## Religion and Mental and Physical Health

Christopher S. M. Grimes  
Saint Louis Behavioral Medicine Institute,  
St. Louis, MO, USA

Since the earliest antiquity, humans have theorized and speculated about the relationship of religion and mental and physical health. Early writings, including those contained in Jewish scriptures, demonstrate a belief that mental or physical illness was understood as sometimes

resulting from uncleanness and sinfulness or as a result of a separation between the individual and God. A period of emotional turmoil in the life of King Saul in 1 Samuel, for example, is attributed to the Spirit of God departing from Saul and an evil spirit tormenting him. These writings are evidence of a belief within the earliest cultures of a relationship between religion, spiritual healing, and mental and physical health.

### Religious Practices and Healing

In many religions the concept of health refers to a sense of spiritual, mental, and physical wholeness, and in many ancient cultures the healing arts were closely related to religious practices. As early as the fifth century BCE, followers of Asclepius, the Greek god of medicine and healing, sought services and advice of priests of the cult of Asclepius to find cures to their ailments through, among other things, the interpretation of divinely inspired dreams. There are accounts in the Christian New Testament of Jesus providing healing of physical infirmities such as paralysis, blindness, and leprosy as well as casting out demons from individuals feared by others because of their aberrant mannerisms and behavior. The cult of Asclepius and the accounts of the miracles of Jesus illustrate how religious leaders, because of their close relationship with the gods, God, or a higher spiritual power, have historically been viewed as healers and sought out by the lame who believed that a religious or spiritual act could restore physical health. Various religious practices ranging from prayer, scripture reading, anointment with oil or perfume, laying on of hands, interpretation of visions, casting out demons, and even sacrifice have been included in healing ceremonies across the ages.

As a result of advances in biology, physiology, and psychology across the millennia and specifically during the Renaissance and the Enlightenment, a more complete understanding of the causes of physical and mental illness has developed. Presently, within contemporary cultures, treatment of physical and mental illness

is predominately based on scientific knowledge or assumptions from previous scientific research. Within Western cultures, medicine and psychology's emphasis on applying scientifically based treatments for physical and mental illnesses, while de-emphasizing spiritual matters, resulted in segmented treatment of the individual's concern: Physicians are sought for physical concerns, psychiatrists or psychologists treat mental concerns, and religious leaders tend to the spiritual needs of the individual. However, since the later part of the twentieth century, there has been a trend within Western medicine and behavioral healthcare toward increased awareness of the relationship between religion/spirituality and mental and physical health. The segmented treatment of the person has been less pervasive in Eastern cultures where a mind-body-spirit approach to healthcare has remained popular and the distinction between religion, medicine, and psychotherapy are less pronounced; for example, the Chinese medical practice of acupuncture which emphasizes restoring balance and correct flow to the body's Qi, an immaterial substance of vital energy, and the Buddhism emphasis on mindfulness, a concept now gaining popularity in current Western psychotherapy. Indigenous and tribal cultures, even in the West, have tended to maintain a holistic view of the person. Present-day Native Americans while heavily influenced by Western culture may include traditional spiritual ceremonies and interventions alongside interventions informed by modern scientific research. Religious groups who subscribe to only spiritual interventions for physical or mental illness exist as a small minority.

### **Religion and Well-Being**

Contemporary research has consistently found a relationship between religion and mental and physical health. Generally, researchers have found that individuals who practice mainstream religions have fewer physical illnesses and tend to live longer than their nonreligious counterparts (Koenig 1999; McCullough et al. 2000).

George et al. (2002) propose that there are multiple factors that account for these findings. Relevant to physical health, most religions explicitly prescribed good health habits while recommending moderation or abstinence of behaviors that are known to be detrimental. Relative to mental health, individuals who belong to a religious group benefit from social support and gain psychosocial resources as a result of their membership. Religion, especially organized religion, offers adherents' coping resources. In times of stress, upheaval, and suffering, individuals often turn to their religious beliefs and/or a religious community to provide comfort, hope, and a sense of belonging and being loved. Generally, religiosity is associated with positive coping in times of distress (Larson and Larson 2003). Regular attendance and participation in religious services offer members the opportunity to connect with a group of concerned individuals who support one another when there is a need. Religious communities not only care for the spiritual need of their members but also provide help for those who are ill or in distress. Religion also provides a systematized faith and value system that helps the believer organize and makes sense out of his/her existence and relationships with fellow humans and the natural world.

However, not all forms of religion are equally beneficial to the individuals' overall well-being. Larson and Larson (2003) have noted that some individual's religious beliefs lead to a sense of guilt, condemnation, and/or abandonment that can result in poorer coping and increased distress. While there has been relatively consistent support for a positive relationship between well-being and internalized intrinsically motivated religion based on a secure relationship with God, the opposite is true for religion that is imposed, unexamined, and reflective of a tenuous relationship with God; this type of religious belief has consistently been negatively related to well-being (Pargament 2002).

Current research on the relationship between religiosity and mental and physical health suggests a complicated multidimensional relationship. Through a review of the literature on religion/spirituality, health, and well-being,

Erwin-Cox et al. (2007) revealed four models implicit in the current literature to explain this relationship. One model found in the literature suggests that religiosity has a positive impact on physical health as mediated by mental well-being. A second model suggests that religiosity has a positive impact on mental well-being as mediated by physical health. A third model suggests religiosity as that impacts both physical health and mental well-being while at the same time physical health and mental well-being influence each other. Erwin-Cox et al., however, settle on a fourth model that suggests that religion has effects on both physical health and mental well-being, physical health and mental well-being effect each other, and physical health and mental well-being impact religiosity. Erwin-Cox et al.'s model emphasizes the bidirectional and interactional nature of the relationship between religion, physical health, and mental well-being revealed in the current literature.

In conclusion, that there is a relationship between religion and physical and mental health is not in doubt. The relationship between religion and physical and mental health is generally positive, although this is not always the case. Future research will hopefully clarify the multidimensional relationship between religion and mental and physical health allowing for the best possible holistic and integrated care of the individual.

## Religion, Sexuality, and Psychoanalysis

Kent Brintnall  
 Religious Studies/Women's & Gender Studies,  
 University of North Carolina, Charlotte,  
 NC, USA

Most discussions of religion and psychoanalysis begin with Sigmund Freud's *Future of an Illusion*. Written in the last phase of Freud's

career, when he was turning his attention more frequently to the social implications of psychoanalytic thought, *Future* famously characterizes “religious ideas . . . [as] illusions, fulfillments of the oldest, strongest and most urgent wishes of [hu]mankind” (Freud 1968, Vol. 21, p. 30). According to Freud, religion is borne of a fundamental sense of helplessness – based initially in our infantile experience of weakness and powerlessness, and fostered by our adult encounter with an uncertain, chaotic world. Religion promises protection. For the child, the father represents an ideal of safety from life’s vulnerabilities and vicissitudes; for the faithful, safety comes from “the benevolent rule of a divine Providence” or cosmic order or karmic justice (Freud 1968, Vol. 21, p. 30). Freud clarifies that his characterization of religion as an “illusion” is meant only to draw attention to its derivation. Unlike a psychiatric delusion, the illusion that is religion is not necessarily false or contrary to reality; an illusion is defined by its source – fantasy, rather than experience – not its veracity (Freud 1968, Vol. 21, pp. 30–31). Moreover, Freud’s discussion of the *wish* for paternal protection implicitly recognizes it as an illusion: whether a child’s father – or other caregiver(s) – provide(s) protection in fact, the child still longs for safety.

Because most discussions of religion and psychoanalysis also end with *Future of an Illusion*, Freud’s views are often dismissed as reductive. But Freud unwittingly allows for a more complicated perspective on the “father complex” at the heart of religion. When describing the longed-for protection, Freud notes that it is provided “through love” (Freud 1968, Vol. 21, p. 30). *Future* characterizes the father’s role almost exclusively as protector; although protection is one demonstration of love, Freud does not emphasize the father as a source – or an object – of love. Similarly, in *Totem and Taboo*, written almost a decade prior to *Future of an Illusion*, when trying to explain the origin of religion, Freud describes the father-son relationship as typified by rivalry and hostility (Freud 1968, Vol. 13, pp. 141–145). Not only is *Totem* silent on the protection that the father can provide,

there is also no acknowledgment that conflict is only one dimension of the father-son relational dynamic.

For Freudian psychoanalysis, the most significant features of psychic development are described by the Oedipus complex. The “positive” complex, in which the male child experiences desire for the mother and rivalry with the father, is the most widely disseminated, and thus well-known, portion of Freud’s thought. While the positive Oedipus complex is central to the discussion in *Totem and Taboo*, and implicit in the account of religion found in *Moses and Monotheism* (Freud 1968, Vol. 23, pp. 7–137), it is virtually absent from *Future of an Illusion*. (This alone should make us wary of reading *Future* as a definitive, psychoanalytic statement on religion.) Absent from all three texts, although hinted at in *Future*, is the “negative” Oedipus complex, in which the male child experiences desire for the father and, hence, identification with the mother. (Freud’s reluctance to use the language of rivalry when discussing the negative Oedipus complex betrays his overarching gender conceptions.) What if the longing that founded religion, the wish for “protection through love,” was, in the final analysis, a wish for love itself – in the form of erotic attention? Turning, for example, to the Wolf-Man case study (Freud 1968, Vol. 17, pp. 7–122), and thinking about the patient’s fascination with the existence of Christ’s anus and how it makes him available for His Father’s erotic attention, we might arrive at a very different understanding of the wishes that religion fulfills. Similarly, Freud’s reading of Daniel Paul Schreber’s memoir (Freud 1968, Vol. 12, pp. 3–82) and Schreber’s sense that God desired him sexually might also cast a very different light on the longings that religion answers (see Brintnall 2011, pp. 84–89). (Freud admits to having a better understanding of the male child’s Oedipus complex. Although the female also moves through a positive and negative Oedipus complex, entailing both love for and rivalry with the father, there is no hint in Freud’s writings on how the female might relate to religion differently in light of her unique developmental path.)

Having seen that *Future of an Illusion*, because it contains a truncated version of the father-son complex, might also contain a truncated understanding of religion, what if we seek to understand Freud's take on religion starting with a different text? Written in 1907, "Obsessive Actions and Religious Practices" represents "Freud's introductory excursion into the psychology of religion" (Freud 1968, Vol. 9, p. 116). In this essay, Freud compares "neurotic ceremonials" to pious rituals (Freud 1968, Vol. 9, p. 117). While noting that the neurotic's phobic avoidance can be meaningfully compared to the cult expert's awareness of taboo, Freud distinguishes obsessive actions and religious rituals by noting that neurotic ceremonials are private, whereas religious rituals are public, and neurotic ceremonials are seemingly meaningless, whereas religious rituals are symbolically meaningful (Freud 1968, Vol. 9, p. 119). While some religious rituals are performed in private, they derive their meaning from communal membership. Even though there are regional, historical, and individual variations in religious practice, it would be hard to understand a ritual *as religious* if it were wholly idiosyncratic in the manner of a neurotic symptom. Assuming this private/public distinction holds, Freud notes that the second distinction does not: neurotic ceremonials only *appear* to be senseless, because their meaning is known only to the unconscious, given that they satisfy repressed instinctual impulses. Similarly, the symbolic meaning of religious rituals is often unknown to practitioners (Freud 1968, Vol. 9, pp. 120–122). There are, of course, two ways to understand this lack of understanding. First, a practitioner may not understand a ritual's religious meaning behind a specific action. I genuflect before a cross; I dip my fingers in a bowl of water; I carefully avoid eating certain foods – I do these things without knowing the reason why, but the reason could be articulated by an "expert" from the tradition of which I am a part. Second, a practitioner may understand a ritual's *religious* meaning without comprehending other motivations for which that explanation is an alibi. At the conclusion of "Obsessive Actions," Freud gestures toward this second kind of meaningfulness when he

notes that both neurosis and religion involve the unacknowledged renunciation of instincts. But they renounce different kinds of instinct: "in neurosis [they] are exclusively sexual in their origin, while in religion they spring from egoistic sources" (Freud 1968, Vol. 9, p. 127). While Freud thus distinguishes religion and neurosis, he suggests that one could "regard obsessional neurosis as a pathological counterpart of the formation of a religion ... and ... describe ... neurosis as an individual religiosity and religion as a universal obsessional neurosis" (Freud 1968, Vol. 9, pp. 126–127).

To distinguish religion from neurosis, then, we must be able to distinguish sexual and egoistic instincts. This distinction is far from stable in Freud's writings. When characterizing ego instincts as "self-seeking, socially harmful instincts" related to a desire for mastery over the world, Freud writes that they "are usually not without a sexual component" (Freud 1968, Vol. 9, p. 125). In *Three Essays on the Theory of Sexuality*, the first edition of which was written just a few years before "Obsessive Actions," Freud notes that sadism, so often linked to cruelty, finds its "roots ... in the normal." Sexuality, after all, "contains an element of *aggressiveness* – a desire to subjugate" (Freud 1968, Vol. 8, p. 157).

This desire to subjugate, to enact perfectly one's desires, and to impose one's will on the world is the instinctual impulse that civilization – in large part, through religion – seeks to curb. This is the famous conclusion of *Civilization and Its Discontents* (Freud 1968, Vol. 11, pp. 86–89). But *Civilization* also concludes – in reliance on Freud's conception of the superego, first suggested in "On Narcissism" (Freud 1968, Vol. 14, pp. 73–107) and later confirmed in *The Ego and the Id* (Freud 1968, Vol. 19, pp. 12–66) – that the aggressive impulse that characterizes sadistic violence toward the world founds and fuels the power of conscience (Freud 1968, Vol. 21, pp. 123–124). Submission to this critical voice is based, in part, on fear – on the sense of helplessness one experiences in the face of those who have the power to enforce their understanding of "good" and "bad" (Freud 1968, Vol. 21, p. 124). But as Freud explains

when discussing metapsychology, rather than religion, this critical agency is also an object of desire. To simplify Freud's account, spread across several essays and books, I want to obey the dictates of my conscience, because my conscience is developed, in part, out of repressed erotic longing for those figures – my parents – who initially taught me right from wrong (see Brintnall 2011, pp. 89–93). In other words, both the ego's operation that fuels my aggression toward the world and the superego's activity that fuels aggression toward my instincts have their basis in—and may be indistinguishable from—sexual instincts. As importantly, the attitudes that fund religious practices – the care demonstrated so as not to incur the wrath of the divine or disturb the cosmic order – may, in the final analysis, have a sexual dimension.

But what is “the sexual” for Freud? If it is a dimension of conscience, then it is clearly something beyond genital pleasure. As Leo Bersani famously concludes, after a close reading of *Three Essays*, “sexuality . . . could be thought of as a tautology for masochism” (Bersani 1986, p. 39). Although Freud never stated the matter so baldly, his recognition of a primary masochism and his surmising about a death instinct makes Bersani's claim plausible. In *Civilization and Its Discontents*, Freud admits that the erotic and death instincts can both be pressed into service of aggression and destructiveness and that, perhaps, the two instincts “seldom – perhaps never – appear in isolation from each other, but are alloyed with each other in varying and very different proportions” (Freud 1968, Vol. 21, p. 119). For precisely this reason, civilization not only secures our survival by curbing our aggressive and self-destructive instincts but also is a source of our suffering, insofar as “we” become the target of the internalized aggression of a moral censor. While Freud ruminates on the ambivalent status of civilization, he fails to note that this feature of civilization means that religion is no longer simply palliative (Freud 1968, Vol. 21, p. 75). Insofar as religion energizes the death instinct through the voice of conscience, it does not give us protection from morality's sadism, but is, in fact, a psychic force *from which we need protecting*.

In *Beyond the Pleasure Principle*, where he first discusses the death instinct, Freud insists that psychoanalysis must “lay stress upon the libidinal character of the self-preservative instincts,” thus abandoning the distinction between sexual and ego instincts. He then recognizes that he may “be driven to agree with the critics who suspected from the first that psychoanalysis explains *everything* by sexuality” (Freud 1968, Vol. 18, p. 52). Although he muses that the erotic and death instincts may still allow for something beyond sexuality, his discussion of sadism and masochism shows that even the death instinct may be a sexual instinct in the final analysis (Freud 1968, Vol. 18, pp. 53–55). If the distinction between neurosis and religion collapses under the weight of Freud's mature metapsychological speculations, then how can his views on religion be rescued from the charge of reductionism?

The strong relation between religion and sexuality in psychoanalysis is not reductive precisely because the psychoanalytic conception of sexuality is not singular. The Oedipus complex, which maps the child's sexual relation to the father and the mother, includes both desire and hostility, love and hatred, and longing and identification. Similarly, sexuality fosters life, relation, and union as well as death, destruction, and isolation: sadism *and* masochism are part of sexuality. Whether or not Freud's claims – his claims about the structure of the psyche or his claims about the historical origins of religion – are true, the ways in which his complex account of sexuality interacts with his (much less complex) account of religion gives us a rich conceptual grid through which to view, interrogate, map, and organize religious practices, texts, and phenomena.

## Religion, Sexuality, and Violence

Cody J. Sanders  
Brite Divinity School, Texas Christian  
University, Fort Worth, TX, USA

Violence against lesbian, gay, bisexual, transgender, and queer (LGBTQ) persons became a prominent national concern after the murder of gay City Supervisor Harvey Milk of San Francisco in 1979, leading to a public hearing on antigay/anti-lesbian violence in the US House of Representatives Subcommittee on Criminal Justice in 1986 (Comstock 1991). Increased media attention to the prevalence of hate crime violence against LGBTQ persons followed the hate crime murder of Matthew Shepard in 1998 in Wyoming

and has continued as a topic of interest in the popular media until the more recent signing into US law of the Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act in 2009. While there exists a plethora of literature from psychological and religious studies perspectives on the relation of violence and religion and the intersections of religion and sexuality, there is a dearth of psychological and religious studies literature addressing the connections between religion, sexuality (specifically, sexual orientation/identity), and violence.

Comstock (1991) and Herek and Berrill (1992) published early texts on phenomena of violence against lesbians and gay men. Comstock's was the first comprehensive national study of violence against gay and lesbian persons that addresses historical, biblical, and theological undercurrents of violence, as well as psychological and sociological analyses of victims and perpetrators of violence. This early literature on the convergence of religion, sexuality, and violence recognizes the primary place occupied by cultural ideology, including religious belief systems, in understanding phenomena of violence against LGBTQ persons. Cultural ideology and religious institutions not only play a large part in the stigmatization of LGBTQ persons in society through theological discourses of "sin" and "sexual deviance" but also serve the function of privileging and theologically legitimating heterosexuality through religious institutions like marriage. While it is not always possible to arrive upon a direct correlation between religious beliefs about sexuality and practices of violence against LGBTQ persons, attention to the intersections of religion, sexuality, and violence focuses primarily upon the ways that religion as a sociocultural force legitimates LGBTQ persons as appropriate targets of violence.

The earliest attention to violence against LGBTQ persons focused on expressions of *physical* violence against LGBTQ persons (Comstock 1991, p. 2). The literature, however, continues to expand to treat the subject of violence beyond what is manifested in interpersonal physical attack. Aside from the instances of hate crime violence that catch occasional media attention,

myriad instances of violence operate at institutional and systemic levels that have profound effects upon the lives of LGBTQ persons but that often go unnoticed and under-theorized. The institutional and systemic operations of violence against LGBTQ persons push beyond what can be addressed at interpersonal levels and call for an enlarged framework for approaching the intersection of religion, sexuality, and violence, thus engaging multidisciplinary lenses such as social psychology, cultural anthropology, sociology, and political theory alongside religious studies.

Beyond the level of interpersonal attack, the subject of violence against LGBTQ persons can be seen as a particular facet of oppression. Young's (1990) treatment of "systemic violence" helps to put overt manifestations of interpersonal, physical violence into the larger framework of institutional structures and the ideological foundations that undergird practices of violence. As it applies to LGBTQ persons, this framework points to the ways in which members of minority (sexual) groups live with the knowledge that they may become victims of random and unprovoked attack, "which have no motive but to damage, humiliate, or destroy the person" (Young 1990, p. 61). This speaks to the psychic terror that may be inflicted upon members of minority groups precluding any necessary personal victimization of physical attack. This violence is a facet of oppression due to the larger institutional and sociocultural context that makes such attacks possible and acceptable, pointing toward certain persons as appropriate targets of violence simply because they are members of a particular group (e.g., LGBTQ persons). Religious teachings regarding sexual minorities and those who breach stringent gender norms are a part of the sociocultural force undergirding such systemic violence. In order to address the institutional legitimization for such violence, "a change in cultural images, stereotypes, and the mundane reproduction of relations of dominance and aversion" is called for (Young 1990, p. 63).

Connected to the macro-level of sociocultural discourse legitimating practices of violence, one of the growing topics of study in the clinical literature

is the phenomenon of microaggressions. Psychologist Derald Wing Sue (2010) has produced extensive treatments of microaggressions in the clinical literature and defines microaggressions as "brief, everyday exchanges that send denigrating messages to certain individuals because of their group membership" (p. xvi). The subtle messages of insult, invalidation, or aggression toward LGBTQ persons and members of other minority groups may be carried forth in common speech, often outside the conscious awareness of the perpetrators of microaggressions. The "attributional ambiguity" (Sue 2010, p. 54) inherent in the workings of microaggressions makes great demands on the psychological energy of targeted persons who must interpret the motives, meanings, and intentions behind the microaggression that are often occluded by the subtlety and brevity of the exchange. Microaggressions are subtle instances of nonphysical violence that are linked to larger sociocultural and religious contexts that attempt to define reality in ways that subjugate, exclude, and stigmatize LGBTQ persons in contrast to a culturally, politically, and religiously legitimated heterosexual norm.

Clinical questions must include addressing realities of violence (physical and nonphysical) with persons who identify as LGBTQ. There is a connection in this regard to the psychological literature on trauma, though the issues with LGBTQ victims of violence are more expansive than those typically covered in traditional trauma literature. It is often the case that LGBTQ persons who are victims of religiously legitimated anti-LGBTQ violence are also, themselves, devoted to similar religious traditions. This raises clinical questions regarding the synchronicity of religious and sexual identity development. There is also a need for clinicians to develop an understanding of the psychological strain imposed by the presence of microaggressions, as well as institutional, and systemic violence experienced by LGBTQ persons. While an LGBTQ person may not have experienced the powerlessness and psychological trauma of physical attack, there is still need for clinicians to attend to the experience of powerlessness and psychological trauma experienced by the overwhelming anti-LGBTQ force of

institutions (e.g., religious groups, governments) and larger sociocultural and religious discourses about LGBTQ persons that are carried forth in the ambiguity of microaggressions, as well as overt physical attack (see Tigert 1999). Finally, clinicians must develop ways of viewing LGBTQ individuals as persons with complex identities, taking into account the intersection of gender, race, class, sexuality, disability/ability, ethnicity, religion, etc. This enlarges considerations of violence, as the inherent multiplicity of socially constructed identities in every person provides for no simple understandings of, or simple solutions for, the complexities that surround questions of religion, sexuality, and violence.

A prevalent lacuna in the psychological and religious studies literature is a psychologically informed examination of religiously inspired violence against LGBTQ persons outside of the USA. Within the USA, documentation of violence motivated by sexual orientation bias has only been required by the federal government since 1990 (Comstock 1991), and in many other parts of the world, this documentation has not been as systematic. With the rising profile of brutality and violence against LGBTQ persons in places like Uganda, however, attention must shift toward global contexts of violence against LGBTQ persons, noting the influence of religious bias often exported from a US religious context. A second gap in the literature is serious attention to the articulation between practices of violence toward LGBTQ persons and religious traditions other than Christian.

It is important to note that while the connection between religion, sexuality, and violence is often treated as patently obvious in the popular imagination – namely, seeing religious beliefs about sexuality as a direct cause of violence against LGBTQ persons – some scholars of religion and violence provide a critique of the prevalent discourse that complexifies the issue considerably (see Cavanaugh 2009). These perspectives on the complexities of religion and violence point to the difficulty of functionally defining “religion” in such a way that religious beliefs can be teased apart from larger cultural ideologies that influence practices of violence.

For discussions of religion, sexuality, and violence, this raises important questions regarding the intermingling of religious teachings on sexuality with cultural ideologies of sexuality and gender as they relate to practices of violence against LGBTQ persons in society.

## Religiosity

Peregrine Murphy Kavros  
Management Focus, New York, NY, USA

### Introduction

The word religiosity derives from the Latin *religiōsitās*, which is commonly viewed as excessive devotion to religion.

Religious, religiousness, and religiosity are used interchangeably within medical literature. This flexibility in nomenclature is confusing; it is not clear whether the religious behaviors described are excessive, pathological, or customary. Emotional and behavioral expressions of faith span a wide breadth depending upon religion and culture. The rousing and participatory nature of Gospel Music can be quite expressive emotionally, but it is also customary (Stearns and Lewis 1998). In contrast, excessive religious feelings or sentiments that extend beyond customary expression to dogmatism, ritualistic, and self-recriminatory behaviors can be pathological. Religiosity, in this sense, is often manifested as guilt, worry, extreme scrupulosity, ritualistic compulsivity, delusions, distortions of belief, and desires of persecution or martyrdom.

Scientific research on the relationship between religiosity and psychological functioning has contributed to a greater understanding of the field, but one must exercise caution in generalizing assumptions about religiosity across religious groups and cultures. Research findings have demonstrated positive, negative, or nonexistent relationships. Results may be obtained through correlation (how the variables vary together); and it may be difficult to determine whether religiosity affects psychological adjustment or whether psychological adjustment manifests religiosity.

## Background and Theorists

Hebrew and Christian Scripture describe differences in the expression of religious sentiment: Ecclesiastes (1.16-17) it is the "... mind to know wisdom and to know madness and folly ..." James (1.26-17) "If any think that are religious, and do not bridle their tongues ... their religion is worthless." Excessive demonstrations of faith are observed in the religious reformers as well as the mystics. Erik Erikson (1993) describes the young Martin Luther as suffering from obsessive scrupulosity and a preoccupation with "dirty" thoughts (p. 61). Ignatius of Loyola (1495–1556)

evaluated his scruples for incorrect assumptions: "... after I have thought or said or done some other thing, there comes to me a thought from without that I have sinned, and on the other hand it appears to me that I have not sinned; still I feel disturbance in this; that is to say, in as much as I doubt and in as much as I do not doubt." (p. 138). In this expression of excessive religiosity, excessive scrutiny of perceived faults and offenses does not bring relief. Robert Burton describes the process: "the main matter which terrifies and torments most ... is the enormity of their offences, the intolerable burthen of their sins ... [that they are] "past all hope of grace ... their offences so great they cannot be forgiven" (p. 410). Martin Luther, Ignatius of Loyola, and St Therese among others struggled in balancing the delicate examination of consciousness and extreme scrupulosity (Osborn 2008). Historically, the boundary between religion and psychiatry or psychology was often blurred leaving both physicians and priests confused as to which to treat first "infirmity of body and soul" (Erickson 1993, p. 47). Excessive scrupulosity may at first appear to be enlightened religious self-examination but it is actually Obsessive Compulsive Disorder, a mental condition arising from specific cultural, psychological and medical conditions that prevent the faithful from living lives of grace (Ciarrocchi 1995). Physicians in the nineteenth century were intrigued with manifestations of religiosity. One of the more significant neurologists of the time, Jean Martin Charcot appeared reluctant to accept the religious claims of mystics and demonstrated that professed demonic possession was a form of hysteria. Pierre Janet, a student of Charcot's, described a patient, Madeleine, whose religious behaviors reflected a number of mystic stances, including the stigmata.

This crippling association between scrupulosity and religiosity has been observed in ultra Orthodox Jews. Determining when customary religious ritual transcends to pathological religiosity has sometimes, been challenging for clinical practitioners who are unfamiliar with Orthodox Judaism. One way of evaluating the pathology has been to observe the degree of

distress the individual is experiencing and his/her resistance to change.

Some religious experiences, which initially presented as ritualistic obsessions in mysticism have been deemed meaningful. Delacroix studied the mystics for signs of psychopathology/religiosity. After observing fervent signs of religious behavior, Delacroix concluded that some mystics were not pathological. He believed that the mystics were evolving to new and creative forms of existence, transforming their personalities to achieve selfless unification with God. Mystics, through prayer, attempt to unite with God, Delacroix felt that this process was not a form of disassociation (the sense of being split off from normal awareness). Extreme and lengthy presentations of dissociation can be manifestations of religiosity, however, some researchers believe moments of disassociation may occur during religious rituals and may not include aspects of psychopathology or religiosity. Many people experience during prayer or meditation a sense of being in communion with a holy other (numinous). Otto (1950) described these experiences in *The Idea of the Holy* as transcending to the presence of the sacred.

The religious groups that use extreme ritual, dogma, indoctrination, and alienation from the larger community promote fear and a form of religiosity that is deleterious to physical and mental health. The Rev. Jim Jones instructed the 900 members of the People's Temple to commit mass suicide in Jonestown, Guyana, on November 18, 1978. Perceptions of God, experiences of faith, and expressions of religious behavior can influence how one perceives the external world. When one perceives God as merciful, kind, and forgiving, one is more likely to experience positive effects in relation to mental and physical health than when one believes that God is distant, punishing, or vindictive.

Our understanding of religious beliefs has developed from research involving attachment theory. Attachment theory holds that individuals form cognitive representations of the self and others in relationship, which evolve from the child's interactions with their caregivers. Researchers observed children as they were

separated and then reunited with their caregiver. Children who minimized contact with their caregiver (which was understood to be a defense against rejection) were classified as insecure/avoidant. The children's behavior as they were separated and then reunited with their caretaker they needed comforting. Children who demonstrated considerable distress upon separating from their caregiver, and sought maximum contact reflected inconsistent caretaking or insecure/ambivalent attachment. Children who did not show distress upon separating and sought closeness when needing comforting demonstrated secure attachment. Rizzuto (1979) investigated the effects of attachment on how people perceived God. They found that individuals who described their experience with God as *anxious* were more likely to express signs of psychopathology, scrupulosity, neurotic behavior and a propensity towards negativity. Religious behavior and belief were similar in that when *insecurely* attached people were in adult relationships that were described as *insecure*, they compensated by increasing their involvement in religious activities. People who described *insecure* childhood experiences displayed signs of religiosity, which were more often than not highly emotional experiences. These individuals also tended to experience sudden changes in their religious beliefs and were more prone to acts of conversion. Individuals who described themselves as *securely* attached tended to demonstrate stable religious behaviors. *Securely* attached people adopted religious beliefs that were similar to those of their caretaker's and changed their religious beliefs or activities slowly over time.

## Religious

Peregrine Murphy Kavros  
Management Focus, New York, NY, USA

### Introduction

The word religious is first recorded in the twelfth century in Old French and derives from the Latin *religiōs-us* (the suffix, *us*, means full of). Religious is commonly defined as demonstrating the full practical or spiritual (human spirit, soul, or higher moral qualities) effects of religion. The word also refers to a person belonging to or bound by holy orders.

How one demonstrates the full practical or spiritual effects of religion varies. Variables influencing religious behaviors are multidimensional and measurable. A measure of religiousness and spirituality was included in the 1997–1998 General Social Survey (GSS) a random national survey of the National Data Program for the Social Sciences. The Fetzer Institute/National Institute on Aging Working Group wanted to understand the religious and spiritual trends in contemporary American society. The variables canvassed a wide breadth: whether one is considered religious or spiritual, religious and spiritual development or history over the lifespan, religious or spiritual preferences, the perception of the transcendent (God, the Divine) in daily life, the meaning that is derived from the events of life, the value that the individual places on religion, the importance of and commitment to one's religious and spiritual beliefs, the cognitive dimensions of belief, forgiveness, private religious and spiritual practices, corporate religious life, and corporate religious relationships, religious or spiritual coping. When people who claim to be religious are queried, there are aspects of religion that weigh in more heavily over others. The body of assessments measuring religious attitudes and behaviors has grown over the past decade (Hill and Pargament 2003). Similarly, to other topic areas of social scientific study investigators seek measures of assessment

that are both valid and reliable (Koenig et al. 2001; Meezenbroek et al. 2012).

### Assessment of Religious Behaviors

#### Religiousness

The Fetzer Institute sponsored the development of multidimensional scale, which can be used across populations (Fetzer 2003). Among other investigations, the scale has been used to measure the impact of religious behaviors on health outcomes (Murphy et al. 2000).

#### Orientation

The Allport and Ross (1967) Religious Orientation Scale determines whether individuals are *intrinsically* motivated and live as though personal and religious beliefs are aligned or *extrinsically* motivated and use religion to provide security, status, and self-justification. *Indiscriminately pro-religious* individuals produce responses falling in both scales. And individuals who are neither *intrinsic* nor *extrinsic* are considered *indiscriminately antireligious/nonreligious*. Intrinsic religious orientation has been significantly associated with many factors, one of which is *absorption*, openness to experience and the ability to alter one's emotional and belief systems across a variety of situations.

### Background

Some researchers, despite the questionnaires' wide use, have questioned whether religious orientations such as intrinsic and extrinsic are distinctive. Drawing from the Allport & Ross model, Batson and Ventis (1982) correlated categories of *internal* and *external* with intrinsic and extrinsic. Findings from this study revealed three independent categories: religion as means (extrinsic); religion as an end (intrinsic); and individuals who are in the midst of evaluating their religious or spiritual process (quest). Addressing issues associated with reliability and validity Francis (2007) evaluates the conceptual and empirical strengths and

limitations of both models. The New Indices of Religious Orientation (NICO), a resultant measure of that study, confirmed: that each orientation (intrinsic, extrinsic and quest) is distinct and defensible; aspects of religiousness are measured and not an associated emotional affect; that the terms were re-operationalized in order to equalize the constituent parts within each religious orientation; and that the measure functions distinctly when evaluating different individuals across different situations (Francis 2007).

### Religious Conversion and Personal Transformation

Joshua Iyadurai

Mylapore Institute for Indigenous Studies,  
Chennai, Tamil Nadu, India

William James (1902/1958, p. 157) defined conversion as, “a self hitherto divided, and consciously wrong, inferior and unhappy, becomes unified and consciously right, superior and happy, in consequence of its firmer hold upon religious realities.” Rambo (1993, p. 5) defines conversion as “a process of religious change that takes place in a dynamic force field of people, events, ideologies, institutions, expectations, and orientations.”

Several studies on conversion recognize personal transformation as the central effect of

religious conversion (Heirich 1977; James 1902/1958; Rambo 1993; Snow and Machalek 1984; Ullman 1989; Zinnbauer and Pargament 1998). Scholars define personal transformation associated with religious conversion as “cognitive restructuring” (Batson et al. 1993) and change in “root reality” (Heirich 1977). Mahoney and Pargament (2004, p. 483) observe that conversion “radically alters a person’s understanding of the sacred, the self, relationships, and one’s place in the universe.” William James argued that the divided self is unified in conversion, resulting in positive emotions. Heirich (1977) suggests, “Conversion . . . involves a conscious shift in one’s sense of grounding.” Snow and Machalek (1984) talk about change in the “universe of discourse.” The change is not limited to identities, beliefs, and values, but the previous universe of discourse is replaced by a new one or by one that was in the periphery until now.

Zinnbauer and Pargament (1998) find that the converts experienced “significant improvements in their sense of self, self-esteem, self-confidence, and self-identity,” without altering the personality structure (Paloutzian et al. 1999). In a similar vein, Gillespie (1991) argues that conversion gives a new identity, a new direction, aim, meaning, and purpose. He claims that it affects all areas of life. In short, personal transformation is acknowledged as the central effect of religious conversion.

How does one get the power to bring about such a drastic change? Theologians would ascribe the power to God, while psychologists explain it as a psychological process. One such explanation is the suggestion that when the struggling self is surrendered, the energy spent for struggling over sin is channelized for positive changes. However, some scholars (Gordon 1967; Ullman 1989) point out the absence of struggle over sin before conversion where there is no direction of energy towards personal transformation.

Social psychologists explain that through socialization a person experiences transformation. The affective bonds between the potential converts and the agent or the group play a vital role in transformation. Once a person is part of a group, the group dynamics of social influence

and social learning activate the transformation in a new member. The social influence theory explains how one experiences gradual transformation through influencing relationships when a person is under stress.

Lofland and Stark (1965) first suggested this idea of social relationship in their “world-saver” model at the stage of a cult affective bond. They observed, “conversion frequently moved through preexisting friendship pairs or nets.” This idea has been developed further by other scholars (Bainbridge 1992; Downton 1980; Long and Hadden 1983; Rambo 1993; Richardson 1985). Bainbridge (1992) argues for a combined model of strain theory and social influence theory. A deprived person looks for an alternative option where the social network plays a role in bringing this person to encounter the group. Such social contact facilitates the conversion of a person who is under strain.

Heirich (1977) basing himself on the study of Catholic-Pentecostals concludes that his findings do not support the theories that explain conversion in terms of psychological stress and socialization. However, he acknowledges that socialization could work with a person who is a seeker. “If one is not already a religious seeker, such [social] contact is insufficient in most cases to produce a ‘change of heart.’” Malony (1998) is of the opinion that the friendship should “result in some transempirical answers to the imponderable questions of mystery, tragedy, and circumstance.” A social association alone is not a sufficient cause for transformation, and it is much more than friendship. Moreover, the social influence theory only explains partially the conversion that takes place in a group context. However, this does not explain the sudden conversion or conversion in isolation where people experience personal transformation but have never been part of a religious community.

Converts in general, however, attribute great significance to the divine-human encounter in conversion. They place the religious experience at the center of the conversion process. The realization that one is sinful occurs at the meeting between the divine and human. The convert begins to see himself/herself and the world

differently through the lens of this encounter. Studies (James 1902/1958; Mahoney and Pargament 2004; Rambo 1993; Ullman 1989; Zinnbauer and Pargament 1998) have acknowledged the presence of the divine in conversion and personal transformation.

Dufault-Hunter (2012) argues that the power of faith contributes to dramatic changes in the lives of the converted who were once drug addicts, gang members, and antisocial individuals. Batson et al. (1993) point out that a new vision – cognitive restructuring – arises from the transcendental realm. Similarly, Bulkeley (1999, p. 16), based on the study of dream experiences, claims that “*dreams can bring a dreamer closer to the sacred*” [italics as in original]. He further argues that “religious and psychological approaches to dreams are logically compatible; both approaches agree that dreams connect us with realms that extend beyond—and, in some cases, *far* beyond—the reach of ordinary waking consciousness” [italics as in original] (p. 28). James (1902/1958), Batson et al. (1993), and Bulkeley (1999) point out the existence of a realm beyond the conscious mind. They also spell out the possibility of interaction between the conscious and the beyond through the mystical states of consciousness.

James (1902/1958) explained the entry of the spiritual power only in mystical experiences or sudden conversions. However, even in gradual conversions, the moment of realization and personalization of the religious concepts can be seen as the result of the divine-human encounter. This realization is not simply an intellectual awareness. No matter the type of conversion experience, sudden or gradual, the divine-human encounter through the mystical states of consciousness triggers personal transformation (Iyadurai forthcoming). However, socialization and religious practices sustain the transformation which is an ongoing process.

## Religious Conversion and Social Transformation

Joshua Iyadurai  
Mylapore Institute for Indigenous Studies,  
Chennai, Tamil Nadu, India

Psychological studies on conversion mainly deal with individual conversion and its effects on the individual. However, religious conversion results not only in personal transformation but social transformation as well. Rambo (1993) points out that the effects of conversion are not merely personal but sociocultural. Rowena Robinson (2003, p. 314) observes, “conversion as a sociological phenomenon is rarely limited only to a transformation in religious beliefs. Social and cultural changes always accompany it.” Based on limited literature, we find that group or community conversion lead to social transformation. Studies show that conversion alters one’s identity.

Conversion is a major change of situation in one’s life that creates an identity crisis where the convert forms a new identity based on one’s conversion experience. Bailey Gillespie (1991) draws a parallel between identity experience and conversion experience. He observes that both identity experience and conversion experience have behavioral changes due to “changed frame of reference,” change of ethical values, and the core of a person affected as the common factors. In conversion, a new identity is formed based on a newfound relationship with God and the faith community. He asserted, “Knowing God through religious conversion is identity producing” (Gillespie 1991, p. 191). Converts acquire a new spiritual identity and social identity in conversion.

Buckser (2003, p. 69) claims that “Conversion to a religion is an irreducibly social act; one does

not merely join a faith, but one enters into a set of new relationships with members of a religious community. Conversion, therefore, changes not only the individual, but also the groups that must assimilate or give up the convert.” The context of community is vital in conversion. Webster (2003, p. 373) claims, “Conversion is a process leading to a new identity, but the identity is going to be both personal and social (caste/religious community) as the two are inexorably linked together [in India]”. Social dimension in the conversion process plays a significant role in constructing a new identity.

According to the social identity theory of Tajfel and Turner, a disadvantaged group adopts three strategies to construct positive social identity. (1) Social Mobility Strategies in which individuals disassociate themselves from the disadvantaged group. (2) Social Creativity Strategies in which members modify the comparative elements to make it favorable to the in-group. (3) Social Change Strategies in which members confront the out-group to change the status. Among the three, social mobility is an individual strategy to enhance positive social identity of an individual and the other two are collective strategies to enhance the status of the in-group (as quoted in Jackson et al. 1996). Jackson et al. explain further:

We find collective strategies include both actual and psychological attempts to enhance in-group status. For example, social creativity strategies include changing the valence of a negatively distinguishing dimension to make it less disparaging to the in-group, enhancing perceptions of the in-group on dimensions other than the distinguishing dimension, or changing other elements of the comparative situation so as to favor the in-group (e.g., engaging in downward social comparisons). Social change strategies focus on producing actual changes in the relative status of the in-group and out-group. Typically, they involve mobilizing members of the in-group to confront out-group members to change the status quo.

We find that all the three strategies are adopted to enhance social identity in the conversion process.

Howard (2000, pp. 385–386) observes that identity crisis can give birth to social movements. She argues, “When identity struggles arise, they

generally take the form of redefining negative images as positive, or of deciphering the “authentic” identity.” Jayakumar (1999/2004) in his study of Dalit (the untouchables in the Indian caste system) conversion movements in South India, based on historical records, argues that conversion to Christianity led to their social transformation. The identity crisis of the Dalits was the context in which they acted as a group to redefine their identity through religious conversion. Jayakumar (1999/2004, p. 229) asserts, “The identity crisis and the aspiration for new identity were obvious when the Dalits fully or partially revealed their motives at the time of their conversion.” Clarke (2003) calls it a movement to change the worldview. Webster (2003, p. 372) observed that the primary motive of Dalit conversion in the Punjab in North India was to obtain human dignity and that it was essentially a liberation movement. It was a movement to discard the “psychological conditioning of the oppressive past.” Farhadian (2003, p. 63) based on his study of conversion among Dani of Irian Jaya observes, “conversion to Christianity led to a reconfiguring of Papuan identity” and further claims, “Christianity as force for social change and a new vision of hope ... became real.” Conversion movements among the tribal communities either give them a new identity and dignity or reinforce their cultural identity which gives them positive self-image about themselves and their communities. Religious conversion gives new identity to the communities converted which in turn leads to social mobility. The new identity obtained in conversion enabled converts to see themselves and others as equals or sometimes superior to others. Through conversion they discard the psychological conditioning that they are inferior.

The effect of religious conversion is not only personal transformation but also social transformation. The core of the transformation is the new identity obtained in conversion. The new identity enables the community to have a positive self-image in light of the conversion experience. Conversion is an ongoing process both for individual and community. “While the conversion of an individual can only last for their lifetime, the

conversion of the community is a much longer, inter-generational process” (Webster 2003, p. 374). The degree of transformation may vary due to various factors both for individuals and communities.

## Religious Coping

Ryan M. Denney and Jamie D. Aten  
Department of Psychology, Wheaton College,  
Wheaton, IL, USA

Tix and Frazier (1998) defined religious coping as the “use of cognitive or behavioral techniques, in the face of stressful life events, that arise out of one’s religion or spirituality” (p. 411). Religious coping strategies often stem directly from an individual’s religious beliefs system and help them to construct meaning and form interpretations (both positive and negative) of stressful situations and events (Gall and Cornblat 2002). Moreover, religious coping has been found to be a distinct form of coping separate from secular forms of coping (e.g., cognitive restructuring) (Tarakeshwar and Pargament 2001). It has been hypothesized that the incorporation of religion into the process of coping provides a source of meaning that may not be as salient or readily accessed during times of distress with secular forms of coping (Krause 1998).

### Religion and Coping with Trauma

When faced with stressful life events, many people turn to their faith for comfort, support, and a sense of meaning and control (Pargament and Ano 2006). Most commonly, researchers have found that people use prayer, worship, and social support from a faith community to cope with suffering (Pargament 2005; Tatsumura et al. 2003). A study of 586 members of mainline Christian churches in America revealed that 78 % of church members utilized religion in their coping with difficult life circumstances (Pargament et al. 1990). A study of 1,000 battered wives revealed that one-third sought help from clergy (Bowker 1988). Of 1,299 African Americans responding to an interview concerning prayer, 80 % reported using prayer to cope (Ellison and Taylor 1996). Similarly, Kesselring et al. (1986) reported that 37 % of Swiss respondents and 92 % of Egyptian

respondents believe that God will help them through their cancer-related illness. Koenig et al. (1988) also reported that 45 % of older, Protestant adults believed religion to be an important part of coping. In short, many people turn to religious leaders and practices to cope with traumatic or stressful circumstances.

There are other factors and personal predictors that serve to influence the probability religious coping strategies will be utilized (Pargament 1997). Overall, gender, religious affiliation, level of education, and ethnicity tend to be the most important determining factors in the use of religion to cope with major life stress or trauma (Pargament 2002). For example, minority status has also been correlated with predictors of religious coping (Bearon and Koenig 1990; Bjorck and Cohen 1993; Ellison and Taylor 1996). Furthermore, the fewer resources available to a person, the more likely religious coping strategies will be utilized. Research has also found that the more serious and potentially threatening the stressor, the more likely people are to rely upon religious coping strategies (Pargament 1997).

### Primary Approaches to Religious Coping

Five primary approaches to religious coping have been identified (Pargament et al. 1988; Pargament 2002). The self-directed approach refers to people relying on their own internal resources to cope, believing they are God-given. The deferring approach occurs when people passively transfer responsibility for problem solution to God. In the collaborative approach, people view themselves as partner with God to solve problems. Pargament et al. (1988) and Pargament (2002) also describe several correlates of these approaches, with the self-directed approach to coping being linked to higher self-esteem and an increased sense of control. The deferring approach has been connected to lower self-esteem, external locus of control, poorer problem-solving skills, and increased intolerance for human diversity. Collaborative religious coping, which involves reciprocation of

responsibility between the person and God, has been associated with higher self-esteem, and internal locus of control, and has been described by several researchers as the most psychologically healthy method of religious coping.

### Positive and Negative Coping Strategies

Religious coping strategies have also been divided into positive and negative categories (Pargament 1997). Positive religious coping occurs when people believe that God is guiding and supporting them through their times of trouble. Researchers have shown that those who experience spiritual support often report more positive outcomes (Pargament 2005; Tatsumura et al. 2003). Churches and synagogues are used more than any other social support system as a source of social support in times of distress. People sometimes describe their faith communities as “second families” as they rely on the financial, emotional, and spiritual support of members and clergy. This is an especially salient point in light of the cogent empirical evidence that social support is positively related to healthy coping. Additionally, positive religious reframing has been linked to better outcomes, as persons who attribute death, illness, or other major losses to the will of God or to a benevolent God are more likely to experience positive coping, as are persons who frame their experience as an opportunity to grow spiritually (Pargament and Ano 2006). For instance, cancer patients who attributed more control of their illness to God have reported higher self-esteem and better adjustment (Jenkins and Pargament 1988). Tarakeshwar et al. (2006) also found that positive religious coping was related to better overall quality of life in persons with advanced cancer.

Negative religious coping mechanisms, which occur when religion and spirituality play a role in coping that is not health promoting (e.g., feeling abandoned by God), have also been identified. Pargament (2005) found that people who frequently use negative religious coping strategies also tend to report an increase in negative

physical and psychological experiences such as depressed mood and a lower quality of life.

Major medical illness, for example, may lead to more distress and even physical symptoms because the illness itself represents a threat to one’s foundation of faith (Pargament and Ano 2006). McConnell et al. (2006) found that negative religious coping was significantly linked to various forms of psychopathology, including general anxiety, phobic anxiety, depression, paranoid ideation, obsessive-compulsiveness, and somatization. Also, the relationship between negative religious coping and various forms of anxiety was more pronounced for persons who had recently experienced a serious illness such as cancer (McConnell et al. 2006). Faith communities while often a source of support can also be a source of psychosocial anxiety (Pargament 1997). Sometimes distressed persons report feeling abandoned by church members and leaders, or they feel they have been a disappointment to their faith community. This can have a negative impact on coping, which can lead to feelings of hopelessness, despair, and resentment. Just as there is positive religious reframing, there can be also negative reframing. Seeing one’s trauma as a deserved punishment from God is one of the most common negative religious reframes reported in the literature, the effect of which is often to stifle adaptive coping (Pargament 1997). Overall, religious coping is a multifaceted construct that has been found to affect how people understand, interpret, experience, and respond to stressful events.

## Religious Experience

Robert Kaizen Gunn

United Church of Rockville Centre, Rockville Centre, NY, USA

Insofar as one defines religious experience as an experience of the transcendent or the supernatural (or some equivalent term), religious experience has been around in some form since humans developed symbols and language. We may look at the full range of religious experience in either of at least four ways: (1) how the experiences of the transcendent are viewed from within the religion itself, or (2) how the experiences may be evaluated and understood from a discipline outside any particular religion, (3) the unique approach to religious experience in a religion based on mind, and (4) the use of various drugs to induce transcendental states of mind.

### Religious Experience as Viewed from Within the Particular Religion

Each religion usually begins with a profound experience of the transcendent on the part of the founder. Abraham, Isaac and Jacob, as well as

Moses, all had profound experiences of God that were the basis for Judaism. Jesus had direct experiences of God and his followers had direct experiences of him for the founding of Christianity. Many Christians emphasize the importance of having a personal experience of Christ, called "being born again." Islam was founded on the experience of Allah by Mohammed. Buddhism began with the enlightenment experience of Shakyamuni Buddha and continued, particularly in Zen, to emphasize the importance of one's own direct experience of enlightenment, which would be verified by one's teacher. The value of direct personal experience in religion is in its transformational possibilities: those who have them often claim to have a clearer purpose for living, a shift away from egocentrism in the direction of altruism and identification with the existential plight of all living things, and a sense of time that transcends human chronology. Within each religion there are often criteria by which particular religious experiences are evaluated as to their authenticity.

Within each of the world religions, where the direct experience of the transcendent is not emphasized, emphasis usually falls on correct doctrine, belief or ritual, and practice for approval of one's status within the religion. Thus, Judaism has its requirement of circumcision, the Mosaic Laws, the Torah, and Talmud; Christianity has its gospels and New Testament canon, its belief in Christ as formulated by one of the ancient creeds (Nicene, Apostles, etc.) and allegiance to the church; Islam has its daily prayers and weekly gatherings and reliance on the Koran; Buddhism has its precepts for monks and laity and the teachings of the Buddha as written in the Dhammapada and the many sutras that followed.

### **Religious Experience Viewed from Disciplines Outside Religion**

As an object or field of study capable of being investigated and understood by someone outside any particular religion, however, the very concept of religious experience is a relatively new idea in

the history of civilizations. It requires the conceptual possibility of a secular consciousness, i.e., a consciousness that reflects on itself and on all human phenomena without presuming a priori any particular religious truth. It requires someone to look at religious experience from outside the religion.

In this sense, religious experience is impossible to consider without at least the theoretical possibility of atheism or at least secularization, which is to say, it is impossible without the capacity to stand back from all religions and observe religious activity as an outsider. Such a stance aims to observe, evaluate, categorize, and understand religious experience on phenomenological grounds alone, without any reference to the truth claims of any particular religion.

As such, religious experience as a field of study never appeared in the world before the nineteenth century CE, that era in which God was declared dead by Nietzsche, religion was declared an opiate of the masses by Marx, God was seen as a projection of the immature human psyche by Freud, and the entire origin of species was theorized by Darwin without any assumptions of theistic causation.

One might say that the roots of an entirely secular, nontheistic *weltanschauung* were laid by the Protestant Reformation's break from the Roman Catholic Church (1517–1648), for without the concept of a legitimate consciousness separate from ecclesiastical control, all observations and truth claims were captive to the church, as attested by the church's condemnation of Galileo (1564–1642) and Spinoza (1632–1677), among others. Although the grounds for separating from the Roman Catholic Church were *intra-religious*, based on the interpretation of the Biblical text itself, the revolutionary and groundbreaking departure was the concept of the individual conscience and the personal direct access to God as superseding ecclesiastical authority. The conception of the possible validity of an individual's conscience being greater than the *consensus ecclesiae* was the first step toward the development of a secular consciousness, a consciousness not constricted by and defined by the church's authority. In this sense, the

Protestant Reformation was a necessary precursor to the Age of Enlightenment, which provided the humanistic philosophical and political framework from which the natural and social sciences of the nineteenth century sprang. Only after Freud, Marx, Nietzsche, and Darwin could the idea of a study of religious experience per se be considered.

William James may easily be called the father of secular studies of religious experience. His book, *The Varieties of Religious Experience* (James 2004), published in 1902, remains the classic work in the field. In it he outlined the four characteristics of religious experience as being (1) transient, (2) ineffable, (3) noetic, and (4) passive. The experience is transient in that it occurs in a limited frame of time, after which the person returns to ordinary life. The experience is ineffable in that it is hard for the person to put it into words. It is noetic insofar as the person usually feels that she/he has learned something of deep and lasting value, on the basis of which her/his life is altered significantly for the better. The experience is passive in the sense that it was not created by conscious control but “just happened.” Even if one engaged in deliberate activities to increase the possibility of the experience, the actual experience was not under the person’s willpower or control.

It was in this book that James distinguished between the “once born” and the “twice born”: the once born are people who go through life without having any powerful religious experience that significantly changes them; the twice born are those who do have such a powerful religious experience that they see it as the basis for an entirely new (and improved, from their point of view) way of living.

It was also in this book that James distinguished between the religion of “healthy-minded” people and that of those of a very disagreeable temperament. In James’ view, healthy-minded people choose a form of religion that is basically positive in its outlook on people and the world, whereas less healthy-minded people choose a religion fraught with the dynamics of judgment, anger, and wrath. This distinction was invaluable for future studies on the particular

characteristics of healthy/unhealthy people and, by extension, healthy/unhealthy religion.

The value of James’ book far exceeded the numerous brilliant insights he offered: it laid the groundwork for the entire field of psychology of religion and psychology and religion. Moreover, it suggested how religion might be a proper field of study for other sciences. Thus, since James, the many dimensions of religious experience continue to be mapped by the fields of philosophy of religion, phenomenology of religion, sociology of religion, comparative studies in religion, history of religions, neurotheology, transpersonal psychology, and genetics.

Meanwhile, as society has become increasingly secularized and mainstream religion has suffered loss of favor, many people identify themselves as being “spiritual” without being “religious,” indicating an interest in experiences of the transcendent but a decidedly negative valuation of both institutionalized religion and monotheism. Such people tend to gravitate toward Eastern, nontheistic religions or to personally constructed amalgams of religious and spiritual truths and practice. The result is the expansion of the meaning of “religious experience” to include “spiritual experience,” in order to include those who intentionally don’t want to be identified with institutional or theistic religion.

### Religious Experience as Viewed from Within a Religion Based on Mind

More than 2,000 years before Freud, a religion arose in India that was based on the intentional exploration of the nature of mind itself. Standing midway between religions that evaluate religious experience on the basis of his or her own internal standards and scientific disciplines that evaluate religious experience from an outside observer standpoint, Buddhism is entirely based on realizing the nature of mind and what is its ground or source through intensive meditation. Fully aware of the mind’s tendency to distort, project, deny, and engage in whatever activities may confirm a sense of a permanent self; Buddhism trains adherents in awareness of the mind’s dynamics

in order to break through the delusion of a fixed, separate, and immutable self to ultimate reality, the emptiness of all things. Such a breakthrough is what is called enlightenment in Buddhism. From that experience one realizes in a total (whole body and mind), nonconceptual way the basic tenets of Buddhism: the interdependence of all things, the impermanence of all things, wisdom, and compassion.

### Religious Experience Initiated by the Use of Drugs

The last category of religious experience to be considered is unique in that it is based on the ingestion of some form of chemical, whether found in nature, such as peyote, or manufactured, such as LSD, psilocybin, cocaine, or nitrous oxide, among others. Taking one of these drugs induces an experience with many of the characteristics identified by William James as marks of traditional mysticism: a transient and ineffable feeling of ecstasy and of loss of boundaries, an oceanic feeling of oneness with all, and the noetic conviction that one has experienced some profound existential truth about the nature of ultimate reality. On the other hand, since it is prompted by the ingestion of drugs, such experiences do not have the fourth trait of passivity James listed. The significance of the passivity in traditional religious experience is in understanding it as an experience of grace, beyond one's control. This element may be missing for those who use a drug to trigger the experience. For some people, nevertheless, drug-induced experiences of transcendence do become transformative in their day-to-day life. Such a life change is usually made possible by the person's continual reflection on the experience and construction of a method for integrating the experience into their common life. On the other hand, as those religions that have made use of drugs in their rituals (most notably, Native American tribes), certain precautions (such as the presence of a trust other person or community, or the context of a ritual) need to be taken so that the drug functions in a constructive way.

## Religious Fundamentalism and Terrorism

Naji Abi-Hashem  
Independent Scholar, Seattle, WA, USA, and  
Beirut, Lebanon

The term "fundamentalism" has recently gained more attention and publicity in mass media and

professional literature, yet it is still viewed in a negative way, especially after the rise of extreme groups around the world and the traumatic events of 9/11.

### Reactionary Fanaticism

Virtually any type of fundamentalism can be defined as a strict adherence to the basic principle or belief system. Fundamentalism is reactionary; it develops as a normal reaction to social modernism, moral pluralism, and religious liberalism. It is any attempt to protect the self or the community from any potential threat or deviation in matters of doctrine and conduct. It is part of a cultural and emotional apparatus, stemming from ancient, deep universal desires for psychological security. Religious fundamentalism strives to cling to ancient traditions and persistently calls for an unwavering return to foundational beliefs that becomes fanatical. It is a spiritual and an ideological attempt to reemphasize the literal interpretation of any sacred literature considered to be holy.

Fundamentalism is not only found in religious circles but in other areas of public life such as in politics, businesses, science and academia, sports, and military doctrines. Extreme secular humanism and fanatic atheism have their own versions of fundamentalism as well. However, to be a *fundamentalist* is not identical to being *cultic*, in the literal sense, but such a group can easily become *sectarian*. When a movement employs some type of brainwashing and indoctrination, in an excessive manner, then it will lead to a *cultic* formation (Abi-Hashem 2012a).

Generally speaking, most people, lay and professional alike, possess certain tender spots (“push buttons”) that can elicit intense reactions. Even though these individuals seem to be reasonable and functioning properly in most domains of society, in such protective areas they seem to be totally unrealistic. Obviously, we all have certain strong passions and values. However, for fundamentalists, there seem to be defensive mental blocks. When these are challenged, they will react fiercely, almost ready for combat.

For people to have *fundamentals* or *focused passions* is very normal and necessary to maintain a balanced worldview and a clear value system. But when these convictions or passions become markedly skewed, narrow, or acute, then they will lead to a rigid and dysfunctional mentality (Abi-Hashem 2012c, 2013).

Fundamentalism is not simply a cognitive ideology, but rather an *attitude*, rooted in unconscious dynamics. Such attitudes show a dedication to a subject or a doctrine of utmost importance to the individual or to the group, leading to varying degrees of rigidity, legalism, fanaticism, and intolerance. However, fundamentalist people are different from each other in their type of belief, degree of inflexibility, and level of emotional reactivity. Fundamentalism can flourish when a community feels its core values to be threatened. Obviously, this process reflects the group’s understanding of their mission, level of inner (in)security, emotional (im)maturity, stage of moral development, cognitive reasoning, and sense of their projected destiny (Abi-Hashem 2012c, 2013).

### Religious Fundamentalism

Religious fundamentalism is mainly an excessive tendency to preserve the principles of faith and their strict applications without compromise. It is a concentrated effort to dwell on the truths, as purely as possible, and avoid potential errors and inaccuracies, in matters of beliefs and conduct. Invariably, legalistic movements do not encourage openness, tolerance, or diversity. Tightly knit groups normally view exposure to the outside world as threatening to the group’s safety and cohesiveness. Therefore, conformity to inner-group norms, loyalty to the leaders, and fidelity to the core principles are seen as absolutely critical (Caplan 1987; Hood et al. 2005).

Every community typically feels an innate need to hold on to a past heritage and to revive parts of history that bestow glory, security, and pride. In that process, however, some tend to lock themselves so blindly into the past that they fail to fully accommodate the present or prepare for the

future. They cling rigidly to practices, doctrines, or legacies without being able to modify any contemporary stance. They cannot reconcile the differences or face the challenges. To compensate for that feeling of being unable to integrate polarities, people frequently have to convince themselves that they have ultimate answers to the hard questions of life. They claim a monopoly on *truth* and pride themselves as *purists*, unaware of their psychosocial splitting, mental inflexibility, antagonistic behavior, and their sense of arrogance and superiority.

Religious fundamentalism is primarily concerned about protecting its spiritual dogmas and moral values, even at the cost of isolating themselves or alienating others. It is found in every ethno-cultural or religious community, such as Judaism, Christianity, Islam, Buddhism, or Hinduism (Abi-Hashem 2012c, 2013). According to Mercer (2009), the structure of the fundamentalist worldview and the psychology beneath its framework are almost the same across all faiths and religions. Currently, as the world is getting closer and cultures are mixing more than ever, it seems that in reaction, separation walls are also rising and new religious movements (NRM) are growing (Lewis 2004). Therefore, the world is witnessing two major and opposing movements: one driving toward modernism, secularism, pluralism, hedonism, and materialism and the other reacting by striving toward traditionalism, legalism, fundamentalism, isolationism, and fanaticism.

## Motives for Fundamentalism

Why do some people tend to become fundamentalists in their views and attitudes or even join an extremist group? There are a number of determining factors, including people's emotional stability, cultural background, moral values and beliefs, life experience, and existential aspirations and fears. Wiviott (2007, pp. 2–3) proposed several root causes of fundamentalism, based upon his analytical perspective:

(a) People hold beliefs that unite them together as a group. This eventually provides a secure

identity for those whose sense of self is shaky. Also, rituals – such as group prayers, fasting, chanting, sacrifices, pilgrimage, and feasting together – help solidify group cohesiveness, even on the expense of individual identity.

- (b) In order not to feel threatened, people employ the psychological dynamic of splitting, creating a scenario of “us versus them,” so they will feel much better about themselves compared to others.
- (c) Inner and intersexual tensions can also account for some fundamentalist thinking. There is a need to govern sexual behavior and impulses so they will not become uncontrollable, so men feel the need to protect “their” women. Perhaps also men unconsciously fear the feminine and its potential to dominate the masculine. So fundamentalists come up with rigid rules and regulations to restrain sensuality, beyond average modesty or social norms.
- (d) Human beings live with the awareness of their own mortality and death. This reality can create substantial anxiety causing people to seek comfort in images, symbols, myths, or hope in the afterlife.
- (e) Humans basically sense their insignificance in the vast scope of life and, therefore, seek guidance and meaning for existence from the transcendent universe. Literal interpretation of sacred texts can provide needed answers and comfort, since questions and doubts will only increase existential anxieties.

## Polarity of Morality

Ironically, there is an innate desire among the great variety of humans to construct a basic morality, fundamental convictions, and clear-cut values. It seems that a strict tendency helps them face mental ambiguity, material secularity, and moral relativity. On the other hand, there are differing calls from those who advocate constant change, open mentality, fast mobility, unrestricted modernity, strong individuality, and custom-tailored spirituality. These polarities can

be found in every social group and every personality, stimulating intrapsychic tension, interpersonal anxiety, intragroup frustration, and intercultural miscommunication (Abi-Hashem 2004, 2011; Caplan 1987; Friedman and Rholes 2008; Wiviott 2007). Those who are able to reconcile some of the existing polarities usually find a comfortable medium to maintain. This balance may serve them well for a while, but not for long, until the dynamic forces of change unsettle them again. Other groups (even nations), unable or unwilling to compromise the conflicting forces, find themselves gravitating toward one of the two extremes: they either become too intolerant or too accommodating. Consequently, they spend a substantial amount of energy trying to defend their newly found attitude and position. However, if the ideological differences are not adequately resolved, then the tension can easily escalate into hostile or violent social turmoil and *religious militancy*.

When fundamentalism is mentioned in the mass media or in public discourse, it appears to be used interchangeably with *fanaticism*, *extremism*, *radicalism*, and *terrorism*. Although these conceptions have many traits in common, they differ in nature. It seems that they form a continuum, progressing from the mild to the severe and from a low level of dysfunction to an acute level of destruction.

## Understanding Terrorism

What is terrorism? Is it random violence against civilians to inflict social pain and score political gain? Is it an effort to arouse general fear of another hazardous attack? There is no single agreed-upon definition of terrorism. There are some guidelines of what constitutes a terrorist attack, but labeling an individual or a movement as *terrorist* remains debatable. Perhaps it is easier to define a certain behavior or a specific act as terrorist, rather than to ascribe the label of terrorism unto a whole personality or community (Abi-Hashem 2003, 2004; Council of Foreign Relations 2004; Gayraud 1988; Lee 2011).

Extremism and radicalism are usually born out of ethno-political and religio-cultural situations and can be the result of some form of injustices, oppressions, or threats (real or perceived). Often, it is very hard to differentiate between what is purely sociocultural, theological, or political, since these are intertwined (Abi-Hashem 2010, 2011; Abi-Hashem and Driscoll 2013; Santosh 2004; Shapiro 2012). Religious militancy can be born out of these conditions. But political motives can also add a theological cover or a doctrinal justification as a front in order to appeal to faithful believers and religious zealous among its followers. In recent years, extremist, fanatic, and radical groups, seemingly reacting against modernism, have been quite willing to use new aggressive strategies and electronic technologies to promote their ideas, raise funds, recruit members, or launch their assaults. Many observers predict that the next confrontational war may very well take place in cyberspace (Abi-Hashem 2012b; Barzilai-Nahon and Barzilai 2005).

Are the so-called terrorists born overnight or made over time? Many scholars see an unfolding progression, similar to the stages of development, advancing an individual, a group, or an agency from one level to the next, until they reach a dangerous point of magnitude: *traditionalism*, *legalism*, *fundamentalism*, *extremism*, *radicalism*, *militantism*, and *terrorism*. Cumulatively, each phase becomes more explicit and intense, providing building blocks for the next level. The passions and behaviors will rapidly grow and increase to become more skewed and hostile. At this stage, people can utilize severe aggression and violence in their perceived duty to defend their treasured dogma.

Finally, and at the end of the chart, the condition of irrationality, rigidity, and obstinacy becomes painfully irreversible. Severe mental fixation and absolute indoctrination engulf the personality or the group in a strange mind-set, like a totally different universe. This is a journey of no return, when those involved are willing to die for their cause, even if they commit massive atrocities in the process.

## Mystery of Martyrdom

Sacrificing the *self* in the act is part of *martyrdom operations* or *suicide bombing* (depending on who is describing the act). At this acute and climactic stage, the individual or group executes all activity in good faith, in peace of mind, and in clear conscience. They have committed themselves, in blind obedience, to a divine commission, as they best understood it, and therefore are willing to accomplish any task for the sake of their supreme cause and cherished ideology (cf. Abi-Hashem 2003, 2004, 2007, 2012b; Armstrong 2005; Berman 2009; Council of Foreign Relations 2004; Cronin 2007; Gallagher 2005–2006; Lee 2011; Metz 2006; Shapiro 2012).

There is a deep, unconscious element about terrorism that is still unclear and confusing. Evidently, scholars have a task ahead of them: to dig into the deeper, multiple layers and uncover the mysteries of this complex and ambiguous phenomenon called terrorism.

## Religious Identity

David M. Bell

Department of Religious Studies, Georgia State University, Atlanta, GA, USA

### Introduction

Most scholars in religious studies and the humanities understand religious identity to be a simple matter of self-identification with a religious tradition. The term is popular in these fields, but such an approach offers little in the way of conceptual clarity or insight into the formation or functioning of religious identity. When approached from a psychological perspective, religious identity reveals significant insight into

the cognitive role of religion; new research may influence the basic questions asked about the psychology of religious beliefs and practices.

### The Psychology of Identity

Erik Erikson (1902–1994), a theorist who essentially began the psychological study of identity, originally spoke of identity as a central ego achievement to be reached in adolescence (1950). One's *ego identity* ("ego" comes from the Latin nominative pronoun "I") is formed from simpler identifications made in childhood and then integrated into a coherent sense of self in adolescence. Through evolution, Erikson theorized that the adolescent is biologically wired to necessarily seek social resources for this identity process during this time of life. This illustrates the interdisciplinary quality of Erikson's *psychosocial model* as being both psychological and sociological. The psychological person is designed to pull identity content from the relative and always changing cultural resources. Observing that identity is often formed and integrated in adolescence only to be later unraveled, Erikson later expanded this stage of human development to also be a constant psychosocial element in adult life as aging individuals encounter other identity crises throughout adulthood.

The current psychological study of identity can be divided into two primary areas. One area of research looks at the cognitive mechanisms and neural structures that are utilized to construct autobiographical memory. There are three primary findings in this relatively new area. First, the field of autobiographical memory emphasizes that identity is more than a mere sociological identification. One's identity is a neurological component of the brain that is formed through memory encoding, selective retrieval, implicit memory schemas, and many factors of psychosocial selective biases. New research in functional magnetic resonance imaging (fMRI) has shown specific modular patterns of long-term memory encoding in which particular regions of the brain are utilized in different types of memory which

are complexified by variants in the content of the remembered experiences. Secondly, this research has shown that memories of experiences are reconstructed and that individuals typically overestimate the correctness of their memories. Humans naturally recreate their event memories to fit patterns of belief expectations. As part of this constructive process, implicit memories (subconscious) are formed from a collection of various experiences that then function as a filter through which to interpret later experiences. Finally, researchers in autobiographical memory have demonstrated a psychosocial quality in the cognitive formation of identity. Through developmental studies of autobiographical memory, Fivush and Haden (2003) have shown that children form a coherent sense of identity primarily through learned patterns of adult and peer interaction.

Another area of identity research uses psychometric measures of identity to determine levels of identity status formation. Marcia (1966) took Erikson's concept of identity development and sought to break it down into four identity statuses that could be measured. He distinguishes two factors that are relatively independent of each other in identity formation. The crisis axis measures whether a person had ever had an identity crisis and whether they are currently in an identity crisis. The commitment axis determines whether or not someone has made a commitment to a certain identity. Identity diffusion (no crisis, no commitment), identity foreclosure (no crisis, commitment), identity moratorium (present crisis, no commitment), and identity integration (past crisis, commitment) make up the four identity statuses. The content of the qualitative interview and the psychometric measure of identity neatly divides the questions into primary areas of vocation, gender, politics and religion. Marcia's popular paradigm has been used in hundreds of published articles. The preponderance of research in identity and the psychology of religion has used variations of Marcia's measure with other established psychological measures of religiosity to reveal interesting connections in which religion is often shown to be a positive

resource in overall identity achievement (see review by Spilka et al. 2003, pp. 143–146). Such studies have shown a connection between identity achievement and increased intrinsic religiosity, belief-threatening consultation, and the level of religious commitment. Identity moratorium is positively associated with higher levels of quest, belief threatening consultation, lower levels of religious commitment, and religious doubting. Identity foreclosure is correlated with extrinsic religiosity, religious commitment, and belief-confirming consultation. Overall identity diffusion is generally related to lower levels of overall religiosity.

There are two caveats to this work. First, these findings are limited due to biased sampling with subjects who are primarily in the United States, primarily adolescents, primarily Christians, and primarily more religious than the norm of American society. More importantly, another limitation lies in the basic theoretical conception of the studies. Using a basic identity status measure (which includes religious content) and a basic measure of religiosity, the researchers end up confounding their results by partly measuring the same factor – religiosity. To show a relationship between religiosity and identity development, one would either have to remove the religious content from the identity measure or design an entirely new measure of religious identity. This also reveals a problem for identity research in which the primary measure of identity is biased towards more religious people.

### **Religious Identity Formation and Functioning**

In the last decade, researchers in identity studies have begun to focus on specific cognitive domains of identity, which may be neurologically unique from other domains, and may be formed independently of other domains. This finding of *domain specificity* has shown that identity statuses may be entirely different in one identity domain than in another domain. Several recent studies have looked at unique patterns of identity

formation in the specific areas of ethnicity, gender, vocation, and politics. But few have considered the unique formation and function of the domain of religious identity. Until recently, there has been no conceptual work in a psychology of religious identity, and no tool with which to measure or establish uniqueness of religious identity. A recently proposed psychometric measure of religious identity seeks to look at identity formation through the lens of religiosity separated from overall global identity (see direction of this research in Bell 2008). In one study of 650 subjects, four statuses of religious identity were defined and measured in ways that revealed clear patterns of cultural resources (i.e., particular religious backgrounds) predicting but not determining overall identity formation. The conceptual bases of the four statuses were also reconsidered to avoid simple assumptions by Marcia about identity achievement in the specific content of religion. A fourth status of “religious identity integration” is being proposed that better reflects a more fluid commitment instead of a rigid commitment to a particular form of religion.

Likewise, this conceptual work considers the functioning of religious identity as potentially the most unique domain of identity in which the focus of religious identity is often away from the self/ego (transcendence to other), much more capable of imagination, and more prone to implicit belief patterns of narrative construction. In the same study of 650 participants, it was demonstrated that people use religious identity in both implicit and explicit ways. In conjunction with the cognitive research in implicit memories, individuals use religious identity in ways in which they may be largely unaware. The importance of one’s religious identity often increases in importance due to levels of social approval bias. For example, the explicit functioning of religious identity is often presented as much more important than when measured implicitly. For the researcher, getting at such a disclosure of religious identity is difficult not only due to social approval bias but also due to “deity approval bias.” People may want to say that religion is

more important to their identity than it really is not only because of social approval concerns, but also because the deities of their belief system may not approve if it is not important enough.

