyterian), Waldensian, Zwinglian, and also Baptist, Anabaptist (Mennonite, Brethren), and charismatic Pentecostal Protestants. Most of these groups experience secularization, loss of church membership, and internal struggles. The cultural and doctrinal diversity within Protestantism is best expressed in numerous confessions of faith. Traditionally, an Anglo-Saxon faith, forms of Protestantism are growing rapidly in the developing world (African Independent Churches; South America) and in Asia (especially South Korea) due to Protestantism's missionary fervor.

Protestantism's general orientation to critical distinction rather than synthesis impacts its relationship with psychology. Yet Protestantism's search for truth brings interdisciplinary exploration. Protestants engage in *critical evaluation or correlation* of psychological theories and use whatever is deemed compatible with their worldview. Others engage in *theory building*, reworking psychological theories, especially cognitive theories, according to Protestant presuppositions. Some seek a *dialectical* approach, holding the tension between two diverse disciplines. Others yet argue that postmodern rationality, refusing objective truth, allows different disciplines to speak into each other's world without losing unique identities. Protestants also use psychology as a lens through which to read Scripture.

One goal that Protestants and psychology share is seeking ways to facilitate the good life. Typical topics of contention Protestantism has with psychology, however, are the following: wholeness found through a personal relationship

with Jesus, Scripture as a special revelation, the problem of suffering, the reality of evil and sin, what it means to be a human being, and how truth is defined. Protestantism can inform psychology on the human spirit's search for meaning around ultimate concerns. Psychology, in turn, can educate Evangelicals on the depths of an embodied existence. In dialog, mutual illumination is possible around concerns such as models of personhood, disease and health, individuality and community, and how transformation occurs.

### Providence

David M. Moss III  
Atlanta, GA, USA

This is a critical theological term of profound psychological significance. Providence refers to God's creative and sustaining care of the universe. In the Judaeo-Christian tradition, it identifies events or circumstances of divine interposition. It also signifies revelation through insight.

In 400 BCE Greek philosophers used the word *prónoia* to describe a power which rationally guides the world and human destiny by a fixed set of natural laws. This became a dogma of Stoicism. It also bears points of contact with the biblical idea of the Creator being directly

involved with creation. The Old Testament records a gradual development of the *belief* in providence. Nevertheless, the Hebrew Scriptures reveal a dynamic theme: God guides history in such a way that independent and free human actions are not annulled. Unlike the impersonal Stoic concept, this conception requires the Creator's intimate involvement with humanity. The New Testament develops this view but not as a theoretical explanation. It is an eschatological perspective, inherently implied far more than explicitly mentioned. The incarnation was providence personified.

Early patristic literature was strongly influenced by Greek philosophy, particularly cosmology. Clement of Alexandria (c. 150–215) best expressed the synonymous relationship of God and providence. Conversely, he contended that the denial of providence was to be equated with atheism. The Church Fathers also explored the biblical idea of freedom with responsibility under God's provision. During the Middle Ages, the Scholastic theologians set forth philosophical speculations about the nature and meaning of providence. Inspired by Augustine of Hippo (354–430), Thomas Aquinas (1224–1274) produced a penetrating examination of this belief. Subsequently, the Council of Trent (1545–1563) designated providence as a *doctrine* of the Church. However, the Reformation was already underway. This represented a break with Catholic intellectualism. Reason was not dismissed but experience was elevated to a primary importance. The Reformers also presented new views about providence. Their writings no longer centered on an explanation of the universe, but in realizations of *faith* and practical living. John Calvin's (1509–1564) teaching on predestination was exceptionally controversial. In his theological system providence was restricted and free will was restrained. Popular expressions of the Protestant belief in providence were published chiefly in devotional literature and hymns. In the eighteenth century scholars of the Enlightenment viewed providence from a more rationalistic position. As a result, this dimension of reality became the fulcrum of natural theology.

G. W. Leibniz (1646–1716) described providence as the rational and meaningful order of human history and the cosmos.

Systematic explanations of providence eventually raise problems of theodicy, questions about the goodness and fairness of God given the evil and suffering in creation. Pastoral theology emphasizes the ascendancy of the former over the latter. Consequently, providence is the basic source of hope for human development. In the twentieth century this belief was reemphasized by the growth of pastoral counseling as a specialized ministry. From such a therapeutic perspective, providence can be defined as an *awareness* that out of every unfortunate experience, as long as one chooses to look with insight, beneficial results will be revealed.

### Pruyser, Paul

Nathan Carlin  
McGovern Center for Humanities and Ethics,  
University of Texas Medical School, Houston,  
TX, USA

Paul W. Pruyser (1916–1987) was a clinical psychologist who, especially by means of his prolific writing, contributed greatly to psychology

of religion while working at the Menninger Clinic in Topeka, Kansas (now located in Houston, Texas). He was born in Amsterdam, and he moved to the United States in 1943 to complete his doctoral studies at Boston University in clinical psychology. He graduated in 1953. His monographs include *A Dynamic Psychology of Religion* (1968), *Between Belief and Unbelief* (1974), *The Psychological Examination* (1979), and *The Play of the Imagination* (1983). He edited *Diagnosis and the Difference It Makes* (1976b) and *Changing Views of the Human Condition* (Pruyser 1987). And, with Karl Menninger and Martin Mayman, he wrote *The Vital Balance* (1963). In addition to these books, he also wrote some 30 book chapters and 80 journal articles. Pruyser also contributed to the field of psychology of religion by serving as president of the Society for the Scientific Study of Religion and by serving on the editorial boards for *The Journal for the Scientific Study of Religion* and *Pastoral Psychology*. Before his death, he struggled with cancer, but he died of a sudden heart attack (cf. Allen 1987; Capps 2011).

### Pruyser and the Menninger Clinic

Pruyser moved to Topeka, Kansas in 1954 to work in the Topeka State Hospital. He joined the staff of the Menninger Clinic in 1956 and worked there until his death. He developed a close relationship with Karl Menninger, founder of the Menninger Clinic. Karl was psychoanalyzed by Franz Alexander and received the first psychoanalytic certificate from the training institute in Chicago (Wallerstein 2007). At Menninger, Pruyser rose through the ranks – but never to the very top, because he was “a psychologist among psychiatrists.” He also participated in “the palace revolt” that removed Karl from power in his own institution, a revolt that Karl believed had affinities with Freud’s (1913/2001) *Totem and Taboo*. Nevertheless, Pruyser still viewed Karl as a father figure, perhaps because Pruyser’s own father had died at a young age. Pruyser wrote Karl these words in 1971: I hope you would “appraise the last 10

years as a period in which I have not only kept your great heritage, but nurtured, fostered and expanded it” (Friedman 1990, p. 324). In any case, after the overthrow, Pruyser developed a facial tic and aged “precipitately,” perhaps an indication of Pruyser’s guilt and a testimony to Karl’s interpretation of the overthrow (Friedman 1990, p. 324). In the political struggles that followed, Pruyser was able “to retain a significant position,” but he was eventually pressured into resigning from his position as education department director, then to assume the post of resident teacher-scholar (1990, p. 338).

### Pruyser’s Contributions to Psychology of Religion

Pruyser’s contributions to psychology of religion are sadly overlooked today. Sometimes Ana-Maria Rizzuto is thought to be the first person to have brought the ideas of D. W. Winnicott, a major proponent of a British appropriation of psychoanalysis known as object relations theory, to the psychoanalytic study of religion, as she does in her classic *The Birth of a Living God*, published in 1979. However, Pruyser (1974) had already done so in his *Between Belief and Unbelief* (cf. Hamman 2000, pp. 137–138). A few major points that Pruyser makes in this book – insights that are still valuable today – include the following: (1) “it is implied in Freud’s approach to religion that many forms of unbelief can be at the same developmental level as belief itself” (1974, p. 61); (2) “unbelief can be just as primitive, neurotic and drive-determined as belief” (1974, p. 61); and (3) “[i]f belief is personal, so is unbelief” (1974, p. 65). While Pruyser, following Freud, did see religion as an illusion, he did not, as opposed to Freud, view illusion or religion pejoratively. Using Winnicott’s notion of illusion – which departed greatly from Freud’s usage (cf. Jones 1991, 38 ff.) – Pruyser viewed illusion as something deeply positive, transformative, and creative.

But this is not to say that Pruyser uncritically or simplistically accepted religion. While he served as an elder in the Presbyterian Church,

he stopped going to church services in his later years, apparently because he was unsatisfied with such services. He also held the view that “much of the force of current religion comes from the persistence of irrationality in both culture and our individual lives” (Spilka and Malony 1991, p. 14). Jansje Pruyser, his wife, once described her late husband as a “rebel” in an interview with H. Newton Malony and Bernard Spilka, two other leading scholars in psychology of religion. They added, “Indeed he was a rebel, but not one who was strident, noisy, or bellicose. . . . He had the rare knack of propounding controversial and iconoclastic ideas in a manner that might elicit disagreement but never hostility” (Spilka and Malony 1991, p. 3). And so Pruyser was a man who struggled deeply with matters of faith and reason, matters of subjectivity and objectivity, and matters of the inner and the outer worlds. And the way in which he could stand by his own idiosyncratic faith was by means of a middle way, a way inspired by Winnicott’s psychology, a way, finally, that enabled him to make his own faith real to him.

### Pruyser and Pastoral Theology

In addition to writing for the field of psychology of religion, Pruyser also wrote for pastors, including works such as *The Minister as Diagnostician* (Pruyser 1976a) and an important essay in *The Journal of Pastoral Care* (now called *The Journal of Pastoral Care and Counseling*) titled “Religion in the Psychiatric Hospital” (1984). Both of these works call pastors to bring the tools that are unique to their trade – especially theology – when dealing with people’s problems.

Pruyser’s work has influenced many thinkers in the field of psychology of religion. H. Newton Malony and Bernard Spilka (1991), themselves significant contributors in psychology of religion, edited a volume of Pruyser’s work and dedicated it to his wife. Pruyser also greatly influenced Princeton Seminary’s Donald Capps, the most prolific writer in the fields of psychology of religion and pastoral care today. Princeton Seminary had tried to recruit Pruyser to teach in their

practical theology department, but he declined the offer and instead recommended to the president that they hire Capps. And so Pruyser’s influence still lives on in the work of Capps (2001) and his protégés, notably in the eloquent writing and preaching of Robert Dykstra (2001, 2005).

## Psalms

Ingeborg del Rosario

Emmaus Center, Quezon City, Philippines

*The Book of Psalms*, also known by its traditional Hebrew title *tehillim* (praises), belongs to the Wisdom literature of the Hebrew Scriptures and the Old Testament of the Christian canon. Comprising 150 individual psalms (from the Greek word *psalmoi* or songs sung to a harp), the Book of Psalms is both the longest and most varied in tone, content, and message of its individual religious lyrical poems. While authorship of the psalms is attributed to King David, biblical scholars note that the period of their composition spanned half a millennium (c. 1000 BCE–c. 500 BCE) and its compilation most likely took place after the end of the Babylonian captivity (c. 537 BCE), with reference to the Book of Psalms as an entity around the first century CE, in the New Testament books of the Gospel of Luke (20:42) and the Acts of the Apostles (1:20). The psalms have been classified under different genres, such as praise; thanksgiving; supplication psalms; individual and communal lament psalms; songs of trust and confidence; pilgrimage; historical, wisdom, or instructional psalms; royal and messianic psalms; and temple or liturgical songs; however, these distinctions do not take into account the psalms' fluidity of message and intent.

Walter Brueggemann, an Old Testament scholar, has proposed taking the Book of Psalms in its entirety and organizing them under three themes: orientation, disorientation, and reorientation. This thematic organization of the psalms supports the wholistic understanding that human life and ordinary experience, along with one's faith life and relationship with the Divine, are not about the occurrence of single events but are taken within the process and flow of an unfolding and ever evolving complex life journey.

What is commonly recognized is that the Book of Psalms reflects themes universal to human life and experience as well as particular to the divine-human relationship: creation, destruction, and transformation; death and life; suffering and relief; good and evil; sin and contrition; repentance and forgiveness; justice and judgment; war and triumph; injustice and loss; betrayal and vengeance; wisdom and worship; and darkness and light. Many believers of both the Jewish and Christian traditions cyclically recite or sing the entire Book of Psalms, thus acknowledging how its prayers embrace and encompass the totality of human reality and how they mirror the diversity of life's facets and textures.

There are psalms and verses favored and held in memory to bring comfort and courage, strength, and hope, such as Psalm 8 ("When I consider your heavens, the work of your fingers, the moon and the stars, which you have set in place; what are human beings that you are mindful of them, mortals that you care for them?"), Psalm 23 ("The Lord is my shepherd, I shall not be in want"), Psalm 51 ("Have mercy on me, God, according to your unfailing love; according to your great compassion, blot out my transgressions. Wash away all my iniquity and cleanse me from my sin"), Psalm 63 ("O God, you are my God, earnestly I seek you, my soul thirsts for you; my body longs for you, in a dry and weary land where there is no water"), Psalm 121 ("I lift up my eyes to the hills – where does my help come from? My help comes from the Lord, the maker of heaven and earth"), Psalm 127 ("Unless the Lord builds the house, its builders labor in vain"), and Psalm 139 ("O Lord, you have searched me and you know me").

The lament psalms, which make up more than a third of the book's composition, are given less focus and attention in individual prayer and liturgical worship. While the Book of Psalms mirrors all of humanness and life, the lament psalms (3, 5–7, 9, 10, 12, 13, 17, 22, 25–28, 31, 35, 38, 39, 41–44, 51, 52, 54–57, 59–61, 63, 64, 69–71, 74, 79, 80, 82, 83, 85, 86, 88, 90, 94, 102, 106, 108, 109, 120, 123, 126, 130, 137, 140–143) are particularly about life assailed by suffering and pain, brokenness and dislocation, and anguish and affliction. All have some experience of betrayal, rejection and abandonment, illness and death of a loved one, emotional and relational conflicts, crisis and powerlessness, oppression or abuse, and even trauma. In them, the encounter with emotions of fear and terror, anxiety and bewilderment, loneliness and despair, grief and sadness, anger and resentment, and rage and hatred is palpable.

In the human search for words with which to speak of experiences of disruption and express vital emotions, the lament psalms provide speech and language that reverberate through centuries and are relevant across cultures. The psalms provide vivid imagery, provocative metaphor, and piercing, pointed words, offering a way of expression that resonates with the ache and agony accompanying the tearing and breaking of every human heart. The lament psalms provide voice to speak of the pain, from the pain. In and through the psalms, one may give vent to the most intense hurt, the deepest rage, and the most profound grief with words that are neither meek nor polite but are bold and direct, harsh and biting, cutting and honest, and at times brutally frank.

Lament psalms also contain imprecatory verses, those that invoke curses of violence and vengeance. The Christian Psalter excludes these verses, setting them off in bracketed form. Ordinarily, they are not recited or sung in communal prayer nor are they used in liturgical readings and rites. Some examples of these verses are the following: Psalm 3, "Deliver me, O my God! Strike all my enemies on the jaw; break the teeth of the wicked"; Psalm 11, "On the wicked he will rain fiery coals and burning sulfur; a scorching wind will be their lot"; Psalm 69, "May their eyes be

darkened so they cannot see, and their backs be bent forever. Pour out your wrath on them; let your fierce anger overtake them. May their place be deserted, let there be no one to dwell in their tent. . . . May they be blotted out of the book of life and not be listed with the righteous"; Psalm 137, "O Daughter of Babylon, doomed to destruction, happy is he who repays you for what you have done to us – he who seizes your infants and dashes them against the rocks"; and, perhaps the most detailed and elaborate of the imprecatory psalms, Psalm 109, "May his days be few. . . . may his children be fatherless and his wife a widow. May his children be wandering beggars; may they be driven from their ruined homes. May a creditor seize all he has; may strangers plunder the fruits of his labor. May no one extend kindness to him or take pity on his fatherless children. May his descendants be cut off, their names blotted out from the next generation. May the iniquity of his fathers be remembered before the Lord; may the sin of his mother never be blotted out. . . . He wore cursing as his garment; it entered into his body like water, into his bones like oil. May it be like a cloak wrapped about him, like a belt tied forever around him."

Many individuals in psychotherapy struggle with allowing themselves the space, freedom, and spontaneity to enter into and express emotions that accompany their wrenching stories. They might speak of their sufferings from the outside, looking in, rather than speak from the heart of their suffering. They might talk about their feelings rather than talk from the depth of these feelings. Some patients profess not to have the words and the language with which to identify and distinguish their feelings of grief, anger, fear, rejection, and humiliation. Others are unable to give voice to emotion for fear these feelings might intensify and overpower, leaving them out of control. One resists giving in to her grief for fear she might never stop weeping once she begins. Another resists giving voice to his anger for fear he might become violent and unmanageable. Because of the fear of feeling, patients will split off from these emotions and disavow their presence. Ironically, when emotions are banished from the space of conscious

awareness and dissociated and when they are unsymbolized, unrecognized, and unarticulated, they gather greater energy, power, and force in the shadows of unconsciousness than they would have in being given space and voice to be put into words, heard, held, and contained in speech and language. Just as the imprecatory verses are excluded from the Christian liturgy and Psalter, so too are the urges for violence and vengeance left unspoken. When fragmented from consciousness, this powerful energy of hatred, rage, and aggression becomes manifest in relational enactments. Cut off from this vital force, one is unable to fully connect with the totality of all that is human and unable to take in shadow experiences and emotions whose release into the light of consciousness and verbal expression permits a full experiencing of all that is authentic and real.

Patients may be helped to discover emotional speech and language, to identify and distinguish, and to give voice and words to the *mélange* of sensations and feelings that can seem chaotic. A therapeutic relationship that provides emotional safety and consistency allows patients to become more secure in the capacity to acknowledge, engage, and befriend the expansive range of their inner life without fear of being overwhelmed. As with the God of the psalms who receives profound angst and the most vicious urges in the lament, no part of life need ever be beyond speech or conversation in the therapeutic space. For the psychoanalyst who has undergone intensive personal analysis, an internal space opens to hold and contain more of the patient's deepest experiences and emotions, to enable a total presence to courageous efforts to encounter and put into words whatever feelings might emerge, be they anger and rage, envy and jealousy, hatred and wrath, shame and guilt, or kindness and tenderness. For the patient to engage and be present to the immediacy of the experience of the inner world, the analyst must be in this immediacy, with a fullness of presence. For patients to feel greater ease and comfort with their aggression, the analyst must be capable of receiving, holding, and containing the power and energy of this verbalized force

without censure, judgment, or condemnation. As in the psalms, with even the imprecatory verses, everything that can be said may be said in the safety of the analytic space. Before the analyst who holds her own experiences and emotions, the patient need not be nice, well mannered, meek, or polite. The patient need only be as the self presents and is present to self, with a growing range of experiences and their accompanying emotions being given voice.

The Book of Psalms acknowledges that pain and suffering are an intrinsic part of life. That the lament psalms significantly comprise the Book of Psalms emphasizes that one must deal with chaos, disruption and disorientation, and the agony and anguish of life's difficulties not by denying, ignoring, or minimizing their presence in life nor by splitting them off, shunning this darker and seemingly less tolerable aspect of oneself by relegating their emotional impact to unconsciousness. The Book of Psalms offers voice and language with which to speak and entrust the depth and breadth of fear, frustration, rage, grief, despair, bitterness, meanness, spite, and desire for vengeance. It provides a way to give expression to these experiences and emotions with powerful yet finite, containable words rather than by impulsive, destructive activity. The therapeutic process shares this way of the Book of Psalms in the acknowledgment of the need for language that is forthright, for containment and verbalization in words that are honest, in the moving through intense emotions which enables a delving into the meaning and depths of one's humanity and the dark corners of one's humanness. These processes awaken the possibility and potential for metabolizing and transforming the energy and power of such emotions and experiences. In the sacred space held by the Book of Psalms echoed in the therapeutic space come a gentle reorientation of life's meaning, a more profound connection with self and with all who partake and share in the universality of lived humanness and reality, and a more profound awakening to the freedom, receptivity, and compassion of God who hears, welcomes, and holds all, spoken, unspoken, and unspeakable, in the Divine lyrical embrace.

## Psyche

M. J. Drake Spaeth

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Psyche, the ancient Greek word meaning “soul” or “spirit,” is also the name of the Greek goddess of the soul, one of whose symbols is the butterfly. The term was employed by Sigmund Freud to describe the unity of unconscious and conscious, the tripartite structure of the mind divided into id (i.e., the repository of unconscious drives and wishes that determine our conscious behaviors), superego (i.e., the repository of superconscious extreme moralistic elements that compensate for the opposite extremes of the id), and the ego (i.e., the conscious referee between the dichotomous ongoing conflict between id and superego). It was also adopted by Freud’s student Carl Jung to encompass the mind and its evolving, developing relationship with the world over the course of life,

manifest in the individuation of the self from the more limited ego (Jung 1978).

The concept of psyche links psychology and spirituality in several ways. In the Greek myth of the goddess Psyche, a human woman becomes elevated to the status of a goddess through her tumultuous relationship with Eros, the god of love. She at first loses Eros through the machinations of his mother Aphrodite and later is restored to him through the intervention of Zeus, king of the gods. Symbolically, this myth illustrates how the human spirit/soul is elevated and ultimately transformed through the vicissitudes love and how sexuality and spirituality spring from the same libidinal source – a connection recognized by Freud in his theory of psychosexual development. In Jungian terms, the myth calls to mind the unity of anima (the feminine aspect of the psyche) and animus (the masculine aspect of the psyche), the Hierogamos (i.e., the sacred marriage of opposites) in the quest of the ego to become the self. Moreover, the butterfly aspect of Psyche evokes the image of the caterpillar building and ultimate discarding the cocoon, which it sheds upon its transformation into a butterfly. This image brings to mind Platonic dualism – in which the soul or spirit sheds the outer physical flesh in death, flying free – an idea that is still found in many religious traditions throughout the world. Ulanov and Ulanov (1991) point out that Jung regarded Psyche as the “mother of consciousness” – that which joins with the father that is spirit (p. 12), effectively linking Christian ideology with the older Greek images described above.

## Psychiatry

Kelley Raab Mayo  
Royal Ottawa Mental Health Centre, University of Ottawa, Ottawa, ON, Canada

## Introduction

Psychiatry and religion have had a complicated, at times collaborative and at times competitive, relationship over their respective histories. Since the earliest days of Western medicine, scientifically trained physicians have recognized that religion and spirituality can affect the mind for both good and ill. Historically regarded as the first spiritual healer, the shaman is a prototype of the modern physician and psychotherapist. Prior to the fall of the Roman Empire and the growth of the Catholic Church, priests and physicians were often the same individuals in different civilizations around the world.

For all cultures, it has been a long journey to look for natural rather than supernatural explanations for mental illness. Ancient Jews seemed to have viewed madness in both natural and supernatural terms. Most Christian thinkers saw no inherent contradiction between a medical view of madness and a Christian view. Islam has a long tradition of compassion for those who were labeled mad. On the other hand, religions of Asia and Africa tended to fuse ideas of

madness and demonic possession. Enlightened views on the mentally ill were found in early Christian hospitals, by Buddhist missionaries, Confucian scholars, medieval Jewish physicians, and in the Islamic hospitals of the Middle Ages. However, many societies later reverted to unscientific and at times inhumane practices. These were epitomized in the medieval Christian Inquisition, where mentally ill individuals, accused of being possessed by the devil, were put to death as witches.

## Background: Science Versus Religion

Fundamental controversies between science and religion laid the groundwork for the modern origin of the antagonism between psychiatry and religion. Concerning psychiatry, a number of prejudices have stood in the way of a closer relationship with religion: the view that religions attract the mentally unstable, that religions may have their origins in madness, that religious experience is phenomenologically similar to psychopathology, that paranormal experiences are a product of definable patterns of brain functioning, that religions are harmful – inducing guilt – or that religious belief is ineffective. Research has proven these prejudices false.

Deeper reasons for the separation between psychiatry and religion have to do with the identification of psychiatry with the “medical” model. As a science, psychiatry is assumed to be based on observation and experiment and in principle open to objective testing. Religion, on the other hand, is said to be “revealed.” Psychiatry employs an essentially deterministic model, whereas religion assumes freedom of action. Yet the separation between science and religion is perhaps a peculiarly Western phenomenon.

During the early years of the twentieth century, psychiatry in the USA and Europe underwent a number of changes, most notable an increasing focus on social progress and general societal welfare. In addition to an evolving body of literature on psychoanalysis, other forces that shaped the field included new religious movements such as New Thought, Christian

Science, theosophy, and spiritualism, as well as the growing social marginalization of fundamentalism. Moreover, in terms of diagnosis psychiatry began moving away from classifications based on course and prognosis of disease. Specifically, “religious insanity” or “religious mania” – diagnoses based on the content of a delusion – became irrelevant to classification and treatment.

## **Influence of Freud**

Although the notion of religious insanity faded with the coming of twentieth century psychiatry, it lived on in some form in the ideas of Sigmund Freud. Challenging the notion that truth can be found in religion, Freud viewed religious faith as based in the illusion of an idealized Father God who provides needed comfort and security; Freud in turn understood religion as a “universal obsessional neurosis.” A goal of psychoanalysis was to trust in the scientific method as a source of truth concerning the nature of one’s being and the world.

Since Freud, modern psychiatry and psychology make claims to have supplanted a number of religious concepts central to understanding human nature. Among these are notions of a soul, of sin, and of morality. Soul and sin have been replaced by notions of human consciousness and psychological and social pathologies. Deficiencies in morality are understood as products of inadequate socialization processes, thus obviating the need for confession and redemption. Religious teachings traditionally promoted the view that unhappiness, despair, and other physical and mental sufferings are meaningful events. While Western religious traditions recognize illness to have a purpose within a grander design and emphasize the spiritual meaning of suffering, conservative psychiatry maintains a materialistic and mechanistic orientation. Thus, the two disciplines have functioned as competing belief systems for providing life meaning and purpose.

From Freud’s work through the 1976 report on mysticism by the Group for the Advancement of

Psychiatry (GAP), there has been a tendency to associate spiritual experiences with psychopathology. The report of GAP on “The Psychic Function of Religion in Mental Illness and Health” (1968) acknowledged that religious themes often surfaced during psychoanalysis and that religion could be used in both psychically healthy and unhealthy ways. Yet the residue of nineteenth century interest in religious insanity could still be found in the glossary of the third edition of the DSM (Diagnostic Statistical Manual) and in the 1989 edition of the Oxford Textbook of Psychiatry.

## **DSM-IV: Religious or Spiritual Problem**

In order to redress lack of sensitivity to religious and spiritual dimensions of problems that may be the focus of psychiatric treatment, a new Z code category for DSM-IV was proposed, “psychoreligious or psychospiritual problem.” The impetus for the proposal to add a new diagnostic category emerged from transpersonal clinicians and the work of the Spiritual Emergence Network. Their focus was on spiritual emergencies – forms of distress associated with spiritual practices and experiences. The proposal had the following goals: (1) to increase accuracy of diagnostic assessments when religious and spiritual issues were involved, (2) to reduce occurrence of medical harm from misdiagnosis of religious and spiritual problems, (3) to improve treatment of such problems by stimulating clinical research, and (4) to encourage clinical training centers to address the religious and spiritual dimensions of experience.

The DSM-IV category was accepted under Religious or Spiritual Problem as follows: “This category can be used when the focus of clinical attention is a religious or spiritual problem. Examples include distressing experiences that involve loss or questioning of faith, problems associated with conversion to a new faith, or questioning of other spiritual values that may not necessarily be related to an organized church or religious institution” (APA 2000, p. 741). Frequently reported religious problems

in the literature are a loss or questioning of faith, change in denominational membership or conversion to a new religion, intensification of adherence to the beliefs and practices of one's own faith, and joining, participating in, or leaving a new religious movement or cult. Spiritual problems cited in the literature involve conflicts concerning an individual's relationship to the transcendent and questioning of spiritual values. Moreover, questioning of spiritual values can be triggered by an experience of loss or a sense of spiritual connection. Spiritual problems also may arise from spiritual practices, e.g., someone who begins a meditation practice and starts to experience perceptual changes. As well, mystical experiences and near-death experiences can lead to spiritual problems and were a focus for concern by the Spiritual Emergence Network. It was argued that inappropriately diagnosing disruptive religious and spiritual experiences as mental disorders can negatively influence their outcome. For example, some clinical literature on mysticism has described mystical experience as symptomatic of ego regression, borderline psychosis, a psychotic episode, or temporal lobe dysfunction. As well, "dark night of the soul" experiences have been equated to clinical depression. Moreover, the interaction of contemporary psychiatry and religion can take place at several levels: patients may have religious beliefs that need to be taken into consideration when planning treatment, and patients' values may affect acceptance of treatment.

While introduction of the V code represents a significant first step toward explicit delineation of religious and spiritual clinical foci, it is but a modest accommodation. One limitation is the tendency to compartmentalize clinical focus on religious or spiritual issues, versus viewing them as interwoven among all other areas of functioning. With the secularization of medicine, mental health practitioners increasingly have assumed three functions traditionally recognized as being in the realm of religion: explanation of the unknown, ritual and social function, and the definition of values.

## Training and Research

On average, psychiatrists hold far fewer religious beliefs than either their parents or their patients. Moreover, despite the importance of religion and spirituality to most patients' lives, psychiatrists are not given adequate training to deal with issues arising from disturbances in these realms. Accreditation standards for medical schools and postgraduate programs in the USA and Canada now require competency in understanding ways in which people of diverse cultures and belief systems perceive health and illness.

Disorders of the mind raise questions about the meaning of life, the presence of evil, and the possibility that forces beyond the senses are influencing one's life. "Spirituality" has come to be understood as a way of talking about such topics as transcendence, immanence, meaning, and purpose and may be theistic or nontheistic. Contemporary psychiatry and religion can be viewed as parallel and complementary frames of reference for understanding and describing human experience and behavior. Thus, while they place different degrees of emphasis on body, mind, and spirit, integration is possible to achieve comprehensive patient care.

It is only recently that religion and mental health issues have been addressed through research. In large part, results from studies have indicated a salutary relationship between religious involvement and health status. The consistency of findings, despite diversity of samples, designs, methodologies, religious measures, health outcomes, and population characteristics, serves to strengthen the positive association between religion and health. For several decades, empirical research findings and literature reviews have reported strong positive associations between measures of religious involvement and mental health outcomes. A beneficial impact of religious involvement has been observed for outcomes such as suicide, drug use, alcohol abuse, delinquent behavior, marital satisfaction, psychological distress, certain functional psychiatric diagnoses, and depression. A next logical step

for research on religion and mental health is to explore possible explanations for this mostly positive religious effect. A variety of potential factors have already been identified, such as social cohesiveness, the impact of internal locus of control beliefs, religious commitment, and faith. Research in positive psychology, which promotes spiritual values such as gratitude and forgiveness, suggests a positive correlation between these values and improved health. Moreover, emerging research in neurotheology explores the relationship between spirituality and neurological processes.

### Future: Religion and Culture

In the twenty-first century, religious and spiritual dimensions of culture remain important factors structuring human experience, beliefs, values, behavior, and illness patterns. Sensitivity to the cultural dimensions of religious and spiritual experiences is deemed essential for effective psychiatric treatment. The majority of the world's population relies on complementary and alternative systems of medicine for healing. It follows that in order for a psychiatrist to effectively work with an indigenous healer, he or she must have some understanding of the patient's cultural construction of illness, including the meaning of religious content. C. Jung's work on the importance of recognizing the "shadow" in healing of minds and souls has contributed a great deal to cementing productive relationships between patient and therapist and priest and counselor. Different ways exist to engage with spirituality, e.g., learning mindfulness and meditation, cultivating spiritual values, and promoting spiritual practices. Inclusion of spiritual and religious issues in psychiatry, however, requires sensitivity to potential ethical issues regarding privacy, therapeutic boundaries, and discrimination.

Finally, religion and spiritual issues have been identified as a research agenda for the development of DSM-V. Examination of religion in history taking and cultural formation processes and

spirituality as a factor in self-identity, self-care, insight, self-reliance, and resiliency are being promoted. Research on the similarities and differences of religious and spiritual issues across ethnic and cultural groups is being encouraged, as is research on the transgenerational process of acquisition or transmission of religious and spiritual norms and their impact on diagnosis.

## Psychoanalysis

David M. Moss III  
Atlanta, GA, USA

Psychoanalysis is a school of psychology originated by the Austrian psychiatrist Sigmund Freud (1856–1939). Born out of struggle, it is a scientific approach to the investigation of conscious and unconscious processes, as well as a clinical discipline of artistic application and therapeutic scrutiny. Psychoanalysis is the sine qua non of modern psychology.

Philosophically, psychoanalysis is based on psychic determinism, a theory of human behavior rooted in a premise that certain causes predictably engender particular psychological effects. Prior to Freud, psychiatric studies theorized that organic conditions were the elementary basis of human behavior. Freud asserted that deep personality conflicts shaped the psyche, as did interpersonal and cultural influences. These dynamic forces became the psychic determinants of attitudes, opinions, and behavioral patterns – including religious practices and faith convictions. Psychoanalysis, by pointing to their roots, offers a mode of shifting or managing and, to some extent, changing the consequences of these influences. This hope is Freud's major gift to depth psychology.