One goal of this research in religious identity is to discover why it is that for many individuals religious identity lingers in the mind much longer than religious beliefs or the desire to do religious practices. For those who change or lose their religious practices and even their religious beliefs, individuals may find that their religious identity is still present and continues to keep them somewhat oriented around religion. This illustrates how religious identity, for many individuals, may be a core psychological mechanism that takes on more permanence than beliefs and practices. Such a proposal may significantly influence how researchers in psychology and religion approach and ask the most basic questions about the role of religion in the mind. Another consideration includes the reframing of the notion of religious orientation. Allport and Ross’s (1967) measures of extrinsic and intrinsic orientation were efforts to distinguish different motivations in individuals’ religiosity as explicitly reported by the participants. By looking at the levels of social approval bias, a psychological understanding of implicit and explicit religious identities takes the question of motivation to a different level in which self-reported motivation is only one consideration.

The work should also extend beyond the measures of such factors. With adequate funding, fMRI studies could investigate whether there are unique modular areas of religious identity. To date, studies have shown how general autobiographical memories are retrieved and constructed, but this research has not considered how the content of the identity may affect the retrieval process.

In short, the psychological study of religious identity is fundamentally a psychosocial investigation in which religious content is often a rich identity resource for individuals in most societies. Certainly one does not need to be religious to be able to form an overall, integrated, and healthy global identity. Religion is part of the many

cultural resources that are highly relative and prone to changing over time. Yet, the ways in which the individual needs to form a notion of self through adulthood are uniquely affected by the amount of religious resources by which that individual is surrounded with. Further, religious identity content, as a cognitive domain, operates differently than other domains, including gender identity, racial identity, and political identity. Finally, it is proposed that the psychological study of religious identity is relatively unexplored and yet foundational to much of the research in the field of psychology of religion. As a new theoretical paradigm, it offers several explanatory insights into the role of religion in the mind.

## Religious, Role of

Sharn Waldron  
Bungay, Suffolk, UK

Carl Jung defines his understanding of religion in terms that make it apparent that he regards religion as a certain attitude of mind taken towards particular factors of experience that are seen as powerful, dangerous, grand, beautiful, or meaningful (Jung 1938, para. 8). These factors of experience are factors of psychic experience and especially those psychic experiences that arise from the collective unconscious. From Jung's perspective, religious ideas originate with the archetypes and careful consideration of the archetypal symbols and image constitutes the essence of religion.

### The Transcendent Quality of Religious Experience

Religion has a transcendent quality because these unconscious processes transcend the realm of the conscious ego, the observing subject, and the ideas and motifs of religion appear to the ego to come from beyond and revelations. But psychologically speaking, this beyond is also within although not restricted to the individuality of the experiencing person. Jung considers that the realm of the unconscious from whence these revelations derive may possess an insight superior to that of the conscious mind. Religious experience is grounded in what is both absolute subjectivity and universal truth; it partakes of the accumulated wisdom of the ages and is not lightly influenced by either the caprices of consciousness or with transcentary cultural trends (Jung 1952, para. 355).

The images enshrined in such Christian doctrine as the God-man, the Trinity, the Virgin Birth, or the Cross are not peculiarly or exclusively Christian. Not only can they be found in many pagan religions, but they may

also appear or reappear spontaneously with all sorts of variations as psychic phenomenon. In Christianity, they have been refined and are highly developed, but their remote origins are neither faith nor tradition but primitive dreams, visions, or trances. They are certainly not conscious interventions, but Jung considers that they came into being at that stage of human development in which humans did not so much think as we do today but rather were aware of thoughts coming into them. These dogmas may last for untold centuries: the suffering God-man may be at least 5,000 years old and the trinity is probably even older. Jung claimed that the doctrines of a particular religion are expressions of unconscious psychic activity with their roots in humanity's primitive past. The particular religion merely shapes and refines these ancient symbolizations.

In consequence to this common reference of symbols of all religions to the fundamental archetypes, there can be no exclusive claim made by the disciples of any particular religion on behalf of its own God. These claims must rather be regarded as an index of the intensity of the conviction aroused in believers by their experience of the overwhelming numinosity that they call God. The experience is certainly valid, but the interpretation of it may not be. Anything or anyone, any figure or any symbol which can produce this overwhelming effect is entitled to the name "God" from the point of the believer, but he can also say that "every idea of the ultimate, of the first or last, of the highest or lowest. The name makes no difference" (Jung 1952, para. 739 note 1).

As a psychologist then, Carl Jung agrees neither with those who see God as absolute that is existing in Himself nor yet with those who adopt the relative view of God which recognizes at least in an elementary way that there is some personal involvement in the process which produces conception of God (personal here relating to the personal psyche). Within its self-imposed empirical limits, analytical psychology recognizes God as a function of the unconscious and particularly of the collective unconscious. The image

of god is then the symbolic expression of a certain psychological state, or function, which has all the character of absolute superiority to the conscious will of the subject; hence, it can enforce or bring about a standard of accomplishment that would be unattainable to conscious effort.

### **The Impact of the Development of Consciousness on Religious Experience**

In the process of the development of consciousness by humanity, Jung argues that two unfortunate but probable unavoidable errors arose in relation to the concept of God. The first of these was materialism that declared in effect that since God could not be found in the galaxies, he had never existed. The second error was to psychologize God as an illusion based on the will to power or repressed sexuality. But Jung believes that humanity cannot thus easily dispose of God or of the instinctually or archetypally based religious impulse. From time immemorial human beings have recognized the existence of gods or a God in one form or another and have been unable to do without them. Consciously or unconsciously, the idea of an all-powerful divine Being is everywhere present. He who says with Nietzsche that "God is dead" does not thereby rid himself of God but rather faces the fatal inflation of becoming his own god – and such gods are but tin gods with thick skulls and cold hearts (Jung 1917, para. 113).

The alternative, which Carl Jung propounds to these two errors, is based upon the conviction that the God images in the psyche have not only numinosity and power but also an essential autonomy. They exist, and they are not dependent for their existence on any other need, motive, desire, or attribute of human beings. For the empiricist, the unanswerable question concerning the metaphysical reality of God in Himself is irrelevant beside the fact that the "idea of God is an absolutely necessary psychological function of an irrational nature." The idea is archetypal and thus there is that within the human psyche which will behave as a god and which caution,

if nothing also, dictates should be consciously acknowledged as God (Jung 1917, para. 113). Human beings do not create gods for themselves, but there is a sense in which they choose the master they wish to serve. In choosing their god, humanity necessarily denies their services to other masters and attempts to secure themselves against them. Such choices do define one's God, but they do not make intelligible that unknown psychic quantity which implies the choice. For true wholeness and genuine health, or salvation, it is important that the human individual chooses wisely. In other words, humanity can become a Self only by choosing the right God. The live issue for modern humanity is between the archetypal image with its authenticity and its immediacy, on the one hand, and the intellectual constructs of the so-called enlightened mind, on the other. In the final analysis, these constructs represent the abortive attempt on the part of the enlightened to deny the reality of both the God image and the realm from which the image derived (Jung 1933, para. 429).

### God as Dangerous

Christianity and Judaism and others of the world religions recognize God as being not only redemptive but also dangerous. In Judaism, for example, the holiness of God is seen as something unapproachable: no man can see God and live. (Compare the elaborate precautions taken to protect the unwary from the Holy Mountain, from the ark, etc.) God must be mediated to humanity, and this mediatory function finds its highest expression in the figure of Christ. This concept of the danger of the nearness of God, according to Carl Jung, is a well-established psychological fact (Jung). The concentration of psychic energy in the unconscious can have catastrophic effects upon consciousness, and the saving factor is the symbol, "which is able to reconcile the conscious with the unconscious and embrace them both" (Jung 1921, para. 178). God images are practically indistinguishable

from the symbols of the self; this means that these symbols and images serve the very real purpose of putting the human individual in touch with his/her own depths in such a way that the contact does not destroy him/her but immeasurably enriches his/her life and increases the boundaries of his/her awareness.

Jung is convinced not only that religious dogma and doctrines always express and formulate essential psychological attitudes but also that they are a more satisfactory medium of expression than scientific theories for irrational facts like the psyche. A theory is necessarily highly abstract and exclusively rational, whereas the imagery of dogma can encompass psychic totality and can express the living processes of the psyche in suitable dramatic forms, like the drama of creation, sacrifice, and redemption.

Thus, Jung argues strongly for the positive value of myth and claims that to divest the gospels of myth would be to sacrifice that very quality in them which conveys wholeness and health. Myth becomes suspect only when one attempts to take the mythological contents literally and concretely, in which case they come into conflict with the objective knowledge of the external world. Treated symbolically, they have tremendous force and power.

Myth is not to be confused with fiction but should be recognized as the dramatic expression of psychic experience that has been constantly repeated in individual lives and in whole cultures. Since they relate back to the archetypes, their content cannot be exhausted in rational explanation and to dismiss them as primitive is to overlook the fact that humanity still has its primitive nature.

Much unnecessary confusion arises from the failure to distinguish between what Jung calls religion as immediate experience (or, more usually, just religion) and religion as creed. Once again Jung himself is partly responsible for the confusion since he is not always consistent in making it unambiguously clear whether his praise or polemic against religion is directed

towards the experience or the creedal variety. Jung writes that

the creeds have accordingly seen themselves obliged to undertake a progressive codification of their views, doctrines, and customs, and in doing so have externalized themselves to such an extent that the authentic religious element in them - the living relationship to an and direct confrontation with their extramundane point of reference has been trust into the background (1957, para. 508).

Religion as immediate experience is grounded in the experience of the numinous, the extramundane, which is manifested through the unconscious. Essentially it is personal and individual experience of the collective depths, and as such it is superior to even the best traditions, at least with respect to the intensity of the conviction that it imparts. His reflection on his experience may or may not accord with the orthodox conceptions or formulations of particular religious confessions, but official pronouncements of the church, synagogue, mosque, or temple are comparatively meaningless unless the individuals to whom they are addressed can themselves authenticate them by personal experience.

This experience may well be mediated through the historic religions with their wealth of symbols and images expressive of wholeness and salvation but only if those symbols and images are consciously recognized and valued for what they are. The whole meaning and purpose of religious experience can be expressed in language more congenial to the great religions of the world by saying that the purpose lies “in the relationship of the individual to God (Christianity, Judaism, Islam) or to the path of salvation and liberation (Buddhism)” (Jung 1957, para. 507). Psychologically, the meaning and purpose lies in the relationship of the person to his own Self, or to the path of wholeness and health.

## Repression

D. Brian Smothers  
The Counseling Center of Milwaukee,  
Milwaukee, WI, USA

## Definition

Repression: (1) The defensive process by which an idea or memory is expelled from the conscious mind. (2) A defense mechanism used to protect the self from unwanted affects associated with instinctual impulses.

## Discussion

According to Freud’s original childhood seduction theory, an individual repressed unwanted or painful memories associated with childhood sexual experiences which were subsequently reawakened in adult sexuality. As Freud’s theory

moved away from the actuality of childhood abuse and towards instinctual sexuality, repression played a prominent role as a generic psychological defensive phenomenon in which an individual excluded painful affects and perceptions from consciousness. Repression was one of Freud's earliest discoveries in working with hysterical patients. Freud felt that such patients experienced impulses that were stricken from consciousness and converted into somatic complaints and hysterical symptoms, such as blindness and paralysis. Thus, while the memory may have been expelled from conscious awareness, the event, affect, or impulse remained present through a compromise formation within the symptomatic sphere.

Originally, Freud argued that the repression of drives and affect as experienced by hysterical patients resulted in anxiety. As the affects and drives were pressing for release and subsequently repressed, the individual experienced anxious tension. Freud later amended this theory to suggest that repression was a result rather than a cause of anxiety. Accordingly, a preexisting fear, impulse, or anxious tension caused the need to forget. Freud suggested that repression occurred in two separate phases, primary repression and secondary repression or repression proper. In primary repression a child learns that some aspects of reality are pleasant, while others are unpleasant. The child, on an unconscious level, keeps unpleasant experiences and affects out of conscious awareness. According to Freud, primary repression is thought to be the cause of infantile amnesia. In accordance with the development of the superego and the maturing of the psychic apparatus, the child is able to actively defend the conscious from unwanted perceptions. Thus, in secondary repression the child formally and consciously excludes from consciousness, desires, affects, or perceptions that may cause tension or anxiety.

At its core, repression is motivated forgetting or ignoring. Freud's early drive model suggested that impulses and affects press for release and have to be held in check by a dynamic defensive force. It is important to note that not all forgetting is an example of repression. Repression is primarily defensive, in that it protects the conscious

from an overwhelming affect or perception. Classical analytic theory regards repression as a higher-level neurotic defense.

Regarding matters of religion, Freud persuasively argued that repression and obsessional neurosis were at the core of religious traditions and practices. Freud suggested that as instinctual impulses, primarily sexual ones, are repressed, the lurking remnants of the impulses are felt as temptation. Religious practices and traditions are used as a means of defending against the lurking temptation. Additionally, Freud suggested that the anxiety that is defended against in the process of repression is similar to one's fearful experience of an omnipotent God's retribution. Thus, the pious believer will repress the sinful impulse in fear of divine punishment and seek penance or repentance for any temptation. The martial ceremony is an example of this defense in religious life. The church formally prohibits sexual relations outside of marriage though after the ceremony sexual enjoyment is sanctioned. Prior to marriage, any gratification of the sexual impulse is due to temptation and in need of forgiveness or penance.

## R sentiement and Religion

Daniel Burston  
Department of Psychology, Duquesne  
University, Pittsburgh, PA, USA

### Nietzsche, Freud, and Christianity

The concept of r sentiement and its role in religious life emerged in the late nineteenth and early twentieth century and was harnessed in the service of a critique of modernity which often had elitist and antidemocratic overtones. For example, Friedrich Nietzsche (1844–1900) was a classicist who was deeply versed in Greek religion and art but highly selective in his preferences. Nietzsche admired Homer, who extolled the warrior virtues, but detested Plato’s otherworldliness, asceticism, and denigration of the body and its passions. According to Nietzsche, the Homeric warrior was uniquely capable of the resounding self-affirmation that also says “Yes!” to life, while Plato presages a “priestly” mentality that is (1) life negating and which (2) inverts or falsifies the natural scale of values and is rooted in self-deception.

In *The Genealogy of Morals* (1888), Nietzsche argued that Judaism and Christianity also share a pathos that inverts the noble values of the older pagan aristocracy, one rooted in a subaltern mentality or “slave morality” that results from a frustrated will to power. It is rooted in envy and rancor, traits common among the weak and dispossessed. Those afflicted with r sentiement habitually envy and devalue the attitudes and attributes of their aristocratic masters, who are more prosperous, powerful, and favored by fortune. Unlike aristocrats and warriors, who are men of action, slaves and their “priestly” leaders wage a war of words. They rationalize their cowardice and impotent hatred by attacking the good, old-fashioned warrior virtues – courage, individualism, and the unfettered expression of instinctual drives – rather than the warriors themselves. They make virtues out of necessities and their own apparent defects, i.e., their meekness,

poverty, selflessness, reliance on others, and so on. Lacking the strength or resolve to throw off their oppressors’ individually, slaves slowly band together (with the help of ascetic priests) to subdue and subvert the individualism and ferocity of the ruling caste through an increasingly peace-loving, collectivistic, and otherworldly ethos.

Nevertheless, said Nietzsche, the newer Christian virtues of meekness, poverty, selflessness, charity, and so on do not alter human nature. They merely distort it, because the Platonic/Christian tendency to mortify the flesh is unnatural and a source of suffering to all who embrace it. So underneath the pious surface of Christendom, all the aggression that formerly found a “healthy” expression in individual acts of courage and self-affirmation become distorted and displaced into different forms of institutionalized sadism and revenge fantasies that pass for genuine justice.

Nietzsche’s critique of Christendom vividly presages Freud’s reflections on the ubiquity of repressed aggression in *Civilization and Its Discontents* (Freud 1930). But Freud said that Christianity promoted group cohesion through sublimation and aim inhibited love, but being unable to totally transform human nature, deflected the repressed aggression of believers onto external groups, and above all, onto the Jews. In Freud’s scenario, then, the containment of collective aggression is a necessary step toward progress, though Jews are but the victims or casualties of progress. By contrast, Nietzsche argued that the triumph of Christianity paved the way for modern socialist and communist movements, which promote leveling, mediocrity, and “degeneracy.” In Nietzsche’s view, Jews are not merely the target of Christian aggression; they are also its secret source. In his own words:

Jesus of Nazareth, the gospel of love made flesh, the “redeemer,” who brought blessings and victory to the poor, the sick the sinners - what was he but temptation in its most sinister form, bringing men by a roundabout way to precisely those Jewish values and renovations of the ideal? Has not Israel, precisely by the detour of this “redeemer,” this seeming antagonist and destroyer of Israel, reached the final goal of its sublime vindictiveness? Was it not a necessary feature of the a truly brilliant politics

of vengeance, a far sighted, subterranean, slowly and carefully planned vengeance, that Israel had to deny its true instrument publicly and nail him to the cross like a mortal enemy, so that “the whole world” (meaning the enemies of Israel) might naively swallow the bait (Nietzsche 1956, pp. 168–169).

There are problems with Nietzsche’s critique of Christianity, one being that despite the Platonicizing Judaism of Philo of Alexandria (and Jewish mystics who followed in his footsteps), normative Judaism emphatically does *not* devalue the body and its appetites or treat self-affirmation as inherently sinful. Furthermore, Nietzsche’s monstrous (and transparently paranoid) conjecture that the Jews plotted the overthrow of Rome by denying and crucifying one of their own out of “a politics of vengeance” is sheer nonsense and completely unsupported by any historical evidence. But though nonsense, it is extremely *interesting* nonsense, because most of Nietzsche’s Christian readers were anti-Semitic to varying degrees. Many, like Adolf Harnack, the famous Church historian, claimed that the essence of Christianity has nothing to do with Judaism and chastised Christians who acknowledged any sense of kinship with the Jews (Harnack 1900). By blaming Christianity on the Jews, and emphasizing the Jewish roots of Christianity, Nietzsche sought to baffle and disconcert pious Christian anti-Semites, including his erstwhile friend Richard Wagner and others who, like Houston Stewart Chamberlain, fantasized about an “Aryan” Jesus.

### Scheler’s Critique of Nietzsche

While most Christian scholars simply tuned him out, Max Scheler (1874–1926), a Catholic spokesman, finally grappled with Nietzsche’s critique of Christianity in a book called *R ssentiment* published in 1915. Like Nietzsche, Scheler acknowledged the presence of malice, vindictiveness, and a thirst for revenge in religious ideation and regarded these passions as abiding character traits that warp our judgment, engendering a tendency to disparage or devalue others which is generally rationalized as righteous indignation.

But unlike Nietzsche, Scheler insisted that *r ssentiment* is not a specifically Jewish or Christian trait but a universal social phenomenon, involving (1) the process of comparing oneself unfavorably to other individuals in one’s own reference group or (2) the process of comparing one’s actual power and status with the status one feels one *should* possess, for whatever reason.

With respect to the former, Scheler noted that the process of comparing oneself to others *within one’s own reference group* is ubiquitous and by no means necessarily harmful. After all, unless we know how others differ we cannot appreciate or understand them as individuals or to improve oneself. More importantly, those whose self-esteem is intact can compare themselves to others endowed with greater gifts or material wealth without feeling that their dignity or personal worth is diminished or impugned by the competence, intelligence, vitality, or good fortune of the other(s). A person who possesses a calm sense of self-worth weathers such comparisons without repressing his or her feelings or allowing them to warp their judgment. Rather than responding to the presence of a prodigy, or someone favored by fortune, through a tendency to deprecate, the healthy person sees superior gifts in another person as cause for celebration or, indeed, for love and esteem. Following Nietzsche and Georg Simmel, Scheler called this the “noble” mentality and fancifully attributed it to aristocrats in bygone days. By contrast, said Scheler, the envious, vindictive person has a “slavish” cast of mind that was presumably more characteristic of the lower orders. He suffers from (unconscious) feelings of impotence, inferiority, and worthlessness and uses the hostile devaluation of others and copious self-deception to compensate for hidden injuries.

With respect to the latter, Scheler points out that in medieval society, people seldom cherished fantasies of upward mobility. Power and status were hereditary and deemed natural and necessary in the scheme of salvation. Industrial democracies, by contrast, replace the traditional yearning for salvation in the afterlife with the promise of equality, breeding extravagant needs and expectations, and upending traditional class and caste divisions,

fostering envy and rancor among those who remained relatively disadvantaged in the struggle to “get ahead” and those whose hereditary status was dwindling or plummeting downwards in the face of new market pressures.

By Scheler’s reckoning then, r s siment did exist in ancient times but was not the real basis of the Christian faith which, by Scheler’s reckoning, is neither democratic nor pacifist in character, but explicitly hierarchical, leaving ample room for the warrior virtues Nietzsche praised so highly. So the prevalence of r s siment among all social classes today is not the fault of Christianity *per se* but of capitalism, which Scheler, echoing Werner Sombart, likened to “the Jewish spirit.” So Scheler had it both ways – declaring r s siment to be a universal phenomenon, while describing it as being particularly intense in Judaism and capitalism, which he took to be related kindred phenomena. Quite apart from the high-brow, low-intensity anti-Semitism on display here, Scheler’s spirited defense of Christianity stood in the starkest possible contrast to the ideas of contemporaries better known contemporaries like Leo Tolstoy and Romain Rolland. Unlike these egalitarian pacifists, he was an ardent German nationalist during World War I and was admired by many Nazis after his death, despite the fact that his mother was Jewish. But whereas Nietzsche, a more prominent fascist icon, flirted with neo-paganism, Scheler’s discourse was romantic and neo-feudal, prompting him to dissociate “true” Christianity from socialism or collectivism, on the one hand, and from Judaism on the other.

### **R s siment and “Penis Envy”**

Thus far, we have noted antidemocratic and anti-Semitic strains in the literature on r s siment. But there are notable instances when Jewish theorists used the idea of r s siment – albeit seldom labeling it as such. For example, Freud deemed women to be notably inferior to the average male, and psychologically akin to children or “savages” cannot reason properly. By Freud’s account, women and girls harbor feelings of envy and inferiority vis a vis their husbands,

sons, and brothers because their male kin possess a penis; a fact that gives rise to an even more intense enmity to the requirements of civilization among women than in the average man.

The idea that women are anatomically predestined to be the “losers” in the unfolding drama of civilization strikes us as odious or hilarious nowadays. Nevertheless, Freud and his followers maintained that the normal (albeit usually unconscious) experience of a woman is of herself as a castrated (i.e., defective) male and that the feelings of envy, inferiority, and resentment that they harbor unconsciously prompt them to distort reality and will plague them perpetually, regardless of any efforts to alter their inferior social status. The idea that one half of humanity is doomed to have their self-esteem and judgment diminished by (anatomically preordained) r s siment regardless of their faith or their moment in history is also quite elitist, and manifestly sexist, but constitutes a considerable shift in emphasis from Nietzsche and Scheler.

Finally, in a series of best-selling books on Arab civilization and the Muslim world today, historian Bernard Lewis invokes a version of the theory of r s siment to explain the widespread fear and antipathy to the West, with its emphasis on democracy, gender equality, freedom of inquiry and expression, and so on. This is another dramatic reversal of emphasis, one laced with considerable irony. Nietzsche and Scheler saw modernity as the problem and implicated the Jews in the genesis of this problem to an unusual degree. Lewis, who is Jewish, sees modernity as a good thing but uses r s siment to explain the roots of Islamic extremism. And while his thesis has some merit, no doubt, it has been used to justify some disastrous foreign policy initiatives, i.e., the second Gulf War.

Reviewing these diverse contributions in chronological order reminds us that the literature on r s siment and religion contains many worthwhile insights but is also fraught with bias. The passions that give rise to r s siment – feelings of powerlessness, envy, the thirst for revenge, the tendency to disparage, or devalue others unreasonably – are ever present possibilities of human experience and only harden into

character traits that routinely impair our judgment in adverse social and historical circumstances. Members of both sexes and all faiths are susceptible to it, and any effort to depict one faith (or one gender) as uniquely susceptible to (or representative of) this character deformity should be greeted with considerable skepticism.

## Resurrection

David A. Leeming  
University of Connecticut, Storrs, CT, USA

The word “resurrection” refers to the return of a dead person to life and is most commonly used in connection with the Christian story of Jesus. The four writers of the biography of Jesus in the Christian section of the Bible (*New Testament*) report the mysterious disappearance of Jesus’s body from his tomb after his death by crucifixion and his subsequent appearance to various followers as a living person. This story is central to the Christian belief system.

The story of Jesus’s resurrection was by no means the first in the history of world religion and mythology. In some versions of a Greek myth, the god Dionysus rises from the dead, as do the Middle Eastern deities Attis and Tammuz and, most especially, the Egyptian Osiris. Sir James Frazer (1922) in his *Golden Bough* had much to say about these resurrected man-gods. Many resurrection stories, such as that of the Canaanite Baal, were associated with agriculture, particularly with periods of drought followed by periods of fertility. In Egypt, the resurrection myth of Osiris was associated with the devastating but land renewal process involved in the annual flooding of the Nile.

For non-Christians and some non-fundamentalist Christians, the story of Jesus’s resurrection might be said to become more significant when it is treated psychologically. The same can be said of the earlier resurrection stories. When one applies the approach taken by Jung in his “Christ, a Symbol of Self,” the resurrection heroes are freed from the restrictions of the merely local or the merely sectarian, and we are able to see that perhaps the real importance of the resurrection myth, whether or not it is based in some sort of historical fact, lies in resurrection and not in the individuals who are resurrected. As Zen masters say, “The first step of Zen is to kill the Buddha.”

For Jung, the archetypal or symbolic Christ as opposed to the historical Jesus is present in the unconscious of each of us as what might be called the “God within” or the “Self” waiting to be realized in our individual egos – our conscious lives. The process of the rising of the Self from our unconscious into our conscious psyche is the process of what Jung called “individuation.” The psychological or archetypal meaning of the resurrection, then, is the awakening of the Self and its emergence through the psychological growth process into our psychic lives.

## Revelation

John Eric Killinger  
The Intermundia Press, LLC, Warrenton,  
VA, USA

## Introduction

Revelation is derived from the Greek, *apokalypsis* (ἀποκάλυψις), *uncovering of the head, disclosure of hidden springs, revelation/uncovering of divine mysteries, and manifestation of persons*. *Apokalypsis* itself is a derivative of *apokalymma* (ἀποκαλύμμα), a revelation, a combination of ἀπό, *away from* + κάλυμμα, *head covering, hood, veil, dura mater* (lit., “hard [or coarse] mother”), and *grave*. *Kalymma* is related to Calypso (καλύψω), *she that conceals*. *Apokalyptō* is a *bon mot* (Derrida 1982, p. 64) for the Hebrew *galah* (גלה), meaning *to uncover, remove, reveal, emigrate, disclose, discover, and display*. Cognates of *galah* include *ger* (גר), *sojourner*, which in the Aramaic sense indicates one who has been accepted from the outside into the YHWH faith; *golah* (גולה), the feminine form of exile (both as a collective and in its abstract sense, to go into exile); and *gilaion* (גליון), a table or tablet – the Talmud uses *gilyōn* (גליון), the empty margin of a page or scroll (Killinger 2006, p. 359, 2007, p. 545). Subsidiary Hebrew words that express the divine act of revelation include *yada’* (יָדָע), “indicate,

announce”; *nagad* (נָגַד), “publish, declare”; and *dabar* (דָּבַר), “speech, word,” and in Greek, *phaneroō* (φανερόω), “I reveal, make known.”

## Sources of Apocalyptic

Persian religious sources, such as the Zoroastrian *Zand-i Vohuman Yasht*, antedate both the Greek and Jewish forms of apocalyptic genre. Such traditions were carried over into the early Christian church. Apart from *revelatio*, Latin terms for revelation include *visio*, “vision, inspection”; *horama*, “vision in a dream”; and *autopsia*, “direct observation, supernatural vision.” In Islam, *Wahy*, “instruction” or “what ought to be read,” comes from God, usually through the archangel Gabriel, given to the prophets, but in its definitive form to Muhammad. Content of revelation in the Qur’ān is wisdom and guidance for the living and warnings and the announcement of final judgment. Because it is divine, it is revelation and may not be altered. In Hinduism, the Vedas have the status of sacred revelation: *sruti* (“heard,” i.e., revealed directly by the gods to the seers) as distinguished from *smṛti* (“remembered,” i.e., composed by humans).

In the Judeo-Christian traditions, there are two forms of apocalyptic: historical and the other-worldly journey. The latter form is influenced by Greek sources, such as Book 11 of Homer’s *Odyssey* (Homer 1956) and the myth of Er in Book X of Plato’s *Republic* (Plato 1961). Historical apocalypticism with its insistence on a coming utopian age merges well with millenarianism, connecting it with more structured forms of normative *communitas*. As event or happening, revelation can be said to be spontaneous or existential *communitas*, especially when it is the communal nature of the community or nations at stake. Numerous apocalypses occur throughout the gnostic texts of the Nag Hammadi writings, the Old Testament pseudepigrapha, the Dead Sea scrolls, and a small but significant number of New Testament apocryphal documents.

Apocalyptic writers were the heirs of the sages, concerned with purity within. As heirs of the prophets, they were concerned with both

cleanliness and social justice. As heirs of the priestly tradition, they made use of doxology and concern with defilement/purification of the land, as well as concern for restoration of worship and an understanding of *who* could participate in such worship, thus demonstrating the alignment of their views with the sacerdotal praxes of the priestly and cultic. A paraprophetic phenomenon, apocalypses differ from biblical prophecy in their notions of radical transformations of human relation and in the manner of judgment. Akin to wisdom literature, apocalyptic writings possess a supernatural wisdom dependent on revelation rather than empirical wisdom as in, for example, the Book of Proverbs.

### Features of Revelation

Judgment upon the nations, a recurring feature, does not come because of failure of nerve and/or pessimism; rather, what is pointed to is the dynamic of an “interim ethics of active waiting and faithfulness to God in all things” (Gammie 1989, p. 181). This is, of course, a radical move, for as with the suspension aspect of the Hanging God or Hanged Man of the Tarot, it is the sacrifice of all that to which we cling and hold dear, from our defenses and preconceptions to our interpretations. This not only happens communally among all the nations but also to each individual. For the faithful – those who undergo the ruptures caused by suffering whether in liminal suspension or at the hands of the cruel and ruthless (the unjust) – there is a share in the divine majesty.

A prominent feature in revelation is the holy mountain. Bearing the characteristics and potencies of the cosmos, it is the conclave of the gods like those who gather on Olympus, the battleground of opposing natural forces, and the conjunction of heaven and earth. Because of this last attribute, it is the place from which effective decrees are issued. The holy mountain is a place set apart, a margin sanctified by God, aligning it with the feature set of *galah* and its cognates. In other words, sojourners, exiles, and exilic communities go to the mountain to receive the revelation of God on tables or tablets (of stone).

The idea of the Kingdom of God has as its focus the sovereignty of the godhead, as well as its majesty and mystery – its establishment in the heavens is matched by an equivalent establishment on earth (cf. Mt. 16:19 Aland, et al. 1998, p. 44) – as above, so below, as the alchemists say. The apocalyptic is a true dialectic of power. Even the Lord’s Prayer depicts this: “Thy kingdom come, thy will be done on earth as it is in heaven.” Natural revelation, expressed in the formula *Deus absconditus/deus revelatus*, is not unlike Bion’s epistemological move from knowledge (curiosity) to ultimate reality,  $K \rightarrow O$ .

Christian theologians in the main reject the broad usage of *revelation* (any inspiration or new knowledge), preferring instead the narrower definition of revelation as the manifestation of something hidden that cannot be discovered through ordinary and usual means of acquiring knowledge. The neoorthodox Christian theologian Karl Barth, for example, argued that the only true revelation is through the Word of God incarnate, Jesus Christ. Whereas this might be quite valid in a purely Christian religious milieu, in postmodern religious plurality in which the dialogue between the major monotheistic religions is paramount, the Word of God must be accepted alongside the words of God, as in the *Wahy* of the Qur’ān, which are also manifestations of the divine transcendence. In Kabbalah, the letters themselves are important sources of revelation; that is, “intentional speech is an ascending human creation complementing the descending divine speech” (Idel 2002, p. 182). Jewish tradition realizes that such revelations or apocalypses of the divine add spice – as presentations of a certain point of view, they possess a marked exegetical character in that they enlarge scriptural scenes. The theme of apocalypse is primarily the glory or arm of YHWH, and it can be disclosed in one’s gaze or ear. Nowhere does it have the sense of fearsome catastrophe with which apocalypse has come to be associated. It is, as André Chouraqui notes, essentially “a contemplation... or an inspiration at the sight, the uncovering or disclosure of YHWH” (Chouraqui, cited in Derrida 1982, p. 64).

The narrowness of definition by modern theologians has been called into question in the post-modern era. Thomas J. J. Altizer's apocalyptic is an inversion of "what had heretofore been named and valued as God but is now manifested in emptiness or abyss" (Wyschogrod 1987, p. 377), leaving creation and apocalypse in a state of nondifference. In literary theory, Tzvetan Todorov (1973) locates the fantastic narrative (which apocalypses can be) on the frontiers of two genres, the uncanny – *unheimlich* – (supernatural explained) and the marvelous (supernatural accepted).

Taylor (1987) has advanced the Derridean notion of erasure by arguing that words re-veil rather than reveal. The idea of erasure is that when something is written down, when marks are made on paper – inscribed – something (whether or not we know what that something is) is written out, erased; an exscription has to occur, relating again to *galah, ger, gilyon, and gilaion*. This is in opposition to traditional theological thinking that revelation occurs linguistically. Taylor argues therefore that there is no revelation of divine truth but only the endless re-veiling or covering of truth. Truth and meaning: if the search is for ultimate truth such as Bion's O, then we might find ourselves crossing the threshold into the creation of a fallacy. "Is the fallacy meaningful or meaning-making?" is the line of questioning one might well take. It is the narrative that provides the raw material. Truth may then be irrelevant, for a good lie can be the enantiomorphic end of truth (and vice versa) as in a uroboros or topology of the torus as in early delineations of the Lacanian Real. A hermeneutic approach, interpreting with symbols that still possess cultural validity, may be warranted for bringing out the hidden aspects of the narratives developing both in the consulting room and in the world outside its doors.

Drawing significantly on the work of Blanchot (1955/1982, 1969/1993, and 1971/1997a), Taylor (1987) reminds us of the fact that revelation is also tear, interstice, rent, fissure, and cleft in not only the language but also the narrative structure as well. Blanchot reports that image is what veils by revealing. If, as Jung argues, image is psyche, then psyche veils by revealing, re-veils through

fissure, cleft, interstice, and abyss. Blanchot (1971/1997a) observes how image is capable of negating nothingness as in the Hegelian *Aufhebung* paradigm, and as in the Nietzschean Dionysian dithyrambic view of the abyss, image is also "the gaze of nothingness upon us" (p. 40). This is perhaps why current work on void states (Ashton 2007) is becoming important in an era when the unreality of dissolution into nothingness seems more real than ever in human history, whether linearly or spatially.

With regard to the apocalypse, the theme is that we must change. Despite concerning himself with the apocalypse as a choice between annihilation via atomic bomb and totalitarianism, Blanchot (1971/1997c) suggests that the apocalypse can be demystified by understanding. All or nothing is therefore far from being our only truth; however, the caveat to removing the projection of mystique is that "it exposes us to a loss of fear...that misleads but also warns" (p. 108). It is an apocalypse without an apocalypse!

Connected with the themes of erasure mentioned above, involvement of the "hard mother" aspect indicates that the word "apocalypse" can mean *away from the hard* (coarse) *mother*. As the tough fibrous outermost membrane enveloping the brain and spinal cord, the *dura mater* is composed of a series of adjacent laminations. Of interest here is not so much the structure but two metaphoric resonances. The first of these is in tandem with the *pia mater* and involves the concepts William James (1907/1987) identified as "tough minded" and "tender minded." Whereas tough-minded folk tend toward facts, empiricism, fatalism, and materialism, tender-minded folk tend toward principles, rationalism, free will, and idealism. Such a dichotomy might even relate to Sheldon's (1936) epimethean/promethean understanding of the animectomy complex.

The other metaphoric resonance of the *dura mater* is with Grotstein's (1979/2000) laminations of awareness in consciousness. It is tantamount to living a palimpsest self. In other words, it is a kind of development in which what occurs is the smudging of one life script – or a portion or portions thereof – in order to write over and/or rewrite the narrative by and through which one lives.

But it is not a complete erasure, for the past essence remains, feint (faint) as it is. Its counterpart is the *pia mater* (tender mother), a soft inner membrane enveloping the brain. The brain is thus aligned with Bion's container contained (♀♂) or it suffers the ontic psychological dualism of good breast/bad breast.

The revelatory manifestation of the divine life comes from the supramental realm. If any of the following three aspects is neglected, we slip back into mental life, knowledge about rather than becoming being or growing into aesthetic consciousness. For example, neglecting the abysmal aspect (the inexhaustible, ineffable depth characteristic) leads to the transformation of revelation into information via rationalistic deism. Neglecting the logical character of divine life transforms revelation into heteronomous subjection via irrationalistic theism. Finally, neglecting the spiritual character makes a history of revelation impossible. Maurice Blanchot reminds us that the nameless navigator, who first crossed the zero parallel, "was under the impression that he found himself at an exceptional moment and at a unique point, a sacred zone, the passage over which symbolized a crucial initiation" (Blanchot 1971/1997b, p. 79).

## Rinpoche

Migmar Tseten<sup>1</sup> and Thomas C. Putnam<sup>2</sup>

<sup>1</sup>Sakya Center, Harvard University, Cambridge, MA, USA

<sup>2</sup>Cambridge, MA, USA

The Tibetan word “rinpoche,” is derived from Sanskrit term “ratna,” which means “precious,” “valuable,” and “rare.” In general, it is applied for anything that is considered valuable, such as gold and jewel and is also applied to the respected teachers and reincarnated lamas as a veneration.

In Jungian theory, the title may be understood as a projection of the Self onto a person. Thus, the one who has been given the title “Rinpoche” would symbolically carry the projection of a deeply individuated person who has reached his fullest potential of wholeness. In western psychology, this person would carry the projection of the Self for his/her students much like a western psychotherapist does for his/her patients.

## Rites of Passage

Paul Larson

The Chicago School of Professional Psychology, Chicago, IL, USA

The phrase “rite of passage” was coined by the anthropologist Arnold van Gennep (1873–1957) in his 1909 book of that title (Fr. “Les rites du passage”). The phrase has become widely known and used to describe those rituals which mark significant life transitions of individuals in a community. Victor Turner (1920–1983) continued the focus on the study of the psychology of rituals and elaborated on the ways in which these rites of passage function to move people from one social status to another (Turner 1969/1995, 1974).

Many of the life passages which are marked by special rituals are age related, though not all. There is often a ritual at or close to the birth in which the child is named and given a place in the family and community. Another period of transition comes at puberty when boys become men and girls become women. In many preindustrial societies, the arrival of puberty shortly follows with marriage, when the individual chooses or is given a mate. This is another major transition, though in most modern industrialized societies, there is a significant time lag between physical sexual maturation and the assumption of the responsibilities of marriage. Especially in modern societies, there are special occasions to mark the completion of educational preparation and entry into the world of adult occupations and work. The commencement ceremonies at graduation use the pomp of academic regalia to celebrate the accomplishments of the new graduates. Likewise, retirement from the workforce sometimes is celebrated with at least a social occasion if not a formal ritual. Entrance into an esoteric tradition through initiation is an example of non-age related rites of passage. Ordination of clergy and the inauguration of civil or government officials are other examples of rites where social roles change by some other circumstance than age. Finally, at death, the body is interred or

buried and a memorial service is held to honor the memory of the deceased and ease the loss to those who survive the individual.

In each case, the ritual serves to mark the change in how an individual is to be regarded by the community. Turner elaborated on van Gennep's concept of liminality that transitional state where one is neither the former status nor the new status but is in the process of passage. In general, liminality refers to this transitional space and time "in between." There is often a period of time over which the ritual takes place or a period of preparation for it. This allows both the individual or individuals undergoing the transition and the rest of the community to psychologically work through the hopes, fears, and expectations for the new role which the participants will assume with each other. During the "in between" phase, the participants are linked by what Turner calls "communitas," the equality shared by all who are undergoing the transition.

Roles, of course, are not only born by an individual but are relational. When a person marries, for example, they are treated differently not only by their spouse and family but other members of the community. Likewise, when an individual is ordained to a sacred role in a community, everyone now relates to them differently. Making these transitions more manageable is the great psychological function of rites of passage. The markers are not only celebratory for the individual but important for the social group as a whole. Our entrances, or shifts in role, and our exits are all marked by rituals that serve our needs as well as those who participate with us in our community lives. Thus, the rites of passage serve as one of the most important functions in a community of the spirit; they guide us through the transitions that inevitably mark our human life trajectory and serve as a means of transmittal of cultural values and meanings.

## Rites of Passage for Boys

Bret Stephenson

The Adolescent Mind, Labyrinth Center, South Lake Tahoe, CA, USA

Anthropologist Arnold Van Gennep first coined the term and concept of a rite of passage (ROP) in his 1909 book *Les Rites de Passage (The Rites of Passage)*. Van Gennep's basic premise was that there are universal, seminal points in peoples' lives that mark significant transitions in life and are celebrated through ceremonies and rituals that cement these processes and growth within the initiate's community. He was the first scholar to see the overlap between the religious rituals involved and psychological aspects affected.

Van Gennep believed that major life events such as birth, puberty, marriage, and death are historically and cross-culturally celebrated as turning points in a person's life and have a major impact and meaning within the culture and community that support them. Although volumes could be and have been written on ROPs, Van Gennep reduced these life-changing events down into three necessary components: *separation, transition, and incorporation*.

An important distinction in rites of passage is that an ROP can actually represent a relatively small personal challenge, like getting a driver's license or graduating high school. Not to detract from these personal accomplishments, but for this discussion, we will focus on the larger rites of passage that Van Gennep noted, the major life transitions boys go through that also affect the

community as well as the individual. Probably the most studied rite of passage is that of turning a boy into a man, which is considered by most cultures a bigger goal or accomplishment than just becoming an adult, which is what modern countries have evolved into with age-arbitrary rewards that are determined by one's chronological age, not maturity or accomplishments.

Similarly, mythology expert Joseph Campbell described the rite of passage process in *The Hero With a Thousand Faces* in 1949, developing his 17-stage Monomyth Model, which he also synthesized down to three main elements: *separation*, *initiation*, and *return*. Both scholars realized that a rite of passage required the boy to be separated from their safety and comfort of community for a time, transitioned or initiated into a larger version of themselves, then incorporated or returned to the original community with their new identity and role within that community as a man.

Whether we look at ROPs from Van Gennep's anthropological viewpoint or Campbell's mythological perspective, it is the universal discovery and use of ROPs that add credence to their value within a culture. Van Gennep noticed the pattern of growth in countless ceremonies and rituals across the globe, while Campbell noticed the model, or sequence of growth, in the thousands of myths he studied. Campbell immortalized the process by simplifying his Monomyth Model into what he called The Hero's Journey, which can be found woven into basically every plot-based story where a boy is challenged to accomplish something difficult.

This dynamic is also seen through most religious doctrines via the birth-death-rebirth concept incorporated into so many belief systems. Before Van Gennep, most anthropologists looked at rites of passage as purely religious ceremonies, rather than the larger rite of change supported by a spiritual ritual or ceremony to celebrate the event. At this point, it is important to distinguish between the term "rite of passage" and "initiation."

Many people inadvertently confuse the terms "ceremony" and "ritual." They are closely related, but a *ritual* is the overall celebration of

something, such as the yearly fall harvest. A *ceremony* is the actual event within the ritual that people engage in, such as a feasting celebration or harvest ceremony. Similarly, an "initiation" is the larger picture of a culture's need or desire to acknowledge a transitory process, such as celebrating puberty in youth. The "rite of passage" is the specific challenge, ceremony, event, or other behavior within the initiation process that creates the transition.

Similarly, the study of girls' rites into women have been just as important, and many rite of passage scholars and practitioners ironically believe that boys' rites of passages were actually developed after older cultures observed the growth and developmental shifts in the girl's path to womanhood. Girls typically begin their journey with the onset of puberty and/or menstruation. The community celebrates another fertile member and thus the continuation of the culture through future babies. A girl's actual rite of passage is typically going through childbirth, which is dangerous, painful, and bloody. But particularly with the birth process, cultures noted that a girl began labor and a day or two later a woman and mother appeared in the girl's place.

The problem for boys is not having a physiological process to go through like menstruation and childbirth. Thus, most cultures realized that boys need a rite of passage process as well to move them developmentally forward, but they had to be created and thus an almost infinite number of similar but different rituals and challenges were developed. They had to typically include the same dynamics as the girls' challenges: pain, danger, and often bloodletting. It has been the wide variety of these rituals for boys trying to become men that have come to represent what many consider the ultimate rite of passage in life, paving the way for future challenges like marriage, parenting, middle age, and death.

One of the most popular descriptions for the overall process, or meaning of adolescence, is the search for identity. The goal, and struggle, of adolescence is for the youth to figure out who they are, what their purpose is, and find out other aspects about themselves. Watching girls

naturally complete much of this process, then boys with the created rites, taught older cultures that from a psychological view, a rite of passage helps a youth quickly find these aspects out about themselves. Nowadays, with the path to manhood blurred or gone altogether, many youth workers believe this is why Western and particularly American boys have such high incidents of violence, gangs, suicide, drug use, and so on.

Famed Swiss psychologist Carl Jung (1958) explained the psychological workings within a rite of passage as an *ego death*, a symbolic death of, for example, the boy, so the man may be born. Many traditional ROPs included components where boys were taken from their villages (separation), symbolically killed in a ritualistic way (initiation or transition), then reintroduced to their old community with their new ego or identity as a man. Put simply, a boy is put into a situation that requires a man to complete it. The boy must step aside, or symbolically die, so that the man can be born. Once again, we see the birth-death-rebirth element at work. In modern times, boys have mistakenly replaced high risk and too often actual death with symbolic death because there are no elders or set practices to follow.

Many boys would get their life purpose or choose their name during the intense ROP process. Modern ROP scholars such as community psychologist David Blumenkrantz believe this process also helped youth quickly work through developmental challenges in a quick and healthy way rather than the modern path of no ROPs or paths to manhood and womanhood. Thus, the loss of initiations has led to the modern phenomenon of uninitiated youth, young adults who don't know if they are men, and terms like *adultolescent* to describe those former teens who have not yet left the familial nest.

Malidoma Somé (1994), who wrote *Of Water and the Spirit* and is one of the few modern men actually initiated in a native culture to write about it, feels that ROPs must be conducted outdoors to connect the initiate with nature. Next he describes the two main components of a rite of passage as "risk" and "community acceptance." Risk is the ingredient that creates the change, the challenge to be overcome, and the test that makes

a boy grow bigger and stronger. Next, what the boy goes through must be accepted and acknowledged by his community. This provides continuity from generation to generation and no question if what the boy experienced "counts" or not. Each successful transition from boy to man, and girl to woman and mother, served to synthesize the community and ensure healthy individual growth and participation in the community.

With the modernization and urbanization of life, many people have been struggling with whether there is a need for ROPs in modern times and, if so, how to effectively implement them. Those who believe ROPs are archaic, brutal, or harmful to boys have largely been successful in First World countries at eliminating ROPs as outdated and dangerous. These people have effectively taken the "risk" out of the lives of modern teens in an effort to protect them, but the inherent, ingrained propensity for teen boys to take risks suggests that this has only backfired as gangs, teen violence, hazing, drug use, and other risky behaviors bubble to the surface.

In regard to the perception by many that initiations are outdated or unnecessary in modern times, "Even if a culture has decided that initiations are no longer necessary, that does not mean the mental, emotional, and psychological processes of the boy will change. His inherent drives and cravings cannot be eliminated by culture, laws, and psychology. Denying these ingrained, innate desires and needs has an effect similar to taking away an addict's drug—we have actually created more of a craving for some kind of initiation" (Stephenson 2006, p. 73). Rather than reducing teen risk, the unfulfilled need to be challenged prompts boys to take unhealthy risks, and they try to self-initiate, or what Joseph Campbell called "self-rendered initiation" in *The Power of Myth* (Campbell and Moyers 1988, p. 82). Elders were the guides and tutors for these journeys of self-discovery, and by eliminating their roles, we have banished them to retirement communities and lives with little real purpose. David Oldfield (1987) believes that adolescence is a "necessary crises" and that not allowing youth to learn and grow from their challenges limits and stagnates them.

*Crossroads: The Quest for Contemporary Rites of Passage* by Louise Mahdi (1996) is a collection of articles and essays by top ROP thinkers and practitioners on how to restore rites of passage to modern youth. Besides the risk issue described above, modern ROP workers are struggling with how to create a supportive “community” for modern youth, particularly in America where there were ROPs in Native America, but the melting pot/tossed salad dynamic of mixed cultures in modern America leaves no one community model to follow.

Some initiations survive modern times, like the religious-based Bar Mitzvah within the Jewish culture. Although a religious ritual, once initiated, the boys are welcomed into the adult world and expected to participate maturely. However, the Bar Mitzvah do not work for America overall, but just one subsection. Informal rites of passage existed and worked to a large extent in rural America until the Industrial Revolution. The inherent risks and challenges of farm and ranch life made informal rites of passage for boys, but as society became more urban, these opportunities fell by the wayside and boys have now been struggling with multiple generations of no initiation rituals.

Some modern therapeutic approaches mimic rite of passage dynamics, such as wilderness therapy or boot camps for teens. Within the confines of an insurance-based culture actually trying to eliminate risk, they try to create a healthy risk and challenge for boys, but cannot create the community acceptance element. Many boys have successfully been put into situations requiring them to create their own ego death and step into a sense of manhood, but when returned to their communities which were not involved or in agreement with the process the boy went through, the rite of passage falls apart from lack of community support. A boy cannot become a community of one.

David Blumenkrantz (2012) puts it this way: “What’s an initiation? It is the way a person gains a sense of belonging to a particular group or place. A person’s sense of belonging—being *included*—is central to any group or community’s survival. It also helps a person

achieve a sense of identity, meaning and purpose in life. Throughout human history the sense of inclusion was intentionally promoted through formal *initiation* called *rites of passage*. Through rites of passage people learn and commit to common values that guide behaviors beneficial for the group as a whole and each individual. The absence of initiation (rites of passage) leads to a person’s sense of disconnection and exclusion from a group, a community and even from themselves.” In other words, a lack of initiation not only prohibits individual growth for an individual but the community he or she lives in.

## Rites of Passage for Girls

Beth Hossfeld

One Circle Foundation, San Rafael, CA, USA

### Introduction

Female adolescent rites of passage provide communities with a group process for initiating girls into womanhood. These rituals are rooted in ancient traditions and support girls' psychological and spiritual development. Western society has no such widely practiced rituals. Girls' circles are beginning to fill this void. As a rite of passage program, girls groups address the critical themes of female identity development, personal values, and healthy relationships so pertinent to girls' concerns. Trained facilitators can provide a program where girls share, explore, think critically, and develop confidence.

### Female Initiation and Western Culture

How does a young woman know she is no longer a girl? Menarche? A driver's license? A sexual

encounter? First job? Prom? Body piercing? Graduation? A religious ceremony? Modern culture offers markers but no definitive ritual to honor girls' transformation into women. Western society's emphasis on individualism has broken down collective structures to guide youth into adulthood (Sullwold 1987). Without such structures, teens too often find themselves adrift in the "betwixt and between" time, without a clear path to discover their purpose in life. This void contributes to epidemic levels of substance abuse, risky sexual behaviors, relational aggression, depression, eating disorders, gang involvement, and suicidality in adolescent girls (Centers for Disease Control and Prevention 2011). Gender-specific groups can help girls navigate their changing identities and counter unhealthy trends. By connecting with a caring community, girls can avoid problems and develop capacities to reach their full potential.

Arnold Van Gennep coined the term "Rites of Passage," in 1906, identifying three stages to initiate adolescents into adulthood – separation, liminality, and reincorporation (Van Gennep 1906/2010). Yet when female-specific rites of passage are examined, Lincoln (1981) observes a distinctly different pattern, a set of three key aspects of initiation: *enclosure, magnification, and emergence*. "The initiand begins as a person on whom no one depends and through the course of initiation becomes one on whom the welfare of the entire cosmos hinges. . . for the fundamental power of creativity is renewed in her being" (Lincoln 1981, p. 107). Virginia Beane Rutter (2009) addresses women's needs to acknowledge and be acknowledged for the significance of their transitions, as well as for girls: "Girls need ceremony, because the physical initiatory experiences that originate in their bodies require that a girl sacrifice her precious physiological state of being and therefore her previous psychological identity" (Rutter 1996, p. 174). Some ethnic-cultural groups have been practicing female initiations within the Western world, such as:

- Latin Americans celebrate the *Quinceañera* (Quinceañera 2002). Fifteen-year-old girls and their families prepare for months for a Roman Catholic Mass and a party.

Special rituals such as wearing a formal dress, receiving shoes, displaying flowers, and eating certain foods signify the girl's readiness for womanhood.

- The Navajo conduct an elaborate puberty ritual, the *Kinaalda*. The coming-of-age girl reenacts Changing Woman, the Chief Deity of the Navajo people; in front of proud elders, the girl performs various rituals such as dressing beautifully, cooking a corn cake, and running a race (Lincoln 1981, pp. 17–33).
- Judaism's Bat Mitzvah and Christianity's Confirmation offer spiritual initiations involving family, a religious community, and friends to recognize the youth's coming into maturity.

These culturally relevant rites of passage anchor girls within ancestral, familial, and community traditions. Mary Lewis (1988) calls for a fundamental change in how adults nurture Black female teens. She encourages an approach that balances attention to girls' solutions and strengths. Lewis advocates applying the *Nguzo Saba*, or the "Seven Principles of Blackness," commonly associated with *Kwanzaa* (that was created for all African-Americans by Dr. Maulana Karenga), to guide and empower girls through adolescence: *Umoja* (Unity), *Kujichagulia* (Self-Determination), *Ujima* (Collective Works and Responsibility), *Ujamaa* (Cooperative Economics), *Nia* (purpose), *Kuumba* (Creativity), and *Imani* (Faith).

Support for identity development is especially important for diverse girls with nontraditional sexual identities (LGBT). These youths have high rates of rejection from the adults they depend upon for guidance and belonging. Andrew Laue (2000) names essential aspects of an LGBT rites of passage program: acceptance by family; intergenerational participation; participation of key figures; acknowledgement of major themes – sexuality, identity, and individuation; and imprinting the values of the wider culture.

Mary Pipher (1994) worries that girls have no cultural compass, asking, "Under what conditions do most girls develop to their fullest?" (pp. 292–293). At adolescence, what motivates girls most is the desire to be loved. Unmet, that desire leaves girls and their development at risk.

Girls' relationships shape their identities (Miller 1976), yet when these are harmful or inconsistent with their own sensibilities, girls disconnect from their authentic selves in order to stay connected (Brown and Gilligan 1992). The unfortunate label "mean girls" highlights relational aggression, in which girls use relationships to find or lose status. In circles, however, girls discover that *sisterhood* is a more sustaining and satisfying use of power. The circle provides a compass by nurturing girls' hunger for needed emotional and spiritual support.

### Girls' Circles as Rites of Passage

Girls' circles are typically support groups for preteen and adolescent girls, which encompass the key aspects of female initiation – *enclosure*, *magnification*, and *emergence*. Focusing on healthy relationships within and outside of the circle helps build safety so girls can develop positive connections with peers and adult women. With safety established, girls gain skills essential to womanhood, including communicating feelings and viewpoints, setting boundaries, and developing healthy coping skills. Facilitators invite girls to share their own views and experiences and to reflect on their behaviors. By doing so, they promote girls' cognitive and spiritual development. Girls' groups are being offered increasingly in education, mental health, child services, juvenile justice, camps, and faith-based and community sectors (Fig. 1).

Circles should first and foremost be a safe emotional environment. Common structures include weekly meetings with 6–8 girls of similar age and development and one or two trained female adult facilitators. Girls can be invited or referred, depending on the program. Except in high transition settings, groups are best if closed to new members for a cycle of 8–12 weeks, to promote safety and bonding. The groups develop guidelines that form the basis for safety, including listening, respect, nonjudgment, inclusivity, confidentiality, honesty, and acceptance. Facilitators use a measure of self-disclosure to help establish trust and authenticity in the group.

**Rites of Passage for Girls, Fig. 1** Being in connection in girls' circle is the key to transformation and growth for adolescent girls (Photo courtesy of the author)

Frequently teen girls express initial apprehension, saying they do not trust other girls. However, once they experience the safety and acceptance in circle, they *want* to be there.

During check-in, girls may pass a *talking piece* around the circle, traditionally practiced by Native Americans to signify a sacred respect for the speaker. They can share something meaningful, such as family concerns, a breakup, grades, hurt feelings amongst friends, or a long-held dream, while the group gives their full attention. Discussions and creative activities promote further opportunities for girls to think critically about their behaviors.

Through the bonds that develop in circles, girls build capacity to risk authenticity. One teen happily said: "I've never before had adults or other girls treat me with respect like this." They become each other's strength while learning to believe in themselves. When one is angry, others listen with acceptance. If self-disparaging, others will speak of times they have treated themselves poorly and how and why they stopped. They become *more themselves, together*, as this story exemplifies:

It's 4:30 pm. Seven high school girls are sitting on pillows in a circle. We're in our sixth week of a semester-long girls circle. Today, we focus on

"Being Real". After each one "checks in" about her high and low points for the week, one girl, J., asks to share more. She describes her distress over the past three days, since having gotten drunk and engaged in sexual acts with a boy she does not respect. She confides,

*"I don't know why I did it; I feel sick about it. I think I was hoping that he would like me, 'cuz he's cute, but he's creepy and could care less about me. Next time, I'm just NOT gonna drink like that because I totally lost my judgment. Thank you for being here everyone, I just really needed to get this out."*

Several group members respond with messages of support:

*Don't be too hard on yourself. We've all made mistakes.*

*I'm sad that happened, J., and I hope you feel better soon. I know how it is to do something you don't really want to do. It took me time to where I can now listen to myself inside.*

*J., you're one of the kindest and coolest people I've ever known. I just want you to remember that whenever you're feeling some doubt.*

One girl hugs J. Everyone inhales, and exhales. The girls move on to an activity. There's a visible shift in J.'s face; she's more relaxed now.

Girls can demonstrate *emergence* in unique ways: at a ceremony, peer-facilitating circles with an adult, redefining their goals, and assuming school leadership. Recently, a high school boy chose as his senior project to study the

girls' circle approach by interviewing a program director at a local organization. He explained that he became convinced of the value of the program when his girlfriend attended a girls' circle and subsequently changed her behavior positively toward him, her family, and friends.

Having inner and outer congruence in mind, body, and spirit is a reflection of girls' growth. Setting interpersonal boundaries, for example, requires that a girl first listen to and value her inner voice and then to verbalize and act upon her preferences. This ability reduces girls' stress, as does the feeling of not being alone, a critical condition for youth as they separate from parents and form identities. This connectedness enables girls to assume their roles as young women with sustaining psychological and spiritual values: self-respect, dignity, pride, and purpose. Two girls reflect on their growth: "I thought I was the only one who felt like this, but Circle made me realize that I am not alone." "I am not so shy and I have learned how to stand up for myself. It made me feel more confident about myself."

Girls' circles are an engaging rite of passage program for adolescent girls. Filling a cultural void, the circle is an experiential way for girls to develop healthy relationships, gain confidence, express themselves genuinely, and set meaningful life goals. Facilitators with an open mind and capacity for relationship support girls' successful transformation, psychologically and spiritually. The consistent format and gender-relevant content help to safely engage circle members. For girls reaching adolescence, a girls' group provides a meaningful female initiation into womanhood.

## Ritual

Bernard Spilka  
Department of Psychology, University of  
Denver, Denver, CO, USA

Among animals and humans, ritual behavior is essentially universal. This suggests the likelihood of biological, evolutionary, and genetic foundations for such activity (Huxley 1966). Ritual thus has significance beyond the actions that define it. The essence of ritual is therefore functional and adaptive.

Ritual, in general, refers to patterned behavior, possibly repetitive, that is usually fraught with symbolism. Simply put, it is a force for connection, communication, cooperation, coordination, cohesion, control, and influence. All of these roles can and often have been initially demonstrated in animal ritualization which appears to serve language or signaling functions.

## Religious Ritual

This realm is excellent for defining human ritualization. Even though religion per se has not been satisfactorily defined in cross-cultural perspective, disagreements as to its purposes appear to be relatively minor. Religious ritual may, however, be distinguished from nonreligious forms by its assumption of ultimate human dependence upon superhuman agents who are not directly observable. To the best of our knowledge, all societies possess religion and religious ritual is therefore an integral part of all known religious traditions.

The terms rite and ceremony are often used interchangeably with ritual; however, some scholars distinguish them as formal actions while religious ritual is regarded as informal.

The last seems to be premised on the high probability of individuals introducing their own personal rituals. Since this distinction is difficult to maintain, all three words are used here to cover both formal and informal behavior.

## Patterns of Religious Ritual

Religious rituals do not occur randomly. They are traditionally associated with important cultural and individual events. First, they are annually patterned. For example, annual midnight masses have been viewed as celebrating the opening and closing of the year. Rites often accompany the planting and harvesting of crops plus specific holidays that honor major sociocultural happenings like military victories, the establishment of nations, or the lives and accomplishments of great historical figures. Second, ceremonies religiously validate rites of passage such as birth and death, one's coming of age, marriage, graduations from schools, and noteworthy anniversaries that occur in long marriages. A third set of religious rituals is commonly associated with such public events as inaugurations of presidents and other high government and public officials. In like manner, legislative bodies open their daily proceedings with a prayer. On a different level, rituals mark similar activities like the installation of presiding officers in universities and fraternal bodies. Fourth, one finds group rituals that either call upon the Divine to help persons in dire straits or thank superhuman agents when recovery from serious illness occurs or one's actions result in personal success. Note further spiritual references connote gratitude that is offered when a lottery is won or individual efforts result in athletic triumphs, high examination scores, or noteworthy advancements in one's life. Fifth, there are familial religious ceremonies such as saying grace at meals, prayers before facing the rigors of daily life, or upon retiring at night. In addition, people frequently develop practices utilizing household shrines, reading from sacred scriptures, intoning prayers before taking trips, etc. Depending on one's religious heritage, group associations, or place in a social structure, there is the likelihood of other rituals.

## Psychological Approaches to Religious Ritual

Contemporary psychological approaches to ritual usually stress cognition (Boyer 2001; Guthrie 1993; Lawson and McCauley 1990; McCauley and Lawson 2002). Motivation is much more implied than explicit, a tendency common to both psychologists and anthropologists who also emphasize cognition. The essential component appears to be a search for meaning. From a subjective perspective, the feeling that one is enlightened by ritual participation is common and may enrich the individual spiritually.

Even though Freud interpreted ritual behavior as obsessional neurosis, thereby affiliating it with pathology, modern Analytic views suggest it may be an avenue to religious experience (Pruyser 1968). Resort to religious ritual is particularly evident under stress that poses cognitive dilemmas. Clarification is sought in ceremonies in which the person attempts to make sense of her or his predicament. People need to understand the causes of events; in other words, attributions are sought that will resolve cognitive difficulties. The intricate matrix of relationships between ritual and myth may speak to this fundamental human desire to make sense out of life and the world.

The leads offered by these scholars need to explicitly include motivation in order to understand religious ritual more fully. Post-Freudians and Jungians claim that ritual behavior controls and directs emotion. It may thus act as means of self-control and function as a spur to control outside influences (Jonte-Pace 1997; Pruyser 1968). Even though these are constructive and adaptive functions, the classical idea of ritual and mental disturbance lurks in the background of many such writings.

Festinger (1957) adds another dimension, namely, when people engage in an activity, it must be justified, hence explained in a manner that makes it proper and desirable to carry out. The more it is practiced, the stronger its legitimization. For example, devout Muslims pray five times daily, a high frequency that contributes to a rather strong commitment.

## Religious Ritual as Connection

The notion of connectivity leads to both humanistic and holistic perspectives and in doing so ties ritual to personal spirituality as opposed to treating it as simple religious activity. Utilizing prayer as representative of religious ritual, connection to the supernatural is intended (Foster 1992; Ladd and Spilka 2002). This includes both personal worship and public prayer. Upward Prayer is an obvious ritual effort to establish this kind of contact. Whether public or private, people introduce their own devices to increase, from their perspective, the efficacy of formal liturgical worship. These regularly encompass changes in body posture such as bowing and kneeling, among other motions. Some settings accept dancing. In the privacy of one's personal life, innovation is frequently present in the prayers addressed to the Divine. Since there are many reasons people desire to connect to super-human agents, prayer is multidimensional. Foster (1992) theorizes 21 different forms. Empirically, research has distinguished over 10 types via Factor Analytic methodology.

The most common form of prayer has been termed petitionary, a term that is very broad since people may seek innumerable things, to wit, material gain or items, divine protection, God's intervention to help others as in intercessory prayer, personal guidance, self-improvement, and religious experience. Prayers of confession, praise, forgiveness, or thanksgiving are frequently offered. Contemplation or meditation may be sought. These are some of the more evident contents possible. Verbal ritual is also clearly patterned and may be supplemented with "speaking-in-tongues," various body movements, eye closing, hand clasping, etc. When describing personal practices, people readily acknowledge that their prayers are made in a regular, orderly sequence based on individually constructed ritual formats.

According to Foster, connectivity via prayer can also be conceptualized as inward or outward. Though the Upward focus remains, Inward Prayer stresses the self. Confession and atonement are usually its chief elements. In contrast, Outward Prayer emphasizes the external world and others.

Prayer, as probably the dominant kind of religious ritual, can be viewed from a number of stances, both theoretically and empirically. As connection, it is not a simple phenomenon.

### The Social Role of Religious Ritual

Ritual in general and specifically religious ritual as connectivity performs a fundamental communicative role. Recognizing this, Lawson and McCauley (1990) analyze religious ritual in terms of linguistic theory. More than simply the intended communicative substance of the act itself is conveyed to the superhuman object of the ritual. Further, as noted, the performing person becomes bound to the religious group within which the act is meaningful plus the larger culture in which the actor's faith has meaning. When people jointly participate in religious ritual, they perceive themselves as unified with their like-behaving peers. They are not only connected to the supernatural but to each other through common symbolic actions.

Particularly within the religious sphere, there is the belief that communal rituals are more apt to influence a deity than isolated individual responses. We see this in joint public expressions of intercessory prayer or calls for collective godly blessings.

Increased social coordination and cohesion are part of this process. Implicitly, an interpersonal consensus is intimated since these acts were learned from and usually concern others. Religious institutions openly avow ceremonial messages of mutual support and harmony in public settings. The hoped-for result is a reduction of conflict and enhancement of help and cooperation. Again, the enrichment of religious ritual behavior that connotes spirituality is implicit in these activities.

The significance of ritual within the individual personality implies a broad range of possibilities. At one end of this continuum, there is an obsessive-compulsive approach that is narrow and protective-restrictive. In the extreme, pathology as in scrupulosity may be present. At the other terminus, the search for meaning in ritualistic actions can

reflect a broadened view as connections to oneself, others, and the sacred come to the fore.

### Rogers, Carl

James G. Emerson  
San Francisco, CA, USA

### Introduction

In most evaluations of psychologists and psychotherapists of the twentieth century, Carl Rogers

(January 8, 1902–February 4, 1987) stands amongst the top five or six whether one speaks of his personal ability as a therapist, a theorist, or a student of personality.

### Person-Centered Therapy

The approach of Carl Rogers, often called “nondirective,” was not nearly as absent direction as both critics and supporters claim. The phrase “client centered” as opposed to “theory centered” or “teacher centered” is a far better statement of his approach and contribution than other terms.

He himself came to focus on the phrase “person centered.”

### Seward Hiltner and Carl Rogers

Most in the field of religion became aware of Rogers through the work of Seward Hiltner. An approach to pastoral care that centered on the perspective of the parishioner rather than the perspective of the pastor or the denomination had several values. The first value lies in awareness that the pastor and the parishioner both stand in need of a context of love and care. That holds true whether or not one speaks of the love and care of another human being or of God. The fact that Rogers came to be identified as a humanist simply defines the perspective from which the client or parishioner was viewed. The starting point was still the person and not the professional.

### The Role of Empathy

The approach of Carl Rogers had special emphasis on empathy or the capacity for empathy. Empathy is a moment in which the brain of one person fully catches what is happening in the brain of another and therefore allows both people to bring that “happening” into full consciousness. The reaction of more than one student of Rogers after an interchange often resulted in the

comment, “My word, he really heard me.” (At least, that was my reaction when I met Dr. Rogers again some 10 years after I completed my graduate work with him).

### The Process and the Dynamic

From a humanist standpoint, Rogers’ view lifted up the capacity of the individual to find healing of mind and self within himself or herself. The process required a context that allowed that healing to work. The task of the therapist, and by extension the pastor, was/is to bring that context into the individual encounter or the group. Contrary to the view that the pastor should have all the answers and give advice, this approach holds that the capacity and strength is within the individual. The role of the counselor or pastor, then, is so to hear what is being said and to lift up what is heard so that the counselee or parishioner can “hear” those strengths within himself or herself.

In his book *Psychotherapy and Personality Change* edited with Rosalind F. Dymond, Rogers drew a picture of two sets of overlapping circles. In one set, he listed many types of experiences in which the experiences were distinct and not in the parts of the circles that overlapped. Those outside of the overlapping section indicated experiences that were in the subconscious and not part of conscious awareness. As, through counseling or pastoral care, experiences became more and more available to one’s conscious awareness, one became healthy-healed.

### From Rogers to Pastoral Care

Although Rogers saw this as a strength of the individual person, it is a simple step for one who believes in God to say that we have not just evidence of the individual at work but of God or of the Holy Spirit at work within an individual. Hence, in the confessional, what happens is that the parishioner brings to the fore events of which he or she feels ashamed.

In Penance, then, it is the task of the priest to find those conscious acts that can bring cleansing to the sin or failure of which one is aware. From a Rogerian standpoint, what happens happens because of a dynamic within the individual and not because of priestly authority.

### Significance for Pastoral Care

The parishioner-centered pastor finds great resource in the work of Carl Rogers for developing a process of pastoral care and counseling.

### A Weakness in Rogers' View

One of the weaknesses of Carl Rogers' approach lay in the area of the reality of sin. Partly in response to that, Carl Menninger wrote a book entitled *Whatever Became of Sin*. The approach of Sigmund Freud, which was basic to Dr. Menninger, resulted in Menninger as a Christian developing a strong sense of the negative forces in human nature even as Carl Rogers looked at the positive. (If one may speak editorially, both are needed).

### Other Applications of Rogers

As Carl Rogers went on in life, he more and more developed applications of his insights to businesses, to educational situations, to practices of management, and to international situations. In line with what is said above, from the religious side, what Rogers would have identified as personality forces within the individual or the group the person of faith may identify as a spiritual dimension – as the work of God.

A major contribution of Carl Rogers lay in establishing means of researching what actually happened in therapy and measuring evidence of movement or change in the therapeutic process. The use of taped interviews, of Q-sorts, and of narrative case studies all became part of the scientific testing that Rogers brought to the measurement of the therapeutic experience.

### The Scope of His Work

Of his many books, two key publications give the essence of Dr. Rogers' theory and his research.

## Roman Catholic Women Priests

Eileen DiFranco  
Roman Catholic Womenpriests, Philadelphia,  
PA, USA

During the last two millennia, the Roman Catholic Church has offered many reasons why women should not be ordained to the ministerial priesthood. Until the women's liberation movement of the 1970s, the barrier to women's ordination was the Church's culturally bound adherence to the unscientific biological assertions of Aristotle and later Aquinas' belief that women were "incomplete males," who by definition would be unfit matter for the priesthood. Although Christianity has been touted throughout the ages as something new and different, above and beyond human experience, history indicates that Christians and their leaders regularly succumbed to cultural imperatives such as slavery, the acquisition of great wealth, and colonization, along with the subjugation of women.

### Roman Catholic Women Priests, Fig. 1

Roman Catholic women bishops (ordained by male bishops) ordaining women priests. On a boat on the St. Lawrence Seaway's International Waters, 2005 (Courtesy of the author. [http://www.romancatholicwomenpriests.org/photo\\_gallery.htm](http://www.romancatholicwomenpriests.org/photo_gallery.htm))

The belief in the innate biological inferiority of women, of course, was not relegated solely to the Roman Catholic Church. However, by the 1970s, women were moving into fields previously reserved for men. By the close of the 1970s, Lutheran and Episcopal women were being ordained in their respective denominations.

Many of the pioneers in the Roman Catholic women's ordination movement such as Mary B. Lynch, Judith Heffernan, Andrea M. Johnson, Sister Theresa Kane, and Regina Bannan fully expected that the sign of the times unearthed during Vatican II and the subsequent civil rights movement of the 1960s and 1970s would lead to women priests in the near future and said so. However, the antiwoman culture of the church led Pope Paul VI to bring a halt to the discussion of women priests in 1976 with the encyclical "*Inter Insigniores*." (Paul VI 1976) Since it became politically incorrect to label women inferior, Paul wrote that only those who "resemble" Christ in his maleness can serve in a sacramental role. This is based upon his literalizing scriptural language in Ephesians 5:22–28 and redefining Jesus as a cosmic bridegroom who gave himself up for the church, a role women could not expect to emulate (Fig. 1).

While acknowledging the misogynistic tendencies of Church fathers such as Jerome, who declared that "Woman is. . . in a word, a perilous

object," and Tertullian who described women as the "gateway of the devil," Paul VI wrote with no basis in fact that such attitudes of these and other Church fathers "had hardly any influence on their pastoral activities and still less in their spiritual direction of women." Paul VI wrote "*Inter Insigniores*" despite the fact that the Pontifical Biblical Commission had declared in the same year that there existed no scriptural reason not to ordain women.