## Personality Constructs

Freud's belief in unconscious motivation was the foundation from which he developed an elaborate theory of personality that virtually reshaped Western thought. He believed that the fundamental source of psychic energy underlying human behavior stems from an instinctive drive called libido which is sexual in nature. By "sexual" he meant any type of physically pleasurable activity, particularly those of the mouth, anus, and genitals. The libido also enables an individual's survival, motivating one to eat and drink. Along with propagation, this survival drive is the essence of what Freud termed Eros, the life instinct. The opposite of Eros is Thanatos, the death instinct aimed at a return of the human organism to an inorganic state.

While Thanatos has been debated and denied by countless critics, Freud's personality divisions have been well accepted as psychodynamic constructs. Basically he contends that the interaction of the id, ego, and superego forms the personality. The id is an unconscious dimension of the mind that serves as a storehouse for the libido. Freud claimed that this "dark, inaccessible...cauldron full of seething excitations" composes all instinctive organic cravings. The id is a substratum characterized by unrestrained pleasure-seeking impulses constantly demanding expression via thought and behavior.

Ideally, these unconscious libidinal drives are controlled by the conscious ego. This is the rational aspect of the personality which governs the activities of the id and directs a person's behavior so that the demands of reality are met. The ego is basically concerned with the maintenance of social approval, self-esteem, and the alteration of libidinal drives so that they are in compliance with normative society.

Morality is not necessarily the product of the ego though. Ethics, folkways, and mores reside in the third part of Freud's personality schema, the superego. A product of parental authority and institutional standards – especially religion – the superego uncompromisingly guards ideas of right and wrong. In turn, the superego's wishes continually conflict with those of the id and both battle

for expression through the ego. When their tension is relatively acute the latter employs compromise mechanisms such as sublimation or compensation. Generally, such a compromise is aimed at satisfying both the id and superego. However, if the ego fails to accomplish this goal, neurotic symptoms may result, symbolically venting the frustrated libidinal impulses.

## Developmental Stages

Psychoanalytic theory claims that the first exposures to crises shape the child's personality and therefore the ways in which he or she handles stress throughout life. Like his personality structure, Freud believed that early growth can be dynamically differentiated into three parts, each of which is a stage of development during the first 5 years of life. He defined these stages mostly in terms of the individual's awareness and the basic reaction of particular erogenous zones. For example, the oral stage is the first or infantile stage in a person's psychosexual maturation. The anal is the second stage and the phallic is the last pregenital phase. The next period of development is latency, a time during which pregenital impulses are repressed. These impulses are then reawakened during adolescence when the genital phase is reached.

Although family influence is important during all of these stages, Freud laid particular weight upon the pregenital periods. During the oral period one may form certain dominant character traits as a result of feeding, weaning, and the mother's attention. For instance, an overprotective mother may cause a child to be abnormally dependent. Another sign of oral fixation is the argumentative person, one who displaced an early need to bite with sarcasm or quibbling.

Usually a child is toilet trained at the anal phase. Like weaning (and delivery before) this, too, is a crucial experience that may determine future attitudes and behavioral characteristics. A strict mother may produce an anally retentive child who will continue to be obstinate and stingy. She may also encourage an explosive type of personality who will be cruel, destructive,

and disorderly. Conversely, a mother who coaxes and rewards may help her child to become creative and productive.

The most important point about the phallic stage is that it is the period during which the child experiences an unconscious sexual attachment to his mother and a feeling of jealousy toward his father. Freud called this the Oedipus complex and said that it results in a feeling of guilt and emotional conflict on the part of the child. Yet, like the oral and anal phases, the danger of such conflict is relative to the individual. In other words, fixation is not inevitable even though most males supposedly have this experience.

Again, latency is a period generally characterized by repression. However, if painful conflicts are repressed without being adequately resolved, they will continue to unconsciously influence the individual's thought, feelings, and behavior. This will cause emotional tension or anxiety and possibly an inability to adjust. Such anxiety manifests itself in varying degrees. Freud used two standard categories to portray the magnitude of a person's maladjustment: neuroses and psychoses. To him, the former is chiefly a product of id versus ego, while the latter is a breakdown of ego, defense mechanisms, and the projection of unconscious wishes onto the external world.

## Religion

The projection of wishes is a key factor in Freud's use of dreams as "the royal road to the unconscious." While dream work is a central ingredient of psychoanalytic interpretation, it is also a medium of religion. Yet Freud contended that religion was an illusion, a belief system largely based on wishes. He appreciated the particularity of religion in providing a sense of emotional protection from external threat, as well as a cultural reservoir of ethical standards. Nevertheless, he believed modern mankind was capable of maturing beyond the irrational, superstitious, and magical thinking of religious ideation.

Freud was an atheist who referred to himself as a "godless Jew." He saw God as a magnified

father figure or parental ideal at the hub of a social neurosis one must grow beyond to be truly educated and able to cope with reality. He believed that primitive religions in patriarchal societies with strong totemic beliefs were profoundly influenced by the Oedipus complex. Young men of a tribal horde murdered their father to possess his wives. Totemic worship was to atone for such death and reinforce ethical restrictions founded on shame and guilt.

## Struggle

Freud's beliefs about religion have been criticized since their first publications. They are intellectually valuable, but they do not represent the driving force of psychoanalysis the way his personality constructs do. These models – especially infantile sexuality – have also been challenged since their initial presentations more than a century ago. Such controversies have led to the development of other schools of depth psychology. These range from analytic psychology and individual psychology to ego psychology and self psychology. Clinically, all of these orientations use Freud's basic tools – free association, transference, and interpretation.

Schools of psychoanalysis vary in their expectations about treatment length and frequency of sessions. Customarily, an analyze will spend at least three hours a week on the couch for months if not years. This is because the process of analysis is not symptomatic in focus. Psychoanalysis is insight-oriented psychotherapy devoted to a reeducation of the self. An effective analysis can enable one to harness neurotic energy in the interest of interpersonal responsiveness and intrapsychic balance.

Shortly before his death Freud made a brief recorded public message in which he noted his “good fortune” in the discovery of psychoanalysis. Yet he concluded, “People did not believe in my facts and thought my theories unsavory. Resistance was strong and unrelenting: In the end, I succeeded in acquiring pupils and bringing up an international psychoanalytic association. But the struggle is not yet over.”

## Psychoanalytic Cultural Analysis

Peggy Kay

Department of Religion, The George Washington University, Washington, DC, USA

### Introduction: Psychological Approach, Psychoanalytic Process, and Analysis of Culture

The primary psychological tool for psychoanalytic cultural analysis is depth psychology, which is integral to psychoanalysis, plus personality psychology, cross-cultural psychology, Jungian psychology, and social psychology. These tools are best suited to examine the full range of culture in all aspects. Additional specialized tools include psychology of religion, archetypal psychology, relational psychology, community psychology, psychologies of liberation, peace psychology, and ecopsychology. Important elements of culture to be analyzed include religion, mythology, social networks, social

conditions, public awareness and discourse, and institutions of all kinds. Social location takes into account many of these factors and is critical to locating the person, relationship, society, and culture itself in time and place.

## Psychoanalysis of Culture

Analysis can be done using three main approaches. One is to psychoanalytically examine culture in general or a particular culture. In this approach, it is culture that is being observed, and depth psychology is employed as a tool or framework within which to understand the culture in psychoanalytic terms. It is an external, structural, phenomenological, empirical approach. The second approach is to examine the psychodynamics of the culture being considered. This approach looks at the internal dynamics of the collective psyche or a functional approach. These two approaches are often used in tandem, in intersect, or interchangeably. The third approach is to examine the relationship of the person to the culture, with views toward understanding individual participation in the culture and seeing how the culture may be constituted by individuals. The third approach, analysis of the relationship of the individual to culture and society, often employs both the first and second approaches.

## Cultural Psychodynamics

Cultural analysis done psychoanalytically examines extant culture, attempting to elucidate unconscious dimensions of the collective cultural psyche and of individual constituents and seeking to understand correlations between the individual psyche and the cultural collective psyche including its connection to the Jungian collective unconscious. In the history of the psychology of religion, arguably the most intense analyst of culture and people was Sigmund Freud. He was expert in applying his theoretical structure of the unconscious to the workings of culture and in psychoanalyzing how the manifestation of culture and the collective psyche

are in dynamic tension. In *Totem and Taboo* (Freud 1913/1960), he says:

The asocial nature of neuroses has its genetic origin in their most fundamental purpose, which is to take flight from an unsatisfying reality into a more pleasurable world of phantasy. The real world, which is avoided in this way by neurotics, is under the sway of human society and of the institutions collectively created by it. To turn away from reality is at the same time to withdraw from the community of man (p. 74).

Among his best-known works on culture are *Civilization and Its Discontents* and his most pointed work in the psychology of religion, *The Future of an Illusion*.

Berry et al. (2011) describe “culture as context for development. . . We learn about norms and beliefs and how to read and write via the different routes of cultural transmission. . . Culture is thus not only what we explicitly learn socially, but is also constituted simply by using cultural artifacts which are often built or invented by earlier generations. . . Hence, human behavior can be qualified as ‘culturally mediated.’” (pp. 36–38).

Different cultures view psychoanalysis itself differently. Discussing the depth psychological notion of ego, Kirschner (1996) has contrasted American and French cultural conceptions.

In general, [this] preoccupation with strengthening the ego and/or the self is absent from the French analytic attitude. . . most radically true in the case of Jacques Lacan, for whom the self or subject is an illusion to be dissolved, itself the problem (or rather the symptom). Particularly the notion of self-direction. . . is disdained by many French analysts, even those who are not exclusively Lacanian. . . Themes of the self and its individuation, of oneness and separateness, are highly salient for Anglo-Americans because of their relation to our ideals of independence and self-direction (pp. 60-61).

Relationships between cultures, societies, religions, and communities are in new focus today with the need for interfaith, peace, and cross-cultural dialogue and understanding. On the dynamics of intercultural and interfaith dialogue and conflict resolution, Abu-Nimer (1999/2002) has said:

Once opponents meet in a genuine dialogue setting, they will never return to the same positions or level of awareness that they had before. It is as if they

have joined a new society. Their views and perceptions of the conflict and the enemy change, mostly because of the powerful turning point in the dialogue process when participants realize, acknowledge, and understand their mutual fears and concerns. When that bridge is constructed between the two sides, a powerful connection has been made... Dialogue is not a substitute for social action. Protest and resistance to oppression are still needed for social and political change to occur. However, dialogue provides an additional path on which to accomplish such changes... full of positive and constructive joint energy... based on creativity and trust (pp. 15-16).

In the introduction to her book *Gaia and God: An Ecofeminist Theology of Earth Healing* (1992), Rosemary Radford Ruether says:

If dominating and destructive relations to the earth are interrelated with gender, class, and racial domination, then a healed relation to the earth cannot come about simply through technological "fixes". It demands a social reordering to bring about just and loving interrelationship between men and women, between races and nations, between groups presently stratified into social classes, manifest in great disparities of access to the means of life. In short, it demands that we must speak of eco-justice, and not simply of domination of the earth as though that happened unrelated to social domination (pp. 2-3).

She focuses on the social, institutional, collective dimensions of these negative relations, and she advocates "a social reordering" to heal them.

## Individual and Culture

Individuals participate in culture, have unique relationships to the culture, and have relationships to each other within the culture. Institutions such as religion play a role in such relationships.

Edinger (1972) says:

Religion is the best collective protection available against both inflation and alienation. So far as we know, every society has had such suprapersonal categories in its collective ritual of life. It is quite doubtful if collective human life can survive for any period without some common, shared sense of awareness of these transpersonal categories. However, although collective methods protect man from the dangers of the psychic depths, they also deprive him of the individual experience of these depths and

the possibility of development which such experience promotes... When the collective psyche is in a stable state, the vast majority of individuals share a common living myth of deity (pp. 64-65).

Freud in *The Psychopathology of Everyday Life*, part XI "Combined Faulty Acts" (Freud 1938/1966) examines individual cases of people with good intentions in resolutions for purposeful social actions. But actions done were not those intended. Because the psychodynamic is common to all cases, he sees this as a collective as well as individual human phenomenon, a matter of consciousness. He says:

That unconscious something which worked against these resolutions found another outlet after the first road was closed to it. It requires something other than the conscious counter-resolution to overcome the unknown motive; it requires a psychic work which makes the unknown known to consciousness (Freud 1938/1966, p. 149) (Fig. 1).

On the dynamics of the individual and of the relationship of the individual to society, Carl Gustav Jung said:

The individual is determined on the one hand by the principle of uniqueness and distinctiveness, and on the other by the society to which he belongs. He is an indispensable link in the social structure (Jung 1953/1979, Vol. 7, para. 519).

The individual is precisely that which can never be merged with the collective and is never identical with it (Jung 1953/1979, Vol. 7, par. 485).

The larger a community is, and the more the sum total of collective factors peculiar to every large community rests on conservative prejudices detrimental to individuality, the more will the individual be morally and spiritually crushed, and, as a result, the one source of moral and spiritual progress for society is choked up (Jung 1953/1979, Vol. 7, par. 240).

The individual will never find the real justification for his existence and his own spiritual and moral autonomy anywhere except in an extramundane principle capable of relativizing the overpowering influence of external factors... For this he needs the evidence of inner, transcendent experience which alone can protect him from the otherwise inevitable submersion in the mass (Jung 1953/1979, Vol. 10, par. 511).

Jung's theory of individuation, the differentiation and development of the individual across the life cycle, describes how the individual first grows in realization and actualization of self, then

**Psychoanalytic Cultural Analysis, Fig. 1** Public domain (Image Source Page: <http://www.crystalinks.com/jung.html>)

in participation in the collective, and lastly in relation to the transcendent. Jung expresses his view of individual and social transformation in the final textual volume of his *Collected Works*, in a “miscellaneous writing” on *The Symbolic Life* (Jung 1953/1979, Vol. 18, paras. 1378–83).

If the whole is to change, the individual must change himself. Goodness is an individual gift and an individual acquisition...acquired only by the individual as his own achievement. No masses can do it for him. But evil needs masses for its genesis and continued existence. The mastermen of the SS [*Schutzstaffel* “defence squadron”, Nazi special police force - Jung is writing this in Europe after WWII] are all, when segregated each by himself, indescribably small and ugly. But the good man shines like a jewel that was lost in the Sahara...Only with the individual can anything be done...What we need are a few illuminating truths, but no articles of faith. Where an intelligible faith works, it finds in faith a willing ally; for faith has always helped when thinking and understanding could not quite make the grade. Understanding is never the handmaiden of faith – on the contrary, faith completes understanding...The people seek, despite everything, to understand.

## Psychoanalytic Spirituality

Ann Gleig

Department of Philosophy, University of Central Florida, Orlando, FL, USA

In their survey of the relationship between psychology and religion, William Parsons and Diane Jonte-Pace (2001) note the emergence of what they label as “psychology as religion.” Rather than employ psychology to interpret religion, this approach seeks to offer psychology as a religion. Presenting itself as a modern secular way to experience one’s religiosity, psychology as religion has flourished within a wider therapeutic climate as an alternative method to guide an individual’s quest for meaning and the sacred. The contemporary rise of psychology as religion, or what is often referred to as psychospirituality, has been noted by a number of scholars who have focused their attention on Jungian, humanistic, and transpersonal schools (Barnard 2001). A similar phenomenon that can be identified as “psychoanalytic spirituality” has also emerged within the field of psychoanalysis. Psychoanalytic spirituality is defined here as the radical claim, explicitly advanced by a number of contemporary influential analysts, that psychoanalysis has inherently spiritual or mystical dimensions and can function as a modern spiritual practice.

Sigmund Freud’s (1927) rejection of religion as nothing more than an illusion, which was designed to protect humans from early childhood feelings of powerlessness, established the classic psychoanalytic view of religion as regressive and antithetical to the psychoanalytic enterprise. Similarly, Freud’s (1930) dismissal of mysticism as a regression to an early developmental stage of merger with the mother established the reductive psychoanalytic perspective of mysticism as narcissistic and pathological. Following Freud, as late as 1977, an overview of the psychoanalytic treatment of religion concluded that approaches were restricted to establishing parallels between religious practices and beliefs and obsessional neuroses (Ducey 1977).

Since the 1980s largely due to the influence of Donald W. Winnicott and Wilfred Bion, however, psychoanalysis has been witnessing a rapprochement with religion and particularly with modern, deinstitutionalized, and eclectic forms of spirituality, which are concerned with personal experience, self-transformation, and an immanent divinity (Anderson and Winer 2007; Black 2006). While often overlapping, two main positions can be delineated in current psychoanalytic-spiritual conversations: (1) a dialogical approach which attempts to bring the two distinct disciplines into conversation and (2) a more provocative perspective, in which the two disciplines begin to converge and psychoanalysis is seen as having inherently spiritual dimensions. The second position identified here as psychoanalytic spirituality is best illustrated through an examination of the writings of some of its most vocal proponents and critical commentators.

At the forefront of the contemporary embrace of psychoanalytic spirituality is Michael Eigen. Eigen is aligned with the relational school and has been described as an affective phenomenologist (Gordon 2004). His work is an exploration of subjectivity that places the feeling self, the impact of the other, and affective experience at its center. Eigen portrays a self caught between the extremes of deficiency and excess, claiming that the self’s unconscious primary processes are often unable to metabolize the intense impacts of affective experience. One of Eigen’s primary analytic concerns,

therefore, is to facilitate the self's capacity for experiencing, an ability, he implies, that is connected to a type of mystical immediacy or transparency to ultimate reality. Eigen wants the self to open to and digest wider ranges of experience. This includes mystical experience, which, he claims, is more common and ordinary than is supposed, an intrinsic dimension of experience that has been discarded in psychoanalysis.

According to Eigen, however, despite this neglect, a strong mystical thread has been present in psychoanalysis since its inception. He argues that many analysts are mystical and use mystical imagery as intuitive models for psychoanalytic experience and that there is a mystical aspect to the analytic process. In a series of books and articles, Eigen has developed the thought of a number of analysts – most notably Bion, Jacques Lacan, Marion Milner, and Winnicott – to recover a lineage of “psychoanalytic mystics.” Writing intimately of his own mystical experiences, Eigen outs himself as one of the latter, revealing that Buddhism and Judaism are “his umbilical connections to the universe” and that he has also dipped into Catholicism, Hinduism, Taoism, and Sufism. Just as his own mystical exploration has been unashamedly promiscuous, so his understanding of mysticism and his readings of the psychoanalytic mystics are unabashedly eclectic and innovative (Eigen 1992, 1995, 1998, 2001).

Eigen claims that there is a basic religious force that specific religions grow out of and elaborate on and which expresses itself in a wide variety of mystical experiences and states. He refuses to define mysticism on the grounds of the paradoxical nature of the experiencing involved, and rather than present a systematic theory, he offers autobiographical snapshots, clinical vignettes, and meditations on the inherent mysticism of a number of seminal analysts. What emerges from these excursions is an unruly multiplicity of mystical experiences, numinous encounters, and religious ecstasies. Eigen locates mysticism both with a distinct personal God and an impersonal monistic force; he values mysticisms of identity and mysticisms of difference; he connects mysticism to aliveness, vitality, and generativity yet also stresses its relationship to

death, dread, and destruction. Celebrating these various mysticisms, Eigen finally settles on what he calls a “paradoxical monism”: a spirituality that embraces both the impersonal void and the personal God, difference and union, dread and ecstasy, immanence and transcendence.

In terms of the relationship of such forms of spirituality to psychoanalysis, Eigen moves between advocating a dialogical approach and embracing the places where the two fields converge and conflate. Dialogically, he calls for the cross-fertilization of the two disciplines and argues that they can correct and amplify each other. Using his patients as examples, he discusses how mystical experiences can be transformative and life enhancing or used for defensive and destructive ends. Analysis, he suggests, can help people metabolize the impacts of spiritual experience and use their mystical capacities in ways that further rather than stunt personality growth.

Mysticism and psychoanalysis can operate, therefore, as distinct practices that potentially correct the deficiencies and excesses of each other. Eigen also believes, however, that the boundaries between the two are porous, overlap, and ultimately dissolve in the face of the “one reality” that pours through them both. Beyond aiding in the healthy psychological integration of mystical experiences, psychoanalysis can function itself as both a spiritual process and practice. In support of this claim, Eigen draws from Winnicott, Milner, Lacan, and Bion. He argues that there is no reason to set artificial limits on how far or where the analytic process can go and challenges analysis to move beyond a technology of cure focused on the resolution of symptoms, towards a creative life process that is concerned with a deepening of the soul.

Just as Eigen refashions the analytic enterprise as a spiritual unfolding so he treats the unconscious to a mystical makeover. Eigen understands the unconscious as both bridge to and mediator of the sacred. The timeless-spaceless aspect of the unconscious does not replace God but rather provides a privileged point of contact between the transcendent “Unrepresentable One” and psychic life. It mediates and filters the divine through dreams, myths, and narratives (Eigen 1992).

Similar themes to Eigen's have appeared in the work of other contemporary analysts. For example, James Grotstein, who is heavily influenced by Bion, has declared that he wishes to return the unconscious to its former Gnostic status before Freud. According to Grotstein, within the sacred architecture of the unconscious is the "Ineffable Subject" a preternatural second self that is separate from, but as near as we can get to, a divinity that is utterly beyond contemplation. This immanent numinous presence is the analytic third that is birthed in the therapeutic encounter and signifies the point where analysis and mysticism converge. Reunited with the Ineffable Self, one attains the "transcendent position," a transient state in which we become one with Bion's designated O, directly experiencing our pure beingness and aliveness. This is not to be rarified as any otherworldly ecstasy, however, but is rather an immediacy of one's emotional reality without defense in which one realizes the sacred in the mundane, the extraordinary in the ordinary (Grotstein 2000).

In a related vein, analyst Kerry Gordon has discussed the inherent mysticism of Christopher Bollas, Grotstein, and Eigen and interpreted psychoanalysis as a contemporary manifestation of the Gnostic quest for an immanent divinity. Gordon believes that there has always been a powerful spiritual current within psychoanalysis but that it has been neglected to make it palatable to the majority of atheist or agnostic analysts. For him and many of his patients, however, psychoanalysis is a psychospiritual process that reunites the sacred and mundane and responds to a universal human drive to experience the divine (Gordon 2004).

Drawing from Winnicott and negative theology, Gerald Gargiulo distinguishes natural spirituality from dogmatic religion and finds within analysis an "everyday transcendence" that grounds the human condition rather than attempts to escape from it. Gargiulo understands psychoanalytic theories as living metaphors that create the found world amongst a midst of infinite possibilities. Rooted in an apophatic perspective that embraces the creative potentialities of unknowing, analysis becomes a natural spirituality. It discovers within the self a sacred ground of

being – a profound aloneness or great emptiness that is paradoxically teeming with life. This opening to mystery and personal creativity is, Gargiulo claims, ultimately the goal of both analysis and spirituality (Gargiulo 2005).

In terms of secondary scholarship on the phenomena of psychoanalytic spirituality, Dan Merkur (2010) has recently argued that a mystical lineage can be found within the field of psychoanalysis. He identifies a lineage of "psychoanalytic mystics" – ranging from seminal thinkers such as Winnicott, Bion, and Heinz Kohut to contemporary analysts such as Eigen and Grotstein – and locates these thinkers in a distinctive deinstitutionalized strand within the wider history of mysticism. In a related vein, William Parsons (2008) has discussed what he labels as "perennial psychology," an unchurched, psychological form of spirituality whose origins can be seen as early as the sixteenth and seventeenth centuries with the appearance of mysticism as a subjective experience divorced of church and tradition. Psychoanalytic spirituality can be located as a contemporary expression of this perennial psychology.

## Psychological Types

Adele Tyler  
Life Journeys, Nashville, TN, USA

A theory of personality developed by Swiss psychiatrist Carl Jung in the early years of the twentieth century. Jung theorized that people's behaviors are directed by inborn tendencies to think and act in different but equally valid ways. His theory posits two basic orientations to the world, called *attitudes*, and four main mental processes, called *functions*. He considered these

psychological preferences innate tendencies, like a preference for right- or left-handedness, and speculated they were biologically based.

Jung's stated purpose in developing a theory of psychological types was not to sort people into boxlike categories but rather to expand the language of the then-new science of psychology to facilitate more methodical, empirical research on human behavior. He developed his ideas on psychological types in part from observations of his patients, both individuals and couples. In his book *Psychological Types*, first published in 1921, Jung acknowledged the historical roots of personality types in oriental astrology, Hippocrates' theories on the four elements (earth, air, fire, and water), and Greek physician Galen's system of four temperaments (sanguine, phlegmatic, choleric, and melancholic), among others.

## Extraversion and Introversion

Jung's first and central idea on psychological types was that people prefer one of two fundamentally different attitudes toward the world. A tendency to focus on the outer world of objects and people he deemed extraversion and an orientation toward and preference for the inner world of ideas and emotions he called introversion. *Extraversion* and *introversion* describe two opposite ways of using and renewing one's psychic energy. Extraverts direct energy to and receive energy back from the external world, and introverts direct energy to and receive energy from the inner world of reflection.

The preference for extraversion or introversion is easily understood by most people in their recognition of extraverted people who are outgoing, talkative, uninhibited, and involved in multiple groups and activities and introverted persons who are more reserved, quiet, and harder to know. These differences can be observed in infancy in an extraverted child's quicker and easier adaptation to and participation in the outer world and an introverted child's tendency toward shyness and reluctance to engage with objects and people. The innate nature of the preference for one or the other attitude helps

explain differences in personalities of children raised in the same family. Jung stated that it was incorrect to assume extraverts were active people and introverts were passive people, saying instead that extraversion correlates with acting in an immediate, unreflective way, whereas introversion correlates with acting after reflecting or acting with forethought. He emphasized that neither way was better or more valid except as called for in a particular situation.

### The Four Functions

In addition to a preference for an attitude of extraversion or introversion, Jung theorized four different mental processes that explain how people use their minds. Two of these, which explain how people gather information, are called the perceiving functions, *sensing* and *intuition*. The two ways people make judgments and decisions are called the judging functions, *thinking* and *feeling*.

When using one of the perceiving functions, *sensing* or *intuition*, people become aware of what is happening, without interpreting or evaluating the experience. Sensing, which is perceiving through the five senses, is concerned with concrete realities and is therefore focused in the present, the “what is.” Intuition, which is perceiving information through a “sixth sense” or the unconscious, looks for hidden possibilities and is therefore more concerned with the future, the “what ifs.” A person whose dominant function is sensing focuses on facts, and one whose dominant function is intuition prefers using imagination.

Evaluating the information that has been gathered via the perceiving functions is done by one of the two judging functions, *thinking* or *feeling*. Thinking relies on logic to make decisions and judgments, weighing the pros and cons to decide whether something is “right or wrong.” The feeling function makes judgments based on one’s personal values, deciding with compassion and empathy whether something is “good or bad.” The thinking function is more concerned with truth and justice, and the feeling

function is more concerned with kindness and harmony. Thinking makes judgments from the outside, using an objective viewpoint, and feeling makes judgments from the subjective viewpoint of “standing in another person’s shoes.”

Jung observed that an innate preference for one of these four functions emerges in early childhood and develops as the dominant mental process. Later, a second or auxiliary function emerges. The other two functions remain less developed but available to the individual through the unconscious. As with the attitudes of extraversion and introversion, Jung emphasized that all four functions are equally valid and useful.

### Type Dynamics

All four of these functions are used in either the extraverted or introverted attitude, which led to eight possible combinations of preferred attitude and function, which Jung called the eight function types. It is important to understand that Jung’s is a dynamic system of personality. Rather than static boxes, these eight type combinations interact in the conscious and unconscious mind of each individual in unique ways. Each set of preferences are like poles on a continuum, with most people’s strength of preference somewhere along the continuum. Some more developed and some less developed, the functions and attitudes work as templates for potential behaviors that result in infinite varieties of individual expression, much the way that the template that governs the crystallization of frozen water into six-sided figures produces an infinite variety of snowflakes.

Throughout life a person will have an interaction and flow of energy between the poles of extraversion and introversion, sensing and intuition, and thinking and feeling. Because one’s preferences are viewed as innate, they do not change during a lifetime, but with normal development people learn to use all the functions in both attitudes to some degree. Jung postulated that a “falsification of type” sometimes occurs where cultural influences cause a person to develop a lesser preference, much

as left-handed children once were forced to use their right hands and that this condition is a primary cause of neurosis.

## Application of Psychological Type Theory

Jung's type theory has been popularized through the Myers-Briggs Type Indicator, a questionnaire based on Jung's typology developed by the mother-daughter team of Katherine Briggs and Isabel Briggs Myers. The Myers-Briggs Type Indicator, referred to as the MBTI, includes the additional category of Judging/Perceiving to indicate a person's preference for the perceiving functions or the judging functions. The MBTI gives scores for one's preference for E or I (extraversion or introversion), S or N (sensing or intuition), T or F (thinking or feeling), and J or P (judging or perceiving). These four categories yield 16 combinations of preferences, called the 16 types, thus doubling Jung's original 8 types to 16. The types are referred to by a four-letter designation that shows these preferences. For example, a person whose scores showed a preference for Extraversion over Introversion, Sensing over Intuition, Thinking over Feeling, and Judging over Perceiving would have the designation ESTJ.

The MBTI, a practical application of type theory, is the most widely used personality test in the world and has made Jung's ideas useful for ordinary people in understanding themselves and developing their potentials. This tool is commonly used in career counseling, marriage and family counseling, education, and in organizations. Recent works in psychological type have examined the role of type in religion and spirituality, studying the ways in which each of the 16 types approaches worship and engages in spiritual practices and works. A less-recognized test of psychological types called the Singer-Loomis Inventory of Personality (the SLIP) was developed by two Jungian analysts and uses as categories the eight function types originally described by Jung.

In recent years a worldwide community of type practitioners, called typologists, has developed.

Hundreds of books have been written and studies conducted applying typology to numerous fields of human activity. The prevalence of the MBTI and typology indicates that Jung's theories on personality type continue to have value in helping increase self-awareness and self-acceptance in individuals and by promoting better understanding and communication in human relationships of all kinds.

## Psychology

Kate M. Loewenthal  
Department of Psychology, Royal Holloway,  
University of London, Egham, Surrey, UK

What is psychology? There is little dispute about the broad definition of psychology as the study and understanding of human behavior, cognitive processes, experience, and emotion. However the history of psychology has been colorful, peppered

with disputes about how such understanding and study should be done. The different views on the “how” of psychology have impacted on the psychological study of religion.

This entry will highlight some important features of the history of psychology and suggest how these features may have impacted on the psychological understanding of religion.

## Psychology and the Early Study of Religion

In its early days, in the nineteenth and very early twentieth centuries, psychologists had no problems with asking people to introspect or report on their “inner” experiences. Two often-cited examples are (1) the Wurzburg school (Wundt 1902), who asked for detailed introspective reports on what went through people’s minds when they saw a picture, for example, or solved a problem, and (2) psychoanalysis (e.g., Freud 1964) in which people were asked to free-associate, to talk about the first things that came to mind. In this climate, the work of William James, described in *The Varieties of Religious Experience* (1902) was perfectly at home. James was able to use descriptive, experiential material and described pioneering uses of the psychological questionnaire method in which people were asked to describe their religious development.

But as the twentieth century grew older, scientific psychology was dominated by positivism, in which it was held that the objects of scientific investigation should be publicly observable and measurable. This entailed a shift from a focus on experience to a focus on behavior, epitomized in Watson’s *Psychology from the Standpoint of a Behaviorist* (1919). The psychological study of religion was seen to be incompatible with behaviorism – since the object of religious activity and feeling cannot be observed and measured, this was thought to make the study of religious activity and feeling unworthy of scientific attention. The psychological study of religion fell into a decline, and this decline was assisted by the influential and rather derogatory views of Freud on religion (e.g., Freud 1927).

Religion was seldom indexed in psychology textbooks, and where it was indexed, the explanations of religious behavior and feeling were almost always pejorative (Loewenthal 2000).

Within psychology, there remained considerable interest in personality and in the psychometric assessment of personality and social attitudes, using psychological tests and measures. This was reflected in the psychological study of religion, particularly the seminal work of Gordon Allport on religious orientation and prejudice (1966), followed by pioneering works on the psychology and social psychology of religion involving extensive use of psychological and social attitude measures (e.g., Argyle and Beit-Hallahmi 1975; Francis et al. 1981; Islam and Hewstone 1993).

## Recent Shifts in Psychology and the Study of Religion

Towards the end of the twentieth century and the early twenty-first century, there were important shifts in psychological methodologies and perspectives, reflecting a general postmodern tolerance of different perspectives. This resulted in a growth of the range of methods used to study religious behavior and experience (Belzen 2010). Religion was indexed more frequently in psychology textbooks and explained and studied in non-pejorative ways. The most important shifts were (1) the development of qualitative research methodologies, alongside the acceptance of experiential and phenomenological perspectives, which enabled the development of valuable work on the experiential aspects of the psychology of religion, and the emergence of interest in spirituality (Hay and Morisy 1978; Nelson 2009; Paloutzian and Park 2005; Tacey 2004); (2) the development of experimental methodologies, in particular their applications to areas of psychology other than the cognitive domains to which experimental methodology had traditionally been applied. Experimental work on social cognition and attachment theory, for example, is being usefully extended to the understanding of religion in relation to social cognition and religious feelings (e.g., Granqvist and Kirkpatrick 2008); (3) the development of

cognitive science has included the study of cognitive universals in religion (e.g., Andresen 2001; Pyssaiainen and Anttonen 2002); and (4) the development of neuroimaging techniques in the study of psychological processes has included the use of neuroimaging in the study of religious thinking and experience (e.g., Azari et al. 2005).

## Conclusions

In brief, the early twentieth century development of psychology as a positivist discipline stultified the psychological study of religion. However from the mid-twentieth century onwards, psychology developed into a discipline involving a broad range of approaches and methodologies, with major and beneficial impact on the way the psychological processes involved in religion have been studied.

## Psychology and the Origins of Religion

Bernard Spilka  
Department of Psychology, University  
of Denver, Denver, CO, USA

## Controversial Issues

To pose questions regarding the origin of religion from a social scientific stance is to enter a dangerous territory. Deviation from orthodox stances espoused by religious authorities has always been negatively viewed and often suppressed. In the mid- to late twentieth century,

this has taken the form of serious confrontation in education even involving the federal courts. Religiously premised frameworks termed scientific creationism and intelligent design continue to be aggressively pursued by religious conservatives to counter scientific, biological, and evolutionary teachings that are viewed as challenging scripture and church doctrines.

## A Brief Look at History

Anthropologists introduced such variation in the nineteenth century though their orientation was not to analyze or question the Judeo-Christian tradition, but to follow a safe path by examining the faiths of peoples they termed primitive. This approach did not threaten the Western religious establishment and was intellectually and emotionally accepted. Another major factor was that the religious perspectives of native groups in obscure locations were largely discussed in terms of the mythology of those studied. F. Max Muller (1879) wrote on the religions of India and Edward B. Tylor (1896) referred to the “religion of the lower races,” “uncultured races,” and “savages and barbarians” (p. 342). Readers of Muller, Tylor, and their ilk considered themselves “civilized” as opposed to the “primitives” whose faiths were treated as naïve mythological tales.

Muller (1879), however, initiated a cognitive approach to the issue of religious origins by claiming that sensory experience with the finite world plus reason leads a person to contemplation of the infinite. He further asserted that from this “sprang the first impulse to religion” (p. 360). Concurrently, the notion of a religious instinct was rejected. He correctly argued that it did nothing more than substitute one unknown for another. The death knell to this approach was sounded in 1924 by L. L. Bernard who found 83 religious instincts in the literature.

The next development emanated from behaviorism when the search for religious origins stressed natural processes such as evolution and neural processes. Given the substrate of human biology, emphasis shifted to learning and the influence of environmental forces. Objectivity

and measurement now dominated psychology, and since theories of religious origins could not be empirically verified, they were relegated to the realm of opinion and simply ignored.

Classical learning theory gave way to cognition and the revival of Muller’s stance via John Dewey (1929) who crossed both philosophy and psychology. Dewey saw the difficulty as experiential. Attempts to understand life’s uncertainty implied a basic cognitive weakness which aroused insecurity and a “quest for certainty.” According to him, “Religion was, in its origin, an expression of this endeavor” (p. 292).

## The Modern Approach

Increasing conceptual sophistication replaced the absolutist heredity-environment distinction. One now calculated the degree to which environment and genetics separately contributed to the phenomenon in question. A new perspective in which psychological processes and behavior were examined in twin studies plus the idea of heritability entered the picture. Reviews of this rapidly developing literature suggest that up to 50 % of the variance in religion measures may be referable to genetics. Keep in mind that heritability estimates are derived from group data and do not hold for any specific person (D’Onofrio et al. 1999).

## Sociobiology

The first major effort along these lines was E. O. Wilson’s 1978 formulation of sociobiology. His basic principle is that evolution has endowed the human mind with some basic guiding rules. Though these are concerned with collective social behavior, including religion, he cautiously invoked the joint influence of both genetics and environment. Wilson (1978) claimed that religion “can be seen to confer biological advantage” (p. 188). He attempted to support this position via an understanding of the role and function of myth for both society and the individual. His argument enlisted natural selection in the process.

## Evolutionary Psychology and Biopsychology

This approach contributed to the growing school of evolutionary psychology. Its advocates embrace both genetic and environmental influences, but there is a tendency for the latter to be minimized in favor of a search for biological bases of behavior.

Interestingly, the psychology used to theorize possible religious origins has been largely employed by anthropologists who exclusively look to cognition. Usually, without elaboration, they refer to biology and evolution for their final answer.

Pascal Boyer (2001) has been in the forefront of this movement. He initially claimed that religious ideas must be influenced by the way the brain is organized to make inferences. Theoretically, the seeking of causes and the making of attributions is given a biological foundation. This position is buttressed by noting the involvement of emotion in religious expression. Biology is joined with environment by acknowledging the important individual and social functions that religion plays in life. Above all, genetics and evolution loom in the background primarily for handling cognition. In addition Boyer appreciates religion's function in maintaining the group. Group selection, however, is largely rejected by the biological community. Hypotheses are then posited regarding the association of cognition and social behavior with natural selection. Religion thus develops because there is need for these concepts, socially, culturally, and biologically.

Among a number of others who look to cognition for religion's origin is Stewart Guthrie (1993) who extensively and impressively details the tendency of people to anthropomorphize virtually anything that may provide meaningful explanations. The result is that religion is reduced to anthropomorphism and ritual and all other religious forms fall into line.

Anthropologist James McClenon (1994, 2002) has taken an approach that explicitly combines cognition with emotion while assuming an evolutionary foundation though the latter remains vague and undefined. His emphasis is on the

experiences of early humans with what he terms "wondrous events." Though "wondrous healing" is stressed as a basis for religion, religion is primarily treated as belief. Leading also to this conclusion are trance states, hypnotizability, out-of-body experiences, and the like. Helplessness in the face of the unknown especially death results in the development of shamanism and ritualization which offer the delusion of meaning and control. The theoretical views of Freud and Malinowski among others are used by McClenon to buttress his arguments.

Cognitive theory offers a powerful entre into questions about the psychological origin of religion. One can, however, argue that it may not be enough. Religion does much more than help make life and the world sensible. From a motivational perspective, it aids people to maintain and/or enhance personal control over themselves and their environment. Lack of control is also one correlate of lack of meaning. Religion not only has the potential to satisfy needs for meaning and control but furthermore brings people together, supporting them both individually and collectively. Natural selection may be invoked for all three of these functions as it can easily be shown that survival and reproductive success follow from meaning, control, and sociality. Furthermore, biological and evolutionary bases for these factors are available, and researchers are continually discovering their neuropsychological and hormonal correlates. In all likelihood, these elements account for the observation that there is a moderate component of heritability in religious belief and adherence. For example, data suggest that up to 50 % of the variability in measures of control motivation is heritable. This overall framework is introduced and discussed elsewhere (Hood et al. 2009). Inherited hormonal factors in sociality have also been identified. An indirect test of these views is possible. One can hypothesize that partialling out these factors from the religion-genetics relationship in twin studies should make this association disappear. This does not deny the necessity of conducting additional research to define other neurobiological possibilities for understanding the place of heritability in personal

faith. The content of the three domains just cited still has to be defined though excellent insights have been offered by Boyer, Guthrie, and Kirkpatrick.

Kirkpatrick (2004) rejects the role of natural selection and religion as basically a biological adaptation. He sees it as a set of evolved by-products that involve cognitive, motivational, and social factors. Further development should not gainsay the role of environment in the learning and expression of religious beliefs, experience, and behavior. In coming to understand the nature of religion cross-culturally, naturalistic approaches ought not be viewed as threatening and blasphemous. There is room for comprehending the character of faith and spirituality from as broad a perspective as possible.

## Neuropsychology

Evolutionary forces involved in the development and expression of religion must rely on changes in the brain. Religious experience and behavior has been associated with temporal lobe epilepsy, magnetic stimulation of the parietal and temporal lobes, and neural activity in the prefrontal and medial frontal lobes and cortex (Hood et al. 2009). Though work in this area is increasing at a rapid rate, a clear need for repeated cross-validation is a necessity before findings can be accepted.

## Psychology as Religion

Ann Gleig

Department of Philosophy, University of Central Florida, Orlando, FL, USA

In a useful survey of the terrain between religion and psychology, William Parsons and Diane Jonte-Pace (2001) note that the multiple and diverse approaches now utilized within this area have replaced its identity as a single field, traditionally known as the psychology “of” religion, with the more inclusive “religion and psychological studies,” within which reside the subsets of “psychology of religion,” and “psychology in dialogue with religion.” What distinguishes the dialogical approach is that it moves beyond using psychology as a method of analysis to interpret religious phenomena to employ psychology as a tool to extend, through conversation, the aims of religion.

An additional subset appearing within, although arguably threatening to undermine, the dialogical enterprise is an approach that seeks less to relate psychology to religion than to offer psychology *as* a religion. Despite eliciting

controversy for blurring the boundaries between the two fields, psychology as religion cannot be dismissed as there is little doubt that the functioning of psychology in ways comparable to religion is widespread within contemporary western culture. This is attested to by the popularity of best-selling texts offering a mix of therapeutic and spiritual advice such as Scott M. Peck's *The Road Less Traveled* (1978) and Thomas Moore's *Care of the Soul* (1994). Presenting itself as a modern unchurched way to experience one's religiosity, psychology as religion has flourished within a wider therapeutic climate as an alternative method to guide an individual's quest for meaning and the sacred.

Before proceeding to the sociohistoric development of psychology as religion and notable cultural commentaries and critiques, further clarification of terms is useful. As William G. Barnard (2001) notes, the type of psychology utilized here is a humanistically oriented psychotherapy that is harnessed in service of psychospiritual wholeness and replaces religion as a way to develop existential meaning and enable a direct experience of the sacred. Similarly, religion is interchangeable with spirituality referring to a personal transformative experience of the essential core of religion, often rendered as a divine force, energy, or consciousness, that is distinct from traditional religious institutions, creeds, and praxis. When these two particular strands of psychology and religion overlap to such a degree that they fulfill the same purposes, we have psychology as religion.

This merging occurs at a variety of intersections as a multitude of cultural strands converge, intertwine, and trail off. Such interlacing complicates a tracing of the history of psychology as religion, but one can certainly identify significant junctures and key figures. William Parsons (2008) has teased out one dominant strand, which he labels as the *psychologia perennis*, an unchurched, psychological form of spirituality whose origins can be seen as early as the sixteenth and seventeenth centuries with the appearance of mysticism as a subjective "experience" divorced from church and tradition. The

emergence of a universal, sacred inner dimension of human beings allowed for the psychologization of mysticism and links the figures of William James, Carl Jung, Romain Rolland, and Richard Maurice Bucke and humanistic and transpersonal psychologists such as Abraham Maslow, Roberto Assagioli, and Ken Wilber. While recognizing differences in metapsychology and therapeutic techniques among these thinkers, Parsons offers a list of shared characteristics that unite them as perennial psychologists: the championing of the individual as an unchurched site of religiosity; the search for the origin of mysticism in the unconscious; a valorization of personal unchurched mystical experiences; an advocacy of perennialism; the discernment of innate, intuitive, mystical capacities; the development of psycho-mystical therapeutic regimens; and a social vision grounded in the rise of *homo mysticus*.

As Parson notes, such characteristics are similar to those identified as definitive of the New Age. Indeed, Wouter Hanegraaff (1998) has described one of the major trends of the New Age as "healing and personal growth," in which psychological development and religious salvation merge to such an unprecedented extent that it is difficult to distinguish between the two. Setting it within the wider context of the secularization of traditional esotericism as it adapted to the emerging scientific worldview, he argues that one of the defining marks of the New Age is "the psychologization of religion and the sacralization of psychology" and delineates two major lineages for this occurrence: American metaphysical movements and Carl Gustav Jung. Regarding the first, drawing heavily on a series of works by Robert Fuller (1982, 1986, 1989) which traces the emergence of a distinctively American religious psychology, Hanegraaff divides the American lineage into two separate but related streams. The first, the metaphysical movements, includes Mesmerism, Phineas Parkhurst Quimby's Mind-Cure, the New Thought movement, and positive thinking/self-help popular psychology. The second, functionalist psychology, has its roots in the thought of Ralph Waldo Emerson, embraces William James, Carl Rogers, and

humanistic psychology, and is best represented by James's classic *The Varieties of Religious Experience*.

Common to the American lineage are the following themes: an understanding of the unconscious as a site of harmony, reparation, and revitalization; the casting of the unconscious as the locus of or a doorway to the sacred; a concept of a spectrum of consciousness in which different layers of consciousness correspond to different psychic capacities, mystical experiences, and metaphysical realms; and the development of a pragmatic attitude and scientific techniques to access the resources of the sacralized unconscious.

The second major source for the psychologization of religion is Jung who Hanegraaff sees as the link between traditional European esotericism, Naturphilosophie, Romanticism, and the New Age. According to Hanegraaff, Jung united science and religion by presenting an esoteric worldview in psychological term and providing a scientific alternative to occultism. Not only did Jung psychologize esotericism, he also sacralized psychology by filling it with the contents (e.g., archetypes, the transcendent function, and individuation) of esoteric speculation rather than empirical realities. The result was a theory which allowed people to talk simultaneously about God (the Self) and the psyche, thereby collapsing the categories of religion and psychology and anticipating the rise of New Age self-spirituality.

There have been a number of cultural commentaries on the recent spread of psychology as religion. Attending to the wider contemporary therapeutic culture within which it has flourished, Philip Rieff (1966) posits a radical break between religion and psychology with a discussion of the replacement of early religious "positive communities" by therapeutically orientated "negative communities." Traditional societies were "positive communities" governed by a cultural symbolic which encouraged restraint of behavior and an ethic which favored the group over the individual. The repression of socially destructive instincts was achieved through the acceptance

of an authoritative "language of faith" and the idealization of a cultural superego. The institutions of the "Church" and the "Party" enabled positive communities to prevent anomie and reintegrate neurosis through religious forms of healing in which the unconscious was encountered in a non-direct manner.

In contrast, negative communities encourage a direct engagement with the unconscious and foster a therapeutic mode of self-awareness. They are suspicious of cultural forms like religion and politics which are understood as symbolic representations of unconscious content. The shift from repression to direct engagement with the unconscious leads to the collapse of the cultural superego and the replacement of the "Church" and the "Party" with the "Hospital" and "Theatre" as the new cultural spaces for the working out of previously repressed psychic contents. The individual is privileged over the group and a new character type emerges, namely, "psychological man."

Critiques of psychological man and the psychologization of religion have come from Paul Vitz (1977), Christopher Lasch (1979), and Richard King and Jeremy Carrette (2005) on the grounds of narcissism, individualism, and apoliticism. The charge of narcissism is most notably filed in Lasch's *The Culture of Narcissism*. Echoing Vitz, he laments that the quest for self-realization promoted by the new psychospiritual therapies has encouraged an indulgent self-preoccupation and created a crisis in personal and social relationships. Moreover, in addition to being narcissistic in the self-absorbed colloquial sense, Lasch utilizes Heinz Kohut to argue that psychologized spirituality reflects and exacerbates an actual clinical disorder: a narcissistic personality structure that because of recent sociocultural changes had become the predominant psychopathology of contemporary life. Lasch argues that the deification of the self within psychologized religiosity appeals to and feeds narcissistic grandiosity. Accusing the psychospiritual therapies of contributing to an amoral society, he calls for the creation of new communities of competence

which foster civil commitment and draw out the moral energies of the Protestant work ethic.

A more recent critique by Jeremy Carrette and Richard King (2005) has targeted the twentieth-century assimilation of the religious into the psychological arguing that psychology has diluted the social and ethical aspects of religion to form a privatized religion amenable to the demands of neoliberal ideology. Highlighting the roles of James, humanistic, transpersonal, and popular psychology, Carrette and King argue that the individualism of psychologized spirituality allows for the infiltration of capitalist logic into religious discourse and the wise-scale commodification of spiritual “products.”

However, there have also been a number of more optimistic appraisals of psychology as religion. Peter Homans (1979, 1989) has undermined the opposition between a traditional moral religious community and a contemporary amoral psychologized culture and challenged the charge of narcissism. According to Homans, critiques such as Rieff’s and Lasch’s fail to appreciate how much of a generative force religion was in the formation of the current psychological climate. He argues that due to secularization, the western religious traditions were deidealized and this resulted in a period of mourning: a regressive process involving a direct encounter with the unconscious no-longer externally expressed in the form of religious symbols and ideation. While religious disillusionment may lead to despair or cynicism, there is also the possibility of a more creative response, an opportunity for individuation, and the reintegration of unconscious contents into new meaningful symbols and values. Moreover, these new systems of meaning – such as the analytic psychology of a forefather of psychology as religion, Jung – not only reject but also assimilate religion so that to various degrees it lives on within them.

Homans also critiques Lasch of misreading Kohut, pointing out correctly that for Kohut narcissism was not in itself a pathological condition but rather a normal developmental stage which had the potential not only to transform into

a healthy valuing of the self and empathy for the other but also to reach the higher religio-ethical goal of “cosmic narcissism.” The issue, therefore, is not narcissism per se but whether narcissistic needs are repressed and acted out or positively transformed. For Homans and Kohut, therapeutic culture, with its themes of idealization, self-esteem, and grandiosity, displays a genuine engagement with narcissism and a desire for a more complete and satisfying subjectivity.

Additional defenses have come from sociologists of religion such as Robert Wuthnow (1998), Wade Clarke Roof (1999), and Robert Fuller (2001) who have convincingly attempted to rescue unchurched religion from unfounded generalizations, unfair stereotypes, and pessimistic evaluations. Arguing that contemporary forms of psychologized spirituality generally display a legitimate quest for self-transformation, these works challenge the elevation of traditional religion over unchurched spirituality, the caricatures of its proponents as superficial and self-absorbed, and its proposed inability to foster a social and relational ethic.

Such scholarship shows that many charges against psychology as religion are exaggerated and unsubstantiated. However, while it is necessary to temper unequivocal condemnations, many proponents of psychology as religion have recognized that certain accusations of individualism and narcissism are legitimate and have embarked on self-critiques to correct the elements that threaten to undermine its status as an authentic form of religiosity. Jorge Ferrer’s (2002) postmodern deconstruction and participatory revisioning of transpersonal psychology is a sophisticated example of this. Combining proponents growing self-reflexivity and relational turns, with the increasing academic scholarship on unchurched psychologized spirituality and the proliferation of Mind-Body-Spirit sections in bookstores with their best-selling psychology/spirituality titles, demonstrates that psychology as religion has established itself as a popular and increasingly sophisticated way to frame one’s religiosity in the contemporary cultural climate.

## Psychology of Religion

David Wulff

Department of Psychology, Wheaton College,  
Norton, MA, USA

## Introduction

Classically defined, the psychology of religion consists of the systematic application of psychology's methods and interpretive frameworks to the broad domain of religion. As strictly a nonsectarian scholarly discipline, it should be carefully distinguished from "religious psychology," which is the psychology that in varying degrees is explicit in the texts and teachings of a religious tradition; from "psychology and religion," a phrase intended to suggest a mutually respectful dialogue between psychological theories and various perspectives in religious studies; "psychology as religion," which designates clinically oriented forms of psychology that are grounded in "spiritual" conceptions of human existence, and "integration of psychology and religion," which constitutes variously conceived (and usually religiously conservative) efforts to critique, recast, and apply psychology within a particular theological framework. The boundaries of the psychology of religion have from the beginning been difficult to draw, especially given the field's long history of providing foundations for religious education and pastoral care.

## Beginnings in America

Of the many specialized areas of psychology, the psychology of religion was among the first to

emerge out of the new empirical science of psychology that established itself late in the nineteenth century in both Europe and the United States. The extraordinary success of the physical sciences in understanding the natural world suggested to various nineteenth-century scholars that scientific methods might be applicable in the human realm as well. Thus arose scientific psychology as well as the *Religionswissenschaften*, the sciences of religion, or what today is called the history of religions.

The American founders of the psychology of religion, including Stanley Hall, William James, Edwin Starbuck, James Leuba, James Pratt, George Coe, Edward Ames, and George Stratton, understood “religion” to encompass both individual piety and the historic religious traditions. Using methods that were both qualitative and quantitative, these scholars were well informed by the burgeoning literatures on religion authored by anthropologists, sociologists, linguists, and historians of religion. Among the field’s early proponents, Pratt stands out for his systematic efforts – including extensive travel in India, Burma, Ceylon, Vietnam, China, Japan, and Korea – to acquaint himself with the major Eastern traditions in both their corporate and their individual embodiments. And more than anyone else, he strove to grasp and sympathetically convey the worldviews and experiences of his informants. But it was William James, Pratt’s thesis advisor and author of the field’s signature classic, *The Varieties of Religious Experience* (1902), who brought the field most prominently into view.

A further impetus for the new psychology – and for the psychology of religion in particular – came in no small measure from the spirit of Progressivism. Near the end of the nineteenth century, the increasingly evident deleterious effects on society of the industrial revolution prompted in the United States an assortment of reform efforts that together became known as Progressivism. Among them was the Social Gospel movement, which centered on the conviction of many liberal Protestants that the traditional teachings of Jesus are aimed chiefly at righting the wrongs in this world, not preparing

believers for the next. Hall, Coe, and Ames were themselves involved in this movement, including the social services offered by the various missions and settlement houses. But others, too, shared their conviction that the psychology of religion could help to reconceive or reform religion in such a way that it would more directly address the personal, social, and spiritual needs of the modern world. Thus the early psychologists of religion were by and large active proponents of religion but in liberal versions compatible with the rationalistic worldview shaped by modern science, including the theory of evolution.

## Two Methodological Principles

Fundamental principles for the new psychology of religion were laid out in 1902 by the Swiss psychologist Theodore Flournoy, who was a close friend of William James and, like Coe, a student of theology before he found it problematical. According to Flournoy’s *Principle of the Exclusion of the Transcendent*, psychologists of religion should neither affirm nor reject the independent existence of the object of religious experience and reflection. Restated in contemporary terms, their posture should be one of methodological agnosticism. But the *experience* of the transcendent object is most certainly not to be excluded from their province; indeed, such experience should be observed with the closest attention to its nuances and variations.

The second of Flournoy’s guidelines, the *Principle of Biological Interpretation*, lays out a broadly inclusive framework for the psychological study of religion. Such study, as the principle’s name indicates, should search for the *physiological* conditions of its object of study, conditions that today are naturally far better understood than in Flournoy’s time. But Flournoy had more in mind than biology. The psychology of religion should also incorporate a *developmental* perspective, giving attention to both hereditary and environmental factors that play a role in the human species as a whole and in individual lives. It should be *comparative* in the sense of

being sensitive to and taking into account individual differences. And it should be *dynamic* by recognizing that the religious life is a complex living reality representing the interplay of a great diversity of factors. Flournoy assigns to the field, in sum, a broadly inclusive agenda, according to which its proponents should welcome guidance and insights from many different areas of psychology. It might also hope to reciprocate by sharing insights of its own.

## Two Methodological Traditions

In laying out these principles, Flournoy did not address the difficult question of what specific research methods to use. In his own investigations, he drew on case studies and personal documents, much as did James. He was thus a qualitative researcher in the tradition of the *Geisteswissenschaften*, the human sciences, one of the two main traditions constituting both psychology and the psychology of religion. Hall and his Clark School of Religious Psychology inaugurated the alternate tradition, which cast itself in the empirical model represented by the *Naturwissenschaften*, the natural sciences, most notably by the use of systematic measurement and the quest for causal interpretations. Even though the natural-scientific approach won the day both in psychology and in the psychology of religion, the human-scientific perspective continued to attract proponents, especially among clinical practitioners as well as scholars specializing in the history of religions.

In the United States today, the empirical psychology of religion finds its organizational home mainly in Division 36, Psychology of Religion, of the American Psychological Association (APA) and in the Society for the Scientific Study of Religion, even though in both organizations it is distinctly a minority undertaking. Advocates of the human-scientific approach can be found chiefly in the Person, Culture, and Religion Group of the American Academy of Religion. In Europe, the International Society for the Psychology of Religion is inclusive of both traditions.

## Three General Goals

Implicit in Flournoy's methodological principles are three goals that are more explicit in James's *Varieties* and that have characterized the psychology of religion to this day. The first one – the one for which James is most famous – is the descriptive task: identifying and describing the field's object of study. When the aim is a *psychology of religious persons*, as it was for James and Flournoy, the object is religious experience or – more broadly – religious attitudes, sentiments, and other such terms intended to encompass religion as it becomes embodied over time in individual lives. When, on the other hand, the aim is a *psychology of religious content or tradition*, as it was for Sigmund Freud and C. G. Jung, the object becomes particular religious content that is shared by adherents of a specific tradition or that is found in a variety of traditions: images, symbols, stories, doctrines, scriptures, rituals, and so forth. Such shared religious content typically serves as the focus of individual religious experience and hence contributes to the shaping of it.

With the object of study well delineated, the psychologist of religion may then pursue either of two further goals: (1) accounting for the object's causal origins – what James called existential judgments – and (2) evaluating the fruits, or correlates, of the religious life, James's so-called spiritual judgments. The first of these goals, uncovering religion's causal origins, naturally requires some reconstruction of the past, whether it be an individual's past or a tradition's. This demand is particularly problematic for empirical researchers, who are by and large limited to measures obtained in the present. But retrospective measures – say, of parental religiosity when the respondent was a child or of family religious practices – along with contemporary assessment of a great variety of other psychological variables (e.g., attachment style) does allow for some meaningful inferences regarding causal associations in individual lives. Interpretive psychologists, on the other hand, may freely draw on a variety of resources for reconstructing the past of both individuals and traditions.

As a self-acknowledged defender of the religious outlook if not its popular forms, James was most interested in revealing the fruits of the religious life. That goal today dominates the work of empirical researchers. Having constructed a variety of measures for assessing individual differences in religiosity, such investigators have for more than half a century sought to identify its correlates in a diversity of realms. Initially, in an effort to understand the impulses underlying the appalling inhumanity of World War II, the focus was mainly on negative social attitudes, including authoritarianism, ethnocentrism, dogmatism, and prejudice. Religious persons, it was found, tended to score higher than nonreligious persons on measures of these attitudes. Subtler measures of religiousness were subsequently developed, mainly of “intrinsic” and “extrinsic” religious orientations, to demonstrate that it is not religiousness per se that is associated with such negative social attitudes, but superficial or inauthentic forms of it. In time, attention shifted from social attitudes to mental and physical health, once again anticipating that intrinsic, or sincere, religiosity would be associated with more positive outcomes. Today, especially with the encouragement of munificent Templeton Foundation grants, there is increasing interest in demonstrating religion’s positive association with certain classic virtues, including forgiveness, gratitude, and humility.

### **Challenges to the Psychology of Religion**

From its beginnings, the psychology of religion has faced a number of critics. Psychologists, who tend in general to be less religious than many other academic and professional groups, have long been suspicious of any interest in religion on the part of their colleagues. Scholars of religion, on the other side, are often critical of what seem to them to be reductionistic if not also hostile views of religion among its psychological interpreters. Thus the psychology of religion has been an academic stepchild from its beginnings. Graduate programs and academic positions in the

field have always been scarce, and where they appear they are usually subordinated to theological or pastoral training. Undergraduate courses on the psychology of religion are most often taught in departments of religion at church-related schools; otherwise they are likely offered only because some faculty member has a personal interest in the subject matter. Nonsectarian programs in the psychology of religion have been more common in England and Europe, where chairs in the field were founded beginning early in the twentieth century. Yet even there the field has never been widely pursued, and recent changes in economic conditions, in conjunction with the traditional priorities of theological faculties, have brought reductions in both chairs and programs, most notably in the Scandinavian countries.

Such external difficulties are complicated by challenges that are intrinsic to the field. Most apparent is the debate between empirical and interpretive approaches, between quantitative and qualitative methodologies, which, beyond determining the research methods used, have broad implications for how religion is constructed and what questions are posed. Less obvious and more difficult is the conundrum of addressing a phenomenon that interprets itself in relationship to a transcendent dimension that by definition lies beyond the conceptual tools and understanding of psychology. Flournoy’s exclusion principle suggests the possibility of bracketing such interpretations, but in reality all researchers come to the field with personal religious views that inevitably shape the questions they address. If one takes a religious outlook to be fundamentally mistaken, as it was by Freud, one will naturally ask how it may have arisen, either in human history or in an individual life. If one has oneself a sense of the transcendent, on the other hand, one will naturally be inclined to ask why it eludes other persons. Given the obvious diversity of religious constructions of reality, the latter question would likely be posed from within a particular theological or religious framework, inevitably threatening to transform the psychology of religion into a sectarian enterprise.

One solution would be to pursue a purely descriptive psychology of religion. But that, the German philosopher Max Scheler once argued, would require a separate psychology of religion for every tradition. Another seeming solution would be the strategy of setting aside any questions about the nature or origins of religion and merely examining its fruits instead. Although widely embraced, this strategy has long been recognized as likewise shaped by religious agendas, which affect the religiosity scales one adopts or devises, the variables one investigates, and the conclusions one draws. Of the respondents to a 1998 survey of the members of Division 36 of APA, the majority of whom are clinical practitioners, nearly all reported themselves to be moderately or highly religious or spiritual. Thus it is not surprising that most research is aimed, subtly or not, at demonstrating the value of religion and that there is a parallel burgeoning of works on the integration of spirituality into psychotherapy, some published by the APA.

Most of the religiously liberal founders of the psychology of religion sought to reinterpret or even transform religion to make it serviceable in the modern world. Today, the psychology of religion serves as a rubric under which more religiously conservative psychologists act as caretakers and promoters of traditional religious convictions. The ideal, most fully realized by James Pratt, of a truly disinterested discipline that investigates a broad range of phenomena drawn from a diversity of religious traditions thus seems today evermore elusive.

## Psychology of Religion in China

Alvin Dueck<sup>1</sup> and Buxin Han<sup>2</sup>

<sup>1</sup>Graduate School of Psychology, Fuller Theological Seminary, Pasadena, CA, USA

<sup>2</sup>Institute of Psychology, Chinese Academy of Sciences, Beijing, China

Psychological reflections on spirituality and religion in China have a 2,500-year history, and the scientific study thereof over the past century has both languished during the Cultural Revolution and flourished in the last three decades (Dueck and Han 2012). However, religions as we know them in the West as institutionalized with a professional clergy, set of doctrines, and specified practices is a mere century old (Yang 2008). The official religions include Taoism, Buddhism, Protestantism, Catholicism, and Islam, but there are a host of folk religions and variations of the five sanctioned religions among China's 55 ethnic minorities. Recent research by Tong and Liu (2005) indicates that there are some 300 million Chinese who identify themselves as religious/spiritual, the highest estimate to be published to date.

As a science, Chinese psychology emerged concurrently with American psychology (Han and Zhang 2007). Yuanpei Cai, who studied with Wilhelm Wundt (1908–1911), returned to China to be the President of Peking University (1916) and later became the President of the Chinese Academy of Sciences (1927) where

he established the Institute of Psychology. Daqi Chen established the first experimental laboratory in China at Peking University (1917). In 1940, Chen Wenyuan wrote a text integrating religion and psychology in China, entitled *Religion and Personality*. During the Cultural Revolution (1966–1976), the discipline of psychology was considered bourgeois, and teaching of and research in psychology was stopped entirely.

Then in the late 1980s, Chinese scholars wrote texts describing Soviet and Western approaches to psychology and religion. The remarkable progress that followed included translation of classic Western texts in psychology of religion and theoretical analyses of James, Erickson, Wundt, and Allport. New measurement tools were developed and empirical social analyses of religion and mental health, religious cognition, and religious emotions were conducted. Chen Biao (2003) examined Erickson's religious psychology and is currently writing a history of Western approaches of psychology to religion. Liang Liping (2003) has conducted a comparative study of conversion among Buddhists and Christians in terms of gender, psychological factors, educational level, and cultural background. Nonetheless, Chen Yongsheng, Liang Henghao, and Lu Liqing describe the state of psychology of religion research in 2006 as follows: "On building the discipline of psychology of religion, Chinese scholars have not discovered the central stream so far, and therefore it seems that the achievements are scattered and lack a solid foundation" (2006, p. 156).

Chen et al. (2006) reported that between 1994 and 2004 only 12 articles on psychology and religion had been published and that none were empirical studies. There had been little dialogue between Chinese psychologists of religion, other Chinese psychologists with similar interests, and Western psychologists of religion until they attended the psychology of religion conferences begun in 2007. Since September 2007, six psychology of religion conferences have been held. The first took place at Zhejiang Normal University with some 17 psychologists in attendance and several students. However, by third conference in March 2009 sponsored by

Sichuan University in conjunction with the West China Hospital, attendance reached 120. The focus of the conference was on psychology of religion in service of Chinese society traumatized by the 5/12 earthquake. Dr. Yanchun Yang opened the conferees with a presentation that encouraged psychologists of religion to be more sensitive to the Chinese context as they researched earthquake survivors and to include spirituality as part of the assessment and treatment of trauma.

The Fourth Conference of Psychology of Religion (2010) was held at Qufu Normal University in the city of Confucius' birth and in a local culture highly supportive of research in psychology of religion. Forty-five Chinese psychologists and students and eight Western psychologists gave papers on topics including attachment theory and modes of spirituality, neurophysiology and religious experience, indigenous forms of spiritual therapy, religious coping research, and spiritual themes among Sichuan earthquake survivors.