Thus, the pope and by extension the bishops as well as many members of the clergy have been unable to forge a connection between the culturally induced antiwomen statements made repeatedly by Church fathers and their heirs and their own persistent inability to view women as having a call to serve as priests. Rather than acknowledging that St. Catherine of Siena and St. Therese of the Little Flower, both of whom had expressed vocations to the priesthood, Paul VI warned modern women seeking ordination that priesthood is "not a right" or a means of "social advancement." The Church is, Paul VI asserted in spite of his ban on women priests, a place of "real equality" where everyone has a "distinct role," a caveat that undermines his assertion of equality.

Paul VI also wrote that Jesus did not even entrust the priesthood to his own mother, a woman described by 2,000 years of theological

reflection as someone far greater than mere human women and one conceived without sin who committed no sin during her life and who never had sexual relations either before or after the birth of Jesus, miraculously both mother and virgin. Because of the Church's ongoing antipathy towards sexual relations, an attitude forged by Platonic dualism and the adoption of the Augustinian belief in the transmission of original sin via sexual intercourse, a woman who engaged in sexual relations could not possibly be a "*Theotokos*" or God bearer.

Despite Paul's claim that Mary was not ordained, Mary is, par excellence, an object of intense devotion for celibate priests who have eschewed sexual relations for life. John Paul II asserted in a general audience in 1993 that Mary is "the friend, companion, guide, and confidant of priests." "Priests," he said, "accept God's gift in self-giving and follow her example as faithful virgins." Indeed, John Paul II, who completely dedicated himself to Mary as expressed in his motto, "*Totus Tuus*" or "totally yours," Mary's that is, regarded Mary as co-redemptrix with Jesus. John Paul also wrote that Mary represents "the union between mothers and sons" (John Paul II 1988). Modern psychology now sees all these kinds of fantasies in a new way.

Few have discussed the roles that celibacy and its concomitant fixation upon Mary play in the church's ongoing sexism. As seminarians intending to eschew all sexual activity for life, aspiring priests are taught to seek "intimacy with Mary and to be formed by her maternal love" (Cardinal Muench). Several psychological questions should be asked. First of all, do mature men offer themselves "totally," that is, heart, body, mind, and soul to their mothers or consider the gestation process some sort of "union" that lasts for life? Secondly, do grown men have "intimate" relationships with their mothers? Thirdly, how does an intense spiritual devotion to a woman who has no counterpart in the real world affect a priest's relationship with flesh and blood women who cannot possibly emulate the ever Virgin Mother of God?

Carl Jung discusses the pitfalls of using the image of the Virgin Mary as means to spiritualize

erotic tendencies (Jung 1923). According to Jung, the single-minded devotion to Mary served as a "death blow" to the "service of women." While Mary was lifted up as the Queen of Heaven and the Apostles, the Star of the Sea, and Seat of Wisdom, women who walked the earth as mothers, sisters, aunts, cousins, and friends were told by John Paul II that they could not even talk about women's ordination since the case for women priests had been closed for all time (John Paul II 1994).

Jung and the Church, however, share some unproven assumptions about women. Just as Jung asserted with little proof that the unconscious or souls of women and men differ essentially. Similarly, the Church, under the influence of John Paul II's "Theology of the Body," asserts that men and women possess essential characteristics that can be "deformed" by taking a less-gendered defined approach to fulfillment. According to John Paul, women must "not appropriate for themselves male characteristics contrary to their own feminine originality" lest they not reach "fulfillment" and lose their "essential richness" (John Paul II 1988). These types of pronouncements are made by powerful and admired men about women serve to preserve stereotypes as well as the status quo. In reality, gender is more flexible than hardwired, and there is as much variation among women as there are between men and women. Any type of essentialism must be true of all women in all places at all times. One needs to look at modern woman and her presence on the athletic field, in government, in business, and, indeed, even in the home, and see that these assertions are simply untrue. Human experiences change over the course of time, giving rise to different interpretations and meanings of what was once considered to be a universal human experience (Lauter and Rupprecht 1985).

The Catholic priesthood is comprised of celibate men who believe they must remain undefiled by sexual contact with women if they are to be effective priests. Celibacy is, in fact, regarded as the "crown jewel" of the Catholic priesthood. Giving up a wife and family allegedly frees the male priest to be a "father" to the people even

though Catholic priestly celibacy does not exist within an otherwise ascetic lifestyle and does not, from empirical evidence, necessarily make men good priests. In fact, psychologist A.W. Richard Sipe discovered that in spite of the priesthood's lofty ideals of fatherhood and the iconic imaging Jesus, two-thirds of priests remain psychosexually immature and thus unable to do either adequately (Doyle et al. 2006).

Sipe also observed that the "ideal" to whom all priests aspire is Jesus Christ, who is both male and divine, and presumed celibate, although no evidence exists to prove what is considered to be fact. According to Roman Catholic dogma, this virginal Jesus has a virginal mother, also undefiled by sexual relations, who serves as a perfect woman who will offer unending support and love. According to Sipe, who studied both the healthy and pathological aspects of the priesthood for 30 years, this leads to a devaluation of women (Sipe 1990). Just as there is no room in the Trinity for a female presence, even though the Holy Spirit is described in Genesis by the feminine Hebrew noun, "Ruah," there is no room in ministry for women priests. Woman, a potential source of imagined psychological defilement for male celibates, becomes "the other," about whom various popes have written endless papal letters to cement women's divinely ordained role in the church as something less than man. This puts women in the male clergy's unbalanced, negative collective shadow that is both psychologically unhealthy and unjust for the Church.

In an interview with Terry Gross, host of PBS radio show, "Fresh Air," Sister Patricia Farrell, president of the Leadership Conference of Religious Women, which is being investigated by the Vatican for their "radical feminism," stated that there is an "impoverishment in the church which has not heard the voice of women" (Fresh Air 2012).

This is the marble wall that women face whenever they attempt to discuss their vocation to the Catholic priesthood, although few priests or bishops are willing to talk about this honestly and openly. The papacy of John Paul II asserted repeatedly that an all-male priesthood has been the "constant" tradition of the church in spite of

epigraphic evidence to the contrary. Historian Dorothy Irvin, Ph.D., described artwork in ancient catacombs of women dressed in liturgical dress, holding chalices and lifting their hands up in the traditional praying position of male Catholic priests. (Irvin) Giorgio Otranto, Ph.D., stated that women were ordained priests in southern Italy as late as the fifth century, as proven by an epistle written by Pope Gelasius I condemning such a practice (Otranto 1991).

The seven women ordained on the Danube River in 2002 as part of the Roman Catholic Womenpriest movement reflected both the ancient practice of women in ordained ministry as well as the determination of devoted, educated, modern women to claim their rightful place in the church as the equal of men. Their ordination was also the culmination of 30 years of asking the church hierarchy to consider not only these historical, cultural, and psychological precedents but also the psychological, social, and pastoral need to have women priests in a church comprised of both men and women.

The Vatican response was immediate. The Congregation for the Doctrine of the Faith (CDF) issued a warning declaring the ordinations null and void. The CDF added that the ordination of women was a "grave offense" and a "serious attack on the unity of the Church" (Ratzinger 2002). The women refused to repudiate their ordination and received official letters of excommunication on July 22, 2002.

Thus, ordination has not been a risk-free event for the ordained women and their supporters. As poet Adrienne Rich wrote, "Feminism means finally that we renounce our obedience to the fathers and recognize that the world they have described is not the whole world" (Lauter and Rupprecht 1985, p. xx). The valid – if illicit – ordination of women in apostolic succession in the Roman Catholic Church in the face of papal and clerical disapproval is, indeed, a sign that the patriarchal landscape of the Roman Catholic Church has been forever altered. The male, celibate, authoritarian Roman Catholic Church that believes that it can speak without error on issues as diverse as the Trinity and women's ordination because that authority has been given to them by

a male, celibate God has much to lose if it opens its seminary doors to women. Women with vocations have been told repeatedly by the pope, bishops, and seminary rectors that no women need apply.

The Church would have to admit that it was wrong; that it had made a mistake; that it had succumbed to secular and cultural gender constructs, rather than adhering to the gospel message which declared that there was neither male nor female in Christ Jesus (Galatians 3:28–29). For the Church to be wrong about women, priests opens up the door to the reality that the Church might have been wrong about many other things as well, something the Church is simply unwilling to do lest it undermine its authority.

Consequently, the church has fought back furiously against the now over 100 women who have been ordained worldwide since 2002 in the Roman Catholic Womenpriest movement. Aside from the letters of excommunication received by the original seven women, ordained women in various cities such as St. Louis, Missouri were harassed by their respective bishops, while others were dismissed from teaching, administrative, and parish ministries. By 2008, when members of Roman Catholic Womenpriests had established church communities in various parts of the country and the world, the Vatican newspaper, “L’Osservatore Romano,” declared that ordained women and those who support them had “excommunicated themselves” (Catholic News Agency 2008). Bishops like William Morris of Australia were fired for even mentioning women’s ordination, while ordained members of other religions such as Rabbi Susan Talve of St. Louis, Missouri, were taken to task by the local bishop for allowing an ordination to take place in her synagogue (Palmo 2007).

The Church’s treatment of ordained women stands in stark contrast to the treatment of male, clerical pedophiles, none of whom has been excommunicated. Most of the pedophiles were not removed from the priesthood until their crimes were made public. While ordained women have been barred from the sacraments and denied a Catholic burial, well-known

pedophiles like the notorious Legion of Christ founder Marcial Maciel were transferred to other parishes or sent to monasteries to live a life of prayer and penance (Berry 2012). Yet in 2010, the Vatican went so far as to equate women’s ordination with pedophilia saying that both strike equally at the sacramental heart of the church (Vatican Information Service 2010).

Excommunication has not stopped the progress of the Womenpriest movement. Aside from ordained priests in the United States and Canada, there are ordained women in South America, Austria, Switzerland, France, Germany, and Scotland. Roman Catholic Womenpriests have a vision of a renewed priesthood, minus the sexual and hierarchical baggage of the past. Consequently, members of RCWP take no vow of celibacy and many of the women are both wives and mothers. RCWP bishops, who were validly ordained by male bishops in good standing, are elected and have no administrative power. Priests take no vow of obedience to the bishops and are accountable to the People of God and to each other.

Parishes pastured by RCWP priests exist in many parts of the United States and Canada. As Rabbi Gamaliel said in Acts of the Apostles, “. . .Let them alone; because if this plan or this undertaking is of human origin, it will fail; but if it is of God, you will not be able to overthrow them—in that case you may even be found fighting God!” (Acts 5:38–39).

As the Roman Catholic Womenpriests website states,

The Catholic people have accepted us as their priests and they continue to support us as we grow from the seven bold women first ordained on the Danube River in 2002. Ordained women are already ministering in over twenty-three states across the country. We are here to stay. We are not going away (Roman Catholic Womenpriests).

## Rome

Anthony J. Elia

The Burke Library, Union Theological Seminary, Columbia University, New York, NY, USA

Rome (Ital. *Roma*) in the state of Lazio, Italy, is the capital of the Italian Republic and spiritual center of the Roman Catholic world. The Vatican, which is its own self-governed city-state, is located centrally in Rome, just a few blocks from the Tiber River. Though in most cases Rome indicates the geographical location of the city and its environs, it also refers to a set of ideas ranging from the state functions of the Republic and Empire in antiquity to the centrality of power of the Roman Catholic Church and the seat of the papacy. Rome is often referred to as “The Eternal City” (*la città eterna*), “The City of the Seven Hills” (*la città dei sette colli*), and “Capital of the World” (*caput mundi*).

The centrality of Rome has been recognized for millennia and written about in literature, theology, and histories (including St. Augustine, Edward Gibbon, and Henry James). Psychologically, its spatial and spiritual centrality may be

compared with Jerusalem, which often attracts individuals with the so-called Jerusalem syndrome but to a much lesser extent. A comparable condition might best be described as a “Rome neurosis,” which Freud described as his anxiety about traveling to Rome while in Italy. As Ginsburg writes, “Freud developed what he called his ‘Rome neurosis.’ He, an avid traveler in Italy, could not get to Rome, though the city haunted his dreams. To do so, he had to dig up the Rome in himself, by analyzing his dreams” (Ginsburg and Ginsburg 1999, p. 17). Freud eventually got over this neurosis, enjoying Rome tremendously, with even a consideration of retiring to the Italian capital (Jones 1955, p. 96).

### Rome and the Church

The relationship between Rome and the Catholic Church is inextricable. Since late antiquity and the reign of Constantine, the Church has played a dominant role in forming an identity of the city. Ernest Jones, Freud’s biographer, wrote about Freud’s idea of the “two Romes,” one which embodies classical antiquity, the other, which was the Christian Rome, the Rome which superseded the earlier Rome of the Republic and Empire. Freud had great interest and admiration for the first Rome but conflict with the second. This second or New Rome “could only be an enemy to him, the source of all the persecutions Freud’s people had endured throughout the ages” (Jones 1955, p. 18).

### Rome in Freud’s Analyses

Freud encountered the subject of Rome several times in his work, both in his analyses of individuals and his topical interpretations. One of the first accounts of Rome in Freud’s works is from a patient “Frau Emmy von N.,” whom Freud saw beginning in May 1889. On the morning session of 15 May, the patient asked Freud if he had heard about a “Countess Sch.,” who had been killed in an accident in Rome. The next mention of Rome

was from a patient named “Fräulein Rosalia H.” in the autumn of 1892, who recounted singing at a rehearsal in Rome, at which point she was in a “state of great emotional excitement” and fell ill upon the stage (Freud 1953a, II, p. 169n).

In his “Infantile Materials as a Source of Dreams,” Freud dealt to some extent with the issue of Rome as a topological ideal and the psychological implications of visiting it. When speaking of memories that may have begun in childhood, Freud notes, “what I have in mind is a series of dreams which are based upon a longing to visit Rome. For a long time to come, no doubt, I shall have to continue to satisfy that longing in my dreams: for at the season of the year when it is possible for me to travel, residence in Rome must be avoided for reasons of health” (Freud 1953c, V, pp. 193–194). Freud then recounts the details of a dream about being in a train near the Tiber. Freud did not visit Rome until 1901, at the age of forty-five. And in the footnotes of these discussions on dreams, Freud has successive notes (one added in 1909, another in 1925) which underscore the importance of the city. He writes, “I discovered long since that it only needs a little courage to fulfill wishes which till then have been regarded as unattainable; and thereafter became a constant pilgrim to Rome” (Freud 1953b, IV, p. 194n).

In one of his dreams, Freud described being on a street corner in Rome and “surprised to find so many posters in German stuck up there,” which he then describes as a vision of Prague and a conflation of his early memories of Moravia, where he was born and where German was likely to be more tolerated (Freud 1953b, IV, p. 195).

### Freud, Hannibal, and Rome

Freud’s most notable work on Rome is that which describes (1) parallels between Hannibal and Freud himself and (2) the tensions embodied between Jewry and the Catholic Church. Freud wrote in his “Infantile Material” that “I had actually been following Hannibal’s footsteps. Like him, I had been fated not to see Rome; and he

too had moved into the Campagna when everyone had expected him in Rome. But Hannibal, whom I had come to resemble in these respects, had been the favourite [sic] hero of my later school days” (Freud 1953b, IV, p. 196). More importantly, Freud makes the connection between himself and Hannibal as something akin to a more pressing historical tension, that between the Church and the Jews. He writes, “to my youthful mind Hannibal and Rome symbolized the conflict between the tenacity of Jewry and the organization of the Catholic church. . . . Thus the wish to go to Rome had become in my dream-life a cloak and symbol for a number of other passionate wishes” (Freud 1953b, IV, pp. 196–7).

Rome appears in additional writings about childhood without significant comment (Freud 1953c, V) and a handful of times in Freud’s commentary “Delusions and Dreams in Jensen’s *Gradiva*” (Freud 1959, IX). In his piece “Der Moses des Michelangelo,” Freud is very interested in the artist’s sculpture, and as the editors of his collected works note, “Freud’s interest in Michelangelo’s statue was of old standing. He went to see it on the fourth day of his very first visit to Rome, . . . as well as on many later occasions” (Freud 1955, XIII, p. 210).

Rome is of some importance to Freud in his work “Civilization and Its Discontents,” of which “the main theme of the book - the irremediable antagonism between the demands of instinct and the restriction of civilization - may be traced back to some of Freud’s very earliest psychological writings” (Freud 1961, XXI, p. 60). In this work, Freud expresses a comparison between the *past of a city* and the *past of the mind*, which questions the mental imagining of the idea of a city like Rome, as well as the artifacts that create the historical narratives around the location of Rome (Freud 1961, XXI).

## Lacan and Rome

Lacan’s vision of Rome is much different than Freud’s ideas about Rome. Lacan was not

interested in the same historical artifacts or constructions that Freud was. As one scholar has put it, “Lacan’s Rome resembled rather the ceilings of the Galleria Farnese, the archangels of Andrea Pozzo, or the facades of Francesco Borromini. (. . .) Occasionally, antiquity would revive in the form of philosophical references or famous battles, but never ruins. The unconscious discovered by Freud was to be started up anew as a Counter-Reformation, sumptuously draped in the folds of Clérambault. Rome would be his palace, the French language his garden” (Roudinesco 1990, p. 253). For Lacan, the illustriousness of the Baroque Rome was attractive, as were the trappings of the Christian Rome, which seemed to be anathema to Freud’s own vision of what Dr. Jones called his “second Rome” (noted above). Roudinesco writes that “Lacan’s Rome began with Ignatius of Loyola and ended in rococo madness. As founder of a new orthodoxy, the master spawned a flamboyant theory. . . . Rome emigrated to Versailles and the Holy See to the rue de Lille. Lacan’s Rome was that of the Roman Catholic empire, a city in which the Pope was no longer a preacher but a commander in chief. The Rome dreamt of over maps in childhood; the Rome of adolescence and the Collège Stanislas: everything in the realm of religion, nothing accorded to faith” (Roudinesco 1990, p. 253). As for Freud, “Medieval and baroque Rome evoked his hatred of Catholicism once more. . . .” (Ginsburg and Ginsburg 1999, p. 18). Lacan presented his *Rome Discourse* in 1953, which is seen as a “first step toward the elaboration of a theory of therapy, of its conduct, temporality, and punctuation” (Ginsburg and Ginsburg 1999, p. 18). The presentation of this discourse in Rome was symbolic of Lacan’s own feelings about the city and what it meant in his overarching thought and work (Amati 1996).

## Rumi, Celaladin

Lucinda Antrim  
Blanton-Peale Graduate Institute, New York,  
NY, USA

## Introduction

Celaladin (Jalal-ud-Din) Rumi, considered by many to be Islam's greatest mystic, was born in or near Balkh (in present-day Afghanistan) on what is generally accepted to be September 30, 1207, and died in Konya, in what is now southern Turkey, on December 17, 1273. A prolific poet and spiritual writer, his work has influenced not only Islamic literature and

thought but the wider Western world. For the first years of his adult life, Rumi was a respected Islamic jurisprudent, teacher, and writer, as was his father before him. With the arrival in Konya of the wandering mystic Shams-i-Tabriz when Rumi was 37 years old, Rumi entered a period of creative and mystic fervor that resulted in an outpouring of poetry and teaching. His physical expressions of mystical experience inspired the founding of the Mevlevi order of whirling dervishes.

## Life

We are dependent for the specifics of Rumi's life on several early hagiographers, including his son, Sultan Walad. This is what has come down to us: Mevlana (Our Master) Jalal-ud-Din Rumi was born into a Sunni Muslim family, either in Vakhsh, outside Balkh, or in Balkh itself, a major cultural center where Muslims, Jews, Hindus, and Christians mingled. It was a period of political unrest; when Rumi was 12, his father, Baha al-Din, left Balkh, perhaps fleeing dynastic quarrels and an impending Mongol threat, perhaps in search of greater scope for his work, which he may have felt was underappreciated in Balkh. The family journeyed for about 10 years and covered about 1,500 miles, and on this long journey, Rumi's mother (one of Baha al-Din's four wives) and a brother died; Rumi married a young woman traveling with the family, and the couple had their two sons. When they arrived in the ancient city of Konya, perhaps at the invitation of the sultan, Konya was still a center of wealth and influence, growing with the influx of those fleeing the Mongols. Baha al-Din died in Konya in 1231, when Rumi was 24.

Rumi was well educated, perhaps in part in Damascus. He studied under leading Sufi mystics and learned large parts of the *Koran* (the holy book of Islam, a record of God's words revealed through the Angel Gabriel to the prophet Muhammad from 610 to 632 CE) and diverse Hadith (commentaries on the *Koran* and on the sayings of Muhammad), by heart. Upon his return to Konya, Rumi assumed a position in the

madrise, or religious school, teaching sharia law and Sufi practices and lecturing widely.

After the death of his first wife, Rumi remarried, a woman some believe to have been a Christian and with whom he had two more children, a son and a daughter.

In 1244, Rumi's transformative meeting with Shams-i Tabriz occurred. A relatively uneducated wandering dervish, Shams was a man of complex personality, experienced by some as dismissive and demanding. He may have been a member of an Islamic order that purposely incited rejection as a path to spiritual growth. Legends grew up around the meeting of Rumi and Shams; one holds that Shams, entering Rumi's home while he was lecturing, looked at a pile of books and asked, "What is this?" Rumi replied, "You don't know." The books burst into flame. Rumi asked, "What is this?" Shams replied, "You don't know." Shams was the first of three spiritual companions in Rumi's life.

Many of Rumi's followers reacted to Rumi's intense interest in Shams with jealousy. After several months, Shams left Konya, perhaps under pressure from the jealousy of others, perhaps following the call of his own wandering spirit, and perhaps from a desire to further Rumi's spiritual growth through a period of separation. Disconsolate, Rumi sent his son Sultan Walad to bring Shams back. After a period of peace when Shams returned in 1247, the jealousy of Rumi's madrase community members returned, and after less than a year together, Shams disappeared. Some scholars believe he was murdered, perhaps by Rumi's older son Ala al-Din.

In 1250, after a period of deep mourning and of search for Shams, Rumi connected with his second spiritual companion, also a relatively uneducated man, Salah al-Din, a Sufi and a goldsmith in Konya. Upon Salah al-Din's death in 1258, Rumi chose Husam al-Din as his third and last beloved spiritual companion. Husam, a longtime friend and fellow Sufi, became Rumi's amanuensis and inspiration in the writing of the *Masnavi*.

Rumi died in 1273, welcoming death and telling those left behind not to grieve.

## Works

Rumi wrote in Persian, with a few poems of lesser quality in Arabic. He cited a book of poems by a classical tenth-century Arab poet as his favorite work, but influences on his poetry are diverse, from animal stories of Indian origin to classical Sufi works to Persian love stories. He wrote in classical form but with living, variously informed content.

In the *Divan-I Kebir*, Rumi documents his love, union, and longing for Shams-i Tabriz, as representative of mystical union and separation from God, in what are considered to be some of the world's great love poems. Rumi signs many of the poems (ghazals, a traditional Persian love poem of 5–12 rhymed lines) as Shams, indicating that he and Shams have become indistinguishable. Many poems speak of spring, intoxication, and of Shams as the Sun, with a musicality that is often lost in translation. All are an attempt to describe inexpressible experience, suffused with a meaning beyond words. Rumi's work is endlessly associative without being dissociated; it is ultimately organized by its object: Allah. Also in the *Divan* is Rumi's Rubaiyat, a series of rhymed quatrains.

The *Masnavi*, a lengthy book of couplets dictated to his last spiritual companion, Husam al-Din, is a famously difficult book: his teachings took as its subjects everything from ribald tales about cheating Sufi wives to parables from the Judeo-Christian Bible to animal fables, through which he hinted at spiritual implications often without specifying them. He charmingly and at times frighteningly personified abstract concepts and anthropomorphized everything from parts of the body to Sleep.

Rumi was a Neoplatonist; Aristotelian logic held little interest for him, and he was sometimes castigated by more traditional Muslims for taking too many liberties with the interpretation of the Koran. His whirling, which began with the arrival of Shams, was viewed with suspicion by other teachers and by some of his own disciples. Within the Sufi tradition, he was relatively uninterested in the delineation of Gnostic stages by which one approaches union with God: for Rumi, man was perfected in love and suffering.

His discourses were collected under the title *Fihi ma fahi*. Several collections of his poems and a short selection of his sermons are available. His correspondence has also been preserved.

## Influence

Despite the fact that his poetic language is rooted in the conventions of Persian and Sufi literature, informed by a medieval worldview very different from our own, and so infused with the Koran that his *Masnavi* was called by some later Muslims “the Koran in Persian,” Rumi’s poetry quickens the hearts and touches the souls of many today. From providing the text of a Philip Glass/Robert Wilson song cycle to Rumi calendars, cards, and websites, Rumi is threading through the modern Western consciousness. Some trace the common phrase “It is what it is” to the compendium of Rumi’s teachings, *Fihi ma fahi*, “In it is what is in it,” or “It is what it is.” Rumi influenced German and English writers in the nineteenth century and was the UNESCO (The United Nations Educational, Scientific, and Cultural Organization) International Man of the Year in 2007 (commemorating the 800th anniversary of his birth).

He is widely influential in the Muslim world: in Iran, he is a household name, his mausoleum in Turkey is a place of pilgrimage, and his influence on later Muslim philosophers and poets is pervasive.

## Commentary

Commentary on the intersection of psychology and religion in Rumi is conditioned by the distance from which we view this medieval mystic, who was deeply rooted in the Koran and in the society of his day.

Developmentally, Rumi remained a gifted but unremarkable Sufi scholar until age 37. His flowering as a poet and mystic began at approximately the same age as the prophet Mohammed experienced his spiritual awakening. For Jung, this is the phase of midlife individuation.

For Erikson, it is near the beginning of the middle adulthood stage, generativity versus stagnation.

Rumi’s sense of identification with Shams and his identification of Shams with the Sun could be seen to indicate a fusion transference, in Kohutian terms.

Some modern commentators (e.g., Leslie Wines) have linked Rumi’s mystical flowering to trauma during the long journey from Balkh to Konya and perhaps even earlier to trauma at age 5 as Mongols invaded his hometown. The mirroring connection with Shams allowed Rumi to expand a part of self that had been desiccated and to begin to process the trauma.

Creatively, Shams could be seen as the precipitant, introduced into Rumi’s erudition and talent and yielding an outflow of poetry and teaching.

It is diagnostically interesting to speculate about Rumi’s internal motivations: his whirling and its attendant drumming may have harnessed mild compulsive or anxious features. At times he reported that he was impelled to the poetry. Sleeplessness and fasting were a regular part of Sufi discipline and can be related to psychic states.

Rumi’s poetry explores at length and in great depth the wide range of human emotions. His lack of sentimentality allows the participation of others in his experience; he provides for readers the mirror that he found for himself in Shams and his later two spiritual companions. Many truths that we now recognize as psychological are found in his writing, for example, “Flee not from the suffering We (God) inflict, for wherever you find suffering, there also you find a way to the remedy.’ No one has ever fled from suffering without finding something worse in return” (*Rumi; Divan*, 1995, p. 123).

Rumi’s relationships with Shams, and to a lesser extent with Salah al-Din and Husam al-Din, were deeply engaging at the expense of other relationships and aroused fierce, even murderous jealousy in his community. For Bion, the pairing of Rumi with his spiritual companions, especially his first, Shams, may have been experienced by Rumi’s madrase community as preventing the work stage. The pairing, very fecund, was not able to contain the

heightened anxiety of the group. Some was released in Rumi's poetry, some in Shams's possible murder.

In James Fowler's Stages of Faith, Rumi is in stage 6, a Universalizer. Fowler found those at this stage to be "contagious"; Rumi's influence is still felt after eight centuries.

Psychoanalysts share with Rumi the inability to express in words the experience of the encounter, and theorists from Winnicott to Bollas to Eigen have worked to describe aspects of that experience.

## Sabeanism

Sam Cyrus  
International Academy of Positive  
Psychotherapy, Wiesbaden, Germany

An ancient religion which should not be mistaken with the Sabaeism of Sabá (or Sheba), nor with the Sabianism (with “i” in English rather than with “e”) originated from the group of followers of John the Baptist who did not accept Jesus as the Christ.

### Term Confusion and History

The confusion of the three is a constant through the literature and it is primarily due to a translation mistake of the Koran by Marmaduke Pickthall – the term mentioned in the Koran refers to the religious group and it is written with the Arabic letter *sad*, and Sabá is written with *sin* and is referred to the people of Sabá, Yemen. Other cause of confusion results from the fact that the Ansar tribe of Sabá adopted the Koranic Sabeanism as a religion. A third cause can be pointed in the fact that the followers of John the Baptist, being persecuted and expelled from Palestine, have settled down in the city of Harran, where Sabeanism was the dominant religion and also, after the conquest of Alexander, the center of religious and intellectual activity. Finally, a historical cause is in the fact that the first commentarists of the Koran, the historians

and the jurists of Islam, not seeing a Sabeian, concluded that all the peoples of the world who were not Christian, Jews, or Muslims, living from India to Spain, were Sabeans.

Only in the tenth century, it was known that there were two different groups: the ones living at the area of the Euphrates – the Mandaeans, followers of John the Baptist – and the descendents of the city of Harran – the Harranians (Mehrabkhání 1995).

In this period, the Mandaeans lived among the Sabeans in Harran, probably, copying some of their cosmology, and later in Babylon, where assimilated local beliefs; posterior to the arrival of Muslims in Iraq (636 CE), they moved to the swampy lands of meridian Iraq (Cárdenas n.d.).

### Sabeanism and Other Religions

According to Mehrabkhání (1995) there are no more living believers of this religion, and the only sources referring to it are the Muslim historians of the ninth, tenth, and eleventh centuries, the explanations presented in Bahá’í texts, their mention in Judaism – e.g., *Yeshayahu/Isaiah* 45:14 and *Iyov/Job* 1:15 – and the existence advocated in the original Islam through quotes that distinguish the followers of the book, by one hand, the Muslims and by the other, the Jews, the Christians, and the Sabeans (2:62; 5:69; 22:17).

As mentioned, their geographical origin was attributed to the city of Harran (Mesopotamia), destroyed by the Mongol invasions of the twelfth

century. In the Bible (Genesis 12:4) one can read that Abram “departed out of Haran,” indicating that he could be from there. In letters, the Guardian of the Bahá’í Faith, Shoghi Effendi, by his turn, mentions that “The followers of this religion lived in Ur of the Chaldees, where Abraham appeared” (1941 cit. in Research Department 1996) and “Abraham is considered as having been a follower of that Faith” (1939 cit. in Hornby 1994). And the Koran describes some beliefs of the land of Abraham as similar to those of the Sabean.

The founder of Islam Himself is seen as being of Sabeian origin, according to some descriptions of His time. About Muhammad, Ibn Jurayr (767) wrote “He is a Sabian”; ‘Abd al-Rahman ‘ibn Zayd (798) mentioned “The polytheists used to say of the prophet and his companions ‘these are the Sabians’ comparing them to them, because the Sabians who live Jaziart-al-Mawsil would say ‘La ilaha ila Allah’” (a sentence common in Islamic theology); and Rabi’ah ‘ibn ‘Ubbad (contemporaneous of Muhammad) wrote “I saw the prophet when I was a pagan. (...) I noticed a man behind him saying ‘he is a sabi.’ When I asked somebody who he was he told me he was ‘Abu Lahab, his uncle” (Gündüz 1994, pp. 18–19).

## Religious Life

Sabeans believed in the need of demiurges that had all the virtues and perfections of one God unique, incognoscible, incomprehensible and prophets capable of answering any questions and unite humankind in conciliation and peace. From unknown date of foundations and having a founder or a “Prophet (...) Whose name is unrecorded” (Effendi, 1938 cit. in Departamento de Pesquisa da Casa Universal de Justicia 2006), the learned attributed its origin to Seth – son of Adam, or Idris, Enoch – having in account that their pilgrimage was to Giza, Egypt, where the tombs of Idris and Seth would be, or even to Hermes Trismegistus. This absence of a known founder made them “replace their unknown prophet with these spirits” (Mehrabkhání 1995), in a total of seven, that govern the earthly world

and manage the worldly and the spiritual problems. Those spirits assumed a celestial body as their own physical one – Saturn, Jupiter, Mars, the Sun, Venus, Mercury, and the Moon – having erected temples for each one of them, in Harran (possibly, in a total amount of 12).

Each of these temples, without images, possessed a different architecture. The ceremonies in these temples were under the absolute control of the sacerdotal individuals, existing a clear dependence towards them. A detailed analysis of the religious phenomenon would show an increase of need of clergy dominion as one would go back in time and a consequent apparent loss of responsibility of the believers’ personal acts. Nevertheless, in the case of Sabeanism, there was a belief that the individual’s spirit is conscious of the punishments and rewards he/she was receiving during life, indicating an individual responsibility, despite the need of constant sacerdotal presence and confirmation on the lives and thoughts of the believers: humans were perfect creations, but in potential, and through the intervention of the spirits and through the clergy, they would have their development. Thus, conscience would become the meaning organ, as defined by Frankl (2002), guiding each human being and permitting the maintaining of his/her own identity, making him/her aware of his/her objective in life. In this way, a Sabeian was someone that, guided, reflected on his attitudes, because “freedom of adopting an attitude (...) is never completed if it is not converted and transformed in freedom to assume responsibility” (Frankl 2001, p. 75). Responsibility is now an essential force in Sabeian psychology, marking as a “distinctive note of man in his humanity” (Guberman and Soto 2005, p. 122).

## Family Life

The concept of family, by its turn, was one of equality, under the law, between men and women, in a monogamist couple, making more likely to have a more congruent child education, in what couple and family therapist could call balanced, or at least, inclination to a more balanced and healthy family system. Divorce was not forbidden, but it was unadvised and only

made possible, once more, through the intervention of a superior and exterior entity: in this case a judge after the analysis of the adultery charges (only acceptable cause of divorce).

### Collective Life and Individual Life

It was a religion that defended an individual role, submissive to an external orientation: from the judge, the clergy, or the spirits. Thábit ibn-i-Qarrah (a devoted Sabean) has written that “some chosen among the people” are those who “have reached all this and have shown the way to heal the badness of the souls and have filled the world with the institutions and centers to fulfill and extend wisdom and piety.” These are the few who led the matters of the community. A first and superficial analysis could attribute the locus of control of the believers to external variables, but if such was true, the cities where they lived, as was the case of Harran, wouldn't have been the centers of cultural enterprises, where difference was accepted. In reality, respecting the guide of those who were hierarchically superior could be compared to the respect a student has towards the teacher or the relationship of a patient with his therapist: at the end, responsibility is of him/her who has, initially, lesser information and knowledge and who wants to learn and develop new capabilities. Thus the ninth and tenth centuries recorded great sages of Sabean origin, like philosophers, astronomers, physicians, and botanicals.

The existence of a class superior in knowledge and wisdom could also prevent a common individual from imposing his opinions to others: as consequence equality, tolerance to difference, and equal opportunities would be as if instituted. The very own diversity of the temples could be seen as an acceptance of difference and diversity. As a consequence, social and moral principles could only result of a social consensus.

### Individual Life

At an individual level, like other religions, there were prayers – in a total of three or five obligatory

ones, depending on the referral source. They took care of their bodies and clothing, as it would be needed for devotional moments. Such act shows a belief in some kind of relationship between the body and the spirit. They fasted three times a year – in a total of 30–46 days – believed that circumcision was against divine creation, and were forbidden to eat some sorts of meats, garlic, onion, lentils, or broad beans.

Scholars assume they believed in life after death, due to their erect and without prostration prayers for the dead during funerals, the archeological findings pointing to their burial with fingernails, and, in a specific record, the figure of a Phoenix on the tomb with the sentence “let there be the joy of a happy ending!”

They were, besides all these, owners of firmness and constancy before hardships, as reported, once more, by Thábit ibn-i-Qarrah: “when everyone was under the influence of the Cross, our parents, with the help of God, showed firmness (...). Blessed those who show constancy and accept all kinds of calamities for the cause of hanputeh, and manifest certitude and confidence.” It was perhaps under this vision that they reached vast corridors of the African world, despite their Asian origins. There are authors who believe that Sabeanism was the precursor of African religions, as the case of the Ngoni people of the Bantu ethnicity of Swaziland, as described by Cárdenas (n.d.), or even Santeria taken to the Americas, centuries later.

## Sacraments

Carol L. Schnabl Schweitzer  
Pastoral Care, Union Presbyterian Seminary,  
Richmond, VA, USA

### Sacred Ritual: Public Act

From a religious perspective, a sacrament is a ritual that has been elevated to a special status because it is believed to have been instituted by

a divine figure. For Christians, for example, these sacred rituals or sacraments are believed to have been instituted by Christ. Scholars that study ritual are able to agree (mostly) on at least two points: (1) “ritual consciousness is pre-critical” and (2) “ritual is meaningful and that meaning consists of the words or ideas to which ritual acts refer” (Grimes 1993, p. 7). Moreover, ritual is a collective, or corporate, and public act, as opposed to an individual or personal and private act; ritual is also traditional as opposed to created or invented. On these points, even Freud would be likely to concur since he declared that an obsessional neurosis was a “half comic and half tragic *private* religion” (Freud 1907, p. 119). This is not to say that new rituals are not created or invented and later adopted as sacred, but it is a process that takes place over generations. The generational process points to the need for some kind of ritual authority – especially with regard to sacred rites or sacraments. Authority is ascribed to sacred texts, tradition (the generational process), ecclesiastical hierarchies, and the like. Grimes identifies several other sources of ritual authority: performance according to rules established by sacred or liturgical texts, functions that cohere with the social context and/or work to achieve explicit goals, and moral criteria which ritual subscribes to and ensures that ritual is just (Grimes 1993, p. 50). Thus, as psychologist of religion Paul Pruyser was led to conclude: “in religion, it is folly to ignore the impact of action on belief. Religious belief is embedded in religious practices; creed is grafted onto cult” (Pruyser 1974, p. 205). Though doctrine about such religious practices is in some ways inseparable from the culture and the practice it describes, there is an unavoidable “chicken-egg” question about which is prior. What then does psychoanalytic theory teach us about ritual and the sacraments in particular?

### Obsession: Private Act

Freud had a less than charitable view of religious ritual and declared that all religion was best understood as a universal obsessional neurosis

(Freud 1907/1959, p. 126). What Freud labeled as “neurotic ceremonials” are “small adjustments to particular everyday actions. . . which have always to be carried out in the same, or in a methodically varied, manner” (Freud 1907/1959, pp. 117–118). If these actions are not carried out methodically and repetitively (daily), the individual experiences intolerable anxiety. Thus, one conclusion pertaining to the function of ritual is that ritual serves as a defense mechanism, which assists in reducing an individual’s anxieties about everyday life. Freud attends particularly to the small additions to what would otherwise be “mere formalities” or exaggerations of formal procedures; these additions or exaggerations may have a “rhythmic character” which consists of pauses and repetitions. One could argue that these “neurotic ceremonials” have an almost musical quality about them. Yet even Freud distinguishes between “neurotic ceremonials” and religious rituals as we shall see.

### Neurotic Obsession or Sacred Rite?

The similarities that Freud identified between neurotic obsessions and sacred rites include the conscientiousness with which the practices are observed as well as the attention paid to details, the “qualms of conscience” or guilt that is stimulated by neglecting the rituals, and the observation or performance of such rituals in isolation from other activities in conjunction with a prohibition against the interruption or disruption of the act. The dissimilarities are equally apparent and include the “stereotyped” character of religious ritual (Freud cites prayer as an example), the corporate or communal nature of sacred ritual, and the details or dimensions of religious rituals that are imbued with significance and symbolic meaning consciously by the believer (Freud 1907/1959, p. 119). Here we can note the “pre-critical consciousness” and meaning located in words and ideas that Grimes describes. In contrast, an obsessional neurosis is acted out in private and the meaning (there is always a symbolic meaning) is not known, at least consciously, to the individual who engages in such practices. Finally, Freud contends that if “deeper insight”

into the actual mechanism of the obsession is to be attained, then one needs to examine what is at the bottom or root of the obsession which is “always *the repression of an instinctual impulse* (a component of sexual instinct)” (Freud 1907/1959, p. 124). Here then we see that an obsessional neurotic practice addresses the guilt which is related to the repression of an impulse and by analogy one can see a similarity with the function of sacraments which, at least in part, are rituals performed to cleanse the believer from sin. Thus, as Freud concludes, the origins of religion are located in the renunciation or suppression of “certain instinctual impulses” (Freud 1907/1959, p. 125). Acts of penance or contrition, which are deemed sacraments in some Christian denominations, are ritual acts engaged in to compensate for the believer’s sinful behaviors, and these acts have a pathological counterpart in obsessional neuroses. As Pruyser notes, however, this treatment of religious ritual doesn’t do justice to religious practice which leads him to render a more favorable reading of sacraments and religious rituals building upon the work of Winnicott and Erikson (Pruyser 1974, pp. 205–213). What then does this more favorable understanding of sacred ritual look like?

### Sacraments as Sacred Ritual

Pruyser takes Winnicott’s idea of a transitional object and its transitional sphere (the attention paid to and “goings on” surrounding the transitional object) as his starting place. The transitional object is a ritual or sacred object which, Pruyser argues, is the transcendent. The object is held as sacred; for example, an infant’s mother and the rest of the family realize almost intuitively that a blanket or teddy bear is precious and it acquires a “ceremonial focus” within the family. It isn’t washed with the rest of the laundry, is often carried everywhere, and is treated with awe or reverence. This transitional sphere wherein the object becomes sacred is also the source of illusion in the positive sense of the word. It is the space between “the mental image produced by the mind itself and the objective perceptual image

produced by the real world impinging upon the sensory system. Illusion is neither hallucination nor delusion, nor is it straightforward sense perception. Illusion also includes mystery” (Pruyser 1974, p. 11). Thus, the transitional object has an almost numinous – even if illusory – quality about it, while the transitional sphere is the location for mediation between inner and outer reality and in this way serves as the place from which religion emanates. The first occurrence of ritual takes place when an infant and mother exchange smiles while the infant is nursing (Erikson 1977, p. 87). How then does this lead to the development of sacred ritual and the celebration of sacraments? If we consider the Christian sacraments of baptism and the Eucharist as examples, we can see that they are in some sense religious dramas enacted in a worship context that deal primarily with notions of grace and judgment (or damnation) which invite communal participation. To be sure, the celebration of the sacraments is fraught with symbols, the multivalent meanings of which perhaps only the clergy or ecclesiastical authorities are able to explain fully, but their absence from the drama of human life would signal nothing short of a person with a negative identity (Erikson) or an individual who has never learned to play (Winnicott).

### Sacred King

Stacey Enslow

Anthropology Department, Purdue University,  
West Lafayette, IN, USA

The Sacred King is a unification of the concepts of the innate self-ruler; the human being as a potentiality expressed in competence, command, resourcefulness, and self-control. This is united with the mystical, religious, or psychic self, as the leader of the unearthly aspects of the human. The Sacred King joins the office of the secular King and the holy Priest into a single whole person, one who acts with authority and knowledge in the inner and outer realms of human experience. Sacred King seeks to achieve homeostasis but at an idealized level. He (the Sacred King is a “masculine” aspect – it is understood that archetypes are manifested in both genders and sexes) is the bridge between extremes of human social and personal/religious experience. In Eastern metaphysics, the human is conceived of as a bridge between “heaven” and “earth,” whereas in Western metaphysics, humanity is seen as possessing, or linking, the extremes of the “upper” or celestial worlds and the “lower” or demonic worlds – heaven:hell, human world: faery/other world, and Arcadia: Hades.

Mythic correspondences include, as earthly beings, Gilgamesh, Rama, and The Fisher King. Some deities representing Sacred Kingship are Marduk, Prajapati, and Osiris.

As Gilgamesh, the earliest recorded Sacred King in history, the Sacred King represents the culmination of the journey of the soul, from realization of potential to the limits of the physical self, to the unification of desires, and will to achieve the end of the soul's journey. Gilgamesh is the Sacred Warrior, and the Wanderer, who has achieved success in the quest for selfhood and self-mastery. Gilgamesh also shows the power of the Sacred King as living and ruling in two worlds: the land of the living and the land of the divine, be they ancestors or gods. Working with the high priestess/goddess of the land, the Sacred King is the judge and upholder of sacred law, and by his decree secular and sacred law are joined. The goddess and the land are forces with which the Sacred King must remain in balance with, to stay healthy and potent.

Rama is the lawgiver: he who arbitrates the sacred law and also keeps the land fertile through fairness and justice. Rama is the Sacred King as universal or social conscience, and the self as a social force; both a binder and administrator. As Rama, the Sacred King represents the idea of latent sovereignty within the self, or self-rulership, as well as the ability to empower, and rule, others. This aspect of the Sacred King is the fulfillment of the social contract between the individual and humanity: as a self-realized human being, the Sacred King performs his duties of office and is in turn sustained within the interconnected energy exchange between himself, the land, and society on one hand and between himself, the goddess of the land, and the collective spirit of the people on the other. Thus the Sacred King fulfills the "Divine Mandate" of Eastern metaphysics as a bridge between heaven and earth. By mastering the Shadow within himself, he is also the bridge between the "lower" or demonic and "upper" or angelic realms as well.

The Fisher King is the wounded self, seeking reconciliation and healing: the Sacred King as victim and as self-immobilized. Just as the

empowered Sacred King represents the self-realized self-ruler, the Fisher King represents the powers of the King: healing, union, justice, rulership, and wisdom, all rendered impotent by the innate power of the King turned against the self. In this aspect of the archetype, the illness of the self is a public role, affecting the health of the entire network he is connected to: the land, and its divinity, and the people, and their collective spirit.

For the Fisher King, all relationships that the Sacred King needs to fulfill are out of balance, rendering the King unable to perform his functions and unable to be healed until the imbalances both within and without the self are healed. The Fisher King's illness is reflected in the land, and so the land ceases to nourish the King, or his people. Also, the land no longer nourishes the social network of the people, and so they cannot heal the King: The Fisher King is sick in body, social function, and psyche.

The Sacred King has a strong messianic component: like the Fisher King, Rama and Osiris are embodiments of the Returning King which involves a period away from society and family (through illness, a personal quest or exile, death) and then a return to liberate and rule again.

Sexual potency is an important aspect of the Sacred King; all Sacred Kings excel in combat, and usually possess superlative weapons; when the King's power is lessened, there is a corresponding lessening, or even breakage, of the potent weapon, and vice versa. The libido is a driving force for the Sacred King; the erotic interplay between Gilgamesh and Inanna, the love affair of Rama/Radhi, and the castration and rejuvenation of Osiris by Isis illustrate the necessity of the male/female dynamism not only as a catalyst but also as a means of attainment.

When the role of the Sacred King is fulfilled, he is the idealized ruler of the inner self. For the individual, the Sacred King is a realization of Maslow's self-actualized person. In all his aspects, the Sacred King reflects an integration of the private self and the social self; the King is ruler and hero, healer and warrior. In all instances, the Sacred King is a responsible participant (and even initiator) of social action, for benefit or for ill.

## Sacred Mountains

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

I will lift up mine eyes unto the mountains  
(Psalm 121).

Mountains with their cloudy, snowy beauty are sacred spaces. Can you feel it? They are Mother Earth in her heaviness reaching toward the sky, dusted with crystals from heaven. We are drawn to their numinous, heavy, ancient magnificence; they lift our souls to the sky. Gods seem to inhabit their caves, peaks, and volcanoes. They are wonderful spectacles to view and challenging

for tiny humans to climb. People revere them so much that they build artificial mountains, like Hindu temples, Babylonian ziggurats, and Egyptian and Mexican pyramids. Spires pointing heavenward on churches, mosques, and temples are like mini-mountains. Skyward mountainous mysteries evoke many feelings – humility, awe, fear, and challenge for the ego – the aura of the Divine Self. Being closer to the sky evokes a transcendent hierophany, the presence of the sacred (Eliade 1958, p. 101).

## Europe

Mount Olympus in Greece was the home of Zeus, who threw down thunder and lightning, frightening Greeks with his cosmic power. Delphi is Apollo's sanctuary high on Mt. Parnassus, with several temples and a cave where the ancient Delphic Oracle gave her treasured mysterious advice. Mount Ida, near the site of the Trojan War, was the home of the Phrygian goddess Cybele, Earth Mother. In Crete, Mt. Ida is the home of the goddess Rhea, who gave birth to Zeus in a cave. The Parthenon, Athena's temple, rises on the Acropolis like a sparkling crown on Athens. These goddesses gave women images of the divine to identify with.

Mt. Athos is a rugged Greek mountain protruding into the Aegean Sea, home of Greek Orthodox monasteries. The celibate monks pray, study, and paint icons (*Mt. Athos*). Mont Saint-Michel off the coast of Normandy, France, was a sacred mountain for Celtic worship of Belenus, Roman worship of Jove. Christian hermits lived there until a bishop had a vision of a shrine atop the rock in 708, and so the great cathedral/castle was built, still busy with pilgrims today.

In Israel, Moses climbed sacred Mt. Sinai, saw and heard God in the burning bush, where he reverently received the sacred Ten Commandments, initiating the holy Hebrew Law. Pilgrims still climb Sinai.

Residents of the snowy Alps are enchanted by its rugged mountains – including 82–4,000-m-high summits popular for hiking and skiing. The Swiss peaks were celebrated by Mary Martin's inspiring songs in the 1965 film *The Sound of Music* such as

**Sacred Mountains,**

**Fig. 1** Khor Virap monastery in Armenia with Mount Ararat in the background. Photograph owner: Andrew Behesnilian. This figure is licensed under the creative commons attribution 2.0 generic license. <http://en.wikipedia.org/wiki/File:Kohrvirab.jpg>

“Climb Ev’ry Mountain” and “The hills are alive with the sound of music.” Here mountains symbolize difficult barriers in life to cross to freedom. Archaic Alpine traditions include the legend of the ancient Germanic goddess Perchta (Bertha), “the bright one,” a guardian of the mountain beasts who may appear as beautiful or ugly. She was white robed with a horned mask and one large foot. She was angered if people forgot to feed her and would slit people’s bellies open and stuff them with straw (*Perchta*). She expresses the beauty and danger of the Alpine regions.

Mt. Croagh Patrick in Ireland rises 2,510 ft above County Mayo, with prehistoric shrine foundations. It was the residence of the Celtic deity Crom Dubh. St. Patrick visited the mountain in 441 and banished the ancient religions, symbolized as snakes and dragons. Today believers climb the pilgrimage trail to the peak, perhaps to shed their own such shadowy feelings (Gray 2007). In Turkey, snowy Mt. Ararat, a dormant volcano (16,946 ft.), on whose peak the legendary Noah landed his mythic ark, offers an image of divine power lifting up and saving survivors of disasters (Fig. 1). Similar stories are told by Native Americans about Mt. Rainier in Washington state and Mt. Shasta in California (Bernbaum 1997, pp. 148–150).

**Asia**

In China there are many sacred mountains (*Shan*). The remarkable Zhangjiajie Park in Hunan is where many tall, very narrow mountains rise like pillars in the cloudy mist. (These were an inspiration for the mythic film *Avatar*’s scenes of the indigenous people flying dragons off floating rocks.) The Five Great Mountains are the mythic locations of the creator god Pangu’s body. These have been destinations for emperors to go for worship and sacrifice. Pilgrims climb up and offer incense, chant, and sacrifice imitation money, praying for children. The five are in the east, *Tai Shan* (Tranquil Mountain), which has a grand stairway; the west, *Hua Shan* (Splendid Mountain); the south, *Heng Shan (Hunan)* (Balancing Mountain); the north, *Heng Shan (Shanxi)* (Permanent Mountain); and the center, *Song Shan* (Lofty Mountain).

The four Buddhist sacred mountains are *Wutai Shan* (Five-Platform Mountain), *Emei Shan* (Lofty Mountain), *Jiuhua Shan* (Nine Glories Mountain), and *Putuo Shan*, an island dedicated to the goddess *Guanyin*.

The four Taoist sacred mountains are *Wudang Shan*, *Longhu Shan* (Dragon Tiger Mountain), *Qiyun Shan* (As High as the Clouds),

and *Qingcheng Shan* (Secluded Place) (*Sacred Mountains of China*).

Japan has many sacred mountains. Notable is Mt. Fuji, meaning “everlasting life.” Revered Fuji-san is Japan’s national symbol and highest mountain, rising 12,388 ft. It has several Shinto temples. Fuji is seen as the embodiment of the Earth Spirit. Pilgrimages to the top attract about 40,000 people a year. Ancient myths tell of its divine origins, spiritual powers, and resident deities, such as the Shinto Goddess of Flowering Trees and the Buddha of All-Illuminating Wisdom (Gray 2007).

Hindus and Buddhists feel in the Himalayas the home of gods and immortals. The Himalayas are the huge, magnificent home of Mt. Everest (Chomolungma or Goddess Mother of the World), the highest mountain on the Earth (29,029 ft.) that has severely challenged many climbers. The local clan of Sherpas guides those who dare to climb to the top of the world, as close to the heavens as you can walk. Edmund Hillary and Tenzing Norgay were the first to reach this highest peak in the world in 1952. It was seen as a great conquest by Westerners. But Asians see more sacred presence, than a place to be conquered, in these highest peaks.

The Buddhist Sherpas envision the protector goddess of Mt. Everest, Miyolangsangma, who guides them (Norgay 2001). But, to those who live nearby, the most sacred Himalayans are not to be climbed. Mt. Kailash in Tibet (22,028 ft.), near the source of major rivers to the south, is seen as a holy mountain, the mythical axis of the universe, the hill where the invisible Mt. Meru (Sumeru to Buddhists) rises above Kailash thousands of miles. It is the glistening crystal pagoda of Brahma (Indra for Buddhists). These high mountains are seen by Asian believers as holy places to experience ultimate reality. Images of the center of the world, the axis mundi, are places for theophanies – presence of the divine (Eliade 1958, p. 373). Pilgrims do prostrations all around Mt. Kailas, like the pagoda of a deity, over boulders, streams, and glaciers, seeking to feel the presence of supreme absolute. Divine Shiva is envisioned sitting serenely on its peak.

When needed below, Shiva married the lovely goddess Parvati and she had Karttikeya, who defeated demons and liberated the world from evil (Bernbaum 1997).

On the island of Bali, Indonesia, are four sacred mountains, the homes of the gods, the largest being Mt. Agung (10,308 ft.), their supreme manifestation of Shiva. The religion of the Balinese is a syncretic blend of Hinduism, Buddhism, Malay ancestor cults, and animistic magic.

In Australia the dramatic *Uluru*, or Ayers Rock, is the beautiful red mountain rising 1,135 ft from a flat plain. It is seen as the solidified remains of the Aborigine Dreamtime Ancestors who roamed the Earth at creation. Aborigines revere this amazing stone greatly, for it connects them psychologically to their archetypal Divine Self (Gray 2007).

In Africa, Mt. Kilimanjaro in Tanzania, where the Chagga people live, they call the 17,000-ft-high mountain simply Kibo, which means highly revered, embodying eternity (Bernbaum 1997).

## Americas

The highest mountain in Hawaii is Mauna Kea, 13,796 ft. above sea level. It is about 2 million years old. All of Hawaii’s peaks are sacred, but this is one of the most sacred. In ancient times, only high-ranking tribal chiefs were allowed to ascend its peaks.

Pilgrims climb mountains to see the big picture that provokes spiritual reflections. When you can see over 50 miles away, psychologically you are flying high with feet on the ground. Native Americans such as Black Elk climbed Harney Peak in the sacred Black Hills for vision quests. Devil’s Tower in Wyoming (5,112 ft.) is the white culture’s name for the surviving core of a volcano sacred to Native Americans, who call it “Bear Lodge,” after a legend of girls being chased by bears. They were lifted high to safety when the land raised them high up, and the bears trying to climb up left their claw marks. The spirits of the Earth protect the natives from

attackers. Pieces of these cylindrical volcanic rocks have slowly fallen down to the base. I asked a ranger how long the most recent fallen one had been there, and he said, “Oh, not long, just 10,000 years.” See mountains, think long geological time spans, and feel small. The nearby “other horn of the buffalo” toward the sunrise is Bear Butte, a mountain sacred to the Lakota and Southern Cheyenne, where the Cheyenne received their four sacred arrows and teachings from the Creator (Page 2001).

In northern California is Mt. Shasta, a 14,000-ft. snowy peak sacred to indigenous people as far away as Peru. In southern Montana, the Crazy Mountains are rugged peaks sacred to the Crow nation, for vision quests and fasting. The Blackfeet people revere the Badger and Two Medicine peaks in northern Montana, where a legend tells of Scarface, who was ridiculed by the boys for his scar. So he took a journey across these mountains to the sunrise, in order to marry a chief’s daughter. When, after many trials, he faced the sun, his scar was removed, and he returned to marry the girl and was renamed Young Morning Star. He brought to his people the Sundance and rises daily with the Morning Star. His legend links the psychology of painful soul scars and romance, with the religion of heroic quests and stars. North of Flagstaff, Arizona, rise the 12,000-ft. San Francisco Peaks, where the Hopi people garden in the desert valleys and value every drop of rain channeled to their gardens. In the Hopi villages, the spirit *kachinas* rehearse the rain-making powers of their mountain homes, dancing in Hopi villages (Page 2001).

Yosemite Valley, in California’s Sierra Nevada range, is a magnificent valley surrounded by huge treeless peaks and high waterfalls that inspire awesome wonder. John Muir said “no temple made with hands can compare with Yosemite” (Bernbaum 1997, p. 144). The entire valley feels sacred. Once I hiked to a high bald peak there at dusk to join star watchers and peek toward the infinite through their telescopes; I saw Saturn’s rings – that felt cosmic. Different tribes of indigenous people lived there for thousands of years, such as the Miwok and the Paiutes. The Miwok called the valley the “Ah-wah-nee.”

Their word for grizzly bear was “uzumati,” which became “Yosemite” (Barrett and Gifford 1990).

The ancient Incas felt many spirits in the Andes mountains, the longest continental mountain range in the world, 4,300 miles long. They climbed up the Andes to build Peru’s sacred mountaintop *Machu Picchu* (7,970 ft) during the reign of their ruler Pachacuti (1438–1472). Offerings (*capacocha*) were given at shrines on Incan lands, to mark events in the emperor’s life – illness, war, death, and birth of a son. Special offerings were given to the Sun God Inti to assure plant growth; to Illapa, the weather god, to assure rain; and the Creator Viracocha. But they were terrified by some mountain spirits. Most gruesome, atop Mt. Llullaillaco, a volcano in Chile (22,500 ft), were found the frozen sacrificed mummified bodies of drunken children, left to freeze to death, to pacify the angry mountain gods. This indicates great fear of the stormy mountains, of epidemics, and of natural calamities such as volcanic eruptions. These gods of the Incas were thought to need sacrifices, sometimes the lives of innocent children, to pacify them (Reinhard and Ceruti 2010, pp. 121–22). This horrible practice of sacrifice – we give to you gods so you will give peace to us – unfortunately, has been practiced around the world for similar reasons. But this has been forbidden by the world’s major religions today.

The US Appalachian Mountain range extends from Canada to Alabama. It holds the Appalachian Trail, the Smoky Mountains, and the Blue Ridge Mountains. The Eastern Band of the Cherokee nation lives in North Carolina mountains. Their traditional “Great Spirit” presides over all things and created nourishing Mother Earth and her spirits, Oldest Wind, Lucky Hunter, and Corn Mother, for which they are grateful (*Eastern band of Cherokee*).

Mountains increase self-knowledge, even if partly unconscious, through feelings of massive beauty, snowy awe, vast heights, humility, and connections to mysterious sacredness. “Do you wish to see the transfigured Christ? Ascend that mountain and learn to know yourself” (Jung 1979, Vol. 9, Pt. 1, para 403n).

## Sacred Prostitution

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Religion has had at best an ambivalent attitude toward human sexuality. All religions recognize the value of sexual union between a man and a woman in a mutually committed relationship and recognized through some sort of rite of marriage. Beyond that type of sexuality, most other forms have received more or less harsh condemnations and proscriptions. Thus, sacred prostitution, or providing sexual acts to strangers as a religious act or in exchange for a donation to a religious organization, has had very limited acceptance and much more condemnation.

Where we have record of sacred prostitution, it has occurred in association with the older pagan fertility goddesses of the ancient Near East. Since most of the commentators, especially those found in the Bible, have condemned the practice, the accuracy of their description of the practice should be taken with some skepticism. In the Hebrew Bible (*Tanach*), the term for a servant of a temple who would provide a sexual act to a supplicant of the goddess is “K’desh” (male) or “K’deshah” (female), with the plural being “K’deshim” and “K’deshot” respectively, and the literal root meaning is closer to “holy one” without any sexual connotation. “Hierodule” is the term in English for this role as translated from ancient works in Hebrew, Greek, or Latin. The Greek historian Herodotus (1, 199) noted that in Mesopotamia it was required that a woman offers herself sexually at the temple of Mylitta once in her lifetime.

Budin (2008) has taken the position, based on philological analysis of the evidence, that sacred prostitution did not exist. As noted above some of the terminology does not imply sexual action, but has come to be associated with a sexual meaning only through a tradition she claims is fatally flawed. The strong moralistic tone found in the

Jewish and Christian writers who are the source of much of the evidence lends weight to her criticism. She also rightfully points out that prostitution was well known in most of those civilizations without any religious overtones, and references to sacred prostitutes don't usually use the terms for regular sex workers. Thus, one is left with much doubt as to whether or what extent the practice existed. It is probable that there were some associations of ritual sexual activity with religious institutions. There is evidence for the existence of "hieros gamos" (Gk.), a ritual sex act between a king or high priest and a high priestess in ancient Mesopotamia. But Budin's argument is that the practice was not widespread or institutionalized. Greenberg (1988) focuses more on the male hierodule, particularly the "galli" (Lat.), the temple servants of the Phrygian deity Cybele. The cult of Cybele came to Rome and became an important one during the period of the empire. These men castrated themselves as part of their initiation into their priestly role and donned female garb. There is some evidence that they subsequently were available for sexual liaisons with males, though our most detailed account (Apulius, second century CE/1962) is a satirical work of fiction. Herodotus' note cited earlier is both the earliest reference and the least burdened by judgment as to the practice he describes, so it is harder to dismiss. Nevertheless, the evidence is scanty and imprecise, and the final word should be that controversy surrounding the practice makes firm conclusions difficult.

## Sacred Space

Ariel Schwartz

Northwestern University, Evanston, IL, USA

### Classic Views of Sacred Space

Whether a holy city, a marked tree or river, a constructed cathedral or mosque, a cemetery, or a roadside shrine, sacred spaces anchor the structures of most world religions. Conceptually, sacred space entails a break with the rest of space. When people declare a place "sacred," it implicitly becomes separate and different from other spaces, unique unto itself. Yet numerous questions complicate the universally acknowledged, seemingly straightforward concept. Who or what renders a space "sacred"? Through what process? For what duration? Under what terms? And ultimately, what does it mean for a physical space to be "sacred"? The theories of two classic scholars of religion, Mircea Eliade and Gerardus van der Leeuw, are widely referenced in determining answers to these questions.

Gerardus van der Leeuw, an early twentieth-century Dutch historian and philosopher of religion, set forth some of the definitive aspects of sacred space in his book *Religion in Essence and Manifestation* (1986). His qualifications of sacred space begin in the specification and ownership of space. He stipulates that a *place* is a part of the more abstract, expansive concept of space. That place becomes a *position* when man selects it, frees it, and declares it powerful. This notion's ambiguity lies in its contradiction: the space emerges as sacred in the same moment that man chooses and empowers it. A *position* becomes sacred "by the effects of power repeating themselves there, or being repeated by man." Man discovers and orients a sacred space and also

maintains its character through ritual acts. Evocative of the *numen* – the sense of awe, fear, and dread of divine power – sacred space involves the continuously active and activating process of man’s ritual in a set place.

Van der Leeuw also suggests that sacred space provides an eternal home for people, albeit not merely as a residence or a locus for communal activity. A model of the universe, sacred space offers people access to the power of the divine. In fact, if a temple becomes only a meeting place, it loses its “cosmic-sacred character”; more emphatically, “it is no longer believed that anything really happens there.” Sacred space, for Van der Leeuw, requires a burgeoning power between the divine and humankind through a *position* in space. And yet, “the real sanctuary is man.” Van der Leeuw conceives of true sacred space as within the self but emerging materially through man’s selection and consecration of *positions* in space.

Eliade echoes and elaborates upon Van der Leeuw’s declarations about sacred space in his renowned work *The Sacred and the Profane* (1987). According to Eliade, religious man experiences space as non-homogenous; he recognizes some locations as distinctive from others, allowing for the transcendence of the profane world. Each sacred space implies a *hierophany*, “an irruption of the sacred that results in detaching a territory for the surrounding cosmic milieu and making it qualitatively different.” Alternately put, the sacred emerges, or erupts, at a specific site, and man’s role in the process is to identify, occupy, and utilize the space and its sacrality. By establishing the space, he found a world, mimicking the divine work of creating the universe. Eliade’s definition regards sacred space as a mirror of the cosmos, with the *axis mundi* at its center. Such a unique position stations sacred space as a bridge between the sacred and the profane, linking man’s everyday actions with the work of the gods and thus transforming them into sacred acts. The sacrality of the emergent space is reiterated through the dynamic interactions between man, place, and man’s rituals in the place. While the substantive value of a space compels man’s sacred experience and

rituals, the rituals continually claim and consecrate the place.

Both concepts of sacred space may be understood as a two-step process of settlement and sanctification. Establishing a sense of order for religious man, the construction of sacred space also signifies individual experiences of personal connections to the divine. Religious man separates himself from others, sets aside a particular space and time for transcendence, and uses the sacred space as a source of closeness and a mode of communication with the gods: “He not only cosmicizes chaos but also sanctifies his little cosmos” (Eliade 1987). Religious man’s sacred space symbolically protects him from the unknown and permits him to live in the universal, not merely intellectually but also experientially. Fundamentally, considerations of sacred space require analysis of living, sensational bodies: space and humans are interwoven and mutually constitutive.

## Modern Views of Sacred Space

Modern perspectives on sacred space continue to emphasize the direct and reciprocal relationship between human beings and sacred places. Most recent scholarship builds on the work of twenty-first-century historian of religion Jonathan Z. Smith. He argues against Eliade’s notion that humans discover or recognize sacred spaces introduced into the world by supernatural beings (Smith 1993). Criticizing Eliade’s implicit theologizing of territory, he contends that humans construct “worlds of meaning” and that territory is a tool for this work. He posits that people use map and territory to insert meaning into their lives, and in so doing, “human beings are not placed, . . .(but) bring place into being.” Smith argues that place is the byproduct of active and deliberate intentions, rather than the “passive receptacle” of human thought or the simple terrain for human proceedings. Navigating and reconfiguring myths and rituals about space, people create and utilize these maps to build meaning and create order in sacred spaces.

Other contemporary scholars of sacred space similarly focus on the sacred as the boundary that

structures the relationship between humans and territory (Gill 1998; Knott 2005; Kong 2003). Unquestionably, location and human embodiment are contingent upon one another, meaning that sacred space emerges from human experiences and actions in a particular socio-spatial location. A subsequent academic challenge regarding sacred space is how to examine the intricacies of sacred space as it is *lived*, rather than merely as it is *conceived*. Because people and space interact in specific, localized ways, scholars must ground their studies of sacred space in each individual place to understand the ways in which people experience sacred space on global, national, regional, local, and individual bodily scales. Such a phenomenological and holistic approach will move toward comprehending the varied processes of conquest, appropriation, ownership, boundary making, exclusion, and exile implicit in the creation of sacred space.

### Kinds of Sacred Space

Geographer of religions Chris Park rightly wrote, “Sacred space to most religions means real places on the ground” (Park 1994). For Eliade, any physical place can be a sacred space. Any place possesses the capacity to be a perfect image of the cosmos, if people discover it to be so. “An entire country (e.g. Palestine), a city (Jerusalem), a sanctuary (the Temple in Jerusalem), all equally well present an *imago mundi*” (Eliade 1987). Religious adherents declare as sacred anything from the natural environment to man-made institutions, from large cities to small villages and towns, from historic sites to burial spots, and from international places of worship to the individual home.

Religious ecology brands the natural world as infused with the divinity of the supernatural beings that created it. Eliade offered that the gods manifested modes of the sacred in the structures of the world and in natural phenomena. In Hinduism, for example, water is sacred, and India’s seven rivers – the Ganges, Yamuna, Saraswati, Narmada, Indus, Cauvery, and Godavari – are considered holy. Each is related to a different god, and numerous rites and rituals are performed at their banks (Fig. 1).

**Sacred Space, Fig. 1** Ganges River, India (Photograph by author)

Some traditions deem mountains sacred. Mount Olympus is thought of as the home of the ancient Greek gods, and people revere Mount Tate, Mount Haku, and Mount Fuji as the Three Holy Mountains of Japan. Practitioners of Shinto consider Mount Fuji the embodiment of all nature, possibly even in possession of a soul, while Buddhists venerate it as a gateway to another world. Other natural sacred spaces may encircle a sacred object. For instance, Muslims worldwide perform a *hajj* (pilgrimage) to the Black Stone of the eastern corner of the Ka’bah in Mecca, a city made sacred by the presence of the Grand Mosque, which encloses the Ka’bah and its stone. Other religions invoke practices that organize natural space and imbue it with sacrality. The Chinese practice of *feng shui* arranges the natural and man-made worlds in accordance with heavenly principles to maximize personal *qi*, or power. Similarly, Korean Buddhist geomancy interprets and orchestrates topography to create sacred spaces.

**Sacred Space,**

**Fig. 2** Western Wall,  
Jerusalem, Israel  
(Photograph by author)

Decreasing in scale from the natural to the built environment, entire cities or villages may be considered sacred spaces. As mentioned, Muslims regard the city of Mecca as sacred for its possession of the Ka'bah. Mormons consider sacred the Salt Lake Basin of Utah, with Salt Lake City designated the City of Zion. Like most Mormon villages, Salt Lake City is mapped to promote subsistence agriculture and self-sustainability, in accordance with the Mormon ideal of partnering with God to redeem the earth in daily living. The three Abrahamic traditions acknowledge the entire city of Jerusalem as sacred space, in part due to the numerous religious events that transpired there but also as “the world’s central point,” a typical example of sacred space (van der Leeuw 1986).

The most frequently acknowledged form of sacred space is the man-made institution for prayer. Explicitly constructed places of worship, such as temples, cathedrals, synagogues, and mosques, vary in architecture and are highly culturally dependent. Hindus seek out spaces close to water, which they believe to be holy. Aiming for minimal landscape disruption and maximal landscape mirroring, they construct their temples to resemble mountain peaks and the rooms inside to evoke caverns. Hindu sacred space often encompasses all land surrounding a temple, so that the temple lies at the center of the town

crossroads. Types of Buddhist temples vary according to sect. Mikkyo temples are often found in the hills, surrounded by forests, while Jodokyo temples lie at the center of a pond, as though a separate albeit accessible Paradise of Enlightenment. Zen temples tend to be located on level ground and usually involve a simple garden that implies nothingness and solitude and is meant to prompt meditation. Churches and synagogues tend to be constructed in accordance with population growth and demand, often serving as the nuclei for their communities. Internally, all synagogues are oriented so that people face toward the Holy Ark containing the Torah scrolls and toward the Western Wall in Jerusalem. Similarly, all mosques compel attendees to face Mecca. In these cases, people mentally reside in their sacred cities despite their physical presence elsewhere in the world (Fig. 2).

Finally, sites of personal importance may be recognized as sacred spaces. Cemeteries memorialize individuals and are revered for the sacrality of the lives that were. Alternatively, acts like cremation re-sacralize certain spaces once they contain human remains, as with holy rivers like the Ganges, in India. The Chinese align their graves spatially according to the laws of *feng shui* to ensure the continued balance and harmony of the dead. Yard and road shrines in Catholic and Eastern Orthodox areas craft

everyday spaces evocative of the sacred, while domestic altars found in Hindu or Mexican Catholic homes offer a personal relationship between family and deity. Such examples demonstrate that personal space, in any form, may be sacred space.

## Challenges of Sacred Space

An exploration of sacred spaces would not be complete without a brief acknowledgement of the problems inherent in sacred space. One conflict over sacred space is the question of its shared or exclusive nature. Religious violence has arisen numerous times as a result of disputes over sacred territory; Jerusalem (Israel) and Ayodhya (India) are both sites claimed by at least two religious traditions that clash over their asserted control over the meaning and use of the land (Friedland and Hecht 1998). Another problem of sacred space is the capacity for its appropriation. In the case of the Devils Tower National Monument in Wyoming, Native Americans struggle to protect sacred nature from its use as public land by recreational climbers (Freedman 2007). Perhaps most problematically, the sacrality of a space implicitly denotes the distinct possibility of the space's desecration. Often, the importance of a sacred space may also be its downfall; flocks of visitors cause damage to the very places that they come to see and experience. Government and religious leaders express concerns about increasing pollution in the holy city of Varanasi, India, whereas Mecca faces the modern forces of capitalism, which are changing the face of the holiest city of Islam. While the definition of sacred space may remain contestable, variable, and changeable, it is clear that sacred spaces are undeniable sources of conflict, concern, and volatility.

## Sacred Time

Rod Blackhirst  
 Philosophy and Religious Studies, La Trobe  
 University, Bendigo, VIC, Australia

In profane understandings, time appears to be a constant linear sequence of moments, but all

religious and spiritual traditions conceive of a “sacred time” that is outside of or other than this sequence. Commonly, this sacred time is said to be an “eternal now” that is located “between” (or above or beyond) the moments that make up linear time. Time is an agent of death, corruption, and the finite; spiritual traditions seek a realm that is ever living, incorruptible, and infinite and therefore not subject to the flux of time.

The psychological perception of time is inconstant. Time will often seem to either “fly” or “drag,” and it seems to pass slower to children and pass faster as we age. Similarly, there are cultural differences in the perception of time. The nomad, for instance, has more of a spatial than a temporal consciousness. For the nomad the starry sky is a map, while for the sedentary city dweller, it is a clock. The decline of nomadic life and the arrival of sedentary life (recorded in such myths as the Biblical story of Cain and Abel) is therefore the passage from the sacred to the profane experience of time.

One of the most primordial accounts of sacred time comes from the Australian Aborigines who describe a period called the “Dreaming” or the “Dreamtime.” While this is usually conceived of as a time long before memory, it is also understood to be ever-present and can be accessed at any time by way of religious rites. This same convention is a feature of most religious systems; the liturgical or theurgical elements of the system allow a symbolic relocation from profane to sacred time, which is at the same time a return to the formative and creative period or the point of a sacred theophany (intervention of God into time).