The most recent conference was held at East China Normal University in Shanghai in March 2012. It was a unique experience in that more scholars of religion were present at the conference. The concern was raised that too much psychology of religion is focused on Christianity, a problem echoed by Western psychologists as well (Belzen 2009; Nelson 2009). There were Chinese presenters who argued passionately for the treatment of spirituality with seriousness in mental health services. More than in previous conferences, cross-cultural and ethnic perspectives were evident.

A major project undertaken by scholars at these conferences was to write an edited collection of essays on the state of the art and future projections for psychology of religion. The essays were the fruit of a 2-year grant from the John Templeton Foundation and published in the journal *Pastoral Psychology* (Vol. 61(5–6)) and a select number are being published in Chinese by the Chinese Academy of Social Sciences (Han and Dueck forthcoming). The goals for the book of essays were to (a) provide an overview of the history of psychology of

religion in the West and in China, (b) explore future directions for the field, and (c) encourage rigorous, scholarly research in the psychology of religion. What follows is a brief summary of a sample of chapters so as to give the reader a flavor of Chinese research in psychology of religion and is adapted from Dueck and Han (2012). This review will focus on several themes: the spirituality of ancient traditions, the emphasis on indigeneity, spirituality within healing and psychotherapy, innovative empirical research, and the influence of national objectives.

Evident in these publications is the fact that Chinese psychologists of religion are rewriting the understanding of the ancient traditions as spiritual rather than secular in nature. Religion, folk culture, medicine, ethics, and religious anthropology seem to interpenetrate each other. Lu and Ke (2012) point out that during the Spring and Autumn and Warring States periods (770 BCE to 221 BCE), debates about "human nature" were central to the development of a future psychology of religion. They show how Confucius' ethical teachings are connected to psychological assumptions about human transformation and the possibility of change by effort. Their analysis of Mencius, Xunzi, Mozi, and Taoism all point to the intimate relationship between religion, spirits, and ethics with human nature, whether good or evil, innocent, or neutral. With regard to ancient folk religions of the lower social classes, their implicit psychology of religion was utilitarian in nature: religion was sought for worldly benefits and spiritual solace (for another perspective on Chinese folk religions, see He 2012).

Shi and Zhang (2012) focus on themes of spirituality in Traditional Chinese Medicine (TCM) and argue that its longevity is a consequence of its spiritual roots. TCM focuses not only on the illness of a person but the person as a whole; it cares for the body and nourishes the spirit. They maintain that notions of Yin-Yang and Qi have spiritual origins because they are related to heaven, earth, and life. They point out that in the book *Shang Shu* we were told: "Zhu, is the one who contacts gods" and "Mr. Zhou prayed for King Wu's illness, and then he recovered." TCM borrowed from Taoism, Confucianism,

and Buddhism the importance of cultivating the mind, nourishing the heart, and developing wise character. Master doctors of TCM were similar to religious leaders in their effort to help people recover from bitterness, illness, and loss. So TCM is not simply a collection of techniques but is deeply concerned about human person as a whole, including spiritual suffering.

Indigeneity is a second major theme emerging in Chinese psychology of religion. Wang (2012) states that contemporary Chinese psychology is simply Western psychology transplanted to China and that Chinese healers have turned a deaf ear to their own rich heritage of psychological thought. He quotes a Chinese proverb, "Unaware of the inexhaustible wealth of his family heritage, he begs from door to door to stay alive." Wang, however, is concerned to develop a psychological approach that is sensitive to the Chinese context, and so he cites proverbs and tells stories in therapy. He hails Confucianism as a teaching therapy and Taoism as capable of addressing compulsiveness. From "Ah Q," personality described by the Chinese poet and essayist LuXun, Wang develops the diagnosis of passivity and escapism in Chinese society, a consequence of national and international oppression. The opposite is the willingness to face life directly rather than creating excuses for one's escapism. Wang finds here the cultural roots of many psychological symptoms.

Henghao Liang (2012) refers to Jung as a Chinese philosopher living in the West. He examined the relationship between Jung's psychological theories and Chinese religions and discovered significant similarities between Jung's concepts of synchronicity, Self, and his principles of the psyche, the mandala, with concepts in Chinese Taoism. Jung absorbed the wisdom of the East, the meaning of the I Ching, the theory of Taoist inner alchemy, and the technique of active imagination. Jung's notion of unity of opposites has its roots in both Taoism and Buddhism. Liang wonders whether Jung's idea of the "collective unconsciousness" is equivalent to the eighth consciousness in Buddhism, Alaya Consciousness.

Ting (2012) compares two regions of the world in terms of mind-body dualism, views of the self, the nature of mental health, the value of relationships, the role of community, and the relationship between healing and spirituality. Appropriately, she begins with reflections on the nature of culture. Culture for her is not static but fluid, improvisational, transformational, and political. Fundamentally, Western culture privileges the individual, while Eastern cultures privilege relationships and the common good. It is her hope that a cultural psychology of religion would be sensitive to differing worldviews and that each culture would avoid imposing its definition of mental health or healing on the other. She maintains that if spirituality or religions were to nurture the well-being of local people, then local persons would need to be shapers of their own religious tradition and express their faith in their local dialects. She finds herself attracted to indigenous forms of psychology as they have emerged in the Philippines and New Zealand. She is concerned about uncritical importation of foreign approaches to mental health into China.

A third theme is the recovery of religion in healing and psychotherapy. This concern is raised by Ren Zhengjia (2012) who asks whether spirituality and community play a significant role in times of crisis. He reflects on his own involvement in providing care after the Sichuan earthquake and believes crisis workers need to appreciate deeply the personal, cultural, and spiritual resources that victims bring to the crisis events. He believes that Chinese spirituality can be involved in the process of psychological rehabilitation and wrestles with the definition of spirituality in China. After reviewing some of the fundamental tenets of Confucianism, Taoism, Buddhism, and folk religions, Ren cites anecdotal evidence in which a survivors' spirituality enabled them to cope. His crisis intervention team honored and encouraged indigenous forms of spirituality.

Ting and Ng (2012) focus on the integration of spiritual and religious themes in the three major religions of Taoism, Buddhism, and Christianity with psychotherapy. The unique practices of

these religions include the blending of religion, folklore, traditional practices, and loyalty to the religious tradition of one's family. It is still a fundamental belief that disturbance in the spiritual realm results in mental illness and demon possession. Hence, Ting and Ng call for a therapeutic approach that is tradition-sensitive in which the client's religious beliefs are explored, religious duties are affirmed, their basic religious teachings and rituals are built on, and religious support from the family and community are accessed.

A fourth concentration of Chinese psychology of religion is empirical in nature and focuses on the role of religion in mental health and the changing nature of belief in contemporary China. Chen et al. (2012) propose several unsolved problems in China's psychology of religion: lack of in-depth studies on the history of Western psychology of religion, diversity in research methods, and the disconnect between theoretical study and practical application. Nonetheless, there are a number of very creative research projects.

While most Western researchers have found a positive relationship between religion and mental health, at least one Chinese study nuances this relationship. Wang et al. (2012) examine the mental health of older Buddhists and a matched sample of nonreligious individuals after the Wenchuan earthquake. Using a mental health inventory for the elderly, they found that the older Buddhists in the more severely damaged area of Beichuan, 4 months after the disaster scored significantly lower than nonreligious participants. After 10 months their scores were significantly better. The authors conclude that religious faith helped Buddhists recover from trauma. However, the lower level of mental health scores initially were interpreted to mean that those with religious sensitivities were more deeply affected by the trauma of the earthquake. The authors comment that since Buddhists accept stress as a part of their daily lives and also emphasize the fundamental goodness of the world, they experienced a greater discrepancy between the reality of the earthquake and this positive conception of the world. Hence, there is the

greater negative effect on Buddhist behavior and mental health.

A number of studies focus specifically on religious belief and radical religious change in China. Song and Fu (2012) report on the religious beliefs of college students that are closely followed by the Chinese government. In the last decade, considerable research has been conducted on college students' beliefs from the perspective of psychology of religion that included the spirituality of college students, the relationship between belief and mental health, and cross-cultural research on the beliefs of college students. The results of Song's research revealed that social beliefs (such as loyalty to the nation and political beliefs) took priority over pragmatic beliefs (loyalty to family, desiring money) with religious belief in last place (worship, supernatural being, personal soul). Women scored higher on religion than men and, overall, the authors estimated that 13 % of college students hold religious beliefs. However, the number of college students who hold religious belief is increased from their first to their senior year.

Based on her qualitative and quantitative analysis, Liping Liang (2012) sought to uncover the meaning of religious experience and to explain how sacredness and earthliness, utility and truth resonate in the spiritual world of Christian and Buddhist believers. She found that the initial motivations for making contact with religion were seeking spiritual relief, physical health, and truth or wisdom. The more educated converts (whether Buddhist or Christian) sought for truth, while lower educated persons wanted physical health. More persons who converted to Christianity (66 %) than to Buddhism (46 %) did so because of the persuasiveness of the doctrine. For others, it was belonging to a religious community or because of the perceived benefits from a spiritual life and practice. The main factor that enabled converts to maintain their religious beliefs and practices was the change they experienced as they continued their journey of transformation.

A fifth theme in Chinese psychology of religion is that the Chinese psychologist assumes that the discipline fosters national goals. Chen and

Chen 2012) have championed this belief. They point out astutely in regard to nationalism that Wundt's cultural analyses of religion seemed to have received much greater attention in China than in the West. Consistent with a cultural point of view, they are concerned that in the future greater emphasis be placed on practical application of psychology of religion for the sake of a harmonious society. Chen and Chen believe that the goal of a harmonious society must shape the development of a psychology of religion. This quote from Chen et al. (2006) captures the spirit of Chinese psychologists of religion:

...the importance of psychology of religion never can be underestimated in vindicating the human rights. China is multinational country with 56 nations, and every minority almost has its own particular customs and religion. We must fully respect the religion of each minority and make use of the knowledge of psychology of religion to promote the conversation and communication between various religions. This will help to strengthen the solidarity of the Chinese nation, to improve the level of human rights, and to safeguard world peace and development (p. 159).

## Psychosis

Kate M. Loewenthal  
Department of Psychology, Royal Holloway,  
University of London, Egham, Surrey, UK

What is psychosis? How is it related to religion and religious factors?

Psychoses are psychiatric illnesses, normally distinguished from neuroses, the other main group of psychiatric disorders. In psychosis the degree of impairment and lack of insight are said to be more severe than in neurosis. Psychotic illnesses have been categorized into two broad groups, the schizophrenic disorders and the bipolar disorders. There are significant concerns about the use of these diagnostic categories, but they are likely to remain in use for the foreseeable future. In schizophrenia, the individual normally shows a marked deterioration in self-care, work functioning, and/or social relations, and moods may be inappropriate. There may be genetic susceptibility to stress and cannabis use, making the appearance of schizophrenia more likely. Symptoms normally include two or more of delusions, hallucinations, incoherent speech, catatonic behavior (rigid, frozen posture), and flat or very inappropriate mood (Butcher et al. 2010, pp. 458–489). The DSM-IV-TR classification lists a large number of related disorders in the schizophrenia group, such as the paranoid or catatonic types, but here we will consider schizophrenia as an overall diagnostic category. The other general form of psychosis is considered to be bipolar (manic-depressive, cyclothymic) mood disorder, swinging from high to low moods, sometimes with intervening periods of

“normal” mood. The most striking feature of bipolar disorders is mania, euphoric joy out of proportion to circumstances, plus at least some of the following: irritability and anger especially if plans are frustrated, hyperactivity, going without sleep, poor judgment, following one’s own grandiose ideas and plans and feeling others are too slow, self-esteem approaching grandiosity, flamboyance, delusions, or hallucinations (Butcher et al. 2010, pp. 247–255). About one person in a hundred may be affected by a psychotic disorder at some time in their lives. It may pass, or respond to medication or other treatment, or the person may continue significantly disturbed.

How do psychoses relate to religion? There are several important questions for discussion.

### Do Religious Factors Correlate with or Cause Psychosis?

The short answer is that there are no clear associations between schizophrenia – or possibly predisposing personality traits – and religious factors. There is some tentative evidence that psychotic episodes may be precipitated in those already prone to disturbance, by some religious practices such as meditation, but this evidence is currently very thin.

The associations between religious factors and psychotic illness have been difficult to disentangle. This is partly because some religious behaviors and beliefs – especially if they stem from a tradition alien to clinicians – may be seen as symptoms of illness, and a misdiagnosis may be made. For example, a devout woman who had been sexually abused began to pray and bible study frequently and eat moderately in an attempt to purify herself. This was interpreted as symptomatic of schizophrenia (Loewenthal 2007, p. 37). Beliefs that the evil eye, spells, or spirits are causing somatic symptoms may be seen as delusory, even though in contemporary transcultural psychiatry, good clinical outcomes have been reported when clinicians treat these beliefs respectfully. A further set of factors

complicating the picture is that stress may well induce mood disturbances and other psychiatric symptoms, and in an attempt to cope, individuals may resort to prayer and other religious practices (Bhugra 2002; Siddle et al. 2002). Indeed, there is considerable evidence that prayer and other religious practices may relieve distress (Loewenthal 2007, pp. 59–67; Maltby et al. 1999; Pargament 1997). Thus, there may be the appearance of an association between mental illness and religiosity, but religiosity is an effect, not a cause. Furthermore, if and when stress is reduced and symptoms alleviate, religious coping is reduced – again, giving the appearance of an association between better mental health and lower religiosity. Only longitudinal studies, in which individuals are followed up over time, can tell us more about whether religion plays a causal role in psychosis and other mental illnesses. At the moment, this does not seem likely for schizophrenia.

There are a number of personality traits which have been suggested to relate to the tendency to schizophrenia and psychotic illness. The most heavily researched of these is the so-called Psychoticism (P) measure in the Eysenck Personality Inventory. This is negatively associated with religiosity (Eysenck 1998). A more complex set of traits fall under the head of schizotypy, which involves personality traits which might indicate prodromal schizophrenia, including discomfort in close relationships, and odd forms of thinking and perceiving. The different aspects of schizotypy relate in complex ways to different styles of religiosity (Joseph et al. 2002), with no substantial evidence to support the idea that religious factors are related to schizophrenia or possible predisposing personality factors.

It has been suggested that meditation and possibly other religious practices and experiences may precede episodes of manic disorder in individuals who are susceptible (Kalian and Witztum 2002; Wilson 1998; Yorston 2001). However, this suggestion is based on clinical case histories, and there is insufficient quantitative evidence in further support of this suggestion.

## **Can We Distinguish Between Pathological and Benign Visions and Voices?**

This has been a long-standing problem for well-intentioned and culturally sensitive psychiatrists, given that visions and voices are supposed to be symptoms of schizophrenia. Littlewood and Lipsedge (1997) and Greenberg and Witztum (2001) offer fascinating and often tragic examples of diagnostic and therapeutic difficulties. It has now been well documented that visions and voices are commonly experienced by healthy individuals and cannot be regarded in themselves as symptoms of psychosis (see Loewenthal 2007, pp. 17–21). Some religious groups encourage or praise the experiencing of visions, or the hearing of voices, and these can be valued aspects of spirituality. Recent work examining and comparing the experiences of members of religious groups and of others without psychiatric illness with experiences of psychotic individuals indicates that the visions and voices experienced by the psychotically ill are significantly more unpleasant and uncontrollable than those experienced by others (Davies et al. 2001; Peters et al. 1999). This work does give clues as to how psychotic visions and voices might be identified. Importantly, we can conclude that the experiencing of visions and voices should no longer in itself be treated as symptomatic of psychosis. Dein (2010) offers further discussion of these and related issues.

## **What Is the Significance of Belief in Demons, Evil Spirits, and the Like in Relation to Psychotic Illness?**

Belief in evil spirits, demons, and other malignant spiritual forces is surprisingly widespread, including highly developed, urbanized countries. A striking example involves sleep paralysis, which is as often reported in highly developed countries in which belief in evil spirits is not well supported, as in less developed countries. The individual feels wakeful but unable to move and is

conscious of a shadowy presence (Hufford 2005). The experience is usually unpleasant, interpreted as involving evil forces, and seldom mentioned for fear of being thought insane. In fact this condition is not a psychiatric problem at all, in spite of the fears and beliefs of those who have experienced it. This example highlights the existence of a widespread and popular idea that the experience of malign spiritual forces is closely related to insanity. Lipsedge (1996) and Kroll et al. (2002) have shown that in medieval times demons and other malign spiritual forces were only occasionally seen as possible causes of psychiatric illness. Contemporary studies have examined beliefs that malign spiritual forces can be causes of insanity. Such beliefs have been reported in many countries, for example, Egypt (Coker 2004), Israel (Heilman and Witztum 2000), South Africa (Ensink and Robertson 1999), and Switzerland (Pfeifer 1994), and there has been some success reported in deploying healing methods which are believed by patients to dispel evil spiritual forces. It has been suggested that the experience of demons and the like may be regarded as an “idiom of distress” (Heilman and Witztum 2000). Contemporary clinical practitioners with experience in different cultural settings would advocate incorporating beliefs about spiritual forces as causes of disturbance into treatment plans, wherever possible.

### What Is the Current Status of the Concept of Religious Mania?

Religious monomania is a now-discarded diagnostic category. At one time it was popular and used to denote intense religious excitement and enthusiasm, to the extent that the individual had gone beyond the bounds of the acceptable and containable. For example, Jonathan Martin, a fundamentalist preacher, who thought the clergy of his time (early nineteenth century) were too lax. He had some dreams which seemed to him significant, for example, in one he saw a black cloud over York Minster. These dreams inspired him to set fire to York Minster (Lipsedge 2003). At the time this act was a capital offence,

but the diagnosis of monomania helped to get the death sentence commuted to imprisonment. With religious and other monomanias, there were difficulties in distinguishing between acceptable and pathological levels of behavior – one group’s terrorist is another group’s martyr, for example.

### Conclusions

There is little to support the idea that religious factors play a role in causing psychotic illnesses. It is likely that religious coping may be helpful in relieving the distress associated with psychotic illness, and the appearance of “religious symptoms” may indicate attempts to cope with distress, rather than as symptoms as such. However, as with other psychiatric illnesses, the religious context may shape the occurrence of stress, often a factor in psychiatric breakdown. The religious context may also shape expressions of distress.

## Psychospiritual

Ann Gleig

Department of Philosophy, University of Central Florida, Orlando, FL, USA

The term psychospiritual has entered psychological and religious discourse as a loose designation for the integration of the psychological and the spiritual. As a broad term it can denote a variety of positions between psychology and spirituality: a supplementation, integration, identification, or conflation of the two fields. It is commonly used to describe a wide range of therapeutic systems which embrace a spiritual dimension of the human being as fundamental to psychic health and full human development and which utilize both psychological and spiritual methods (such as meditation, yoga, dreamwork, breathwork) in a holistic, integrated approach to healing and inner growth. Included here are Jungian psychology; Roberto Assagioli's psychosynthesis; the post-Jungian archetypal psychology of James Hillman; transpersonal psychology, such as the work of Abraham Maslow, Stanislav Grof, Ken Wilber, Michael Washburn, and Charles Tart; the spiritual psychology of Robert Sardello; and a plethora of contemporary spiritual therapies which are being developed within an East-west framework.

William Parsons (2008) offers some useful historical contextualization for the Western lineage of the psychospiritual through his discussion of the “*psychologia perennis*,” an unchurched, psychological form of spirituality whose origins can be seen as early as the sixteenth and seventeenth centuries with the appearance of

mysticism as a subjective experience divorced from church and tradition. The emergence of a generic “Absolute” framed as an inner universal, sacred dimension of man allowed for the psychologization of mysticism and links the figures of Romain Rolland, William James, Carl Jung, and Richard Maurice Bucke with humanistic and transpersonal psychology. While recognizing significant differences in metapsychology and therapeutic techniques among these thinkers, Parsons identifies a number of common characteristics: a championing of the individual as an unchurched site of religiosity; the search for the origin of mysticism in the unconscious; a valorization of personal unchurched mystical experiences; an advocacy of perennialism; the discernment of innate, intuitive, mystical capacities; the development of a technology of altered states; the institutionalization of psychospiritual therapeutic regimens; and a vision of social transformation grounded in the psychospiritual transformation of the individual.

Psychospiritual therapies explicitly protest against the reductive and materialist assumptions of mainstream behavioral and cognitive psychology and seek to return the soul or psyche to psychology. While traditionally associated with the humanistic-existential strands within depth psychology, as Parsons (2007) points out there has also been a recent wave of interest in spirituality within the psychoanalytic field. Much of contemporary psychoanalytic literature suggests that spirituality has seeped into many aspects of the practice of analysts and of the therapeutic expectations of analysands. For example, the analyst Michael Eigen, who is particularly influenced by Jewish mysticism and Zen, describes psychoanalytic therapy as “a psychospiritual journey” and argues that meditative practices and psychoanalysis are not separate but rather integral parts of the growth process (Molino 1998). Similarly, analyst Paul Cooper claims that spiritual practices have influenced many dimensions of psychoanalytic therapy, such as theory, technique, training, and supervision, and draws attention to the important empirical fact that many of his analysands

understand psychoanalytic therapy as part of their spiritual growth. Furthermore, Cooper argues that there is undeniable cultural drift in this direction (Molino 1998).

In a similar vein, concerns with the psychospiritual have entered into mainstream psychotherapy. This is reflected in both the professional psychotherapeutic accrediting of spiritual therapies and the establishment of a number of associations that seek to integrate the two fields of spirituality and psychotherapy, for example, the Institute for Psychotherapy, Science and Spirituality, formerly the Center for Spirituality and Psychotherapy, established in 1997 to study how psychotherapy can foster the emergence of the spiritual dimension in life and how spiritual practice may enhance the psychotherapeutic encounter.

The term psychospiritual has also been applied to mystical traditions, particularly Asian, which include psychological development as an indispensable component of spiritual growth or see psychological and spiritual development as inseparable. Some of these traditions are seen as inherently containing a psychospiritual approach. A notable example, here, is Sufism which aims for a psychospiritual transformation of the human being from a state of ego centeredness to a state of purity and submission to the will of God (Frager 1999). Other spiritual traditions have incorporated Western psychology into traditional mysticism to create new psychospiritual integrations. An influential example of this is integral psychology, a synthesis of the Indian mystic Sri Aurobindo’s teachings with the findings of depth psychology as developed by his disciple, Haridas Chaudhuri (Cortright 2007). Another contemporary psychospiritual tradition which incorporates the insights of psychoanalytic theory to aid spiritual realization is A. H. Almaas’s Diamond Approach (2004).

Finally, the psychospiritual is a term often used interchangeably with the cultural phenomena referred to as psychology *as* religion and to signify the psychologization of religion and the

sacralization of psychology that is a defining mark of the New Age. Hence, commentaries on, critiques of, and predications for these two related, if not identical, strands are indispensable in illuminating different aspects of the psychospiritual.

## Psychosynthesis (Assagioli)

Michael Keller

Elmira Psychiatric Center, Elmira, NY, USA

## Psychosynthesis: An Integration of Personality and Spirit

Psychosynthesis, for the greater part, is a synthesis or integration of Psychology (depth psychotherapy) and religion (spiritual process and growth). Psychosynthesis uses a combination of a multiplicity of techniques and modalities, e.g., the empty-chair technique, empathy, abreaction and catharsis, nonjudgmental acceptance and holding environment, creativity, play and drama, dream analysis, meditation and guided imagery, family reconstitution, primal wound healing, subpersonality analysis and dialogue, and self-unfoldment. It draws from many schools and traditions: Depth Psychology, Analytical Psychology, Gestalt, Family Systems, Insight Meditation, and Humanistic and Transpersonal Psychology, to name a few.

Psychosynthesis originated from the work of Roberto Assagioli, M.D. He was a contemporary of Jung and Freud and belonged to the Zurich Freud Society. However, he was not totally satisfied with the narrow approach of Psychoanalysis and was drawn to the more positive and spiritual side of human nature. As a consequence, he explored a number of Eastern as well as Western philosophies and new theories and therapeutic techniques which were being developed at the time. Over a number of years, he compiled and combined all of these techniques (see Assagioli 1965) into what eventually became Psychosynthesis. In the process he explored many modalities which utilized methods promoting the positive or spiritual side of human potential including the Self-Actualization model (see Maslow). He still utilized the methods of Depth Psychology and insisted that he used the scientific method to examine, assess, and test out all of these methods.

He also developed his own model of the psyche which expanded on the fourfold model of personality of Jung and added a fifth function, the Will. Dr. Assagioli felt that the Will was a very important and neglected function and, in order to promote and explore the understanding of the Will, he started what became the Will Project.

## History and Biography

Dr. Assagioli started out in Psychoanalysis and agreed, with Freud, that many of us have primal wounds from our early childhoods which need healing. These can also lead to subpersonalities which need further healing. However, he believed that, in the process of personal growth, we have access to help from our Higher Selves. Assagioli developed his own map or “Egg-Shaped Diagram” of the person, in which he delineated a Higher Unconscious in addition to a Lower Unconscious and a Middle Unconscious. He also postulated a place for a “Soul” or Higher Self in addition to an “I” or Conscious Self. Along with Carl Jung, he believed in a process of lifelong personal growth or Individuation toward an integration or synthesis of our personality self with our higher or spiritual self. In addition to healing childhood trauma and developing a healthy ego, he felt the human spirit was drawn toward a higher level of personal integration and self-actualization. He studied the philosophical and spiritual traditions of both the East and the West. He envisioned a process of transpersonal development and the cultivation of what Maslow called peak experiences, e.g., spiritual insight, inspired creativity, and unitive or mystical states of consciousness.

Dr. Assagioli had a classical education in Greek and Latin and was fluent in several languages. He started medical school in 1906 in Florence and wrote his doctoral dissertation in 1910 as a critical study of Psychoanalysis. He trained under Eugen Bleuler in Switzerland. After his training he worked as a psychiatrist in Italy, but corresponded with Jung and Freud, and was a member of the Zurich Freud Society. After WWI he continued to work as a doctor and psychiatrist and continued his studies

and writing in Depth Psychology. In 1927 he founded an Institute in Rome and published a book called *A New Method of Treatment – Psychosynthesis*. In the 1920s he also met his wife, Nella, a Roman Catholic and Theosophist (like his mother). They were married in 1922, were married for 40 years, and had a son – Ilario.

During the 1920s and 1930s, Assagioli rubbed shoulders with many of the intellectual thinkers and innovators of his day, e.g., Croce, Inayat Khan, Tagore, Keyserling, Jung, and Buber. He wrote numerous journal articles, contributed to the *Hibbert Journal*, did a yearly lecture series, and sponsored conferences. In the latter 1930s he experienced some persecution by Mussolini. He was sent to prison for about a year, where he was in solitary confinement for over a month. It was during this time that he meditated and worked on his inner self and received many of the insights that became incorporated into Psychosynthesis. After being released from prison, he had to close his Institute and go into hiding in the country for several years.

After WWII, Dr. Assagioli’s work became internationally known. His Istituto di Psicointesi reopened in Florence, and in 1958 the Psychosynthesis Research Foundation opened in the USA. In 1960 the Greek Centre for Psychosynthesis was founded. In the 1960s and 1970s, Assagioli contributed to the development of Humanistic and Transpersonal Psychology. He published two main works, *Psychosynthesis* in 1965 and *The Act of Will* in 1974. He died later that year at the age of 86. There are now Psychosynthesis Centers and Training programs in the USA, Canada, Argentina, Australia, and throughout Europe, including a major center in London. There is no single overarching organization, as Dr. Assagioli did not want to limit or stereotype the development of Psychosynthesis, which he saw as continually open to further development and evolution.

## Theory and Practice

Psychosynthesis is not as well known as many other approaches to psychotherapy, but it has

become more popular over time and draws on a multitude of techniques and methods that are in current usage in other venues today. Dr. Assagioli was not afraid of experimenting with new therapeutic modalities and he combined them and modified them to meet his needs to create a grand synthesis of treatment leading to a spiritually healthy and actualized human personality. Assagioli drew from the insights of Psychoanalysis regarding subconscious traumas and memories affecting our personalities and functioning. However, he developed his own map or model of the psyche which included higher levels of awareness, creativity, and inspiration. He agreed with Jung on there being a Collective Unconscious which, among other things, carried a repository of past knowledge and human experience. He postulated a Higher Self or “Soul” in addition to our personal Ego or “I.” He focused on positive human traits and encouraged group and cultural action, which he saw as essential to the growth and evolution of the human species.

Assagioli imagined psychotherapy as an ongoing collaboration between the therapist and the client in which the therapist acted as an empathic mirror and holding field for the client. He would nonjudgmentally encourage the client to feel, express, and work through his or her wounds and to develop a more healthy understanding of them. Then he would encourage greater maturity and development of the personality into expanded areas of abilities, creativity, and giving back to others and humanity.

Today, Psychosynthesis is often done through a process of “guiding” (Brown 1983) where a therapist or “guide” helps the client to negotiate a series of barriers on the road to self-growth. The guide acts as an equal, though more experienced, traveler on life’s journey. This encourages the client to take responsibility for their own progress and direction. Sessions often last for an hour or two, during which the guide sits with the client and encourages them to focus on feelings, sensations, thoughts, and images in the present moment. The guide nonjudgmentally accepts the productions of the client and suggests exercises to enhance or modify the experience toward a catharsis or resolution of the feelings. These

exercises could include things such as free association, visualization, primal scream, empty-chair dialogue, meditation, focus on the breath, and self-soothing.

As a result of Dr. Assagioli’s work and process, many people have been helped to find a more satisfying approach to life and growth. Psychosynthesis has expanded all over the world, and the process and philosophy is being applied to ever-expanding areas of group, family, and cultural developments. I would expect that the Life Coaching approach has been influenced by many of the ideas of Psychosynthesis. A number of therapists and professionals have developed and expanded on the techniques and ideas of Assagioli, as evidenced by the sampling of books listed in the Bibliography.

## Psychotherapy

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

### On Caring Rather than Curing

Psychotherapy is an art and a science of caring for those in distress with the goal of helping others toward more fulfilling and meaningful experiences in their everyday existence. The ways in which this project is done is extremely diverse, and in fact, there are hundreds of practices in our contemporary situation that would claim the name “therapy.” Although various kinds of histories have been written, I would like to offer a read of this history that highlights its inherent religiosity.

Discerning the beginnings of psychotherapy depends on how one defines this process and whether or not one understands psychotherapy as a science, an art, or both. I argue that its foundation rests both in the history of the *cura animarum*, or the care of souls, and in the history of consolation literature and practices across a variety of religious traditions, “*cura*” originally meant “care” rather than “cure” (McNiell 1977; Jalland 2000). The psychotherapist was an *iatros tes psuche*, or physician of the soul. Much has changed since these originations. Thomas Szasz (1988) notes that psychotherapy as a talk therapy originated in ancient rhetorical traditions, but, over time, psychotherapy has become a medical treatment. Szasz has argued, and I think correctly, that psychotherapy is not a medical treatment, evoking Aristotle’s warning against the confluence of science and rhetoric.

Although aligned with Szasz’s general project as a clarification and differentiation of psychotherapy from medical modeled practices, I nonetheless agree with Ernesto Spinelli’s (2007) proposal that psychotherapy, or therapeia, should be understood in light of its true etiological foundation as less an art of persuasion and more a process of “walking with” another who suffers and is in distress. If *cura* is care and therapy is more a “walking with” rather than a “doing to,” then contemporary practices of psychotherapy as problem solving and repairing brokenness are practices far from their origins. The conceptualizations of Spinelli, Szasz, and other like-minded theorists and clinicians are much closer to the tradition of pastoral counseling as a companionship with another through existential transitions in life.

Another important distinction to be made about psychotherapy as seen from the field of psychology and religion concerns what is meant by the “psyche.” Early Greek formation of this concept did not start with the psyche as a self-encapsulated thing or ego. Psyche was more closely aligned with *nous*, or mind (Louth 1981). Mind, however, did not mean “brain,” which is another confluence of irreconcilable differences based on a categorical mistake of fusing mind and brain (Brothers 2001). *Nous* was “soul” and specifically the experiencer of meaning, significance, and purpose, or *telos* (Louth 1981). Hence, Viktor Frankl (1905–1997) developed his existential approach to psychotherapy and called it logotherapy, basing logos on a nosological discernment of how meaning motivates our existential comportment in our lives (1946/1959). Bruno Bettelheim (1903–1990) has further pointed out that Sigmund Freud’s (1856–1939) position on the psyche has been grossly misunderstood, often due to Freud’s mechanistic conceptualizations of the psyche (Bettelheim 1983). Freud’s understanding of psyche, as Bettelheim argues, is the German word, *Seele*, or soul. This conceptualization is aligned with Martin Heidegger (1889–1976) and the psychiatrists with whom he dialogued regarding the implications of his

philosophy for psychotherapy, Ludwig Binswanger (1881–1966) and Medard Boss (1903–1990). Whereas Binswanger (1967) understood the goal of therapy to be soul-oriented goals, such as the ability to love and trust again, Boss and Heidegger described psychotherapy as a process of *Seelsorgen*, or soul care (Boss 1963; Heidegger 1987/2001). Heidegger (1962) still wanted to destruct any conception of the psyche or soul as a substantial entity and so shift the focus from psyche as thing to human existence as *Dasein*. *Dasein*, or, literally, “being there,” is the unfolding of being amid the clearing and unburdening of human existence. Psychotherapy, or *Daseinsanalysis*, allows for the particular kinds of disclosure of one’s existence and relationship to existential givens that give rise to symptomatic constrictions of one’s freedom in the world.