The most conspicuous instance of this in the Semitic religions is the Jewish Sabbath which is celebrated every 7 days (Saturday) and is a return to the Divine repose after the 6 days of creation. The reiteration of sacred events is the guiding principle of sacred calendars and calendrical systems. The annual reiteration of events is not merely commemorative; it is a symbolic return to sacred time. Often, intercalary days and festivals are regarded as especially sacred because they represent “time outside of (normal) time.”

In Judeo-Christian mythology, the period that Adam and Eve spend in the Garden of Eden is the paradigmatic instance of sacred time. Sacred time is Edenic and before the Fall. But as historical religions, Judaism and Christianity both propose paradoxical instances of sacred periods that are within the fold of history. In Judaism, the period during which the Israelites wandered in the wilderness in a sacred time is “out of history” even though it is understood to have been a historical event. In Christianity, the Last Supper was a historical event at a definite time and place, but it also dwells in sacred time since it can be accessed by the Real Presence of Christ in the Eucharist. Similarly, the crucifixion was a historical event, but in Christian theology, it is also an eternal event; the sacrifice of Christ is now and ongoing. In shamanism and in shamanic practices that persist in later religions – such as fasting, chanting, trances, dancing, autohypnosis, or the sacramental use of drugs – there is an attempt to have direct and immediate experience of “time beyond time” and to induce a psychological state of timelessness that is not merely symbolic. In folktales, popular stories, or the so-called fairy tales, sacred time is signaled by the convention “once upon a time” which refers to a mythical time that is no time in particular.

Sacred time is pristine and archetypal; it is the time when the shape and patterns of life and the world were first established. It is therefore mythological and nonhistorical, history then being defined as a decline, a deviation from, or the passing away of sacred time. Plato, giving a very traditional account of it, says in his *Timaeus* that “time is a moving image of eternity” and that the forms or archetypes of the world reside in eternity, their temporal (and corruptible) manifestations being “images” or copies of the atemporal originals. In his dialog called *The Statesman*, Plato also gives an account of the idea of “eternal return,” namely, the notion that historical time is circular (rather than linear) and that all events in time are repeated endlessly. This idea is surprisingly widespread, as Mircea Eliade has documented, and follows from the idea that, ultimately, the movement of time is an illusion

and that only motionless eternity (sacred time) is real. The myth often takes the form of an era in which the world moves in one direction (with the sun rising in the east and setting in the west) followed by a catastrophic reversal of direction at end of this era (after which the sun rises in the west and sets in the east). Time, so to speak, winds up and then winds down, although in fact both movements cancel each other out and there is really no movement at the level of the principle. The religious mystic or the spiritual seeker aspires to this principle (which is spatially represented as the center or axis of a wheel) and therefore to freedom from the cycles and vicissitudes of time and decay. In the Eastern religions, this idea is expressed in terms of cycles of birth and rebirth, and the timeless realm is attained through liberation from these cycles. In modern thought, the idea of “eternal return” was taken up by the German philosopher Nietzsche who presented it as a nihilistic denial of the liberal ideal of progress.

## Sacrifice

Morgan Stebbins

Faculty of the New York C.G. Jung Foundation,  
New York, NY, USA

The concept of sacrifice was once so important in the study of religions that whole developmental taxonomies were created to define them from this standpoint (Frazer 1890; Hubert and Mauss 1981). We can still see it as one of the least understood but central ideas in religion, in dynamic psychology, and in common parlance.

Sacrifice, like many words that have crossed from ritual to general usage, can be defined in two general ways. On one hand, it is giving up something for something else, and on the other, it is giving up something precious (anything from grain to animals to goods to humans) to a deity, usually in supplication. For the former, one might wonder how it is different from the concept of simple exchange – and indeed, it seems to be hardly differentiated especially when applying models of social value systems which depend on both cohesion and coercion. For example, a mother is said to sacrifice for her children or a soldier for his or her country, and yet it is hard to see how it was not a matter of job description in the first place. That is, it seems to be more a choice in terms of both having children and parenting style, except that socially the value of parenting is higher than that of self-care. The same goes for military sacrifice (the so-called ultimate sacrifice) and other things that benefit a given social group. Both of these examples show that the dynamic involved is that of giving up something personal for something collective or interpersonal (and something that often needs to remain unexamined to retain its influence).

For all of these examples, critical theory in the style of Slavoj Žižek indicates that a form of ideology is active. That is, a master signifier embedded in the language of a particular social group designates collective goals as more valuable than the pursuit of personal consciousness or desire. In this sense, the master signifier acts to

justify a regrettable life – if one has sacrificed something major for something else of less tangible import, one could hardly be expected to have excelled as a person. Of course, this dynamic can be reversed so that, for example, with sports figures, one might be either negatively or positively assessed in terms of sacrifice made for some great achievement. In either case, we can see the caustic lens of social reprobation at work. To the extent that ideological cultures can express a sentimentality toward sacrifice, we have to remember Jung's words that "sentimentality is the sister of brutality" (Jung, 385).

Before moving to the specifically religious concept of sacrifice, let us notice that the word itself is derived from the Latin words *sacre*, or sacred, and *facere*, the verb meaning to make. So sacrifice is that act which makes something (or someone) sacred. The terrain of the sacred includes a range of experience from sublime experience of union to terrible and destructive acts of the divine. To make sacred then is to approach the meaning of taboo – it is nearing the holy fire, the spark of life, and the dark reaches of the psychoid realm of the psyche. The term "psychoid" refers to a theoretical level of the unconscious which can never be plumbed and yet out of which content emerges. One could think of it as the irreducible biological substrate of the mind (see Jung 1969).

In the realm of religious traditions, sacrifice of some kind is nearly ubiquitous.

It also served a social or economic function in those cultures where the edible portions of the animal were distributed among those attending the sacrifice for consumption. This aspect of sacrifice has recently become the basis of an economic explanatory model (see especially R. Firth, E. E. Evans-Pritchard). Animal sacrifice has turned up in almost all cultures, from the Hebrews to the Greeks and Romans (particularly the purifying ceremony *Lustratio* and from the Aztecs to the Yoruba). The ancient Egyptians, however, forbade the practice as being primitive, although the entombment of both humans and animals in a sacrificial form with the Pharaoh as companions after death was common.

The Hebrew word for sacrifice is *korban*, from the root *karov*, meaning to come close to God.

This is a more spatial aspect of the quality of making sacred. The opening chapters of the book of Leviticus explain in great detail the various methods of sacrifice as well as provide a veritable taxonomy of sacrificial victims. Sacrifices were classified as bloody (animals) or unbloody (grain and wine). Bloody sacrifices were again differentiated into holocausts (whole burnt offerings), guilt offerings (divided into a burnt part and a part kept by the priest), and peace offerings (also partial burning).

A specific set of sacrificial offerings was the scapegoat, particularly instructive psychologically because these were a pair of goats with different functions. As is well known, the scapegoat was adorned with ribbons representing the sins of the village and driven out into the wilderness. The other goat was an unblemished holocaust or wholly burnt offering to God. Psychologically translated this shows an inability to sustain a proximity to the divine while suffering consciousness of sins. Moreover, in the person manifesting the victim mentality, there is a split which both cannot bear responsibility for mistakes and in which there is an unconscious identification with the divine – represented by the wholly burnt and therefore nutritionally unavailable goat. In other words, for this type of split subject, the only path to an experience of value is through suffering.

The practice of human sacrifice is a particularly instructive, if brutal, reminder of the power of the gods however imagined. This translates into a personal possession by a transpersonal structure which results in the destruction of anything human. Examples come from all over the world: In the Greek world, there are many stories of human sacrifice from youths sent to appease the Minotaur to Iphigenia being sacrificed by her father Agamemnon for the sake of favorable war wind. There are many conflicting ancient sources, and in fact, only Aeschylus' *Agamemnon* and Pindar's *11th Pythian Ode* describe her actual sacrifice and her father's bloodguilt, prompted by his eagerness for war.

In Mesoamerica, human sacrifice was even more widespread from Aztec sacrifice of many (usually enemy) humans in order to assure the rising of the sun to common Mayan and Incan sacrifice for astrological and architectural reasons.

It has been found in Norse culture, Indonesian tribal society, and in some African cultures and persisted until recently in India in the form of immolation of the widow of a Brahmin on his death pyre. The immolation of the widow is called *sati*. Legislation to outlaw it was passed only as recently as 1987.

Frazer and other early theorists of religion established a dubious but very influential hierarchy or development of sacrifice from the human to the animal to the symbolic to, not surprisingly, the Christian (Frazer, *The Golden Bough*). Of course the latter (the Eucharist) is really a form of human sacrifice but with the twist that it is also a sacrifice of God and is self-inflicted. In this model, we come very close to a psychological view in that the most valuable thing one can give up for something higher or greater is an aspect of oneself. The factor which keeps this process from becoming merely an exchange is that of uncertainty. Although some anthropologists have seen sacrifice as a fairly transparent manipulation of the divine, the Catholic and Orthodox churches have gone to great lengths to explain that it is not in fact a manipulation of the Godhead but rather an offering which is then responded to out of grace, albeit suspiciously consistently. The instructive Biblical passage is the moment in the garden of Gethsemane in which Jesus admits that he doesn't want to go through with the crucifixion but then assents, saying "Not my will, but thine, be done" (Gospel of Luke, 41:22–24). This is also found in Paul, Galatians 2:20, "I have been crucified with Christ, it is no longer I who live, but Christ who lives in me."

We can see that psychologically the dynamic is one of giving up the lesser for a chance at some uncertain greater. This is only viable within depth psychological approaches for which there is a mode of functioning or a psychic structure which is seen as bigger, greater, wiser, or more comprehensive. However, within these systems we can see another sort of sacrificial taxonomy. An image of human sacrifice would indicate a blame of the other, of animal sacrifice indicates a relinquishing of instinct, of agricultural offerings shows a dynamic of cultural sacrifice, and a self/symbolic sacrifice shows that a process of

giving up something highly valuable and personal for the transpersonal is indicated.

In this process the first victim is instinctive certainty, replaced by doubt and concomitant differentiation. This becomes the development of an evaluating consciousness, one that weighs options and consequences. If successful, personal guidelines emerge in the shape of instinct molded by will. This phrase is instructive as it is Jung's very definition of the psyche; it is "instinct modified by will" (Jung 1979, p. 56), which if still successful, pushes the natural impulses into a corner. There is a danger as well as hardship in this, but further sacrifice including spiritual ambition in favor of something still unknown but symbolically indicated reveals the logic of the soul apparent in the present in any given moment.

To turn the image another way, we can see the sacrificial knife (of differentiation) as the instrument of a kind of regeneration. It is one that kills the failing king or dominant part of consciousness. As such the knife acts like the Lacanian concept of any speech act: it carries content but also carries the implicit worldview in which the content can be viable, thus undercutting the very subject of the utterance. In Lacan's case, what must be given up is the attachment to a specular (i.e., apparent in vision only) wholeness in favor of a more authentic experience of fragmentation in the face of ideological social pressure (Lacan 1901/1981).

Lacan's analysis indicates the coercive aspect of sacrifice that may be supported by a social agenda. In this we see that the dynamics of sentimentality include brutality, so that a statement of sacrifice of some overt type "I sacrifice for you" (or the call for a patriotic sacrifice under the banner of "us" when what is meant is "you") is revealed as a desperate gambit to maintain control at any price and is the reverse of a personal spiritual process.

Sacrifice is a key aspect of both religion and psychology. In religious terms, it was archaically practiced through the sacrifice of an animal in order to change the supplicant's relationship with the divine. It has changed to become a sacrifice of personal intention in favor of divine spirit – although this is ambiguous, it brings the

concept very close to the psychological meaning in which growth is seen as giving up the smaller for the larger. For Freud this meant giving up the sexual urge, or sublimating it, into cultural pursuits. For Jung there is a definitive religious instinct in which sacrifice is made of the small personality in favor of the large. Although simple to describe, in practice it involves a typically difficult struggle to let go of something that previously defined the subject in favor of something not yet fully known but more comprehensive.

### Sacrifice of Isaac

Erel Shalit

Israel Institute of Jungian Psychology,  
Ra'anana, Israel

The sacrifice of Isaac, in Hebrew the *akedah*, i.e., the *binding* of Isaac, is one of the Bible's most dramatic stories. In its extreme brevity, the narrative is an archetypal skeleton, not fleshed out by personal details or human feelings. It thus lends itself to innumerable theological explanations, philosophical readings, and psychological interpretations.

God tells Abraham to go to the land of Moriah (possibly meaning the land of the Amorites, the land of worship, or the teaching place of God) and offer his beloved son Isaac for a burnt offering. Abraham does not question his God, with whom he has sealed a covenant. He has been promised that he will "multiply exceedingly" and become a father of many nations. He binds his son Isaac and lays him upon the wood on the altar he has built, but when raising his knife, the angel calls upon him not to slay his son. He has passed God's test of devotion, and a ram is offered in place of Isaac. Abraham then calls the place *Adonai-yireh*, because "the Lord has been seen" (Genesis 22: 1–14).

For philosophers and religious commentators, the test of Abraham has provided a stage, similar to the trial of Job, for contemplating good and evil. Kierkegaard emphasized Abraham's anguish and suffering in preserving his faith. For him, "only one who draws the knife gets Isaac" (Kierkegaard 2006, p. 27). The willingness to fulfill the command (or rather, as phrased in Hebrew, the request) to sacrifice Isaac becomes, then, for Kierkegaard, a rekindling of faith in the good God, while for Kant it represents an act of evil to be rebelled against.

In Jewish thought, the perception of the story has commonly emphasized Abraham's devotion to God, to the extent of sacrificing the embodiment of his future. It has been considered a paradigm of the readiness to give up life in

order to sanctify the divine name but also as punishment for Abraham having sent Ishmael into the wilderness.

Some biblical scholars have read the account as a prohibition against child sacrifice, such as mentioned, for instance, in Jeremiah (7: 31; see also Exodus 22: 28–29; 2 Kings 3: 27, 16: 3, 21: 6), with the angel intervening to prevent Abraham’s act of filicide. The narrative has also served as a model for anti-Semitic blood libels accusing Jews of ritual murder of non-Jewish children.

Already, some early legends told the story that Abraham in fact did slay and then burned Isaac. The lad “was reduced to ashes,” only to be revived by God’s “life-giving dew” (Spiegel 1993, p. 37). Thus, Isaac served as a “symbol for the archetypal experience of death and re-birth” (Dreifuss 1971, p. 72).

The symbolic death of Isaac has been understood as transformative, confirming him in his role as chosen to carry out God’s promise to Abraham, to be the one in whom the seed shall be called (cf. Abramovitch 1994, p. 123; Genesis 21: 12). This seed, says St. Augustine, while called in Isaac, is gathered together in Christ by the call of grace. The sacrifice of Isaac becomes the precursor of Christ; like Jesus carried His cross, Isaac himself carried the wood to the place of sacrifice, and like the ram was offered in place of Isaac, so Jesus would die on the cross for humankind.

The name of the sacrificial child is not mentioned in the Quran. Consequently, Muslim scholars have disagreed whether it concerns Ishmael or Isaac. Since it is said that Abraham offered up his only son, scholars have argued this could only mean Ishmael, the elder of the two. The importance ascribed to the sacrifice is reflected in Eid-ul-Adha, the Feast and Festival of Sacrifice, celebrated immediately after the Hajj, the annual pilgrimage to Mecca.

### Psychological Aspects

The akedah offers a kaleidoscope of psychological facets and interpretations. Abraham, Urvater

of the monotheistic religions, stands in the center, between the Father-God, who now requires of him the sacrifice of his repeatedly promised seed, and the late-born son, predestined to fulfill the covenant and conceive the earthly offspring. The offering of a child to appease the gods is a common theme in myth and legend in many traditions.

Psychological interpretations naturally tend to look at the father-son relation. One aspect of this is submission – both Abraham’s and Isaac’s – to the command of the father. It entails the recognition of God’s supremacy, interpreted on the psychological level as reflecting weakness in relation to authority. Yet, the archetypal scheme seems more important than personal character, since Abraham already had shown himself quite capable of challenging God, as when he argues and negotiates with God to spare the sinners with the righteous in Sodom (Genesis 18: 23–33).

### Father’s Reluctance Against His Son

In a sense, the akedah is a reversal of and predecessor to the Oedipus complex. A complex would not have been born in Oedipus’s name if it were not for his father Laius, who frightened by the oracle’s prophesy of his son’s patricide and mother-incest exposed Oedipus to certain death. Only the shepherd’s compassion saved Oedipus the child from certain death by unprotected and defenseless exposure to archetypal forces. Likewise, Acrisius, fearing the prophesy that his grandson would kill him, locked his daughter Danae and grandson Perseus in a chest and threw them into the river to an unsure fate, though they were saved by the good fisherman. (Later, Perseus saved Andromeda, who was offered by her father, the king, to appease the sea monster Cetus.) The Laius complex, the father’s fear of the son, who eventually will destroy and replace him, precedes the son’s slaying of the father.

Castration anxiety, in which the child fears the father’s anger because of its choice of the mother as love object, is an innate aspect of the Oedipus complex. Theodor Reik refers to *Das Incestmotiv* by Otto Rank, in which he “conceived of Isaac’s

sacrifice, prevented only at the last moment, as a threat to castrate Abraham's son" (Reik 1961, p. 66). The threatened castration and near sacrifice of the son can be taken to mean that the genitility and vitality of the ego may feel threatened by new instinctual and archetypal elements that arise from the unconscious. Consequently, the ego responds like a vulnerable father who undermines his son's rise to masculinity.

The libido and potency of the son may threaten many a father, and the youthful spirit of the revolting son may pose a challenge to his authority. Jung relates *father-and-son* not only to an interpersonal dynamic but also to the intrapsychic polarity of *discipline and instinct* (Jung 1956, *CW* 5, par. 396). In the individual psyche, the father may represent adherence to the collective consciousness of established norms, rules, and principles, whereas the son represents an upcoming, purposeful complex, which by its mere newness may pose a threat, even in the case when, as with Isaac, he collaborates in the sacrifice. In the edifying process of acculturation, aspects of the child's nature are slain.

### Rite of Initiation

The sacrifice of Isaac (whose name means *he laughed*, Genesis 21: 6) has been looked upon as a puberty rite of initiation. The characteristics of the divine and innocent child, who has thrived in the delightful embrace of the Great Mother, are shed in juvenile rites-de-passage. In the process of becoming an adult, the child is now exposed to the requirements and principles of the spiritual father. Isaac's age at the time of the sacrifice is unclear; while phenomenologically he appears to be a child, legends have given his age as 25 or 37. That is, Isaac moves from childhood to maturity, from innocence to consciousness. In some legends Satan tries to prevent Abraham from carrying out the sacrifice, thereby introducing conscious doubt into the otherwise passive submission. Satan is thus found in his role as adversary, instigating toward consciousness.

Rites of initiation require the sharpening of the maturing ego's strengths by exposure to what is

experienced as a very real threat to body and soul. The ego is exposed to hardships and extreme conditions, such as sleeplessness and infliction of physical pain. The ego is required to hold out against its own destruction, in order to be rendered adequate to carry the Self or a transcendent principle into living, embodied reality. The danger may entail, as in the case of Isaac, being burned by fire, nature's very essential transformative energy, whether representing Logos and consciousness, Eros and relationship, or Thanatos and destruction (Shalit 2012, p. 5f.). The evolving ego must be able to both endure and revolt against the father's authority, in order to carry, continue, and regenerate the collective spirit, whether social, religious, or otherwise.

### Sacrifice and Transformation

The readiness to sacrifice one's offspring for a higher cause has been prevalent during all times, as the death of the young in innumerable wars testifies. In devotion of a principle, whether transcendent, ideological, or intrapsychic, the individual's embodied identity may be sacrificed. Many wars for one's devoted country, religion, or ideology attest to the sacrifice of one's offspring, even if reluctant and painful.

In the sacrifice of Isaac, Abraham succumbs to the command of God to sacrifice the human flesh and ego for divinity and a greater Self. As a prefiguration of Christ, God's test of Abraham "is to determine whether Abraham was willing to share Yahweh's later ordeal of sacrificing his son, Christ. Abraham is asked to participate in the tragic drama of divine transformation" (Edinger 1984, p. 98).

Processes of psychological transformation and individuation entail the temporary defeat, or sacrifice, of the ego. Jung writes, "Quite apart from the compassion [Abraham] felt for his child, would not a father in such a position feel himself as the victim, and feel that he was plunging the knife into his own breast?" He continues, "The self is the sacrificer, and I am the sacrificed gift, the human sacrifice," whereby the self can be integrated or humanized and pass "from unconsciousness into consciousness"

(Jung 1969, *CW* 11, par. 397ff.). With the sacrifice of Isaac, God nearly destroys his own creation (Shärf-Kluger 1967, p. 154). Destruction is psychologically crucial in processes of transformation and creativity, and the process of individuation requires sacrifice and near destruction or representative, symbolic sacrifice, as in the akedah. However, the individual ego may, likewise, collaborate with an ideology, a mass, or a leader claiming God-like proportions, sacrificing mature and critical consciousness.

## Psychization

Jung coined the term *psychization* for the process whereby an instinct or a sensory experience is transferred into the psyche and consciousness. The instinctual *reflex* becomes the *reflection* of the psyche, just like soul and psyche constellate by the capacity to reflect. This is the process whereby the actual deed can be psychically represented, and experience becomes consciously *experienced* experience (Shalit 2004). The infant comes to *psychically* experience, for instance, touch and pain to which he or she is exposed. The concrete deed or physical sensation, such as pain, becomes represented and imagined in the psyche. This lies at the core of symbol formation and acculturation and of the representative dimension of art and literature.

Psychization expands the human sphere, says Neumann, by the withdrawal of “Gods, demons, heaven, and hell,” in their capacity as psychic forces, “from the objective world,” and their incorporation in the human sphere (Neumann 1970, p. 338f.).

The binding of Isaac signifies a cultural transition, whereby the sacrifice of the firstborn was replaced by animal sacrifice. Whereas there is little or no archeological evidence of the practice of filicide, the binding of Isaac provides a striking archetypal image of the transition from literalness to symbolic representation, from actual deed to image formation, i.e., of soul making, in the absence of which the ego is literalized and “trapped in ‘reality’” (Hillman 1992, p. 51). By substituting the sacrificial animal for the actual

son, the akedah represents the separation of meaning from act. The near sacrifice thus represents the very essence of psychic processes – intrapsychically, interpersonally, as well as culturally.

## Sai Baba

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

### Personal History

Sri Sathya Sai Baba is a holy man who was born in the tiny hamlet of Puttaparthi in south-central India on November 23, 1926. At age 13 he declared his spiritual purpose and commenced a ministry that has provided spiritual nourishment for millions of devotees worldwide. Until he died on Easter Sunday, April 24, 2011, Sai Baba was a teacher, healer, and miracle worker. He valued all religions and was trans-traditional in outlook. Over the years his influence expanded so that his organization has been providing free education and medical care and clean water to countless poor Indians. Similar projects are organized in other countries because Sai Baba's call is to universal love and service. He taught: "The best way to love God is to love all and serve all."

To his devotees Sai Baba was an Avatar, and he is believed to be the second of three Divine Incarnations that all carry the name Sai Baba. The first of the three lived in the nineteenth and early twentieth century in a mosque in the town of Shirdi, India. Although his parents were Hindu, he was raised by a Moslem holy man, after his parents went off to the forest to become ascetics (*sanyases*). That first Sai Baba was a teacher and healer who used ashes from a fire in the mosque for healing purposes. Shirdi Sai Baba, as he is called, fostered interreligious understanding by teaching Hindus about Allah and Moslems about Rama and Krishna. At the time of his death, both Hindus and Moslems claimed him. Shortly before he died in 1918,

he confided to a close devotee that he would return in 8 years.

In 1926, a child was born and named Sathya Raju. There are many stories about miraculous events that attended his conception and birth, and, as a young boy, Sathya was known to be very spiritual and loving. His playmates called him *Guru* ("teacher") and he was known for his generosity both to his friends and to wandering beggars. Whenever he witnessed suffering, he provided help in some way.

Sathya's parents were sometimes distressed by his unusual behavior, especially when he quit school at the age of 13 and announced that his devotees were waiting for him. "Who are you?" his perplexed father asked. Sathya replied, "I am Sai Baba," and picking up a handful of jasmine flowers, he threw them on the ground. The flowers are said to have formed themselves into letter shapes that spelled out the name: Sai Baba.

Thenceforth, he has been known as Sathya Sai Baba. His miracles are numerous. Among the most frequent and well-documented miracles are materializations. When Sai Baba waved his hand, various material objects appeared, apparently out of thin air. He sometimes made jewelry – rings or locketts – or icons for devotees. These religious objects included Hindu images such as Krishna or Christian icons such as the crucifix. Frequently, he materialized *vibhuti*, a sacred ash used for healing. In providing this healing ash, he echoed and went beyond the sacred ash that Shirdi Sai Baba used for similar purposes. (Even after his death, numerous devotees have discovered *vibhuti* coming forth from pictures of their beloved *Guru*.)

Sai Baba lived in a large *ashram* in the town of Puttaparthi, where he has also built a hospital and a university, both to serve the people free of charge. At his *ashram*, called *Prashanti Nilayam*, (Abode of Highest Peace), major feast days are celebrated by hundreds of thousands of devotees flocking in to view the holy man (*darshan*) and to receive the spiritual energy of his blessings. Sai Baba has told devotees that shortly after his death the third Sai Baba reincarnation will occur, who will carry the name of Prema Sai Baba (*Prema* means love and *Sathya* means truth).

## Teachings

In addition to his charitable work, materializations and occasional miraculous healings, Sathya Sai Baba taught his devotees through public discourses given frequently at his *ashram*. These teachings have been gathered into books, which now comprise the 42-volume *Sathya Sai Speaks* series. There is also a website where his message is articulated. For example, this writing from 1968 describes Sathya Sai Baba's self-definition of purpose:

I have come to light the lamp of Love in your hearts, to see that it shines day by day with added luster. I have not come on behalf of any exclusive religion. I have not come on a mission of publicity for a sect or creed, nor have I come to collect followers for a doctrine. I have no plan to attract disciples or devotees into my fold or any fold. I have come to tell you of this unitary faith, this spiritual principle, this path of Love, this virtue of Love, this duty of Love, this obligation of Love (Sathya Sai Baba, 7/4/68, cited on [www.sathyasai.org](http://www.sathyasai.org)).

Despite his stated lack of specific plans to attract followers, there are over 30 million devotees worldwide who follow the teachings of Sai Baba and believe him to be an Avatar, that is, an incarnation of God on earth. When asked directly whether he is God, Sai Baba frequently responded, "Yes, and so are you!" A central component of his teaching is that the Divine is omnipresent; Divinity resides in every person and our primary duty in life is to discover that indwelling divine life (*Atman*). In 1997, he spoke to a large group of devotees:

*Embodiments of Love!* Only that person can be said to lead a full human existence whose heart is filled with compassion, whose speech is adorned by Truth and whose body is dedicated to the service of others. Fullness in life is marked by harmony of thought, word and deed. . . . In every human being Divinity is present in subtle form. But man is deluded. . . . The innumerable waves on the vast ocean contain the same water as the ocean regardless of their forms. Likewise, although human beings have myriads of names and forms, each is a wave on the ocean of *Sath-Chith-Ananda* (Being-Awareness-Bliss). Every human being is invested with immortality. He is the embodiment of love. Unfortunately he fails to

share this love with others in society. The root cause of this condition is the fact that man is consumed by selfishness and self-interest. . . . Only when this self-interest is eradicated man will be able to manifest his inner divinity (Sai Baba, 1997, p. 191f).

Like Jesus, Sai Baba frequently taught in parables, which were often spoken in modern idiom. He used airplanes, for example, to teach about the presence of an unseen God (the pilot), and electrical energy to teach about the inner, unseen current that activates a multiple of appliances, even as God motivates and activates humans. Sometimes Sai Baba taught from the wisdom of the *Vedas*, the *Bhagavad Gita*, or other ancient Indian scriptures; at other times he spoke quite directly to the needs and problems of the twentieth- and twenty-first-century global society. In 1993, for example, he spoke about a problem that is increasingly newsworthy in the twenty-first century:

My advice to office-goers and students is that it is good for them to commute by cycle at least 5 or 6 km a day. This cycling exercise is very useful, not only for maintaining health, but also for reducing the expenditure on automobiles. . . . Moreover it serves to reduce atmospheric pollution caused by harmful fumes from automobiles. The carbon dioxide smoke from motor vehicles and factories is already polluting the air in cities and is affecting the ozone layer above the earth. The primary task is to purify the environment, which is affected by pollution of air, water, and food. All the five elements [earth, water, air, fire, and ether] are affected by pollution. People should, therefore, try to reduce the use of automobiles and control the emission of harmful industrial effluents. . . . Trees play a vital role in helping mankind to receive oxygen from the atmosphere while they absorb the carbon dioxide exhaled by human beings. Hence the ancients favored the growing of trees to control atmospheric pollution. But nowadays trees are cut down indiscriminately and pollution is on the increase (Sai Baba, 1993, p. 35f).

Like Gandhi, Sai Baba emphasized the importance of the fivefold values: truth, love, peace, nonviolence, and righteous living (*Sathya*, *Prema*, *Shanti Ahimsa*, and *Dharma*). Sai Baba treasured the *Bhagavad Gita* and he frequently taught his devotees the meaning of the metaphors of that archetypal story of the war between good

and evil. For example, on the battlefield in the *Gita*, Krishna says:

The point, old friend – and this is very important – is to do your duty, but do it without any attachment to it or desire for its fruits. Keep your mind always on the Divine (Atman, the Self). Make it as automatic as your breath or heartbeat. This is the way to reach the supreme goal, which is to merge into God (*Gita* 3:19. Hawley, 2001, p. 32).

Sai Baba taught that the battlefield is our inner life. Our spiritual aim should be to surrender to the Divine, to be a willing instrument of God's Will, and to leave the results of that action in God's hands. This relatively simple statement is the essence of life's goal; it is a spiritual work worthy of conscious effort (*sadhana*). Sai Baba has provided many teachings that support this goal. To keep focused on the Divine, he taught that the easiest method in this era is, with every breath, to repeat the name of God (*namasmarana*, remembering God through any name that has personal meaning).

Sai Baba's teachings also emphasize the importance of purity of heart, which entails letting go of desires and attachments. The union of opposites involves transcending the natural tendency to have likes and dislikes, attachments, and aversions. Rather, he taught, one should strive to care equally for friend and foe, to behave calmly whether one receives praise or criticism, and to be indifferent to honor and ignominy. Equanimity is fostered when one is able to accept suffering as a blessing in disguise and to accept adulation with humility.

## Psychotherapy with Devotees

In working psychologically with devotees of Sai Baba or with others who adhere to similar Eastern traditions, it is important to understand and accept their worldview. While anger, jealousy, fear, pride, lust, etc. are natural psychological states, the spiritual aim in this Eastern tradition is to transcend those states. World – as we know it – is illusory (*maya*). The only permanent reality is the Divine and that permeates everyone and everything. Every situation is a scene in the

Divine play (*leela*). Psychologically, this attitude enables devotees to take life a little more lightly and to cope with its vicissitudes a little more gracefully.

## Self-Realization

In summary, to the devotee of Sri Sathya Sai Baba, the aim of life is to surrender to God, to be the Instrument of Divine Will, to fight the various battles of life, but to leave the outcome in God's hands. In order to accomplish that aim, the primary purpose of life is to discover the Godlife (*Atman*) within oneself and to honor that same Godlife in others – all others. Self-realization means to know that identity and unity experientially. Sai Baba promised that such self-realization results in a state of bliss. In essence, he said, we are being, awareness, and bliss (*sath-chith-ananda*), i.e., when we are fully aware of the Divine within each of us, and acting from that awareness, we shall receive bliss as a natural occurrence. Thus, when we aspire for world unity and work toward that end, we work in consort with the Divine Will. We merge with the Divine One.

## Samsara and Nirvana

Frank Scalabrino

Department of Philosophy, University of Dallas,  
Dallas, TX, USA

On Buddha's birthday a spotted fawn is born – just like that (Bashō 1999, p. 70).

### Introduction

The structure of this double entry, i.e., the combination of the entries Samsara and Nirvana, moves from an analysis of samsara and nirvana as religious concepts to the question of the relation between nirvana's revelation and the perceptual shift which results from performing a phenomenological reduction (cf. Heidegger, 1962; cf. Heidegger, 2008). In other words, if the practice of meditation, for example, zazen (cf. Suzuki 1993, p. 29) or koan (cf. Suzuki 1971, pp. 18–200), produces what is tantamount to a phenomenological reduction and if meditation is a practice toward the revelation of nirvana, then to what extent is the accomplishing of a phenomenological reduction a practice toward revealing or realizing nirvana?

Next, a brief conceptual analysis of nirvana in relation to different conceptualizations of time follows the examination of the above question. On the one hand, it seems as though how one thinks of time influences how one thinks of samsara and nirvana. On the other hand, complicating matters further for anyone who would attempt to understand samsara and nirvana, thinking of nirvana tends to invoke concepts like “absolute emptiness” or “nothing(ness),” and how we think of these concepts seems to be intimately dependent on our understanding of the relation between time and existence. Hence, to conclude the first part of this double entry, I clarify the difference between nirvana and nonbeing by way of a phenomenological description of nonbeing for the sake of illustrating what nirvana is not. Realizing that the “nothing” to which nirvana is often

taken to refer is not the nothing of “nonbeing” should help clarify how to think of samsara and nirvana.

The entry concludes, then, with a gesture toward what the research project of tracing the textual use and changing readings of nirvana and samsara might look like across psychology as a natural (*Naturwissenschaften*) and as a historical-social-individual-human science (*Geisteswissenschaften*). Such a research project would include a discussion of the differing conceptions of nirvana found in Freud and Jung and a gesture toward explicating the presence, and perhaps therapeutic use, of the psychic revelation of “nothingness,” “emptiness,” or nirvana (or at least the differing uses of phenomenological reductions) present in the various accounts spanning the division often referred to as “the four forces of psychology.” The four forces of psychology are here taken to be varying psychological accounts divided by methodology and theoretical point of departure.

### Conceptual Analysis

Nirvana is notoriously an elusive notion. Take, for example, Nagarjuna's celebrated claim: “Samsara is nothing essentially different from nirvana. Nirvana is nothing essentially different from samsara” (cf. Lee 2006, pp. 464–465; Nagarjuna 1970, p. 158). Further, nirvana is supposed to refer to some difference, i.e., a salvation, worth striving for by way of the “thirty-seven practices” which lead to enlightenment, i.e., nirvana (Hirakawa 1990, pp. 48, 51). These practices conclude with the famous “Noble Eightfold Path” supposed to lead to the “cessation of suffering,” i.e., *dukkha* (Humphreys 1990, pp. 65–70). The trajectory of this soteriology may be thought through by thinking Samsara *to* the Four Noble Truths *to* the Three Jewels of Buddhism (which include meditative practices leading to the experience of a phenomenological reduction revealing samsara as profane) *to* a contemplative life (*samadhi*) for the sake of further unfeathering *to* nirvana “with spatiality” *to* only a small number of rebirths with nirvana while perfecting wisdom (*prajna*) as an

arhat and enduring until *samyak sambuddha*, i.e., “final” nirvana.

Along this trajectory, then, may be thought various stages relative to two different revelations of nirvana – nirvana with spatiality (nirvana with embodiment/remainder) and nirvana without spatiality, i.e., final nirvana (nirvana without remainder). Before discussing the above trajectory further, however, it is worth mentioning that according to the “Mindfulness of Breathing Sutra” from the *Middle Length Discourses* (118.15), the development and cultivation of “mindfulness of breathing” is supposed to be sufficient to achieve enlightenment, i.e., awareness of nirvana from within samsara. Hence, “mindfulness of breathing” as the performance of a phenomenological reduction opens an interesting space for comparison of Western philosophers and psychologists informed by phenomenological practices.

The Four Noble Truths, then, are considered one of the Three Jewels of Buddhism. And, upon embracing the Jewels, a being enters the first stage toward nirvana, i.e., as a “stream-entrant” (Hirakawa 1990, p. 57). Embracing these Jewels (Buddha, Dharma, and Sangha) is tantamount to believing in the possibility of enlightenment and nirvana, believing in the path leading to enlightenment, e.g., the Four Noble Truths, and participating in the practices associated with enlightenment and nirvana (Hirakawa 1990, p. 57). To contextualize, such a path to enlightenment may fruitfully be compared to Plato’s description of the just released “prisoner” in the “Allegory of the Cave” (cf. *Republic* 515c-e3).

There are three other stages associated with progress through the “thirty-seven practices.” They are once-returner, non-returner, and *arhat* (the one who is worthy of *samyak sambuddha*, i.e., final nirvana) (Hirakawa, 1990, p. 57). Further, the ethical path along these stages, invoking liberation, is described as the loosening of “ten fetters – ignorance, conformations, consciousness, name and form, the six senses, contact, sensation, grasping, becoming, and old age and death . . . to be overcome before Nirvana [can] be reached” (Humphreys, 1990, p. 66). And, the distinction between two nirvanas helps here,

since the *arhat* “manages to avoid suffering that arises due to change in something to which he is attached, but not the fact that sensations are often unpleasant nor that things are imperfect due to being brought about by something else” (Leaman 1999, p. 22). Hence, release from one’s fetters may be thought of as ascendance through these stages toward nirvana; and the successful overcoming of the realms, to which one would have otherwise been bound by fetters, allows an *arhat* to enter final nirvana upon the death of the physical body (cf. Schopenhauer 1958, pp. 506–507).

An adequate *conceptualization* of “Samsara” and “Nirvana,” then, would render samsara as the repetitive cyclical realm of birth and rebirth associated with suffering and nirvana as both salvation through liberation from the suffering associated with samsara and liberation from rebirth in samsara. Such a rendering follows the Buddha’s first teachings after experiencing nirvana in which he revealed the “Four Noble Truths” which relate to suffering. First, the “truth of suffering,” which is the awareness of suffering, is also thought to be the awareness of samsara. Second, the “truth of the origin of suffering” refers to an awareness of desire and attachment in relation to suffering. Third, the “truth of the cessation of suffering,” which is an awareness of the cessation of suffering, is also thought to be an awareness of nirvana. Fourth, the “truth of the path to the cessation of suffering” refers to the habits and practices involved toward the cessation of suffering, i.e., nirvana (cf. Gyatso 1994).

### **Nirvana: Aporia, Phenomenological Reduction, or Death?**

With the path of liberation identified, then, is it possible to think through an agent’s psychological process leading from samsara to nirvana? If so, then Western philosophers concerned with agency might be able to help. For example, Immanuel Kant’s (1724–1804) description of apperception suggests an agent becomes self-aware through a focal revelation derived from awareness immanent in multiple perceptions. In other words, through an agent’s interaction with

the phenomenal world, i.e., samsara, an agent becomes self-aware – as that which is interacting.

However, there is still a third step left in this dialectic. The third step, on the one hand, the agent is not the phenomena experienced. On the other hand, the agent is neither the “I” nor any of the discursivity which may stand in for the “I.” Rather, the agent is transcendental. The third step’s uncovering being, then, the revelation of the nondiscursive transcendental, i.e., the agent, as condition for the possibility of both the unity of apperception and the experiencing of samsara. Further, just as we can encounter an object through a phenomenological reduction such that the more discursive aspects of its being are bracketed, so too can we realize our movement and dwelling as that of a nondiscursive transcendental being. Notice the process of this realization may also be referred to as the “emptying” of the self. And emptying here is in quotes as it is clearly meant metaphorically, since the self is, of course, not a physical object. Hence, awareness of being transcendental, as such, arrived at via phenomenological reduction is entrance into the nirvanic stream (noted above).

Now, to perform a phenomenological reduction, without doing so merely in reflection (cf. Husserl 1983, p. 103), would be something like attempting to sense your senses sensing. And, to accomplish this, you would need to be in a phenomenologically reduced relation to experience. Prior to meaning “your” senses, they would just *be* (the repetition of not-yet-judged apprehensions, i.e., sensations). Further, supposing a “sense” to be a bundle of multiple unconscious possible thoughts (cf. Kant 1998) and supposing the automaticity of contraction dilation which allows for the exchange of content in sensory awareness (“I” feel “my feet,” “I” feel “my hands”), then there would be gaps created in the process of exchanging content. Such would be to not make the being of the sense depend on the presence of the object but to make the presence of the object depend on the capacity of the power of animation ( $\psi\upsilon\chi\acute{\iota}$ ) to sense.

In this way, it is possible to become aware of gaps in your experiencing, in other words, the power of animation instantiates, but does not

perpetually hold an experience in being. “Nonbeing” refers to those gaps in experiencing. Your being is not persisting, it is pulsing (Scalambrino 2011, p. 560). Hence, just as it seems incorrect to equate nirvana with nonbeing, it seems incorrect to equate nirvana with death. So, the physical death associated with final nirvana is not more nirvana; it is less samsara.

### Eternity and Perspective: The Hermeneutics of Samsara

Is there awareness of the presence of the eternal? In *Zen Mind, Beginner’s Mind*, Shunryu Suzuki (1904–1971) recounts: “Dogen said, ‘Time goes from present to past.’ This is not true in our logical mind, but it is in the actual experience of making past time present” (Suzuki 1993, p. 33). And a question to help clarify, “When you are sitting in the middle of your own problem, which is more real to you: your problem or you yourself?” (Suzuki 1993, p. 40).

Similarly, St. Augustine’s perplexity moves from “If the future and the past exist, I want to know where they are” (Augustine 1993, p. 222) to “the present of things present is sight, the present of things past is memory, the present of things future is expectation” [223]. And juxtaposing Suzuki and St. Augustine illuminates the question: Are memories and expectations clouding a vision of the present? This is perhaps what the Buddhist monk Dogen (1200–1253) referred to in stating, “Most people think time is passing and do not realize that there is an aspect that is not passing” (Dogen 1975, p. 70). Finally, coming full circle, to think through the possible relations between eternity and time would be to answer the question asked earlier regarding possible awareness of eternity.

The post-structuralist tradition beginning with Kant’s *Critique of Pure Reason* (1781–1787) and especially with his *Critique of the Power of Judgment* (1790) seems open to the possibility of a difference that cannot be structured. Hence, post-structuralism is capable of reading the structure of memory, expectation, and the objects of sight as identifiable precisely because of their

being part of a structure. Now, if this structure includes time, then the post-structural difference could be eternal as “outside” the structure identified as time.

In order to think through the possible relationships between eternity and time, consider an example from Friedrich Nietzsche’s *Die fröhliche Wissenschaft* (1887):

*Sub specie aeterni* – A: “You are moving away faster and faster from the living; soon they will strike your name from their rolls.” – B: “That is the only way to participate in the privilege of the dead.” – A: “What privilege?” – B: “To die no more” (Nietzsche 1974, p. 218).

This movement is mirrored (cf. Williams 2001) in Nietzsche’s “The Three Metamorphoses of the Spirit” (cf. Nietzsche 1969, p. 54), and Wilhelm Wurzer (1942–2009) links the metamorphoses with different perspectives regarding eternity (cf. Wurzer 1983, p. 269). Hence, the “Camel” spirit who carries the burden of samsara thinks “time” in “eternity.” The “Lion” spirit who rages against the burden of samsara thinks of an “eternity of time,” and, as the agent of a “New Enlightenment,” the “Child” spirit eternally plays, thinking of time with the seriousness of a child at play (cf. Nietzsche 1989, p. 83).

Notice, then, that thinking through these possible relations between time and eternity affirms the conclusion of the previous section. A non-reflective phenomenological reduction and a contemplation of time provide the possibility of identifying more with the nirvanic stream than with samsara. Further, it is possible to think of the power intuiting time to *thereby* be eternal “outside” of time. Hence, this different perspective regarding eternity opens a space to think the possibility of reincarnation not merely after physical death but repeatedly in regard to “your” *current* physical body.

Summarized a different way, the awareness of the presence of the eternal would be like the realization of the power animating an experience both as the power allowing for the conceptualizing of an experience and as the nonconceptual power that you most are. Keeping in mind that space and time depend on the present (“sight” of the) environment of the experience for identification, even if time

and space are intuitions of the power allowing for an experience in space and time, the power itself is neither of space nor time. In other words, depending on how you think of time, the power of animation ( $\psi\upsilon\chi\eta$ ) might be eternal. Perhaps Plato would call this the “immortality of the soul” (cf. *Phaedo* 63e8–64a7; 66b2–66e2; 67e3; 72d6–73a3).

It is the awareness of that power undergoing transformation to leave the wheel of birth and rebirth that allows us – to “enter the stream” – the option to live more mindful of that power than any of its manifestations. Despite the difficulty of the dialectic leading to such a psychological discovery, retreating to a position of “eliminative materialism” (EM) (cf. Churchland 1981) would be tantamount to embracing samsara to deny nirvana. In the same vein as this criticism of EM, Henri Bergson (1859–1941) argued concerning the relationship between the natural scientific discoveries regarding brain damage studies and the psychological truths they purportedly uncover:

That there is a close connection between a state of consciousness and the brain we do not dispute. But there is also a close connection between a coat and the nail on which it hangs, for, if the nail is pulled out, the coat falls to the ground. Shall we say, then, that the shape of the nail gives us the shape of the coat, or in any way corresponds to it? (Bergson 1991, p. 12).

Whereas answering Bergson by affirming a correspondence between brain and psychē tends toward thinking psychology as a natural science (*Naturwissenschaften*), denying a direct correspondence tends toward the thinking of psychology as a historical-social-individual-human science (*Geisteswissenschaften*).

### Scala Amoris v. Scala Natura

Reminiscent of the disagreement among the central figures taken to illustrate Plato and Aristotle, respectively, in Raphael’s (1483–1520) famous fresco “The School of Athens” (1510–1511) is the disagreement between those who claim the methods of psychology should reflect its status as a historical-social-individual-human science (*Geisteswissenschaften*) and those who claim

the methods should reflect those of natural science (*Naturwissenschaften*) – *scala amoris* v. *scala natura* (cf. Van Kaam 1958, p. 22). Moreover, this distinction is not unlike the different discussions of the *psychē* found in Plato (*Geisteswissenschaften*) (cf. *Phaedo*) and Aristotle (*Naturwissenschaften*) (cf. *De Anima* 414a-414b). Hence, analyzing the single idea of “psychology,” one could use this distinction to indicate the subsequent two parts (cf. Gadamer 1989; Husserl 1970).

A further distinction, perhaps most useful when distinguishing between therapeutic intervention orientations, referred to at times as the “four forces in psychology” may be used to indicate the difference(s) across various psychological accounts (cf. Brennan 2003; Hergenhahn 2008). Such clarification is beneficial, for example, when texts such as Raymond J. Corsini’s *Handbook of Innovative Therapy* suggest the existence of over 1,000 different types of psychotherapy (cf. Corsini 2001). Hence, if we take the four forces of psychology to be divided by the extent to which the methodologies involved embrace “natural kinds” in regard to psychology, then the first two forces of psychoanalysis and behaviorism may be thought of as on the natural kinds side of the division (*Naturwissenschaften*) along with a number of reactions to these forces which still adhere to natural kinds, e.g., functionalism, cognitivism, and neuronalism. In contrast, on the side of the division which thinks natural kinds as dependent on the mind (*Geisteswissenschaften*), i.e., the side of the division which embraces the Kantian Copernican revolution (Kant 1998, pp. 110–111), are found “third force” phenomenological-hermeneutic psychologies such as Rogerian, Gestalt, Existential, Transpersonal (contemplative), and post-structuralist theories and the fourth force of “systems”-based theories of psychology such as family therapy and other theories which maintain, e.g., “that individuals may *only* be understood within the social [and historical] context in which they exist [emphasis added]” (Prochaska & Norcross 2006, p. 352). Whereas – generally speaking – the former (*Naturwissenschaften*) lends itself to an understanding of psychological

salvation as dependent on physical destruction, the latter (*Geisteswissenschaften*) seems to allow for a salvation more consistent with that found regarding samsara and nirvana.

## Sigmund Freud

Though one might refer to a more existential-phenomenologically grounded psychoanalytic theory as “psychodynamic,” the Freud who authored *Project for a Scientific Psychology* (1895) seemed interested in psychology as a natural scientific enterprise. Similarly, and following Arthur Schopenhauer (1788–1860) (cf. Schopenhauer 1958, p. 506–509), Sigmund Freud (1856–1931), specifically in the *Economic Problem of Masochism* (1924), suggested, “the nirvana principle expresses the tendency of the death instinct” (Freud 1961a, p. 160). And the aim of the “death instincts” is to “conduct the restlessness of life into the stability of the inorganic state, and it would have the function of giving warnings against the demands of the life instincts” (Freud 1961a, p. 160). Hence, Freud seemed to read any striving for nirvana as the manifestation of *the body’s* desire to cease its own processes of maintaining life (cf. Freud 1955, pp. 143–144).

Since, in Darwinian fashion, life for Freud emerges from the nonliving and struggles to survive, in *Beyond the Pleasure Principle* (1920), Freud speculated an “inertia” tending, then, toward nonliving. Further, Freud suggested, “everything living dies for *internal* reasons [Freud’s emphasis]” (Freud 1955, p. 38). And Freud unfolded this interiority from which death derives in *Instincts and Vicissitudes* (1915) noting “an ‘instinct’ appears to us as a concept on the frontier between the mental and the somatic, as the psychical representative of the stimuli originating from within the organism and reaching the mind” (Freud 1957, pp. 121–122). And Freud clarified that “By the source of an instinct is meant the somatic process which occurs in an organ or part of the body and whose stimulus is represented in mental life by an instinct” (Freud 1957, p. 123).

## Carl Gustav Jung

It is possible to arrive at Carl Gustav Jung's (1875–1961) reading of samsara and nirvana in at least two ways – his direct comments in their regard and his criticism(s) of the interpretation of instinct in which Freud grounds nirvana. To begin, Jung spoke of samsara and nirvana directly, and, in contrast to Freud's equation of ego dissolution with internal death, Jung wrote:

To us, consciousness is inconceivable without an ego ... If there is no ego, there is nobody to be conscious of anything. ... The Eastern mind, however, has no difficulty in conceiving of a consciousness without an ego. Consciousness is deemed capable of transcending its ego condition; indeed, in its 'higher forms, the ego disappears altogether. Such an ego-less mental condition can only be unconscious to us, for the simple reason that there would be nobody to witness it (Jung 1969, p. 484).

In this way Jung allows for a reading of nirvana beyond a Freudian psychic-apoptosis. According to Jung, "The Mind in which the irreconcilables – samsara and nirvana – are united is ultimately our mind" (Jung 1969, pp. 488–489). Moreover, "what we [in the West] call the 'dark background of consciousness' is [in the East] understood to a 'higher' consciousness. Thus our concept of the 'collective unconscious' would be the European equivalent of *buddhi*, the enlightened mind" (Jung 1969, p. 485). And since Jung associates this "higher consciousness" with introversion, he noted "Introversion is felt here [in the West] as something abnormal, morbid, or otherwise objectionable. Freud identifies it with autoerotic, 'narcissistic' attitude of mind. ... In the East, however, our cherished extraversion is depreciated as illusory desirousness, as existence in the samsara" (Jung 1969, p. 481).

In *Freud and Jung: Contrasts* (1929), then, Jung declared, "I prefer to look at man in the light of what in him is healthy and sound, and to free the sick man from just that kind of psychology which colors every page Freud has written" (Jung 1970, p. 335). And, according to Jung, "the question of instinct cannot be dealt with

psychologically without considering the archetypes, because at bottom they determine one another" (Jung 1978, p. 134). In a parallel construction, Jung then unfolds his understanding of instincts and archetypes. On the one hand, "Instincts are typical modes of action, and wherever we meet with uniform and regularly recurring modes of action and reaction we are dealing with instinct, no matter whether it is associated with a conscious motive or not" (Jung 1978, p. 135). On the other hand, "Archetypes are typical modes of apprehension, and wherever we meet with uniform and regularly recurring modes of apprehension we are dealing with an archetype, no matter whether its mythological character is recognized or not" (Jung 1978, pp. 137–138). Jung's notion, then, holds open the possibility of unconscious apprehension and a way of discussing the apprehension by way of archetypes, such that "Just as conscious apprehension gives our actions form and direction, so unconscious apprehension through the archetype determines the form and direction of instinct" (Jung 1969, p. 137). And, finally, regarding the archetype in its relation to instinct Jung notes, "the yucca moth must carry within it an image, as it were, of the situation that 'triggers off' its instinct" (Jung 1978, p. 137). Hence, Jung clearly seems to have the more *Geisteswissenschaften* friendly reading of samsara and nirvana.

## Conclusion

In conclusion, it would seem that to do the least amount of interpretative violence to the notions of samsara and nirvana in the process of performing a more thorough examination of the concepts across psychology, one might proceed by comparing various psychological accounts regarding change and death. For example, how might the influence of Epictetus' *Enchiridion* square with what may be thought of as the more natural scientific interests of Cognitive Behavioral Therapy (CBT)? Moreover, is it the case that CBT's roots run too deep in the psychoanalytic soil from which it came to consider it based in phenomenology and hermeneutics? Is it

possible to provide “mindfulness”-based therapy within a natural scientific perspective, and, if so, then is it possible to reread phenomenologically based approaches without altering their fundamental character? To what extent might “stream-entering” make one a better psychotherapist? Finally, in regard to systems theory, one might examine the extent to which the psychological change of individual family members shifting the family unit from a closed to a “healthier” open position utilizes agent, i.e., group member, specific techniques which may be thought of as designed for “stream-entering.”

## Sangha

Paul Larson

The Chicago School of Professional Psychology,  
Chicago, IL, USA

In Buddhism the Sanskrit term “sangha” has two meanings. More generally, it refers to the entire community of all practitioners of Buddha dharma, both lay and monastic. It is also used to specifically refer just to the monastic community, both monks and nuns. Contemporary Buddhists often refer to themselves not only as Buddhist but as dharma practitioners. This emphasizes the point that they are active in meditation, chanting, or some other spiritual practice or discipline. This is in contrast with the Western monotheisms where the term “believers” emphasizes the cognitive component, what doctrines one holds or affirms.

The sangha is one of the three gems, the other being the dharma and the Buddha. Collectively, they are known as the “triple gem.” To become a Buddhist one would take refuge in the triple gem. The concept of taking refuge refers to the first of the Four Noble Truths of Buddhism, the pervasiveness of human suffering. As one experiences the reality of suffering, one seeks refuge from not only the suffering itself, but with knowledge of the cause of suffering, attachment, one seeks the way out by practicing the methods that lead to enlightenment.

## Santería

Sana Loue

School of Medicine, Department of Bioethics,  
Case Western Reserve University, Cleveland,  
OH, USA

## Origins

Santería, more formally known as Lukumí or La Regla Lukumí, originated in Africa and was brought to Cuba by slaves from western Africa, many of whom were from Yoruba-speaking areas that are now part of Nigeria and Benin. The religion was brought to the United States during the 1940s by immigrants from Cuba. It has been estimated that approximately 10 million individuals in the Americas are adherents to the Afro-Cuban religion Santería; somewhere between half a million and 5 million of them are located in the United States. It is believed that approximately 50,000 adherents reside in South Florida. In addition, there are also large clusters of practitioners (*santeros*, a status that is explained in greater detail below) in New York City, New Jersey, and Connecticut. Although many believers may have been raised in the Santería tradition, followers of other faiths are increasingly identifying as believers of Santería.

In many respects, Santería is unlike Western religions. While Western religions such as Christianity, Islam, and Judaism rely on doctrine and liturgy embodied in sacred texts to define their beliefs and boundaries, Santería relies instead on the careful performance of numerous rituals and the fulfillment by its followers of these prescribed rituals and sacrifices. Unlike various denominations within Christianity, Judaism, and Islam, for

example, Santería does not have a centralized, hierarchical structure. Each house-temple (*casa de santos*) acts independently of others and may engage in very different practices and have different interpretations of those practices in comparison with other house-temples. Followers of Santería are known as such because they have carried out specific actions during prescribed rituals, not because of an accident of birth.

Significant disagreement exists with respect to the characterization of Santería as a syncretized religion. Santería has been labeled as such because some observers have noted that adherents to Santería appear to be praying to Catholic saints and concluded that Santería followers have merged the Catholic and African belief systems and abandoned their gods (*orishas* or *orichas*) in favor of the Catholic saints. Various scholars, however, have argued that because the Yoruba slaves in Cuba faced religious persecution when they worshiped the orishas, they masked this worship by imbuing a particular Catholic saint with the power and characteristics of a particular orisha. Although it appeared that the slaves were now praying to a saint, they actually continued to worship a particular orisha as manifested in the form of a particular saint. As an example, the orisha Orúnla, who is the god of wisdom, is often manifested as Francis of Assisi, St. Philip, or St. Joseph. The persecution in Cuba of adherents to Santería continued until relatively recently; the practice of the faith was a punishable crime in Cuba until 1940, and persecution continued until the 1980s. Even in the United States, Santería did not gain formal recognition as a religion until 1993, when the United States Supreme Court ruled that prohibitions against religious rituals involving animal sacrifices were violative of the United States Constitution.

## Basic Beliefs

Santería is a highly complex and ritualized faith. The various rituals, proverbs, and relationships that exist between adherents and officiants of the faith and the orishas serve to bind each to the other. As evident from the following discussion, survival of one depends on nourishment of the other.

It is believed that the orishas manifest themselves in other religions in addition to Santería by virtue of *ashé*, an amoral neutral energy force that serves as the foundation for all that exists and that is possessed by all entities that have life or power. Accordingly, it is believed that every human being who worships the Divine is actually worshipping the orishas. All religions, however, are to be accorded respect since all faiths contain truth.

Every individual is believed to be the spiritual child of an orisha. The identity of the orisha parent will become known once the individual becomes a follower of Santería. The new believer can then begin to foster the relationship with his or her orisha parent and look to the orisha for guidance and assistance with his or her problems. Significantly, the sexual orientation and gender identity of the adherent are not tied to the characteristics of the deity. For example, a self-identified gay male with female-associated mannerisms may be a follower of *Changó*, one of the most powerful orishas.

When an individual dies, his or her *ori*, analogous to the Christian concept of a soul, returns to *Olodumare*, the ultimate god, who causes the *ori* to be reborn in successive lives until its destiny on Earth has been fulfilled. Accordingly, death is viewed not as the end of life but rather as the beginning of a new existence.

Although the orishas are powerful, they are not immortal. Their survival depends on sacrifices made to them by their believers. The relationship between the orishas and believers is complex; each depends on the other for survival.

Santería's primary purpose is to assist the individual to live in harmony with his or her destiny; they will more easily be able to meet life's challenges and overcome difficulties if they follow the appropriate rituals. These difficulties may include marital strain, financial stress, illness, and problems with children. Although the individual is deemed to be responsible for his or her actions, assistance may be sought from the appropriate spirit. The individual's performance of a prescribed ritual will provide energy to that spirit so that the spirit can provide assistance to the individual.

Santería does not personify the qualities of good and evil as God or Satan, angels or devils. Rather, what is to be considered good or evil depends upon the particular circumstances. Unwelcome events are not deemed to be punishment for having committed a sin or for a human frailty but are instead seen as the natural consequence of disharmony. Restoration of harmony between the physical and spiritual realms is deemed to be critical. This can be accomplished through the perfect performance of various rituals designed to demonstrate respect to the appropriate orishas and to placate them. If done successfully, the orishas will reward the individual by granting his or her request, even if the fulfillment of that request would be to the detriment of others.

## Ritual

Individuals seeking assistance with their difficulties will consult a *santero* or *santera* for a *consulta*. (*Santero* refers to males and *santera* to females; the term *santero* will be utilized in the remainder of this entry to signify both male and females.) *Santeros* who have developed a reputation of being knowledgeable and powerful may have established a *casa de santos*, known as an *ilé*. These are often located in a room or basement of a house that has been converted for this purpose and that houses shrines of Santería. *Santeros* are believed to be extensions of *Olodumare*, the supreme spiritual source. In their role as mediators between humans and orishas, they are able to officiate at ceremonies and rituals, diagnose illness, effectuate healing, and dispel evil spells. *Santeros* have been trained by longer-term practitioners of the faith who have "birthed" more junior members (male *padrinos* and female *madrinas*) and are recognized as their mentors' godsons (*ahijados*) and goddaughters (*ahijadas*).

The process of restoring harmony between the physical and spiritual worlds and discovering how to be in balance with one's destiny often begins with divination. Although each individual is believed to have a destiny, actions are not predetermined; rather, each person can pursue actions that are congruent with their destiny and

reach their full potential, or they may act in ways that are in opposition to their destiny and create disharmony. Divination will help to clarify the client's situation, reduce anxiety, and identify a solution to the client's difficulties. The santero will ask the client questions about his or her situation; the client is able to clarify for him- or herself the presenting problem as he or she relates it to the santero.

A detailed description of the varied divination processes is beyond the scope of this entry. In brief, divination may be achieved through reliance on sanctified coconuts which, after being tossed, reveal a yes-no response to a question that has been asked of an orisha; through the use of cowrie shells that constitute the "mouth" of a specified orisha; and through the use of kola nuts or palm nuts.

Only *babalawos*, male high priests whose abilities exceed those of the santeros, are authorized to perform various forms of divination, such as that accomplished through the use of kola nuts or palm nuts. Additionally, only *babalawos* can perform animal sacrifices. Over time, the power and importance of *babalawos* has diminished as increasing numbers of santeros learn the rituals involving animal sacrifice and the more advanced forms of divination.

A sacrifice or tribute to a particular orisha may be prescribed at the conclusion of the consulta. Offerings, known as *ebbós*, may be prescribed for a variety of purposes: to give thanks for the favorable resolution of a problem; to obtain an orisha's favor; to appease an angry orisha; to ward off an attack; to mark the beginning of a particular ceremony, such as an ordination; and to obtain an orisha's blessing at the start of a new venture or enterprise, among others. Each ritual service necessitates the payment of a monetary offering (*derecho*) to the orisha. The *derecho* is often needed in advance in order to pay for the various component objects to be used in the ritual, such as food, candles, and animals. The blood from animal sacrifices is used to nourish the orisha; the animals are cooked and eaten following most Santería rituals, with the exception of healing and death rites. The ritual of sacrifice or offering serves as a catharsis for the client's emotions that are

associated with the difficulties he or she described during the consulta.

A santero, or even an adherent, may become possessed by an orisha during the course of a ritual. A client's belief in spirit possession may in some cases complicate a mental health diagnosis by a Western-trained mental health professional. However, a client's reliance on Santería rituals and consultas may serve to complement therapy by providing additional support, feedback, and opportunity for self-reflection. Accordingly, it is critical that a mental health professional be willing to engage his or her client in a discussion of the client's religious and spiritual beliefs.

Adherence to Santería or membership in the faith is not a prerequisite to a consulta. Individuals who seek entrance to Santería as a full member must proceed through a series of four rituals that includes (1) receipt of the beaded necklaces (*elekes*), containing specific beads that reflect the orishas to whom the individual is responsible; (2) making the image of Elegguá, a warrior orisha responsible for determining human destinies; (3) receiving the warriors (*Guerreros*), that is, receiving from the *babalawo* objects associated with the warrior orishas Elegguá (his image), Oggún (iron tools), Ochosi (a bow and arrow), and Osún (an iron chalice with a rooster); and (4) *asiento*, an elaborate multi-day ritual through which the individual is reborn into Santería. Various aspects of the *asiento* serve to distinguish and separate the post-*asiento* individual from his pre-Santería identity: the initiate's head is shaven, he is given a new name, and he is kept in seclusion. Initiation into the faith through the four rituals typically requires several years and tutelage under a particular santero. The individual is free to halt the process at any stage and may continue as a member of the faith at the level he has attained.

## Benefits

Santería has provided and continues to provide its adherents with a sense of family, community, refuge, and belonging and the possibility of

exerting some degree of control within one's current existence. Reincarnation of the ori assures the continued existence of the individual and the regeneration of the community. These physical and emotional benefits are evident throughout the faith's history. During the period of slavery in Cuba, the faith provided a mechanism through which individuals could momentarily escape from their oppression. Cuban immigrants to the United States found fellowship and community in the *casas de santos*, where fellow clients spoke the same language and held similar worldviews. The *santeros* and *santeras* serve as surrogate godparents, while fellow adherents are seen as siblings. The *casas de santos* also serve as marketplaces, where clients can exchange goods and assist each other economically. In short, the *casas de santos* and its personages constitute family and community, bound together through an intricate system of ritual and respect and, not infrequently, experiences of oppression.

## Sarasvati

Malgorzata Kruszewska  
Sonoma State University, Rohnert Park,  
CA, USA

Sarasvati is a riverine goddess invoked in the *Rig Veda*, the oldest of the ancient sacred text of India. She maintains a prominent place in Hinduism as goddess of knowledge, music, and sound and is often portrayed as one of the three great (*maha*) female deities along with the goddess of prosperity, Lakshmi, and the fierce protectress mother, Durga. She is a pan-Asian goddess represented in Jain, Sikh, and Buddhist temples, rituals, and narratives. There is some evidence that an Old Iranian river goddess, Haraxwaiti, may also refer to a similar female deity.

Historically, a river Sarasvati existed until its mysterious disappearance by 800 BCE, which is variously attributed to climate changes, geological shifts or possible earthquakes, and drought conditions. Speculations of locating the actual river continue to this day, pointing to the geographical areas along the west border areas of India between modern day Punjab and Pakistan.

The Sanskrit name suggests a flowing quality associated with both water and eloquence. Sarasvati is usually depicted with four arms holding her musical instrument (*vina*), sacred beads (*mala*), and a scroll or book and with her animal vehicle the goose, swan, or peacock at her feet. Painted images of Sarasvati portray her gliding on river waters cascading from a mountain source. She is associated more with moving waters that transform the landscape rather than with still, placid bodies of water. The knowledge attributed to Sarasvati therefore arises from the life force and movement of the river.

The Sarasvati river as described in the *Rig Veda* is powerful, forceful, and unpredictable. In this way, the quality of the waters differs greatly from lake, sea, or pond deities. Yet she is not only a water deity for she also is Sound. Sarasvati is invoked by poets and seers for inspiration, poetry, and music. Knowledge is gained by entreating

**Sarasvati, Fig. 1** Sarasvati clay statue, street shrine during Sarasvati Puja, 2011, Kolkata (Calcutta) (Photo courtesy of the author)

Sarasvati to bless her devotees with the flow of thoughts, words, and music.

Psychologically, Sarasvati symbolizes the cognitive skills of reading, thinking, and free-flowing verbal and written expression. She also symbolizes the psychology of the artistic “flow” of inspiration and skill in musical performance. She represents the divine gift of these skills of articulation, arising from inspiration.

Knowledge of words is used in conjunction with knowledge of the healing powers of water (often in the form of prescribed baths) and specific medicinal herbs found along the river waters. Thus, an early version of Sarasvati portrays her as a physician who was called on to heal the Vedic god Indra after he drank an excess of Soma. It is understood that knowing the correct mantra and proper recitation of these powerful sounds may bring about restoration of health and remedies misfortune. Psychologically she is an

image of the knowledge of healing arts and medicine – herbs and mantras.

Knowledge depicted as a female divinity can be found in the Greek religious and mythological narratives of Sophia and Athena as well as in the biblical references to Eve receiving the fruit from the Tree of Knowledge. Each of these offers a specific understanding of the qualities associated with the acquisition and use of knowledge according to specific historical and cultural context that contributes to the formation of how knowledge is psychologically defined and perceived (Fig. 1).

Sarasvati in modern Hinduism has come to be associated with the pure (*sattvic*) knowledge of the Vedas. She is often associated with the sacred rituals of Brahminical knowledge which include performance of correct ritual and recitation of Sanskrit *mantra*. She also appears in non-Brahminical literature and ritual such as in Tantric traditions which view all female deities as manifestations of the goddess and as *sakti*.

In popular rituals, Sarasvati is frequently associated with the privilege of psychologically accessing and receiving a specific education such as literacy or the sacred Sanskrit language. In this context, she represents the arts and technology of civilization. In India, statues and poster art of Sarasvati are most often found in libraries, bookstores, and performing arts halls, since it is understood that these are places where the goddess resides. Children offer their books to Sarasvati to receive her blessings and to ensure success in educational endeavors.

Sarasvati is honored during the 9-day Durga Puja festival in autumn as well as on a specially designated Sarasvati Puja day in February/March. Rituals include offering books, learning devices, and musical instruments to the goddess as well as abstaining from reading for the day to honor the importance of words.

Knowledge, as defined by the myths and images of Sarasvati, includes not only the sacred psychology of intelligence but also memory, insight, cleverness, inspiration, eloquence, and the ability to read, recite, and perform songs, rituals, and chants. She is often considered to be speech (*vac*).

Sarasvati is associated with the arts through storytelling, music, drama, science, technology, medicine, and a metaphysical realization of the universe as sound. Sarasvati always holds the *vina*, the musical instrument that symbolizes the subtle vibrations of the body and the universe itself, at both the psychological and the divine level.

## Scapegoat

Tadd Ruetenik

St. Ambrose University, Davenport, IA, USA

Scapegoating commonly refers to the process by which an individual, or perhaps a group, gets shunned unfairly so that a community can avoid considering a more complex problem. An unremarkable employee, for example, might get fired from a company experiencing major systemic problems, in the hopes that this action will show that the company is serious about reform. Scapegoats can also be found at the more prominent levels of a community. A football coach will often be fired in an attempt to reform a team of weak players, or more seriously, a political leader will be killed in response to problems among the populace.

The common factor here seems to be the defenselessness of the victim or group of victims and the injustice of the punishment, which is either misapplied or inappropriately harsh. The origin of the scapegoat, however, comes from Leviticus 16, where the process is actually prescribed by law. A priest is instructed to lay his hands on a goat, confess the sins of the people, and send the goat out of the community and into the desert. The consequences of the people's sins, which otherwise would build endlessly, are thus believed to be expunged from the community along with the animal. The goat is neither guilty nor innocent: it is just a goat. The punishment is thus not misapplied, and the punishment is not too harsh – unless we consider alternative versions of the story in which the goat is pushed off of a cliff. A similar story of scapegoating occurs in the synoptic Gospels in the story of Jesus banishing demons by transferring them into a herd of swine that were sent into the sea.

The demons are named “Legion” and require a scapegoat in the plural.

The fact that in both stories the scapegoat is an animal and not a human seems to justify the action morally. When humans are the ones scapegoated, however, the act is regarded as unjust. The problem with scapegoating, however, is that its perpetrators often do not see it for what it is. A myth develops that the sins of the individual are real and justify his exclusion. When Jesus is being crucified, he remarks that the people “know not what they are doing.”

Identifying this kind of blindness is important to the work of Rene Girard. According to Girard, a largely unconscious *scapegoat mechanism* is at work in the foundation of human civilization. The mechanism takes the form of unchallenged religious rituals. “Violence and the sacred are inseparable,” says Girard in *Violence and the Sacred*, “but the covert appropriation by sacrifice of certain properties of violence - particularly the ability of violence to move from one object to another - is hidden from sight by the awesome machinery of ritual.”

This machinery results from the pervasiveness of *mimetic desire* within communities. Mimetic desire is a type of rivalry in which its competitors are focused not on objects of desire, but rather for the desire itself. Girard’s example involves considering two children who are simultaneously introduced to a new toy. Rivalry develops as soon as one child, perhaps sensing the impending interest of the other, is attracted to that toy. Predictably, the second child will also become interested in that toy, but not because of any intrinsic value in the object. Rather, the child is interested in the other child’s interest. The object in question is of secondary importance and, in the case of pronounced mimetic rivalry, becomes irrelevant.

One does not have to look to the immaturity of children to find examples of mimetic rivalry. The interest of a few customers in a sales bin usually prompts the interest of many others. As clever marketers understand, the contents of the bin are not as important as the fact that someone appears

interested in sifting through it, and this interest causes an anxiety in others, who fear they just might be missing out on something. What they are missing out on is the act of looking.

There are of course more intense and important cases of mimetic rivalry involving jealous lovers, business competitors, rival countries, etc. These cases involve more significant and dangerous conflicts and threaten community stability. According to Girard, mimetic rivalry is both contagious and violence inducing, and when the threat of mob violence becomes sufficiently acute, a scapegoat is sought by the members of the community. The violence done to the scapegoat by the community serves to dispel the dangerous force by symbolically expelling the agreed-upon object. Yet the symbolic expulsion is not viewed by the community as such. Scapegoat rituals are seen as real solutions, not just symbolic acts. In the case of the witch trials in colonial America, the common interpretation is that the sacrificed women were victims of some kind of conscious conspiracy by the male elders, who trick the gullible masses. Such an interpretation avoids considering the insidiousness of scapegoat mechanism. According to Girard, both the persecutors and the public are sincere in their beliefs. The primitiveness of a community (and indeed for Girard its lack of Christian revelation) is measured by the extent to which this scapegoat mechanism eludes consciousness.

The importance of Christianity is that it reveals the scapegoating mechanism by showing that the victim, in this case Christ, is innocent. The point however is not that innocence condemns scapegoating while guilt exonerates it; the point is that either way scapegoating is a mistaken response to the problem. The scapegoated individual is not the real threat; it is, rather, an escalation of communal rivalries that threatens peace. The resurrection of Christ is seen as a victory over the dark necessity of violence and scapegoating that constitutes particular communities and indeed civilization in general. Christianity reveals, according to Jesus, and elaborated by Girard, “things hidden from the foundation of the world.”

## Schopenhauer, Nietzsche, and Atheism

David Berman  
Department of Philosophy, Trinity College,  
Dublin, Ireland

Schopenhauer's atheism is implied rather than directly stated. For nowhere in his published works does he either deny the existence of God or describe himself as an atheist. Hence, Nietzsche's confident claim, in his *Gay Science* 357, that Schopenhauer was the "first admitted and inexorable atheist among us Germans" (1974) stands in need of qualification. A more accurate statement might be that for a German – rather than a French or British writer of that time – Schopenhauer was an honest and open atheist.

### Schopenhauer's Atheism

That having been said, atheism does seem to be a clear implication of Schopenhauer's system: for given that this world is essentially blind eternal will to life, there does not seem to be any need for an intelligent and good God who creates this world.