### Therapy as “Being-With”

This genealogical interlude shows how current practices of psychotherapy have been consistent with its origins, the origins in some cases, and in other practices have diverged from its foundations. Therapy can be a fixing of broken psyches, a walking with persons, a “being with” and description of ways of being-in-the-world, an interpretation of relational patterning, or the regulation of unbalanced chemical processes, among other possibilities. Heidegger and Medard Boss considered this process more one of analysis than therapy, in which one loosens constrictions of *Dasein*’s ways of being-in-the-world (Boss 1979; Heidegger 1962, 1987/2001). Regarding the psychology and religion field, at first glance “loosening throughout” seems at odds with the definition of religion as a “binding back.” Nevertheless, with transcendent liberation as the goal of both processes, we can see how psychotherapy is itself a spiritual discipline.

An understanding of the spirituality of psychotherapy, then, depends on how one understands psyche and therapy or analysis. Although distinctions have been made between counseling, therapy, and spiritual direction, I believe these

distinctions presuppose functional and content differences that are secondary to what is shared by all of these practices: therapeutic presence. The current consensus among meta-analysts of successful psychotherapeutic practice is that the therapeutic relationship is the key factor in therapeutic change and positive outcome. Training programs, therefore, should focus most of its emphasis on teaching trainees how to establish and foster therapeutic relationships. With this focus, intangibles arise that are nonetheless significant factors in therapeutic outcome: empathic presence, depth of compassion, degrees of self- and other acceptance, risks of transparency and disclosure, the quality of discernment, the felt sense of being understood, and so forth. These qualities of therapeutic presence are well grounded in all traditions of religious care of however the soul is conceived.

The therapeutic intangibles mentioned above require discipline to achieve that necessitates risk, sacrifice, and patience – again, familiar words to all spiritual traditions. Participation in these intangibles transforms all participants in the therapeutic process, including the therapist. Both participants are on a journey toward liberation and transformation, which is the lived experience of transcendence.

### Commentary

One point for discussion in this commentary is how one adjudicates between the current insistence on providing evidence-based practices with this history of psychotherapy as spiritually informed by invisible, incommensurate, immeasurable phenomena that make up what is considered the *sine qua non* aspects of therapeutic change: therapeutic presence. Mere assessment from an outside position belies the history of concerned involvement and thousands of years of care and consolation. People do come to treatment in order to experience transcendence-as-transformation in their lives. Yet, being prescriptive about how one should live one’s life can be intrusive at least and downright controlling at best, thus disempowering another’s journey. An

alternative is available and one that is understood in light of its inherent religiosity: therapy as the clearing of space and lightening of burdens so being can unfold toward its ownmost potential in light of its embrace limitations. This is neither analysis alone, nor psychotherapy, but a type of therapy nonetheless. One does not direct the future, but open possibilities toward it. Doing psychotherapy this way necessitates a less than controlling experimental approach to discerning therapeutic quality.

At the forefront of the edification debates is a competition around which style of psychotherapy should be considered the most successful. Again, success depends on what counts as data and outcome, and, in fact, meta-analyses consistently suggest that all styles are more or less equally successful – depending, again, on the quality of the therapeutic relationship, which in turn depends on the quality of the therapeutic presence. Questions about therapeutic presence should be directed to the ancient spiritual traditions, particularly the ascetic and mystical dimensions of those traditions. What is not discussed as much as it should be is the fact that no one really knows how change occurs, in spite of our obsessive attempts to predict and control change factors. In other words, we should include more discussion about one change factor in the therapeutic process that is as old as the traditions that can inform it: mystery.

Finally, the development and choice of therapeutic modality should also be a consideration in the process of soul care. With the shift of psyche to more than an isolated ego, and/or a growing awareness of systems, relational processes, and like kind phenomena, therapeutic modalities have expanded to include group, family, couple, and play therapy. At the same time, psychotherapy still remains within a medically modeled format as long as those who come for help are seen as compromised and those who help them are seen as experts. Psychotherapy in the future could break this hegemony by focusing more on communities becoming more therapeutic and therapeutic milieus expanding toward more invitation to true *koinonia*, or the experience of freely being oneself as affirmed and affirming otherness.

## Psychotherapy and Religion

Kate M. Loewenthal

Department of Psychology, Royal Holloway,  
University of London, Egham, Surrey, UK

This essay briefly outlines some of the varieties of psychotherapy practiced today and looks at the development of the relationship between psychotherapy and religion under two broad headings: independence and integration.

### The Varieties of Psychotherapy

Freud (e.g., 1933) is usually credited with the discovery of the “talking cure” for psychiatric illness: psychoanalysis. Although in the late nineteenth and early twentieth centuries psychiatric illness was dealt with by medical practitioners, the chief disturbances are those of behavior, thinking, and feeling, often with no clear organic cause. The era of humane treatments had dawned, and pioneers such as Tuke, Pinel, and Dix had established humane institutions for the care of the insane, in England, France, and the USA, respectively. But effective medical treatments were lacking. Psychoanalysis, the talking cure developed by Freud, was not always totally effective in producing improvements, but it was sufficiently effective to survive, expand, and develop enormously during the twentieth century. Its development still continues and its clinical efficacy has been placed on a firm footing (e.g., Sandell et al. 2000). The theories, aims, and methods of psychoanalysis can only be summarized briefly here. Psychoanalysis aims to enable the client to develop

a conscious awareness of the feelings and ideas that underlie his or her habitual style of living and relating to others. These feelings and ideas have ruled his/her life in a powerful way. The origins of these feelings and ideas are unconscious. Awareness allows the possibility of assuming a level of control. One view of psychoanalysis, therefore, is that it helps make the unconscious conscious. One route by which this is often achieved is via the “transference relationship,” in which the client displays powerful feelings towards the analyst – anger, dependency, and idealization – feelings which are not realistically related to the current context. The analysis of transference – the examination of these feelings and their earlier occurrences and origins – is an important route towards therapeutic improvement.

From its earliest days, psychoanalysis has engendered new theories and methods. Some are regarded as recognizably psychoanalytic – for example, the neo- and post-Freudians (e.g., Horney 1963) and Klein (1955) and her followers. Others, for example, Rogers (1961), have developed schools of counseling in which a primary vehicle of improvement has been the therapist’s support and regard for the client. Cognitive Behavior Therapy (CBT) (e.g., Beck 2005) has begun to exert a very important influence in clinical practice, since it has been able to demonstrate effective outcomes in relatively few sessions. CBT functions by enabling the client to examine and evaluate his/her habitual thoughts, behaviors, and feelings in a manner which is focused on the client’s immediate problems and agreed-upon areas of improvement and is therefore less wide-ranging than psychoanalytic therapy. There are many other varieties of psychological therapies, but this brief account has hinted at the range and approach of some of the dominant influences in this very active field.

### Independence

A starting point is to note Freud’s apparent distaste for religion, for instance his view of religion

as a universal obsessional neurosis (e.g., Freud 1907). Spilka (1986), Loewenthal (1995), and others have described as the enormous range of ways in which psychotherapists have seen and described the role of religion: religion may be a socializing and suppressing force, a source of guilt, a haven, a source of abuse, a therapy, and a hazard. Many of the views of religion expressed in the early days of psychoanalysis and psychotherapy were detrimental: religion was seen as damaging to mental health. One response to these views is to attempt to leave religion out of the picture in any attempt to work with mental health issues.

During the twentieth century, the mental health and religious leadership professions were often seen as parallel and largely independent, each offering solutions to human misery that were alternative rather than complementary. There was some antagonism. Some psychotherapeutic writers perceived only damaging effects of religion. Some religious leaders saw psychotherapy as a spiritually damaging venture (Loewenthal 1995).

One reasonable justification for the independence of the psychotherapy and religious professions was advanced by Neeleman and Persaud (1995). While decrying the fact that mental health professionals overlook the often important religious concerns of their patients, they observe that mental health and religion are two largely independent areas of professional expertise. The mental health professional may feel – wisely – that she/he does not have the expertise to tackle religious issues. These, it might be felt, should be left to the chaplaincy. Similarly the religious leader may feel that she/he does not have the expertise to tackle mental health problems.

These concerns gave rise to the development of pastoral counseling among the ministry and to transcultural psychiatry and spiritual counseling among mental health professionals. Both developments aim to give professionals awareness of and training in issues in mental health and religion, including sufficient knowledge of when to cross-refer. Many mental health practitioners and religious leaders/chaplains work now harmoniously with each other, and earlier mistrust and antagonism have generally been laid to rest.

## Integration

The history of peace between psychotherapy and religion is almost as old as the history of war. Carl Gustav Jung was the prominent early exponent of harmony, with his view of spirituality as intrinsic to human nature, suggesting that spiritual growth and psychological growth involved the same processes – an inner journey involving the healing of fragmented aspects of the self and the development of individuation (e.g., Jung 1958). The Jungian influence was almost certainly the strongest in the early development of pastoral psychology.

Other prominent exponents of harmony include Rizzutto (1974) and Spero (1992). Both these authors use objects-relations theory (a development of Kleinian thinking), which deals with how from infancy onwards, the individual internalizes, splits, and harmonizes “objects” from his/her social world. G-d is an internal “object” and the relationship with G-d may be examined, developed, and healed in the course of psychotherapy.

There has been a strong growth of interest in psychotherapy and religion, as seen for instance in the psychoanalytic explorations in Stein’s (1999) *Beyond Belief: Psychotherapy and Religion*. David Black (2000, p. 25) explores recent thinking involving a neuroscientific model. In Black’s view, some of the values of psychotherapy and religion are remarkably similar, for example, love, mourning, and reparation. Nevertheless, their goals are different – psychoanalytic therapy proceeds by the analysis of transference to allow the ego to achieve optimal functioning in the individual’s social world. The goal of religion is to achieve “a true view of the universe and our relations to it.” Black believes that mature religions aim to give access to positions which differ from what can be established and worked through in psychoanalysis. “A religious vision opens up the possibility of other sorts of development which go beyond the world of human object relations” (2000, p. 22). Thus, interestingly, Black appears to suggest that in object-relations terms, the potential for spiritual and personal development may differ in the religious life, from what can be achieved in psychoanalysis.

In a different vein, Viktor Frankl (1986) has explored the importance of the will to meaning and the role of purpose in life in psychological health. His introduction of these concepts into the practice of psychotherapy has enabled a positive approach in working with troubled individuals.

Attending to the client's spiritual problems has become a strong focus of attention in the twenty-first century (Cook et al. 2009; Pargament 2007; Pargament and Tarakeshwar 2005). One noteworthy point is that the term *spirituality* has become increasingly popular as an alternative and substitute for the term *religion* – the implications of this shift are reviewed by Pargament, also Loewenthal (2007) and others. In *Spiritually Integrated Psychotherapy*, Pargament defines spirituality as *the search for the sacred*. He argues that spiritual concerns are often salient for many clients and therapists need to be equipped to deal with them. Therapists need to be able to recognize spirituality which can lead to growth and spirituality which can lead to a decline, also spirituality which is part of the problem, and spirituality which is part of the solution. The forthcoming American Psychological Association's *APA Handbook of the Psychology, Religion and Spirituality* (Pargament 2013) promises in-depth study of further aspects of the integration of spirituality into psychotherapeutic practice.

Another development has been the question of examining different cultural-religious traditions. In what ways do different traditions differ in the extent and manner of their integration into psychotherapeutic practice? Such issues are explored in Richards and Bergin (2000), in their *Handbook of Psychotherapy and Religious Diversity*, and Dowd and Nielsen (2006), in their *Exploration of the Psychologies in Religion*.

## Conclusions

The early development of psychotherapy featured some mistrust as the proponents of psychotherapy and religion viewed each others' ideas. Nevertheless, from the early stages there were noteworthy attempts to integrate the practice of psychotherapy with the religious and spiritual concerns of clients, and such attempts are now

flourishing. On the whole, it is the psychoanalytic and counseling schools of psychotherapy, rather than the cognitive-behavioral school, that have been responsible for these developments.

## Puer Aeternus

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

“*Puer Aeternus*” is a Latin phrase for “eternal child.” It is an archetypal complex, that is, a psychological and mythical amalgam of symbols and images of eternal youth. It is embodied in the literary work *Peter Pan* by the British author James Barry (1860–1937), which has been adapted numerous times in plays, movies, and television. It is often used as a pejorative phrase to denote a young man who will not make the emotional commitments of adulthood and prefers to continually “play the field.”

Pushing the archetypal image backward in time from Victorian literature, Pan was the proverbial “naughty boy” in Greek mythology. Like the lost boys in Barry’s work, Pan lived out in the wild woods and was notorious for unrestrained sexuality. Other creatures fill this role; centaurs,

half-man and half-horse, and were notorious not only for their unrestrained sexual appetites but for their aggression as well. Satyrs, half-man, half-goat, were Pan’s species, and he was their chief. Barry’s Peter Pan was prepubescent and sexually neuter, boyish with charm but without the threat of rising sexuality. But Pan as the archetype of an animalistic approach to sexual relations informs the use of the Peter Pan complex today.

In the gay male imago, *Puer Aeternus* can be seen as the continuation of the mythic image of same-sex attraction that begun with the “erastes/eromenos” relationship as exemplified by the story of Zeus and Ganymede. The archetype continued through the real historical characters of the Roman emperor Hadrian (76–138 CE) and his adolescent companion, Antinous, a youth from Bithynia in modern-day Turkey. After his tragic death by drowning in the Nile river while the two visited that province of Rome, Hadrian had him deified. The godling ephebe, Antinous, became a late Roman polytheistic cult with particular support from men who sought erotic connection and love with other men. The Antinoan temples lasted until Theodosius closed all pagan temples between 388 and 381 CE.

In Jungian archetypal psychology, the *Puer Aeternus*, or eternal child, represents a regressive romanticization of childhood and can be unhealthy, preventing normal adult development, or it can be transformed into an appreciation of one’s remaining childlike qualities as one ages. Woman can have “puella eternis” issues as easily as men struggle with the puer. All people struggle with the eternal child as a reaction to aging. The dialectic polarity in the psyche is that of puer and senex. The emulation of youth is a strong tug in the mind fed by our consumer culture. We struggle to hold on to the seemingly unbounded energy, enthusiasm, and vitality as the “eternal child” continues to influence our choices and feelings. The process of self-exploration allows us to confront this archetypal force and through dialectic to transform the energies into an age-appropriate blend of *Puer Aeternus* and the elder, sage, and wise one. We start as the former and, should we live so long, embody the other.

## Purgatory

Thomas St. James O'Connor  
Waterloo Lutheran Seminary, Waterloo, ON,  
Canada

There are diverse beliefs about the existence of purgatory. There is little evidence for purgatory in the Scriptures. The notion of purgatory began in the Patristic period. Purgatory is a time, place, and/or moment in the afterlife between God's judgment at death and the final beatific vision. Eastern mystical theology sees purgatory as a time of purification. Humans need to be purged of their sins before seeing God face-to-face. Purgatory is the final step in human growth and divination. In Western theology, purgatory contains the notion of reparation (satisfaction) for one's sins through penance. Sinners take responsibility for the sins and accept the consequences (justice). In the medieval time, Popes and church councils addressed this doctrine. The Council of Florence (1439) in the *Decree to the Greeks* sought to balance the Western and Eastern notions. The reformers (Luther and Melancton, Calvin and Zwingli) threw out the notion of purgatory. They believed that God's grace in Christ was more than sufficient and that human purification and satisfaction were part of a salvation-by-works mentality. The reformers were particularly incensed by the selling of

indulgences which Tetzel argued helped release souls from purgatory. The Roman Catholic church in the Council of Trent (1563) reaffirmed the teaching on purgatory while eliminating the excesses like the sale of indulgences. In the twentieth century, Vatican II and Paul VI reaffirmed the doctrine of purgatory.

Praying for the dead (those in purgatory) has been part of Roman Catholic piety since the beginning. Some other denominations share this spiritual practice. The fourteenth-century poet Dante devoted one book (*Purgatorio*) of *The Divine Comedy* (translated Sayers 1955) to the journey up Mount Purgatory. His artistic depiction has had an enduring effect. Based on the theology of Thomas Aquinas, Dante portrays purgatory as both purification and reparation for sin. Purgation is God's work and not the result of a human effort. Humans however must cooperate with grace. Unlike hell, penitents in purgatory gladly take responsibility for their sins, accept the just consequences, are purified, and make reparation that is healing.

Some contemporary thinkers believe that purgatory or aspects of purgatory can be helpful today. In family therapy, O'Connor (1999) relates Dante's notion of purgatory to narrative therapy developed by White and Epston (1991). Taking responsibility for self, accepting the consequences for one's actions, and developing personal agency are similar to both narrative therapy and purgatory. Narrative therapy externalizes the problem much in the same way that Dante externalizes the seven deadly sins. Both approaches lead to transformation. Theologian Richard McBrien (1981) believes that purgatory is the shedding of the selfishness of the ego so that humans become more like God who serves others. Similarly, Boszormenyi-Nagy and Krasner (1984) argue that family therapy should be modeled on Martin Buber's (1970) I-Thou that purifies self-centeredness in developing a deep respect and care for others. Hargrave (1994) in his research on forgiveness maintains that reparation of wrongdoing is an important aspect of forgiveness and healing. Purgatory in this post-modern era has experienced resurgence while still being disputed.

## Purpose in Life

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Purpose in life is the prime motivator for meaningful and fulfilling relationships and projects in existence, without which we can find ourselves in abject despair. Hence, discernment about the nature and edification of the purposeful life is vital to every area of therapeutic care and spiritual well-being. In fact, one could say that the partnership between psychology and religion is found in the understanding and perpetuation of the purposeful life. The purposeful life has been described by such diverse writers as the existential logotherapist Viktor Frankl (1905–1997) to the current, American, popular culture writers (Tolle 2008; Warren 2007).

Originally, “purpose” meant “aim,” “intention,” “to put forth,” or “by design.” Inherent to purpose is some type of directionality that is transfused with significance. A thorough understanding of purpose in life, therefore, entails an investigation of two primary aspects of its character, namely, intentionality and teleology.

Intentionality is our “aboutness” or “oughtness” in any given circumstance and comportment in the world. Beginning with Franz Brentano (1838–1917) in the late nineteenth century and furthered by the founder of transcendental phenomenology, Edmund Husserl (1859–1938), intentionality was defined as a focus on or toward something that is a part of any experience. Experience is always an experience of something, or an experience that is pointed, about which we are attuned or concerned. We are always heading somewhere, in some direction, searching, not only with our consciousness but also with our entire comportment. Brentano's and Husserl's positions were altered yet again by Martin Heidegger (1889–1976) who saw intentionality as an every moment experience of “care” or “Sorge” (Heidegger 1962). We find ourselves invested in how we are in the world, to what ends, and with what constitutes our ownmost possibilities.

Unlike Husserl, Heidegger did not believe we could shed or escape finitude and pre-understanding to achieve a pure phenomenological clarity. Rather, Heidegger believed that our very intentions are called forth by the already and always world of meaning in which we are “thrown” or find ourselves by happenstance. Jean Paul Sartre (1905–1980) furthered Heidegger's work by equating consciousness with intentionality, including an emphasis on deconstructing any assumptions of an unconscious. For Sartre, the unconscious is merely disowned consciousness and an example of bad faith (Sartre 1956). In short, we are living out a purpose while searching for a purpose, as it the direction in which we are proceeding either has a design to it or, with each step, gives clues to the construction of a purposeful life. As the debate continues, what is indisputable is that there is teleology to how we experience and for what purposes.

Teleology can mean either “end” or “purpose” but an end or purpose that either is a part of or completes a particular design or another. The existence of something in a purpose-as-plan leaves us with the question of whether the circumstance creates space for something to exist or if our purposeful comportment would exist no matter what provisions were provided for it. Do we develop certain strengths or illnesses because it fits our culture’s needs, or would we have such strengths and/or illnesses regardless of the cultural prescriptions? Contemporary perspectives on this matter, also called a nurture or nature debate, consider our designs as a product of both natural and nurturing processes. The same issue contains another dilemma: are our designs, even if a combination of nature and nurture, a part of hard determined fate or providence, or are we free to create our designs as we choose? Finally, is our purpose serving a means for the ends of a larger purpose, or is our purpose an end in itself that uses the larger context as a means to our own ends? Do we become sensual creatures because we have senses, or do we evolve senses because we need to become sensual creatures? At the same time, much like air shifting toward the most vacuous space, does our direction in life take the shape it does because of opportunity for it to do so? The answers to these and other similar questions are predicated on whether or not one sees teleology as extrinsic, intrinsic, or a combination thereof. Nevertheless, all purpose in life is an intertwining of calling and commitment, of oughtness and response, and, most importantly, of an inviting niche matched with a matching fit.

The importance of purpose in life within the field of psychology and religion is probably best known in the work of the logotherapist, Viktor Frankl (1905–1997). Frankl’s development of logotherapy evolved from his lived experiences within a concentration camp during World War II. Frankl’s now famous book, *Man’s Search for Meaning* (1946/1959), showed what human beings could endure, anything as long as the purpose and meaning to stay alive is strong enough to overcome one’s psychic, physical, and spiritual pain. For Frankl, his purpose to

live was twofold: he had someone who loved him and whom he loved, and he had projects to complete before his death. Frankl’s convictions integrate both teleology and intentionality in the will to meaning. Spirituality, contrary to an otherworldly phenomenon, is viewed from this perspective as the meaningful and fulfilling experience of discovering, following, being sustained by, and living out our purposeful existence.

Contemporary articulations of purpose in life continue with strong following. Rick Warren’s (2007) *The Purpose Driven Life* is a very popular text, at least among conservative to moderate Christians, and focuses on the discernment and synchronization of one’s life calling and direction with God’s providential plan for each person. Eckhart Tolle (2008) advises us that attachment to ego-based consciousness creates our conflicts and suffering, mirroring Buddhist noble truths, and invites us to a new consciousness that moves purpose beyond our egoism toward a deeper connection with that, which is more than us all, which is experienced in the fullness of the present moment. So whether in a popular or more formally academic way, discerning and following our purpose in life spotlights what matters in assessing and committing to live.

## Commentary

Several questions remain for consideration in discerning the purposeful life. First of all, one significant concern is clarifying who gets to define what is purposeful. Social construction has shown how powerful the voices of others are in shaping our life direction. Our purposes in life may actually be handed to us by the group, herd, crowd, or status quo. Yet, even though agency is shaped by our environmental and ideological contexts, agency still remains. One still assents or not, interprets or is interpreted, and decides or is handed decisions. Merely to fit with the needs of the group’s purpose has led to fascist and totalitarian horrors as much as the dictatorship-like apathy regarding how one’s intentions impact others. Caution should be

exercised in both directions, but all said and done, we are still left with the accountability of our own personal decisions and commitments toward a direction in life. What is purposeful depends on what is valued, be it survivability, safety, or otherwise. But inspiration and motivation seem to entail more than mere self-preservation. Thriving, as the old adage goes, is more than merely existing.

Another issue for consideration is whether purpose is found, discovered, or, as I argue, in line with the tradition of existential phenomenology, that purpose is already and always lived out in the world long before it becomes an object for reflection. Even in the very Sartrean act of creating meaning and purpose out of nothing overrides the obvious meaningful place from which the creation of meaning out of nothing can occur. Our enactments of significance fold in teleology and intentionality, while simultaneously incorporating finitude and freedom. One intends and complies with design based on what is meaningful to us, which at times does not show itself until times of great intimacy or crisis. As Will Barrett (1913–1992) noted, we often quibble about free will and determinism until our lives are at stake and our choices become quite pronounced (1979). Our lived purposes are so much a part of our moment-to-moment existence that Maurice Merleau-Ponty (1908–1961) demonstrated that intentionality (and the reception of the intended response) is even in our reflexology (Merleau-Ponty 1963).

It should also be kept in mind that intentionality occurs within a context and clearing in which the intention is summoned and recognized. Jan van den Berg (1914–), the Dutch phenomenologist, argued that the metabletic moment, or the moment in which change occurs, is a convergence of many vectors that come together (van den Berg 1983). A space is created for purpose to become itself, much like the unfolding of Heidegger's *Dasein*.

Finally, we must address the relationship of the purposeful like to nihilism. Albert Camus (1913–1960) knew this relationship well and perhaps put it most succinctly when we argued that the only question worth asking is whether life is

worth living in spite of its absurd constitution (Camus 1955). His answer was a courageous “yes.” It behooves us to be honest about how random and seemingly impersonal tragedy can be in its savagery, often leaving powerful undertows of posttraumatic reactions and/or invitations to suicidal despair. But even suicidal despair is purposeful. One seeks to transcend one state of existence for another, which is driven by the pain of what is and what could be, albeit from a narrowed place of attunement. Each moment, though, we inescapably enact significance, whether or not we are attuned to it or whether or not we find it pleasing. Each moment is nonetheless a leap of enacted significance and lived out long before analyzed (Kierkegaard 1843/1941; Henry 2002). Hence, if we are always and already enacting significance, there can be no purposeless existence. Knowing this about the purposeful life frees us to embrace the “call of the wild,” where the “freedom to be” may actually be the heart of purpose in a life fully lived.

## Quaternity

John Pahucki  
Department of Humanities, SUNY Rockland,  
Suffern, NY, USA

A concept in Jungian analytical psychology which refers broadly to images of totality and wholeness – such as the mandala – that appear in dreams or other spontaneous expressions of the unconscious. Jung believed that the quaternity should serve as the primary image of the God archetype, replacing the Christian trinity which he viewed as psychically obsolescent. The Christian trinity was an inadequate symbol to denote psychic wholeness, Jung contended, as it failed to encompass the shadow and feminine aspects of the psyche. Jung was not clear on which of these two should be accorded priority, arguing for the inclusion of Mephistopheles in the quaternity, as the shadow cast by Christ, while also expressing great enthusiasm for the Catholic Church's adoption of the doctrine of the *Assumption* of Mary. This, he maintained, established a quaternity relation as Mary, representative of the eternal feminine, functioned as counterpart to the bridegroom of Christ.

## Quest

David A. Leeming  
University of Connecticut, Storrs, CT, USA

In the cultural dreams that are our myths, heroes serve as our personae, representatives of our collective psyches – first as cultures and then as a species. Gilgamesh reflects a Mesopotamian physical and psychological experience, and Odysseus could not be anything else but Archaic Greek. But when we compare the heroes of these various cultures, Joseph Campbell's heroic monomyth pattern emerges, and we discover a hero who belongs to all of humanity. "The Hero," writes Campbell, "is the man or woman who has been able to battle past his personal and local historical limitations to the generally valid, normally human forms" (1949/1973 Hero, p. 19–20).

The central event in the universal hero myth, the heroic monomyth, is the quest, in which

a hero – the representative of a culture – seeks some significant goal or boon for his or her people. Often the voyage involves archetypal stages such as the search for truth or riches or a lost loved one, a struggle with monsters, and the descent to the underworld. Jason goes in search of the Golden Fleece, Parsifal the Holy Grail, and the Buddha Enlightenment.

Interpreted psychologically, the questing hero is our cultural and collective psyche out in search of identity – that is, Self, the point of self-knowledge at which the conscious and unconscious come together as a unity.

As we see in the overall heroic monomyth, the archetypal pattern that emerges from a comparison of hero myths, the quest involves several almost ritualistic stages. There is the initial unwillingness to begin the journey – the refusal of the call – reflecting the natural unwillingness of most of us to give up the status quo for a difficult exploration of our inner worlds. But the hero must leave home precisely because he or she must break new ground in the overall human journey, as we must on the psychological journey towards fulfillment or self-identity. The old ways must be constantly renewed and new understandings developed. The knights of the Round Table must give up the comforts of Camelot to achieve renewal through adventure, and Gilgamesh must leave home to seek eternal life.

The questing hero looks for something lost – a father, a sacred icon of the tribe, something that will save the people, the plant of immortality, and the Holy Grail. “Religious” or philosophical heroes such as the Buddha or Jesus look to less tangible goals: Enlightenment, Nirvana, and the Kingdom of God.

The quest always involves frightening and dangerous thresholds to be crossed – giants, dragons, evil kings, and seemingly impossible labors such as those of Herakles. These all reflect the monsters within our own psyches and the thresholds we must cross on the way to wholeness. When the hero confronts the ultimate threshold and dies, and when he returns to the world after his descent into death, he is an image of our descent into the very

depths of the unconscious world in preparation for a new “birth” of the psyche.

## Quetzalcoatl

David A. Leeming

University of Connecticut, Storrs, CT, USA

Quetzalcoatl is a ubiquitous Mesoamerican figure who, like Jesus and Osiris, for example, was at once a god and a human king. As such he had immense power tempered by the inevitability of suffering and death. Quetzalcoatl was the “Feathered Serpent” of the Toltec city of Tula. He was the culture hero who taught the people how to live, how to create a calendar, and how to grow maize. His divinity is indicated clearly by the story of his virgin birth. His mother, Chimalman, was breathed upon by the supreme god in his form as the morning. In the process of giving birth to Quetzalcoatl, she died, much as Queen Maya, in one story, died after giving birth to the Buddha. Quetzalcoatl had a single significant enemy, his brother and fellow world creator, Tezcatlipoca, the god of the Smoking Mirror. Tezcatlipoca was primarily an Aztec god, and, since the Aztecs overcame the Toltecs in Mesoamerica, it was logical that Tezcatlipoca should trick and defeat

Quetzalcoatl before the Aztecs assimilated him into their pantheon.

Myths are cultural dreams, and as in the case of any dream, the characters in the dream reflect the dreamer. The culture that dreamed of Quetzalcoatl and Tezcatlipoca contained both beings and their qualities in its collective psyche. And given that we have been fascinated and struck by the lives of these beings – as we are fascinated by the lives of Jesus, the Buddha, or Osiris, for instance – whatever they represent might be said to be alive in the collective psyche of the human species.

Quetzalcoatl, the culture hero and king of the golden age of the Toltecs, knew that one day he would have to confront the side of his being represented by his brother. In the same way the Mesopotamian Inanna knew she would have to confront her dark sister of the underworld, Ereshkigal, or Jesus knew that he would have to descend to the death world of Satan before he could return to the world above. It is psychologically telling that when Tezcatlipoca arrives to confront Quetzalcoatl, he, the lord of the Smoking Mirror, holds up a mirror to his brother “so that you can see what you look like to others.” Horrified by his own physical identity and having been given a drug by Tezcatlipoca, Quetzalcoatl commits the sin of incest with his sister, thus experiencing the darkness within himself. He has a tomb built in which he can hide so that his people can no longer see him and after 4 days in the tomb leaves Tula in search of some place called the Red Land or the Dark Land or the Land of Fire. Along the way he is gradually stripped of his retinue and his powers, the ultimate humility coming when he is defeated by Tezcatlipoca in a game of ball. Like Inanna, he arrives at his destination having given up all former masks of his identity. His heart rises to the heavens from the funeral pyre on which his body is burned, and his soul lives in the place from which he had originally come and from which he will be resurrected.

In terms of his relation to the psyche of the human species, then, Quetzalcoatl represents any of us who make the heroic journey into the

unconscious world of our inner selves in order to relate to the shadow aspect of the personality. The process involves the stripping away of the masks that we wear and the confrontation with the elements of the unconscious that need to be brought into the conscious world. In this process the dark energy of these elements may be transferred into positive creativity. The final goal is the achievement of Self, represented by the hoped for resurrection in the myth.

### Qur'an

Ali Kose  
 Ilahiyat Facultesi, Marmara Universitesi,  
 Istanbul, Turkey

The Qur'an is the sacred book of Muslims who believe its complete text came through revelation. Each word of it was revealed in Arabic by Allah (God) to Prophet Muhammad through the Archangel Gabriel over a span of 23 years in the seventh century. The revelation of the Qur'an

began when the Prophet was 40 years old. It consists of around 600 pages, 114 chapters, and over 6,000 verses. The length of chapters varies with the longest chapter having 286 verses, while the shortest one has only three. The word "Qur'an" means recitation, and the first verse of the Qur'an to be revealed to Prophet Muhammad was a command to "read in the name of your Lord, the Creator. . ." (Ibn Hanbal 1895, p. 232).

Given that the Prophet was an unlettered man, his early followers eagerly memorized and recorded each new revelation as it was revealed. By the time the Prophet passed away, the Qur'an had been completed and many had memorized its entirety. Within 2 years after the death of the Prophet, the first caliph, Abu Bakr, compiled the Qur'an into a manuscript which became the basis for the authorized editions that were distributed to each Muslim province during the rule of Uthman, the third caliph. A few of those early manuscripts have been preserved and can still be viewed in museums today. Thus, there is only one authorized version in Arabic.

Muslims believe in the original form of all the revealed books which are mentioned in the Qur'an: the Torah of Moses, Psalms of David, and the Gospels of Jesus. The Qur'an also mentions the Scrolls of Abraham. Moses' contemporaries were excellent in magic, so his major miracle was to defeat the best magicians of Egypt in his day. Jesus' contemporaries were recognized as skillful physicians; therefore, his miracle was to cure incurable diseases. The Arabs, the contemporaries of Prophet Muhammad, were known for their eloquence and magnificent poetry. Accordingly, Prophet Muhammad's major miracle to prove that he is a messenger of God is believed to be the Qur'an.