There is, however, at least one place in Schopenhauer's published work where he comes close to making his atheism explicit, which he does by what is essentially a psychological argument. The argument, in his main work, *The world as will*

*and representation*, vol. 2, xlviiii, is based on the fact that we human beings represent the highest possible development of morality and intelligence. Schopenhauer's argument is not just that there is no evidence that there is any being higher than us in these respects but that there couldn't be. And this is shown, he thinks, by the saints and ascetics of all religions, who, because they are more morally and intellectually sensitive than their fellow human beings, are able to see that this world is the worst of all possible worlds, which moral insight leads them to mortify or deny themselves, with the aim (most clearly expressed in Buddhism) of achieving nirvana or nothingness, which for Schopenhauer is the most perfect state. Hence, it is clear to Schopenhauer that if, for the sake of argument, we try to imagine a (supposed) more intelligent and good being, such as God, or a being even marginally superior to the saints, we would realize that such a being would even more instantly annihilate itself when it realized how revolting this world was.

Schopenhauer's psychological-atheistic argument is important not only for the light that it sheds on his mind and metaphysical system but also as providing the crucial context for Nietzsche's idea of the overman, the central idea of his *Thus Spoke Zarathustra* (Part 1, 1883) and his general attempt to rescue man from nihilism. In his early work, the *Birth of Tragedy* (1872), Nietzsche accepted much of Schopenhauer's pessimism, but still not Schopenhauer's nihilistic belief that the highest good was nirvana. Instead of that bleak prescription, Nietzsche puts forward the more nuanced idea of the tragic life, as exemplified by Aeschylean tragedy, as the highest condition for man. And while he does not repudiate this aesthetic prescription in his later work of the 1880s, Nietzsche does change his focus there, a change that was partly brought on by his break with Richard Wagner and their common mentor, Schopenhauer, who, in 1886 Nietzsche nonetheless describes as "my first and only teacher, the great Arthur Schopenhauer." More positively, Nietzsche had by that time come under a new influence, more scientific than aesthetic, namely, the theory of evolution. For now his hope is that a new type of man might be evolved, which will answer the threat of nihilism. Thus, Zarathustra's announcement of the death of

God, at the beginning of *Thus spoke Zarathustra*, is immediately followed by “I teach you the overman. Man is something that shall be overcome. . . [and] What is the ape to man? A laughing-stock or a painful embarrassment. And man shall be just that for the overman. . .” (1962, 124).

### Nietzsche’s Anti-Atheism

But against such a higher development was Schopenhauer’s atheism, as outlined above, which appeared to show that such a development was not possible, since man represented an evolutionary dead end; hence, no being more perfect than man can evolve – which, for Nietzsche, was the nightmare of nihilism. So Nietzsche opposed Schopenhauer’s atheism, although not completely, since for one thing he still accepted much of Schopenhauer’s pessimistic account of life. So Nietzsche, like his great teacher, rejected the optimistic idea that scientific or cultural or political improvements might be effected which would improve our happiness quotient – something Nietzsche associated with the shallowness of English Utilitarianism.

In short, for Nietzsche, Schopenhauerian atheism had many roles and implications, sometimes pushing in different directions, which Nietzsche importantly explores in *The Gay Science*, sections 125, 343, 357, and 370 (Berman 1998). So atheism, thanks to Schopenhauer and others, is going to bring about enormous destruction in our world. A vast amount is going to crumble, “for example, the whole of European morality” (Nietzsche 1974, section 343). And yet Nietzsche says, in 125, we human beings did it, we are God’s “murderers.” But then he dramatically asks: “How did we do this? How could we drink up the sea. . . wipe away the entire horizon?” (1974). And Nietzsche goes on and on about the dire consequences of the deicide, which there is no need to stress here, since it is widely appreciated; but what is not so conspicuous or appreciated is the opposing tendency in Nietzsche, his anti-atheism, according to which the destructive deicide also has a good side, since it is going to clear the way, opening up new possibilities for

new creations (1974, section 343), to which Nietzsche alludes even in 125, when he says: “Is not the greatness of this deed too great for us? Must we ourselves not become gods simply to appear worthy of it?” (1974). This is Nietzsche’s hope. But it is a hope that is threatened by Schopenhauer’s psychological-atheistic argument, a threat that Nietzsche sought to oppose by, among other things, his acute unmasking or transvaluating of what he took to be Schopenhauer’s nihilistic concepts of goodness and knowledge, pity and compassion, showing how they worked against life and instinct and hence against the great hope of a new evolutionary development of man (Berman 1998).

### Schreber, Daniel Paul

Lorna Lees-Grossmann  
Department of Psychosomatic Medicine,  
Klinikum Rechts der Isar, Munich, Germany

Daniel Paul Schreber (1842–1911) was a lawyer and judge by profession but became infamous as

the author of *Denkwürdigkeiten eines Nervenkranken*, or *Memoirs of My Nervous Illness*. In this work he detailed his experiences during his second period of mental illness, lasting from 1893 until 1902. Many well-known psychologists subsequently adopted Schreber as a case study, although none of them ever met or corresponded with him.

Schreber's illness began with his half-dreaming thought that it must be nice to be a woman submitting to sexual intercourse. He began to experience auditory hallucinations shortly before his hospitalization in October 1893, but in February 1894 his hallucinations became more severe and for the first time visual. From these hallucinations Schreber extrapolated information that he used to create a complex worldview:

Humans have material souls present as “rays” in the nerves of the body. At the moment of death, the body is left behind, and God then examines the soul for “blackening,” or damage through sinful behavior. Once finished, God assigns the soul a period of time and a method through which it will be purified; it becomes a “tested soul,” meaning that it is untested. Schreber’s “soul-language” contains several similar antonymic references, e.g., “juice” for “poison.” Once the soul is purified, it enters the “forecourts of heaven,” where it enjoys continued “voluptuousness,” defined by Schreber as pleasurable experience caused by the uninterrupted closeness of God. God is split into Upper and Lower Gods, named after Ahriman and Ormuzd, the sons of Zurvan, the Persian God of Time. He is unlike the Judeo-Christian God in that He is neither omnipotent nor benevolent; He is a disinterested observer of the world and only intervenes in exceptional circumstances.

Schreber believed that earthly harmony could only be achieved through his transformation into a woman so that he could bear God’s children and thus perpetuate a new and superior race of human beings. To encourage the transformation, he took to wearing feminine adornments and asking medical staff to examine his developing breasts. Schreber believed that God was working against the “Order of the World” in this matter: His rays had become dangerously linked with Schreber’s, a link that could prove fatal to God were it to be severed while Schreber was still in possession of his wits. For this reason God was involved in an attempt with Schreber’s psychiatrist Flechsig to destroy Schreber’s reason. This “soul murder,” as Schreber termed it, took the form of physical attacks and constant harassment from “tested souls.”

The most famous of the multiple analyses of Schreber is Freud’s own. Freud, like the others, never met Schreber and concluded that Schreber’s homosexual anxiety was to blame for his breakdown. Freud argued that Schreber turned the love he felt for another man, possibly his father or brother, into hate. He then justified his hatred through delusions of persecution. Schreber’s change of sex was therefore an attempt to render his homosexual desires acceptable.

Alternative analyses include Nederland’s, who noted the similarity between the miraculous punishments suffered by Schreber with the suggested educational methods of Schreber’s father, the pedagogue Moritz Schreber. Schatzman’s analysis went further than Nederland’s and blamed Moritz Schreber’s “sadistic” teaching methods for Schreber’s illness on the grounds of these miraculous punishments. All of these analyses accept the original diagnosis of Schreber as suffering from paranoid schizophrenia, but Koehler suggested that Schreber may originally have been suffering clinical depression and in fact only made the “schizophrenic switch” in February of 1894.

Schreber published his *Memoirs* partly in the hope that they would become the foundational text for a new religion based on the knowledge revealed to him by the “tested souls.” His experiences were to be viewed in the context of martyrdom; his suffering led to the acquisition of knowledge of the extraordinary world that is

inaccessible to humans under normal circumstances. Comparisons can also be drawn with Biblical Job, Hildegard of Bingen, and other religious mystics.

## Seder

Lynn Somerstein  
Institute for Expressive Analysis, New York,  
NY, USA

The Seder, a yearly event celebrated on the 15th and 16th of the month of Nissan, is a part of the

Passover celebration that marks the Jew's Exodus from Egypt in the thirteenth century BCE. The word "Mitzrayim," Hebrew for Egypt, comes from the root meaning narrow, so the Jews escaped from a narrow place to a broader world.

Since the Exodus is a prelude to God's revelation on Mount Sinai, the Seder is an opportunity for each participant to relive the Exodus as a personal spiritual event. The Seder meal is supposed to replicate the experience of escaping from bondage to freedom and can include family references and stories about danger, freedom, and redemption. Reciting the family's history is a way to draw individual members closer together; and the Haggadah, the story of the Exodus, says that the more one speaks about liberation, the better. The Haggadah and the family stories together are an oral recitation of history and a way to remember it.

The word "seder" means order, or order of service, referring to the ritual and the celebratory meal. A thorough house cleaning leads up to the event. Special pots, pans, tableware, and foods are served, and some foods are prohibited – no leavened foods or grains are eaten.

Matzo's are allowed because they have been carefully prepared in under 18 min. They commemorate the haste with which the Jews fled the Egyptians, without time to let the bread rise.

The Seder meal teaches about the Exodus. Since it is so different from usual family meals, it inspires people, especially children, to ask questions, like the famous, "Why is this night different from every other night?"

The Seder is quintessentially a *family* meal, usually led by the eldest male in the household. Participation in the Seder at whatever level is a powerful emotional experience of the love and hate occurring in the outside world and within the family as well. Using special cookware and dinnerware and avoiding prohibited foods for the entire week of Passover can be an exercise in mindfulness or frustration.

The meal concludes with songs and with the declaration, "Next year in Jerusalem!" This can mean the literal city of Jerusalem, or it can mean Jerusalem as a symbol of personal redemption and freedom. Whichever theme is emphasized, the personal effect of recreating ancestral, family,

and individual histories and relationships to bondage and freedom can indelibly mark one's soul with a respect for self-determination and an eternal emotional connection with one's people.

## Self

Ann Casement  
British Jungian Analytic Association, London, UK

*Self* lies at the heart of Jung's conceptualizing on the structure and dynamics of the psyche. He first encountered the Self in midlife during the turbulent years of 1916–1918 while undergoing his “creative illness” following the difficult breakdown of his relationship with Freud. As a result, Jung took midlife to be universal for experiences of the Self to come into being, a view that has been contested by later analytical psychologists. Jung's definition of the Self is that it is the totality of the psyche as well as being the prime archetype that keeps the psyche from disintegrating at times of stress. Furthermore, it transcends and goes beyond psyche.

If it is conceptualized as the prime archetype, the Self would be the container of opposites, above all perhaps those of good and evil. In this regard, Jung refers to it as a “*complexio oppositorum* (which) proves to be not only a possibility but an ethical duty” (Jung 1954, p. 320). This is to be

found at the very center of what it is to be human which is also an analogy of God: “Man is God, but not in an absolute sense, since he is man. He is therefore God in a human way. . . every endeavour of our human intelligence should be bent to the achieving of that simplicity where contradictories are reconciled” (Jung 1954, p. 320). Here Jung is quoting Nicholas of Cusa of whom he says: “The alchemists are as it were the empiricists of the great problem of opposites, whereas Nicholas of Cusa is its philosopher” (Jung 1954, p. 320). Furthermore, “The self is a union of opposites *par excellence*, and this is where it differs essentially from the Christ-symbol. The androgyny of Christ is the utmost concession the Church has made to the problem of opposites” (Jung 1953, p. 19).

On the other hand, Jung's writings contain many references to the synonymous nature of the Self with the God-image as follows: “*Christ exemplifies the archetype of the self*” (Jung 1959a, p. 37) (Original italics). “The Christ-symbol is of the greatest importance for psychology in so far as it is perhaps the most highly developed and differentiated symbol of the self, apart from the figure of the Buddha” (Jung 1953, p. 19). However, in so doing Jung was not trying to take on the mantle of a religious thinker but, instead, remained always aware that he was an empirical psychologist. “Strictly speaking, the God-image does not coincide with the unconscious as such, but with a special content of it, namely the archetype of the self. It is this archetype from which we can no longer distinguish the God-image empirically” (Jung 1958a, p. 469). This image of wholeness rises independently in the conscious mind from the depths of humankind's psychic nature. He goes on to say: “. . . the self is not a philosophical concept like Kant's ‘thing-in-itself,’ but an empirical concept of psychology, and can therefore be hypostatized” (Jung 1958b, p. 262).

### Self and Individuation

The Self is all important not only in the individuation process of individuals but also in that of collective groups though the symbols of the Self

are different at different historical epochs. He elaborated this in his work *Aion*, the name of which is taken from the Mithraic god who rules over time, as follows:

...“wholeness”... is nevertheless empirical in so far as it is anticipated by the psyche in the form of spontaneous or autonomous symbols. These are the quaternity or mandala symbols, which occur not only in the dreams of modern people... but are widely disseminated in the historical records of many peoples and many epochs. Their significance as *symbols of unity and totality* is amply confirmed by history as well as by empirical psychology (Jung 1959c, p. 31) (Original italics).

Jung goes so far as to say the Self represents psychic totality and is both conscious and unconscious. From the latter realm, it may manifest in dreams, myths, and fairy tales in the figure of the “supraordinate personality” (Jung 1971, p. 460). In this way, it takes on the form of king, hero, prophet, or savior or a symbol of wholeness such as a circle or cross. “I have called this wholeness that transcends consciousness the ‘self’ The goal of the individuation process is the synthesis of the self... symbols of wholeness frequently occur at the beginning of the individuation process, indeed they can often be observed in the first dreams of early infancy” (Jung 1959b, p. 164). This tantalizing glimpse into Jung’s interest in infancy was taken up and elaborated by the analytical psychologist, Michael Fordham, whose ideas will be expanded further in this entry.

### Encounter with the Self

In exploring the connection between the Self and ego, Jung turned to the Biblical story of the *Book of Job*. Similarly, the analytical psychologist Edward Edinger depicts the relationship between the story of Job with its relevance for the psyche of modern man and William Blake’s *Illustrations of the Book of Job*. As Edinger states: “. . .the Job story is an archetypal image which pictures a certain typical encounter between the ego and the Self. This typical encounter may be called the Job archetype” (Edinger 1986, p. 11). Edinger further states: “The term ‘Self’ is used by Jung to designate the transpersonal center and totality of the psyche.

It constitutes the greater, objective personality, whereas the ego is the lesser, subjective personality. Empirically the Self cannot be distinguished from the God-image. Encounter with it is a *mysterium tremendum*” (Edinger 1986, p. 7).

An encounter between Self and ego always results in a defeat for the latter. However, if it can sustain the ordeal and at the same time become aware of its meaning, ego may experience an insight into the transpersonal psyche. In the Blake drawings, Job is first depicted as living in a state of unconscious innocent contentment. In the second picture, Satan manifests in a stream of fire between Yahweh and Job and represents the urge to individuation which is a challenge to complacency and living unconsciously. “Dionysian energy of excess has erupted into the Apollonian order” (Edinger 1986, p. 19).

The later pictures illustrate the growing dynamism of Dionysian energy and its impact on ego by destroying its containing structures, depicted in the Job story as the loss of his children and their families. Psychologically, this corresponds to the onset of bad dreams and neurotic symptoms such as depression and psychosomatic symptoms. Ego may try to deal with these by splitting them off and dissociating them from consciousness, which results in an impoverishment of the conscious personality.

The book goes on to illustrate the complete breakdown of Job (ego) when confronted with the dark side of the Self (Yahweh), which a later picture depicts as Job on high pointing down to the chthonic aspects of the numinosum, Behemoth and Leviathan. “This is the other side of the *numinosum*, which we must always remember is a union of opposites” (Edinger 1986, p. 55). As Edinger goes on to say: “Job is being shown the abysmal aspect of God and the depths of his own psyche, which contains devouring monsters remote from human values. . . God reveals his own shadow side, and since man participates in God as the ground of his being he must likewise share his darkness” (Edinger 1986, p. 55).

Blake’s pictures and the *Book of Job* end with Job’s fortunes being restored and with an enlargement of his personality through an encounter with the Self. As Jung says: “. . .the widening of consciousness is at first upheaval and darkness, then

a broadening out of man to the whole man” (Jung 1963, p. 171).

## Primal Self

The analytical psychologist, James Astor, views Michael Fordham as the last of the founders of a movement in analysis, who tapped into something essential in the discipline. Fordham’s pioneering work led to a developmental model of Jung’s ideas of the self. “His most radical departure from Jung was to describe the actions of the self in infancy and childhood such that the infant, far from being uncentered at birth, as Jung originally thought, is a person with an individual identity even in utero” (Astor 2007).

In this way, Fordham revised Jung’s thinking of the self in showing how, through interacting with the environment, it helped to mold and create it. In this way “The self, as Fordham conceived it, was the instigator as much as the receptor of infant experience. This conception gave rise to the particularly Jungian theory of ego development in which the interaction between mother and baby ensured the uniqueness of the situation, a uniqueness created as much by the infant as by the mother” (Astor 2007).

The prospective nature and self-regulating function of the psyche through the self’s unifying characteristics “could transcend what seemed to be opposite forces” though in the course of that it could be “‘exceedingly disruptive’ both destructively and creatively” (Astor 2007).

Astor sums up Fordham’s revised thinking on Jung’s theory of the self to include a primary self or original state of integration as follows: “This primal self, he thought, gave rise to structures from interaction with the environment which it in part created. It existed outside of time and space, and was similar to a mystical (or contemporary scientific concept such as emergence), whose manifestations had archetypal form. This primary self was integrated, and in Jung’s sense it was an agency of the psyche which transcended opposites” (Astor 2007). Astor links this to Fordham’s innovative thinking about the *dynamic structure* of the self which infant research is arriving at quite

separately from analytic thinking. “Fordham took the innateness of Jung’s archetypal psychology and demonstrated the way in which the environment affected it” (Astor 2007). Furthermore, “by having a theory of deintegration we are able to think about the observed behavior of the infant as being continuous with the self. What this means is that the development of the individual baby is in effect an early form of individuation” (Astor 2007).

Fordham also challenged Jung’s thinking about the self as both the totality of the psyche and an archetype. “As for the archetype definition, Fordham notes that it accounts for a range of phenomena related to wholeness (archetypal images) and, in fact, is closer to the data than the totality definition. However this data ‘cannot also be the totality’ because it excludes the ego, which Jung differentiated from the archetypes” (Urban 2005, p. 574).

In conclusion, it is worth noting that the term “Self” is spelt with a capital “S” in some instances and a small “s” in others. The former tends to be used by classical Jungians who view the Self as synonymous with the God-image; in the latter, it is used by analytical psychologists of the developmental school of thought. While Fordham was not an atheist, “Much of Fordham’s work has countered this religious aspect of Jungianism” (Astor 2007). At the same time, “His respect for Jung and his understanding of the value of his studies of the manifestations of the collective unconscious led him to try to take a balanced position with respect to both the psychological and religious perspective” (Astor 2007).

## Self Psychology

Carol L. Schnabl Schweitzer  
Pastoral Care, Union Presbyterian Seminary,  
Richmond, VA, USA

The psychology of the self is a psychoanalytic theory of the development of the self which focuses

primarily on narcissistic disorders or configurations of the self. With the publication of Heinz Kohut's *The Analysis of the Self* in 1971, the psychology of the self, though widely criticized by psychoanalytic theory purists, began to gain respect as a psychoanalytic treatment for a particular kind of pathology – narcissism. Heinz Kohut understood his work to be an addition to, rather than a replacement of, Freud's groundwork in psychoanalysis. There are several significant points of departure from Freud's metapsychology including Kohut's precise understanding of transference, internalization, and empathy.

Narcissistic patients, according to Kohut, experience the transference not as a projection of their existing internal psychic structures but rather as an expression of a need for internal psychic structures which are missing. Thus, the analytic task focuses on liberating the patient from his or her denial of a need. Likewise, Kohut offers us a somewhat different understanding from Freud of the process of internalization. Building upon Freud's work, Kohut understands internalization as more than the taking in of the qualities of the libidinal object which is lost and mourned; it is a process which includes the taking in (or internalizing) of idealizations of a selfobject when that object has temporarily failed in one of its need-fulfilling functions. One indication that analysis is progressing from Kohut's perspective is the ability of the analysand to tolerate the inevitable empathic failure of the analyst.

Kohut proposed a bipolar model of the self: one pole is related to ideals (idealized self), the other is related to ambitions (grandiose self), and the area or space between the two is comprised of inborn skills and talents. The poles of the self are developed in relation to selfobjects (or the original primary caretakers who fulfill the needs of the developing self). The maternal selfobject is associated with the idealized self while the paternal selfobject is associated with the grandiose self (originally the narcissistic self). These selfobjects are not viewed as separate entities but rather in terms of the way they fulfill or fail to meet the needs of the developing infant. Kohut theorized that an infant could tolerate a traumatic failure on the part of one but not both parental selfobjects (or others who may have primary caretaking

responsibility). Thus, a paternal selfobject need not be the biological father; it may not even be a male but someone who provides father-like care. The same is true for the maternal selfobject.

The three major constituents of the self (ideals, ambitions, and talents) shape the three major groups of transference experiences in the analytic process. If the area of ambitions (grandiose self) is damaged, the patient will likely experience a mirror transference in which the analyst is the person around whom constancy is established. This can be related to the “gleam in a mother’s eye as she gazes at her infant.” If the area of ideals is damaged, then the patient experiences an idealizing transference which means that the analyst provides soothing and tension-regulating functions if the narcissistic injury occurred early in childhood. If the injury occurred later in childhood (or even beyond childhood), then the analyst may become “de-idealized” quickly as the analysand seeks attachment with an omnipotent object. And finally, if the area of skills and talents is damaged, then the patient looks for reassurance in an alter ego or twinship transference in which the analyst is experienced as being similar to the analysand’s grandiose self. How then does analysis change from Freud’s original understandings according to Kohut’s theory of the self? In other words, how does analysis provide a cure?

Freud maintained that a narcissist was not curable because a narcissist was not accessible to the influence of psychoanalysis; thus, the patient lacked the ability to invest in a transference relationship (Freud 1959a, b). The noteworthy difference is Kohut’s focus on the treatment and cure of narcissistic personality disorders. The touchstone in Kohut’s analytic process is empathy which he understood as a *data-gathering tool* within the analytic relationship, not a cure in itself (see *How Does Analysis Cure?* 1984, pp. 300–307). Why is empathy in and of itself not a cure? Kohut, using an illustration from Nazi Germany, demonstrated that empathy (or the ability to put oneself in another’s shoes) can be used for good or ill. The Nazis used empathy to exploit the vulnerabilities of their victims to inflict emotional pain. Nevertheless, Kohut contended that empathy is what

ultimately affirms our humanness and makes psychological existence possible (Kohut 1995). In an attempt to correct the many misunderstandings and misappropriations of empathy in the analytic relationship, Kohut offered the following toward the end of his life in 1981: empathy is “the capacity to think and feel oneself into the inner life of another person” (*How Does Analysis Cure?* 1984, p. 82). Indeed, the capacity to experience empathy is one of the five qualities identified by Kohut which signal the transformation of narcissism in the therapeutic relationship. The origin of empathy is located in the earliest mother-infant relationship as the developing self of the infant takes in the mother’s feelings toward the infant.

Other determinants of a healthy self include creativity, transience, humor, and wisdom. The analyst is able to observe these qualities developing in the transference relationship. Creativity, quite simply, is a person’s ability to idealize his or her work; it suggests a capacity of playfulness and imagination. One may observe that a patient is now able to celebrate his or her innate skills and talents instead of seeking reassurance.

Transience is the ability to accept one’s own mortality. The patient demonstrates an ability to surrender the need to be omnipotent, first in relationship to the analyst and then subsequently in other relationships. Humor, if it is not a defensive posture (e.g., sarcasm may be a defensive signal), suggests an acceptance of transience. When humor is indicative of a transformation of narcissism, the patient has experienced a strengthening of his or her values and ideals. A genuine sense of humor, according to Kohut, is witnessed by the analyst as the patient’s ego is able to experience amusement when reflecting upon old rigid configurations of the ego (e.g., grandiose fantasies and exhibitionistic strivings).

Wisdom, or at the very least a modicum of wisdom, may emerge at the end of a successful analysis. Like Freud, Kohut suggested that analysis never truly ends but he maintained that a successful analysis is eventually terminated. During the concluding phases of analysis, wisdom attained by the analysand helps to maintain self-esteem even upon recognizing personal

limitations. The analysand may exhibit a friendly disposition toward the analyst even though there are conflicts remaining, and the analyst's limitations have been recognized by the patient as well. In brief, human frailties are now tolerated with composure instead of being defended against with tendencies toward self-aggrandizement or infantile idealization.

Within a religious framework, too much interest in the self may be viewed as pride, self-centeredness, selfishness, or sinfulness. Pastoral theologian Donald Capps has written about the narcissist as a tragic self (Capps 1993) who feels more depleted than ever upon the recognition or observation that others receive the mirroring that one desires for oneself. The unmet desire for mirroring triggers a shame response as the grandiose self receives another disappointment. As Capps observes, many faithful Christians reel from the admonitions against seeking praise and recognition which is in itself a tragedy of faith because “[w]hat was a display of healthy narcissism is redefined as an expression of self-centeredness, and the Christian faith is used to legitimate the renunciation of our desire to be mirrored. This is tragic, for mirroring is at the very heart of the Christian gospel. Quite simply but profoundly, it is the form and means by which the depleted self experiences divine grace, the benediction of God” (Capps 1993, p. 64). Thus, in part, Christian faith may be an impediment to the analytic process, especially if the narcissistic vulnerability presented by an analysand is a wounded grandiose self.

## Selfobject

D. Brian Smothers  
The Counseling Center of Milwaukee,  
Milwaukee, WI, USA

## Definition

Selfobject: An object which is used in the service of the self or objects which are experienced as part of the self and provide a function for the self.

## Discussion

The selfobject is the central psychic apparatus within Heinz Kohut's theory of self psychology. To understand this ambiguous concept, one must understand Kohut's departure from conventional analytic discourse. Kohut's usage of an object significantly differs from the Freudian usage of an object. Freud's object exists, primarily, as the target of libidinal cathexis; whereas Kohut's object is cathected with narcissistic energy in the service of the self. Freud's thinking was bound to the Cartesian dualism of the scientific revolution, in which one is experienced as either a subject (ego) or an object (other). Kohut, on the other hand, recognized the capacity for internalization of the experiences of the subject-in-relation to the object and the object-in-relation to the subject. Accordingly, the selfobject is those dimensions of our experience of another person that relates to this person's functions in establishing our sense of self.

Based on his groundbreaking work with traditionally unanalyzable individuals, narcissistic patients, and those with other disorders of the self, Kohut established a bipolar theory of development that contrasted with the traditional drive model proposed by Freud. Extending the works of Margaret Mahler, Heinz Hartmann, and Edith Jacobson, Kohut's work sought to develop a theory of self. For Kohut, the infantile or rudimentary self develops along two primary continuums in relation to others, the grandiose self and the idealized parental image.

Kohut viewed narcissism not as pathological, but as a necessary component of healthy development. In his theory, the infant must develop a sense of confirmation through the mirroring of the parent. Thus, the parent must reflect back the grandiosity of the child as a means of her acceptance and participation in the infant's developing sense of self and self-agency. Children are biologically and environmentally dependent on an (m)other for food, shelter, and nurturance. This other provides critical tasks by fulfilling physiological and psychological needs that the child cannot fulfill herself, though the child will experience the other as an extension of herself. Effective mirroring builds the child's internal confirmation of her

self-agency through the development of healthy selfobjects. These internalizations will aid her by mobilizing her to act on the world and to have her needs met. If the need for mirroring is absent or inadequate, the child will grow to feel deficient and will spend her life seeking the selfobject to fulfill this gap within herself. Psychic structures of self are built through the process of transmuting internalizations. Through the process of optimal frustration of the child's narcissistic needs by the parent, the child's emergent self develops. The emergent self will eventually provide mirroring and idealizing through mature relations and the external/internal functions of mature selfobjects.

According to Kohut, one's experience of self is the unconscious experience(s) of self in relation to objects, therefore self is selfobjects. Thus, as an individual experiences a sense of "I," he/she is inextricably bound to the "I" in relation to the particular "other" to whom he/she is experientially connected. Therefore, the experience of self differs across time, contexts, and relationships. The concept of a selfobject refers not to an object in the interpersonal sense of the word, but to the inner experience of an object; therefore, the selfobject is defined by our inner experience of the object and its function in establishing a sense of self. Put more simply, selfobjects are not necessarily selfs or objects, but one's internal subjective experience of the relationship and its functions for the self.

It is important to note that the rudimentary infantile self is bound to the experience of external others and their selfobject functions. As the individual matures, selfobjects may not necessarily be experiences with a physical manifestation of an other, but may be one's dynamic experience of a piece of art, music, literature or religious traditions, beliefs, and associated matters. Mature individuals can turn to selfobject functions of symbolized abstractions to meet their deepest self needs, as we are never fully independent of our deepest self needs.

In his interview with Robert L. Randall, a young theologian, Kohut briefly outlines the theological implications of self psychology. For Kohut, the role of religion could not be simply reduced to one dimension of the self, though with

this said, his focus on the idealizing needs and the role of religion is worth noting. According to Kohut, the core nuclear self is developed through mirroring, idealizing, and the optimal frustration of these needs. Through the optimal responsiveness of the caregiver in meeting the mirroring and idealizing needs, and the eventual frustration of those needs, the child slowly internalizes the selfobject functions and the nuclear self emerges. The parent must allow the child to idealize him or her, essentially merging with the perceived strength found within the parent. In the rudimentary child unable to meet her own needs, this process may be internalized in ways such as, “You are perfect, and I am a part of you, so I am perfect.” As mentioned above, the mature individual never outgrows the basic self needs, though they are altered through the usage of mature selfobject relations. Accordingly, God is the perfect idealizable object. The sense of belonging to a religious tradition or having a personal relationship with God may, through the process of merger and idealization, align one with God’s perfection.

A benevolent image of God may provide the mirroring and idealizing functions needed during times of distress. It is not unusual to hear an individual state that “God is my strength,” indeed the psalmist even made this assertion. Thus, faith or one’s faith may function as an organizing selfobject experience, providing psychic structure and experiences of self leading towards equilibrium, cohesiveness, well-being, and esteem. Individual differences are uniquely respected within this conceptualization, as one’s experience of a religious experience is not internalized and experienced in the same manner as another’s. The religious experience of hearing a moving sermon, participation in the Eucharist, or the symbol of Christ on the cross becomes internalized sources of self through the experience and selfobject functions of these abstractions. In the Muslim tradition, the Koran and recitation of Koranic verses may hold substantial symbolic selfobject functions for individuals of this faith. The Koran soothes, supports, and strengthens the Muslim through its subjective and shared selfobject functions.

## Sex and Religion

David A. Leeming

University of Connecticut, Storrs, CT, USA

Take me to you, imprison me, for I,  
 Except you enthrall me, never shall be free,  
 Nor ever chaste, except you ravish me  
 (John Donne, *Holy Sonnet 15*).

Sexual and religious experiences have in common characteristics conveyed by such words as *desire, mystery, ritual, passion, ecstasy, and union*. Ideally we go to religious services and “to bed” because our bodies and our psyches *desire* something beyond ourselves. There is a sense of awe and mystery associated with both

activities and certain *rituals* that contribute to *passion* and, when things go well, to *ecstasy* in both. The fact that, for some, such an analogy will smack of sacrilege or even heresy only indicates the depth of the split between these two natural human activities. If we have a deeply ingrained horror of mixing sex and religion, this has not always been so.

To begin as far back as we have records of religious experience, we would have to look to the Paleolithic (Old Stone Age) period to such sites as the great painted caves and prehistoric settlement ruins in southern France. There we would find, among other objects, abstract and stylized drawings of what appear to be female genitalia and paintings of strange humanoid male figures with animal heads and pronounced genitals dancing before great horned beasts. The themes of the paintings and related figurines, and the dark and moist painted caves themselves, as many scholars have pointed out, suggest not prehistoric bathroom graffiti but myths of a goddess-based religion in which human sexuality, centered on the woman, serves as a metaphor for the hoped-for fertility of the humans of the given tribes and of the surrounding earth with its potential plant and animal food sources.

A natural development of the Paleolithic goddess mythology took place in the Mesolithic (Middle Stone Age) and Neolithic (New Stone Age) periods, in which the female, now clearly a mother goddess associated with the emerging practices of agriculture and animal husbandry, was often depicted in the act of giving birth, as, for example, in the famous case of the goddess on sanctuary walls and in figurines at the site called Çatal Hüyük in Anatolia (modern Turkey). Appropriately, the goddess at Çatal Hüyük was accompanied in her many birthing representations by a male fertility principle in the form of a bull.

The sacred marriage of the Great Goddess and the Bull of Heaven – of Earth and Sky – would be celebrated as a central act in the various forms of the Sumero-Babylonian religion in Mesopotamia throughout the Copper and Iron Ages. It was celebrated, for instance, in various “hymns” which today’s religious people would probably

consider to be pornographic and sacrilegious. In one hymn, the goddess Inanna calls out:

My vulva, the sacred horn,  
Heaven’s vessel  
Is eager, like the new moon, to be full.  
My fallow land desires a plow  
Who will plow my moist ground?

The goddess being impregnated and giving birth to new life was a logical and almost inevitable early metaphor for hunter gatherers and especially for agriculturalists that depended on the fertility of earth for survival. And it is in this context that the depositing of the male seed in the womb or any plant seed in the ground would have been expressed metaphorically by way of such mythical figures as the god who pours out his life-giving fluid and the dying and buried or “planted” god who returns in the spring.

The process by which sexuality begins to get a bad name in religion seems to coincide with the demise of female power and political importance in the face of a rising male-dominated, warrior-based patriarchy. In ancient Mesopotamia, for example, we find a significant change from early-second-millennium BCE Sumerian stories of a positive relationship between the hero-king Dumuzi (Tammuz) and the goddess Inanna (Ishtar) to a late Babylonian version of the stories, in which the heroic Gilgamesh scornfully refuses the advances of the same goddess. The situation in which the patriarchal hero refuses the sexual advances of the now suspect, strength-draining female is repeated in other contexts around the world. The Irish hero Cuchulainn’s refusal of Queen Maeve – an avatar of the old fertility goddess Morrigan – is a Celtic example. The Bible contains stories of the harm that can come when the otherwise powerful and dominant male is seduced. The stories of Adam and Eve and Samson and Delilah are only two of many such stories in which the femme fatale has replaced the old fertility goddess. In Greece it is Pandora, whose name really means “gift giver” and who was in all likelihood once a goddess of agricultural abundance, who is said by Hesiod to have released the evils of the world from her famous box.

Nowhere is the antagonism between sexuality and religion more evident than in the three great monotheistic or Abrahamic religions, Judaism, Christianity, and Islam, as they have evolved. The “People of the Book” envision a world created alone by a distinctly mateless god, Yahweh-God-Allah. Although there are other examples of ex nihilo (from nothing) creations by male gods, the more natural metaphor for the conception and birth of the universe has involved the union of male and female. Whether by way of a primal mound (literally a pregnant Earth), the primal maternal waters, the cosmic egg, or intercourse between primal god and goddess, the feminine aspect of nature, with only a few exceptions, plays a significant role in the world’s creation stories. This is true, for example, of most animistic religions as well as of Hinduism, Shinto, Taoism, and certain branches of Buddhism, although, it must be said, each of these religious cultures, like the Abrahamic traditions, has tended to place women in an inferior position to men in human society.

The exclusion of the feminine from godhead in the Abrahamic religions developed in part, of course, from the concept of a single deity and the desire of Jews, Christians, and Muslims to separate themselves from so-called Pagan traditions. Furthermore, the depiction of the Abrahamic god – Yahweh, God, or Allah – as essentially male is a reflection of the realities of cultures that had long been patriarchal. It might well be argued, however, that patriarchy itself, including as it does the insistence on God’s maleness and singularity and the relegation of women to secondary status, is, as Karen Armstrong has suggested, “expressive of deep anxiety and repression” (1993, p. 50).

“Repression” is an important word here. We know, for instance, that the Hebrews in Canaan as depicted in the biblical book of Exodus, like most peoples of the ancient world, tended to assimilate the deities of conquered or neighboring peoples. It was only the development of priestly law and early rabbinical condemnation of Canaanite religious practices that led to the repression of the popular worship among the Hebrews of the goddess Asherah (“God’s wife”), for example, in her many, often erotic, aspects. By being stripped

from godhead, sexuality, associated particularly with women, inevitably became tainted by the concept of sin. Women were tempters; women were psychologically and even physically dangerous. Thus, it was Eve who corrupted Adam, initiating, among other things, shameful sex. And it was Delilah who seduced Samson, symbolically castrating him by cutting off his hair.

The repression of the natural relationship between sexuality and religion in the Abrahamic religions has not been limited to story or myth. It is clearly expressed in ritual practices which, whatever their original “religious” or social intent, have resulted in a sense of the essential impurity of certain biological functions associated with human sexuality and an inferior role for women. In effect, religion has been used to reinforce the repressive patriarchal idea of women as the valuable property of men, the necessary but controlled vehicles for pleasure – under certain circumstances – and reproduction.

Christianity and Islam have perpetuated the tradition of the essential impurity of sex and the consequential inferiority of women. The repression of sexuality in Christianity is expressed metaphorically in the depiction of Jesus and his mother in the canonical gospels and dogmas. There the asexuality of Jesus, the virginity of Mary, and Mary’s own immaculate conception form a de facto denial of the sacredness of sexuality itself, a denial that is in conflict with the depictions of holy men and avatars of godhead in other religions – Krishna and Moses, for example. Jesus’ asexuality undermines the theological position that Jesus is God truly sharing our human nature.

Until very recently, Christians and Jews did not ordain women to their clergy ranks. And even now such ordination is denied not only by the more orthodox branches of Judaism but by most Muslims and by the largest sect of Christianity, the Roman Catholic Church. It should be pointed out that this is true in spite of the prominent role played by women in the early organization of Christianity and Islam.

Saul of Tarsus (Saint Paul) preached the “head covered, back of the church” doctrine that greatly resembles the early prohibitions against women studying the *Torah* or praying in the synagogues

or the present restrictions applied to Muslim women in regard to places of prayer. By the second century CE, the North African theologian Tertullian (160–220) saw women as “the devil’s gateway,” a point of view developed by one of the most influential of the “church fathers,” Saint Augustine (354–430), in the doctrine of Original Sin. The first sin, that of Adam and especially Eve, was passed on to humans in the sexual act; he announced an act to which men were enticed by women: “What is the difference, whether it is in a wife or a mother, it is still Eve the temptress that we must beware of in any woman” (see Armstrong 1993, pp. 123–124).

As in the case of Judaism and Christianity, certain Islamic scholars have used often distorted understandings of scripture to justify what can only be called, in spite of various complex and supposedly positive rationales, the oppression of women in such institutions as polygamy, female circumcision, *pardah*, and the denial of basic social and political rights. At the center of this oppression has been the sense of male ownership and a strict double standard in regard to sexual practice. For the Muslim, as for the Christian and Jew, the female and female sexuality are powerful and potentially tempting distractions that can take the believer’s mind away from religion and proper order and threaten male control. For many among the Abrahamic faithful – believers in the one god, a wifeless male god, and his prophets – to accept the equality of women would be to accept what are seen as the chaotic ways of the pagan. In short, the secondary status of women is linked to the doctrines of exclusivity associated with Judaism, Christianity, and Islam.

On the other hand, it has been argued by many that the Abrahamic attitude towards sexuality represents an alienation of humans from their humanity. Nietzsche called the Christian God a “crime against life.” And there have, of course, always been challenges within religious traditions to the prevailing view of the incompatibility of sex and religion. Like the ancient hymns to Inanna, the biblical Song of Songs is a celebration of holy sex. And, implicitly or explicitly, mystics of all three Abrahamic religions (and other religions as well) have turned to sexuality for

language that can convey the desire, the mystery, the ritual, the passion, the ecstasy, and the union that together comprise full religious experience.

In a poem of the sixteenth-century Christian Spanish mystic Saint John of the Cross, the Soul sings of its intimate union with God:

O flame of love so living,  
How tenderly you force  
To my soul’s inmost core your fiery probe!  
Since now you’ve no misgiving,  
End it, pursue your course  
And for our sweet encounter tear the robe!

The thirteenth-century Sufi (Muslim mystic) Jelaluddin Rumi used similar imagery to convey his sacred love of a friend, a love inseparable from his love of God:

The Friend comes into my body  
looking for the center, unable  
to find it, draws a blade,  
strikes anywhere.

And later,

Two hands, two feet, two eyes, good,  
as it should be, but no separation  
of the Friend and your loving.  
Any dividing there  
makes other untrue distinctions like “Jew”,  
and “Christian”, and “Muslim”.

## Sexuality and American Religions

Megan Goodwin

Department of Religious Studies, University of North Carolina at Chapel Hill, Chapel Hill, NC, USA

The academic consideration of sexuality is crucial to the study of American religions. Religious thought, belief, affect, and practices construct and constrain America beliefs about and practices of sexuality. Scholars of American religions should be “thinking sex”: because religious Americans take sex very seriously; and because religious Americans’ thinking about sex has significant material consequences.

Theories of sexuality begin by confronting and complicating the normalization of a heterosexual/homosexual binary. Psychoanalysis helped create and enforce this binary by insisting that sex is the truth of ourselves (Foucault 2012). In the late nineteenth and early twentieth centuries, analysts and sexologists began to catalogue and pathologize sexual differences as deviances. Consequentially, psychoanalysts also diagnosed as *deviants* those who engaged in “unusual” sexual behaviors (nonreproductive sex acts, including masturbation as well as same-sex sexual object choices). The semantic space between deviance and deviants is small but significant: while sexology and early psychoanalysis focused on a number of sexual “abnormalities,” their key epistemological innovation was the creation of sex-as-identity. The popular conviction that sex tells us who we *really* are owes much to psychoanalysis; the prevailing organizational structure that emerged from psychoanalysis has been a heterosexual/homosexual binary. Thus, until the late nineteenth century, many people might have engaged in sodomy, but homosexuality as an identity was literally unthinkable (Foucault 2012).

As historian David Halperin (2004) explains, we now find it hard to imagine a world *not* organized around sexual identity – but critical sex theory tries to do just that.

Thinking critically about sex means challenging cultural assumptions about what is “normal” to do with (to, on, in) one’s body, as well as thinking hard about where our ideas of normalcy came from. Critical theories of sex address and trouble the pathologization of difference. Such theories have traditionally focused on individual subjectivity, agency, and resistance.

In short, critical sex theory addresses cultural assumptions about sexual bodies, including issues related but not limited to gender and sexual practices. While contemporary theorizations of sex began with challenging heteronormativity (the primacy and normalization of heterosexuality), this school of thought now addresses homosexuality as an identity, same-sex sexual object choice as a practice, nontraditional gender presentation (transsexuality, transgender, intersex), and transgressive sexual practices (e.g., celibacy, BDSM, non-monogamy, sex work). Critical theories of sexuality consider all those who are or feel marginalized based on their sexual practices and/or identities, as well as their bodily identities and/or presentations (Halperin 1997, p. 62).

Several key premises about sexuality should inform scholarly engagement with American religions. Foremost among these must be the terms’ universal importance: cultural assumptions about “normal” gendered behaviors and sexual practices shape us all (Sedgwick 2008). Thus, a theoretically rigorous approach to sexuality in American religions must attend to masculinity as well as femininity and account for cis- and transgender as well as intersex and gender-queer presentations. American religious scholarship informed by sexuality studies should moreover account for how groups are shaped by their relationships to hetero- as well as homosexuality; such an inquiry should also interrogate how, when, and why certain groups institute transgressive sexual practices (e.g., non-monogamy, cross-generational relationships, celibacy).

Second, the study of sexuality is neither interchangeable with nor reducible to the study of

gender. Rather, each term informs the other. Queer theorist Judith Butler suggests that heteronormativity – the cultural assumption that heterosexuality is both exclusively natural and universal – creates gender by requiring binary roles. Butler calls this the “heterosexual matrix,” which “assumes that for bodies to make sense there must be a stable sex expressed through a stable gender (masculine expresses male, feminine expresses female) that is oppositionally and hierarchically defined through the compulsory practice of heterosexuality” (Butler 1990, p. 151). That is, heteronormativity makes sense of sexual bodies in hierarchical, binary, reproductive terms – and thus compels certain gendered behaviors.

Finally, western cultures value some sexual acts and gendered behaviors more than others: those acts and behaviors usually correspond to a hierarchical, binary, reproductive understanding of human embodiment. Those who engage in “normal” sexual acts and gendered behaviors are considered sane, respectable, law-abiding, worthy of social mobility, institutional support, and marital benefits (Rubin 1993, p. 12). Unrepentant sexual transgressors and “gender outlaws” (cf. Bornstein 2012) may be accused of mental illness, disrespectability, and criminality, as well as restricted social and physical mobility, loss of institutional support, and economic sanctions (Rubin 1993, p. 12). Mainstream cultures often interpret unconventional religious beliefs or practices as evidence of sexual and/or gender transgression, and engagement in sexual and/or gender transgression often invites mainstream suspicion toward marginal religions’ theologies and praxes.

Accepting these premises – the universal importance, imbricated construction, and hierarchical cultural valuation of gender identities and sexual behaviors – allows insight into the function and significance of sexuality studies for the field of American religions. The insights provided by sexuality studies allow scholars to interrogate the ways American religions use sexuality to create space for difference, secure access to privilege, or are denied privilege on the grounds of sexual transgression.

It is moreover important to note that “thinking” sex does not exclude the consideration of sexuality

in conservative religious movements, such as Orthodox Judaism or Christian ex-gay ministries (Gerber 2011). Much critical work on sexuality focuses on transgression of and resistance to norms. As American religious historian Ann Taves (1997) notes, “recent textbooks of American religions... discuss sexuality explicitly only when it ‘deviates’ from the norm” (p. 28). But disrupting the presumed naturalness of heterosexuality also allows scholars to interrogate instances in which religious people practice and valorize conservative sexualities.

Scholars of American religions must also resist “overthinking” sex – which is to say that sex is religiously and politically significant, but also one among many concerns for scholars of embodied religions (Jakobsen and Pellegrini 2004, p. 139). Focusing on sexuality in American religions does not exempt scholars from considering other cultural factors – race, education, geographic location, economic status – that construct and constrain religious belief and practice.

Scholarship of sexuality and American religions engages the field of psychology at several points. For example, ex-gay ministries such as Exodus International and Love in Action, maintaining that homosexuality is not in keeping with Christian doctrine, advocated “reparative” or “conversion therapy” to shift the sexual orientation of nonheterosexuals (Erzen 2006). [Notably, the president of Exodus International (perhaps the most visible of such ministries) stated unequivocally in June 2012 that the organization no longer focuses on sexual reorientation (Gerber 2012)]. The American Psychiatric Association (2000) has condemned any treatment “based upon the assumption that homosexuality per se is a mental disorder or based upon the *a priori* assumption that a patient should change his/her sexual homosexual orientation”; however, a number of ex-gay ministries continue to support conversion therapy. Similarly, The Church of Jesus Christ of Latter-day Saints continued to advocate electroshock therapy as a treatment for homosexuality years after the APA condemned the practice; pressure from the APA is thought to have finally discouraged electroshock therapy at Brigham Young University (Vance 2008).

Psychology also finds itself in tension with sexuality and religion in the theology and

practice of Scientology. The Church of Scientology has officially denounced psychology and psychiatry as harmful and deceptive, and homosexuality as sexual perversion or illness (Hubbard 1969, 2007). The Church's current position on homosexuality is contested; however, Church leaders in San Diego publicly supported Proposition 8, a 2008 legislative attempt to ban same-sex marriage in California. At the same time, queer author and activist Kate Bornstein (2012) recounts being attracted to the Church because thetans (Scientologists' "eternal souls") have no gender. Scholars might draw upon such cases as Scientology and ex-gay ministries for a richer consideration of the imbrication of sexuality, psychology, and American religions.

Critical consideration of sexuality in North American religious scholarship requires taking seriously the embodied construction of religious difference. Critical theories of sexuality in conversation with psychology encourage scholars to think differently – deeper, broader, more carefully – about what sex is, what it can mean, and what it can do. As such, “thinking sex” facilitates rich and theoretically rigorous scholarship of psychology and American religions.

## Sexuality and Buddhism

Jo Nash

Sri Lanka International Buddhist Academy,

Kandy, Sri Lanka

## Sexual Ethics and the Buddhist Precepts

There are two codes of sexual ethics underpinning all schools of Buddhism, those regarding monastics and those for the laity. The monastic code for all

monks and nuns across all three Buddhist vehicles (Theravada, Mahayana, and Vajrayana) is simple and straightforward – total celibacy. The reason for this is that undertaking to train in the monastic code involves the renunciation of sexual desire, which is understood to be caused by a form of dissatisfaction that detracts from spiritual practice. Monks and nuns are required to adhere to strict vows of celibacy in accordance with the Vinaya, which includes refraining from masturbation and nongenital contact with the opposite sex, such as hugging or kissing. Private meetings between monastics and the opposite sex are also restricted to protect the deterioration of the vows. Such meetings usually involve a chaperone, such as trusted upasaka (lay Buddhist holding the five precepts), who will accompany the monastic to such a meeting.

For lay people the sexual ethics are somewhat different and to a large degree a matter of voluntary conduct. A lay follower of any Buddhist vehicle may volunteer to undertake training in the five precepts. Practitioners of the third precept undertake the training to abstain from sexual misconduct. However, for lay people sexual expression in the context of an appropriate relationship is understood to be a healthy method of dealing with the consequences of having a human body in the desire realms. We all have sexual hormones driving us to reproduce and/or experience sexual pleasure, and for most people this is not something we can conquer voluntarily. However, there are situations where sexual behavior can lead to violations of other precepts, and it is in these situations when a lay follower is encouraged to abstain. Precepts that can be violated easily when not training in the third precept properly include the second precept “I undertake the training to abstain from taking that which is not given” and the fourth precept “I undertake the training to abstain from false speech.”

### **What Constitutes Sexual Misconduct?**

Sexual behavior towards or with a monk or nun is always a form of sexual misconduct, as is any form of nonconsensual sex as defined by the laws of the land and at a given time, including rape, molestation, and sex with minors. Other areas of

sexual activity that have led to ethical debates among Buddhists are mentioned below.

### **Monogamy Versus Non-Monogamy**

When lay people train in the Buddhist precepts, each situation which risks undermining those precepts should be assessed individually using wisdom and compassion. One can assess whether sexual behavior constitutes misconduct through reference to the other precepts and a consideration of potential consequences of the behavior. For example, extramarital affairs may involve lying to others because the truth would cause suffering to other people. As people tend to find out the truth in the longer term, then, to avoid causing suffering, those training in the third precept should try to abstain from this kind of behavior. Of course it is possible that taking another sexual partner than one’s spouse is consensual and that everyone involved knows what’s going on, but this kind of situation is rare. A downloadable booklet on *Buddhism and Polyamory (2006)*, written by Zen practitioner H.E Hoogstra, argues that what causes suffering in non-monogamous relationships is attachment, not the sexual behavior itself in any intrinsic sense. She argues that non-monogamous committed relationships can offer the greatest opportunity to overcome attachment and its allies, such as jealousy, greed and hatred. Casual sex outside of a committed relationship may also risk hurting others who find themselves becoming more attached or emotionally involved than they anticipated, due to the emotional bonding that can occur during the sexual act. However, the truth is that there can be no hard and fast rules about how to apply the third precept, except in relation to the other precepts and the specific situation and people involved.

### **Homosexuality, Bisexuality, Transgendered Sexuality, and Nongenital Sexual Acts**

There are some debates among Buddhists about these matters. Those holding proscriptive views about nonheterosexual relationships are being

influenced more by their predominant cultural attitudes than explicit prohibitions laid down by the Buddha. On the whole, the Buddha never said anything explicit about the ethics of gender in relation to sex acts, but he did refer to the unethical nature of sexual behaviors which involve violence, manipulation, deceit, or intoxication. Whether these behaviors took place between members of the same gender or different genders was not mentioned. In Ancient India the third precept discouraged sexual exploitative practices such as abduction, forced marriage, rape, incest, sex with minors, sex with monks or nuns, and coerced adultery. In certain cultures additional texts that comment on the given teachings of that tradition also include commentary on homosexuality, bisexuality, and nongenital sexual behavior as forms of misconduct, because they contravene traditional cultural norms around what is deemed acceptable. However, nothing was stated explicitly in the original Sutras about whether same sex relationships constituted misconduct, rather all sexual behaviors were understood to lead to suffering, as sex tends to evoke attachment, which leads to craving and sorrow. Even when sex takes place in an appropriate relationship, it leads to pleasure associated with a release of tension, but this is impermanent and will soon be replaced by further dissatisfaction and craving. This is why the Buddha exhorted those wanting liberation to abstain from sexual behavior as far as possible.

## Pornography

As Winton Higgins says in his excellent talk on “Buddhist Sexual Ethics” about the third precept,

... the precept’s ambit, especially today, is obviously much wider and covers violating behaviours that the women’s movement among others has rightly politicised(...) Where power relations are prevalent, the power relations themselves have a gender component, and opportunities and cultural encouragement for abuse are ubiquitous. Among other things, sexual harassment is harming and involves taking the non-given, based on a deep-seated presumption - and delusion - in male conditioning about the constant sexual availability of

women(...). Rape in marriage is strikingly similar. Also violent and misogynist pornography which creates a hostile and unsafe environment for women and induces moronic and demonic mind-states in men, including delusions about the nature of women and what they want. So both sexes suffer harm. Publication or use of pornography which eroticises women’s subordination thus plainly contravenes the third precept. But by no mean all pornography does so, and other sexually explicit material might be equally innocent.

The proliferation of free pornography available to download via mobile phones and the internet was not something the Buddha could have predicted, and so sexual ethics around the use and abuse of pornography have never been covered in the Sutras. However, the issue is highly relevant today and arguably leads many men and women into mutual sexual objectification and related acts of psychological violence against themselves and each other which need to be reflected upon mindfully. Equally the Sutras’ emphasis on monogamous marriage as the most suitable vehicle for a layman to satisfy sexual desires must be understood in its specific historical and cultural context – the Ancient India of 2,600 years ago. Contemporary sexualities and the range of possible relationships that can satisfy a need for loving companionship and sexual fulfilment for lay people are now very different. Buddhists need to be mindful of the ever-changing and impermanent nature of the conditioned responses we have to our relationships and be open to exploring more creative ways of meeting our needs for intimacy than just conforming to sets of prescribed social norms, especially those recommended by the Buddha for his community of followers in Ancient India. Desires and feelings are impermanent, especially sexual desire, as is romantic love and even the love we feel for our friends. This is because everything we relate with, including our own hearts and minds, is evolving and changing all the time. Any attempt to solidify our responses and needs into the conditioned categories of culturally normative relationships, such as monogamous heterosexual marriage, can be regarded as non-Dharmic. However, if this kind of arrangement does meet the needs of the individual people concerned, then this may be right for them. But it is not Dharmic to promote

a socially sanctioned relationship structure as spiritually superior to other arrangements, as the same relationship structure will not work for everybody and is even unlikely to work for the same person or couple across their lifetime.

Higgins writes:

The Buddha (. . .) did not waste a word of condemnation on non-procreative sex (hence no list of no-no's), but he inspired thousands to ordain into celibate monasticism and so leave baby making behind altogether. This was not because he disapproved of sex or babies, but in an era when a non-celibate usually ended up with many children to feed, clothe and house and so had little freedom or time for spiritual pursuits, celibacy made a lot of practical sense for many people with a spiritual urge. Needless to say, the choice is not nearly as stark in developed countries today, where contraception is available and earning a living is a good deal easier.

In conclusion, the third precept on sexual ethics in relationships must be interpreted in relation to the other precepts and the specific situation one is dealing with. Anything less than that would be reactive and habitual rather than mindful and liberating.

## Sexuality and Judaism

Brett Krutzsch

Temple University, Philadelphia, PA, USA

Jewish attitudes toward sexuality have shifted across times and locations. Even today, Jewish ideas about gender and sexuality vary greatly. Historian David Biale (1997) has argued that Judaism cannot be understood as either exclusively repressive or accepting of sexuality; instead, Jewish tradition is replete with examples of pervasive ambivalence toward sexuality and the body. Contemporary Jews are heirs to a legacy of conflicting arguments about sexuality. What has remained constant though is a focus on marriage as the ideal space for sexual activity. However, for centuries, rabbis, Jewish intellectuals, and others have debated what is sexually permissible and forbidden within and outside marriage.

The expectations to marry and procreate are as central to Judaism as the expectation to refrain from food on Yom Kippur, the Day of Atonement. While attitudes toward sexuality and sexual practices have changed throughout Jewish history, most Jewish groups and authorities have restricted sexual intercourse to marriage. The premise for situating sex and reproduction within matrimony is based on biblical creation stories. Rebecca Alpert (1997) suggests that

The creation of humans as male *and* female, not male or female, presents [Jews] with the paradigm of the complementary coupling of men and women as essential to human experience. . . .suppl[ying] basic explanations about gender, complementarity, sexuality, and compulsory heterosexuality (p. 22).

Thus, Jewish tradition has maintained that only two genders exist and has required everyone to enter married sexual relationships where biological progeny will be a possible outcome. Marriage in Judaism, however, has not always been an arrangement between one man and one woman. Polygamy was sanctioned and common for many prominent Biblical figures. The patriarch Jacob, for example, had two wives and two concubines. Polygamy remained permissible within Jewish law and was not officially circumscribed for Ashkenazi Jews (Jews primarily from Eastern and Central Europe) until about 1000 CE.

Jewish law has always required that everyone marry, and for much of Jewish history, marriages were arranged relationships. During the European Enlightenment though, Jewish intellectual reformers (the *maskilim*), influenced by new approaches to sexuality, romance, and marriage, opposed arranged marriages, asserting that the ability to freely select one's spouse is necessary for a healthy sexuality (Biale 1997). But even within marriage, sexuality has remained largely regulated by Jewish law. For example, the Jewish legal precept of *onah* demands that husbands regularly engage in sexual relations with their wives. For centuries though, rabbis have debated how often husbands are required to engage in intercourse and when (and if) it is permissible to have sex for pleasure or only for procreation. Jewish law also dictates that wives are not to engage in intercourse while menstruating every month, as well as for the 7 days after all menstrual bleeding has ceased. Known as *niddah* ("seclusion"), at the conclusion of those days, the wife immerses herself in a mikveh (purifying ritual bath) and may then resume sexual relations with her husband. In contemporary times, few non-Orthodox Jews observe *onah* or *niddah* (Telushkin 1991).

Ancient Jewish law allows husbands and wives to engage in anal and oral sex, as well as various sexual positions, as long as sex is done with the intent of procreation. One sexual activity forbidden for most of Jewish history, however, is male masturbation. The *Zohar*, a chief Kabbalistic text, treats male masturbation as a heinous, almost unforgivable sin considered worse than adultery. Known as a mystical form of Judaism, Kabbalah

began between the eleventh and thirteenth centuries, and Kabbalists were interested in esoteric connections between God and creation. Kabbalistic writings hold that the sexual union of husbands and wives brings together the masculine and feminine powers of the Divine. Sex, therefore, has cosmic consequences. Kabbalists circumscribed male masturbation as a violation of Jewish sexual norms for, among other things, failing to unite the masculine and feminine in intercourse. For much of Jewish law, any sexual act that deviates from the sanctified union of the male and female, such as masturbation, is expressly forbidden.

Female masturbation is not given anywhere near the attention that male masturbation receives. In fact, most Jewish texts on sexuality, until the contemporary period, were written by and addressed to men. Ancient and medieval writers and codifiers of Jewish law did believe, though, that women have a sexuality. More specifically, they believed that, unlike men, women could not control their sexual desires. Because of their presumed inability to restrain their sexuality, extensive restrictions were placed on women. Jewish law, for example, forbids women from touching men unless they are a relative. Women must dress modestly, and they are to be separated from men during prayer services. These constraints also purportedly serve to prevent men from being tempted by women's ever-present sexual aura. Like the laws of *onah* and *niddah*, in the present day, these gender restrictions are largely rejected by non-Orthodox Jews.

Sexual activity occurring between two women has, historically, not been regarded by most Jewish authorities as an especially heinous violation. The Bible contains no explicit condemnation of female same-sex relations. Ancient rabbis only briefly chastised female same-sex behavior, and not until Maimonides, the twelfth-century codifier of Jewish law, was much written on the topic. Even Maimonides regarded female same-sex sexual activity as a minor offense to be monitored and punished by husbands and fathers. Presumably because penile penetration is not involved, lesbian sex for Maimonides neither claimed a woman's virginity nor aroused accusations of adultery if she was married.

Following one biblical verse though, male same-sex intercourse carries with it the threat of the death penalty. Primarily based on two verses in Leviticus, Jewish law unequivocally condemns male same-sex sexual activity. Rabbis of the Talmud even categorize the prohibition against male-male sex as *gilui arayot*, meaning that a person should sacrifice his life before committing such a sin. Not until late in the twentieth century did rabbis begin to formally reevaluate the prohibitions against same-sex relationships and sexual activities.

In examining contemporary Jewish perspectives on sexuality, Alpert (2003) writes that, “Although remaining committed to marriage as the best option, liberal Jews have abandoned other prohibitions around sexuality” (p. 186). Therefore, for most non-Orthodox Jews who are not as closely bound to Jewish law, prohibitions against masturbation, sex during menstruation, and premarital sex are generally obsolete. And with the emergence of the gay rights movement in the 1970s, attitudes toward gays and lesbians have also shifted in many Jewish communities. Synagogues organized primarily by and for lesbian, gay, bisexual, and transgender Jews started to appear in Los Angeles, New York, San Francisco, and other major cities in the 1970s. In 1985, the Reconstructionist Movement, an American-born progressive denomination of Judaism, ordained its first openly gay rabbi. The Reform Movement endorsed the ordination of openly gay rabbis in 1990, and the Conservative Movement reached the same position in 2006. Orthodox Judaism, which unlike Reform, Reconstructionist, and Conservative Judaism does not have one unifying governing body, generally continues to proscribe same-sex sexual activity, and no Orthodox rabbinical school has publically endorsed the ordination of gay rabbis.

In a qualitative study of 18 gay and lesbian Orthodox Jews, psychologists Halbertal and Koren (2007) found that their participants could not be described by earlier development models of homosexuality (e.g., Cass 1979) where identity synthesis is seen as the ultimate goal. According to Halbertal and Koren, being gay was almost always incompatible with being Orthodox, writing, “Neither one of these identities is assimilated

into the other – that there is neither synthesis nor resolution of the fundamental opposition between them” (p. 42). Their findings, therefore, challenge earlier models of identity development which claim that a synthesis of one’s identities is necessary for healthy functioning. They conclude that many gay and lesbian Orthodox Jews renegotiate their identities in various contexts and that, “the picture that emerges is rather of two mutually exclusive selves that, following formative periods of intense conflict and struggle, manage ultimately to achieve a working coexistence within the same body and mind” (p. 40).

Asserting similar findings, in a study of both Orthodox and non-Orthodox Jewish gay men in Great Britain, Coyle and Rafalin (2000) maintained that all but one of their 21 respondents reported periods of identity conflict in trying to reconcile their gay and Jewish identities. The participants commonly remarked that they had experienced pressures from their families and from Jewish institutions to enter heterosexual marriages and to have children. Additionally, Coyle and Rafalin found that, “several participants described identity conflict in gay contexts and related experiences of anti-Semitism in gay communities and organizations” (p. 17). In other words, the respondents suggested that the difficulty of synthesizing their gay and Jewish identities exists not only within Jewish spheres but also within predominantly gay circles where anti-Jewish sentiments may have prevalence. Their study also highlights how the challenge of identity synthesis was difficult for Jews from both observant and secular backgrounds. Thus, with regard to Judaism and sexuality, expectations to marry and reproduce remain a feature of many Jewish institutions and communities, regardless of their adherence or connection to formal, rabbinic Jewish law.

## Sexuality and Religion: Feminist Views

Leah Thomas  
Psychology and Religion, Drew University,  
Madison, NJ, USA

Feminism has taken a variety of iterations throughout the history of the psychology of religion. In the 1970s, feminism emerged in the West within the fields of theology and psychology, challenging psychological theories, methods, and applications, as well as the androcentrism of many religious traditions. This included questions about the images of the divine, the role and authority of sacred texts, and the power of redemptive figures.

Feminist views in relation to sex and sexuality are rooted in an awareness of the dualisms that have so often pervaded Western society, especially those between sex and God, spirituality and sexuality, body and spirit, and pleasure and goodness. It recognizes that many dualisms can be traced to androcentrism within society, including the religious and psychological traditions. (For a full discussion of the historical development of this phenomenon, see this encyclopedia's article “► [Sex and Religion](#),” which chronicles the development from goddess-based religions to present religious traditions). These dualisms, products of a patriarchal and hierarchical worldview, have often included a deep suspicion of erotic love, as well as a privileging of men over women, and heterosexuality over homosexuality. They are also often linked to other forms of injustice, including racial, social, and socioeconomic, as they have rendered the male experience normative in religious spheres and in psychological research and theory.

As feminism evolved, so did the realization of the diversity within feminism, both in ethnicity and social location. There was increased attention in psychological research and theories to women of nonwhite ethnicities, although textbooks and more mainstream publications tended to still reflect a white, middle class focus. Multiculturalism was also showing its face in the theological realm, with the emergence of womanist and *mujerista* theologies, and burgeoning voices of women from around the globe. More recent trends in feminism in the religious and psychological realms inquire as to the relationship between feminism and postmodernism. Within this discourse, postmodern approaches examine the socially constructed nature of knowledge, including concepts and theories, and ask whose interests are being served by particular constructions. This takes the form of critiquing the scientific method and also analyzing the implicit assumptions embedded in psychological and theological concepts (i.e., gender, sex, and objectivity). Postmodern feminists suggest that the production of knowledge privileges certain views, while discounting or marginalizing others. They are attentive to the power of language, and they examine how language is used to frame women's experience.

The views of feminists in relation to sex and religion function as critical, inclusive, analytic, and constructive. As part of the critical project, they frequently engage in critique of classic texts and theories. For example, they examine the absence of women's experience in Freud's formulation of the Oedipus complex, noting that women are only present as an object of their sons' incestuous desires. Others critique Jung for his tendency to downplay personal relationships in favor for eternal transpersonal archetypes. Feminist scholars in psychology of religion also participate in an inclusive project, whereby they name and incorporate women's lives and experiences into the research agendas of the field. They ask how women's experiences of the divine feminine and of embodiment shape the ways that they approach their own sexuality. The third feminist project is the analytical stance, which questions the ways that gender shapes knowledge, culture, and research. This involves an increased attention to the role of multicultural issues in this dialogue, including the importance of social location and the ways in which current gender scholarship and postmodernism affect discourses around and about sexuality. Finally, the work of feminists on sex and religion involves a constructive effort. It recognizes that much of the pervading discourse around sex and religion has functioned to harm individuals and communities throughout time, and thus, new discourses must be constructed as counter and corrective. Some have disputed Freud's stance towards sexuality, offering instead an alternative theory of sexuality embedded in a relational context.

An example of this would be Miranda Shaw's work on the place of women in Tantric Buddhism (Shaw 1994). Shaw first critiques the tradition that sees women as marginal and ancillary within Tantric Buddhism. She argues that Buddhist studies have lagged behind other fields when approaching the subject of gender and have posited male dominance as a fixed principle within Buddhist history. Through employing methods of women's studies, historiography, and translation, Shaw engages in an inclusive project. She seeks to reclaim the agency of women throughout history, exhibiting that women played a central,

active role in Tantric Buddhism in India; they acted as gurus, created new rituals, and were worshipped as divine beings. Shaw then participates in an analytic project, questioning how gender and colonialism shaped the views of devadasis – women who played significant social roles as artists, scholars, and performers of ritual dance and worship. She proposes that colonial powers, uncomfortable with women who were engaging in nonmarital sexual activity and/or were religiously exalted, demonized these women, labeling them "harlots" and "sluts." Finally, her constructive effort involves an in-depth examination of the Tantric union, a ritual that involves the joining of the male and female in a sexual union that ultimately leads to enlightenment. Shaw demonstrates that, far from being a degrading ritual where the woman was sexually exploited for male spiritual gain, the Tantric union was an ultimate expression of balance and equality. Women were, in fact, some of the first teachers who imparted instructions for the implementation of sexual union as a means of liberation and were essential in the creation of an atmosphere of male/female reciprocity.

### **Relational View**

Certain feminists doing work on the intersection of pastoral psychology and feminist liberation theology build on the work of object relations and use such figures as Fairbairn and Winnicott to develop a relational approach to mental health. This branch suggests that "we become persons literally in and by relation, it is only in 'mutually empowering and empathetic relationships' that our wellbeing can be secured and sustained" (Heyward 1989). This view departs from more traditional individualistic notions of psychiatry, psychology, and psychotherapy, which link mental health to the process of becoming an "autonomous" or "individuated" self. In contrast, these feminists propose that one's mental health is ultimately linked to and enhanced by one's relation to others, by connection as opposed to separation. Not wanting to slip into the fallacy that women realize their mental health when they live

for others, rather than for themselves, they believe that all humans live into health and wholeness when they live *with* others, in relationships that embody certain characteristics, including greater energy (or zest) for the self and for action on behalf of the community, a greater sense of self worth, and an increased sense of connection to one another and to persons outside of the relationship (Miller 1986). The flip side of this view is that the absence of mutually empowering and empathetic relationships is the root of abuse.

For feminists who hold views similar to this, sex is embedded within this relational context and ultimately contributes to deeper relationality with one another and with the broader world. Some feminists address the connection between the sacred and erotic, others focus more on the role of sexual pleasure, and nearly all highlight the broader connection of eros and sexuality to issues of social justice. Those who address the relationship between the sacred and erotic believe that one explores and experiences the sacred through sexual experiences, as the erotic is a tangible and embodied experience of God's love. Some go far as to define the erotic or God as an experience of "power in right relation" (Miller 1986). This view of the erotic contradicts Freud's view of sexuality, which maintained that sexuality needed to be restrained in order to live into fullness of self (the ego ideal). In this alternate view, sexuality generates "more energy, not less" for justice-related actions in the world. It allows people to experience the depths of power in relation to others as pleasurable and therefore connects people to the larger relationships of power in the world. For these feminists, sexual expression not only beckons people inward but also inspires them towards right action on behalf of the least.

Others in this vein address the undue focus on procreation within sexual discourse, as well as the way that current theological discourses view eros and sexual pleasure. Some maintain that the task of feminism in relationship to sex is to retrieve eros from its problematic place as something needing to be "controlled" by a patriarchal tradition and to grant it a privileged place in human relationships, due to its special power to

**Sexuality and Religion: Feminist Views, Fig. 1** The Kiss. Sculpture by Auguste Rodin. Rodin Musée, Paris (Public Domain. This file is licensed under the Creative Commons Attribution 3.0 Unported license. <http://en.wikipedia.org/wiki/File:TheKiss.JPG>)

work for justice, mutuality, and solidarity in relationships (Gilson 1995). Others counter the undue focus on procreationism by replacing the emphasis on procreation with an emphasis on pleasure, which itself indicates the fundamental goodness of sex. These feminists argue that pleasure, far from being suspect, communicates both the purpose of sex and its blessed quality. In this view, when pleasure is mutual, it has the power to bind people to one another in relationships of mutuality, love, and justice (Gudorf 1994). For nearly all feminists who espouse these views, the erotic is not limited to monogamous heterosexual relationships. They would maintain that sexual expression needs to be reimagined in terms such as "erotic mutuality," which is not limited by gender, and is characterized by justice and reciprocity which leads to deeper connection and solidarity with others (Fig. 1).

## Goddess and Sexuality

While most of the views mentioned above fall into the Christian tradition, feminist positions regarding sex and religion also build bridges between psychology and goddess spirituality, asserting that the goddess traditions offer helpful tools for speaking about sexuality and sexual expression. In pre-patriarchal goddess-worshipping civilizations, the goddess was associated with the planting and harvesting of crops. As the body of the goddess changed, seeds sprouted, and crops were harvested. The female body was revered for its similarity to the goddess, both in its fertility and sexuality. The narratives that were passed on therefore honored both the goddess and women, as the processes of the female body (birth, menstruation, rebirth) had divine resonance. Feminists who embrace goddess traditions note that, with the onset of Christianity, women's sexuality became something associated with sin; instead of a creative, God-revealing force, it was something that was in need of control. Patriarchal religions thus exercised control over women and their sexuality, as is manifested in the biblical narratives and the writings of the Church Fathers. Those who embrace goddess spirituality draw on varying psychological traditions. Many point to the work of Carl Jung to assert the needed connection between mind and body (Mijares 2003). Drawing on his assertion that the collective unconscious is manifested in the body, they believe that the unnatural separation of mind and body has severed humanity from a larger field of potential consciousness. They point to Jung's concept of archetypes, revealing the goddess as one such archetype of feminine power which needs to be retrieved to free women from limited self narratives. They maintain that the recovery of the goddess tradition offers women and all of humanity the potential to develop new reverence for life and sexuality and for the Earth itself. Goddess traditions note that disrespect for and domination of women and the earth are closely related to the domination of the Earth and offer the potential for healing this split.

## Multiculturalism

Feminism's attention to the reality of multiculturalism has also influenced opinions on sex and religion within the psychology of religion. This includes areas of intersection between womanism and *mujerista* theology and psychology. Women of color have divergent responses to feminism, which include both womanism and black feminism. Both of these realities reflect the reality that feminism has not adequately addressed the reality and the needs of women of color, including the fact that women of color are frequently victims of multiple oppressions (not only sexism but also racism, colonialism, socioeconomic factors). Womanism incorporates various elements of spirituality and engages in a critical analysis of issues such as race, gender, class, geopolitics, and culture. A womanist psychology both associates with and departs from feminist psychology in that it promotes knowing and being known from the perspective of black women. It challenges feminist psychology to become more inclusive and to incorporate the views of women of color into its work. The issue of sexuality is of great importance to womanist psychologists of religion. The black woman's body and sexuality has historically existed for the profit and pleasure of men who owned them and, as such, has endured physical and sexual abuse. Those who embrace a womanist psychology of religion ask how religion and psychology can be used to heal the sexual wounds of black women, enabling them to love themselves and their bodies. Womanist psychology accentuates the stories and psychological state of these women as they fight for their own liberation and healing. It builds on different branches of psychology, including transpersonal psychology. For example, by placing stories of generational abuse into a transpersonal communal context, womanist psychology does not confine these stories to the family of origin, but incorporates the community across time and space.

An appreciation of multiculturalism has also given birth to *mujerismo*. *Mujerista* theology is a blend of feminism, Latin American liberation theology, and cultural theology, which has as its

aim the liberation of Latinas from oppression (Comas-Diaz 2008). *Mujerista* psychology is based in a liberation approach. It studies the experiences of oppression, resistance, race, and gender related to dominant Western discourse. In relation to sex, the intersection of *mujerista* theology and psychology recognizes that many Latinas simultaneously cope with the previous generation's rigid gender roles, their daughters more progressive attitudes regarding sexuality, and their own sexuality. Thus, *mujeristas* attempt to balance these positions, while also remaining rooted in their own social location. For example, while white feminists frequently advocate for contraception and abortion, Puerto Rican women suffer from a position of forced sterilization as a consequence of US policy (Comas-Diaz 2008). To address this reality, *mujerista* feminists reclaim the full spectrum of their sexuality, while also embracing tools such as folk spirituality and syncretism.

## Postmodernism

More recently, as feminists engage in a dialogue with postmodernism, feminists within psychology of religion critique the discourse that surrounds religion. The dialogue between feminism and postmodernism includes two main views: those who assert that psychoanalysis is helpful in the formation of subjectivity and the understanding of sexual difference and those who critique the marginalization of women within psychoanalysis. Those who espouse the first view believe that the ideas of traditional psychoanalytic theory highlight that gender and sex are formed within culture, which enables feminists to critique that such identities are natural or intrinsic. Many in the second camp focus on the marginality of women in psychoanalysis. They charge that women have been closed out of religious discourse by a notion of God who has been defined in solely masculine terms. As such, religion cannot account or name the desire of women, except in a distorted way.

Feminists within the psychology of religion incorporate an attention to gender, relationality, and social location in order to build bridges

between psychology and theology. They incorporate a variety of psychological theories in their efforts, which continuously stress themes of liberation and social justice. Yet, it is important to recognize that a variety of views of sex and religion exist within the field and that feminism, in advocating for the importance of social location and subjectivity, would affirm the diversity of these views, asking what each contributes to the wider body of literature around sex and sexuality within the psychology of religion.

## Sexuality and Wicca

Melissa Harrington

University of Cumbria, Lancaster, UK

The Wiccan understanding of sexuality is derived from its history, philosophy, and practice. Wiccans perceive life to be a precious gift that should be lived and enjoyed, thus sexuality is valued as a pleasure as well as for procreation. Sex is also respected as a means to a sense of communion with the divine and to connect to the life force and the creative energies of the cosmos (Clifton 2006). The life force can be understood in the same way as *prana* or *ch'i* of the eastern meditative systems and is believed to be generated and transmitted via magical practice.

Since Wicca emerged as a new religious movement in the mid-twentieth century (Hutton 1999), most Wiccans grew up during or after the sexual revolution of the 1960s, within a culture that condones sex before marriage and the use of birth control within and outside of marriage. Wicca mirrors these contemporary cultural norms. Most adult Wiccans engage in monogamous, sexually active, relationships prior to monogamous marriage. Alternative relationships such as polyamory also exist within a smaller demography that reflects numbers exploring alternative relationship structures in Western society today. Celibacy is accepted if Wiccans do not wish to have sexual relationships, and gay and lesbian relationships are celebrated and may be affirmed in same-sex marriages. All relationships are guided by one rule, the *Wiccan Rede*, which states “An it harm none, do what you will.”

This view of sex and sexuality is emphasized in *The Charge of the Goddess*, a ritual text that has a variety of older original sources but was rewritten by High Priestess and author, Doreen Valiente (1989), in its current form. It is widely used in Wiccan rites and features in the traditional Wiccan initiation ceremony:

... Whenever ye have need of anything, once in a month, and better it be when the Moon be full, then ye shall assemble in some secret place and adore the spirit of me, who am Queen of all Witcheries. There shall ye assemble, ye who are fain to learn all sorcery, yet have not yet won its deepest secrets: to these will I teach things that are yet unknown. And ye shall be free from slavery; and as a sign that ye are really free, ye shall be naked in your rites; and ye shall dance, sing, feast, make music and love, all in my praise. For mine is the ecstasy of the spirit and mine also is joy on earth; for my Law is Love unto all Beings. . . Let my worship be within the heart that rejoiceth, for behold: all acts of love and pleasure are my rituals. And therefore let there be beauty and strength, power and compassion, honor and humility, mirth and reverence within you . . . (Valiente 2009).

Many Wiccans come from a Christian background and have rejected Christianity. They report a sense of “coming home” to Wicca (Adler 1986; Harvey 1999). This feeling of coming home is due to the fact that many have felt uncomfortable with, or alienated by, the philosophies and practices of traditional religion,

while Wicca fulfils them, its philosophy fitting with their own personal and long-held belief systems (Harrington 2002).

One aspect of Wicca that draws many people is that it is a religion that celebrates women and includes Goddess worship. After millennia of patriarchal monotheism women find this to be a potent force for empowerment (Starhawk 1989). They draw on Goddess iconography to explore different aspects of their own psyche as well as archetypal images of womanhood (Salomonsen 2002). They celebrate their sexuality as part of a holistic and holy model of femininity (Rountree 2004).

Equally, men are drawn to Wicca to worship the Goddess, but they also find that they are able to engage with empowering archetypal models of the male psyche within its rites. The rituals of the seasonal festivals or *Sabbats* incorporate folk traditions and mythology with ritual psychodrama that links the human life span to the cycle of the year's seasons. This *wheel of the year* revolves around the God and Goddess meeting, marrying, giving birth, dying, and being reborn in an endless cycle of regeneration. Witches believe that enacting these rites brings them closer to the divine, to nature, and to the life force and forces of nature of which we and the rest of the natural world are integrated parts, hence Wicca is often called "Nature Religion" (Clifton 2006).

The ceremony of Cakes and Ale concludes all rituals. This consecrates ritual food via an act of symbolic sex. The Priestess who has embodied the Goddess in the rite plunges a ceremonial dagger or *Athame* into a chalice held by the Priest who has embodied the God, who kneels before her. She says "As the *Athame* is to the male so the cup is to the female, and conjoined they bring forth great blessings." He then extends a plate of cakes to her, asking her to "bless this food unto our bodies, bestowing health, wealth, strength, joy, truth and that fulfillment of love that is perpetual happiness." The coven passes the chalice to each other and shares the consecrated food, believed it to be imbued with magical energy and life force. In this ritual Wicca is also consciously inverting traditional power structures as the man kneels before the woman, it further plays with power/gender in that each holds a symbol of the other sex, and the

**Sexuality and Wicca, Fig. 1** Wiccan handfasting wedding ceremony in Castlerigg Stone Circle, England (Photo courtesy of the author)

man is the passive/receptive partner to the woman who is in an active/dominant role (Fig. 1).

Generally however Wicca does not challenge gender stereotypes; rather it works with them, as can be seen in the *Sabbat* cycle. This is a heterosexual and monogamous interpretation of the human life cycle in which traditional stereotypes of masculinity and femininity are affirmed. As Wicca has developed, it has attracted gay practitioners, some who find the classic model of the *Sabbats* irrelevant to their sexuality. They have begun to work out ways in which the Wicca can be more meaningful for them. This had led to a widening of Wicca's denominations which has encouraged expanding and deepening Wiccan liturgy and praxis.

Whatever their personal sexual orientation, Wiccans believe sex can be a sacrament. In most rites in Wicca, the Gods are called on or *invoked* into the sacred space of the Wiccan temple and into

the bodies of a consecrated Priest and Priestess, for the duration of the ceremony. One Wiccan rite consummates this sexually, the Great Rite. Due to Wicca's respect for sex and sexuality, the Great Rite is considered to be a ritual that only highly experienced practitioners should undertake, and is usually conducted by a couple of equal status, who are already a partnership, as a private sacrament. Here, the body is seen as a sacred vessel of the Gods and a channel for the divine force of the living universe. Otherwise, the Great Rite is conducted *in token*, as in the ceremony of Cakes and Ale, with adherents believing that it is just as powerful when performed symbolically as when *in true* (Valiente 1989), particularly as this avoids complicating relationships between participants.

The Great Rite is also used in the third and final initiation into Wicca. It is believed that when in the altered state of a Wiccan ceremony, infused with the divine spirit, the witch is able to transcend consciousness and reach states of religious ecstasy and gnosis. Vivianne Crowley discusses its effects in Jungian terms of the integration of feminine *anima* and masculine *animus* within the psyche of an initiate, leading to states of psychological well-being and spiritual integration (Crowley 1996).

Sexual energy is also perceived as a potent source of energy that can be harnessed for magical means. Energy is thought to be directable by any witch. Part of the earliest Wiccan training includes the use of candles, chanting, drumming, dancing, mediation, and knotting cords to raise and send physical, mental, and magical energy. Thus, sex magic can also be done as a conscious act by a couple, who send the resulting energy towards a specific purpose. This is often absent healing for another person, as an act of sympathetic magic, whereby physical means are used to achieve physical ends.

Wiccan rites also incorporate methodologies that help changing practitioners' consciousness, but maybe seen as titillating to outsiders and exacerbate taboo aspects of modern Pagan witchcraft. Some denominations practice nude or *sky clad* and report similar feelings of freedom and closeness to nature as do secular nudists. Initiations include a short and carefully ritualized act of mild flagellation that helps to send the initiate into trance. This is part of a long and effective

tradition in the history and technology of religious consciousness change within initiatory traditions of the magical the Western Mystery Tradition (Bogdan 2008).

As a religion in its current form, Wicca is only half a century old and perhaps that is why it embodies the *zeitgeist* of the twenty-first century with its concerns for equality, ecology, and individualism set within a postmodern framework of personal and spiritual choice. Its preoccupation with the sacrality and fragility of the Earth and its revival of Goddess worship are key attractions, but so too are its view of life and of sexuality. Perhaps the rites of the initiatory mystery schools of Wicca are a little too intimate and obscure for them to ever to become a mainstream religion, but as Modern Pagan Witchcraft is growing into a more wide spread form of ecumenical Neo-Paganism, it continues to diversify and adapt to suit much wider congregations. Within them all however remains one shared view that all sexuality is a sacred gift, and all sexual practices valid, as long as they bring pleasure, empowerment, connection to nature and the life force, and communion with the divine to their participants and harm to no one.

## Shadow

Stephen A. Diamond  
Center for Existential Depth Psychology  
Los Angeles, Los Angeles, CA, USA

For Swiss psychiatrist C. G. Jung, the theory of the “shadow” was a metaphorical means of conveying the prominent role of the unconscious in both

psychopathology and the perennial problem of evil. In developing his paradoxical conception of the shadow, Jung sought to provide a more highly differentiated, phenomenologically descriptive version of the unconscious and of the *id* than previously proffered by Freud. The shadow was originally Jung’s poetic term for the totality of the unconscious, a depiction he took from philosopher Friedrich Nietzsche. But foremost for Jung was the task of further illuminating the shadowy problem of human evil and the prodigious dangers of excessive unconsciousness. Especially concerned with those pathological mental states historically known as “demonic possession,” Jung’s psychological construct of the shadow corresponds to yet differs fundamentally from the idea of the Devil or Satan in theology. As a parson’s son, Jung was steeped in the Protestant mythos, digested the rich symbolism of Catholicism, and studied the other great religious and philosophical systems. But, as a physician, he intentionally employed the more mundane, banal, less esoteric or metaphysical, and, therefore, more rational terminology “the shadow” and “the unconscious” instead of the traditional religious language of god, devil, *daimon*, or *mana*. For Jung, depth psychological designations, such as *the shadow* or *the unconscious*, were “coined for scientific purposes and [are] far better suited to dispassionate observation which makes no metaphysical claims than are the transcendental concepts, which are controversial and therefore tend to breed fanaticism” (cited in Diamond 1996, p. 97).

The shadow is the unknown “dark side” of our personality – dark both because it tends to consist predominantly of the primitive, benighted, negative, and socially or religiously depreciated human emotions and impulses like sexual lust, power strivings, selfishness, greed, envy, aggression, anger, or rage and due to its unenlightened nature, obscured from consciousness. Whatever we deem evil, inferior, or unacceptable and deny in ourselves becomes part of the shadow, the counterpoint to what Jung called the *persona* (see *persona*) or conscious ego personality. According to Jungian analyst Aniela Jaffe, the shadow is the “sum of all personal and collective psychic elements which, because of their

incompatibility with the chosen conscious attitude, are denied expression in life. . .” (cited in Diamond 1996, p. 96). Indeed, Jung differentiated between the *personal shadow* and the impersonal or *archetypal shadow*, which acknowledges transpersonal, pure or radical evil (symbolized by the devil and demons) and collective evil, exemplified by the horror of the Nazi holocaust. Literary and historical figures such as Hitler, Charles Manson, and Darth Vader personify the shadow embodied in its most negative archetypal human form. “The shadow,” wrote Jung (1963), is “that hidden, repressed, for the most part inferior and guilt-laden personality whose ultimate ramifications reach back into the realm of our animal ancestors and so comprise the whole historical aspect of the unconscious” (cited in Diamond 1996, p. 96). The shadow is a primordial part of our human inheritance, which, try as we might, can never be eluded.

The pervasive Freudian defense mechanism known as “projection” is how most people deny their shadow, unconsciously casting it onto others so as to avoid confronting it in oneself. Such projection of the shadow is engaged in not only by individuals but groups, cults, religions, and entire countries and commonly occurs during wars and other contentious conflicts in which the outsider, enemy, or adversary is made a scapegoat, dehumanized, and demonized. Two World Wars and the current escalation of violence testify to the terrible truth of this collective phenomenon. Since the turn of the twenty-first century, we are witnessing a menacing resurgence of epidemic demonization or collective psychosis in the seemingly inevitable violent global collision between radical Islam and Judeo-Christian or secular western culture, each side projecting its collective shadow and perceiving the other as evil incarnate.

For Jung, the shadow is most destructive, insidious, and dangerous when habitually repressed and projected, manifesting in myriad psychological disturbances ranging from neurosis to psychosis, irrational interpersonal hostility, and even cataclysmic international clashes. Such deleterious symptoms, attitudes, and behavior stem from being possessed or driven by the dissociated yet undaunted shadow.

Robert Louis Stevenson’s classic story of *The Strange Case of Dr. Jekyll and Mr. Hyde* can be taken as a cautionary tale par excellence: dissociation of the shadow results in a perilously lopsided development of the conscious personality and renders us susceptible to destructive possession by the disowned shadow. The overly good Dr. Henry Jekyll is at times taken over body and soul by his equally evil shadow: the depraved, nefarious, wicked Edward Hyde, his complete opposite. Indeed, the shadow contains all those qualities we hide from ourselves and others, but which remain active within the unconscious, forming a sort of “splinter personality” or “complex,” not unlike the relatively autonomous sub-personalities found in multiple personality (dissociative identity) disorder or in so-called demonic possession or demonism. Under stressful circumstances or in states of fatigue or intoxication, this compensatory alter ego or shadow complex can be triggered into temporarily taking total command of the conscious will. The abject negativity and destructiveness of the shadow are largely a function of the degree to which the individual neglects and refuses to take responsibility for it, only inflaming its ferocity and pernicious power. The shadow’s sometimes overwhelming strength and disturbing ability to intrude into one’s cognitions, affects, and behavior have historically been experienced and misinterpreted as demonic possession, for which exorcism is believed to be the only treatment. Yet, it must be emphasized that the shadow is not meant to be taken literally but rather allegorically: it is not an evil entity existing apart from the person, nor an invading alien force, though it may be felt as such. The shadow is a universal (archetypal) feature of the human psyche for which we bear full responsibility to cope with as creatively as possible.

But despite its well-deserved reputation for wreaking havoc and engendering widespread suffering in human affairs, the shadow – in distinction to the literal idea of the devil or demons – can be redeemed: the shadow must never be dismissed as merely evil or demonic, for it contains natural, life-giving, underdeveloped positive potentialities too. Coming to terms with the shadow and constructively accepting and assimilating it into the conscious personality are central to the process of

Jungian analysis. Working with dream material (see dreams) is key to comprehending and dealing constructively with the shadow. The shadow tends to appear in dreams as a figure of the same sex as the dreamer, but Jung draws a distinction between the personal shadow and the anima or animus, symbolized in dreams as the opposite sex. Typically, it is the subjective experience of the shadow or evil and its ego-dystonic effects (or, as in the case of the hypercivilized Dr. Jekyll, an inexplicable malaise or vague sense that something vital is missing in us) which motivates the person to seek psychotherapy and spurs one toward new growth, maturation, and individuation. Indeed, in many ways, we need the shadow and must therefore learn to develop a more conscious and constructive relationship to it. Becoming conscious of the shadow requires tolerating the inherent tension of opposites within, sometimes “having it out” with the shadow and standing up to its destructive influence, other times permitting it some measured outward expression in the personality, but always treating it with utmost respect.

Notwithstanding its negative influence, Jung understood the daimonic nature of the unconscious, and that the compensatory effects of the shadow upon individuals, couples, groups, and nations could be beneficial as well: “If it has been believed hitherto that the human shadow was the source of all evil, it can now be ascertained on closer investigation that the unconscious man, that is, his shadow, does not consist only of morally reprehensible tendencies, but also displays a number of good qualities, such as normal instincts, appropriate reactions, realistic insights, creative impulses, etc” (cited in Diamond 1996, p. 96). Creativity can spring from the constructive expression or integration of the shadow, as can true spirituality. *Authentic spirituality* requires consciously accepting and relating properly to the shadow as opposed to repressing, projecting, acting out, and remaining naively unconscious of its contents, a sort of precarious *pseudospirituality*. “Bringing the shadow to consciousness,” writes another of Jung’s distinguished followers, Liliane Frey-Rohn (1967), is a psychological problem of the highest moral significance. It demands

that the individual hold himself accountable not only for what happens to him but also for what he projects. Without the conscious inclusion of the shadow in daily life, there cannot be a positive relationship to other people or to the creative sources in the soul; there cannot be an individual relationship to the Divine (cited in Diamond 1996, p. 109).

## Shakers

David C. Balderston  
Private Practice, New York, NY, USA

### Introduction

The Shakers were the largest, longest-lasting, and the most widespread of all the communal or utopian societies that flourished in nineteenth-century America, whether secular (Fourierists, Owenites) or religious (at Amana, Bishop Hill, Ephrata, New Harmony, Oneida, and Zoar). Their formal name is the United Society of Believers in Christ's Second Appearing. A Christian millennial sect, they looked to their founder, "Mother" Ann Lee, as a female manifestation of the Christ spirit.

Described first as "Shaking Quakers" from the free, ecstatic movements that characterized their worship (shaking is mentioned in several passages in the Bible, as God's activity and humans' response, e.g., Ezekiel 38:19–20 and Hebrews 12:26–27) and because they were mistaken for nonconformist Quakers, the Shakers developed certain religious and psychological practices that helped them to grow, prosper, and endure for many decades, eventually shrinking to currently one small group at Sabbathday Lake, ME – still vibrant and supported by a large organization of Friends of the Shakers.

### Origins

From humble origins in Manchester, England, at a time of religious ferment and searching outside the Established (Anglican) Church – for example, the Quaker movement, itinerant evangelists such as John Wesley and George Whitefield, and possibly the immigrant "French Prophets" or Camisards (a Huguenot sect) – an illiterate woman named Mrs. Ann Lees Standerin (variant spellings exist) emerged as a charismatic leader in a local revivalist group of Quaker origins that was previously led by a couple named Wardley. After severe persecutions, she and a few followers,

including her husband who eventually left her, emigrated in 1774 to New York City in the American colonies. Within a few years, they had established themselves near Albany, NY, first at a wilderness site called Niskayuna (now Watervliet) and later at a permanent center not far away in New Lebanon, NY. A nearby revival of "New Light" Baptists was petering out, and Ann Lee's fresh message of salvation found willing converts.

### Growth

Missionaries were soon sent from the new center into four New England states. While enduring much prejudice, violent opposition, and the death of Ann Lee in 1784 at age 48, the Shakers still managed to establish a total of 11 communities by 1793. Several strong and capable leaders carried on her work, and by 1836, 10 additional communities had been founded in Ohio, Kentucky, Indiana, and western New York. Out of a total of 23 Shaker communities, 18 endured for an average of over 125 years. The Shakers reached a peak population of 5,000–6,000 by ca. 1840.

### Religious Practices

Religiously, the Shakers are noted for the following: an emphasis on the female or maternal aspect of God as manifested in Ann Lee; equality of leadership roles for men and women; their "shaking" behavior during worship including marches and patterned gestures as well as spontaneous ecstasies and speaking in tongues; celibacy and separation of the sexes by mandating separate sleeping quarters, dining tables, seating in worship, and entrances to major buildings; pacifism; confession of sins; separation from the "world's people" in isolated rural villages; the inspired creation of many new songs, hymns, and mystical "spirit drawings" – especially in the revival period known as "Mother's Work" (1837–1847). Members turned over all their money and possessions to the community, following Acts 2:44–45 and 4:32–35 where the early Christians "had all things in common." Biblical support for the female aspect of divinity is found in Genesis

1:27 and Rev.12:1 ff., while the elimination of marriage is justified at Luke 20:34–35 and supported by Jesus' radical challenge to abandon family ties at Matt. 10:35–37 and Luke 14:26 (and similar Gospel parallels). While confession of sins was a universal requirement and the loss of sexuality, possessions, and family was a standard sacrifice, probably the dominant theme of Shaker religion has been an upbeat one: *love*, always available from God and always needed between humans – a succinct principle that exemplifies the Shakers' characteristic simplicity.

### Psychological Features

Psychologically, the emergence of Several exceptional female leaders following Mother Ann encouraged the gradual development of gender equality for all members. The absolutes of celibacy and separation of the sexes were tempered by the Shakers' enthusiastic worship, e.g., loud singing, synchronized energetic marching and dancing, and physical gestures in which both sexes mirrored each other. During much of the nineteenth century, young men and women would join in "union meetings," small, mid-week gatherings where the sexes would sit in two rows opposite to each other and converse, with an elder Shaker monitoring, on various topics of the day – an outlet of heterosexual socializing that helped make the daily controlled proximity of the sexes workable. Individualism was downplayed while the importance of the community was stressed: cemeteries have just one large gravestone marked "Shakers," or small identical markers recording only names and dates. When whole families joined, they were separated into men's and women's dwellings, and their children reared communally. Shaker education of children was often considered superior to local public schools. Communities were organized into large, separately sited "Families" for full members, novices, and inquirers, with a leadership hierarchy of elders and eldersses and deacons and deaconesses. Although previous family ties were severed, this community organization provided a larger family, in which all members were known as "brethren" and "sisters," while special leaders were termed

"Mother" and "Father." In general, the austerities of Shaker life were balanced by spiritual resources and intuitive psychological sensitivity that enabled their remarkably long and fruitful communal existence.

### Institutional Strengths

The Shakers' well organized communal life and industrious work ethic produced prosperous farms, innovative crafts, impressive large buildings, excellent functionally designed chairs and cabinetwork, a widely marketed variety of seeds in standardized packets, and a wholesome, plentiful diet – all of which made possible a unique material culture that also expressed the Shakers' active religious life, summarized in their motto: "Hands to work and hearts to God."

While the Shakers had their origins in *spontaneous* ecstasies and confrontational testimonies, as their responses to being seized and shaken by the sudden visitation of the Christ spirit, their widespread expansion and long endurance owe as much to the development, after Ann Lee's death, of *rational* designs for their social organization, economic structure, and formal worship – all of which served to perpetuate, in less spontaneous forms, the original spiritual message that was so liberating and nourishing to so many.

### Decline

After the Civil War (1861–1865), the Shaker communities gradually shrank in size and number. Over the years, there had been sporadic challenges to their inner stability: the all-too-human occasions of youth to rebel against older authority, of trustees (who were delegated to conduct business with the outside world) to embezzle funds or invest unwisely, and of illicit lovers and disillusioned apostates to leave the community. But it was external economic and social factors that caused accelerating declines especially, in the number of new members, and first the consolidation of dwindling communities

and then their closing, with some to reopen later as museums. The growth of cities, industrialism, and spreading rail networks reduced the market for Shakers' agricultural and handcrafted products, while also increasing the allure of "the world." New job opportunities, greater personal freedoms, and the gradual rise of foster homes and orphanages all contributed to the falloff in new members, especially of distressed women who had previously sought refuge with the Shakers and of orphaned children who had been brought to them. The proportion of male members shrank, and farming done by hired non-Shakers became common. Women came to dominate in leadership roles, and the average longevity of remaining members increased significantly, due to a healthy lifestyle and the mutual support of communal living. As times changed, so did many aspects of the Shakers' daily life and worship, demonstrating their adaptiveness.

## Historiography

Questions remain about how to interpret many early accounts and about the speculation that the deaths of Ann Lee's four children at very early ages had determined her negative view of sex (reportedly, Mrs. Wardley had also promoted sexual abstinence). Besides thousands of the Shakers' own publications and manuscripts now in archives, many non-Shakers have written about them; see the bibliography for recommended authors. Aaron Copeland's 1944 music for Martha Graham's ballet, "Appalachian Spring," incorporated the now-famous tune, "Simple Gifts," composed perhaps in 1848 by Joseph Brackett of the Alfred, ME, community, with words dating back at least to 1813. Recent television specials and musical recordings continue to appreciate and publicize aspects of Shaker life and make them available to a wide and interested public.

## Shakti

David A. Leeming  
University of Connecticut, Storrs, CT, USA

The Sanskrit for "power" or "energy," Shakti (*sakti*) in Indian religion is the energizing material power of a given Hindu god, a power

personified as his wife, especially the wife of Shiva. Often depicted in a state of sexual union, the god and his shakti together represent the Absolute, the god being nonactivated Eternity, the goddess being activated Time. The Goddess, Devi, is Shakti or “Universal Power.” As Prakrti, she is the shakti or female energy by which the original Purusha, the primal male, becomes creation. As Lakshmi, she is the manifestation of the divine energy associated with Vishnu. Shiva’s shakti takes many forms – Uma, Durga, the terrifying Kali, and the motherly Parvati, for instance. By extension, Sita is the Vishnu avatar Rama’s shakti in the *Ramayana*, and Draupadi is the shakti of the Pandavas in the *Mahabharata*. And by further extension, the Hindu wife is a manifestation of her husband’s shakti. By still further extension, shakti may be said to be the spiritual equivalent of the Jungian *anima* (Latin for psyche or soul) in which the anima is the subconscious inner self of the male – his feminine principle – and the related animus is the subconscious inner self or masculine principle of the female. The individual might be said to be animated by the anima/animus as the god is animated by his Shakti.

## Shamanic Healing

Meg Bowles

Westchester Institute for Training in  
Psychoanalysis and Psychotherapy,  
New Fairfield, CT, USA

### What Is Shamanism?

Shamanism is an ancient method of healing found in many cultures that focuses upon the relief of spiritual pain and suffering through interventions in non-ordinary reality. Non-ordinary reality (see Castaneda, who originally coined the term) can be described as the dimension of the Cosmos that exists outside of and parallel to the linear time-space arena of ordinary awareness. What distinguishes the shaman from other healers is the ecstatic flight or journey into non-ordinary reality in order to contact his or her tutelary spirits for the knowledge and healing needed for a specific patient or community. The shamanic state of consciousness which enables the shaman to see what others do not is entered into and exited at will, usually with the aid of repetitive drumming or rattling. The drum is often seen as a spirit horse whose sound allows the shaman to ride into the Upper or Lower Worlds of the shamanic Cosmos. It is the helping, compassionate spirits that the shaman interacts with in these realms – the power animals, teachers, and other wise beings – who do the diagnosis as well as the healing work in partnership with the shaman. A master of linking the ordinary with the non-ordinary worlds, the shaman therefore functions as an intermediary or bridge who also interprets and communicates the meaning of what is experienced in these alternate realities.

The resurgence of interest in shamanism and shamanic healing that has been thriving for the past few decades is evidence of a deepening hunger to reconnect with the transcendent dimensions of reality in a direct, revelatory way. Ancient shamanic practices have been resurrected and revitalized throughout the world as indigenous people have become freer to practice their own

traditions openly (e.g., as in the former Soviet Union) and have sought to recover the old ways of their ancestors in order to heal themselves and their communities. Feminine shamanic traditions which possess more of an interpersonal orientation that encourage and empower patients to become active participants in their own healing are also taking their rightful place of importance alongside the more masculine, heroic shamanic traditions (see Tedlock) where the patient adopts more of a passive role. While some Westerners have been drawn to study with indigenous shamans, many more have been able to explore shamanism through various training programs in what has become known as “core” shamanism that have been offered all over the world through organizations such as the Foundation for Shamanic Studies.

## Core Shamanism

The body of work referred to as core shamanism was originally synthesized and brought to Westerners by the pioneering work of anthropologist Michael Harner. During the 1950s, Harner conducted extensive fieldwork with the Jivaro and Conibo people in South America and was eventually initiated as a shaman. After further research into many other shamanic practices throughout the world, Harner began to synthesize and distill the fundamental techniques that he found in common across various traditions into a universal, core practice for integration into Western contemporary life. These techniques, the primary one being the shamanic journey process which enables one to enter into the characteristic ecstatic, shamanic state of consciousness, have proven to be accessible even for those who have no prior training or conscious experience with anything remotely shamanic.

Core shamanism is essentially a modern spiritual practice free of specific religious or cultural requirements. That said, the basic world view embodied in both traditional and core shamanisms is an animist one which perceives everything in the Cosmos as being imbued with life essence or spirit, including all members of the varied and wondrous kingdoms that are part of the natural world.

Everything is alive and connected within an intricate web or tapestry of energy, both in this physical realm and in other parallel realities. In contrast to a psychological perspective of spirits, where the phenomenon might be viewed as an externalization of an unconscious, autonomous complex (Jung), the shamanic experience of spirits is that they have an innate intelligence and a reality of their own that exists outside of the personal and collective psyche.

## The Spiritual Origins of Illness

Shamans and practitioners of core shamanism see the phenomenon of illness as a spiritual problem resulting from either a loss of power, a loss of soul, or an intrusion of an energy form which does not belong in the patient, which may be localized somewhere in the energy body or, in the case of spirit possession, systemic. A person suffering from soul loss, for example, does not feel fully alive and engaged with life. Symptoms of soul loss may include experiences of chronic depression, dissociation, addiction, and unresolved grief, as well as persistent physical illness. Judging by that list many if not all of us suffer, or have suffered, from some form of soul loss during the course of our lives. There are a number of ways in which the lost soul can spontaneously return to embodiment, such as in a healing dream or even in a luminous moment during analytic work. Sometimes, however, a shamanic intervention by another is needed.

## Soul Retrieval

One of the most powerful core shamanic healing practices engaged in today is that of soul retrieval, a classic form of shamanic healing (Eliade 1972) which was spontaneously rediscovered in a journey by shamanic practitioner, author, and therapist Sandra Ingerman during work with a client many years ago. Soul retrieval is a healing ritual where the shamanic practitioner, in partnership with his or her tutelary spirits, journeys into non-ordinary reality to search for the missing soul parts which are ready to be returned to the patient. The soul parts

are located, interacted with, and finally “pulled” or carried out of non-ordinary reality as the journey ends, after which the practitioner restores them to the patient by blowing their essence into the heart and crown chakras of the patient’s body. The energy contained in the returned soul essence is often experienced and felt on a subtle yet palpable level by the patient.

According to Ingerman, soul loss is a natural response to unbearable trauma. Trauma triggers a self-protective phenomenon consisting of the splitting off of a part of one’s vital essence or “soul,” which then literally flees the patient to become stuck in a dimension of non-ordinary reality where it then leads a parallel existence, but one where the gifts and potentials of that soul part (as well as the memories of the trauma) remain inaccessible and no longer incarnated in this world. This view is not so different from that of an analytical psychologist, who might conceive of soul loss as an archetypal defense of the personal spirit (Kalsched 1996); however, an analytical psychologist might also perceive the phenomenon as taking place in the inner world of the patient (see self-care system), whereas according to Harner, the practitioner of core shamanism observes the evidence of soul loss empirically, in the parallel universe known as non-ordinary reality.

### Integration with Other Healing Modalities

There is a growing interest with regard to integrating core shamanic healing practices with analytical psychology (and other forms of psychotherapy) as well as with other disciplines such as Western medicine. Having been trained as a psychotherapist, Ingerman sees work of therapy as having tremendous value; however, her pragmatic view is that for the necessary psychological working – through process to progress, the patient’s soul must be embodied and therefore in residence or “home” to engage with the therapist – hence the need for the shamanic approach to bring back the split-off soul parts in order to restore wholeness to the patient. Many analysts who have found themselves working endlessly with a patient’s “false self” (Winnicott) as

they patiently hold a space for the vulnerable child to appear in their consulting rooms might resonate with Ingerman’s position. While the experience of soul retrieval can be a powerful and transformative process standing on its own or a complementary practice to deepen the work of psychotherapy, it does not provide a quick fix. As with any other healing modality, there can be pitfalls, such as if the egos of the patient and/or the practitioner get in the way of the process. The work of facilitating and integrating the return of soul into life can be arduous, complex, and humbling, as much as it can be deeply rewarding.

### Conclusion

Integrating the two disciplines of analytical psychology and core shamanism in a way that honors the power and essence of each practice without falling into a diluted soup of New Age meaninglessness presents a worthy challenge going forward for all of us who seek wholeness for ourselves and the patients with whom we work.

## Shamans and Shamanism

Richard W. Voss

Department of Undergraduate Social Work,  
West Chester University of Pennsylvania,  
West Chester, PA, USA

### Context for the Discussion: Shamans and Non-Ordinary Reality

Shamanism is a great mental and emotional adventure, one in which the patient as well as the shaman-healer are involved. Through his heroic journey and efforts, the shaman helps his patients transcend their normal, ordinary definition of reality, including the definition of themselves as ill. The shaman shows his patients that they are not emotionally and spiritually alone in their struggles against illness and death. The shaman shares his special powers and convinces his patients, on a deep level of consciousness, that another human is willing to offer up his own self to help them. The shaman's self-sacrifice calls forth a commensurate emotional commitment from his patients, a sense of obligation to struggle alongside the shaman to save one's own self. Caring and curing go hand in hand (Harner 1990: xviii).

The generic term “shaman” describes a wide range of practices among indigenous people wherein “helpers” or “spirits” are called upon to help the patient asking the shaman for help. The term is derived from the language of the Tungus people of Siberia (Eliade 1964; Harner 1990) and from the Chinese, *sha men*, as well as the ancient Sanskrit *sramana* which is translated as “ascetic”

and from *sramati* as “he fatigues” (Hopkins 1918). The term describes the indigenous practitioner who works with spirit helpers and through whom the spirits “doctor” or treat the individuals that come for help and healing. Often the metaphor of the “hollow bone or tube” is used to describe the power of the shaman – as he or she is one who is simply a tool or conduit for the helping or healing process – the power for the healing comes from something beyond the shaman – often from some other world or realm. Generally the shaman does not seek to become a shaman, but the spirits choose him or her for this purpose, or the individual inherits the “helpers” or “medicine” from their family ancestors (Personal communication, 1999, 2001). John A. Grim noted that “Among tribal people the shaman is the person, male or female, who experiences, absorbs, and communicates a special mode of sustaining, healing power. For most tribal peoples the vital rhythms of the natural world are manifestations of a mysterious, all-pervasive power presence” (see van der Leeuw 1938/1963; Grim 1983).

In the past other more pejorative terms were used to describe these healers, such as “witch,” “medicine man or woman,” “witch doctor,” and “sorcerer,” so the use of the more generic term “shaman” avoids such prejudicial overlays to this healing tradition and is preferred (Harner 1990). The shaman is distinguished from other kinds of healers by his or her use of altered consciousness, which Eliade called “ecstasy” (cited in Harner 1990). Harner notes that shamanism is the most widespread and ancient methods or systems of mind-body healing known to humanity (1990, p. 40). Equally remarkable is the fact that the assumptions and methods or processes of shamanism are very similar across the various and distant regions of the world (Harner 1990; Eliade 1964). Years ago, one of my students showed me a video tape of a spirit-calling ceremony conducted in a remote indigenous community in Brazil – which had many elements I had observed in traditional Lakota spirit-calling ceremonies, such as the use of earth in the “altar” as well as the use of six directions’ flags (the black, red, yellow, white, blue, and green), tobacco offerings, and a darkened room cleared of all furniture.

Harner noted that the shaman

operates in non-ordinary reality only a small portion of his [or her] time and then only as needed to perform shamanic tasks, for shamanism is a part-time activity. Among the Jivaro, the Conibo, the Eskimo, and most other primitive groups, the master shaman is usually an active participant in the economic, social, and even political affairs of the community. The shaman moves back and forth between the two realities deliberately and with serious intention (1990, p. 46).

The shaman I met in a remote Amazonian community was the president of his community council and a teacher and also collected Brazil nuts in the forest. When I first met him, his riverboat was on its way to the market, heading away from his village. When he learned that I had come to interview him, he met me at the small village grocery store where I was told to meet him – I was amazed that he arrived sooner than I did, even though he had been traveling in the opposite direction. He was a highly respected political leader of his community, was modestly dressed, and wore a rosary around his neck. The interview took place on the porch of the small building which served as the local “grocery store.” Other traditional “medicine men” or shaman I met often worked tirelessly helping their communities, one actually served as chairman of the tribe, served on tribal council, and conducted healing ceremonies whenever requested – pretty much at the request of anyone seeking help and assistance (Personal communication, 1999, 2001).

### **Shamans Do Not Operate in the Abstract**

I think the best way to discuss chamanism/shamanism is to describe it in concrete terms. In 2004 I had the opportunity to conduct field research in concert with the Amazon Center for Environmental Education and Research (ACEER) as part of a Faculty Development Grant made possible by West Chester University and the ACEER. As part of this project, I visited a traditional indigenous community along the Tambopata River in southeastern Peru. While conducting this field research, I had the opportunity to interview numerous individuals about the

healing and helping traditions of chamans/shamans in the area. These interviews included interviews with chaman, patients, community leaders, and other healthcare professionals. As part of this research, I asked a recognized chaman if he would sing a healing song used in his ceremonies. He told me to return later that evening to his casita, not exactly answering my question. Over the years I have learned to follow directions literally, without analysis (which requires a shift from my otherwise usual mode of study). I returned to the little casita at nightfall where he was resting in his hammock. I was invited to sit in one of the adjoining hammocks where we continued our conversation until he invited me into his house.

### **The Entire Forest Was Dancing!**

I was instructed to sit on the edge of his bed. He rolled four tobacco cigarettes, each about 3 in. long, and laid them aside. The chamen/shamen stood in front of me. Then he poured rose water over my head from a small bottle which dripped over my face and back. The rose water had a very pleasant fragrance. He then lit one of the cigarettes and blew smoke on me and all around me. He then took a small bunch of long leaves (called a chakra) that were tied at the stem which formed a handle; the leaf rattle was approximately 10 in. in total length and about 6 in. wide. The chamen/shamen then began striking the top of my head with the chakra while he sang a very simple melody in a very soft, subdued birdlike whistle, formed by the air blown against the roof of the mouth through the teeth, not a hollow whistle blown through the lips. All the while the chamen/shamen continuously struck the top of my head gently with the chakra. The chamen/shamen’s song did not have any recognizable words, consisting of a very simple and subdued, yet shrill, whistle. I recall thinking how simple and childlike the tune was – it seemed like a very “happy” tune. I recall feeling very relaxed and that I was “in good hands.” There were no explanations given by the chamen/shamen; the process was entirely experiential. By this time I had closed my eyes,

and I focused on the rustling sound of the dry leaves of the chakra. Before I knew it, with each strike of the chakra, I felt as if the entire forest had opened up and was dancing around me. It was as if the little leaf rattle became the spokesman for the forest, and it was as if I was hearing the entire forest singing and dancing all around me, and I was part of it. It was as if the chamen/shamen had brought the entire vegetation of the Amazon into that little casita.

## Shamanism and Psychology

John A. Grim noted a more universal implication for the interest in shamanism, noting, “Shamanism is not only characteristic of tribal peoples but also is an ongoing and irreducible mode of experiencing the sacred that is not limited to a particular ethnic group. . . .” Elsewhere he noted that shamanism has a certain attraction for our times, when the more sophisticated, or more rationalized, modes of religious life are often so weak that they no longer communicate the power needed by contemporary man, who must resolve a new and overwhelming set of tensions in a creative manner” (1983, p. 29). Shamanism is particularly of interest to those interested in the intersection between religion and psychology; J. A. Grim noted further that “The meaning of shamanism lies in the depths of the human psyche, which is not yet fully known to itself but is partially manifest in particular human efforts to structure symbols as a way of knowing” (1983, p. 31).

## Conclusion

A discussion of shamans and shamanism provides an important perspective on the intersectionality of psychology, religion, and ecstatic experience and focuses the clinician on the role of “caring and healing” in the therapeutic interaction which is not focused on clinical detachment or objectivity, but rather on ecstatic engagement, connectivity, and the subjectivity of the healer with the patient where both encounter the non-ordinary reality and subsequent psychological and spiritual transformation.

## Shame and Depth Psychology

Gerardo James de Jesus  
Philadelphia, PA, USA

## Shame

Shame can be defined simply as the feeling we have when we evaluate our actions, feelings, or behavior and conclude that what we have done wrong makes us wrong. It encompasses the whole of us; it generates a wish to hide, to disappear, or even to die. Shame, as the deeper problem of the self, means that one has suffered a loss of being, not merely loss of status. Individuals suffering from a shame-based complex have a characterological style of identification with a given behavior due to internalization. For example, when someone is

called “an angry person” an emotion becomes the core of his character or identity. He does not *have* anger or depression; he *is* angry or depressed. Similarly, shame-based people identify with this affect-toned complex in a globalized way which becomes characteristic of their behavior. People with shame-based complexes guard against exposing their inner selves to others but, more significantly, will guard against exposing themselves to themselves. The shamed affect is ignited upon hearing a single word, observing a gesture by another that is distorted and catastrophized, or by just about anything that will trigger the complex, creating a negative affect that is felt in a global sense.

One way of understanding a shame-based complex is by noting what shame-based persons are not. Quoting from M. Scott Peck, John Bradshaw notes that to be a non-shame-based person “requires the willingness and the capacity to suffer continual self-examination.” Such ability requires a good relationship with oneself. This is precisely what no shame-based person has. In fact, a toxically shame-based person has an adversarial relationship with himself, often compulsively seeking ways to avoid the affect-toned shame-based feeling. It is this very reason that he projects it away from himself onto others. Other defensive mechanisms which the ego uses to avoid feeling the shame affect are repression, dissociation, distraction, or ownership. This intersubjective work occurs on an unconscious level; if he understood what he was doing on a conscious level, he would have learned to own it and become conscious of his projections.

The following three points attempt a description of the problem of shame emerging both at an individual and a communal level. First, a normal response of failure to an internalized standard created by an authoritative source such as family, society, or religious affiliation can generate a shame-based complex that has a globalized affect that engulfs one’s entire being. Further, shame-based individuals make no distinction between themselves and real and imagined failings. So, often what they imagine to be real is exaggerated.

Secondly, the inability to distinguish between imagined failings and behavior that is not exaggerated is referred to as fusion. Fused feelings blur the self, making it difficult to differentiate clearly. What is cognated, or re-cognized, such as inner features, feelings, memories, thoughts, images, standards, and God concepts, are fused with outer features, interpersonal associations such as church, family life, society, and culture. Another way to view it is to imagine a co-assembling of inner feelings and thoughts, images, memories, bound to outer shaming events associated with God, church, or family. The church, an outer association where acceptance and purpose is sought, can actually be a place where shame is internalized. Feelings of anger, rage, self-contempt, comparison with others, and meaninglessness are not relieved with Church activities such as prayer, Bible reading, or hearing homilies. Rather, life becomes a ritualized routine without any connection to a goal or purpose when what is heard is felt to be like shame. For some who have left the church, the hearing of a sermon can become fused with a feeling of shame and the feeling reexperienced as memories of childhood visits to the house of shame: the church. The sense of “feeling lost” is not unusual in a place where “being found” is preached.

Third, there is no one theory of shame that allows professionals in the field to devise a uniform treatment of the problem. A DSM diagnostic disorder of shame does not exist. Instead, shame is observed as symptomatic of that which stems from mood disorders or, some would argue, evident in the behavior of personality disorders. It would be helpful to define the state of shame by compiling a list of a unique set of behaviors or a set of stimuli that elicit the particular feeling, informing pastoral psychotherapists on how to treat a patient. What is evident is that those in Christian faith communities who suffer from shame acquire it as a by-product of their theological formation.

As persons of faith process psychological life through theological presuppositions that have helped guide and, at times, misguide them, rather than dismiss the theology or the Christian faith, the pastoral psychotherapist can help the patient discern and rethink metaphors, symbols, and stories that shaped much of the client’s identity

in a way that is empowering and liberating. Theological concepts such as incarnation, forgiveness, redemption, reconciliation, and unconditional love can be reframed by rehearsing the sacred narratives in a new way. A healing methodology of pastoral psychotherapy that reframes the stories, myths, and narratives can be discovered in depth psychology.

The pastoral psychotherapist trained in depth psychology can serve as a primary relational object for the patient's transferences and projections. His or her presence in the therapeutic moment can help to form a healing *imago* in the memory of the patient of non-shaming episodes. The Christian psychotherapist can discover a theological basis for this encounter in an incarnational theology that is vicarious in its expression, vicarious in the sense that the Christian psychotherapist who utilizes a depth approach to therapy can address shame by speaking in a theological language familiar to the patient. By *re-presenting* the humanity of the Christ that embraced all people in the light of their psychological formation, the Christian psychotherapist's non-shaming presence humanizes the process by moving away from absolute pronouncements of God's will to a declaration that embraces the mystery of the human. By accepting what appears as unrelated phenomena in feeling, thinking, and behavior, which, in a more behavioral modification approach, would have been avoided or minimized with absolute biblical principals, the depth approach honors that within the self and outside the self that seeks to bring transformation, including deriving meaning of the shame-based complex and its part in psycho-spiritual renewal.

## Depth Psychology

Jung's theory of depth psychology is distinguished by its emphasis on the unconscious as an objective reality. By exerting specific pressures on our subjective consciousness, it produces oppositional, at times compensating, viewpoints that guide the process of individuation. The unconscious does not determine consciousness in a fixed way but

operates constantly in the background as a guide to the process of healing and wholeness. To observe this background is to learn how to own the process of individuation. The patient in analysis learns to hear and be conversant with the shame-based complex when it rears its head. By capturing projections, the patient remains conversant with the oppositional voices, embracing the affect rather than avoiding, repressing, denying, or projecting. Differentiation of internalized shame-based affect from outer events is enjoined in the process. By differentiating internalized voices, the patient embraces what once felt oppositional and, in doing so, discovers that what once felt like a feeling to be avoided or projected can be viewed as a key to understanding the self. From a Jungian depth psychological point of view, transcendence and transformation are possible as the oppositional is now acceptable.

Depth psychology is much broader as a methodology for addressing shame than are Biblical ways of thinking as the source of solving personal complexes and problems. Some approaches to psychotherapy from a Christian perspective assume an anthropology that places the spiritual life as a higher or initial life of the self that is combined with a rational or mental self. By appealing to this spiritual motivation, an appeal that depth psychology also embraces, the cognitive approach seeks to direct the patient towards a Biblical way of thinking as the source of solving problems. The assumption is that if one is spiritually oriented towards God's principles and lives "obediently" in accordance with these principles, all else will follow. For some, this seems to work, but for those unable to accept this principle of spiritual obedience as a solution to all problems, the therapy may not be effective. Consequently, therapy for a non-Christian is not possible, as a prerequisite for successful therapy is to embrace the "truth" of God's principles.

Although depth psychology is similar to a Christian cognitive approach in its emphasis upon the spiritual as a medium for transformation, its universal approach to seeking what is common in all humans and cultures differs from a Biblical approach to counseling. In depth psychology, prerequisites like embracing Biblical principles are not

necessary. It seeks to ask what is it that is longed for in all humans through the symptoms that are expressed by all people. There is no fixed way of being “Christian,” rather; to be Christian is an invitation into a way of seeing oneself in its relation to the outer world through a Christ that is transcendent. In the spirit of the Christ of the gospels, the shame-based person learns to reconcile, embrace, and accept all that feels oppositional in him. Rather than seek to impose a conventional form of wisdom that is enculturated as a way of legitimating an institution, a depth psychological model can be woven into a theological anthropology that sees the unconscious process as guided by a Spirit that knows of the Christ, an archetypal reality Jung called the Self. The Self is that within all humans that acts as if it knew God or Spirit. It includes both the ego and the unconscious and is encountered when the human need for *transcendence* is understood in the psychotherapeutic moment.

The transcendent function is discovered in a process called oppositional dialogue or active imagination. The patient is empowered to hear the “authoritative” voices that once determined approval as a longing to be made whole. By placing oneself in an oppositional relationship with the affect – as if it were alive – one learns to hear and even speak to the affect, seeking meaning for its long and painful manifestation in the life of the shame-based person. Rather than be quick to purge it or perceive it as a result of a “disobedient life,” the process helps to reframe it as a summoning to a more spiritual life. In this approach, “disobedient acts” are less the focus of therapy, and learning to hear what the “acts” and their symptoms mean is a focus of the depth approach. One’s overall longing is what is most essential. Ann Belford Ulanov reminds us that “the encounter between Self and transcendence presses for its own resolution, towards what Jung called individuation.” The push for transcendence can be manifested in shaming behavior, and shaming behavior can be conceived as manifesting the need for transcendence. For a Christian psychotherapist practicing within a Jungian theoretical framework (since as mentioned, Christians tend to address personal issues from within their respective theological pre-suppositions), the spirit of Christ can be spoken of

as the presence that reconciles, embraces, and accepts what felt oppositional and shamed.

By defusing and differentiating the internalized voices discussed above through this active imaginative approach, the patient learns how to capture the unconscious projections. What is projected or transferred is the feeling that is avoided, namely, the affective shame-complex. Since passing blame through scapegoating or demonizing is a common transference phenomenon of the unconscious, it too is an archetypal reality called the shadow. The shadow is that which disrupts and interrupts the ego’s need to save face to the outer world. It is the psychological clothing we wear in order to survive an outer world that has shamed us. One cannot act as if the shadow does not exist, for it will manifest itself in projections. Consequently, coming to terms with one’s shadow involves clearly defusing and differentiating what is mine and what belongs to the other. It defuses the internalized images that are fused with the outer world and helps the patient arrest the projections. As the fusion of the inner and outer spheres created the globalized sense of shame, embracing the shadow and differentiating from the ego’s need to project contributes to the conscious ownership of the self, as it seeks to become whole.

In the case of a shaming theology, oppositional dialogue seeks to have the patient converse with inner feelings and voices that a shaming theology avoids, since its commitment is the legitimizing of an enculturated religious institution. Depth psychology holds to the legitimization of the objective psyche and its summons towards individuation. A Christian doing psychotherapy from within a Jungian theoretical model might say, “the spirit blows where *it* wills,” not where and how, the institution says it blows! This embracing of the oppositional within as an authentic process of the self is a way of learning about the “truth that sets one free.”

the ego; but shame is felt as an inner torment, a sickness of the soul. It does not matter whether the humiliated one has been shamed by derisive laughter or whether he mocks himself. In either event he feels himself naked, defeated, alienated, lacking in dignity or worth (Tompkins 1963, p. 118).

The affect of shame manifests in a variety of physiological ways including blushing, sweating, dizziness, lowering or averting of the eyes, and increased heart rate.

Shame, as distinguished from guilt (which affect theorists understand to be a subpart of the shame/humiliation affect), is about exposure and the experienced self. Guilt is remorse about acts believed to have been wrongfully committed. Shame is about the experienced wrongness of aspects of one's very being and is often, directly or indirectly, related to the condition, the needs, the desires, limitations, and suffering of the human body.

## Shame and Guilt

Jill L. McNish  
Union Theological Seminary, Swedesboro,  
NJ, USA

### The Shame Affect

According to the influential affect theorist Sylvania Tompkins (1963, p. 118), shame/humiliation is one of the six innate negative affects. By the word "affect," Tompkins means "a physiological mechanism, a firmware script," that is dependent on "chemical mediators that transmit messages and on the organizing principle stored in the subcortical brain as the affect program" (Nathanson 1992, p. 149). "Shame," according to the oft-quoted definition of Tompkins,

...is the affect of indignity, transgression, and alienation. Though terror speaks to life and death and distress makes of the world a vale of tears, yet shame strikes deepest into the heart of man. While terror and distress hurt, they are wounds inflicted from outside which penetrate the smooth surface of

### Guilt Distinguished from Shame

It is believed by affect theorists following Sylvania Tompkins (1963) that guilt is subsumed under the affect of shame. Since guilt involves acts believed to have been wrongfully done or left undone, whereas shame involves a sense of the wrongness of the self regardless of acts or omissions, guilt involves less experience of the self than does shame. However, guilt and shame are often fused, with guilt also involving a conscious or unconscious fear of retaliation, or talion dread. Feelings of guilt imply basic trust in one's world, its laws, rules, and taboos, and in the persons who are the interpreters of these laws. It is generally understood that guilt feelings develop during the oedipal stage of life when culture's laws are first internalized through fear of the father.

Religions typically are among those societal institutions that create rules, laws, and taboos to which persons are expected to adhere. For example, in Judeo-Christian religious structures, the Ten Commandments set forth basic laws which must be complied with. Most Christian denominations provide mechanisms and rituals for confessing one's wrongful acts and omissions,

thus assuaging feelings of guilt and leading to a sense of forgiveness and reconciliation. It has sometimes been observed that in secular life psychotherapy provides opportunity for “confession.”

### Implications of Shame

Contemporary psychology understands the affect of shame as being necessary to protect individual boundaries of privacy and to ensure individuals’ social adaptation. Furthermore, psychological theorists following the groundbreaking study of Helen Lynd (1958) see experiences of the affect of shame as providing access to the deepest possible insight into personal identity, since shame is viewed as the affect closest to the experienced self. In her 1971 work *Shame and Guilt in Neurosis*, Helen Block Lewis persuasively argued from empirical clinical studies that real psychological healing cannot occur without express analysis of shame issues. However, it is axiomatic that for some individuals shame is the overarching and deeply engrained habitual mode of reacting to others. Large degrees of shame, inappropriately or obsessively fixed, can lead to profound depression and other mental illness. Defenses to the experience of shame include social withdrawal, isolation, addictions, depression, violent acting out, abuse of power, self-righteousness, blaming and projection, shamelessness (a power defense to shame), and perfectionism.

It has been argued that shame is archetypal, as is evidenced in the myth of Adam and Eve’s fall and expulsion from the Garden of Eden. It has likewise been asserted that the enduring power of the narratives of the Christian Gospel derives from the shame that is explicit and implicit in Jesus’ birth, life, ministry, and crucifixion, as well as the shameful circumstances of many of the individuals to whom he ministered (see McNish 2004).

### Sharia

Amani Fairak  
Heythrop College, University of London,  
London, UK

*Sharia*, or Islamic Law, is a set of principles implemented in the Islamic community. Sharia comes from the Arabic word (شريعة) Shara’a which means to enforce a code of conduct in order to facilitate a way of life. Islamic Law is integrated into almost all aspects of life, from relationships, education, and law to economics and politics. Islam proposes four descending criteria to which Islamic society or individuals can refer as an ideal model for social policies. Sharia has certain sources from which it derives its authority in Islamic society and characteristics that give it credibility and authenticity among Muslims. Sharia is divided into two major sources and nine sub-sources. The first two sources are *the Quran*

and *the Hadith*, which are believed to be directly or indirectly divinely inspired. The sub-sources are mainly based on scholastic interpretation and judgments.

## Sources of Sharia

1. Quran: Muslims believe it to be the literal word of God.
2. Hadith: the teachings of the Prophet Mohammed.
3. Ijma'a: the consensus or the collective agreement of Muslim scholars.
4. Qiyas: the standardization of any issue against Quran and Hadith based on Ijma'a.
5. Istihsan: it comes from the Arabic word *Istah'sana*, or to prefer something over other possibilities of decisions.
6. Masaleh Morsalah (the Common Good): a jurisprudential agreement can be Islamically approved if it brings about common good for the Islamic community or the public.
7. Sadd al-Dhara'i (the standardization of appropriate means and ends): it is to block any means that might cause social disruption even if the ends can be noble. This also means that any means that might bring about a common good should be Islamically facilitated.
8. Al Orf (conventions): it comes from *Arafa* in Arabic, which means an acceptable manner of doing something. It is the social convention or custom in any given Islamic society that may contribute to change in Islamic Law.
9. Math'hab al-Sahabi (the teachings of the Prophet's companions): it is to use the teachings of the Prophet's companions as a raw model in everyday life if there is no direct text from the Quran or Hadith or the previous Islamic Laws.
10. Sharia man Qablana (Pre-Islamic Laws): if there is no known source from a companion, Muslims can follow the laws of the previous messages like Christianity and Judaism as long as they do not conflict with the main sources of the Quran and Hadith.

11. Istis'hab (continuity): the presumption of continuation of a certain status is to remain as is until it can be changed or refuted by evidence.

## Characteristics of Sharia

1. Divine law: Muslims believe that the Quran is the third and final literal message that God has sent to humankind, after al Taurah (*Torah*) and al Injeel (*The later Bible*).
2. Long-term and short-term policy of reinforcements: the Quran speaks of promises and consequences for the short and long term. The mention of heaven and hell are emphasized throughout Quran. Muslims believe that every action has a reaction that can be either rewarded or disciplined in this life (al-Donia) or the afterlife (al A'khirah).
3. Universality: since the Quran is the last message from God, its message is universal to all human-kind in contrast to the previous messages of Jesus and Moses and other prophets whose messages were exclusive to their people.
4. Comprehensiveness: as the last message, the Quran discusses every aspect of human life on every level, personally, socially, politically, spiritually, scientifically, and educationally. Therefore, Muslims believe that the Quran is a divine law that is open to reinterpretation and so applicable at any time anywhere.

## Commentary

Several psychologists and sociologists of religion have distinguished between the focus of Islam and Western psychology. Islam tends to view religion as the core of the individual's life, while psychology tends to view religion as one aspect of the individual's life. Social psychology, therefore, may suggest that abiding by Sharia Law is to confirm the identity of the individual Muslim in society. To follow certain codes of conduct, to adhere to specific policies of discipline, or to at least accept such a lifestyle aim at sustaining the religious institution and ensuring its survival.

Islam, as a social system and establishment, introduces the term *umma* or nation to indicate the importance of a “unified Islamic community.” This community is governed by particular policies in order to fulfill certain needs and to meet specific goals. Sociology may explain this concept as follows:

... a cultural and ideological territory in which no Muslim would find himself alien regardless of political or geographical diversities. In one sense, it is comparable to the notion of ‘Western World’ abundantly used to define a cultural and ideological territory today (Ebrahimi 1996).

*Ummah* works as “. . . a common framework in which temporal association of different groups sharing the Islamic values can be maintained” where the goal and the strategy in cultivating the concept of *umma* is already recommended in the Quran.

## Shekhinah

Mark Popovsky  
Department of Pastoral Care, Weill Medical  
College of Cornell, New York Presbyterian  
Hospital – Chaplaincy, New York, NY, USA

## In Rabbinic Literature

In early rabbinic texts such as the Talmud, the term Shekhinah (lit. “dwelling”) is used as one of many Hebrew names for God. Deriving from the verb meaning “to dwell,” this particular divine

appellation suggests imminent divine manifestation in a specific place or at a specific time. For example, the Shekhinah is said to rest at the head of a sick person’s bed, to appear when ten men gather for prayer, or to rest between a righteous man and his wife. Though this is the only commonly used Hebrew name for God that is grammatically feminine, in Talmudic and contemporaneous sources, overt feminine images are rarely associated with it. In most instances, the term Shekhinah could be replaced with other Hebrew names for God such as “Master of the Universe” or “The Holy One Blesses Be He” without any consequent change in the passage’s meaning.

## In Medieval Texts

A primary concern of many medieval Jewish philosophers from the post-Talmudic period such as Saadya Gaon, Judah Ha-Levi, and Moses Maimonides was to preclude any interpretation of scriptural passages which might suggest divine anthropomorphization. Revelation and prophecy were especially problematic phenomena for these philosophers because they presume that God communicates in human language. Consequently, among these philosophers, the Shekhinah was often understood not as another name for God but rather as a divinely created separate entity. The Shekhinah became the divine intermediary that would appear to prophets in visions; for God himself does not speak. The Shekhinah is the entity that reflects God’s presence in the world and that interacts with human beings because God’s ultimate transcendence makes direct human-divine contact impossible.

The concept of the Shekhinah evolved further in the writing of the Kabbalists (Jewish mystics) from the twelfth century on. Kabbalistic thought posits that a profound unity of the divine once existed but was severed because of human sin. With this rupture, the masculine and feminine principles of the divine were separated and remain alienated from each other to this day. The Shekhinah becomes the symbol of the feminine aspect of the godhead, the element of the

divine closest to the created world and most directly in contact with human beings. According to the Kabbalists, it is the duty of each individual to work to unite the male and female halves of God by observing the laws of the Torah and living a holy life. Human actions affect the divine, either promoting or hindering progress towards its reunion. Redeeming the Shekhinah from its exile from the remainder of the godhead becomes a primary motivation for behavior in Kabbalistic teachings.

It is in the Kabbalistic literature generally and in the Zohar most prominently that feminine and sometimes even erotic imagery is first associated with the Shekhinah. The Shekhinah is often depicted as a queen or a bride and serves as a foil to the traditional patriarchal images of a transcendent deity. It is not uncommon in Kabbalistic texts to find imagery portraying the reunion of the Shekhinah with the remainder of the godhead as sexual intercourse. Some Kabbalists would attempt to visualize such divine coupling when performing religious duties in order to remain aware of the broader theological implications of their righteous acts.

### Contemporary Analysis

Reflecting the status of women in the premodern period, the Shekhinah is often described in Kabbalistic texts as beautiful and radiant but passive and dependant on the deeds of men for redemption. Some scholars suggest that the popularity of the Shekhinah as a gendered representation of God may have arisen out of the same psychological and theological needs for divine intimacy and accessibility which popularized the Cult of the Virgin Mary among contemporaneous Christians. A number of modern feminists have argued that Jewish women should reclaim the image of the Shekhinah as a counterbalance to the many masculine images of the divine found in scripture and Jewish liturgy. Some Jewish pastoral counselors have reported positive results exploring feminine images of the Shekhinah with women who have suffered trauma and are alienated from more traditional divine imagery.

Shema Israel, Adonai Eloheinu, Adonai Ehad –  
Hear O Israel, the Lord our God, the Lord is One.

This prayer is recited in the morning and afternoon prayers and on the death bed. The word “shema” means listen, or understand, indicating that one is to turn inward and feel God, since God cannot be visualized. “God is one” is a unifying principle.

The word “Lord” is used to replace the name of God, which cannot be said.

Eloheinu means “our God.”

Ehad means “one.”

This short phrase captures monotheism and identifies the Jew saying it as a dedicated person of God and a member of the Jewish people – it is a statement of belief and of identity. It is an affirmation of Judaism and a declaration of monotheism. It unifies the self as it declares that the individual self belongs with a particular group. This unifying sound of the Shema can serve to hold the individual personality and make it feel safe and connected.

## Shi'ite Islam

Liyakat Takim  
Department of Religious Studies,  
McMaster University, Hamilton, ON, Canada

Historically, the term Shi'a refers to the partisans of 'Ali b. Abi Talib, the cousin and son-in-law of Muhammad. The early Shi'is claimed that 'Ali was the only legitimate successor to the Prophet Muhammad having been explicitly designated by him at Ghadir Khum.

To understand the psychology of Shi'ism, it is important to comprehend certain historical events. With the coming of 'Ali to power in 656 Shi'ism emerged as an effective religiopolitical movement. Although unable to join him in battle, the Shi'is also supported Husayn, the son of 'Ali, in his uprising against the Caliph Yazid in 681. The massacre of Husayn and his forces at Karbala then was an important milestone in Shi'i history, as it affirmed notions of injustices endured by the progeny of the Prophet and exacerbated a passion for martyrdom. The "martyrdom complex" has generated the demonstration of grief and passion for the 12 Imams that Shi'is revere (Fig. 1).

An important feature in Shi'ism is weeping for the Imams for it is believed that they were all poisoned or martyred on the battlefield. Weeping for the Imam also reinforces his soteriological function for it is believed that even a tear shed in the memory of the sufferings of an Imam will result in him exercising his intercessory powers.

By participating in the sorrow of the family of the Prophet, the *ahl al-bayt*, the sins of the faithful are obliterated. The importance of weeping can also be seen from the belief that weeping reenacts the cosmic drama. According to some Shi'i traditions, the heavens and earth wept for the blood of Husayn. As a matter of fact, the whole of God's creation cried for Husayn.

Shi'ite faithful also congregate in local assembly halls to hear repeated affirmation of the historical injustices endured by the progeny of the Prophet. The *majalis* (pl. of *majlis*) are lamentation assemblies where the stories of the martyrs of Karbala are recited for the evocation of grief. Narratives associated with the Imams are often heard in the *majlis*. In addition, their virtues, miracles, and valor are recounted.

## The Significance of Flagellation

An important ritual that often accompanies the outpouring of grief is that of flagellation. In Shi'ism, flagellation is a composite term that includes the use of swords and knives to cut the head (*tatbir*), the use of chains (*zanjeer*), as well as striking of the chest. *Tatbir* is the most violent of these acts and is practiced by only a small portion of the Shi'i community.

Together with other rituals, flagellation is important as it helps induce a state of altered awareness in which ordinary restraints of prudence are removed. The flagellant loses not only his sense of self-protection but also his sense of separateness from the Imam as the flagellations generate a mood of identification with sacred Shi'i figures. The flagellant breaks the boundary between himself and his fellow flagellants and even between himself and the model he seeks to imitate.

Flagellation performs different functions. For many flagellants, the induced physical sensations help in the attainment of spiritual states. Blows to the body stimulate identification with the blows inflicted on Husayn and allow the historical tradition not only to be intellectually apprehended but also emotionally and physically experienced. Shedding blood is seen as the pilgrim's way of

**Shi'ite Islam, Fig. 1** Husayn Shi'a Mosque in Karbala, Iraq; pilgrims commemorating the martyrdom of Husayn ibn Ali, grandson of Muhammad (Public Domain [http://en.wikipedia.org/wiki/File:Kerbela\\_Hussein\\_Moschee.jpg](http://en.wikipedia.org/wiki/File:Kerbela_Hussein_Moschee.jpg))

demonstrating grief for Husayn's suffering and identification with the mortal wounds of the Imam. Symbolically, it is also his way of stating that had I been in Karbala, I would have protected the Imam with my blood.

Connected to the passion and emotions inherent in the Shi'i psyche is the *ta'ziya*, or expression of condolence or mourning over the martyrdom of Husayn. The *ta'ziya* was established soon after the martyrdom of Husayn when his son, the fourth Imam, Zayn al-'Abidin (d. 713), recounted the sufferings of his father. Later on, under the Buyids (945–1055), official ceremonies were organized to mark Husayn's martyrdom. Subsequently, the *ta'ziya* has assumed different forms as various Shi'i groups have expressed their devotion to Husayn in a myriad of culturally conditioned forms. In the Indo-Pakistani subcontinent, for example, *ta'ziya* refers to a replica of the tomb of Husayn that is constructed, paraded in processions, and then kept in special sanctuaries within the compound of the mosque. In Iran,

the same term signifies passion plays that depict the events in Karbala. In Lebanon, *ta'ziya* refers to a gathering to mark Husayn's martyrdom.

Other rituals that are often enacted in the month of Muharram (when Husayn was martyred) include passion plays, which attained their full expression in Iran during the Safavid dynasty. The plays reenact the events of Karbala and confront the issues of martyrdom, intercession, and the pivotal role of the Imams in the lives of the Shi'is. Passion plays are often held after a procession passes through the town. The processions often highlight political and social grievances and represent antigovernment protests. It is because of this factor that some Sunni regimes have tried to stop the processions.

Powerful symbols (called *shabih*) accompany the processions and passion plays. Especially in the Indo-Pakistani community, specially designed flags (called '*alams*) and biers are paraded to remind the crowd of the suffering that Husayn had to endure. *Jhula* (cradles) are

paraded in processions to remind the faithful of the innocent youthfulness of 'Ali Asghar, an infant son of Husayn who was also killed in Karbala. A horse, popularly called *dhu'l-jinah*, representing Husayn's horse in Karbala, is a focal point in some Muharram procession. As it is paraded among the crowd, the horse triggers an outburst of grief and initiates wailing. Like the other rituals performed in the shrine complex, the purpose of the *shabih* is to encourage weeping and engender a sense of commitment and devotion to the Imams. Through the symbols, the Shi'i is able to identify with the Imams and the suffering they endured.

### Shrine Visitation in Shi'ism

Shi'is also believe in the special charisma of the Imams. The sanctity and authority that are associated with the Imams are transferred to the places that contain their bodies as the spirituality of the Imams is believed to be embodied in the space they have sacralized. Thus, pilgrimage to the shrines of the Imams has become significant as it allows for a spiritual encounter with sacred figures.

The presence of the Imam at the shrine is interwoven with his *potentia*, his power to assist the pilgrims. The *potentia* of the Imam manifests itself in various forms, from the healing of the sick, alleviating calamities afflicting the people, to the restoration of their socio-political rights. Thus, notions of pilgrimage and intercession are pervasive in the Shi'i psyche.

Visitation to the shrine of the Imam is also connected to the use of a whole range of paraphernalia associated with the Imam, his shrine, and related material objects. It is in this context that we can comprehend the importance of holy objects. An object becomes holy when it manifests or acts as a medium with the sacred. In a sense, the divine reveals itself through holy objects, which have expressive power as vehicles of supernatural meaning and are an important means to the attainment of personal holiness. Holy objects offer salvific opportunities because

the presence of the Imam can be experienced by objects that come into contact with the shrine.

Objects help construct the physical presence of the Imam and extend his sanctity beyond the shrine. In this way, these vehicles anthropomorphize the sanctity of the Imam. In popular Shi'i culture, tying a sick person to the shrine is believed to be therapeutic. When it is not possible to bring him to the shrine, then bringing home a thread that has been tied to the shrine is believed to be an equally effective method to cure an ailment. Such objects recreate the presence of the Imam, extending the possibility of attaining his blessings and curative powers even without performing the pilgrimage at the shrine. The Imam acts through the objects just as he acts through his physical presence. At the same time, objects extend the *praesentia* and *potentia* of the Imam beyond the shrine complex, allowing distant Shi'is to experience the Imam's curative and other miraculous powers.

Another important element in the Shi'i psyche is that of waiting for the expected Messiah. Since they realized the futility of armed revolts against the political authority, the Imams, starting with Ja'far al-Sadiq (d. 765), taught the doctrine of dissimulation (*taqiyya*) rather than jihad. Henceforth, Shi'is were to conceive of jihad in terms of keeping their faith intact and paying allegiance to the Imam rather than staging armed revolts against political authorities. Jihad was declared to be in abeyance until the time of the Mahdi, the twelfth Imam and promised Messiah. It is believed that the twelfth Imam was born in 870 CE and is currently in a state of occultation. He is expected to establish the kingdom of justice and equality and to eliminate injustice and tyranny. Thus, praying for the appearance of the Messiah and postponement of any rebellion against the political regimes is another important element in the Shi'i psyche.

## Shinto

Robert S. Ellwood  
University of Southern California, Los Angeles,  
CA, USA

### The Nature of Shinto

The word “Shinto” can be translated as “The Way of the Gods” and refers to the traditional religion of Japan. Shinto has roots in the prehistoric past of Japan before the introduction of Buddhism, together with Chinese forms of writing and culture, around the sixth century CE. “Shinto” then appeared as a term to differentiate the worship of the traditional kami, or gods, from “Butsudo,” “The Way of the Buddha.” The two

faiths became deeply intertwined in the Middle Ages, when Shinto shrines were often closely associated with Buddhist temples, the deities of the former regarded as guardians, students, or even alternative indigenous expressions of the imported Buddhas and bodhisattvas. But during the modernizing and increasingly nationalistic Meiji era (1868–1912), Shinto and Buddhism were separated by the government. Shinto became in effect a state religion. Extreme nationalists favored Shinto, regarding it as the authentic Japanese faith, its deities being ancestors or divine companions of the imperial house. After the end of World War II in 1945, Shinto was separated from the state. Its some 80,000 shrines were placed under local control, and apart from a few controversial relics of the past, such as the Yasukuni Shrine, dedicated to Japanese war dead, the religion went its own way.

Shinto, however, continues in what many consider to be its true nature, a religion centered on the patronal deities of particular places and communities. Most Shinto shrines are *ujigami* shrines, that is, shrines of the patronal deity of a particular community, extended family, place, or occasionally class of persons, such as a certain trade. The kami (or it may be a family or group of kami) is either unique to that shrine or is a mythological figure of broader background essentially in the same local role. These places of worship are maintained by that community, and their *matsuri* or festivals are celebrations reaffirming traditional bonds.

Shinto shrines are easily recognizable by their distinctive *torii* or gate, with two upright pillars and one or two large crossbars, through which one passes to enter the shrine precincts, as though moving from one world to another, from the pollution of everyday life to a realm of sacred purity. The shrine itself will typically have an outer porch, bearing such symbols of kami presence as a mirror, drums, and hanging *gohei* or zigzag strips of paper. Behind them stands an eight-legged table for offerings. Finally steep steps rise up to massive doors, very seldom opened, concealing the *honden* or inner sanctum where the *shintai*, or token of the divine presence, is reverently kept.

## Shinto Worship

Shinto worship typically commences with a stately, highly ritualized offering of food (typically rice, salt, vegetables, fruits, seafood, and rice wine), followed by the chant-like reading of a *norito* or prayer and the reception by worshippers of a sip of the rice wine as a sort of communion. At major community festivals, worship is followed by colorful, celebrative events, ranging from sacred dance and *sumo* wrestling to processions, fairs, and traditional horse or boat races. This last part of the festival, which may go on all day to end with fireworks in the evening, is far from solemn, often having more the atmosphere of Mardi Gras or Carnival in Latin countries.