## Final Scripture

The Qur'an is revered by Muslims as being God's final Scripture. Its verses are and have been recited and memorized by Muslims of every nationality. It is the verses of the Qur'an that Muslims read during their five daily prayers.

The faithful ones are inspired, consoled, and often moved to tears by its poetic imagery.

For the past fourteen centuries, Muslims from all over the world have written the Qur'anic verses in various calligraphic forms, which were mainly produced and perfected by the Ottoman Turks. In fact, it was in Istanbul that the finest calligraphic scripts were produced. A famous saying, therefore, goes: "The Qur'an was revealed in Mecca, read in Egypt, and written in Istanbul."

The Qur'an contains many verses which describe natural phenomenon in various fields such as astronomy, geology, and embryology. It is also a law book to provide some basic principles for both individual and social life. Its main message is to call people to turn to the Source of all being and the Giver of life and to serve Him with a pure heart, free of idolatry or superstition. It rejects the concept of salvation or special privilege based on ethnicity, race, or color. Spiritual salvation is to be achieved by an attempt to make amends for one's sins and a sincere intention not to repeat one's mistakes in the future. There is no official priesthood in Islam, and the "imam" is no more than a knowledgeable prayer leader; one's sins need only be confessed directly to the Creator. The Qur'an presents itself as guidance for mankind as a whole. It is not for any particular people, place, or period in time.

## The Qur'an as Source of Culture

Islamic culture is founded on the Qur'an. It is recited on special occasions like wedding ceremonies and at certain times such as going to sleep or setting forth on a journey. In this sense, it serves the purpose of a prayer book. Muslims also utilize the Qur'an as a psychotherapeutic book. For example, they read some certain verses and gently blow them upon the sick as well as for the soul of the deceased. Additionally, verses like the eleven in the last two chapters are read to protect against evil temptations or when one fears of possession by a devil. People hang up amulets which have chapters from the Qur'an

around their neck, on the main door of houses, and on the rear mirror of automobiles to protect themselves and their belongings from accidents, evil eyes, burglars, etc. The Qur'an is also popularly used as an oath book; people swear by the Qur'an to take an oath.

## Ramakrishna Paramahansa

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

One of the most recognized and beloved of the great saints of India, Ramakrishna (1836–1886) is best known for his devotion to the Divine Mother, the Goddess Kali. He was also the founder of the Vedanta Society that now has branches in many major cities throughout the world. The doctrine of Vedanta is based on Hindu tradition, but Ramakrishna was also versed in comparative religious traditions. It is a characteristic of Hindu tradition to honor and respect all religions.

Ramakrishna's life was marked by many unusual spiritual phenomena. His birth was predicted to both his parents individually as being especially devoted to both Vishnu and Shiva, two of the Hindu Trinity. Early in life Ramakrishna was a nature mystic, occasionally falling into rapturous unconsciousness at the sight of great beauty or, on one occasion, when playing the role of Shiva in a play. He was the youngest son of a poor family that was of the *Brahmin* (priestly) caste. When his oldest brother went to Calcutta to teach Sanskrit and serve as a priest in the temple consecrated to the Goddess Kali, he invited his youngest brother, then 17, to assist him in his priestly duties. When this brother died just 1 year later, Ramakrishna took over as

priest in the temple. It was at that point that he underwent a profound change, dedicating himself entirely to the service of the Divine Mother. He became so engrossed in religious life that he sometimes lost track of time. Nonetheless, this was a period of dark yearning for the young Ramakrishna. His ardent spiritual thirst was for *darshan* – a vision and teaching of the Divine Mother. At one point, he almost committed suicide, and it was then that the Divine Mother first appeared to him. As he taught later, when yearning is as strong as that of a drowning man gasping for breath, then we will be given the gift of knowing God (cited in Kakar 1991, p. 16f).

After this first powerful mystical experience, his appetite was whetted for more. Whenever he received visions of the Goddess, he would beam with joy and enter into *samadhi*, which is a deep and intense meditative state wherein the ego enters into unspecified, formless, featureless consciousness, and then he would frequently become unconscious. When there was any diminution in the sense of Her presence, he would loudly wail and become breathless. His family worried about him; they took him to an *Ayurvedic* doctor for treatment and even tried an exorcist. He gradually passed through this initial intense spiritual phase. Subsequently his family arranged a marriage for him with the 6-year-old Sarada Devi. He complied with their wishes but never had any intention of consummating the marriage. In later life he envisioned his wife as the Divine Mother herself and worshiped her.

## Teachings

Ramakrishna taught that *Bhakti yoga*, or the life of devotion, is the quickest, surest path toward the union with the Divine. From this perspective, all desire can lead one to God. The passions of life are all redirected toward God rather than toward the objects of the world. Devotional mysticism, rather than eliminating the sense of individuality of the aspirant, seeks to use that sense of ego-identity by recapturing the feelings of childlike innocence and fresh vision. It was in feeling as a child, aware of his total humanity and complete dependence on the Divine, that Ramakrishna prayed:

To my Mother I prayed only for pure devotion. I said, "Mother, here is your virtue, here is your vice. Take them both and grant me only pure devotion to you. Here is your knowledge and here is your ignorance. Take them both and grant me only pure love for you. Here is your purity, and here is your impurity. Take them both, Mother, and grant me only pure devotion for you" (Kakar 1991, p. 16).

As a priest in the Kali Temple, Ramakrishna became known as a mystical genius and he was greatly sought after for teachings. He frequently taught that one can certainly worship God with form – any form – or one can worship God without form. What matters, he said, is simply the longing and the intensity of devotion. Not awe, but devotion. He was known to have many occult powers or *siddhis*, but he always made light of them. Ramakrishna conveyed his experiences through devotional songs, myths, analogues, metaphors, and parables. He generally transmitted his teachings orally, but also gave special mystical energy transmissions to his close disciples.

## Vedanta Society

His key disciples were originally 16 in number. After Ramakrishna's death, which occurred at age 50 due to throat cancer, Swami Vivekananda took over the leadership of the spiritual community. Starting in 1893 at the Chicago World Parliament of Religions, the Vedanta Society grew into a worldwide movement. Today the spiritual traditions of India are easily accessible

through this group; and in particular, when feminists are searching for female god images, the teachings of Ramakrishna make these ideas more plausible and available to spiritual aspirants.

## Ramana Maharshi

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Sri Ramana Maharshi (December 30, 1879 to April 14, 1950) was born into a Tamil Brahmin family, though freed himself of any caste restrictions at the age of 16 upon achieving liberation. His initial experience of *moksha* was famously precipitated by an acute psycho-spiritual crisis which manifested in an all-consuming fear of death. His emergence as an *Atiasrami* was complete with the realization that Spirit is deathless and that it transcends the body and endures after physical expiration. Although he highly recommended Bhakti as a path to the Absolute, he favored the non-dual system of Advaita Vedanta far more, his primary method of instruction (aside from the knowing radiance of his silence) to encourage seekers to ask of themselves the following all-important query: Who am I?

For he understood that this question, if honestly explored with both passion and intensity would lead those seeking answers through the tempestuous fog of samsaric confusion to the shining realization of *Tat Tvam Asi* – Thou Art That – the apex of the Vedantic path.

His uniquely Maharshian blend of Advaita Vedanta has influenced untold numbers both East and West. His teachings prefigured and informed in a multitude of ways the kinds of existential inquiry that would later be integrated into the humanistic and transpersonal theories that would dethrone the despots of psychodynamism and behaviorism. But these are modern distinctions; for, in Vedantic understanding, the domains of what we perceive to be those of “psychology” and “religion” overlap to the point of indistinctiveness.

Many modern interpreters of Asian religious traditions to the West have embraced the figure of Ramana Maharshi as the exemplar of perfected understanding incarnate in the flesh – most famously Ken Wilber, who in his mapping of the Kosmos, privileges Maharshi beyond all other sages. Subsequent authors critical of Wilberian spiritual politics see Maharshi’s complete disregard for his own health and survival not as evidence of spiritual profundity but of severe psychopathology. In the final analysis, perhaps the answer lies not so much in either extreme but in the meeting of the two.

## Rank, Otto

John Pahucki

Department of Humanities, SUNY Rockland,  
Suffern, NY, USA

One of Freud’s closest colleagues for 20 years, Rank (1884–1939) was an early and influential member of the Viennese Psychoanalytic Society, serving as its secretary and the editor of two journals, the *Zeitschrift* and *Imago*. He was also a member of Freud’s innermost circle, the “Ring” committee. Rank was one of the first lay analysts, a point of contention in the early days of psychoanalysis, receiving his Ph.D. in philosophy from the University of Vienna.

Rank’s eventual break with Freud accompanied the publication of his book *The Trauma of Birth*, where he traced the genesis of anxiety neurosis to the birth experience. Rank’s claims in this text threatened to subvert Freudian orthodoxy, with suspicious Freudians like Ernest Jones suspecting that Rank was seeking to replace the Oedipal drama with the experience of birth trauma as the central interpretive principle of psychoanalysis. Rank did, at places, call for a reevaluation of the importance of the maternal in psychoanalytic theory, recognizing the overestimation of the role accorded to the paternal in Freud’s system. In this sense, Rank’s work anticipated the criticisms and constructions of later feminist psychoanalysts like Luce Irigaray and Julia Kristeva.

Rank’s subsequent work retained this sense of the importance of birth as a paradigmatic experience in psychic development, arguing that this painful severance from the maternal was to some extent recapitulated in all later relationships as well as the countless “deaths” and “rebirths” the subject undergoes in the process of self-development, described in *Truth and Reality* as the “never completed birth of individuality.”

Rank became increasingly critical of the deterministic elements of Freud’s thought, arguing that Freud reduced the role of the ego to a mere “showplace” in the war between the biologically

driven id and the socially imposed superego. Dissatisfied with Freud's rejection of ego psychology, Rank turned to his early philosophical influences, Arthur Schopenhauer and Friedrich Nietzsche, in developing his own psychotherapeutic system of "will therapy."

The goal for the subject, in the Rankian view, is to marshal his creative powers for the development and pursuit of his own projected ego ideal. Following Schopenhauer, Rank claimed that self-consciousness had developed evolutionarily as an instrument of the will, eventually becoming capable of autonomous determination. Based on this view, Rank developed a triadic psychological typology. The majority of people, he believed, simply languish in unconsciousness, not nearly self-aware enough to labor under the burden and alienation that self-consciousness imposes. The last two types are the neurotic and the artist. Both the artist and neurotic are akin to Schopenhauer's genius, individuals who are gifted with a kind of surfeit of will that grants them prospects for liberation and self-determination that few can enjoy. The neurotic, however, refuses to embrace his creative powers as this involves conscious acceptance of the conditions of life, namely, the isolation and mortality imposed on him by the act of birth. The neurotic is thus, in Rank's term, a failed artist (*artiste manqué*) who turns his tremendous energies in upon himself in constituting his own suffering. The artist, by contrast, embraces life's transience and directs himself toward the formation and establishment of his own considered ego ideal, which often proves at variance with the ideal foisted upon him by parents and society. In this sense, Rank's conception of the artist type has clear resonance with Nietzsche's notion of the "overman" (*Übermensch*) and the "transvaluation of values."

## Rank, Otto, as Mystic

Matthew Fox

Academy for the Love of Learning, Santa Fe, NM, USA

In *Psychology and the Soul*, Rank declares himself thus: "I believe that we have entered a new phase of spiritual development, one that affects both physics and psychology" (Rank 1998, p. 113). How telling that Rank is interested in our "spiritual development" and how this evolutionary step for our species will occur in the coming together of physics and psychology. It is our "spiritual development" that provides the larger context for our "physics" and of "psychology" – and not the other way around. It is Rank's own "belief" and conviction that history is awaiting a new chapter in humanity's evolution. Indeed, a "new phase" is being born.

Rank, writing these words in 1930, was so prescient and so profound in his grasp of the depth of history and of human nature that even today, some 82 years later, the new era or "phase" of which he speaks is still struggling to be born, still being unpacked. It is still *new*.

Yet, as Rank would be the first to testify, this "new phase" is born of the wisdom of the ancestors of whom he declares: "Primitives disclose to us the deeper sources" (Rank 1941, p. 245). If we are looking for *depth* (which I consider as good a definition of "spiritual" as we can find), Rank says we ought to consider the ancients because they reveal the "deeper sources."

Rank, so deeply postmodern, admires the wisdom of the premoderns and goes hunting for it. In doing so he sets himself up against the modern mentality that saw truth only in scientific cognition and ridiculed the consciousness and mysticism of premodern peoples. (Theodore Roszak points out that the Enlightenment “ridiculed” mysticism as the worst offense against science and reason, see Roszak 1992, p. 80; see also Freud 1967, pp. 68f, 100, 112, 172 and Freud 1957, p. 72). Freud ridiculed mysticism, reducing it to infantile regression and a yearning to return to the womb. Rank respects mysticism and includes it in any view of a whole and healed personality.

Let us consider seven areas in which Rank emerges as a bona fide mystic.

## Unio Mystica

Premodern and ancient peoples, like Rank, saw physics (i.e., nature and macrocosm) and psychology (human nature and microcosm) as one. All of life was a celebration of this union of psyche and cosmos. For Rank, people still seek “an identity with the cosmic process” and this rediscovery of cosmology will provide the surest healing for our deepest woes which stem from our separation from the cosmos. This *unio mystica*, our “being one with the All” and our being “in tune with” the cosmos, the earliest humans knew intimately. “This identification is the echo of an original identity, not merely of child and mother, but of everything living – witness the reverence of the primitive for animals. In man, identification aims at re-establishing a *lost identity with the cosmic process*, which has to be surrendered and continuously re-established in the course of self-development” (Rank 1932b, p. 376). Rank instructs us to look to indigenous peoples – in this instance for the wisdom of animal relationships, indeed the “reverence” that primitives have for animals. Are we capable of recovering reverence?

Here Rank reveals a profound ecological consciousness, one that is about “all our relations” as the Lakota people pray in their most sacred

ceremonies. This should come as no great surprise since, as Thomas Berry has observed, “ecology is functional cosmology.” To bring cosmology back, as Rank insists on, is to bring ecology alive. A new, “ecozoic,” age (Berry) will be marked by new (and ancient) relationships of intimacy with nature both micro and macro.

## Language

William James, whose work Rank studied, identifies one of the marks of mysticism as being “ineffability” (James 1958, p. 292). And Meister Eckhart, whom Rank also read, tells us that we “have to stammer when we speak of divine things” (Fox 1991a, p. 108). Anyone who has read Rank is familiar with his stammering and his dances with ineffability. Rank praises religion “because it admits *the Unknown*, indeed recognizes it as the chief factor instead of pretending an omniscience that we do not possess” (Rank 1932b, p. 44).

Rank is not the succinct poet that mystical writers like Eckhart or Rumi are. Yet, in reading Rank, sometimes plodding along with his convoluted sentences and mixed images, there are moments of epiphany, breakthrough images, and phrases that arrest the mind and move the heart.

## The Irrational

One great effort Rank makes to name the mystical is his much used term, the “irrational.” In invoking the “irrational,” Rank is standing up to and calling our attention to the *excessive rationality* of the modern era and its science of mechanism and reductionism, of Freud, of Newtonian causality, indeed of patriarchy itself.

Animals are irrational and the winds and the sea and the tigers and the stars and the planets and the rocks. Yet they all speak to us. And often of the Unknown and the mystery behind all things. As Eckhart says: “All creatures are gladly doing their best to speak of God” (Fox 1991a, p. 59).

All kinds of beings – beings that an anthropocentric civilization *chooses* to ignore – live their wonderful lives with little or no rationality. Furthermore, humans too live our lives far more irrationally than modern science and modern education would have us believe. Rank actually believes that values count. But values are not born of rationality – nothing deep is in Rank's view. Values are born of the "irrational." Einstein also says values come from intuition and from feeling and not from the intellect. They are born of love.

Rank declares that "the epitome of the irrational is the marvel of creation itself" (Rank 1941, p. 250). Here Rank, in his own poetic way, has named the unnamable for he has pointed to *where* we will find experience that is worthy of being named "spiritual" experience. It is in nature. The wilder and freer the better. Wonder is irrational, not rational. And marveling is everything. This Jewish spiritual consciousness is echoed in Heschel when he speaks of "radical amazement" and reminds us that "awe is the beginning of wisdom" (Heschel 1955, pp. 30f, 74). The rational gives us knowledge, but wonder gives us wisdom. Rank sought wisdom, he had seen enough of knowledge (body counts are rational as are "bottom lines" in business). Wisdom might be defined as the bringing together of the rational (knowledge) and the irrational (awe and love). Whole civilizations fall, Rank felt, such as the Roman Empire, because they chased after the rational at the expense of the irrational and after a patriarchal agenda (the masculine preference for the rational) at the expense of the feminine (for women are "carriers of the irrational").

Are the beasts rational? Is the sea rational? The sky? The fog that enveloped the distant sea this morning? The warmth I feel with the gas heater lit up? No, the rational – the making of a gas heater and the engineering that made this warm cottage possible – is good and fine *but it serves the irrational*. If it does not, if the irrational serves the rational, then ideology trumps reality and we are lost souls indeed.

For Rank ideology represents the shadow side to irrationality, a wolf in sheep's clothing; it comes pretending to be scientific, objective, and

rational. But scratch the surface and you find what often drives it is unconscious fear, dread, guilt, and the compulsion to control. This demonstrates the power of the irrational: Repress it, forget it, and deny it and it will come up in other forms to sting us with its poison.

"Vital human values" – ethics itself – derive from the irrational, from our experience of what matters, of what is truly vast and vulnerable and worthy of our attention and protection (Rank 1941, p. 14). In other words, what is truly *marvelous*. The irrational is that which "does not fit into our scheme of things" – it takes us beyond our personal, private, tribal, anthropocentric agendas into a vaster world, a cosmic place, whence we derive our truest values.

Rank observes that life would not be life without the irrational. "Rationalistic psychology was only an outgrowth of the mentality of our age which is, or rather, was up to recently, so highly rationalized that the irrational had only the neurotic form of expression." Repress the healthy irrational and neurosis will sting you – and sting all of a culture. What is the cure to excessive rationality? "To attempt to cure this result of rationalism by more rationality is just as contradictory as a war to end wars, or an effort to strengthen a weakening democracy by more democracy" (Rank 1941, p. 289).

The cure is to step out of excessive rationality and make room for the power of life itself. "The only remedy is an acceptance of the fundamental irrationality of the human being and life in general, an acceptance which means not merely a recognition or even admittance of our basic 'primitivity,' in the sophisticated vein of our typical intellects, but a real allowance of its dynamic functioning in human behavior, which would not be lifelike without it" (Rank 1941, p. 289). What is lifelike *is* irrational and we ought to be paying attention to this first and foremost. This may mean getting off our intellectual high horses and making room for its dynamic functioning in our lives.

What are the negative consequences if we ignore the irrational? "When such a constructive and dynamic expression of the irrational together with the rational life is not permitted, it breaks

through in violent distortions which manifest themselves individually as neurosis and culturally as various forms of revolutionary movements which succeed *because* they are irrational and not in spite of it” (Rank 1941, p. 289). Notice that Rank is not abandoning the rational – he says here that the rational and irrational life are compatible – but there must be a balance and our culture, lacking appreciation of the irrational, is far from balanced, to its peril. Ideology will take over in its stead, *anything to bring alive the irrational*. Rank believes that Karl Marx succeeded so amazingly because he offered *hope* to the poor. Hope is an irrational thing. It keeps people in dire straits alive.

What else is irrational? How about the following: dreams, music, dance, art, ritual, sex, love-making, babies, laughter, play, massage, drumming, singing, the smells of newly cut grasses, tastes of spicy foods, silence, grief, color, creativity, peace, clowning, nature, wilderness, prayer, fear, animals, angels or spirits, children, beauty, paradox, myth, stories, games, sport (that is not rational or business driven), campfires, chant, darkness, tenderness, forgiveness, meditation, God, birds, trees, plants, flowers, and food. And “legitimate foolishness,” the folly that accompanies wisdom. Holy folly.

What would life be without these? Where would we derive our values, our reasons for living, our zest for carrying on? The irrational includes the “dynamic forces governing life and human behavior” (Rank 1941, p. 23). In our culture these forces are stigmatized as “irrational.”

We need, says Rank, a whole new civilization – one that includes the irrational – because “human nature is at bottom irrational.” Rank is interested in the *ground* (Eckhart’s word) of our souls, the truth about what is at the “bottom” (Rank’s word) of our beings. Because society is rational (or pretends to be), we suffer from its “rational ideology” which is in fact born of an “inhibited negation of life” (Rank 1941, p. 278). Instead of an inhibited negation of life, why not a community celebration of life? This celebration of life, this optimism, begins with awe and wonder, with marveling at creation itself.

Rank is a creation-centered mystic of the highest order. The *Via Positiva*, a rediscovery of the awe and wonder, the delight and joy of existence itself, is the basic cure for self and society’s tiredness and pessimism. A new falling in love with life is the medicine prescribed by Rank and other creation-centered mystics. Consider, for example, Aquinas: “Joy is the human’s noblest act” and “God is supremely joyful and therefore supremely conscious” (Fox 1991b, p. 119f).

## The Beyond

Another favorite concept of Rank’s is that of the “beyond.” Says Rank: “The individual is not just striving for survival but is reaching for some kind of ‘beyond.’” Beyond is something we reach for. It is not there yet. One might say it is “eschatological” or in the future. Yet it beckons us, reaches out to us. The word “beyond” implies *being yonder*, being at a frontier, being at an edge, stretching, growing. Eckhart says: “God is delighted to watch our souls enlarge.” An enlarging of our souls takes us “beyond.” Beyond implies distance. Being at the horizon. Adventure. Something great to strive for, something great to welcome us in, to welcome us home. A homecoming. A return to our origins.

In *Art and Artist*, Rank insists that the ancients’ passion for developing our *relationships* to the macrocosm, so fully experienced by way of ritual, can be our passion today. Humanity’s will, that is, its power of choice to create, is called forth by struggle and survival issues. Our species, which is so deeply troubled by its own mortality, seeks still “to reach for some kind of beyond.” It is, in Rank’s view, that very reaching that characterizes us as a species. Call it immortality; call it going beyond death. In our children, our monuments, our creativity, and our art, it beckons us, reaches to us, and pulls us to some kind of beyond. We cannot escape it.

Rank speaks of the need to move *beyond psychology*. How is this done? “Man is born beyond the psychological era only through vital experience of his own – in religious terms, through revelation, conversions, or rebirth”

(Rank 1941, p. 16). Vital experiences take us beyond, wake us up, and feed us with revelation and rebirth. Vital experiences include the experiences of ecstasy and union, joy, and beauty that no one can take from us. They are, reports Dr. Kubla Ross, those moments people remember on their deathbeds when they die peacefully. They are grace. Grace breaks through. These are mystical moments. Mysticism is our breakthrough moments of union, of ecstasy, sometimes hot or orange ecstasies, and sometimes cool or green, green/blue ecstasies. They are what nourish the soul for soul is, says Rank, our “power of rebirth” (Rank 1932a, p. 128). They make us young again, new again. Eckhart says the first gift of the Spirit is *newness* (Fox 1991a, pp. 111–113).

What are some other synonyms for “beyond?” How about the following: Transcendence, infinity, spirituality, cosmos, grandeur, immensity, mysticism, God, magnanimity, creativity, surprise, Spirit, and eternal life.

Rank believed that we “negotiate with the problem of the Beyond” in at least two deep instances: art and love. Our experiences of union overcome separateness. As Kramer puts it, “in the jointly created – and endlessly recreated – ‘moment’ of empathy between artist and enjoyer, lover and beloved, I and Thou, client and therapist, separateness is dissolved only to be rediscovered, enriched, and renewed by the dissolution of the individual into the void. ‘Love abolishes egoism,’ said Rank, ‘it merges the self in the other only to find it again enriched in one’s own ego’” (Kramer 1995, p. 95). We have “beyond experiences” which results in a “dissolution of . . . individuality in a greater whole” (Rank 1932a, p. 110). Beauty does this to us and the experience of truth and art do the same.

What is this “greater whole?” Rank dares to cite the mystics in *The Trauma of Birth* published in 1924, the book that got him expelled from Freud’s circle. Rank says the mystic “cries out in beloved ecstasy: ‘The I and the You have ceased to exist between us, I am not I, You are not You, also You are not I; I am at the same time I and You, You are at the same time You and I’”

(Rank 1924, p. 177). Rank saw separation from the cosmos as the greatest issue besetting our species. This cosmic separation is temporarily healed by our experiences of mystical union, the return to an original identity of union with the cosmic process which “has to be surrendered and continuously re-established in the course of self-development.” When we surrender ourselves in art or in love, we are undergoing a “potential restoration of a union with the Cosmos, which once existed and was then lost. The individual psychological root of this sense of unity I discovered (at the time of writing *The Trauma of Birth*, 1924) in the prenatal condition which the individual in his yearning for immortality strives to restore. Already, in that earliest stage of individualization, the child is not only factually one with the mother but beyond that, one with the world, with a Cosmos floating in mystic vapors in which present, past, and future are dissolved” (Rank 1932a, p. 113).

This passage echoes Eckhart when he talks about our pre-origins in the Godhead where the unity is so great that no one will have missed us when we return. We return at death but before that in encountering our “unborn self” in meditation and in other unitive experiences (Fox 1991a, pp. 77, 214–218).

For Rank, because he is at home *in the cosmos*, the world “bears the mark of infinity.” Rank’s world is not a rational world that humans make but the *whole world* that constitutes the very meaning of the Greek word “cosmos.” French philosopher Gaston Bachelard, in his moving book, *The Poetics of Space*, describes what living in a cosmos is like. There the soul experiences *immensity* and *grandeur*. We are at home with solitude for great things well up in the soul because of solitude. “Immensity is within ourselves. It is attached to a sort of expansion of being that life curbs and caution arrests, but which starts up again when we are alone. . . . we are elsewhere; we are dreaming in a world that is immense.” Our soul is a *vast* place full of hidden grandeur and in our experiences of unity or grace “we discover that immensity in the intimate domain is intensity, an intensity of being, the

intensity of a being evolving in a vast perspective of intimate immensity.” Intensity, immensity, and intimacy – in the human they all occur at once. There follows a new level of self-appreciation and gratitude for being here. “Slowly, immensity becomes a primal value, a primal, intimate value. When the dreamer really experiences the word immense, he sees himself liberated from his cares and thoughts, even from his dreams. He is no longer shut up in his weight, the prisoner of his own being” (Bachelard 1994, pp. 184, 193, 195). The feeling of ecstasy results in a taste of profound *voluptuousness*. (Eckhart says “God is voluptuous and delicious,” Fox 1983, p. 33). Liberation and healing follow. I believe Rank saw all this. This is why he champions so fiercely the reunion of microcosm and macrocosm.

### The Now

For Rank the experience of union with the cosmos includes the suspension of time – “present, past, and future are dissolved” at that moment. He further elaborates on the “Now” experience at the end of *Psychology and the Soul*: “In the psychic realm, the only reality is the *Now*. (italics his), the same Now that physicists find so incomprehensible, useless, and even unthinkable” (Rank 1998, p. 127). Rank criticizes Freud for dwelling in the past for “in so doing, he neglects the truly psychic element – the present, active self, and its corresponding Now.” For Rank the creative process, the choice to give birth that is the basis of all ethics, happens *only in the Now*. Creativity is not of the past; therefore, our healing will not come from knowledge of the past but from current choices, choices made by the “present, active self, and its corresponding Now.” Rank applies his philosophy of the Now and practices what he preaches (or is he preaching what he practices?) when he tells us that his “dynamic therapy” is based first and foremost on an emphasis that shifts “from the past to the *present*, in which *all* emotional experience takes place” (Rank 1996, p. 268). The Eternal Now is reenacted in the healing paradigm Rank presents. The emphasis

on the Now is not speculative; it dictates a trust of what is really going on. This sounds very zen-like.

Meister Eckhart talks similarly when he says that God is creating everything of the past and everything of the present and everything of the future in the depths of your soul now. He adds: “God is in this power as in the eternal now. Were the spirit at every moment united with God in this power, people could never grow old. . . . There everything is present and new, everything which is there. And there you have in a present vision everything which ever happened or ever will happen. . . everything is present and in this ever-present vision I possess everything” (Fox 1991a, p. 113).

Another creation mystic, the historical Jesus, also speaks of the importance of the Now when he says: “The kingdom and queendom of God *is* among you.” It is from these experiences of the Eternal Now that our memories are stamped forever with what we truly cherish. Therefore, it is from these glimpses of a restoration of a primal unity (Eckhart talks about our return to our “unborn self,” Fox 1991a, p. 217) that our truest values emerge. Without honoring these Now experiences, we do not share values in common. We have no shared ethic.

### Letting Go

Like the mystics of old such as Eckhart, who says “we sink eternally from letting go to letting go into the One” (Fox 1983, p. 49), Rank talks about the constant separations that life asks of us. “I have learned that the capacity to separate is one of life’s major functions. Life in itself is a mere succession of separations, beginning with birth, going on through several weaning periods and the development of the individual personality, and finally culminating in death – which represents the final separation. At birth, the individual experiences the first shock of separation, which throughout his life he strives to overcome. In the process of adaptation, man persistently separates from his old self, or at least from those segments of his old self that

are now outlived. Like a child who has outgrown a toy, he discards the old parts of himself of which he has no further use” (Rank 1996, p. 270).

If we fail to learn to let go, the result is neurosis. The neurotic “is unable to accomplish this normal detachment process. He cannot live through and emancipate himself from the various fundamental separation stages in life. Owing to fear or guilt generated in the assertion of his own autonomy, he is unable to free himself, and instead remains suspended upon some primitive level of his evolution. He stays fixated, so to speak, upon a particular worn-out part of his past that he cannot sever himself, and his whole present behavior is directed and symbolized in terms of this *unaccomplished* separation” (Rank 1996, p. 270). Thus, the neurotic never tastes the Now. He is too busy living in the past and bracing himself for an imagined angst-ridden future. *The neurotic is not just the artiste manque; he is also the mystique manque.* Rank is not only a mystic himself – he calls us all to the *unio mystica* and to the “marvel of creation,” to the irrational and the beyond, and to the Now and to deep and constant letting go. To fail to respond is to invite loss of soul.

Mysticism is our “Yes” to life (see Fox 2001). Rank proposes that neurosis is by definition a refusal to say Yes; thus, it is a refusal to be a mystic: “*All neurotic reactions can be thus reduced to one Big No that men hurl at life*” (Rank 1996, p. 258, italics and caps his).

## Recovering the Child

In a lecture delivered in 1938 at the University of Minnesota, Rank repeats his call for a feminine psychology and a children’s psychology. “We do not possess a real psychology of the *woman* nor do we understand the *child* psychologically.” What we have in psychology “is in essence *man-made*: that is to say, man has projected his own psychology into the woman and into the child” (Rank 1996, p. 271). How ahead of his time Rank was in pointing to what we can call today Adultism – the projection of adult attitudes into children. Rank suggests that adults ought to

learn from the children (Jesus offered the same subversive advice). The child is more mystical, more at home with the irrational. “The child lives mentally and emotionally on an entirely different plane: his world is not a world of logic, causality, and rationalism. *It is a world of magic*, a world in which imagination and creative will reign – *internal* forces that cannot be explained in terms of scientific psychology.” To honor the child’s wisdom is to recover a respect for nature itself. “The child lives in a world of magic, where no logical or rational – that is, man-made – laws govern, but where the irrationality of nature herself, of which the woman is still so much a part, predominates” (Rank 1996, p. 272). Instead of projection of adult ideologies into children, Rank proposes a radical alternative: The way of love, of a love that is more than sentimental and anthropocentric. We cannot remove the child’s fear or insecurity, but we can “alleviate [them] by love, *a love that connects the tragically separated individual again with cosmic life*” (italics his). Of course, for this to happen, adults must themselves possess a relationship to the cosmos. Rank continues: “Instead of psychologizing the child, we should respect his irrational nature and learn from him to accept it humbly in ourselves as well. We are not in the least more secure than he is, we are not less irrational at bottom. All we do is pretend to be; that’s our tragedy, our false heroism” (Rank 1996, p. 273).

Rank is not only a mystic; he is also a prophet who dared to interfere with the modern era’s biases against mysticism. And, like most prophets, he has paid the price of being vilified by his Freudian brethren and being forgotten by many who study psychology. In Rank’s view, the “new hero” will be one who carries on an authentic love of life: “The new hero, still unknown, is the one who can live and love in spite of our *mal du siecle*” (Anaïs Nin citing Rank in Lieberman 1985, p. 336). Rank observed that “new personality types are created during social and spiritual crises of religious, political or economic origin” (Rank 1941, p. 163). I believe Rank was such a type; he was a hero. He beckons the rest of us to go beyond.