In any case, the main annual *matsuri* is an important solidifier of community identity; its preparation takes months, and it usually involves special, jealously maintained customs distinctive to that place. Shinto is fundamentally grounded in archaic agriculture, and most festivals are related to the agricultural year: seedtime, the growing season, and harvest. New Year, the time of renewal in this highly “cosmic” religion, is also very important.

Persons frequently visit shrines at other times as well to pray, customarily approaching the shrine porch, clapping hands twice as it were to attract the deity’s attention, then bowing the head for a few moments.

## Main Themes of Shinto

Five main themes can be thought of as characterizing Shinto:

1. The importance of the purity versus impurity concept. Shrines, and persons taking part in their rites, must be kept free of contamination by death, disease, or blood. Kami, together with their abodes – which are usually set in green park like spaces as far as possible – bespeak the purity of pristine nature as over against the pollution so often afflicting the city and human life.
2. Tradition. Shinto strives rigorously to maintain traditional practices extending back to the mists of prehistory. For many Japanese,

buffeted by the immense and unsettling changes that have affected their country in recent centuries, it is undoubtedly reassuring that one segment of national life changes little and connects them to ancient roots.

3. Matsuri or festival. Shinto fully recognizes the value of “sacred time” that affirms community, permits joyous and even ribald behavior, and is like a release from the tensions of a highly structured, achievement-oriented society.
4. Pluralism. It must always be borne in mind that Shinto is only a part of the Japanese spiritual spectrum; there is also Buddhism and (while it is not a religion in the strict sense in Japan) Confucian morality, still extremely important in attitudes to family, work, and society. Most Japanese have some connection to all three, having an affiliation with both a traditional family shrine and Buddhist temple, while affirming Confucian ethics. Shinto is typically thought to affirm the joys and relationships of this world, while Buddhism has to do with ultimate metaphysical questions and life after death. Thus, marriages are frequently celebrated in Shinto shrines, and funerals (which, having to do with death, would pollute a Shinto shrine) are conducted in Buddhist temples.

In this regard it should be pointed out that membership figures for Shinto are virtually meaningless; while few Japanese would think of themselves as “a Shintoist” in the western sense of belonging exclusively to one religion, most in fact are likely to visit shrines and participate in Shinto festivals, whatever exactly that may mean in terms of commitment.

5. Polytheism. Shinto, with its many thousands of finite kami, seems to be the only thoroughly polytheistic religion in a major advanced society today.

## Shinto and Psychological Themes

All of these points are of great psychological interest. Psychologists know that issues of purity and pollution can be very real to countless people, that the place of tradition as over against other forces is the subject of vehement debate both in

society and within individuals, that the need for celebrative release in a world of tension must somehow be dealt with, and that we need to find ways to live with integrity in a highly pluralistic society. In all these matters, undoubtedly there is much to be learned from the Shinto experience.

Polytheism is an especially fascinating case, because it is a challenge to the monotheistic or monistic direction in which most of the world's other religions have gone in the last 2,000 years. The theologian Paul Tillich once pointed out that the difference between monotheism and polytheism is a matter not just of quantity, of one God versus more than one, but also of quality. Polytheism involves a different way of seeing the sacred world, not as all centered in one divine power and person, but as diffuse and diverse. The polytheist perceives separate spirits, finite but with distinctive personalities, in this sacred grove and that waterfall, over this town and that, for love and for war. Modern Shinto apologists have argued that this is important and that Shinto is the most democratic of religions because it holds the universe runs by processes of divine conflict and consensus, rather than by a single autocratic will. Some psychologists, from William James in *The Pluralistic Universe* to post-Jungians like James Hillman in several works, have perceived modern western society to have become psychologically polytheistic in all but name and have urged us to come creatively to terms with that vision. Neo-pagans around the world have also lately been paying renewed attention to Shinto.

The psychological significance of Shinto for many Japanese also lies in its symbolic relation to primary social identities and to nature. Both are very important in Japanese consciousness. In this society, anomie and insecurity can be felt very acutely when the support of a family or peer group is lacking. Families, communities, trades, and businesses have their patronal kami and shrines and collective worship events that reinforce bonding. Shinto has been called a religion of the particular; rather than universal themes, it emphasizes sacredness in particular places and groups so strengthens attachment to significant locations and people.

Shinto moreover consorts well with the Japanese love of natural beauty. It has been spoken

of as a "natural religion" in another, more psychological sense as well: as religion in harmony with the "natural" cycles and social structures of human life, unlike faiths that challenge the merely "natural" on the basis of transcendent revelation. But inspired by Shinto, as well as forms of Buddhism such as Zen, the Japanese appreciate finding the sacred in the world and human life as it is when it is rightly perceived.

Shinto, then, remains an ancient religion with contemporary relevance. It is important for understanding Japan and also perhaps ourselves.

### Shiva

Lee W. Bailey  
Department of Philosophy and Religion, Ithaca College, Ithaca, NY, USA

Shiva is one of the major Hindu gods, typically ranked with Brahma, the Creator, and Vishnu, the

Sustainer of the universe. Brahma and Vishnu arrived in India with the Aryan invaders from the northwest around 2000 BCE, bringing the Sanskrit language, horses, and iron weapons. Shiva was an indigenous deity who was absorbed by the larger culture over centuries. Brahmanic caste society did its best to prevent mingling of Aryan blood with indigenous dark-skinned Dravidian peoples, excluded by caste rules from intermarriage, eating together, and funerals. But this effort was slowly, partly undermined by centuries of mingling. Gandhi eventually refused to attend weddings unless they were intercaste. Aryan ancient legends and rituals (*Vedas*) and later philosophical explorations (*Upanishads*) combine conservative social customs such as caste and yogic meditative sexual abstinence with highly refined cosmic speculations. Aryan gods such as Vishnu represent the saving spirit of sustaining life on earth, formal rituals, and the social order of the priestly caste system. The indigenous Dravidian peoples of India, including the Tamil people, were pushed to the south. Their primordial gods, such as Shiva and Kali, represent a more archaic type of shamanic divinity that embraces both the creative and destructive extremes of existence, embracing ecstatic methods of experiencing divinity, both fertility and death, ascetic self-control and wild song and dance, fed by mind-altering plants. Over time both Aryan and Dravidic major gods and goddesses were accepted across India, next to thousands of local deities (Storl 2004, pp. 173–189). Many Aryans see Shiva's *lingam-yoni* altars and many Dravidians embrace meditation.

When a worshiper of Shiva enters a Shiva temple, a typical ritual is for him/her to take in flowers, incense, and a coconut. The priest takes the coconut and smashes it on a hard surface, spilling the milk for Shiva to drink. This symbolizes the smashing of the worshiper's ego in our skulls, thus sacrificing its narrow instincts to the much greater transcendent, numinous presence of the Great Shiva Mahadeva (*great god*) (Storl 2004, p. 1). This is a ritual that Carl Jung would see as the ego serving the self.

Shiva is a multifaceted composite divinity that has absorbed sometimes opposing aspects over the centuries and from various regions of India.

In the *Mahabharata* text, he is portrayed as invincible might and terror, as well as honor, brilliance, and delight (Sharma 1988). As an archetypal image of divinity, Shiva has absorbed elements from various historical periods' religious traditions.

## Shamanic Elements

Ancient shamanistic cultures provided much of Shiva's roots – spirit flights where he encounters supernatural beings, elemental spirits, nature spirits, the souls of the dead, and night visits to cremation grounds that take the devotee into the dark unconscious and death images. Thus, he is called the old hunter, wild, insane, carrier of the skull, trickster, drum rider, and the black one. He is envisioned as a ganja-smoking, trance-dancing horned god, lord of the animals, and guardian of souls. He inspires many naked (*air-clad*) wandering mystics covered with ash and meditating in the wilderness, as Shiva does on his Himalayan home Mt. Kailash. He has a third eye, normally closed, but, when opened, is able to send devastating rays of fire to destroy demons, as he did the body, but not the spirit of Kama, god of desire. Shaivites' foreheads are marked by three horizontal lines of white ash to indicate his three eyes and many other trinities, such as heaven, earth, and underworld (Storl 2004, pp. 86–92). His son, elephant-headed Ganesha, likely has roots in Stone Age culture, when big-game hunters were awed by these huge, powerful animals. There are many Paleolithic cave paintings of elephants (Storl 2004, pp. 157–164). Shiva is a teacher of Tantric paths to cosmic bliss, teaching couples eternal love and a pathway to enlightenment. Tantric traditions are not ascetic, but celebrate the discovery of the Ultimate Mystery in the world and its energies. As Storl (2004, p. 210) says, “Love, not renunciation, frees the soul! Everything is divine and worthy of worship.” Food is a gift of a god; music, art, and poetry are divine. Every woman is the goddess; sensual pleasure need not be a hindrance to salvation (*moksha*) but gifts of Shiva's Shakti. This is not to welcome impure or forced relations, but

to see that love overcomes the rigidity of the ego, letting the energies of Shakti take lovers out of their minds to the self (Shiva). Miranda Shaw researched Tantra in Tibet, where it had been absorbed and transformed by Buddhists, and after undergoing strict purification rites, she concluded that Tantric sex is “holy bliss” (Shaw 1994, p. 189).

### Matrilineal Elements

Matrilineal agricultural societies later gave Shiva the Great Goddess (*Devi*) and his wife Parvati, a river goddess who is one with him as *Shakti* energy. Goddess societies gave Shiva the fertilizing phallic *lingam-yoni* altar, earth-crawling serpents, the fertilizing bull mount (*Nandi*), whose horns decorate a Neolithic sanctuary in Catal Huyuk, and the divine feminine energizing power of *Shakti*.

### Patrilineal Aryan Elements

Then, beginning around 2,000 BCE, the more puritanical patrilineal Aryan sages identified Shiva with their all-devouring fire god *Agni*, their intoxicating drink soma, and the howling storm god Rudra, who leads a parade of the dead, ghosts, and spirits. Brahmans have contributed to Shiva’s more restrained, transcendent spirituality. Many devotees who have overcome demons of egotism wear necklaces of Rudra’s tears (*Rudraksha*), strings of shriveled nuts. Sitting in serene yogic meditation, Shiva is called *Shankara* (*Peaceful One*), an image of dispassionate, calm presence. He channels the Ganges River through his head that flows down to Benares and washes the sins of the living and the ashes of the dead. His blue neck came from the Vedic tradition of creation, when the gods were churning the cosmic ocean of milk with mythic Mt. Meru. A poison came up, but Shiva drank it, showing his power to overcome evil or the power of meditation (like later psychotherapy) to bring up shadows from the deep unconscious and neutralize them.

Shiva is most commonly represented abstractly in the widespread stone *lingam* (male organ) atop a dish-like *yoni* (female organ). Worshipers pour milk or honey on it, then add flowers. This represents his role as the power of reproducing life. The *lingam* is imagined to become hot and so needs cooling liquid poured over it. His statues may represent him seated in calm meditation or whirling in ecstatic dancing. He may carry a trident as a weapon, indicating the syllable OM, meaning infinity. He wears a crescent new moon on his head, symbolizing the cycles of time, for the Eternal is beyond time.

Shiva often wears a cobra wrapped around his neck, for his wisdom conquers dangerous animal instincts. Southern India has many jungles populated with cobras. Women ritually, carefully approach trained cobras in baskets and touch them with a flower to gain fertility from Shiva. He may wear a garland of skulls, indicating that his Being embraces death. He is shown seated on a tiger skin that represents his conquest of lust. He may smear his body with ashes (*bhasma*) and inhabit cremation grounds, thus embracing death’s lessons. He has matted hair, rolled into swinging ropes or wound up atop his head. His abode is Mount Kailash, in the Himalayans, where the glaciers have for centuries melted into rivers below (until global warming melts them). This sacred mountain is seen as the axis of the world. Pilgrims walk around it, for it is too sacred to climb.

Shiva holds a small double-headed drum (*damaru*), especially when dancing. He reveres the city of *Varanasi* (*Benares*), the holy city where pilgrims immerse themselves in the Ganges River to purify themselves, and corpses are cremated. Nandi the bull is Shiva’s mount, indicating that he is protector of Dharma, the law that regulates and upholds the universe – he is known as Lord of the Animals.

Shiva is both an ascetic, sitting in yogic isolation, and a householder, married to the goddess Parvati, the divine Mother, and Shakti, divine energy. Their elephant-headed son Ganesha is worshipped as Remover of Obstacles, all over India. Their other son, Kartikeya is

vanquisher of demons and savior of the earth (Storl 2004).

## Conflict

The conflict between the Aryan invaders and the indigenous people is reflected in the conflict between the gods. Shiva's narratives are mostly in the *Purana* texts. In the *Brahmanda Purana*, some Aryan priests in a forest saw Shiva dancing erotically, and their wives were excited by him. So the angry sages demanded that he let his *lingam* fall off. So he did, and all the virile powers in the world stopped. The priests were alarmed and went to Brahma, who realized that this was Shiva and that "He alone creates all creatures by his own energy." So Brahma told the sages to go around India and make *lingam-yoni* altars to Shiva. They did, and when he returned with his powers, they begged his forgiveness and he graciously praised their self-control practices (O'Flaherty 1975, pp. 141–148). Although this may be told from the Shiva perspective, it shows that the competing religions came to terms.

## Nataraja

As Nataraja, Shiva sculptures show him dancing the cycle of creation and destruction, with hair swirling and the shamanic drum of creation, surrounded by a circle of the cosmic round of seasons and planets. The shamanic drum, the "shaman's horse," generates a "hypnotic regression," with the heartbeat, opening depths of soul. His foot crushes the demon of ignorance (*Muyalaka*). As Storl says, "Here, in the center of our being, he, who is our own true Self, dances the joy of being, as well as the dance of doom that turns ego, greed, hate, false pride, and jealousy into pure ash" (2004, pp. 141–145) (Fig. 1).

Wolf-Dieter Storl is a psychologically astute Shiva scholar. He says, agreeing with Jung, "Many a would-be saint has been undone by their rage. Before any spiritual progress is possible, the repressed needs and desires must be lived out and exhausted." Freud called Indian Shakti

**Shiva, Fig. 1** Shiva as lord of the dance, Nataraja (Courtesy of Los Angeles County Museum of Art. [http://en.wikipedia.org/wiki/File:Shiva\\_as\\_the\\_Lord\\_of\\_Dance\\_LACMA\\_edit.jpg](http://en.wikipedia.org/wiki/File:Shiva_as_the_Lord_of_Dance_LACMA_edit.jpg))

libido that cannot be simply repressed (Storl 2004, pp. 214–220). Psychotherapy is hardly available to many Shaivites, and so they live out the unconscious in their social situations, rather than talking it out with a therapist. This can enable some shady behavior, such as India's "Thuggees" and bandits that lurk about in Shiva's shadow. But positive energy from meditative reflection is a part of Shiva's tradition also. The illusions of ego are not easily shed, but Shiva's tradition of being called "God of Gods," which is not uncommon for other deities as well, points the ego to self, which awakens compassion, justice, and ethics. Practice of Kundalini, which blends earthly with spiritual energies, awakens this.

## Kundalini

The Yogic and Tantric *Kundalini* serpent power is a strong tradition of raising the image of the primordial serpent energy up the spine through

the body's chakras, from the lowest intestinal exit through to the highest cosmic release from the skull. The root *Muladhara Chakra* is about earthiness; the next up, the *Svadhithana Chakra*, at the genitals, is about fire and sexuality; the *Manipura Chakra*, at the digestive tract, is about hunger and greed; the *Anahata Chakra*, at the heart, is about love and imagination; the *Vishuddha Chakra*, at throat level, is about mystical insight; the *Ajna Chakra*, between the eyes, is about higher consciousness; and the *Sahasrara Chakra*, at the crown of the head, is the focus of release into cosmic oneness, where all oppositions and forms melt into ultimate reality, the ground of all Being (Storl 2004, pp. 222–227). Why waste time at the lower end of the spine when the blissful highest awakening of the self beckons above? If we pass through each level with purity and without causing problems, we are not repressing, but are experiencing the holiness of each level. This system blends and moves the psyche through the lower to higher elements of Indian religion, instead of trying to jump over psychological issues to higher consciousness.

## Sin

Morgan Stebbins

Faculty of the New York C.G. Jung Foundation,  
New York, NY, USA

The concept of sin can be thought of as a type of error. This can be an error according to either divine or social standards. Furthermore, the concept of sin is active in both religious and secular determinations of group allegiance, human fallibility, suffering, and the cure of suffering. Having said that, the dynamics and repercussions of sin are quite different depending on whether the sin is conceived of as transgressing secular law or divine order. Since there is no sin that is good, it is related to evil. Evil can be seen as relative harm (good for me, bad for you), as distance from the divine (St. Augustine and the *privatio bonum*) or as an absolute and archetypal aspect of the construction of reality.

It may clarify the concept of sin to describe it as a more differentiated and active form of a sense of the taboo that can be seen in relationship with confession, heaven, and hell. Since no significant religious or secular traditions propose a worldview in which humanity is in a state of perfection, sin can be seen as a fairly universal concept although one with incredible variation. Not all religions use a concept of sin in a narrow sense, but it does appear that all religions and indeed all individuals have a way of identifying and dealing with problems, errors, or situations that appear to be beyond the scope of local logic. Local logic (so-called because sensible patterns of thought are only comprehensible within a shared emotional, cultural, and metaphysical frame) easily identifies mistakes and can chart the course of their correction. For experiences that supercede this capacity, metaphysics of some kind enters the fray. Metaphysics in this context covers the conceptualization of all nonrational modes, including experiences of love, death, birth, sin, or anything that humans have the capacity to conceptualize but not satisfactorily explain. That is, experiences which are in some way transpersonal are also beyond the normal

problem-solving mechanisms of the mind. Not only is the apperception of some types of experiences such as birth, death, and aging beyond the conscious mind's capacity according to psychological theory, evolutionary psychology has shown that there are not any conscious cognition modules for processing them.

Large-scale forms of transpersonal thinking can also be fruitfully described as religions or political ideologies, whereas small-scale forms are called personal projections. Projection is here meant in the broadest and most neutral form: the subject's assumptions about reality are constantly being refined and tested by social interactions and so are in some sense projections. However, if personal projections become too detached from social networks of meaning, the subject may be identified by the society as psychotic. This can happen even locally, as many people report having neighbors who are "completely crazy" (see Horwitz 2004). To further complicate the picture, even individuals who identify as fully secular imagine the transpersonal aspects of sin in a highly uniform and predictable way that is functionally similar to the various religious modes (Boyer 2002).

Sin is typically defined by dictionaries in two ways: on the one hand, it is an offense against God, and on the other, it is something highly reprehensible but otherwise secular (Miriam Webster Dictionary). To the religious and secular aspects, we will add psychological views in the following discussion. However, from within the structure of religious experience, an offense against God carries definite consequences and demands solutions which are only offered by expert technicians (priests) validated by the religious hierarchy. Thus, as previously stated, we can think of sin as an error or transgression. To whom or what, and what the consequences and solution are, varies by tradition and culture, but in any case, the systems are closed and sin is seen as in some way evil.

All of the major religious systems employ a category of sin. Other types of religious or supernatural traditions such as the Greek pantheon or many ancestor or spirit-based traditions have a way to account for actions which anger the

supernatural beings and usually need some kind of specialized intervention. It is instructive that the primary Hebrew words for sin are *het*, meaning something that has gone astray or off the path, and *aveira*, or transgression (There are at least 20 Hebrew words that convey variations of the meaning of sin!). What goes astray is *yetzer*, or the human inclinations which must be channeled by the law. The cure for *het* is found in adherence to the law (in Orthodox and Conservative Judaism, the law or *Halakha* – meaning the way of walking, or path – is comprised of 248 positive and 365 negative *mitzvot*) and the expiation of guilt during the celebration of *Yom Kippur*. The *yetzer hara* is the evil inclination which would appear to be a conceptual cognate of original sin except that it is balanced by *yetzer ha-tov*, or the good inclination. This is strongly paralleled (in contradiction to the doctrines of St. Augustine) in the Christian New Testament by Rom. 5:12–19. Psychologically speaking, original sin can be translated as an acknowledgment of feeling estranged or alienated from the law of one's psychic dominant. Spirituality, within this psychological model, depends upon discovering and submitting to a law that comes from a nonconscious aspect of ourselves. In this view, spirituality is not dependent upon social norms or emotional states, but rather upon acting and thinking in ways compatible with the psychological structure that each person comes to discover.

The concept and dynamics of Sin have been gradually differentiated throughout the Hebrew Bible into the New Testament, reaching a crescendo of complexity in the Catholic scheme. The latter includes sins ignorance as well as deliberate action, venial and mortal sins (the mortal seven sins of pride, covetousness, lust, anger, gluttony, envy, and sloth are held to be fatal to spiritual progress), sins of animosity to God, and finally the state of original sin which is not dependent upon an action (The Catholic Encyclopedia; also cf. Genesis 3, as developed originally by St. Augustine but refuted by the monk Pelagius). Sins of commission are expiated through a 5-step process of confession, whereas original sin is only transformed through the mystery of the Eucharist. Original sin, although an

unpopular concept in many circles, can be seen psychologically as an intuition that something highly charged needs attention in the very foundation of the human condition and as such has parallels even in the Buddhist tradition.

Buddhism is usually portrayed as having no concept of sin. While it is true that in most forms of Buddhism there is no metaphysical divinity, in practice there are many conceptions of different Buddhas which are beyond space, time, and causality, making them functionally identical with divine beings. Also, the concept of karma, while not implicating a judgmental higher being, is nevertheless a system of punishment and reward for misdeeds (or errors) both of omission and commission. This is further differentiated into a large array of behavioral precepts not unlike the *mitzvot* or Catholic list of sins (*Nirvana Sutra* and spread around the *Pali Canon*, see Nakamura 1980). Furthermore, Buddhist texts outline the three poisons or hindrances to the realization of one's Buddha nature: anger, greed, and ignorance (Watson 2001). The most potent is ignorance, seen as the root of all suffering. This is the original state of mind of all humans and is described very specifically as ignorance of the ontological truth of the emptiness of human nature. All suffering, and to put it another way, all sinfulness, is related to this ignorance. Suffering is not the same as pain, and neither Buddhism nor psychology would promise to eliminate the kind of discomfort that comes from making hard choices or what Jung called conflicts of duty. Rather what can be changed is neurotic suffering, or to put it the other way around, neurotic suffering is often the avoidance of the authentic struggle implied by integrative growth.

The Muslim Qur'an describes also describes sin (like the Jewish and Buddhist traditions) using the error and guidance model (rather than the fall and salvation model). Sura 1:5 describes God sending a succession of prophets to lead the faithful back to the straight path. Sin is thus a kind of distraction correctable by following the examples of the prophets and of course the great prophet, Muhammad.

In all of these descriptions, we see a common human experience of something being wrong,

and sin locates the problem in the relationship between the personal subject and some transpersonal aspect. Sin moves fully to the psychological realm if conceived of as the description of an experience which leads away from the dominant (and usually unconscious) value in a given personality. Thus, sin, radically seen psychologically as a symptom or symbol, also gives shape to a change of attitude which closes the gap between the personal subject and his or her highest value (leaving aside, for the moment, whether that value is conscious, unconscious, ideological, or individual). In other words, sin is the recognition of a projection that is now ready for integration, as well as containing, in itself, as the direction (in symbolic form) of the integrative process.

We can see that this recontextualizing completely changes the symptom into a complex signifier of psychological progression. An illustration of the flatness of the concept of sin when seen from a predetermined perspective is contained in the following vignette: President Calvin Coolidge, seeking guidance, attended a sermon on sin. Upon returning, his wife asked what the preacher had said about it. The President shrugged and answered, "He was against it." Instead, the psychological dynamics of sin have a double quality, like the original sin of Adam and Eve being seen as both the cause of expulsion from the Garden as well as the beginning of some correction. The experience of a fall or expulsion can be seen as the first step in moving away from a relationship based on assumption and fusion and toward a more nuanced and conscious position directed by the very symbol that had been called sin.

An example is found in the treatment of alcoholism. As soon as the subject becomes aware that alcohol has been having a negative effect, the projection on the substance is already beginning to change. However, rather than merely avoiding the concrete usage of alcohol, the cure is found in investigating what exactly was the change in personality that occurred when drinking was engaged (whether this is an increased level of social comfort, an interest in others, relaxation, or even aggression). It is this very change in

consciousness that the psyche as a whole is pressing for an awareness of, and experience shows that it will not be satisfied (rather like a jealous god) until this change is accomplished. From the neutral, amoral side of the psyche, there is no preference for just *how* this is done. However, from the side of personal consciousness, it makes all the difference whether the change takes place through practice and engagement or through drinking.

This double description is not far from a Gnostic view in which the beginning of the path toward gnosis is found in filth, sin, decay, and the experience of alienation (Jonas 2001). Medieval alchemy, as well, locates the initiation of the opus in the experiential feces of the human condition, and for Jung the deep analytic process begins with the cast-off and despised parts of the personal psyche, the shadow (Jung 1979).

In addition to the religious, secular, and psychological aspects, two others should be mentioned in order to highlight the multiple valences of this concept. Evolutionary anthropology has shown convincingly that religion in general and the embedded concept of sin specifically enable the identification of trusted cohorts, allow room for the problem of decoupled scenario building (called imagination in other contexts) and provide the economic incentives for a priestly class. From the perspective of a Lacanian critique of the subject (in many ways not different from the Buddhist; see above), the conceptual error is found in the *very idea* of wholeness or healing (Lacan 1982). Wholeness is thus seen, like the Freudian interpretation of religion in general, as an illusion (Freud 1989). Instead the subject is constituted at the deepest level by a lack of being which is only painfully exacerbated by collusive and ideological strategies of regaining any concept of wholeness. These strategies actually open the wound through the foreclosing of the natural flow of language.

Both of these latter approaches enable us to ask of sin: what is sin for in the dynamics of the subject? This question allows one to translate from the dogma of a religious tradition to an experiential appreciation of the concept of sin.

## Skinner, Burrhus Frederic

Gilbert Todd Vance

Department of Psychology, Virginia

Commonwealth University, Roanoke, VA, USA

Burrhus Frederic Skinner (1904–1990) is known as the pioneer of radical behaviorism. He was an avowed atheist as an adult, and his ideas and methods are not generally associated with religion. However, Skinner's work clearly shows that he was exposed to and influenced by religion and religious ideas. In his autobiography, Skinner describes the influence his Presbyterian Sunday School teacher had on his early love for learning and writing. He also recounts having a "mystical experience" as an adolescent and losing his belief in God after he did not receive additional "signs" to confirm and build on this experience.

A central idea of traditional Presbyterianism is that of predestination, the belief that an omnipotent and omniscient God has determined the fate of the universe from creation until the end of time. This theme is explicitly discussed and contrasted to the idea of free will in Skinner's novel, *Walden Two*. Skinner's radical behaviorism posits that all behavior is determined, not free. In this way, the determinism of radical behaviorism is similar to the religious idea of predestination. While he does not explicitly acknowledge such in his autobiography, it is possible and even likely that the ideas and arguments put forth in *Walden Two* were influenced by Skinner's early exposure to the Presbyterian faith.

## Smith, Joseph

Paul Larson  
The Chicago School of Professional  
Psychology, Chicago, IL, USA

Joseph Smith (1805–1844) was the founder of Mormonism. He was only 14 and living with his parents in Palmyra, New York, when he became absorbed with finding out which of the various religions was the true one. The whole region was known as the “burned-over” region because of the very active evangelization by preachers, a period known as the Second Great Awakening of religion in America. After a period

of fervent prayer in a forest grove near his home in 1820, he received a theophany, or divine manifestation, where he was told that none of the current religions were true. This is known as the First Vision. Three years later he received another visitation, this time from an angel called Moroni. He was instructed where to look for some plates which he was to recover and then translate the contents with the aid of devices known as the Urim and Thummim. The resulting book was published as the *Book of Mormon*. It claims to be the record of several waves of ancient Hebrew peoples who came to the New World by boat and the civilizations which developed from them over centuries.

From this and several other revelations, he was instructed to found a church which was to be a new dispensation of the Gospel with full authority of priesthood to perform sacraments and teach the true religion. In 1830 he and several others including some family members founded the Church of Jesus Christ of Latter-Day Saints (LDS), also commonly known as Mormons. The reception to this new proclamation was not generally favorable. Many thought him possessed of the Devil; others just thought he was deluded. Even from an early point in the history of the movement, word surfaced of his association with magical practices such as use of divining rods for finding buried treasure or lost objects (Brodie 1971; Quinn 1998). Though later attempts to sanitize his biography have dismissed these claims, there is good evidence for some involvement in folk magic traditions.

Despite critics, the LDS Church grew and so did opposition. He moved his flock to Kirtland, Ohio, after a former Campbelite (Disciples of Christ) preacher, Sidney Rigdon, converted along with many of his congregation. It was here that the first temple was constructed. Temples are buildings for special rites apart from the regular meeting houses. Persecution of the church continued as many Christians found the fundamental claim of authenticity of the *Book of Mormon* as a supplementary scripture to the Bible to be unacceptable. Additional practices and beliefs articulated by Smith as Prophet, Seer, and Revelator of the new Church were also at

odds with orthodox Christian teachings. He rejected all previous creeds, Ecumenical Church Councils, and other sources of authoritative teachings held by many Christians. In addition to the *Book of Mormon*, he began compiling his revelations in a book now known as the *Doctrine and Covenants*. A third new scriptural book, the *Pearl of Great Price*, contains books whose authorship is claimed to be Abraham and Moses. These are claimed to have been translated from papyri found with a mummy which came into Smith's possession. As a result of continued challenges, he moved the church to Independence, Missouri, building a temple there and proclaiming it to be the center of Zion.

From an early period, Smith supported aggressive evangelization of others. Missionaries were sent to various parts of the United States and began traveling to Europe, bringing in many converts, mostly from northern European countries. Smith moved the church to Missouri and, then after further persecution, to a city he founded on the Mississippi River in Illinois, named Nauvoo. Here, he felt, he and his followers could be secure by building a place where they could be concentrated and thereby hold political control. He founded the Nauvoo Legion, a militia, to guarantee protection for his followers. However, opposition continued and mounted. By this time the Mormon doctrine of polygamy had become widely known and the source of much additional anger from the surrounding community and the American public. Finally, in an outbreak of violence, he declared martial law. He and his brother were then taken on criminal charges of treason to the jail in Carthage, Illinois. On June 24, 1844, a mob seized control of the jail and killed both Joseph Smith and his brother Hyrum. Several other followers who were with him were wounded but survived.

His death precipitated a struggle for succession of the church. The largest faction favored the election of Brigham Young, who was then a leader of the Quorum of Twelve Apostles, the major body of leadership of the church directly under the President and his counselors. Another faction supported his son, Joseph Smith III. This became known as the Reorganized Church of

Jesus Christ of LDS. Young decided to move the flock deep into the far west of the United States to avoid further persecution through isolation and is now known as the Community of Christ. In the winter of 1846, the largest body moved across the river and camped in Iowa, at a place now known as Winter Quarters. From there they migrated across the plains and on July 24, 1847 entered the valley of the Great Salt Lake in what is now Utah. There Young proclaimed that "this is the place" where they could settle and find a new community.

Smith's legacy is established as a founder of a major religious movement, including both the dominant LDS Church based in Utah and several offshoots. The movement was burdened for many years by the doctrine of polygamy, which has been abandoned by all but a few fundamentalist spin-offs. The LDS Church in Utah is one of the most rapidly growing religions and is perhaps the leading example of "restorationist" Christianity, which rejects the bulk of the history of the church as clouded by apostasy and claims that one or more modern prophets have restored the true religion. Brodie's (1971) biography was the first scholarly work which differed from the Church's official hagiography; it stimulated controversy which still reverberates today. Regardless of how one conceives of the status of the *Book of Mormon* or the religion founded by Smith, it is certainly clear that he had a prodigious capacity to formulate a new theological vision and attract followers to that vision.

## Socrates' Daimonion

David Berman

Department of Philosophy, Trinity College,  
Dublin, Ireland

Probably the fullest description of Socrates' daimonion is in Plato's *Apology* 31c, where Socrates says:

I have a divine sign [daimonion] from the god which... began when I was a child. It is a voice, and whenever it speaks it turns me away from something I am about to do, but it never turns me towards anything. This is what has prevented me from taking part in public affairs, and I think it was quite right to prevent me. Be sure, gentlemen of the jury, I should have died long ago otherwise.

One reason that Socrates' daimonion is important is because in *Republic* 496, Socrates suggests that it enabled him to become a true philosopher. This is puzzling but is made even more so by the fact that the daimonion does not offer any reasons, but only deters from this or that action. And yet notwithstanding, Socrates, the great rationalist, submits to it. The problem then is squaring Socrates' overriding commitment to having reasons and his willingness to follow religiously his daimonion.

## The Sources

We have two primary sources for the daimonion, the writings of Plato and those of Xenophon, another contemporary follower of Socrates. The data that we need to work from are Plato's *Apology* 31c (as quoted above), also 40 and 41, *Euthyphro* 3b, *Alcibiades* 1, 103, *Euthydemus* 272, *Phaedrus* 242, *Theaetetus* 151b, *Republic* 496; *Theages* 128–30, and probably *Hippias Major* 304 (accepting Reeve's proposal in Smith and Woodruff 2000, pp. 31–33). The sources from Xenophon are his *Memorabilia*, I.1.1–9; and 3.5; also IV. 8.1 and 8.5; also *Banquet* viii.5; and Socrates' *Defence* 5 and 13.

On the whole, there is considerable coherence and consistency in these sources. Probably the biggest textual problem is the dialogue called *Theages*, which of all the Platonic dialogues

contain the most material on the daimonion. The problem is that in it Socrates says that his daimonion was the dominant element in what he taught his followers. Here Socrates the rational moralist seems to give way to Socrates the man magically possessed by his daimonion, which he says "has absolute power in my dealings with those who associate with me" (129). But since it is agreed by present-day Plato scholars that the *Theages* is not by Plato, we can put its evidence to one side in this entry.

Here, then, is what we learn about Socrates' daimonion:

1. It is a divine sign that Socrates had since childhood and which always turns him away from something, never directly towards anything (Ap. 31).
2. Specifically, it stops him: (1) in mid-speech (Ap. 40); (2) from leaving the changing room at the bath house (Euth.); (3) from crossing a river to return to Athens (Phaed.); (4) from initially befriending Alcibiades (Alc.) and from initially associating with Antisthenes (Xen, Banq.); (5) from accepting back students that have left him (Theat.); (6) from going into politics (which he believed saved his life) Ap. 40 and also other professions (7) such as becoming a Sophist (Hippias Major); and (8) from twice worrying about or preparing for his defence at his trial (Memorabilia 148 and 491).
3. It frequently came to him and sometimes in small things; Ap. 40.
4. It was the source of one of the three accusations made against him at his trial, namely, that he introduced new divine things; Euth., Ap. 31; Memo 1.
5. He believes that it was responsible for his becoming a true philosopher; Rep. 496.
6. In Rep. 496 he also says that it was unique or rare.
7. It seems to compel acquiescence; for Socrates always, as far as we know, obeys it.
8. It gives no reason, although this might be qualified by the evidence of the *Phaedrus*, where Socrates says that "just as I was about to cross the river, the familiar divine sign came to me" and adds "I thought I heard

a voice coming from this very spot, forbidding me to leave until I made atonement for some offense to the gods.” – which could be taken as the reason for the sign, although hardly a sufficient, justified reason.

9. Unlike the usual divinational signs, such as thunder, birds of omen, and sacrificial victims, Socrates' daimonion is not publicly observable. And although he describes it as a voice (in Ap. 31 and Def.), all his other references to it are as a sign. However, here again the evidence of *Phaedrus* might also seem to go against this, since Socrates does talk of a voice speaking to him from “this very spot,” although he says that it seemed to be, or he thought it was, a voice speaking to him.
10. In the *Phaedrus* passage, the sign is preceded by Socrates feeling uneasy.
11. When Socrates describes his daimonion at his trial (in Ap.31 and Def.), and especially its prescience, it provokes an angry response from his judges.

## Interpretations

This, then, is the hard or hardish evidence. The question is: what does it tell us about Socrates' daimonion?

1. Perhaps the most widespread view, recently expressed by Gosling, is that “The voice of the daimonion is pretty clearly what we would call the voice of cautious conscience” (1997, p. 17). This fits with its subjective character and with Socrates' concern with what is right. But the interpretation seems belied by what Socrates says in Rep. 496 that it is unique or rare, for then Socrates would be saying that that he was unique in having a cautious conscience. Gosling characterization also seems at odds with the outbreak of anger from the judges, which strongly suggests that they thought that Socrates was making an outlandish claim. Seeing the daimonion as a moral manifestation also does not fit the appearance of the sign in the *Euthydemus*, where it stops Socrates from leaving the bath house.
2. Another widely held interpretation is that the daimonion was essentially an indirect manifestation of Socrates' rationality. Among the proponents of this view is Martha Nussbaum, who speaks of the daimonion as “an ironic way of alluding to the supreme authority of dissuasive reason and elenctic argument” (see Smith and Woodruff 2000, pp. 32–33). What is attractive about this view and those like it is that if it were right, we would then have a way of dealing with the problem mentioned at the beginning of this article. For then there would be no fundamental conflict between Socrates' rationality and his daimonion. But this suggestion, like Gosling's interpretation, does not fit the evidence of the *Euthydemus*, or (comfortably) most of the other appearances of the daimonion.
3. A variation on (2), which also draws somewhat on (1), is that the daimonion is rational but that its conscious rational operations have become instinctive or intuitive by long use in the service of virtue. This seems to be Montaigne's proposal that Socrates' daimonion was “a certain impulse of the will that came to him without awaiting the advice of his reason” (p. 35). But, though attractive, it also suffers from the difficulties of (1) and (2).
4. A more searching suggestion, although prima facie less attractive, is made by Nietzsche in his important “The Case of Socrates.” This is that the daimonion, which Nietzsche describes as an “auditory hallucination,” was an indication that Socrates was suffering from mental illness. I think this is essentially right, but it needs to be honed in important ways. Most importantly, it needs to be observed that not all mental illnesses are bad. Socrates himself is especially clear about this in the *Phaedrus* 244–5, where he speaks of the valuable things that have come from madness (mania). Also, it is not clear, despite Nietzsche' description, that the daimonion was a psychotic symptom. For unlike the classic psychotics, such as Schreber, Socrates does not believe he was hearing voices that brought him into direct contact with other persons or agents. What all the evidence (with the possible exception

of *Phaedrus*) suggests is that he was experiencing (subjective) signs or urgings. Hence, if Socrates was suffering from a mental illness, it is probably closer to a neurotic rather than a psychotic illness. And there is evidence that it did resemble an important neurosis, namely, obsessional neurosis, now also described as obsessive compulsive disorder or OCD, a condition most famously described by Freud in the seventeenth of the *Introductory Lectures on Psychoanalysis* and the case of the Rat man.

The most important evidence pointing to the daimonion as a form of obsessional neurosis is that:

1. It compels but without giving a reason; and yet the sufferer feels that it must be obeyed.
2. That those subject to such compulsions often try to rationalize them after the fact, which is what Socrates does.
3. As the obsessional neurotic very frequently believes that he, or his condition, is virtually unique, so did Socrates.
4. Having this condition gives the sufferer a sense of his importance even grandeur. Of course, in one way this does not fit with Plato's picture of the modest Socrates. But this was not how the judges at his trial reacted to his account of his daimonion. It created clamor, since it suggested that he had a special relation with a god.
5. In the *Phaedrus* it goes with or is preceded by uneasiness or anxiety. Obsessional neurosis is also frequently found in people obsessed with morality (as, e.g., Zola) which was also Socrates' case.
6. It also very often takes a religious form, most famously shown in Luther and Bunyan.

Of course, in proposing that Socrates' daimonion should be seen as a form of good obsessional madness, I am not claiming that it perfectly fits. Thus, we do not know that Socrates found his daimonion oppressive or unwanted. But then, it isn't clear what his attitude to it was or whether it was consistent over the many years that he had it. That he believed it divine and obeyed it does not prove that he liked having it.

Another likely objection to this interpretation is that it is crudely reductionistic. In fact, this need not be the case, if we bear in mind Socrates' judgement in the *Phaedrus* that the most valuable things have come from good madness. For then, it is not religion that is being reduced to psychology, but psychology that is being raised to religion. And given Socrates' extraordinary accomplishments – i.e., becoming arguably THE exemplary wise man, even perhaps the noblest human being in history, and, through his crucial impact on Plato, the guiding spirit of western philosophy – we have little or no reason to regard anything which was distinctive of him as MERELY psychological or bad psychopathology. Nor, bearing this in mind, should we even exclude the possibility that the daimonion was what Socrates thought it to be, namely, a supernatural sign from a god. Seeing the daimonion as some form of good madness does not exclude that. Indeed, if anything the extraordinary character of Socrates' achievements seems to call for some such an extraordinary, paranormal explanation. The daimonion as good or divine psychopathology also offers a way of reconciling the conflict between Socrates' daimonion and his rationalism: in short, that it provided the necessary safety net or veto for Socrates' commitment to reason and rational justification, preventing him from becoming a rational tyrant as well as encouraging his rationalism by the tendency that obsessionals have for finding reasons for their compulsions or – perhaps we should say in Socrates' case – his repulsions.

Of course, one thing that needs to be mentioned, as lying behind Socrates' unique accomplishments and between the plausibility of the supernatural interpretation and the psychopathological interpretations, was the apparent ability of his daimonic repulsions to be unerringly, providentially right.

## Solution-Focused Counseling

William D. Roozeboom  
Fuller Theological Seminary, Pasadena,  
CA, USA

Solution-Focused Therapy/Counseling, or Solution-Focused Brief Therapy as it is sometimes referred, is one of the postmodern psychotherapeutic methodologies which developed out of a critique of the traditional approaches to psychotherapy. The impetus of the critique was that traditional models of psychotherapy take an overly hierarchical and pathologizing approach, based on biased presuppositions and worldviews. Thus, traditional approaches of psychotherapy focus predominately on identifying the cause of problems (interpreted by an objective observing expert) while the solution-focused approach believes that knowing about the problem is no longer necessary, and in fact, can be limiting in many cases (Walter and Peller 1992). Moreover, the client, not the therapist, is actually the expert on his or her experience and determines what is problematic as well as what will be helpful. In short, the emphasis is on *solution building* rather than *problem solving* wherein solutions are

constructed via describing the problem, establishing goals, exploring exceptions, and noting client strengths and resources.

Solution-Focused Therapy (SFT) was developed by Steve de Shazer (1940–2005), Insoo Kim Berg (1934–2007), and their colleagues at the Brief Therapy Center in Milwaukee, Wisconsin. This group was influenced by the findings in cybernetics (Bateson), the Milan Strategic Family Therapy approach, the Mental Research Institute (MRI) in Palo Alto, California, and Milton Erickson's theory of untapped potentiality in persons. Each of these approaches, along with SFT, began to ask different kinds of questions and created new ways of thinking about persons and psychotherapy.

In what follows, we will explore these differences and how they make SFT popular and unique by unpacking three areas: (1) the philosophical underpinnings, (2) the key elements of the theory, and (3) the key elements of practice. Following this, we will bring SFT into conversation with spirituality and religion and then close with future directions of this approach.

## Philosophical Underpinnings

In order to discuss the specific elements of SFT, one needs to locate it within a larger, more general paradigm of thought. As stated previously, SFT is one of the postmodern approaches to psychotherapy, based on particular philosophical orientations. Providing an exhaustive description of the distinctive features of all postmodern approaches to psychotherapy is somewhat contradictory given the philosophical underpinnings and is beyond the scope of this entry, but this term does highlight a major paradigm shift which occurred throughout all realms of intellectual pursuit in the late 1970s/early 1980s. This shift was based on the work of Jacques Derrida, Michel Foucault, Jean-Francois Lyotard, and Ludwig Wittgenstein, among others (Tarragona 2008). Each of these thinkers was instrumental in numerous ways building postmodernity as a *critically liberative and deconstructive critique of the nature and sources of*

*knowledge*. In other words, universal givens, pure objectivity, and authoritative meta-narratives were no longer assumed to be true, rather a hermeneutic of suspicion examining underlying premises and power dynamics became a necessary prerequisite for any hope of constructing, not finding, truth.

More importantly for psychology and religion, this work introduced new emphases in psychotherapy and the study and understanding of human experience. Postmodern critique has highlighted the biases and limitations of positivist epistemology and embraces constructivism and social constructionism – meaning reality is not “out there” to be discovered but is constructed socially through language. In this paradigm, meaning making, particularly the continual co-constructed meaning, that persons give events and experiences, not scientific or empirical data, is what shapes identity and reality (Anderson 2006). Moreover, a postmodern understanding views pure objectivity as impossible because persons are already-always looking at the world through a lens shaped by one’s social location – culture, gender, race, socioeconomic status, and so on. As a result, a new appreciation for difference and particularity emerged in the postmodern era, with an emphasis on the local knowledge and expertise of the “other” rather than a pathologizing of that which is “other”. And this new appreciation led to more liberative, strength enhancing, and collaborative approaches to psychotherapy.

## **Key Elements of Theory: Assumptions and Concepts**

### **Solution Building, Not Problem Solving**

SFT, unlike traditional forms of therapy, believes that one does not need to understand the problem in order to alleviate it and that the solution may not even be related to the problem (de Shazer 1988). In fact, according to this approach, a problem-solving mentality has a detrimental effect on the client and therapist, as this often limits the vision of exceptions and possible solutions.

### **Exceptions**

A solution-focused approach believes that no problem occurs all the time and that there will inevitably be “exceptions” when the problem either is not a problem or is less of a problem (de Shazer 1988; O’Hanlon and Weiner-Davis 1989). There will always be a moment, an event, or an experience wherein the problem is not impacting a person’s life or is less severe, and these offer a glimpse into the person/client’s strengths, abilities, and resources. To create such moments, the client must be building solutions to the problem, and thus the therapist points this out and asks important questions about how this is accomplished. For example, a therapist might ask, “*Are there times when you don’t have this problem?*” “*What is different at those times?*” “*How does that make a difference to you?*” “*What will make it possible for more of that to happen?*” (Lipchik 2002).

### **Change as Already-Always**

In the solution-focused approach, change is viewed as already-always occurring – even before the client enters therapy for the first time. De Shazer notes the fact that a person who seeks therapy reveals that change is already occurring by the simple fact of their entrance into therapy (de Shazer 1988). Furthermore, the therapist realizes that a client’s situation is always in flux, but often change goes unnoticed (O’Hanlon and Weiner-Davis 1989).

### **The Beginner’s Mind**

The beginner’s mind is a mind-set or stance of working with persons based on a Zen phrase: “In the beginner’s mind there are many possibilities; in the expert’s mind there are few” (O’Hanlon and Weiner-Davis 1989, p. 8). What this mind-set illustrates is that the therapist must clear himself or herself of preconceived views and solutions and be open to learning from the local knowledge of the client. Such a “decentered” stance allows the therapist to assist the client in finding solutions that fit their particular interpretive framework and worldview (Gehart and Tuttle 2003).

### Present and Future Focus

Solution-focused therapists ask mostly present- and future-oriented questions based on the belief that finding lasting solutions is best done by focusing on what is already working well and how the client would like their life to be, rather than focusing on the past and origins of the problem (Dolan 2012). Once a goal or solution is established, it can be carried into the future to strengthen it.

### Key Elements of Practice: Skills and Techniques

#### Formula First Session Task

The *formula first session task* is a theoretical orientation and technique of practice simultaneously. De Shazer developed this method as a way of reorienting the focus on solutions and what was working rather than on problems and what was going wrong. It provides an opportunity for clients to notice otherwise unseen strengths, abilities, resources, and solutions. As the initial session wrapped up, de Shazer would say something like:

Between now and next time we meet, I would like you to observe, so that you can describe to me next time, what happens in your (pick one: family, life, marriage, relationship, etc.) that you want to continue to have happen (de Shazer and Molnar 1984).

#### The Miracle Question

The miracle question is probably the most recognized aspect of the solution-focused approach. It is used as an assessment tool, a goal-setting strategy, and an intervention technique (Gehart and Tuttle 2003). In this technique a client is asked to describe what their life, relationships, family, sense of self, etc. would be like if the problem was no longer around. De Shazer would often set the stage for this question explaining that he was going to ask a somewhat bizarre question that required the imagination but hoped the client would play along. Following this, he would say something like:

Suppose that one night, while you were asleep, there was a miracle and this problem was solved. But because this happened while you were asleep, you did not realize that this miracle occurred. . .what would be the first sign that will make you notice that something is different? What would be the first thing that you would do that you don't normally do?

#### Scaling Questions

Scaling questions refer to the use of a 10-point scale to measure status and change. Therapists ask clients to give themselves a score as a way of assessing where they are in relation to the problem. Take depression, for example, a therapist would say, "*On a scale of 1 to 10, with 10 representing a place where depression is no longer a problem and 1 representing depression as extremely problematic, what is your relationship with depression today?*" The client would then offer a number (let's say 4), and the therapist would follow with, "*What would need to happen between now and the next time we meet, for it to go from a 4 to a 5?*"

#### Exception Questions

Earlier it was noted that no problem is all encompassing; thus there will always be times or experiences that do not fit with the understanding of the problem, and solution-focused therapists ask questions to unearth these exceptions. Such questions invite clients to reflect on times or experiences when the problem either was not a problem or was less of a problem and are important because they reveal past solutions, strengths, and resources. Another method of discovering exceptions is to use coping-type questions. For example, when working with clients in extremely challenging scenarios, a therapist might simply ask, "*How have you managed to carry on?*" or "*How have you prevented things from becoming worse?*" (Dolan 2012).

#### Compliments and Feedback

Compliments and feedback (a method similar to collaborative therapists Harry Goolishian and Tom Anderson's reflecting teams) provide the therapist an opportunity to highlight and validate

clients' strengths and resources by noting what they are already doing well. It also offers an opportunity for the therapist to communicate that he or she has been listening and knows how challenging the problem is for the client (Dolan 2012). Often times, but not always, the compliment and feedback occur after the therapist has taken a short "consultation break" towards the end of the therapy session. This is a brief break wherein the therapist leaves the room to reflect and then returns with feedback, emphasizing the strengths and progress of the client.

### Reflecting Theologically

The literature connecting SFT and spirituality and/or religion is sparse, yet not without potential. Earlier it was noted that a solution-focused approach uses a Zen "beginner's mind-set," but there is much more to reflect theologically in this approach – particularly from a Judeo-Christian perspective.

First, the solution-focused approach has an ethic of neighbor love, which highly respects and values persons. A person seeking care is not seen as a deficient "patient" in need of an expert's diagnosis and treatment plan, but is seen a valuable human being, with strengths, resources, and goals that contribute meaningfully to the therapeutic process. Second, there is an empowering and liberative impetus for persons who have been subjugated/pathologized by the dominate norms of traditional psychotherapy. This stance echoes themes from the prophetic writings and liberation theology. Additionally, Jesus modeled a deconstructive and prophetic critical lens for the dominant norms of society, as he often taught saying, "*You have heard that it was said...but I say*" (see The Sermon on the Mount, Matt. 5–8; Caputo 2007). Third, Kornfeld (1998) uses the theological concept, *discernment*, to describe the solution-focused approach. She illustrates how both the therapist and client are looking [discerning] where change is already happening and thus re-/training themselves to notice and be open to the presence and activity

of God. Finally, the solution-focused approach is hope filled and future oriented and thus teleological (Lester 1995). There is a spirit of anticipation in the possibilities of a God who is beyond us and out in front of us calling humanity towards greater healing, restoration, liberation, and reconciliation.

A couple of theological critiques arise, which must also be noted. The first critique is in relation to the view of human sinfulness and limitation and the reality of systemic evil. In other words, what are the limitations of human potential and possibility, or of solution building, in light of human sin and vulnerability? A second critique is that of extreme relativism, as a Judeo-Christian worldview asserts that not all truth claims are equally valid or authoritative. Thus, the question becomes how does one navigate competing norms? I believe such questions, and others, are best offered and not simply answered, as a way of highlighting the tensions and inviting constructive solution building.

### Future Directions

Solution-Focused Therapy is one of most popular and widely used forms of psychotherapeutic practice in the world (Trepper et al. 2006). This is likely due to its brief, collaborative, and empowering model, which makes it popular and applicable to a wide variety of situations. Trepper et al. (2006) highlight such uses as follows: family therapy (Campbell 1999; McCollum and Trepper 2001), couples therapy (e.g., Hoyt and Berg 1998; Murray and Murray 2004), domestic violence (Lipchik and Kubicki 1996), sexual abuse (Dolan 1991), substance abuse (Berg and Miller 1992; de Shazer and Isebaert 2003), and schizophrenia (Eakes et al. 1997). Additionally, the solution-focused approach has been utilized by social service agencies (Pichot and Dolan 2003), educational settings (Franklin and Streeter 2004; Rhodes and Ajmal 1995), and business systems (Berg and Cauffman 2002). SFT is also undergoing new emphases of research to evaluate its effectiveness including microanalysis of language within session, the role of emotions,

brain imaging, and qualitative approaches (Trepper et al. 2006). It seems likely that, like the theory itself, the solution-focused approach will continue into an expansive future ripe with potentialities and possibilities.

## Song of Songs

Ingeborg del Rosario  
Emmaus Center, Quezon City, Philippines

The Song of Songs, also known as the Canticles of Solomon, is a collection of lyrical love poetry belonging to the Wisdom literature of the Hebrew Scriptures or the Old Testament of Christian Scriptures. The Song's title, the Song of Songs, is in the style of the superlative, similar to other Scriptural references as "the Lord of lords," "the God of gods," and "the Holy of holies." While the Song has neither evident moral or ethical teaching nor any mention of God and is highly charged with passion and desire, deeply sensual and earthy in nature, by this designation, the Song is upheld as the Song above and beyond all songs, the godliest and holiest, and the greatest of all songs. Within Jewish and Christian traditions, from as early as Rabbi Aqiba (c. 100 CE) and Origen of Alexandria (c. 240 CE), Gregory of Nyssa and Bernard of Clairvaux, to the mystics Teresa of Avila and John of the Cross, the Song is most commonly read and interpreted as an allegorical expression of God's agape, the divine passionate love for Israel, the chosen people, and later of Christ's intimate love for his Bride, for the individual soul, and for his Church. At the same time, while providing an analogue with which to speak of the intensity of divine love, a faithful reading of the Song, which alternates between three voices, a woman, her male lover, and a female chorus, needs also to recognize its particular nature as a secular, erotic love poem. From its onset, the Song is eloquent with vivid metaphor and pulsating imagery that playfully express without inhibition or constraint the human experience of sexual yearning, desire, and fulfillment:

Let him kiss me with the kisses of his mouth!  
(Song 1:2).

Oftentimes, the challenge lies in being able to hold together these two ways of reading the Song. Spiritual growth and closeness to the divine do

not entail a shunning of the authentic human capacity to be sensual and sexual, to know pleasure, and to experience the urgings of desire and the delight of its satisfaction. Development and maturity in the spiritual life does not mean a forsaking of what is innately human, a relinquishment of our embodied nature. Disembodiment deprives and alienates, rather than nourishes and ennobles, the human spirit.

The religious patient in therapy might have profound sexual shame, guilt, and inhibition around speaking of and referring to the body, sexual sensations, and feelings because of imbibed religious beliefs that have dichotomized and alienated the life of the spirit from felt and sensed human reality. Deep shame can hinder the knowing and trusting of the body's inherent goodness and worth, beauty, loveliness, and desirability. Spiritualization as a defense often serves to protect this patient from intense anxiety around being in the body and from experiencing powerful feelings and palpable sensations as well as from having to face and work through internal conflicts around religious beliefs, guilt from the association of the body and pleasure with evil, and sexual shame. Rigid, obsessive attitudes and compulsive behaviors might develop to support and consolidate a defensive spiritualized wish for self-lessness and accompanying disembodiment. Patients might also struggle with repression or dissociation around experiences of relational intimacy and sexuality especially if there is some history of sexual trauma, abuse, or trauma to the body. The fear and terror of reawakening or reliving these traumatic experiences can keep patients numb and disconnected from their bodies, unable to feel and, consequently, unable to feel real and in themselves. On the other hand, there are patients who must deal with promiscuity or with sexual addictions and compulsive behaviors that also struggle with a form of this dichotomy between body and spirit. For these patients, there can be an obsessive, insatiable desire for the thrill and pleasure involved in these encounters, a longing that is dissociated from the human reality of the embodied love object and their potential for a mutually intimate relationship.

A radical experience of the divine as well as an authentic movement towards wholeness and integration involves and presumes an immersion in one's body and a growing awareness of the liveliness of its senses, a consciousness of one's sexual nature and robust capacity for mutuality and intimacy. The Song expresses sheer joy in the sensual: fragrant scents and aromas, the taste of sweetness and spice, the roundness of the belly, curve of the cheeks and color of the lips, the radiant ruddiness of the lover and the growing excitement that accompanies the sound of his approach, the heart-piercing desperation and frustration around his leave-taking, and the exhilaration of desire and of being desired:

How fair and pleasant you are, O loved one, delectable maiden! You are stately as a palm tree, and your breasts are like its clusters. I say I will climb the palm tree and lay hold of its branches. Oh, may your breasts be like clusters of the vine and the scent of your breath like apples (Song 7:6–8).

The Song touches on deeply human struggles: to take in and receive such profuse admiration of oneself and one's body, to risk physical touch and emotional connection that opens one to vulnerability and the possibility of painful rejection, to experience deep neediness and desperation for love along with the angst that comes with loneliness and abandonment, and to deal with familial and cultural stereotypes that affect and distort issues of body image and physical self-care. The Song also provides a vital way of being with and in the body through which the world is known and experienced: allowing the mutuality of sexual desire and delight, palpable affection, and playfulness; acknowledging that the human and communal journeys involve comings and goings, searching and finding, finding and losing, want and woo, intimacy that can be left bereft, need and satisfaction, lack and deprivation, assurance and insecurity, the yearning to touch and be touched, to hold and be held, wounding by love, and fulfillment in love; and recognizing that these same dimensions are reflected in the spiritual journey and in each one's sacred relationship with the Divine.

The Song calls to a lived consciousness and embrace of the human-divine capacity for

passion, yearning, and oneness that is both singularly embodied and spirited, allowing each to be deeply moved and affected by the other, that is, empowering, vitalizing, and transformative, as audacious and bold as the woman of the Song demanding her lover to

Set me as a seal upon your heart, as a seal upon your arm, for love is strong as death, passion fierce as the grave. Its flashes are flashes of fire, a raging flame (Song 8:6).

### Sophia

Annabelle Nelson  
The WHEEL Council, Flagstaff, AZ, USA

### Origins

Sophia is derived from the Greek word *sophizesthai* (Cady et al. 1986) or one who is wise. Her name also comes from the Greek word *sophos* (Cady et al. 1986) or to be of the same kind. An interpretation of this definition is that Sophia is

contained in all of life; each life form is of the same kind as Sophia. Matthews (1991) describes Sophia as a warrior, dressed in camouflage haunting history. Similarly Schaup (1997) describes Sophia as a red thread who can be traced throughout the history of human experience.

Sophia has been defined as a deity, goddess, creator, and archetype. She is referred to many entities: a Middle Eastern goddess, the “she” listed in the *Book of Proverbs*, the creator in the Gnostic gospels, a symbol of God in matter in Eastern Orthodox theology, the primordial Jungian archetype of all matter and life in Jungian thought, and synonymous with Prajnaparamita, the mother of all Buddhas. Sophia is the spiritual force which formed the material world, and as such her spiritual energy is in each form of creation. Because of this, Sophia can be a conduit from the material world to the spiritual essence in each life form.

## Goddess

As a Middle Eastern goddess, Sophia’s name is associated with Barbelo (Ann and Imel 1993) who is the mother of all the angels, as well as Jehovah’s mother. There is an entity called Sophia Prunikos (Ann and Imel 1993) or the fallen half of Sophia who was thrown out of heaven and became a whore on earth. She experienced the dark side of the human condition, integrated this, and then returned to heaven as an aeon. In another form Pistis Sophia (Davidson 1967) was the serpent who tempted Eve. Pistis is translated as faith. As a deity, Sophia embraces all of life without moralistic judgments.

## Creator

Sophia was also named as the creator in the Gnostic gospels in the *Nag Hammadi* scrolls (Eliade 1987). The name for the gnostics comes from the Greek word *gignoskein* (Eliade 1987) meaning to know. In the scrolls Sophia is described as a self-generating, emergent force that rippled into existence to begin creation. This story has similar features to the structure of

the Jewish kabbalah, where wisdom is *hokhmah* (Seghi 1995) and is the first manifestation of the unknowable divine energy.

The Gnostic gospels with Sophia as creator are related to Plato’s *Timaeus* (Conford 1959). Speaking through *Timaeus*, Plato described creation as beginning with “one” or the world soul, termed Sophia by the Gnostics, and then subdividing exponentially. In all its varied forms, all matter and life still contained a piece of the world soul, Sophia.

In the *Nag Hammadi*, Sophia is beyond the opposites that define reality and becomes a paradox that unites.

I am the knowledge of my inquiry  
and the finding of those who seek after me,  
and the command of those who ask for me  
and the power of the powers in my knowledge  
of the angels who have been sent at my word  
and of the gods in their seasons by my counsel  
and of spirits of every man who exists in me  
(Bonheim 1997, p. 216).

## Old Testament

Cady et al. (1986) say that the “she” in The Book of Proverbs, Wisdom, and Baruch was Sophia. The following quotes exemplify Cady’s point (*Catholic Family Edition of the Holy Bible* 1953):

For wisdom is more active than all active things;  
and reacheth everywhere by reason for her purity  
(Wisdom, Chapter 7, vs. 24).

For she is more beautiful than the sun, and  
above all the order of the stars being compared  
with the light, she is found before it (Wisdom,  
Chapter 7, vs. 29).

Learn where is wisdom, where is strength, where  
is understanding; that thou mayst know also where is  
length of days and life, where is the light of eyes and  
peace (Baruch, Chapter 3, vs. 14).

Receive my instruction, and not money, choose  
knowledge rather than gold, for my fruit is better than  
gold and the precious stone and my blossoms than  
choice silver (Proverbs, Chapter 8, vs. 10 and 11).

## Religious Contexts

A Russian orthodox mystic, Vladimir Soloviev (1978), created a theology called Sophiology in

an attempt to resacralize nature. Bulgakov (1993), one of Soloviev disciples, makes the point that Sophia is unspeakable and unknowable but she is where the “creaturely world is united with the divine world in divine Sophia” (p. 17). Sophiology teaches that the way to become spiritual is through the material world.

In Tibetan Buddhism, Sophia is Prajnaparamita, the Mother of all Buddhas (Macy 1991). Prajna is profound cognition and Paramita is translated as perfect or gone beyond.

Freed from the dichotomies which oppose earth to sky, flesh to spirit, the feminine appears here clothed in light and space, as that pregnant zero point where the illusion of ego is lost, and the world, no longer feared or fled, is reentered with compassion (Macy 1991, p. 107).

Paramita personifies the Buddhist concept of “dependent co-arising.” All sentient and insentient life arises from the same energy, consistent with *sophos*, to be of the same kind. Paramita or Sophia symbolizes the possibility of transforming the human mind to sense the interconnection of all life.

Sophianic scholars such as Thomas Schipflinger (1998) and Susan Schaup (1997) conclude that the ecstatic visionary experiences of Hildegard von Bingen and Jacob Böehme were of Sophia. Arne Naess (1992) coined the word Ecosophy to create a philosophy of aligning human life to ecological equilibrium.

## Archetype

Marie-Louise von Franz, a Jungian therapist, calls Sophia the self-knowing primordial cause or the energy from “the archetypal world after whose likeness this sensible world was made” (von Franz 1985, p. 155f). She also says that Sophia is the fundamental archetype or the blueprint of the material, sensible world (von Franz 1996). Woodman and Dickinson (1996) believe that humans are at the brink of a paradigm shift moving into a state where the spiritual self is the locus of development and interconnectedness will mark consciousness, or the paradigm contained in the archetype, Sophia. The search for wisdom, then, is contained in this quote: “To become like Adam and unite with the inner

Sophia and become androgynous” (Eliade 1987, p. 13). Sophia transcends religious, racial, tribal, national, and even species differences as part of creation and becomes a method of gaining wisdom of merging human consciousness with the world soul contained in all life.

## Soteriology

Emily Stetler

Department of Theology, Mount St. Mary's  
University, Emmitsburg, MD, USA

Soteriology is the branch of theology dealing with the study of salvation. The term comes from the Greek *soterion*, "salvation," and is also related to *soter*, "savior."

Soteriology relates to several other branches of theology in that it asks who is saved, by whom, from what, and by what means. It asks, as well, what the end goal of this salvation is. In Christianity, soteriology is inextricably linked with Christology, for both fields centralize the significance of Christ as savior. Christian soteriology, then, developed vis-à-vis the process of defining doctrinally who Jesus is and what his life, death, and resurrection mean for humankind. While it is outside the scope of this article to give a comprehensive overview of Christological developments, we may examine two Christological concerns of the early church that are immediately relevant to soteriology: that Christ must be fully God and that he must be fully human.

The issue of Christ's divinity came to the fore in the early fourth century, when the priest Arius of Alexandria insisted that the Son, Jesus, was not coeternal with the Father but was created by him. Jesus was the first of all creation, but created, nonetheless. He was, Arius claimed, *homoousious* with the Father – of *similar* substance. Would Arius' position have been accepted, the soteriological implication would have been that the world's Savior would have been only an instrument of God and, thus, one

who did not necessarily himself passionately desire the world's salvation.

While the Council of Nicaea condemned Arianism in 325 by declaring the Son to be *homoousious* – of the *same* substance – with the Father, another soteriological challenge soon arose. Apollinaris of Laodicea described Christ as being fully human insofar as his body was concerned; his divinity, however, took the place of a human soul. In this instance, Christ would not be truly human; he would simply be the divine Logos enfleshed in a human body. Soteriologically, Jesus the Savior would be, in the Apollinarian view, one with the Father who desires the world's salvation but unable to be identified with the humans whom he saves. The Council of Chalcedon in 381 condemned Apollinaris and his teaching. Christian soteriology, then, insists that the savior be one with both the God who saves and the people whom he saves.

Certainly, Christianity is unique in being defined by its savior, but there are savior figures in other religions, too. For instance, some sects of Buddhism see a bodhisattva as helping to bring about salvation. In Pure Land Buddhism, devotees believe that the Dharmākara bodhisattva (also known as the Amitābha Buddha) works to help them enter the perfect land of bliss.

Soteriology, though, deals not only with the *soter*, the savior figure, but also addresses what salvation means. In Christian theology, salvation classically means salvation *from* sin and *for* Heaven. Among and within Christian denominations, however, this statement of salvation still leads to disparate understandings. Western churches traditionally have taught that Christ redeems humankind from personal and original sin; Eastern churches, however, have no doctrine of original sin. Likewise, salvation to Heaven classically means, in the West, that humans can hope to experience the *beatific vision*, seeing God face-to-face in the afterlife. In the East, Heaven has been construed differently; the emphasis has been on Christ bridging the gap between humankind and God so that, through Christ's saving work, the human experiences *theosis*, a divinization by which he or she

participates in the divine life of the godhead. Heaven, then, is the fulfillment of Athanasius' axiom that God [Christ] became human so that humans may become [by adoption, not by nature] God.

Like Eastern Orthodoxy, Islam has no doctrine of original sin, so Muslim soteriology focuses on salvation *for* Heaven. This is accomplished primarily through faith, although some sects of Islam also emphasize adherence to the law and the need for purgation of sin.

In both Buddhism and Hinduism, salvation entails liberation from the illusions of this world. In Hinduism, it is primarily ignorance from which one must be saved, and so the process of salvation is a process of becoming aware of the illusoriness of the world, the transience of all things, and the self as an extension of *Brahman*. According to Buddhism, the person escapes suffering through freeing himself or herself from desires and false attachments to the world and the self.

Increasingly across faith traditions in the late twentieth and early twenty-first centuries, soteriology has come to be understood as having ramifications in this world as well as in the afterlife. Liberation theologies emphasize that salvation is not salvation from sin alone but also from structures of oppression and violence. Faith communities have become more socially engaged to promote human flourishing in this life.

## Commentary

In Christianity, soteriology has an undisputable relationship with sin, especially in the Western churches. From a psychological perspective, then, soteriology presupposes a state of guilt, the state in which an individual feels he or she has committed a violation of moral law. While guilt can be a positive impetus for change, it can also fester and lead to anxiety, depression, and despair.

Freud understands guilt as a state of disjunction between the ego and the superego. More relevant, though, is the notion of existential guilt, associated with Søren Kierkegaard, among others. Kierkegaard denies a concept of original sin that implies that humans cannot resist sinning.

Rather, he suggests that humans are free, and in the face of this freedom, they experience anxiety (and, to be sure, this anxiety does incline a person to sin). It is through wrestling with this anxiety that the person becomes authentically human; failure to do so furthers guilt. Ultimately, the person who does not engage his or her anxiety will fall into despair. Salvation in Kierkegaard's paradigm entails recognizing oneself as a sinner, culpable in one's own right, and acknowledging the need for Christ.

## Soul in the World

Lee W. Bailey

Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

The separation of psychology from religion is a modern philosophical argument that went a long way toward solidifying the “internal” psychological ego that interacts with the “external” world. It took off with René Descartes. Ancient indigenous religions believed the world to be full of spirits and divinities that interacted with humans. This was the importance of the biblical first commandment: “You shall have no other gods before me” (Exodus 20:2). This assumes that there are other gods around, but they are not to be honored; this is called henotheism, the early step toward Hebrew monotheism, which took centuries to achieve. Monotheism teaches that humans are first of all creations of the one God, neither related to other spirits nor independent souls. But Descartes solidified the concept of the subject versus objects.

Descartes (1596–1650), the “Father of Modern Philosophy,” argued that human minds are not children of God, but have autonomous subjective, internal psyches, led by the conscious ego. This was encapsulated in his famous saying: “I think, therefore I exist [*cogito ergo sum*]” (Descartes 2011). He proclaimed, not “I am a creature participating in earth’s existential energy fields, therefore I exist,” or other options. This is the origin of the modern philosophy of the ego/subject standing independently from God and from the “objective, external” world, explainable by natural laws and mathematical principles. Thus emerged the modern onset of the separation of psychology and religion.

As science developed, the metaphysical claim that human souls are not creations of God, but have independent psyches in a world of separate objects, made the development of science and industry easier, since their advocates did not have to respect any inherent spiritual or ethical guidelines toward nature. This left the world free

for humans to dominate and exploit. As the powerful idea of the “neutral, soulless objective, external” world developed increasingly effective knowledge and technologies, this idea looked good at first, freeing humans to exploit nature to solve human problems. Since monotheism rejected ancient nature spirits, nature was for the first time a neutral, “objective” realm, and Descartes’ “I think” defined the conscious ego. In theory, that is.

Psychology developed the theory of “projection” beginning with Feuerbach in the 1840s and finalized by Freud around 1900. The theory of projection became a powerful argument against lingering religion, claiming that God was “nothing but” a subjective content that was inappropriately “projected” from subjects into the objective heavens. This showed how far psychology had accepted the Cartesian separation and helped reinforce it. Religion began a slow decline in industrial cultures, since God had become mainly a matter of personal experience. Meanwhile, the machine world of industry fascinated people with its speeding trains and mass-production industries and sometimes saw its smoky pollution as a sign of “progress.”

Most psychology as subjectness has not challenged its own worldview. But some, such as Ralph Metzner, say: “The environmental disconnection of modern psychology is indeed a conspiracy . . . . To keep human nature as distant, different, and disengaged from nature as possible” (Metzner 1999, p. viii). This disconnection is now being seen as a defense, part of the subject/object metaphysics that is fading.

### Subject/Object Metaphysics in Decline

Industrial society’s premise of the subject/object dualism has always had problems. The nineteenth-century air pollution in coal-burning towns like London was almost as awful as the coal miners’ “black lung” from inhaled coal dust. Now pollution and ecology are problems on a vast scale – for example, global warming from excessive CO<sub>2</sub>-filled smoke, overfishing the oceans, clear-cutting forests, and fighting for

increasingly scarce resources such as forest and water – because people feel no ethical obligation to respect the “objective” world. Better to escape the ugly polluted industrial realm for a vacation in the peaceful countryside. But slowly this barrier between inner and outer worlds is disintegrating. Now we know that, at a deep level, we exist not essentially as subjects/egos, but existentially as parts of important fields such as atmosphere, temperature, and electromagnetism.

The combination of the population explosion and the effectiveness of machine technologies to produce mass quantities of artificial products has led to growing problems of ecology, such as pollution – air pollution, water pollution, mountains of trash on land and islands of floating trash in the oceans, species extinctions, and chemicals producing unanticipated results. Serious ailments such as cancer from nuclear leaks are showing that the isolation of subjects from the objective world is not a useful metaphysical paradigm. Psychology is no longer taken for granted by all as just as the metaphoric “in here” nor nature merely “out there.” And nature is not just neutral “things” since we interact with them at deep, often unconscious levels, from inhaled gases to polluted water. Western religion, which has been relegated to just a private matter separate from nature, is increasingly being questioned. Even “unreligious” people now speak of “spirituality” as *experiences* of sacredness, in the soul and in nature, as distinct from conventional religions of “the book” (Elkins 1998).

### Soul in the World Reviving

Becoming conscious of experiences of soul in the world is taking a long time. But there are many sources. The Romantic artists of the nineteenth century began to oppose the rise of industrialism with books such as Mary Shelley’s *Frankenstein* (1818) that pictured the tragic consequences of seeing the human body as a collection of separate parts that a mad scientist could assemble like a machine and, by some unexplained process, bring to life. This expresses fears of the soul-less “objective” materialistic factory-like machine model for humanity.

The revival of feeling soul in the world rejects the harsh industrial exploitation and ravaging of nature and activates another way of knowing. Emerson said: “The earth laughs in flowers” (Van Matre and Weiler 1983, p. 9). Thoreau intentionally lived close to nature at Walden Pond. Countless others, notably artists, celebrated soul in the world. Walt Whitman said: “Now I see the secret of the making of the best persons. It is to grow in the open air, and to eat and sleep with the earth” (Van Matre and Weiler 1983, p. 12). John Muir said: “*This grand show* is eternal. . . Eternal sunrise, eternal sunset, eternal dawn. . .” (Van Matre and Weiler 1983, p. 13). Muir’s psychological experience of nature was religious; he saw soul in the world. He roamed the California mountains and persuaded President Teddy Roosevelt to establish National Parks to preserve islands of undisturbed nature, such as Yosemite Valley. These are places to experience soul in nature’s beauty and majesty. Robert Service, “Bard of the Yukon,” wrote: “Have you seen God in His splendors, heard the text that nature renders? (you’ll never hear it in the family pew.)” (Van Matre and Weiler 1983, p. 20).