## Redemption, The Problem with

Ginette Paris

Pacifica Graduate Institute, Santa Barbara, CA, USA

## Humanity Redeemed!

The myth of redemption is so pervasive that it permeates global politics, education, ecology, feminism, etc. Depth psychology is not exempted. Ostensibly a depth psychological analysis starts with a pursuit of consciousness, but covertly the process often conceals a quest for redemption, masquerading as individuation, actualization, psychological health, wholeness, centeredness, mindfulness, or whatever new jargon that accommodates the Christian myth of redemption. The confusion between those two concepts leads to a belief that analyzing the unconscious will lead to a clean, pure, healthy psyche and that one will evolve into a luminous, loving, dignified, pacified soul. Such a utopian dream would be nice were it not for the fact that it produces an odious, sanctimonious persona. To break the trance, one needs to differentiate redemption from individuation and salvation from wisdom. The time allotted for our life is finite, but the quest for perfection is not, and when the pursuit of perfection is ego driven, it causes psychological exhaustion. The quest for redemption turns the person into a depressed pilgrim, out of spiritual wind from the long ascension towards an impossible apotheosis of individuation. Despite every guru's teaching and Jung's warnings that individuation can never be complete, sparks from the ego are often taken for an "illumination." Because the spiritual need is real, so is the danger of inflation.

For depth psychology to emerge as a force of renewal of the sense of the sacred, it needs to escape from inflation about the quasi-divine principle of the Jungian "Self." Escape from ego fixations includes theoretical fixations upon the masters that have trained us. Deification of the masters and their theories is, in itself, a sign that

the myth of redemption is active. The masters, gurus, and leaders who ask to be “adored” by their disciples are usually in the business of selling redemption (“Think like me and you’ll be saved!”). When adoring disciples notice that their idols have feet of clay, their critique becomes vicious, fueled by a sense of betrayal and disillusionment. However, such decanonization would not have been necessary had they not deified their master in the first place.

Neither Voltaire nor Nietzsche nor Freud nor Jung nor any of the modern philosophers of atheism were completely free of the redemption myth. The Christian God may have been declared dead, but the mourning is not finished; it is too big a loss to be completed in just a few generations. Jung’s nostalgia for the Christian God resurfaces at times in his theory about the Self (capital S); I have met many who *believe* in Jungian theory as one believes in a Savior, because they miss the certainties of faith. Until our mourning of God is done, the fantasy of redemption will grow out of all sorts of grounds.

Zarathustra’s rallying cry of “God is dead” provided me with an enduring motivation to practice psychotherapy: I felt then – and still do today – that a world without the Christian God need not be a desperate world”. Psychotherapy is a daily battle against despair. Nevertheless, the deconstruction of conventional religions does not alleviate the need for a sense of the sacred; but where is it? The desire for redemption resurfaces in every cause that is dear to one’s heart: ecofeminist redemption (when women rule, all will be fine on this planet), political redemption (this party will change everything), financial redemption (as soon as I have enough, I’ll follow my bliss), romantic redemption (one day, my prince/princess will come), and psychological redemption (one day, I’ll be individuated, one of the Illuminati). Each of these fantasies stems from the monotheistic mythology. Even the ideal of Buddhist detachment can conceal a typical Christian fantasy where the guru replaces God and an all-encompassing philosophical system serves as faith.

To make sense of my small life, I need the amplification of my ordinary life-journey into

something I can call an Odyssey; I want the magnification of my battles at the office into an Iliad; I know my house is not a castle, but in a way it is. This aggrandizement of our story, which is not at all an aggrandizement of the ego, is a valid protection against feelings of absurdity. In times of great difficulty, the narrative logic breaks down and the transformation of facts into a narrative fails. One tries to tell the events this way and that way, from this or that perspective, but the collection of facts remains absurd. The trajectory of one’s life appears seemingly random – what was *THAT* all about? The breakdown in the narrative capacity is usually interpreted as a form of despair, similar to the despair of losing one’s faith. Yet, it can also signal a very different kind of breakdown: that of the redemptive myth. Only then can the loss of the redemptive hope appear as a necessary loss.

### **Life Is Absurdly, Awesomely Ugly and Beautiful**

Christians come from a culture that has millennia of religious indoctrination in which the meaning was defined by hope of salvation in the afterlife. Nietzsche and many others bulldozed the field, but the efforts of many more generations may be necessary to change not only our religious attitudes but our psychological makeup as well. We have only begun to expose the racist, sexist, oppressive, violent, hypocritical, parasitic, and exploitative cowardice present in the cement of actual institutionalized religions. The need to explore the destructiveness of our pervasive redemption myth is as necessary as a good look at the shadow. We could begin with examining how it is very possible and feasible to live outside the redemptive myth, without falling into despair. For example, if one looks at the usual promises of human love – “I’ll love you forever” or “I’ll never abandon you” – one sees the *absurdity* of it. These promises may be sincere, but are *absurd* if one considers that mortality is an absolute limitation to the infinite depth of the experience of love. Nevertheless, this limitation, with all the sweet lies around love, is not reason enough to

waste the spiritual value of love. We bring children into this world, and we love them madly, even if we know they will suffer and die. We love them with an intensity that is almost painful, even though we know, despite all our efforts, that they, like ourselves, will suffer and die. It doesn't make much sense, but not loving makes even less sense. The sense of the absurd, which is a consequence of the loss of a religious faith in a literal god, may come to be experienced as something as natural as the limitations of human love, a reality that simply is like other realities that cannot be logically explicated.

The core idea of early-twentieth-century existentialists with respect to the experience of the absurd was to suggest the necessary dissolution of all the meanings that have been taken for granted. Their sense of the "absurd" is often interpreted as meaning "nonsensical," but it does not; I am suggesting it means "mysterious." The notion that existential angst is the unavoidable consequence of the loss of faith in a redemptive god may very well be simply a consequence of a very long domination by the monotheistic God. Religious sentiment, like the sentiment of love, has a history. Building cathedrals was a task carried on by many generations; deconstructing the redemptive obsession may take at least that long. Postmodernism, with its unrelenting attack on ideologies and single meanings, has acted as a sort of collective therapy. It took us to a place in our consciousness where the loss of the redemptive myth is simply equal to the major absurdity of most of life's trajectories.

It is a fact that an acute sense of the death of God can stir up feelings as painful as when experiencing the death of a child or the loss of a loved one in a car accident. It seems so absurd, so meaningless, that the anguish is so acute. The danger is then to invest all of one's psychic energy in *explaining* the absurd, to redeem the tragic event (Why? why? why?). The suffering soul becomes obsessed with a search for meaning; and because the tragic cannot be redeemed, that search itself becomes tragic. This is where I find that a depth psychological approach can be of immense help, because it moves away from explanations and remains in the territory of the

tragic. It leads into the deepest layers of the imagination, where psychic regeneration can occur. It does not offer redemption but a map of the journey through psychic devastation.

Augustine asked himself the age-old question that historians have in common with depth psychologists: can one find meaning in history? (And the corollary: can I find meaning in my story?) Augustine's answer constituted a dogma for a very long time. Yes, history has meaning, says Augustine. It is the meaning given by faith. If one loses faith, one also loses meaning. Problem solved! By remaining unconscious of our Christianity, we tend to apply that same logic and replace one bible with another, falling right back into Augustinian dogma. One of the current tasks of depth psychology, as I understand it, involves dumping the last residue of that Augustinian style of consciousness, based in faith. Not that there is a need to bring up Augustine's case again. He has been tried and found guilty over and over. Nevertheless, Augustinian debris is blocking new construction. Depth psychology is experimenting with a next style of consciousness, one that allows a person to endure the absurd, to cope with the insufferable, to lose one's innocence, and, instead of turning to Augustinian redemption, to learn to swim in the Styx and imagine life differently, making room for its tragic element. Depth psychology suggests, for example, that you are absolutely free to jump off a bridge, if suicide is what your soul ultimately wants, but before you literalize death into physical death of the body, try a metaphorical death. Try an imaginal trip to the Underworld. Try a form of loving through pain, living with loss, and aging in character. Try imagining another self, inventing another myth, and writing another chapter in your story. Travel first, see the inner world, and then decide if it is literal or metaphorical death you want.

The desire to find meaning is a human one and is given expression in the creation of a narrative, but there is too often a contamination with the belief in a redemptive principle which wants to turn bad into good. "My baby is dead, but she is now an angel in God's paradise" is a frequent defense against despair, a direct consequence of

not having completed the mourning for one particular long-lived God. The almost irresistible reflex of turning everything into morality of good and evil belongs to faith, belongs to a God that defines right and wrong. The adventure of a depth psychological analysis is a move away from this kind of religious conditioning. The need for redemptive ideals is replaced by another style of consciousness: the capacity to value the awe-inspiring mysteries of the psyche and of the beauty of the sensate world. As one opens up to the possibility of living a full and generous life, the thirst for redemption diminishes, and the need to be of service to others, to culture, and to nature increases.

Human glory, health, and fortune do not suffice to fill the vast inner space. We need to imagine a wider world, one of archetypal dimension. All humans, once they take care of survival needs, feel that there is a beyond-the-ego-realm. Many still choose to call “it” God or Goddess or Love or First Principle or “any other term of your choice,” as they say in Alcoholics Anonymous, with impressive success. Transcendence means a sense of value above, beyond, and apart from the material world. Depth psychology has helped many understand and feel that life lived in the service of justice, truth, love, and compassion has enough transcendental value without any imposition of prefixed meanings and predefined values. This is why the search of a junction between psychology and the various religious traditions feels like a precious alternative to institutionalized religions; it recognizes the human need for something bigger than ego, but refuses to let religious orthodoxies manipulate that need.

## Reductionism

Charlene P. E. Burns

Department of Philosophy & Religious Studies,  
University of Wisconsin-Eau Claire, Eau Claire,  
WI, USA

## Introduction

Reductionism is the process of breaking complex entities, concepts, or phenomena down into their smallest constituent parts or processes in order to more fully understand them. While essential to scientific study, reductionism generates difficulties when dealing with higher level phenomena like those related to human religious experience. The problem is especially difficult for the psychology of religion because of the tendency among many researchers to assume that description is explanation.

## Historical Trends

Reductionist tendencies in the psychology of religion have historically led researchers and analysts to commit the fallacy of “nothing buttery” (Paloutzian 1996). The discovery that certain areas of the brain are active during meditation, for example, has led some to claim that experiences of the one who meditates are *nothing but* by-products of neurochemistry. From the standpoint of religion, this is obviously problematic. From the standpoint of psychology, it is also, if less obviously, problematic since

reductionism of this sort ends in loss of important information about the object of study (Zinnbauer and Pargament 2005). Prior to the advent of neurological and cognitive sciences, the most reductionist approaches were perhaps the Freudian and behaviorist schools of thought. In Freud's framework, the "personal God is, psychologically, nothing other than an exalted father" (Freud 1910/1957, p. 123), and religion is illusion, "fulfillments of the oldest, strongest, and most urgent wishes" (1927/1961, p. 30). For the strictly behaviorist school of thought, religion is reduced to publicly observable behaviors, which are nothing more than operantly conditioned actions. For B. F. Skinner, the father of behaviorism, a god is nothing more than the "archetypal pattern of an explanatory fiction" (1971, p. 201).

The problematic nature of reductionism was recognized by some from the start. William James wrote against what he called medical materialism and advocated a descriptive approach to the study of religion. Although it is debatable how well he succeeded in avoiding explanation, James' seminal *The Varieties of Religious Experience* (1902) remains the standard for approaching religion from a phenomenological point of view. Theodore Flournoy (1903) identified two fundamental principles for a psychological approach to religion, the first of which is the "exclusion of the transcendent." By this he meant that psychologists should always strive to avoid making claims about the actual existence/nonexistence of God or other aspects of transcendent experience. One can learn a great deal about human psychology by studying the ways people conceive of God without making claims that these ways of conceiving prove anything about the reality of God. Carl Jung also repeatedly attempted to make this distinction clear: "the image [of God] and the statement [about God] are psychic processes which are different from their transcendental object; they do not posit it, they merely point to it" (1976, p. 556).

## Current Thought

Over the course of the twentieth century, the majority of psychologists who studied religious

experience tended toward the reductionist explanatory approach. This may in part be accounted for by the apparent "genuine antagonism toward religion among typical psychologists" and may itself account for the fact that this is an underdeveloped field of study (Wulff 1997, pp. 16–18). But it seems the psychology of religion is in the midst of a paradigm shift. It is now seen as an area rich in research possibilities that overlaps with research on neuroscience, philosophy, anthropology, evolutionary biology, and cognitive science. Emmons and Paloutzian (2003) have shown that religion and spirituality are complex, multifaceted phenomena that cannot be understood from the vantage point of a single discipline. The only viable approach today is one like their "*multilevel interdisciplinary paradigm*" which "recognizes the value of data at multiple levels of analysis while making nonreductive assumptions concerning the value of spiritual and religious phenomena" (2003, p. 395). Approaching religion in this way is to presuppose different and interrelated "planes of information" wherein the most fundamental are "necessary but not sufficient" for explanation of higher-order phenomena (Zinnbauer and Pargament 2005, p. 31).

## Re-Enchantment

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

The term “re-enchantment” describes a reawakening to the depth of soul that embraces us and the world, as is well described by Thomas Moore in *The Re-Enchantment of Everyday Life* (1996). But first we have to extract ourselves from the old industrial worldview that believes it has abolished the credibility of enchantment and depends only on constructs such as subject and object. Moore says:

Science and technology have their underlying mythology, rituals, and eschatology – an interpretation of the future... They are both full of magic (Moore 1996, p. xiv).

To reawaken awareness of enchantment in all of life, we must return to our Beginner’s Mind, to our Original Mind.

## Subject-Object

The theoretical divide between subject and object is a modern cultural construct useful for scientific investigation. It strives to separate the “internal” thinking ego-consciousness from the “external” physical world and applies mathematical, logical

methods to analyzing the world. But the proposed divide is superficial, because the unrecognized “subjective feelings” constantly cross the supposed boundary into “objective facts.” Psychological factors saturate what we call “objectivity.” For example, the facts and objects that go into making our blizzard of weapons suppress the psychologies of fear and aggressive domination that drive people to fund, buy, and build explosives in the first place. It’s not just a gun or a bomb; it is a powerful extension of aggression and domination dynamics. As Henryk Skolimowski said: “Objective evidence as such does not exist, for in every bit of the ‘objective’ evidence a part of our psyche is built” (Skolimowski 1994, p. 72).

So these theoretical constructs do not “go all the way down.” Objects and subjects are not self-evident metaphysical realities. Nor are facts and values self-evident epistemological realities. Both are superficial creations of ego-consciousness, with grand mythic pretensions. Useful as these schemes are for science and technology, they fruitlessly attempt to strip the world of enchantment and imagine the world as soulless that can be exploited for technological conquest without feeling. The problem is that the feelings remain there, largely unconscious, unacknowledged, ignored, or denied. So we end up with unexpected consequences such as global warming and massive pollution. Why does each nation have its own enchanted version of “God Bless America” or “God Save the Queen”? The enchantment known as “patriotism” is a thin veil over many unconscious dynamics that drive ego-consciousness and its tools and repress our holistic being-in-the-world.

## Enchantment

What is enchantment? It means “being in song” and this song pervades the world that we are part of and cannot do without. It is like the song in the background of a film, the fascinations we have with beauty, love, eros, sports, war, religion, and endless other charms, positive and negative, that

demand ethical decisions and actions. Like all archetypal phenomena, enchantments have shadows. There are positive and then there are negative sides of enchantments, such as nationalism, racism, or greed. The problem is that negativities are not stopped by rationalism alone. You cannot argue with them very successfully. They need personal relations, compassion, equality, and other such positive enchantments.

Life would feel sterile and barren without enchantment. Actually life on this planet could not continue without enchantment, because it is a basic part of our foundations, such as reproduction. “Falling in love” and mating are beautiful enchantments, because the lifeworld needs to get hormonally stimulated lovers together to mate and keep life going. Of course enchantments need logic to keep it from extremes. Enchantments and logic need to cooperate, not dominate each other. Our industrial world strives to make logical ego-fact-rationality and prosperity-productivity dominate, but enchantment keeps slipping into the equation (except, of course, in politics). And since it is largely unconscious, it needs a new attention to its feelings, intuitions, and symbols to bring it into consciousness. This is the postmodern task of “re-enchantment,” a major shift in consciousness that embraces many fields, notably psychology and spirituality.

I used to wonder whether beauty is in a deer or in the mind of the beholder. It took a few years for me to realize that beauty is not an either/or. It is both. We inhabit a world full of beauty, including deer, and our minds are part of the deep enchantment of beauty. Beauty cannot be trivialized by ego-consciousness into being only “in us” or only “out there.” We are both unconsciously embraced in it. When we feel the beauty of a garden, a flower, a baby, a waterfall, a poem, or a starlit sky, we are not “projecting our subjective feelings onto a dead objective world.” This is sometimes important to distinguish one’s own erroneous “projections” from another person’s actual situation. But psychologically we still participate in the greater wholeness that ego casually separates into convenient dualities that simplify the vast mysteries of this world. Re-enchantment

is not putting anything “out there.” It is awakening to what always is, the phenomena, the soul in the world, the implications behind symbols, and the presence of being-in-the-world, as depth psychology and meditation show. Like the glow of a sunrise, enchantment is the glow of Being, the deepest reality we can experience in this life. Psyche expands as we dive deeper into the world. We swim in the endless presence and symbolism of enchantment, in puppets, “relationships,” nature, and the gods and goddesses. But being usually unconscious, like the fish that does not know what water is, we do not know what enchantment is without more empathy.

## Empathy

The recent study of empathy has expanded in several ways. The Jungian therapist Andrew Samuels said:

The Self is the primary source of phenomena known as empathy. . . . Empathy is a form of psychological interpenetration, a deep link between people; the mother-infant relationship is both a special example of this and a model of empathy throughout life (1985, p. 99).

Seeing Jung’s archetypal divinity (Self) behind empathy accounts for the sense of sacredness one can feel in empathetic experiences, such as beauty, sensuality, compassion, love, eros, sympathy, awe, and wonder. The starlit sky is awesome, but so is light itself, and our animal eyes made to see it; these participate in the enchanted empathy, even sacredness of stargazing. The awe in viewing a majestic mountain or a grand canyon is an enchantment. In empathetic participation, enchanted soul emerges from the depths.

In *The Empathic Civilization*, Jeremy Rifkin (2009) sees the increase in empathetic awareness as a newly reemerging philosophy of human nature, shifting away from the materialistic view of humans as basically self-interested, aggressive, and utilitarian. Empathy has always been a part of religions, and twentieth-century depth psychology has refined our empathetic

skills in new ways by opening up the usually unconscious dynamics of the soul. Undergoing psychoanalysis and dream analysis is an initiation into this new era.

## Technological Enchantments

Technologies are not a just set of tools created by the conscious ego alone. They are full of enchantments. Their usefulness is driven by partly unconscious dynamics. Some are as sexy birth control devices, speedy automobiles, lofty airplanes, concealed submarines, and soaring space travel. Many fit into the enchanted modernist dream of utopian progress. But one that particularly enchants unconsciously is the android robot. Many machines we call “robots” are really remotely controlled machines, such as microsurgery, which are operated by humans. Others may seem autonomous but are limited by their programming. No matter how many chess games Big Blue wins, in this program it is limited to this cognitive game.

## Android Robots: Enchanted Puppets

Many robots are useful, such as for bomb defusing and factory welding. But these do not try to look or act human. The most enchanting machines are the ones that are intended to look and act like humans. Robotics engineers strive to make them seem deceptively human. This engineering effort is partly driven by the advance imagining of artists of utopian machine culture, as in films such as “A. I.” (Artificial Intelligence). This assumes that intelligence can be duplicated by machines artificially. It is so thoroughly materialistic that it does not imagine that all intelligence involves nonprogrammable elements such as sincerity, honesty, imagination, morality, or free will.

Android robots are even commonly imagined as gods, which is a grand enchanted projection of the robot engineers and utopian dreamers of their own inflated egos. One robot maker

said: “It’s tough being a god” (Bailey 2005, p. 156). This enchantment is an effort to show that making androids imitate humans would prove the universal validity of the mechanistic worldview. I call this enchantment the “Pinocchio Project,” since its subtext is about making high-tech but limited puppets that we naively fantasize to be godlike and will someday exceed humanity and become eternal, omnipotent, and omniscient.

Instead of this utopian dream, real robots are being dystopian – causing social and economic disruption by taking away employment for humans (Brain 2013).

But my favorite question is: “Would you marry a robot?” This helps bring up questions such as genuine feeling. Would a robotic lover programmed to slavishly please a man or woman be possible, or if so, would it be genuinely convincing and satisfying by saying “that feels good” or “I love you”? Would it even provide a “relationship”? Or would it be seen as just a high-tech mechanical puppet? Machine enchantments can be useful, fun, or destructive, but they are full of enchantments, like kids’ puppets. Re-enchantment would raise new questions about the entire expensive, utopian project of imagining and making android robots (Bailey 2005).

## Indigenous Cultures

Indigenous, preindustrial peoples’ traditional cultures retain a feeling for enchantment that can be brought to wider understanding. After centuries of oppression by European invaders, their culture is increasingly being studied as a valuable source of re-enchantment. Southwestern North American natives say:

You look at that mountain, that mountain has spirit, that mountain has holiness. There’s a quiet there and yet there’s a fervor there. . . . There’s life up there. That’s why it is sacred. . . . We must try and worship the land, the ground and the stars and the skies, for they are the ones that have spirit. They are the mighty spirits which guide and direct us, which help us to survive (Trimble 1986, pp. 24–47).

Indigenous traditional people live in a world enchanted with sacred spirits in the land, the animals, and the skies, which leads them to have great respect for nature.

### Participation Mystique

Many indigenous totems or clans identify member peoples with animals. Lucien Levy-Bruhl called this “*participation mystique*”:

The Trumai (a tribe of northern Brazil) say that they are aquatic animals. – The bororo (a neighboring tribe) boast that they are red araras (parakeets) . . . . It is not a name they give themselves, nor a relationship that they claim. What they desire to express by it is actual identity . . . [so that] they can be both the human beings they are and the birds of scarlet plumage at the same time (1926, p. 77).

Such symbolic paradoxes are a clue that we have left the logical world of ego-consciousness and entered enchantment land. Levy-Bruhl at first imagined this in now-outdated language to be a “prelogical, primitive mentality.” But in his final *Notebooks*, he renounced this “prelogical” notion and acknowledged participation mystique to be present in the most rational, modern humanity as well. Participation is not a joining together of prior separate entities. Rather participation is a prior state of existence, where some oppositions are not very important: “To be, to exist, is to participate” (Levy-Bruhl 1926, p. 16). Our mentality, like the “primitive,” is both conceptual and affective. “. . . it is something human and which is not met exclusively in societies called primitive . . . it is also met in other societies” (Levy-Bruhl 1975, pp. 126–127). Today we still value feelings of belonging and other kinds of *participation mystique*, no matter how hard industrial societies try to repress them.

### Eco-Spirituality

Re-enchantment of the world leads to the ecological consciousness that is so urgently needed in our era. Ecology is a re-enchantment, a way of

living in respectful harmony with nature. *This Sacred Earth*, edited by Roger Gottlieb, is one of the growing number of books on reawakening enchantment with the world so that we will live in harmony in it, not recklessly destroying its resources and polluting the world to the level that global warming has become such a dangerous threat. As Bron Taylor, editor of the *Encyclopedia of Religion and Nature*, says, the ecological activist group called Earth First! has religious elements: “Earth First!ers often speak of the need to ‘resacralize our perceptions of nature’” (Gottlieb 1996, p. 547). Matthew Fox (1991) also awakens this resacralization in his *Creation Spirituality*. Even in cities, he says, we can be attuned to ecological consciousness by diving into the depths of cities: the steel, the glass, cement, and all the products that make a city are from nature. “A city – as awesome a place as it is – is also earth, earth recycled by humans who themselves are earth standing on two legs with movable thumbs and immense imaginations” (Fox 1991, p. 7). This is re-enchantment.

### Meditation

One of the most helpful practices that has come out of the expansion of world religions around the globe is meditation, stillness with legs crossed in silence, constantly sinking into the “Beginner’s Mind.” It requires no institution, no dogma, and no mythologies of anthropomorphic gods or goddesses. It is like ground zero of newly developing spiritual consciousness, because it simply quiets the body and mind so the soul can open up to the presence of being-in-the-world, to the sacred enchantments in the world, the wonders and caring that the Self sends up to consciousness in stillness. Leaders of meditation are many, such as Thich Nhat Hanh, who teaches mindfulness meditation and writes about “Interbeing” and opens the heart and mind to awareness of enchantment in the world that leads to the essential ethics of re-enchantment: *care* – care for the suffering, care for each other, and care for the world that embraces us all. This is re-enchantment.

## Reform Judaism

Nicole Gehl

The Priory Hospital, London, UK

Reform Judaism (also known as Liberal or Progressive Judaism) emerged in eighteenth-century Germany, as an adaptation of Jewish beliefs and traditions to accommodate participation in the surrounding culture. On the spectrum of Jewish denominations, Reform is considered among the most liberal and has come under criticism by other sects for deviating from Jewish traditions. For example, while Orthodox Jews believe *halacha* (Jewish law) to be the very essence of Jewish life, dictating every aspect of day-to-day experience, so as to bring the Jewish people closer to G-d, Reform Jews reject the concept of *halacha* as binding. Rather, they hold it as utilitarian in its presentation of moral values and insights. Similarly, while Orthodox Jews hold the oral and written Torah as of divine origin, Reform Jews perceive it as a document of human interpretation of the divine, which unifies and preserves Jewish culture and history. As such, its interpretation is subject to variations with the changes of society and interpretations by the individual. A woman's entitlement to hold Torah scrolls, although common practice within the Reform movement, is an issue of controversy among Orthodox Jews (Fig. 1).

Like Orthodox Judaism, Reform theorists advocate that Jews study Torah but sharply diverge in their prompting to the individual to make sense of the tradition in their own way. Reform Judaism embraced the equal rights movement, allowing women to participate side by side with men in all parts of religious services, and was soon to follow suit after the Reconstructivists initiated the ritual of a Bat Mitzvah to mark a young woman's coming-of-age in parallel to the traditional Bar Mitzvah ritual signifying a 13-year-old boys' transition into manhood. Reform congregations accept gay and lesbian lifestyles and mixed marriages and believe that Judaism may be passed on patrilineally, that is, a child whose father is Jewish who is raised as

**Reform Judaism, Fig. 1** Woman holding Torah. Tikun v'Or Reform Congregation in Ithaca, NY. Part of "Women of the Wall" photo campaign. See <http://womenofthewall.org.il> (Courtesy of the photographer Cantor Abbe Lyons)

a Jew may be accepted as Jewish regardless of the status of the mother. This supplements the traditional requirement for being a Jew that the mother be Jewish.

For many years Reform theorists rejected anything indicative of rigid conformity to practices handed down; until recent years it was forbidden for men to wear yarmulkes in classical Reform congregations, and Hebrew in services was kept to a bare minimum. Presently, however, the wearing of yarmulkes in Reform services is almost commonplace, and congregations are integrating more Hebrew into prayers.

It may be contended that the Reform movement's greatest strength historically has remained at the same its greatest weakness. While the absence of strict adherence to rituals allows a sense of freedom and acceptance for more secular Jews, its looseness leaves abstract the definition of what it means to be a Reform Jew, in the standards and guidance as to how one

should live. Mental health professionals need to foster an awareness that these ambiguities contribute to the complexities of Reform Jewish identity and enhance the status of the Reform Jewish person as a member of a minority group.

*Halacha* regulates all aspects of life for Orthodox Jews, and just as its authority impacts their identity in both conscious and unconscious ways, divergence from these edicts which have stood for millennia has loosened the identities and self-concepts of Reform Jews. The manner of relating with long-standing Jewish traditions for Reform Jews is rife with negotiations. Self-concepts may be further complicated by a sense of alienation from other sects of Judaism. Indeed, the views typically held by those of more traditional Jewish denominations, that Reform Judaism "isn't real Judaism" and that practices accepted such as intermarriage or homosexuality are abominations, prompt further marginalization of this minority group. But Reform Jews would respond that they cling less to outdated traditions and encourage people to think for themselves about sincere faith in a contemporary context, not just traditionally prescribed behavior.

As a result of the higher level of assimilation, Reform Jews are most subject to the status of an invisible minority, their Jewish identity being less overt and tangible to majority groups. The matters of identity, anti-Semitism, Christian privilege, and a history of oppression are equally pertinent issues for Reform Jews and more traditional denominations. In working with Reform Jews, it is important for mental health professionals to understand the within-group variability of the client population and to inquire as to the client's experience of Jewishness and Jewish issues in light of their presenting problem when appropriate.

## Refusal of the Call

Alice Mills

University of Ballarat, Ballarat, VIC, Australia

In Joseph Campbell's monomyth model of the hero quest, the hero may not immediately agree to undertake the quest on receiving the call to adventure. Refusals of the call are quite common in fairy tales, myths, and other sacred tales. The hero does eventually consent to undertake the quest, but there are plenty of examples of people never undertaking the quest to which they have been summoned. In *The Hero with a Thousand Faces*, Campbell cites an example of a reluctant hero and heroine from the Arabian Nights story cycle and examples of those who altogether refuse from Ovid's *Metamorphoses* and *The Bible*. Refusal in these cases has a calamitous outcome: the nymph is transformed into a tree; God refuses to help those who have refused his call.

For the Christian, human life can be considered a quest to which all are called by the fact of their birth into this world. St. Augustine conceptualizes each Christian as a warrior engaged in spiritual warfare against the devil (though in Augustinian theology, salvation is only possible through the grace of God, not by individual effort alone). Those who refuse the call to champion the Christian cause are damned, just as much as those who actively fight on the side of the devil. According to Jesus, God hates those who are

lukewarm even more than those who are either hot or cold. Those who refuse the call must face the consequences; opting out of the spiritual war is not ultimately possible.

Freudian theory does not consistently recommend one response to the call to adventure, understood as an internal process within the psyche. In his earlier writings, Freud considers that the healthy psyche accommodates the desires of the id rather than repressing them. In his later works, however, such as *Civilization and Its Discontents*, he argues that the id's appetites must be repressed in order for civilization to continue. In terms of this later Freudian theorization, Campbell's monomyth call would be understood as the id's call to act out its sexual or aggressive impulses with a danger of complete loss of self-control; this call must be refused in order for the social order to be preserved. In Jungian terms, however, the call should in general be accepted, and refusing the call to adventure has deeply undesirable consequences. In the context of the healthy psyche with appropriate inner boundaries, a Jungian would understand the call to come in the first instance from the shadow, signaling its readiness to become gradually more integrated in the process of individuation. The hero's quest is then an internal effort to explore, acknowledge, and accept the psyche's unconscious contents. Refusing this call means robbing consciousness of its potential richness and depth. Living thus becomes more like a mere struggle to exist; purpose and happiness are drained away. The repressed will return with increasingly peremptory calls for attention. If the call is refused, the person runs the risk of becoming possessed by unconscious contents in psychosis or of suffering severe psychosomatic illness as the body protests. Ultimately, refusing the call is psychological suicide.

## Reich, Wilhelm

William D. Roozeboom  
Fuller Theological Seminary, Pasadena,  
CA, USA

Wilhelm Reich was the controversial psychoanalytic theorist and protégé of Sigmund Freud, known for his sexual, political, and cosmic energy theories. Given the controversial nature of his work, he faced opposition from the psychoanalytic community, the Communist Party, and the Danish, Swedish, Norwegian, and United States governments. He died at the age of 60 in a US federal prison.

Reich's early work is commonly applauded as brilliant and widely accepted in and credited with shaping the psychoanalytic community. His work on character (*Character Analysis* 1933, 1945) was particularly influential wherein he discussed the development of "character armor" and "defense mechanisms" of the personality. Additionally, Reich introduced theories of the latent negative transference, stasis anxiety, and somatic or body psychology, as well as incorporating Marxist critical social-political theory into his work.

However, later in his work Reich moved away from his psychoanalytic roots, and the support of the psychoanalytic community, towards the

(pseudo)scientific "cosmic" enterprise of "bions," "particles," and "orgone therapy." This theory postulated that good health occurred through a proper balance of biological energy, which was atmospheric or cosmic and ran throughout the entire universe (Klee 2005). Moreover, that each living cell was made up of microscopic bions which are charged with orgone energy. Orgone energy is thus the basis for life. However, in excess this energy can become toxic; therefore, one must eliminate an unhealthy buildup of orgone energy in one's body through orgasm. Reich referred to this as "orgastic potency" but was clear to point out that he meant more than simple orgasm; he meant a complete and uninhibited sexual surrender in which the body would convulse involuntarily in pleasure (Boyd Higgins 1994). Such orgastic potency was vital for Reich because he believed that imbalanced orgone energy led to problems in all the systems of life – biological, emotional, social, cultural, and so on – and that balanced orgone energy could cure such ailments as cancer, mental illness, war, and totalitarianism.

Religiously, Reich was certainly outside the bounds of traditional religion, and yet he could be considered in the prophetic school of thought as he challenged the "emotional plague of humankind," calling for high moral societal standards and values and spreading his liberative message of the welfare for all people (Salzman 1955). However, his message was unorthodox as his teleological vision focused on a sexually-politically liberated life for persons rather than the teachings of a particular religion. Additionally, Reich held up Jesus as the epitome of the human condition – representing life and goodness yet also necessitating continual murder/denial because Jesus Christ confronts humanity with their personal responsibility for evil and death (Vande Kemp 1990). Reich also identified himself with Christ and developed a Christology of a "fully emancipated, sexually complete human being" and believed that he, like Jesus, bore the burdens of the world (Corrington 2003; Reich 1966). However, for Reich it was not the burdens of sin and systemic evil traditionally seen in Christian teachings, but the burdens of

the sexually repressed and sadistic human race. In light of this, Reich believed that he could point the way to a new humanity and new way of living if only his liberative message was embraced (Corrington 2003).

Recently, there has been a resurgence of Reich's theories in the areas of alternative medicine and nontraditional healing methods. In such methods, orgone therapy is offered as a typical technique of treatment along with others, such as therapeutic touch, Reiki, acupuncture, herbal therapy, pyramid therapy, naturopathy, and colonic cleansing (Klee 2005).

## Reincarnation

Lee W. Bailey

Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Beliefs about life after death are metaphysical speculations, with some experiential hints, about a vast unknown mystery. But, as Jung said, “Metaphysical assertions, however, are *statements of the psyche*, and are therefore psychological” (Jung 1954, para. 835). Psychologically, some such belief about the afterlife is needed to give life meaning, as we see others die and as we approach our own death. If, as in materialistic philosophy, the universe is meaningless, we might as well grab all the power and pleasure we can here, then at death our consciousness disappears – poof! Life does not matter, ultimately. But one believes that in the afterlife, one's life is judged and leads to a reward or punishment, our behavior does have meaning in view of that. Or if life is interpreted as a chance to learn and improve, that gives life a purpose and eases death's pain. So psychologically and spiritually, one of life's most important tasks is to come to terms with the question of life after death.

Two major theories on afterlife have developed over time. In the West, in the monotheistic religions, *resurrection* is belief in return after death to the same body. This implies the importance of the body and typically leads to rituals of burial or preservation of the body, in expectation of resurrection at the end of time. In the East, *reincarnation* means return after death as a newborn in a new body, in a repeated cycle of rebirths, that gives little value to the body, so cremation is common.

Reincarnation, or rebirth, is the enduring Asian belief about afterlife in Eastern religions. This is rooted in archaic beliefs that immortal powers filled nature, especially in the form of reborn ancestors. So a relative, now a bear, could be your reborn father. What determines *how* one is reborn? The belief in *karma* (moral cause and effect) says that one's behavior in this

life determines whether you are born in the social and natural “caste” hierarchy above or below your latest life. Hindus believe that the soul, or *atman*, is carried from life to life and determines one’s fate, mainly what social caste one is reborn into. There are thousands of castes in India, clearly differentiating the wealthy from the poor. It seems to be rooted in the ancient invasion of the Aryans who subdued the darker-skinned natives and pressed them southward. High-caste people are believed to deserve their social rank and wealth, due to their good behavior in previous lives. On the contrary, low-caste people, outcastes, and animals are traditionally believed to deserve their suffering, due to past-life misbehavior. Castes have rules against touching, eating with, or marrying people of a lower rank. This ancient belief ties Hindu religions to the social system that has been illegal since 1950 in India, but is still practiced, despite government efforts to aid the poor and outcastes. Since the old body is irrelevant after death, cremation at holy sites, such as Benares, is common. The goal of Hinduism is to escape reincarnation by pious behavior and after death stay in everlasting bliss of Nirvana, beyond this world’s illusions. “Behind the manifest and the unmanifest there is another Existence, which is Eternal and Changeless . . . . Those who reach it are not reborn” (*Bhagavad Gita*, Chap. 8, p. 77).

The Buddha denied any knowledge of an afterlife, since he rejected metaphysical speculations in favor of here-and-now focus on overcoming suffering through enlightenment (*Middle*). Yet belief in reincarnation or rebirth continues in Buddhism. Buddhists reject the belief in an essence or substance that is reincarnated, such as the Hindu *atman*. They emphasize moral responsibility and the spiritual life leading to enlightenment, but not reincarnation as transmigration of an essential soul substance. Rather, the shift from one life to another after death is seen as like a candle’s flame transmitted to a second candle. Belief in *karma* is still strong across Asia, but rejecting the essential self behind *karma* and the rigidity of the caste system, Buddhists speak of the nonself and emphasize that anyone can be enlightened and escape rebirth at any time.

Escaping *karma*’s effect depends upon one’s enlightenment.

The most dramatic and psychological Buddhist text on reincarnation is *The Tibetan Book of the Dead (Bardo Thodol)* (1975). This is a blend of ancient indigenous Bon Tibetan religion and imported Buddhism. It is a manual for the preparation for death, or the days approaching death, when it is read to the dying one. It is said that it was the product of the Guru Padmasambhava, who in the eighth century CE took Vajrayana Buddhism from India to Bhutan and Tibet. Tibet had a long tradition of Bonpa shamans such as Milarepa (1052–1135 CE), who originally practiced black magic but was converted to Buddhism. He rejected the ancient shamanic world of revenge, powerful demons, deities, and goddesses of both horrible and beautiful forces. Into this world Padmasambhava brought Buddhist institutions such as monasteries and Tantric traditions. *The Tibetan Book of the Dead* seems to be a reworking of the people’s ancient beliefs in demons, “hungry ghosts,” and all sorts of deities, into visions that the dead encounter. If they have learned good Buddhist meditative practices, they will be able to see the illusory nature of these deities and hungry ghosts. They will see them as what Western psychology calls “projections” of their own inner natural archetypal images. If they recognized these as simply part of their own inner psychic dynamics and see through them to the teachings of the Buddha, the Dharmakaya, they will see each one as an empty illusion of earthly minds and will be liberated a step further along to enlightenment. If we are enlightened, the first appearance of the brilliant light of the Dharmata (“the essence of things as they are”) (*Tibetan Book of the Dead* 1975, p. 11) will free one from reincarnation and return one to the pure luminosity:

Now the pure luminosity of the dharmata is shining before you; recognize it . . . . This mind of yours is inseparable luminosity and emptiness in the form of a great mass of light, it has no birth or death, therefore it is the buddha of Immortal Light. To recognize this is all that is necessary. When you recognise this pure nature of your mind as the buddha, looking into your own mind is resting in the buddha-mind (*Tibetan Book of the Dead* 1975, p. 37).

But, being frail humans, if we fail to recognize this pure Immortal Light as the Buddha, the “awakened one” in our own mind, unable to see through the illusions to the Dharmata, we move downward on the scale of reincarnation, to be born at a lower level, even as a lowly worm. But if we succeed in recalling our insights into the Dharmakaya at any point, we will get off the descending ladder and be reborn higher, as a deity or a human.

So each *bardo* (stage between death and rebirth) of the *Tibetan Book of the Dead* is a dramatic encounter with an ancient religious image, probably having Bonpo roots. Each is a challenge to your consciousness to recognize it as an illusion, to see that it is a projection of your own, and see through it to the thundering light of the Dharmata. When you see through your projected divinity or demon, you will be reborn at the corresponding level of earthly life. If you fail to recognize this vision as a projection and, due to your karmic illusions, you think it is real, you will be confronted with the next demon, lower on the scale toward rebirth. The first *bardo* is the pure light of the void, the empty Dharmata of liberation. If you recognized it as such, this frees you from rebirth altogether, which is the goal of all Buddhism. If not, you go on to the second *bardo*, the deities, first, the peaceful deities, such as Vairocana, the blue light of supreme wisdom of the Buddha. These would be an exalted group to join but still on the path to later rebirth. If you miss liberation here, you will hear:

If you had recognized the natural radiance of the wisdoms of those five families as your own projections, you would have dissolved into rainbow light . . . and become a sambhogakaya buddha, but because you did not recognise you have gone on wandering (*Tibetan Book of the Dead* 1975, p. 50).

After that you see the wrathful deities, whom the unfortunate might end up joining. Then finally in the third *bardo* of rebirth, one envisions the form of rebirth coming: human, dog, goat, ant, and worm. If you are going to be a boy, you will feel hatred toward your father and love for your mother (a pre-visioning of Freud’s Oedipus Complex) (*Tibetan Book of the Dead* 1975,

pp. 84–85). Thus, Buddhism took popular Bonpo traditions and turned them into a Buddhist ritual trial of recognizing one’s projections as illusions and seeking to help believers see through their projections to the enlightening great illumination of the Buddha mind beyond life and death. This ritual is a powerful example of a strong psychological awareness in an ancient religion.

Carl Jung’s commentary on the *Tibetan Book of the Dead* sees its many metaphysical deities and ghosts psychologically: “the whole book is created out of the archetypal contents of the unconscious” (Jung 1954, para. 857). Buddhists would agree that the mass of our *samsara* earthly existence is psychological and illusory, although it seems real, but that the thundering light of the Dharmata is truly ultimate reality; it is not an internal psychic image of divinity, like Jung’s Self. Jung sees this ritual text as an “initiation in reverse, which, unlike the eschatological expectations of Christianity, prepares the soul for a descent into physical being” (Jung 1954, para. 854). This is so, since the first *bardo* is of the Clear Light, presenting the dying person with the opportunity to avoid reincarnation and ascend directly to the Infinite Buddha mind. This is roughly parallel to the Christian Heaven, about which Christians will have been taught. But, unfortunately, this high goal is out of reach of most ordinary believers. So the initiation proceeds from the highest level down through numerous opportunities to be freed from lower rebirth to the lowest levels. Jung is saying that the one-life-only Christianity starts from the low level of the earthly ego and seeks to reach the higher Heaven (or Self) as a result of one life’s moral and spiritual level. Thus, it is an initiation into the Infinite, but in reverse of the Tibetan starting point.

Belief in reincarnation explains to believers that this life’s rewards or suffering are the results of past lives. Certain memories may be seen as past-life memories. Tendencies such as fear of swimming may be interpreted as having drowned in a past life. Feelings of “*déjà vu*” or having “already seen” something may be interpreted as

due to a past life event. Talented child prodigies are interpreted as bringing gifts from a past life. Thus, psychologically, rebirth gives deeper meaning to life. Speculation about certain numbers of levels of heavens or hells is common in varieties of both Hinduism and Buddhism, and at death one may be seen as reborn in one of those as a reward or punishment where negative karma is burned away, so that one may be reborn in a higher, less miserable plane. Hells can include criminals boiling in oil, ghosts, animals, or demons. Heavens can include demigods and gods. Humans have the opportunities to learn the spiritual life, be purified, and improve their *karma* before rebirth. Heaven and hell in Western religions are also pictured as paradises and places of torment, eternal or temporary, as Dante's *Divine Comedy* (1946) illustrates (Alighieri). Psychologically, hope for paradise encourages and fear of hell deters believers.

The American psychiatrist Ian Stevenson (1934–2000) studied over 2,000 cases of spontaneous past-life memories scientifically. He documented many times that the children's memories were accurate. He found that a child could recall an ability to speak an unlearned foreign language, a home, and names of deceased relatives, from a distant town where he had never been in this life. Although he found hypnosis unreliable as a source of reincarnation evidence, Stevenson did believe in the case of a Colorado woman who in 1952 claimed to have recalled under hypnosis the details of an Irish girl named Bridey Murphy who lived in 1906 (Bernstein 1956). Psychologists have reported success with hypnosis, especially in psychosomatic disturbances, such as addiction or anxiety (Brody 2008). In India Stevenson found a girl named Swarnlata Mishra, born in Pradesh in 1948. At the age of three, she began to recall memories of a past life in a village of Katni, over 100 miles away. When she was 10, her family took her there and she was able to discuss an apparent past life when she was Biya Pathak; she could recall over 50 verifiable facts from years before her birth (Stevenson 1980, pp. 69–71). Cases like this made Stevenson believe in reincarnation but he

remained very skeptical of accounts until scientifically proven.

Thus, Eastern and Western cultures have both found reincarnation spiritually fascinating and psychologically instructive.

## Relational Psychoanalysis

Steven Kuchuck  
National Institute for the Psychotherapies,  
New York, NY, USA

### Introduction to Relational Theory

In addition to other principles that will be discussed below, relational psychoanalysis assumes that psychic structure develops in response to interactions and relations with primary caretakers and is therefore accessible in psychotherapy or psychoanalysis through an examination of the transference-countertransference relationship. Stephen Mitchell was the primary founder and passionate voice at the center of this new way of thinking. With his large body of written work, founding of the journal *Psychoanalytic Dialogues*, and central role in the formation of relational programs in New York and then internationally, Mitchell had a crucial influence on the first generation of relational analysts.

The term relational first appeared in the psychoanalytic literature in 1983, when Mitchell and Jay Greenberg proposed a synthesis of Fairbairn's object relations and Sullivan's interpersonal theories. Object relations theory (especially as developed and influenced by Klein, Fairbairn, Guntrip, and Winnicott) offered an alternative to Freudian theory based not on drives pressing for discharge but rather on connections with others as the main motivation in development and later life and the resulting internalization of objects and self-other relationships. Different theorists emphasize different aspects of this process, and while seen as a useful model of development, it nonetheless offers a somewhat disparate set of concepts that are sometimes difficult to apply to clinical practice. Similarly, Sullivan and his followers also emphasized the centrality of relationships to the development of psychic structure. Interpersonal theorists, in an effort to distance from classical, intrapsychic theory, de-emphasized internal process in favor of here and now relating as the most accessible and therefore most

important unit of study for the psychoanalyst. Originally employing a firm, authoritative style characteristic of its main founder's personality, contemporary interpersonal theory is often indistinguishable from relational psychoanalysis, though there are still sometimes subtle differences in emphasis and technique.

### Key Concepts in Relational Thinking

The heart of relational psychoanalysis involves a focus on and mutual understanding with patients that therapist-patient interactions will always reflect the ways in which patients interact with others and as children were interacted with by their primary objects. Often though not always made explicit, there is an additional assumption that the analyst's particular history and internal world will also come to bear on the therapeutic relationship and may in fact influence or even pull for particular transference responses. In this way, relational psychoanalysis is a two-person psychology that, while engaged in for the growth and benefit of the patient, must nonetheless take into account the mind of the analyst as well. Selective self-disclosure, once thought to be taboo, is now seen as an important tool that when used with discretion can both enable the analyst to acknowledge his or her contribution to the current relational dynamics and also enables the patient to recognize otherwise dissociated material through its impact on the analyst and others.

### Departing from the Classical

This shift from a one- to two-person psychology and an emphasis on the primacy of relating rather than drives are two of the major differences between relational psychoanalysis and the classical Freudian theory that preceded it. While still asymmetrical – the analyst sets the parameters and tone of the treatment – relational analysis is co-constructed rather than dictated by an “all knowing” analyst and is therefore a more mutual endeavor. In this way of thinking, the therapeutic relationship itself serves as the main vehicle for

therapeutic action and change. Concepts of intersubjectivity, wherein the interaction between and mutual influence of analyst and patient subjectivities are understood as central to understanding and working through the patient's psychic conflicts and, related to this, the analytic third: the ideas and affects that belong not to analyst or patient alone but rather in the middle, co-constructed space between the two, multiple, shifting self states: there is no singular personality constellation, and enactment as co-determined, inevitable, and crucial to deepening the therapeutic relationship, are just some of the more important hallmarks of relational thinking. Relational psychoanalysis maintains a hermeneutic and also a dialectical approach; an attempt is made to maintain tension between seemingly opposite or opposing principles rather than either or thinking or complementarity, which can result in a limiting dichotomy of doer-done to thinking.

## Postmodernism

Relational psychoanalysis exemplifies the postmodern tradition in which it evolved. It transcends the notion that one theory or hierarchical, fixed, rigid set of rules and ways of thinking can explain the vast complexity of human behavior. Standing less in opposition to than inclusive of, it is an offshoot of and/or includes aspects of classical theory, self-psychology (especially the current thread of intersubjectivity theory as developed by Stolorow and associates), object relations, and interpersonal and attachment theories. There has also been an active dialogue with and feed from gender and queer theory, feminism, culture, race, class, and political activism. An attempt is made to understand and include many groups that were and felt themselves to be powerless, pathologized, and excluded from more traditional psychoanalytic thought (referred to in the relational literature as "the other") – women, lesbians, gays, bisexuals and transgendered, people of color, and others previously underrepresented in society and mainstream psychoanalytic teaching and practice.

## Believing

Religion was seen by Freud and many of his followers to be the result of regressive fantasy and infantile neurosis. One goal of psychoanalysis then was to free the patient from the illusion of religion. In light of this, we might add people who believe in God or maintain other religious and spiritual attachments to the above-mentioned list of those disenfranchised from classical psychoanalysis. As mentioned, postmodernism and contemporary schools of psychoanalytic thought such as relational psychoanalysis are critical of dichotomies. While the ability to reality test is of course still a necessary consideration, automatic, rigid distinctions between fantasy and reality, illusion and "truth," and science and religion are no longer tolerated. Patient and analyst subjectivity and personal beliefs are given equal weight to or privileged over objective "facts" such as whether or not god exists. In large part as a result of relational psychoanalysis, religion is coming out of the closet. Prominent relational writers such as Lew Aron, Charles Spezzano, and Michael Eigen write about religion and the influence of their and patients' religious beliefs and practices on the transference-countertransference field. Relational psychoanalysts have committed themselves to welcoming and examining all aspects of the patient's and clinician's subjectivity. In this respect, religion – either the presence or absence of spiritual belief and practice, associated thoughts, feelings, and fantasies – can come to be an important part of the relational psychoanalytic dialogue.

## Relativism

Roberto Refinetti  
Psychology, University of South Carolina,  
Walterboro, SC, USA

Relativism refers to the contention that moral values and/or factual beliefs are not good or

correct in themselves but are good or correct only in reference to other values or beliefs. The term relativism is often used with a negative connotation, and many relativists prefer the term *relativity* to express the idea that moral values and factual beliefs are *relative to* the context in which they are adopted. The relativist posture is often contrasted with the absolutist posture – that is, the contention that at least some moral values and factual beliefs are *absolute* (i.e., good or correct in themselves).

## History

Records of relativistic thought are available since the beginning of written history. Among the pre-Socratic thinkers in Ancient Greece, Heraclitus and Protagoras are often cited for their relativistic pronouncements. Heraclitus' famous metaphor asserting that a person cannot bathe twice in the same river (because the water is constantly moving and the river does not remain the same) implied that everything is in constant change and, consequently, that what is true today may not be true tomorrow. Likewise, Protagoras' relativistic thought is encapsulated in the sentence "Man is the measure of all things," meaning that truth and virtue are not absolute concepts but are rather dependent on who experiences them.

In the middle ages, René Descartes sought certainty and absolute truths but learned in his travels that "those who have views very different from our own are not therefore barbarians or savages, but several use as much reason as we do, or more" (Descartes 1637/1947). Later on, the 1800s brought to light much relativist activity, including Freud's relativization of the conscious mind, Marx's relativization of the free market economy, and Darwin's relativization of man's place in the animal kingdom.

In the twentieth century, Thomas Kuhn did much for the cause of relativity. Kuhn never saw himself as a relativist, but his analysis of how progress is attained in science led him to question the absolute nature of scientific knowledge. In his classic book *The Structure of Scientific Revolutions*, he asserted that scientific

**Relativism, Fig. 1** Musical staves showing the same quarter note as either an indeterminate note, an E, or a G, depending on the chosen clef (or absence thereof)

knowledge is always part of a transitory paradigm that, by necessity, must eventually be discarded in order for scientific progress to take place (Kuhn 1962). Quite more explicitly, Willard Quine used the expression *ontological relativity* to describe the fact that the objects of a science cannot exist in themselves and must instead be interpreted or reinterpreted by one theory or another (Quine 1969).

## Logical Coherence

Relativity might at first seem intrinsically contradictory, as an absolute proof of relativity would directly contradict the relativist cause. Relativists, however, readily recognize that to say that “everything is relative” is the same as to say that “everything is absolute.” That is, when one says that statement  $x$  is relative to context  $y$ , one says not only that it is possible that statement  $x$  will not be true in context  $z$  but also that it is actually absolute in context  $y$ . This so-called arbitrary absolute is just as absolute as it is arbitrary (relative). Thus, the obvious fact that there is a world around us is not denied, but the absolute character of this world is put in question.

The notion of an arbitrary absolute is clearly illustrated by a musical staff with and without a clef. Notes on the staff are musically nonexistent if there is no clef (see Fig. 1a). If a treble clef is placed on the staff, such as to provide a frame of reference, then the indeterminate note assumes the absolute ontological identity of an E above middle C (Fig. 1b). This absolute E is arbitrary, however, as it becomes a G when a bass clef replaces the treble clef (Fig. 1c).

It should be noted that, because absolute relativity is indeed nonsensical, relativists do not fret about exhausting the relativization of the universe. Rather than demonstrating that nothing is absolute, relativists enjoy pointing out instances of relativity. Expunging alleged absolutes – or “questioning authority” – is the true impetus. This relativistic impetus is pervasive among intellectuals in contemporary Western culture and is reflected in the emphasis on “critical thinking” in education.

## Antagonism to Science

Relativists are often maligned by scientists. This is not surprising, as science is commonly thought of as an absolutist institution. Many – possibly most – scientists share a positivist view of science, according to which a real world exists independently of science and has structural and functional properties of its own that can be objectively known and understood by scientists. Against this, relativists such as Michel Foucault argued that the language of science is part of the language of a culture and, therefore, it establishes beforehand what can and cannot be discovered by scientific research (Foucault 1969). Similarly, David Bloor claimed that pieces of scientific knowledge are nothing more than symbols standing for social struggles among scientists (Bloor 1976), and Helen Longino stressed that the logical and cognitive structures of scientific inquiry cannot even develop without a dynamic interaction between scientific practice and social values (Longino 1990). This relativization of science was not well received by a number of scientists and philosophers, as is clear in an

edited volume entitled *A House Built on Sand: Exposing Postmodernist Myths about Science* (Koertge 1998). The criticism expressed in this volume was partially justified because quite a few “postmodernists” (relativists) were simply ignorant of science and scientific methods. It is also true, however, that many of the self-appointed defenders of science were ignorant of philosophical relativity and made unjustifiable absolutist claims.

## Antagonism to Religion

Relativists are equally apt at enraging religious leaders. After all, *faith* (belief in authority) is central to most religions. By doubting religious dogma, relativists act as heretics. That religious leaders despise relativity is exemplified by Pope John Paul II’s thoughts as expressed in his encyclical letter *Faith and Reason*. There, he posited that faith and reason are essential human attributes and that reason without faith leads to nihilism and relativism. He explicitly condemned relativism and asserted that the rejection of relativism is prescribed by the Bible (John Paul II 1998).

## Religion

Peregrine Murphy Kavros  
Management Focus, New York, NY, USA

## Introduction

The word religion is derived from the Latin *religare*, to bind, restrain, or tie back, and was first recorded in English in the eleventh century. Religion is defined as a system of faith and worship or faithfulness or devotion to a principle.

Agreement about the definition of religion has been lacking. The West generally views religion as a system of practices and belief towards a sacred or supreme being. Worship in the East has emphasized transcendence or liberation, as opposed to systematic belief. Many definitions of religion have been suggested, but one approach that avoids cultural bias and secular ideologies of human origin has suggested that religion includes doctrine (a creed of belief), myth (an historical sacred narrative), ethics (moral code of sacred origins), ritual (use of sacred objects/ceremony including the historical sacrifice), experience (devotional, mystical, experiential), and social institutions (educational, social gatherings, social service, pastoral care), all of which are interrelated.

Researchers are trying to understand the relationship between religion and health, psychological functioning, and decision making. Methods of studying religion are becoming increasingly formal and rigorous. Researchers use multidimensional assessments to evaluate religious affiliation, belief systems, and practices. A few of the more commonly used instruments are described below, but for a more

thorough review, please refer to the work of Koenig et al. (2001).

## Assessments Used in Religion

### Affiliation

Roof and McKinney (1987) have developed the most common form of measuring religious affiliation. Duke University has expanded the primarily Western denominational scale to include Muslims, Greek Orthodox, Agnostics, and Atheists.

### Belief

Glock and Stark (1966) Orthodoxy Index identifies beliefs about God, Jesus, miracles, and the devil. Beliefs of orthodoxy, fanaticism, importance, and ambivalence have been measured by Putney and Middleton's (1961) dimensions of religious ideology scale. Belief, religious affiliation and coping have been associated with increases in well being and reductions in anxiety, depression, and suicidal behavior in depressed patients (Rosmarin et al. 2013; Dervic et al. 2004; Dervic et al. 2011).

### Religious Practice

King and Hunt (1967) have assessed participation in church attendance, organizational activities, and related church work. Considering that church attendance may be influenced by relationships (Fetzer Institute 1999) evaluates the emotional support provided by a congregation. Murphy et al. (2000) demonstrate how religious and spiritual practices influence decision making in long-term illness. Both long-term and short-term health care decisions can impact quality of life. Medical researchers used the Spiritual Needs Assessment for Patients (SNAP) to evaluate the unmet needs of ambulatory cancer patients seeking to enhance patient quality of care (Sharma et al. 2012).

### Practices of Piety

Stark and Glock (1968) evaluate private prayer; and Lenski (1963) assesses the extent to which one consults God when making everyday decisions.

## Background and Theorists

Early relationships between psychological attitudes and religious belief can be found in the pre-patriarchal rites of the southeastern pre-Indo-European peoples during the Paleolithic era. The religious belief system featured a monotheistic female deity as center and possibly reflected the mother-kinship societal structure. This belief system may have developed to counter fears arising in response to the natural elements, which were beyond their control (ca. 6500–3500 BCE). Within the Greco-Roman culture, the monotheistic God was preferred by Plato to the polytheistic gods that were vulnerable to vice, ignorance, and imperfection. An early source of Christian doctrine was the *Didache* (ca. 140). Here, peace is promoted with singularity of thought and avoidance of debate. St. Augustine in *Confessions* describes the emotionally charged psychological turmoil as difficulty with singleness of belief: "My desire was not to be more certain of you but to be more stable in you" (St. Augustine, p. 133).

William James (1958) explains that there are two aspects to religion: institutional and personal. Institutional religion includes worship, theology, ceremony, and ecclesiastical organization. Personal religion reflects the inner dispositions, which prompts personal prayer outside of ritual. James believes that religion is the "...feelings, acts and experiences of the individual. . .in their solitude, as they stand in relation to whatever they may consider the divine." Freud (1856–1939) offered the first of the many psychoanalytic interpretations of religion. He observed the rituals of indigenous people and concluded that religion developed from the guilt experienced by the son when he tries to replace the father. In the *Future of an Illusion*, Freud stated that human beings are essentially unhappy and try to escape their unhappiness by engaging in religious ritual. He believed that religion enabled individuals to externalize religion's precepts while disguising possibly incompatible internal intentions. Jung felt that religion provided something that the external world did not. However, over time

he believed that individuals saw that religious truths were sometimes empty and not integrated. Neurosis was the state of being at war with oneself, which he saw could be cured by the Christian virtue of forgiveness. Healing occurred as the representation of religion and the self evolved in the psyche.

More recently, object relations theorists (Rizzuto 1974, 1979) integrate the representation of the mother (or caretaker) as a central figure in religion. Drawing from the writing of Winnicott (1953, 1975) where he suggests that religion was synonymous with an object that the infant used to help with transitions, this illusory experience provides a bridge from the inner world to the outward reality. The child's representation of God evolves from the child's relationship with his/her caretakers. This representation of God is shaped by all of the emotional factors that are dominant in the child at the time of formation and evolves with the changing representation of the parents and the inner view of the child's sense of self. Theorists (Rizzuto 1974, 1979) believe that it is possible that one can hold a representation of God while not believing, but when one believes in the representation of God, one expresses loyalty to the inner representation of the self and to the ones who nurtured the self into existence.

## Religion and Erik Erikson's Life Cycle Theory

Joseph M. Kramp  
John Jay College, New York City, NY, USA

Religion and the life cycle is an area of scholarship in psychology and religion, built upon the work of

Erik H. Erikson. Erikson, who studied under Anna Freud, developed life cycle theory in his first major book, *Childhood and Society* (1950). Erikson's interests in the human life cycle always coexisted with his interests in religion and human values because Erikson assigned attending virtues to each psychosocial stage of development. Erikson's understanding of the way in which individuals managed to acquire these virtues factored into his understanding of how social values are transformed and how leaders rise to prominence out of strenuous psychological conflict and struggle. In this sense, Erikson makes it very difficult to talk of the human life cycle without also critically analyzing the role of religion in the stages of psychosocial development. Religion becomes a critical term of analysis in life cycle theory at each epigenetic stage, beginning with the first.

For Erikson, the child's basic trust is formed in the maternal presence, though the formation of basic trust does not depend upon a total absence of frustration. Erikson describes the child's interactions with the mother as ritualized and the infant's first experience of a numinous presence. The infant has, thus, a need to be seen, to see and respond, and then to be responded to. This process, for Erikson, is saturated with religious connotations and forms the basis for future religious and psychological development. Idealization or positive projection is therefore a critical component to Erikson's psychology of religion and his understanding of religion in the human life cycle. Positive projection (along with Erikson's psychosocial stages) differentiates Erikson's emphasis and understanding of religion from Sigmund Freud. Religion at its best is, for Erikson, a sense of basic trust.

The development of basic trust undergirds the acquisition of the first life cycle virtue that Erikson assigns that of hope. In later writings, such as Erikson's (1959) *Young Man Luther*, a psychological biography of the German Roman Catholic monk Martin Luther, Erikson would discuss the role of the virtues such as hope in Luther's developing religious and psychological life. Biography and historical study would, therefore, become a means for Erikson to analyze how the epigenetic life cycle interacted with religious beliefs and behaviors

over the course of a lifetime. Erikson would typically choose famous religious leaders for such studies (e.g., Luther and Gandhi), though he would also use other less well-known and less ostensibly religious figures as well, such as George Bernard Shaw and William James.

As the child's sphere of interest and influence grows, the psychosocial or life cycle crises expand to include a broader set of peers and social goals to be accomplished. In the second stage, for example, the radius of significant persons is both parents or any kind of parental guide. At this stage, the virtue to be acquired is will. While hope provides the individual with the belief that one's wishes are attainable (sometimes religiously articulated as believing God will provide), will provides the individual with added strength to assert one's own wishes in spite of the control exercised by authority. Will is, in this sense, built off of hope.

In the third and fourth stages, the virtues of purpose and competence are ideally acquired. These virtues, as with hope and will, have religious connotations to them. While hope and will are tied to the strength and discretion one acquires in idealizing and action, purpose and competence are tightly aligned with beginning to experience meaning in one's actions and decisions. These begin at play age but extend throughout adulthood. Play is, in this sense, the precursor to adult forms of work. Thus, work is – for Erikson – an intrinsically religious activity so long as the virtues are what support it, even if it is done in an ostensibly secular setting. An airplane pilot, for example, who never prays and self-identifies as an atheist, but who finds her or his work deeply meaningful and has gone through a long process of training and discernment of why such action is meaningful for him or her, is living out a deeply religious action in their style of work. While it would be important, in this and all cases, to respect the unique religious designation (in this case, atheist), religious behavior in life cycle theory connotes not only idealizing behaviors but also intentional patterns, moods of reverence and awe, and the unique meaning an individual assigns to actions taken or interpreted.

As the individual moves through the stages, the adolescent period is a particularly significant one for understanding religion and the life cycle.

While the adolescent is initiated into various social clubs and groups, the adolescent is in desperate need of acquiring a worldview or guiding ideology. The adolescent sometimes looks to religion for this, as in the case of Luther, but might also look to more secular behaviors or teachings, as described by someone like William James. This successful acquisition of an ideology provides the basis for the adolescent's success at the life cycle crisis of identity versus identity confusion and determines their transition into a social and working role in society. This stage is particularly important for understanding the role of religion in the life cycle because the adolescent may find a way to use religion in order to critique the social roles prepared for the adolescent to accept. Such countercultural behavior deeply interested Erikson and formed the basis of his psychohistorical methodology, which he applied in his studies on Luther (Erikson 1959) and Gandhi (Erikson 1969). For Erikson, such struggling adolescents have particularly unique psychosocial crises that, when the individual articulates them, their crises become commonly understood by large groups of people and they therefore form the basis of social reform movements, such as the Protestant Reformation.

Such adolescents also can take the better part of a lifetime to find their work role in society and resolve the intimacy vs. isolation crisis, as well as other life cycle crises. As a result, Erikson understands adolescence in terms of life cycle development. Adulthood is only reached when the individual assumes a personally meaningful social role, informed by successful completion of the early stages where meaning and action are aligned. Writings on religion and the life cycle, when focused on an individual, are therefore often revealing of an ersatz adulthood, falsely simulated by an aging population who have failed in the critical life cycle stages leading up to adulthood and therefore mocks the weighty and significant role that adults play in the life cycle schema. Such significance attached to adult responsibility reveals the religious sensibilities and commitments Erikson linked to life cycle stages.

Love, care, and wisdom form the last three virtues Erikson assigned to the latter life cycle stages. Such virtues form the basis of social cohesion and empathy, which Erikson believed was what provided an answer to cultural relativism, individual uniqueness, and oppressive social forces. Integrity of one's identity is, therefore, the ultimate aim of the life cycle in the midst of a complex and pluralistic social environment. Integrity of identity is an aim guided at each stage by acquisition of religious virtue in conjunction with psychosocial experience.