Soul in the world requires a rejection of ego’s literalist, materialistic, and purely practical readings of nature. It needs to include an intuitive, imaginative symbolic perception. Modern art rejected the “realistic” art of classical tradition and forced viewers to see art and thus life symbolically, deeper into the soul, not literally. For example, Picasso’s painting *Guernica* is a symbolic cry against the first bombing of civilians in Spain. Aerial bombing treats its victims like objects out of sight, out of mind. Andy Warhol’s Campbell soup can is a portrait of the industrialization of food into commercial objects. Now, while bombing civilians has become too common, the rise of the health food movement and protests against industrial pollution has increased, and not just in yogurt and granola. People are striving to preserve nature’s soul in healthy organic food and prevent pollution of natural water, land, and air. Why? Not just for the health of humans and nature, but because such movements immerse soul in the world’s field energies, not egos

standing against theoretical objects. This is partly unconscious, but it is emerging into collective consciousness.

The quest to reawaken soul in the world takes psyche out of logical ego into nonliteral, poetic, paradoxical soul languages to help express the new/old consciousness of the depths of soul in the world, spoken often in paradox. Gaston Bachelard wrote: “The falcon is always at the summit of the mountain, crying: “I am the White of the Night, the Red of the Yellow”” (Bachelard 1948, p. 46). Look sensitively for the subtle, paradoxical, unexpected tones, deeper than the surface of the world deeper than the shadow of meaning in the literalism of science.

Indigenous cultures have always experienced soul in the world, as ancestors reborn in nature, spirits, and divinities in nature. One Hopi says that we should live in harmony with the world because “We are all of one human life, human world. We’re also involved in the animal world, and the plant world, and the cosmos” (Trimble 1986, p. 89). In his initiation into African manhood, Malidoma Somé, after a hot, sweaty day embracing a tree, ego-subject dissolved as he saw face-to-face an image of the soul of the world:

I thought I was dead . . . . When I looked once more at the *yila* [tree], I became aware that it was not a tree at all . . . . My body felt like it was floating. . . . When I looked again, she had lifted her veil, revealing an unearthly face. She was green, light green. Even her eyes were green, though very small and luminescent. She was smiling and her teeth were the color of violet and had light emanating from them . . . . She was green from the inside out . . . this green was the expression of immeasurable love . . . . We exploded into each other in a cosmic contact that sent us floating adrift in the ether in countless intertwined forms . . . . She placed her lips close to my left ear and she spoke so softly and tenderly to me that nothing escaped my attention. I cried abundantly the whole time. . . . because every word produced an indescribable sensation of nostalgia and longing in me. . . . The power of nature exists in its silence. . . . Human language has access only to the shadow of meaning (Somé 1994, pp. 220–222).

Take me out of ego and let me hear the loving, luminescent green goddess. Embrace the world and feel how it already embraces you. Knowledge needs to incorporate soul’s caring. “Green” has become a metaphor for nonpolluting ecological

*caring* about nature. This caring about green is an important spiritual step away from the separation of subject and object.

The post-Jungian archetypal psychologist James Hillman wrote about *Anima Mundi*, “Soul in the World.” For him psychology has failed its healing task by attending only to what we imagine as a completely enclosed internal psyche and repressing our soul in the world, trapped as we are in the Cartesian dualism. But he breaks free:

I can no longer distinguish clearly between . . . . psychopathology of self and psychopathology of world . . . . to place neurosis and psychopathology solely in personal reality is a delusional repression of what is actually, realistically, being experienced . . . . The world is inundating me with its unalleviated suffering (Hillman 1992, pp. 93, 99).

When we ignore the suffering of the natural and cultural world, we are blind to the way it affects our own souls. Looking at the world’s psyche, its feeling embraces us is a new way of seeing:

Hence, to call a business “paranoid” means to examine the way it presents itself in defensive postures. . . its delusional relations between its product and the speaking about its product, often necessitating gross distortions of the meanings of such words a good, honest, truth, healthy, etc. (Hillman 1992, p. 104).

To accept the definition of our egos as “consumers” who compulsively mob stores for “holiday” sales, trampling each other in a pushy, me-first grab-all materialistic rush, is a pathological example of the denial of the collective interaction of world and personal psyches:

To call consumption “manic” refers to instantaneity of satisfaction, rapid disposal, intolerance for interruption. . . the euphoria of buying without paying (credit cards). . . . To call agriculture “addictive” refers to its obsession with ever-higher yields, necessitating ever more chemical energizers (fertilizers) and mass killers (pesticides, herbicides) at the expense of other life forms and to the exhaustion of agriculture’s earthen body (Hillman 1992, pp. 104–105).

The psychopathology of repressing soul in the world has reached a dangerous extreme – paranoid, manic, and addictive. This is a sick

situation, yearning for re-enchantment of soul-in-the world with psychological and spiritual empathy for the “out there” that is not really “out there” or “environment.” We are in it, and it is in us, as a deeper, holistic world, and our lives depend on its health. It is demanding a different, non-Cartesian psychology of the oneness of existence, just below the psychopathological denial of soul in the world. We even need to stop saying “subject” and “object,” stop thinking of the world as a machine, and let imagination and empathy shape more thinking. But this re-enchantment of the world is another article.

## Soul: A Depth Psychological Approach

Lionel Corbett  
Pacifica Graduate Institute, Carpinteria,  
CA, USA

It has become very fashionable for depth psychologists to speak of the soul, although there is great variation in the way they use this word. Traditionally, the word “soul” refers to a suprasensory reality, an ultimate principle, a divine essence, or an energy that is essential for organic life, but depth psychologists have appropriated the word as a way of distinguishing themselves from other schools of psychology. Some writers use the word “soul” to deliberately imply an overlap between psychology and spirituality or to imply depth of experience or a romantic sensibility. For the psychotherapist, the main importance of this word is that it distinguishes between everyday ego concerns and deeper levels of meaning. The word soul is also a useful term for that mysterious, often uncanny sense of presence familiar to all psychotherapists that occasionally pervades the therapy room.

According to Bettelheim (1983), Freud used the term “*die Seele*,” not in its religious sense but metaphorically, to indicate our common humanity or as the seat of human identity and uniqueness. Bettelheim believed that Freud used this word for its psychological impact and to evoke mythological and humanistic resonances in the reader. Bettelheim suggested that Freud was aware of the spiritual nature of his work, but this awareness was ignored by his translators, and the word “soul” was deliberately excised or

mistranslated as “mind” to make Freud’s work more acceptable to the scientific community. This, even though Freud thought that psychoanalysts could be “secular ministers of souls.”

Jung’s writing consistently emphasized the soul rather than the mind or the brain. In 1933, in the heyday of behaviorist attempts to rid psychology of words with a religious connotation, he suggested that the recovery of the soul is an essential task for us. Although he insisted on the reality of the soul as a principle in its own right, he used the term in various ways. Sometimes “soul” was used as if it were synonymous with the whole psyche, which for Jung is an irreducible realm in its own right. Because the psyche creates the reality in which we live, his ontological position is what he calls *esse in anima*, or being in the soul, meaning that our experience of the world is a combination of its material reality and the way the psyche or the soul imagines or fantasizes about it (Jung 1971). This is an intermediate position between purely materialistic or spiritual perspectives – *esse in re* or *esse in intellectu*.

Jung also uses the term soul as if it were a kind of psychological organ which produces images and symbols which act as a bridge between consciousness and the unconscious. When we dream, or when we have a numinous experience, transpersonal levels of the psyche interact with human levels of consciousness. In this sense, the soul is that which allows us to link with spirit and perceive the sacred – what we know about the spirit comes by means of the soul. The soul casts the experience of spirit into emotions and images that are transmitted into personal awareness and into the body, a process known as the ego-Self axis.

Jung used the term “soul figures” to refer to a female figure in a man’s dream (the anima) or a male figure in a woman’s dream (the animus). These parts of the psyche are particularly unconscious to the dreamer, more “other” than same-sex figures in a dream, so they bridge to deeper levels of the psyche. Today, we are reluctant to attribute specific gender qualities to the soul, because these often repeat gender stereotypes. What remains important is the soul’s function of linkage to the unconscious.

Hillman (1975) wrote of the soul as “a perspective rather than a substance, a viewpoint rather than a thing itself.” He points out that the soul is a way of talking about something that cannot be fully articulated. The soul refers to our capacity for imagination, reflection, fantasy, and “that unknown human factor which makes meaning possible, turns events into experiences, is communicated in love and has a religious concern” (Hillman 1972). Hillman is fond of Keats’s (1958) notion that the world is a “vale of soul-making,” although he uses this term in a somewhat different sense than Keats did. Depth psychologists understand “soul-making” to mean the development of interiority, achieved by processing our experience psychologically, by casting our experience into words and images, and by seeing our situation metaphorically rather than literally, perhaps with a mythic sensibility. Arguably, however, it is the soul itself that allows us to do these things. If the soul is an a priori, supraordinate principle, we cannot “make” soul; to do so would imply something beyond the soul that is doing the making. It is more likely that the soul makes us, or makes us human. Our problem is to contact the soul amidst everyday life, whose activities, if understood properly, are a bridge to the soul, which makes the world and the body necessary.

Hillman makes much of the distinction between soul and spirit. He suggests that the soul is deep, moist, and dark, while the spirit is fiery, light, impersonal, and ascending. This distinction may be carried too far, since at times the soul can also soar and feel dry, so it is arbitrary to attribute these qualities to spirit alone, not to mention the fact that there are many descent or earth-based spiritualities. But Hillman (1987) makes this distinction so that we do not confuse (soul-centered) psychotherapy with spiritual disciplines such as meditation, which aim at self-transcendence. For him, spirit prefers clarity and order and is often aloof or imageless, whereas soul is about experiencing the soup of daily life, natural urges, memories, the imagination, fantasies, suffering, and relationships, much of which the spirit considers unimportant. Since only the soul but not the spirit suffers psychopathology,

the soul is the proper province and the root metaphor of psychotherapy. For Hillman, it is important to distinguish soul and spirit when we are trying to understand the soul's own logic, its suffering, fantasies, and fears, which is a different project than a metaphysical approach to spirit and its ultimates. While he is correct to point out the danger to the psychotherapist of excessively spiritualizing human concerns, it is also true that the soul has spiritual needs. When we think of soul and spirit as transpersonal processes or qualities, it is overly dualistic to separate them completely. Without actually conflating them, we can think of the soul as an extension of spirit into the body, soul as the way we subjectively experience spirit, or spirit inducing what we call soulful experience.

Other writers in this tradition use the term soul when referring to the deepest subjectivity of the individual, especially to emotionally important experiences. "Soul" is often used synonymously with powerful emotion, especially among psychotherapists with a strong thinking function for whom emotions are numinous. Because emotion is the effect of the archetype in the body, and the archetype is a spiritual principle, soulful emotions such as love, hatred, terror, sadness, and joy are spiritually important to the psychotherapist.

As Jung (1969) puts it, the psyche contains a divine power, or the psyche is a metaphysical principle in its own right. The problem of dualism arises here, of how this essence interacts with the body, or how the body acts as an organ of the soul, which is a preferable attitude to traditional ideas that the soul is trapped in the body. For psychotherapeutic purposes, one can bracket this problem, which does not arise in the consulting room. Here one can think of soul and body as two aspects of the same reality, experienced differently because of the limitations of our perceptual apparatus, emanations of the same source expressing itself on a gradient of different levels of density.

In his seminal work on the soul, which is now rarely acknowledged, Christou (1976) points out that the proper field of psychotherapy is subjective experience, which is not the same as the brain, the body, or the mind. The soul is the

experiencing subject, not the mind or the body that is experienced. Just as there is a difference between a physical object and our sense data about it, so there is a distinction between states of mind such as willing, perceiving, and thinking and our *experience* of these states of mind, what we do with them and what they mean to us subjectively. The language of reason and sense perception may vitiate the experience of soul, which is a reality of its own. Just as the body and mind develop in their own ways, so "the soul has its own developmental processes leading to psychic maturity and psychic plenitude" (Christou 1976, p. 37).

For Christou, there is a difference between ordinary states of mind and deeply meaningful experiences, which are the province of the soul. Mind is the name we give to ideas and thought, but soul is the name we give to our ability to transform these ideas in our imagination. Mind, body, and emotions are *sources* of psychological experience, but they are not the experience itself—to fail to make this distinction is to confuse different levels. Our imagination elaborates our bodily states and our feelings, and the result is much more than simple conceptual understanding of an original experience. "Soul" therefore implies not just intellectual or aesthetic understanding of an experience but our gut-level relationship to it, its effects on us, and the ethical demands of the experience on the personality. We participate in soulful experience; we do not just impartially observe it.

The soul cannot be thought of conceptually, because it is that which witnesses thought going on; it is the matrix within which mental life happens. In spite of the claims of cognitive-behavioral approaches, behavior and ideas are of a different order than the order of the soul. There is a distinction between a science of the mind and the reality of the soul, which is not just about behavior. The realm of soul is the realm of meaning that is discovered when we look into ourselves, when we are inspired or deeply affected by music, art, ritual, relationship, nature, love, or beauty, whatever really matters to us.

Mainstream psychology rejects the language of the soul because it seems too religious.

The soul is impossible to study using empirical criteria; it needs its own methods of study. Dreams and spiritual experiences have no rational explanation, or they have their own rationale – they defy the inductive scientific approach because they produce something new and impossible to replicate, so they are anathema to positivistic approaches.

The word psychotherapy means attending to the soul, and the word psychopathology means the suffering of the soul. If the therapist does not work at the level of the soul, by default we work only with the ego, the sense of personal identity, and with the personal unconscious. But soul is the larger context of experience, so that the ego's attitude may be mistaken from the point of view of the soul. Therefore, psychotherapy that only supports adaptation to the environment may produce a "cure" that ignores the values of the soul. Accordingly, Christou suggests that the "proof of psychotherapeutic cures takes the form of 'testimony,' a 'witness,' rather than that of logical conclusions or empirical observations of an objective event" (Christou 1976, p. 3).

## Sound

Laurence de Rosen  
Paris, France

Sound is scientifically defined as any vibratory disturbance in the pressure and density of a medium (solid, liquid, or gas) that stimulates the sense of hearing. It measures the ability to vibrate. Creation myths of a number of ancient religions – African, Australian, Polynesian, Tahitian, Hawaiian, and Japanese – reflect the belief that matter is formed and life begins through God's sounds and tones. In Hinduism, the importance of sound, and particularly of chant, is firmly rooted in the belief that sound vibration is the basic nature of the universe, *Nada Brahman*: "Sound is God." The Sanskrit language is essentially a 3,000-year-old science of sound. For the Greek philosopher Pythagoras, "A stone is frozen music, frozen sound." Hermetic principles tell us the universe is nothing than more an endless number of vibrations and rhythms.

Ancient ideas that sound and vibrations represent the fundamental nature of reality are reflected in the theories of modern particles physics and quantum mechanics.

Most objects, from subatomic particles to planets, have one or more frequencies at which they vibrate. Sound is widely used in modern science (notably in medicine, as in MRI and other technologies) in its resonance meaning,

literally, resound for diagnosis and healing. When a sound wave strikes an object, if there is a match between the frequency of the wave and the frequencies inherent in the object, the object begins to vibrate (creating resonance). The same phenomenon applies at the symbolic level in psychology. The verb “vibrate” means “move, swing to, and fro,” which is precisely the description Jung gave of the transcendent function, “the psychic function that facilitates a transition from one attitude to another.”

The word *persona* is made up of two Latin syllables: *per*, which means “through,” and *sonare*, the verb for “sound.” Together they mean “sounding through, through sound,” an allusion to the hole in the mask worn by actors in ancient times, through which the voice was sounding, moving through.

In psychology, sound is a bridge between Spirit and matter. Through the vibrating energy that is sound, the invisible world can touch this physical plane. In a number of practices (ancient Egypt, Kabala, Sufism, and Buddhism), it is believed that the chanting of particular vowel sounds has the ability to connect the chanter with the energies of the Divine and with the mystery of healing.

## Spectrum of Pastoral Counseling

Kristen Leslie

Eden Theological Seminary, St. Louis, MO, USA

Pastoral counseling, a specialized form of pastoral or spiritual care, is a structured form of caring ministry which is accountable to and reflects the particular commitments of religious communities through skilled representatives of those communities. Practiced by both ordained religious professionals and lay representatives of religious communities, pastoral counseling can be understood as either one function of a larger healing practice of a congregation or more formally with clinically trained pastoral counselors who use contractual agreements and charge fees. (For more on this, see websites for The American Association of Pastoral Counselors –[www.aapc.org](http://www.aapc.org) – and the American Association of Christian Counselors –[www.aacc.net](http://www.aacc.net)). Largely a Western Christian practice, the discipline has grown globally to include Judaism, Islam, and other religious traditions that see healing as the work of the religious professional (Friedman 2001; Kobeisy 2004). Central to the work of pastoral counseling is the integration of theological understandings and commitments to therapeutic resources in order to facilitate healing and growth. Because religious traditions understand the importance and manner of integrating theology and therapeutic resources in different ways, pastoral counseling can best be understood on a spectrum of theological and methodological commitments. This essay will provide an overview of the spectrum of pastoral counseling, using the framework of premodern, modern, and postmodern approaches to knowledge (Doehring 2006). Starting with the foundational work of Seward Hiltner (1949), we will explore modernist approaches to pastoral counseling. From there we will examine two responses to this modernist emphasis on healing and growth: premodern critiques as found in the work of Christian counseling and postmodern critiques as found in pastoral counseling influenced by liberation themes, poststructuralism, and intercultural contributions.

## Modern Approaches

American Liberal Protestants influenced by a post WW II renaissance in pastoral psychology (and hence pastoral care and counseling) look to the pioneering work of four formative pastoral theologians who represent a strong modernist approach to integrating theology and psychological resources in pastoral counseling (Holifield 1983). Seward Hiltner (1949) drew on social and cultural anthropology as he emphasized educative counseling, or a drawing out of concerns and problem-solving resources of the counselee. Carroll Wise (1951) based his work on personalist theology and dynamic psychology, as he emphasized the goal of insight. Paul Johnson (1953), strongly influenced by philosophical personalism and the work of Harry Stack Sullivan, advocated a “responsive counseling.” Wayne Oates (1974) worked within the free-church tradition as he argued against pastoral dogmatism and in favor of responsiveness to the counselee’s concerns. These pastoral counselors understood the human as an autonomous self, while they draw upon rational and empirical methods of inquiry (biblical critical methods, psychological and medical knowledge, and the social sciences) to help careseekers heal and grow.

All four of these formative figures engaged the educative and nondirective client-centered counseling approach of Carl Rogers (1951). Their work reflected Roger’s notion of liberal optimism about human nature and his commitments to self-actualization as the goal of growth and healing. Rogerian client-centered counseling was popular with religious liberals because it appealed to an optimistic image of the self as capable of growth and change. This reflected the growing sense in Protestant liberalism that openness to the future was a prime mark of the Christian faith. As well, Roger’s notion that conventional social expectations inhibited the true self was reflected in the distaste many liberals held for moralistic legalism. Roger’s client-centered model of counseling exerted a normative influence on American Protestant pastoral counselors of the period because it was a counseling model that could be taught in an

already crowded seminary curriculum (Holifield 1983).

Theologically Protestant pastoral counselors of this formative period were significantly influenced by the work of Paul Tillich and his correlational model, which allowed them to relate psychological concepts to theological traditions. Carroll Wise asserted that Tillich “provided the pastoral psychologist with a theological method for translating the power of the gospel into the idiom of the twentieth century thought, namely a psychological way of thinking” (Holifield 1983, p. 303). By acknowledging that clinical therapeutic practices provided both the language and the inspiration for his understanding of grace, Tillich provided a theological method for pastoral counselors and scholars to bridge the disciplines. In an era represented by theologically neoorthodox commitments to isolating theology from the secular disciplines of psychotherapy and medicine, Hiltner and others picked up on Tillich’s work to discern the meaning of the “Christian context” for psychotherapy and counseling.

Pastoral counselors reflecting modernist approaches to healing and growth engage the Hebrew Scriptures and the New Testament in ways that utilize a modern historical-critical biblical method of interpreting the texts and the doctrines of the faith traditions. As such, the pastoral counselor looks for the disclosive power of the text rather than an inductive approach that calls the careseeker to accept or adjust to set interpretations of the Scriptures (as practiced in Biblical counseling). Pastoral counselors following this modern approach consider the Bible both authoritative in faith and life and understand it to hold symbolic meaning for a careseeker. The relevance of a biblical text is determined both by its interpretation and the light it brings to a human situation. The use of the bible and its insights are always considered in light of good counseling principles. Hiltner was clear that referring to scriptures during counseling did not justify moralizing with biblical legalism; he made a clear distinction between moral clarification and moral coercion. The American Association of Pastoral Counselors (AAPC) ([www.aapc.org](http://www.aapc.org)) and the College of Pastoral Supervision and

Psychotherapy (CPSP) ([www.pastoralreport.com/](http://www.pastoralreport.com/)) serve as membership, training, and credentialing guilds for pastoral psychotherapists and counselors in both the modernist and post-modernist approaches.

## Premodern Approaches

Christian counseling, a premodern approach to pastoral counseling, is an inductive mode of counseling in which both the counselor and the counselee directly engage biblical and doctrinal resources that are understood to be true in all times and places. It draws on a “biblically based, Spirit-directed, and empirically validated model that invites Christ into the healing process to meet the deepest needs of individuals and families” (Clinton and Ohlschlager 2002, p. 37). For Christian counseling, full reciprocity between Christian and psychological resources is not expected and, for some, dismissed. Pastoral counseling in this premodern form can function as the application of biblical and theological resources to inform a faithful use of secular psychological wisdom. When social sciences are integrated into the practice of care, it is done in ways that preserve the integrity of conserving theological or biblical perspectives. The Bible is often used both in assessment and treatment of persons, as well as defining the goals and procedures for change. Unlike a postmodern approach, mutuality in the counseling relationship is not stressed. Identifying problems and experiencing acceptance happen in the guise of confessing one's sins and experiencing forgiveness. Person-center, nondirective, Rogerian notions of counseling and the centrality of the immanence of God (rather than a transcendent notion) are critiqued as a “New Age marketplace” approach to spirituality that neither recognizes sin, calls for sacrifice, or confesses the need for change in the form of redemption (Collins 2007). Christian counseling emphasizes the need for personal change that comes in response to a transforming life experience in which “God touches, heals, and reshapes the deepest recesses of heart and soul” (p. 34). Relying on a legalistic biblical hermeneutic, it is a rational,

problem-centered, behavior-oriented approach. Counseling techniques are considered effective and moral when they are consistent with biblical texts. Effective tools of counseling include the reading of Scriptures, prayer in the counseling session, “gentle confrontation with Christian truths,” and encouraging counselees to become involved in faith communities. The Christian Counseling and Educational Foundation (CCEF) ([www.ccef.org](http://www.ccef.org)) and the American Association of Christian Counselors (AACC) ([www.aacc.net](http://www.aacc.net)) serve as accrediting guilds for Christian and Biblical counselors.

Christian counseling is best understood in three related “evangelical ministry movements.” Nouthetic or Biblical counseling, identified in the works of Jay Adams (1986) and David Powlison (2010), understands the Bible as the “textbook for counseling” and serves as the ultimate source for discernment and interpretation of other sources. While Adams holds that the Bible is the exclusive source for understanding the human condition and its redemption (healing), Powlison rejects the split between spiritual and psychological concerns, recognizing that some nonbiblical sources can be informative as they challenge and inform us about the human experience. For both, Biblical counseling is a form of “Christian psychology.” Ultimately, any extrabiblical sources are strictly subordinate and secondary to a conserving biblical interpretation of the human condition. Critiques of Biblical counseling claim that it disregards the complexity of the Bible and the freedom of the human spirit, is too focused on a confrontational style of dealing with sin and behavioral change, and gives insufficient attention to human grief (Anderson 2005).

An Integrationist model of Christian counseling, best identified in the works of Gary Collins (2007), works to integrate “biblical theology” and the psychosocial sciences into a unified counseling model. While biblical knowledge has primacy, integrationists hold that God permits us to learn through methods of scientific investigation. These discovered (empirical) truths must always be consistent with, and tested against, the norm of “revealed biblical truth.” Some Christian counselors find integrationism to be invalid and pernicious because it imports corrupting and under-examined

psychological theories into the church (Clinton and Ohlschlager 2002, p. 41).

A Community model of Christian counseling, championed by the work of Lawrence (“Larry”) Crabb (1975), is centered in the daily life of the church and focuses on the notion that counseling needs to be situated in church communities, where the work of healing “soul wounds” happens within small Christian groups, or among “spiritual friends.” Crabb understands spiritual direction encompassing all that is legitimately done in psychotherapy, seeing the “battle between flesh and the Spirit” at the root of all organically caused psychological disorders (Clinton and Ohlschlager 2002). Some in the Christian counseling movement critique Crabb’s notion of spiritual friends and community healing as devaluing the significance of the trained Christian counselor. In putting this forward, the Community model bridges the commitments of premodern Christian counseling and modern Rogerian-influenced modes of pastoral counseling.

### Postmodern Approaches

A postmodern approach to pastoral counseling reflects three overlapping influences: liberation themes, poststructuralist interpretations of reality, and intercultural/multicultural analysis. Liberation themes of resistance and solidarity, power analysis, internalization of oppressive systems, and relational justice had a transformative effect on the work of pastoral counselors who moved from understanding the person as an autonomous self to one who lives in a network of connections, or a “living human web” (Miller-McLemore 1996). Those connections included both the historical community in which the person developed their identity and forces that exerted power from oppressive and controlling systems. African American pastoral theologians like Edward Wimberly (2006) recognize that pastoral counseling liberates by empowering and strategizing in the face of oppressive systems. He asserts that the most important role of pastoral counseling with African Americans is “to liberate (them) from the negative images, identities, and

stories into which they have been recruited, and to accompany them in discerning how best to make use of their resulting personal and political agency and efficacy” (p. 11.) Nancy Gorsuch (2001) proposes a feminist model of counseling that decenters the counselor and privileges the careseeker’s knowledge and experience, definition of the problem, and identification of the resolution, before turning to the knowledge and experience of the counselor. Carroll Watkins Ali (1999) draws on contributions from womanist theologians and African American psychologists as she recognizes the limits of a clinical pastoral model for the communitarian context alive in many African American communities. Joretta Marshall (1997) presents a model of pastoral counseling with lesbian partners that nurtures covenantal relationships built on the transformative values of love, justice, and mutuality. Like other pastoral theologians influenced by liberative themes, Marshall calls for prophetic and priestly counseling practices aimed at transforming oppressive systems that cause suffering.

Like those influenced by liberation themes of resistance and solidarity, postmodern pastoral counselors are influenced by poststructuralist understandings of knowledge and the self. For these pastoral counselors, Scripture provides just one of many truths and that truth is mediated through its disclosive and liberating power to the careseeker. Narrative counseling theory, based on poststructuralist philosophies, recognizes the notion of the self as socially constructed. For Christie Cozad Neuger (2001), the interpretation of reality *is* reality and as such is socially constructed. “Realities...are organized and maintained by stories that are personal, familial, and cultural. Thus, a major part of the work of narrative counseling is to help people generate new language and new interpretive lenses and thus create new realities” (p. 232). This narrative approach provides a liberating promise because just as our lives are socially constructed, so too can they be reconstructed.

Intercultural and multicultural analysis in pastoral counseling arises from a particular awareness of the global dimension of the asymmetry of political and economic power associated with

racial and cultural difference. Emmanuel Lartey (2003) suggests three interdependent principles inherent in intercultural care: contextuality of multiple influences on identity, multiple perspectives on knowledge, and authentic participation made possible by attention to the voices silenced by those in power. Lartey's work represents a widening of the pastoral counseling lens to include theories and practices from around the globe. Pastoral counseling with a global lens requires multiple perspectives and an acceptance of ambiguities that exist when multiple truths coexist.

## Spectrum of Religions

Lee W. Bailey

Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

The spectrum of religions can be approached by various themes, such as the traditionalist/moderate/progressive theme: (1) whether a major religion seeks to maintain a historically traditional approach, (2) is moderately adaptive to its cultural context, or (3) seeks to adapt more fully to current cultural movements. These have psychological as well as regional, historical, and theological roots. Global archetypal themes, such as family, gender roles, and death, appear in many ways.

### Traditional

Religions whose goal is to maintain traditional practices strive to stay rooted in various elements of past principles. Psychologically, this may provide a sense of rightness, security, identity, stability, social order, family history, moral order, and survival, as in gender roles or land ownership. Change is difficult, perhaps threatening. Since religions often make social order and psychological identity a matter sanctioned by ultimate reality, they seem to be fixed and immovable.

Indigenous nations are guided by ancient traditions such as clan and tribal social organizations, gender roles, and ancestral veneration. The presence of sacred spirits is felt in the world and the sky. Traditional rituals are maintained, such as drumming, dancing, and gods and goddesses, such as Chronos and Mother Earth. Haudenosaunee (Iroquois) nations keep to Long House political structures whereby clan mothers choose male chiefs, who relate to the outside world. Some traditional first nation people do not believe in teaching nonnatives their traditions, since they feel that their land was stolen and do not want their culture stolen as well. Arctic peoples strive to maintain their traditional longboat sea hunts and honor ocean

goddess such as Inuit Sedna of the sea creatures. Caribbean religions keep traditional rituals such as Spiritism or Voudon alive with drumming, dancing, and possession by spirits during ritual dances.

Chinese folk religions maintain ancient *shen* gods and goddesses, such as Mazu (Mother Ancestor), who rescues drowning sailors. Chinese New Year is a major celebration including family reunions, ancestor veneration at family graves, and dragon parades with firecrackers to scare off threatening spirits. Confucianism is usually called not a religion, but a philosophy for social order, yet its texts revere the “Mandate of Heaven.” Confucian tradition still teaches a preference for male babies and patriarchal society. Taoism teaches the ancient dynamic energy Qi (chi), incorporating the Yin/Yang energy pair of opposites in relation, such as dark/light, female/male, and traditional arts. Pilgrimages to ancient Taoist or Buddhist temples and Chinese mountain shrines are popular.

Hindu traditionalists learn spiritual traditions from gurus and priests. They celebrate holidays such as Holi, when raucous crowds throw brightly colored powder on each other as they process to temple celebrations. Belief in karma and reincarnation is widespread across Asia. The seemingly sacred Hindu caste system lingers among traditionalists, even though it is now officially illegal. Thousands of gods and goddesses and their temples fill India, but the greatest gods are Brahma, Vishnu, and Shiva. Goddesses include Kali, goddess of life/death, and Durga, a fierce warrior who rides a tiger. Ascetics reject conventions and retreat to the forests or beg in cities.

Buddhist traditionalists vary by country, support celibate monks and nuns who educate their children, and celebrate holy days such as Buddha’s birthday. Indonesians have little model Spirit Houses, where they believe indigenous spirits and ancestor spirits live and are fed to assure peace. Tibetan monasteries and refugees strive to maintain monastic traditions. Avalokiteshvara, the Buddha of compassion, is a popular Tibetan form of Buddha. The Chinese chant and burn incense in Buddhist Amita-fo Pure Land Buddhist temples. Chinese Chan Buddhism is the mystical branch

that spread to Japan and became Zen. The goddess of Mercy Guanyin is a syncretic blend of the Buddhist Avalokiteshvara and ancient goddesses.

In Japan, Zen Buddhists maintain their elegant temples and monasteries with model gardens of harmony with the spirits throughout the cosmos. Monks seek to drop the bottom out of the mind and experience the Buddha mind throughout existence by practicing the rigorous Zen meditation, koan riddles, and chanting sutras. Ancient indigenous Japanese Shinto belief in *kami* nature spirits continues, as in the blessing of the rice before planting. Mountain pilgrimages may include standing under cold waterfalls.

Most Jews now live in Brooklyn, New York, and Israel. Jewish traditionalists include the mystical Hassidim and pious Orthodox, who emphasize strict adherence to Torah laws, and later interpretations, such as male leadership and religious education, gender separation, kosher diets, nineteenth-century dress in black suits and beards for men, modest dress for women, strict Shabbat rules, arranged marriages, and rituals such as Yom Kippur New Year cleansing practices. Israel is the protected Holy Land.

In Christianity, traditionalist Eastern Orthodox believers practice worship with ancient ritual chanting. They venerate medieval-style icon paintings and have a hierarchical, bearded male priesthood. Priests marry and Bishops come from celibate monastic lives. Traditionalist Roman Catholics celebrate ritual masses in Latin, with a celibate male priesthood, centered in the Vatican in Rome, where the Pope leads the hierarchical global church. Strongly Catholic countries, such as Italy, Spain, and southern Germany, are now being outnumbered by former colonies such as South America, Asia, and Africa. They oppose modern birth control, abortion, and many women's rights. Protestant Fundamentalists are usually independent "free church" or nonhierarchical churches, like the US Southern Baptists. The Bible is the primary authority for faith, read literally. The Protestant belief in the priesthood of all believers reduces clerical authority. Evangelical traditionalists promote belief in creationism against evolution and have other conflicts between science and biblical literalism. Episcopalians and Lutherans retain bishops and

formal liturgies, but most Protestant worship is simplified and communal, rather than formal and hierarchical, and married men are preferred for traditional ministry and leadership.

Muslims are most traditional in Arab countries, centered on Mecca in Saudi Arabia, where the annual Hajj pilgrimage attracts millions of fervent believers. Traditions such as reverence for the Qu'ran are kept, such as saying the key belief in only one God Allah and that Muhammed is His one Messenger, daily bowing prayer facing Mecca five times a day. Loyalty to family and clan are very important. Men prefer beards and women are generally required to dress modestly, sometime totally covered.

## Moderate

Moderation of traditional practices often comes from cultural mixing, due to today's globalization of cultures. Moderate religious practices among indigenous peoples include interacting with and teaching nonindigenous people native ways, such as respect for nature. Some Native Americans have Indian gift shops selling beads or Hopi Kachina dolls, hosting public powwows, native museums, and gambling casinos. Chinese dragon boat races in the Duanwu Festival originating in China have become a popular event worldwide. Some indigenous people move to industrial cities for jobs, such as ethnic grocery stores or restaurants. New Orleans has become the home of moderate Caribbean Voudon traditions, with a temple, a museum, and the sale of love potions.

Some moderate Hindus adopt English customs and education and revere leaders such as Gandhi, who led an influential nonviolent resistance against British imperialism. He rejected industrialism and promoted handmade clothing. Some Hindus emigrate to other countries and build Hindu temples. Yoga has become a popular practice in the West, although sometimes more fitness-oriented than spiritual.

Buddhist programs in foreign countries build temples and monasteries for immigrants, usually using native languages. They often translate

religious literature, such as Buddhist books and DVDs. Moderate leaders may work with new local converts to establish publishing houses to distribute their books and artifacts. Americans become Buddhists and influence the US culture with meditation and new forms of spirituality.

Moderate Jews have founded Reform, Conservative, and Reconstructionist branches. Most support the Israeli State, speak some Hebrew, and celebrate traditional holidays such as Rosh Hashanah and Bar and Bat Mitzvahs, while living otherwise largely Western lives. Women in these traditions have increasingly become rabbis.

Moderates in the Roman Catholic Church like the ritual and symbols, although they may ignore some rules, many practice contraception. Women have gained increasing leadership roles in many churches. Mass was often celebrated in modern times in local languages, but in 2007 Pope Benedict XVI restored Latin to the Mass. Moderate Protestants, the “mainstream” denominations, continue a rather traditional worship, with a new informal dress code. Many have supported civil rights for minorities. Modern large “megachurches” such as the large Lakewood Church in Houston, TX, have spread a conservative gospel with modern architecture, nontraditional music, television, and often a “prosperity gospel.”

Turkey is a rather moderate Muslim country, where one can see many large mosques, and women dressed in many ways, mostly modestly, but some in youthful modern clothes, many in very modest modern clothes, and some in fully black robes with only their eyes showing. Many moderate Muslims have emigrated West and assimilated somewhat into Western culture. In parts of Brooklyn, one can see Muslims in traditional dress walking down the same streets as Orthodox Jews.

## Progressive

Progressive believers offer spiritual support for making changes in their societies. Progressive indigenous peoples focus on the struggle for political and economic equality. They often stand strongly for the protection of the earth’s

ecological health, against industrial society’s destructive exploitations. Southwestern US Indians say: “You look at that mountain, that mountain has a spirit, that mountain has holiness” (Trimble 1986, p. 27). They may seek to regain tribal lands lost in past wars of conquest. They may create new ceremonies and resources for rebuilding their communities. Kwanzaa is an African-American celebration since 1966 that focuses on seven principles (*Nguzo Saba* in Swahili): *Umoja* (Unity), *Kujichagulia* (Self-Determination), *Ujima* (Collective Work and Responsibility), *Ujamaa* (Cooperative Economics), *Nia* (Purpose), *Kuumba* (Creativity), and *Imani* (Faith) (Karenga).

Progressive Chinese are increasingly traveling and getting higher education abroad. They are rapidly absorbing industrial culture at home. Chinese Amita-fo Buddhism is gaining ground at home, as well as the Daoist mystical traditions of Lao Tse’s *Dao de Ching*, some with women priests (Johnson 2010).

Progressive Hindus often promote Gandhi’s principles: the harmony among all religions, rejection of the caste system, untouchability, and non-violent resistance. Women are also gaining power, as expressed by Guru Mata Amritanandamayi (2002), a leader for women’s liberation. She ordains women as priests, in opposition to Brahmin tradition. She is considered a divine mother by many of her followers worldwide. Progressive Hindus also emphasize the urgency of restoring the earth’s ecological balance. One group hugged trees so they would not be cut down to make sports equipment (Hinduism and Ecology).

Progressive Buddhists have created the “Engaged Buddhism” movement that works to change oppressive social structures. Work for education, health, environment, and social justice for the poor is now considered an important part of Buddhism, expanding from monastic and meditative traditions (Queen & King 1996). The Zen monk Thich Nhat Hanh (1987) emphasizes “Interbeing,” the full relatedness of all existence at the foundation, the Buddha Nature. His precepts include “Do not accumulate wealth while millions are hungry,” and “Do not live with a vocation that his harmful to humans and nature.” Similarly, the

Dalai Lama (2011) spreads Buddhism worldwide with teachings on the dangers of the population and environmental consciousness, consumerism, and religious intolerance. He supports the growing number of women Buddhist leaders, such as Tsultrim Allione (2000). He urges compassion, increased democracy, and, in a new book, the theme of going *Beyond Religion: Ethics for a Whole World*.

Progressive Jews encourage the ordination of women into the rabbinate, such as Sally Priesand, in 1972 the first US woman rabbi. Progressive synagogues now call girls to the Torah in a Bat Mitzvah. Prayers are becoming gender-neutral, and the birth of a daughter is celebrated. Women celebrate their own Passover Seders. Yeshivat Maharat is the first school to train women to be Jewish leaders (Umansky). Rabbi Michael Lerner (2005), editor of *Tikkun* magazine, advocates a rewriting of the Ten Commandments as the Ten Commitments. Rethinking “Thou shall not steal,” he writes “. . . I will support a fairer redistribution of the wealth of the planet so that everyone has material well-being. . .” Secular Humanistic Judaism celebrates Jewish customs and holidays, but without belief in God.

Progressive Christians are represented by Matthew Fox, the priest who was expelled from the Catholic Church for advocating feminism, and Episcopal Bishop John Spong, who challenges fundamentalist and mainstream churches alike (Spong 1998). Most progressive churches support African-American concerns. Most have welcomed women clergy. Some Catholic women have been ordained illegally (Roman). Some progressive Protestant churches have embraced rights for gay and lesbian believers. Sexuality is increasingly discussed openly in feminist circles. Some progressive Christians have supported ecological spirituality and global warming awareness. Many are ecumenical, engaging in shared services and programs with other churches. Others are active in interfaith movements to bring together various world religions. World Religions college courses are common. Pastoral Counseling and Spiritual Guidance, blending psychology and religion, are spreading worldwide. Goddess spirituality is an expanding area of feminist theology.

Most Muslim countries are experiencing struggles between traditional leaders who control most of the wealth and the masses who are pressing for democracy, using the Internet, sometimes protesting forcefully, as in the 2011 “Arab Spring.” Progressive Sufi mystics have strong traditions of chanting, meditation, and the dramatic Whirling Dervishes. The International Sufi movement supports creative interfaith spiritual practices (International). Debates continue over conflicts between the progressive *Universal Islamic Declaration of Human Rights* (Islamic) and traditional Muslim Sharia law (Salem 1981).

The spectrum of religions shows that religions are always changing. Today, rapid growth in global communication and travel, education, and immigration are bringing together stimulating psychological and spiritual forces at a rapid pace.

## Spielrein, Sabina

Felicity Kelcourse

Doctor of Ministry Program, Christian  
Theological Seminary, Indianapolis, IN, USA

Sabina Spielrein (1885–1942) was a first-generation psychoanalytic pioneer whose collected works, available in German since 1987, have only recently been rediscovered by English-speaking scholars. Spielrein's original contributions at the dawn of psychoanalytic thinking, as typified by her papers "Destruction as a Cause of Coming into Being" (1912/1987) and "The Origins of the Words Mama and Papa" (1922/1987), deserve to reemerge from the heavy shadows of the Freud/Jung legacy to be studied and appreciated in their own right. Spielrein published over 30 papers during her lifetime, served as Piaget's analyst, and helped to establish psychoanalysis in her native Russia. The origins of Freud's "death instinct," Jung's "anima," and Klein's theories about the infant's experience of the breast have all been linked to Spielrein's prior contributions. The correlations Spielrein identified between evolutionary biology and psychoanalytic thinking,

resisted by her contemporaries, prefigure the work of Bowlby and Bateson (Launer 2011). Her contributions to psycholinguistics and psychoanalytic theories of human development as applied to early childhood clearly precede those of Melanie Klein (1882–1960) and Anna Freud (1895–1982).

Spielrein was also influential as an early psychoanalytic patient. What Anna O (Bertha Pappenheim) and Dora were for Freud, foundational cases for the practice of psychoanalysis, Spielrein was for analytical (Jungian) psychology. Arriving as an inpatient at the Burghölzli in 1904, where Jung had been working since 1900 under the direction of Bleuler, hers was the first case Jung attempted to treat using Freud's psychoanalytic method. The treatment was both a success and a disaster: a success because Spielrein went on to train as a psychiatrist, publishing articles in German, French, and Russian, and a disaster because she was in some respects betrayed by both Jung and Freud. What Jung and Freud learned, and what subsequent analysts can glean from her treatment, informs understandings of therapeutic transformation, individuation, boundaries, and frame identified as best practices today.

Spielrein was the firstborn daughter of a well-to-do Jewish couple living in Rostov-on-Don, near the eastern shores of the Black Sea. Her parents' arranged marriage was apparently never happy. Her mother, Eva Lublinsky, trained as a dentist and was the daughter and granddaughter of respected rabbis. Both Sabina's mother and her maternal grandfather had first loves who were Christians before marrying within their faith. Sabina's father, Nikolai, originally from Warsaw, prospered as an animal feeds dealer, but Sabina's mother repeatedly provoked him to rage and threats of suicide with lavish spending and affairs. When Sabina was admitted to the Burghölzli hospital at the age of 19, marital strife and humiliating corporal punishment inflicted by both father and mother were cited as causes for what we would now consider posttraumatic stress.

Sabina was sent away from her family to live with relatives in Warsaw at age 5, perhaps because her parents already recognized her

signs of disturbance. Sabina later returned to live with her parents and three brothers and was educated at home until she entered the gymnasium. A second daughter, Emilia, was born when Sabina was 10. Fluent in German and French as well as Russian, Sabina studied biblical Hebrew to read the Bible in the original. She studied piano and voice as a child and composition as an adult. In keeping with the Hassidic rabbis on her mother's side of the family, she had a mystical bent, believing that an angel spoke to her in German, telling her that she was destined for great things.

With encouragement from her father, she aspired to be a doctor, while her mother wished her to remain ignorant in sexual matters. Despite academic success, she developed symptoms including depression, nervous tics, and psychosomatic ailments. Her mental health worsened at the age of 16 when Emilia, age 6, suddenly died from typhoid fever. Sabina then withdrew from friends and family, becoming increasingly agitated. When her mood failed to improve, her mother and physician uncle took her to Switzerland for treatment. At 10:30 p.m. on the night of August 17, 1904, she arrived at the mental hospital made famous by August Forel and Eugene Bleuler, respected throughout Europe, the Burghölzli.

Spielrein's case, diagnosed as hysteria, was assigned to the 29-year-old Carl Jung who, having been encouraged by Bleuler to read Freud's *Interpretation of Dreams*, attempted to treat Spielrein using Freud's then-novel psychoanalytic method, despite his personal reservations about the sexual etiology of mental illness. Jung had been conducting association experiments since 1901 and proceeded to "analyze" Spielrein during episodic sessions, sometimes lasting 3 hours at a time, during which he attempted to understand her "complexes." Spielrein's initial disruptive behavior, eliciting negative attention by provoking staff, responded positively to treatment despite, with occasional setbacks when Dr. Jung was not available.

The Burghölzli at that time was a true "asylum," in the sense that patients whose mental illnesses were either hereditary or induced by

abuse were to be treated with kindness and respect. Every patient capable of contributing through work was given a task. Both patients and staff were expected to attend psychoeducational sessions designed to help them understand the nature of mental illness. As Spielrein recovered, she assisted Jung in his ongoing association experiment research. By April 1905, only 8 months after being admitted as an inpatient, she began to attend medical lectures at the University while still living at the hospital. On June 1, 1905, she was discharged and lived independently in Zurich while continuing her medical studies. In May 1908, she passed her preliminary medical examination, and in 1911, her qualifying psychiatric medical dissertation, *Über den psychologischen Inhalt eines Falles von Schizophrenie* (On the Psychological Content of a Case of Schizophrenia) was accepted, using the term "schizophrenia" recently minted by Bleuler.

Spielrein's successful recovery demonstrated the value of the psychoanalytic method. But the disaster that followed was to have a profound effect on both Spielrein and Jung, altering the course of psychoanalytic history. As early as September 25, 1905, after Spielrein had been discharged but was still seeing Jung on an outpatient basis, Jung prepared a "Report on Miss Spielrein to Professor Freud in Vienna, delivered to Mrs. Spielrein for use if the occasion arises." The report begins as a standard case summary but concludes: "During treatment the patient had the misfortune to fall in love with me. She raves on to her mother about her love in an ostentatious manner, and a secret perverse enjoyment of her mother's dismay seems to play a not inconsiderable part. Now in this distressing situation the mother wants to place her elsewhere for treatment, with which I am naturally in agreement" (Covington & Wharton 2003, p. 106). Jung's 1905 report was apparently never sent to Freud (though Spielrein would eventually meet Freud in Vienna).

Sabina remained in Zurich through 1911 to pursue her medical studies and continued to see Jung, first as patient, then as research assistant, becoming, in the course of completing her

psychiatric dissertation under his supervision, the first of his many “muses,” later to be succeeded by Maria Molzer and Toni Wolfe. Through the intensity of their work and his own emotional vulnerability, it seems possible that the “poetry” Spielrein wrote of in her journal included an affair (Carotenuto 1982). Clearly Jung, a fully qualified psychiatrist 10 years her senior, had a moral obligation to Spielrein to maintain appropriate professional boundaries with his former patient. But it is significant that Jung did not truly embark on his own self-analysis until after Spielrein left Zurich for Vienna (via Munich) in 1911. Jung’s own woundedness included the hospitalization of his mother when he was three. During her absence Jung the toddler depended on a dark-haired caregiver and developed what he called a distrust of women (Jung 1961, p. 8). Today this would be considered an insecure attachment style compromising trust and monogamy in adulthood. Moreover, as Jung confessed to Freud “. . . my veneration for you has something of the character of a ‘religious’ crush . . . I still feel it is disgusting and ridiculous because of its undeniable erotic overtones. This abominable feeling comes from the fact that as a boy I was the victim of a sexual assault by a man I once worshipped” (49J, 10/28/1907). Like Spielrein, Jung’s childhood was overshadowed by parental conflict, attachment injuries, and sexual abuse. As yet unanalyzed regarding his own woundedness, the intensity of his analytic work with Spielrein, coupled with grueling demands at the Burghölzli, meant that Jung was increasingly unable to contain the flights of nondirected thinking that were to become *Symbols of Transformation* (Jung 1956).

From the beginnings of the Freud/Jung correspondence in April 1906, until Spielrein left Zurich in 1911, Jung’s attempts to cope with the intense countertransference he developed using Freud’s psychoanalytic method resulted in requests for supervision. Jung mentioned her case to Freud in his fourth letter, “disguising” the case by stating that the unnamed patient had an older brother: “First trauma between third and fourth year. Saw her father spanking her older brother on the bare

bottom. . . couldn’t help thinking afterwards that she had defecated on her father’s hand” (Freud & Jung 1974, 4J 10/23/1906). From this report and Jung’s history, we can infer the interlocking nature of his countertransference to Spielrein, who had also experienced preoedipal trauma and abuse of a sexually invasive nature. Jung’s therapeutic work and subsequent boundary transgressions with Spielrein served to precipitate his own period of “creative illness” from 1913 to 1919, following his break with Freud. In moral terms, Jung’s psychological vulnerability at this stage in his career does not excuse his “use” of Spielrein, or Toni Wolfe and others, in transgressing therapeutic boundaries. These are the potential perils of intense countertransference that have served to establish the emphasis on the “temenos,” the inviolate container required for therapeutic transformation that is the norm for Jungian analysts today.

In recent years Spielrein has gained notoriety, if inadequate recognition, through the publication of Kerr’s *A Most Dangerous Method* and a 2011 film directed by David Cronenberg that relies heavily on his text. Kerr recognized the pivotal role Spielrein played in the Freud/Jung correspondence and subsequent falling out. What is only now being acknowledged is the significance of Spielrein’s own original work. She is justly credited with contributing to Jung’s understanding of Jung’s anima/animus “syzygy” as the bridge between the individual ego and the transpersonal self (Bettelheim 1983). Clearly the paper she delivered to Freud’s Wednesday Psychoanalytic group first named the “death instinct” theme was later taken up by Freud (1920) and others. But these facts do not exhaust the originality of her work. John Launer, a British psychiatrist, asserts in *Sex Versus Survival: The Story of Sabina Spielrein: Her Life, Her Ideas, Her Genius* (2011) that her work is the most significant for the way it anticipated contemporary efforts to link psychoanalytic theory with evolutionary biology, as represented in the work of Bowlby on attachment theory and Bateson’s *Steps Towards an Ecology of Mind*.

Despite the condescending tone of the letters that Freud and Jung exchanged about her,

Freud cited her work 4 times and Jung 16 times in *Symbols of Transformation* alone. Spielrein continued to correspond with Jung until 1918, referencing the mystical and ambiguous Siegfried symbol they shared, and she corresponded with Freud until 1923. She not only attempted to bridge the differences between the two through her own understanding of symbols, but according to Launer, she was ahead of her time through attempting to provide a biological basis for psychoanalytic thinking. This was a theoretical vein that both Freud and Jung resisted, thereby foreshadowing the efforts of subsequent theorists.

Like Rosalind Franklin (1920–1958), another Jewish female intellectual who had her understanding of the DNA double helix formation pirated by Watson and Crick (Sayre 1975), Jung is credited with the anima/animus concept that developed in the context of his relationship with Spielrein, and Freud claimed the “death instinct” that first appeared in Spielrein’s *Destruction* paper. Similarly, Melanie Klein is known for her psychoanalytic work on representations of the breast in infancy, which may well have been influenced by Spielrein’s paper “The Origin and Development of Spoken Speech” delivered at the 6th International Psychoanalytic Conference in Spielrein (1920) that Klein attended. Kerr notes that “the talk was striking in its attempt to integrate Freud’s notion of a primary autistic stage in infancy ruled by the pleasure principle with the findings of developmental psychology.” Anticipating Winnicott’s understanding of transitional phenomena (1953), Spielrein noted that “spoken speech arises in an intermediate zone between the pleasure and reality principles” (Kerr 1993, p. 493).

Following the 1920 conference, Spielrein moved to Geneva, delegated to the Institute Rousseau as an evangelist for psychoanalysis. She conducted a “didactic” analysis with Piaget, which, according to him, did not take. In 1924 she moved to Moscow, establishing early childhood care based on psychodynamic principles, and then returned to her birth place where, following the rise of Stalin banishing psychoanalysis, she was killed with her two daughters when the Nazis invaded Rostov-on-Don for the second time.

Too idealistic to believe that Germans who spoke the language of her angel could be butchers, she resisted those who urged her to flee, and so her life was cut short at the age of 57. Had not Aldo Carotenuto discovered her diaries stored in the building that was formerly the Rousseau Institute in Geneva and published *A Secret Symmetry: Sabina Spielrein Between Jung and Freud*, Spielrein’s work might well have remained forgotten. But it is now high time to appreciate Spielrein’s pioneering efforts in their own right, not Spielrein *between* Freud and Jung, but Spielrein *beyond* Freud and Jung (Launer 2011; Kelcourse et al. 2012).

## Spirit Writing

Mark Greene

Counselling and Psychotherapy, Mercury Pier Publishing, Hong Kong Special Administrative Region of the People's Republic of China, North Point, Hong Kong

Spirit writing is a popular form of divination used in Taoist temples and folk shrines located principally in Taiwan, Malaysia, Singapore, Hong Kong, and Mainland China. The Chinese name for this traditional method is *fúji* (扶). The *fúji* diviner uses a stick to convey messages from a god or a spirit by drawing Chinese words in a tray of sand or on a table. Once the character has been identified, a second person transcribes it for later study so that the drawing area can be swept clean to make

way for the next word. Although the guiding force behind the stick's movements is thought to be the god or spirit, the diviner participates in the process to the extent that he must be deemed deserving of the post by virtue of his good character. Spirit writers generally appear to be in a mild trance and do not often show signs of overt spirit possession.

## Spiritism

Alexander (Alejandro) V. Gonzalez  
Strayer University, Piscataway, NJ, USA

“Spiritism” is the creation of the French educator Hyppolyte Leon Denizard Rivail (1804–1869), who went under the alias of Allan Kardec for his Spiritist writings. Spiritism incorporates the archaic mediumistic methods of American “Occult Spiritualism” of the Fox sisters but is more Christian than the American. Spiritism also incorporates reincarnation. Spiritism spread from France to Cuba and Brazil, where in some instances it blended with Cuban and Brazilian African traditions.

## Kardecan Spiritism

From the United States, Modern American “Spiritualism” traveled to Europe in the mid-nineteenth

century, where it became especially popular with the professional classes. In England Sir Arthur Conan Doyle later codified Spiritualism in two volumes that were published in 1926 as *The History of Spiritualism*. In his work Doyle made only slight mention of a phenomenon derived from Spiritualism, known as Spiritism, that continued to be distinctly popular in France. Doyle only dedicated about five pages to Spiritism in his work. To this day Spiritism is more widely known in countries where Romance languages are spoken, especially Cuba and Brazil, whereas Spiritualism is more popular in the English-speaking world.

In 1800s France Rivail had codified Spiritism and distinguished it from Spiritualism. These Spiritist writings were written under the pseudonym of Allan Kardec, a name Rivail believed to be that of a previous Druid incarnation. Kardec never claimed to be a medium or to have the ability to communicate with the spirits. It was on the basis of conversations with and observation of mediums that he elaborated Spiritist doctrine. Kardec wrote a series of books in which he expounded Spiritist doctrine. Although not a medium, Kardec claimed that it was superior Spirits who guided him to write *The Spirits' Book* and that it was their work.

Kardecan Spiritism is specifically Christ-based. Jesus Christ is upheld as the role model for spiritual perfection and God is seen as the telos. In Spiritism, the spirit is endowed with free will. However, a spirit receives a mission from God and submits to the law of constant progress. It is this notion of reincarnation as constant spiritual progress that takes the spirit through various lifetimes on its way to moral perfection, which is the desired goal. Reincarnation is thus viewed as progressive and one is never reincarnated into a lower life form. Comparable to Hindu karma, Spiritism believes in the law of cause and effect; thus, the human spiritual condition in any given lifetime, be it happy or unfortunate, is predicated on actions taken in previous lifetimes. Spiritual progress or evolution is made possible through Christian charity, and charity, followed by wisdom, is one of the two premier Spiritist virtues. As Christ-based, Spiritism holds Jesus Christ as the most elevated Spirit and spirit guide. He is seen as the highest example

of an incarnated spirit. Indeed, Spiritist doctrine teaches that Jesus was sent by God to show humanity the way toward spiritual perfection. Spiritism views itself as pure and basic Christianity that is untainted by organized religion. In keeping with this notion, Spiritism utilizes Christian prayers such as “The Our Father” and borrows sayings from the Gospels, but these are interpreted in a Spiritist context as teachings related to the attainment of moral perfection and the personal quest for a higher reincarnation. Spiritism is a syncretic blend of ancient mediumistic communication with spirits, Christianity, and reincarnation.

In his books Kardec specifically differentiates between “Spiritualism” and what he now calls “Spiritism,” because for him not all Spiritualists believe in the reincarnation of spirits or that spirits exist and that they can communicate with the material world. Most importantly, for Kardec there is God, who is the Primary Mover and the Supreme Intelligence who generates all things including the spiritual and the material; but there are also the Spirits who perfect themselves in the astral plane and through reincarnation; these Spirits can both communicate with the living and interfere in their lives.

Kardec also believed that there is intelligent life on other planets that is more intellectually and morally advanced than we. Spiritism envisions Earth as a place of atonement. In Kardecan cosmology the Spirits communicate through mediums. Mediums are individuals who have the sensitivity to be able to hear, see spirits, or have these spirits communicate with them through various means such as trance, possession, and automatic writing. But Spiritism does not believe in supernatural elements such as miracles. Spiritism believes in an invisible, or nonmaterial, yet natural, plane, where the spirits abide. Spiritism holds that communication is possible between both the material and nonmaterial planes. Indeed, the natural world encompasses both material and nonmaterial planes and both planes are subject to experimentation on the basis of natural laws. For Spiritism, what we call the human body is comprised of the soul, or spirit, which is responsible for our thoughts, will, and moral sense and the material body that permits

the spirit to abide in the material world. Beside the material and the spiritual, there is an intermediate body designated by Kardec as the *perispirit*, which is a term he adapted from the botanical “perisperm.” As Kardec states in answer to his self-posed question 93 in *The Spirits’ Book*, concerning whether spirits have an outer covering:

The spirit is enveloped in a substance which would appear to you as mere vapor, but which, nevertheless, appears very gross to us, though it is sufficiently vaporous to allow the spirit to float in the atmosphere, and to transport himself through space at pleasure. As the germ of a fruit is surrounded by the perisperm so the spirit, properly so called, is surrounded by an envelope which, by analogy, may be designated as the *perispirit* (Kardec 1996, p. 92).

It is this *perispirit* that allows spirits to manifest themselves in the material world. The *perispirit* is drawn from the particular world the spirit is in. A spirit manifesting in different worlds may appear differently as the *perispirit* “material” of the world the spirit finds itself in determines the apparition. This quasi-material substance is what permits the spirit to appear and communicate with us through rappings, movement of furniture, etc., in our material world. Kardecian séances were practiced throughout France and then Cuba and Brazil.

In Cuba and Brazil, like in Europe, Spiritism first became very popular with white upper class women who would often engage in séances and Spiritist masses. In Brazil and Cuba, especially for practitioners of African religions, Spiritist beliefs in reincarnation and the ability to communicate with the dead resonated with ancient indigenous African beliefs in ancestor spirits. Due to historical exigency, certain Afro-New World religions such as Cuban *Lukumi* (Santería) and Brazilian *Umbanda* and *Candomble*, while discarding the philosophical underpinnings, adapted certain elements from Kardecian Spiritism. These Kardecian Spiritist elements came to be adapted in a roundabout manner. For example, the arrival of Spiritism in Cuba coincides, as it did in Brazil, with the demise of the *egungun* cults. “*Egungun*” is a Yoruba word that means skeleton and is often shortened to “*egun*,” or bone; either word generally refers to the deceased, such as an ancestor.

The *egungun* were needed for various rituals including the indispensable funerary rituals having to do with appeasement of a newly diseased practitioner’s *egun*, or spirit.

By the 1880s *egungun* cults in the Americas were generally on the decline, for various reasons. For example, 1880 saw the outlawing of slavery in Cuba, but not the legalization of Afro-Cuban religions. Because of their trappings, that included a public display featuring full body costume and maniacal shouting, *egungun* cults such as the Oro and the *Egungun* secret societies were especially feared and had been specifically outlawed. Also, the relatively minimal influx of *egun* technicians from Africa into Cuba and Brazil that the slave trade had supplied, and now the lack of willing apprentices required to continue *egungun* cults, resulted in a major problem for Afro-Cuban and Brazilian religions. Additionally, improperly carrying out an *egungun* ritual could result in the death of the technician and all present witnessing the event. Seeing that it was socially acceptable for white women to become possessed by a spirit and that Kardecian Spiritism had much structurally in common with West African religious beliefs relative to *egungun* practices, *Lukumis* (as did Afro-Brazilian religious practitioners) adopted these Kardecian practices with the conscious twofold understanding that it could meet and supplant the need left by the demise of the *egungun* cults and additionally serve as one more instance of dissimulation of West African ritual under the guise of dominant cultural practices. Also, priests were now freed from reliance on the specialized services of *egungun* cults.

Today there are Spiritist societies in both Canada and the United States, most with roots in Brazil. Spiritism continues to be very important in both Brazil and Cuba. It continues both as a freestanding system of beliefs and as a structure for communicating with spirit ancestors in the context of Afro-New World practices. For example, there is a Cuban saying illustrating this idea that states that “All Santeros are Spiritists, but not all Spiritists are Santeros,” or “*Todos santeros son espiritistas, pero no todos espiritistas son santeros.*” Spiritists also often practice Catholicism and/or one or more Afro-New World religions. Besides its adaptation by some Afro-New World religions, Spiritism as

such has the largest population of believers anywhere in Brazil. In 2010 director Wagner de Assis's Brazilian film *Astral City: A Spiritual Journey* was released. Said to be the most expensive Brazilian film ever produced, it is based on the renowned Brazilian medium Francisco "Chico" de Paula Candido Xavier's Spiritist book, *Nosso Lar*, "Our Home," and supposedly relates the after-death experiences of a physician who was channeled by Chico Xavier (Xavier 2000). This film has helped to familiarize non-Brazilian audiences with Spiritism.

Allan Kardec is buried in Paris at Cimetière du Père Lachaise. The French inscription on his tomb states, "To be born, die, again be reborn, and so progress unceasingly, such is the law," a distillation of Spiritist doctrine. Kardec's grave is a pilgrimage site for practitioners of Spiritism and West African diaspora religions.

Spiritism is psychologically appealing because of its belief in moral improvement, reincarnation, mediums, and healing. Spiritism provides psychical comfort derived from the possibility of communicating with recently deceased family members and helps stave off the fear of one's death. Because it is couched in Christian language and has moral improvement as a goal, Spiritism also dispenses with the fear of impropriety or nefariousness often attached in the West to practices involving communication with spirits. Brazil alone has more than twenty million practitioners of Kardecian Spiritism.

## Spiritual Care

Norvene Vest<sup>1</sup>, Rose Slavkovsky<sup>2</sup> and Liz Budd Ellmann<sup>2</sup>

<sup>1</sup>Mythology, Pacifica Graduate Institute, Carpinteria, CA, USA

<sup>2</sup>Spiritual Directors International, Bellevue, WA, USA

Spiritual care is based on the assumption that each human being bears a longing for relationship with that which is "more than" human, or to paraphrase philosopher Blaise Pascal, each human is born with a God-shaped vacuum, for which fulfillment the heart longs (Pascal 1993, p. 45). Care consists of attentive listening to the heart of the conversation, in a formal or informal setting, two persons face to face, or group conversation. And the heart is found in the

spiritual significance, the deep meaning of life emerging from a person's speech and nonverbal communication.

Although Christians generally identify the presence as the Holy Spirit, non-Christians and those with a nonpersonal notion of the sacred may also experience longing for deeper meaning in life, as for example, archetypal psychologist James Hillman's invitation "to see with the eyes of the soul, the soul of things" (Hillman 1975, p. 201).

In the more evangelical Christian denominations, the connection with God/Spirit is viewed as a one-step process, completed in a once-only response to the question, "Do you accept Jesus Christ as your Lord?" But more mystical and liturgical Christian traditions understand an ongoing spiritual life, a lifelong process of growth and change, as in any meaningful relationship. Thus ongoing spiritual care becomes helpful to name shifts in experience or explore new practices that intensify the spiritual dimension of life.

## Relationships of Spiritual Care and Psychotherapy

Psychotherapy and spiritual care share the aims of helping a person move toward inner freedom and wholeness. While spiritual care relates this task to the quality of a relationship with God, psychology might call it a move beyond the relatively narrow claims of the ego toward the greater wholeness offered by self. To speak of Christian spirituality specifically is to acknowledge a meeting point between Christian revelation and human psychology (Bouyer 1982, p. ix). Dogma plays a role, but spirituality has to do primarily with living a life that is experientially meaningful. The concern for wholeness is particularly characteristic of C.G. Jung's psychology. Both spiritual care and psychology aim to identify blockages that prevent inner movement and offer practices to dissolve such blockages.

The Jungian process of active imagination begins with awareness of an emotional disturbance that signals a need to rebalance the psyche. The parallel in spiritual formation is a periodic

need to reexamine basic assumptions that have ceased to be health-giving.

The second step in active imagination is using the arts to release unconscious content, with the ego consenting to engage disagreeable materials. In spiritual care, the seeker is encouraged to look honestly at life, remembering one's past with fresh eyes, accepting suffering and shock at betrayal, as well as awareness of beauty in self and other.

The third step in active imagination is bringing one's opposite positions together, as in Jung's transcendent function (Jung 1970, pp. 67–91). Here Jung acknowledges the ongoing presence of the unknown, which bears great gifts for those who dare its presence. This is not dissimilar to the moment in spiritual care of surrender to being "spun around" (*epistrephein*) or converted to a new way of being by God (Thomas 1997).

## Classic Resources for Christian Spiritual Care

Over time, many approaches to spiritual depth and prayer have developed as streams of Christian spirituality. Themes from Hebrew scripture include covenant, exodus, and the fidelity of God; Christian scripture themes include love, joy, and peace. Other approaches are liturgical, including regular daily periods of prayer rooted in the Psalms (Benedictine); nature-based, discovering the presence of God in the created world (Franciscan); ritual prayer, honoring the sacred in daily life (Celtic); and imaginative interaction with Gospel events (Ignatian) (Vest and Vest 2007). Each of these forms of prayer, study, and reflection helps deepen spiritual life. All include support for the poor and needy, both locally and worldwide.

The Carmelite approach to spirituality offers generations of attentiveness to constant lived prayer, which reveals a typical pattern of prayer including "basically three stages. . . the purgative, illuminative, and unitive" (Burrows 1980, p. 15) in a process that unfolds repeatedly in a lifetime.

Purgation refers to the inner work of what is called "detachment," or weaning oneself from

excessive attachments, what psychology might call obsessions. This is not a harsh asceticism, rather eliminating things that interfere with loving God and being receptive to God's love.

Illumination is a deepened joy in the presence of God and seeing the world with God's eyes. Physical perceptions seem strangely heightened, and one may feel that one has found the secret of the world.

Finally comes union with God, which sixteenth-century Carmelite Teresa of Avila observes is simply "making my will one with the will of God" (St. Teresa 1946, p. 13). One is so immersed in one's sacred origin as to feel no separation. Although maturation to this stage requires patience and faithfulness, "it cannot be brought about through either spiritual ambition or self-domination, but only by an un-self-regarding response to the love of God" (Jones et al. 1986, p. 370). Ultimately, union with God is a gift from God.

Mystic Evelyn Underhill suggests the addition of two other stages to the Carmelite approach to spirituality (Underhill 2010, p. 109). Before purgation, she adds the experience of the thrilling "touch of God." This may feel wondrous but can also feel like failure or loss, such as an alcoholic "hitting bottom" that hopefully precipitates a move toward "reform."

Underhill also adds a stage of the "dark night of the soul" *between* illumination and union that may feel like depression but is primarily an anguished loss of awareness of God's presence and care (John of the Cross 1945, p. xiii). The dark night is perhaps a reminder that this process is not solely a matter of "executive will."

While persons in spiritual care may not experience any of these traditions or stages in the sequence stated, nor perhaps at all, spiritual guides are trained to be well acquainted with a range of experiences so that they can offer guidance, encouraging seekers that they are not alone.

## Spiritual Care and the Person

One ancient and contemporary articulation of spiritual care comes in the relationship between

a seeker and a spiritual director, a process known as spiritual direction, spiritual companionship, spiritual accompaniment, and spiritual guidance. The language of spiritual direction comes from the Christian tradition, yet spiritual companionship has emerged in many contexts using language specific to particular cultural and spiritual traditions. It is a ministry of accompanying one person on a spiritual journey and focusing attention to the movement of God in the seeker's life by engaging in deep listening. In response to growing interest, Spiritual Directors International (SDI), a registered nonprofit charity, was formed in 1989.

From that small beginning, SDI has today grown to a membership of over 6,000 persons of many faiths (including Buddhist, Jewish, Islamic, and pagan) and in all inhabited continents (Africa, Asia, Australia-Oceania, Europe, North and South America) (view spiritual director demographics). Members of SDI constitute a global learning community of people who share a common concern, passion, and commitment to the art and contemplative practice of spiritual care through the ministry and service of spiritual direction. The purpose of the learning community is to foster the transformation of individuals, organizations, and societies in light of the holy.

Spiritual care and spiritual formation live in the heart of spiritual direction. Trappist monk Thomas Merton is reported to have said that spiritual direction is fundamentally about leading a person to see and obey God/Spirit in the depths of the soul. Additional descriptions pertaining to spiritual direction in the Buddhist, Christian, Islamic, Jewish, and Taoist spiritual traditions may be accessed on the SDI website, [www.sdiworld.org](http://www.sdiworld.org). Contact information for individuals who currently offer this form of spiritual care can be obtained online using the *Seek and Find Guide: A Worldwide Resource Guide of Available Spiritual Directors*.

To assist seekers in locating a spiritual director befitting of his or her particular needs and spiritual context, SDI offers interview questions aimed at determining the compatibility of

a particular spiritual director. These questions include:

1. What enrichment, spiritual formation, and theological education do you have in spiritual direction?
2. What is your personal experience tending your own prayer, meditation, and contemplative life?
3. What is your experience as a spiritual director? How many years? In what environments? What are you most interested in spiritually?
4. How do you continue your education and supervision for your spiritual direction ministry?
5. What ethical guidelines do you abide by, such as those published by Spiritual Directors International? Have you ever been accused or convicted of misconduct?
6. What type of engagement agreement will we establish to clarify roles and responsibilities in our spiritual direction relationship, such as samples provided to members of Spiritual Directors International?
7. How often will we meet, and for how long?
8. Is there a cost associated with your spiritual direction ministry?

For some, the best way to start looking for personalized spiritual care and a spiritual director is to experience a retreat that includes spiritual direction. Spiritual Directors International maintains a list of retreat centers that offer spiritual direction in a variety of traditions.

To support people seeking spiritual direction and spiritual directors, SDI publishes the *Seek and Find Guide*, *Listen: A Seeker's Resource for Spiritual Direction*, *Presence: An International Journal of Spiritual Direction*, and *What to Expect in Spiritual Direction*, a series of materials designed for those inquiring about spiritual direction. Included in the *What to Expect* series is the booklet *What to Expect in Christian Spiritual Direction* and separate articles that examine Buddhist, Islamic, Jewish, and interfaith spiritual direction.

For those interested in pursuing spiritual care by offering spiritual direction, an online listing of available enrichment, formation, and training programs is accessible to the public on SDI's website.

Spiritual care can be very helpful to a person's unique spiritual journey. Taking into consideration one's personality and temperament, spiritual direction assists reflection on how to pray, ongoing or unfolding spiritual practices, and the stages of spiritual development in one's life. Spiritual care nourishes the spiritual aspect of being human, enabling service with authenticity and a grateful heart.

## Spiritual Direction

Kenneth L. Nolen  
Salinas Valley Memorial Healthcare System,  
Salinas, CA, USA

Spiritual direction is the process of one person accompanying another person or persons on their spiritual journey, a journey that emphasizes a growing closer to God, the Holy, or a Higher Power. However, each spiritual director tends to have a modified or different definition of spiritual direction germane to his or her context, background, and experience. Currently spiritual direction is experiencing a rebirth or resurgence in Christianity, and other faith traditions are discovering or rediscovering spiritual direction as well.

Spiritual direction consists of a director and a directee, or directees in group spiritual direction, that are in a process of seeking out the operation and direction of God, the Divine, or the Holy in the directee's life. Although, modern spiritual direction has its root in Catholic and Anglican faith traditions, all Christian faith groups do not universally accept spiritual direction as a valid ministry or expression of faith. Many Evangelical and Pentecostal denominations believe that Christ is the mediator between humankind and God and that the Holy Spirit is the only spiritual guide needed. They fear that using another person as a director is allowing that person to come between the directee and God. In addition, spiritual direction is not a uniquely Christian phenomenon. Witch doctors or shamans perform the role of spiritual guide in primitive cultures and many instances of spiritual guides may be found among eastern traditions. The ascetics of Buddhism, the sages of China,

and the soul guides of Sufism, with the guru in Hinduism being the closest to the Judeo-Christian concept of a spiritual director, are examples of other spiritual guides or directors.

Although spiritual direction may examine and highlight many issues of life, spiritual direction is not the same as its relative of psychotherapy. While an individual may need and use a combination of psychotherapy and spiritual direction, spiritual direction, although at times overlapping the boundaries of psychotherapy, is a different and distinct helping discipline. Spiritual directors use many of the same techniques such as active listening, compassion, and reflective open-ended questions that psychotherapy practitioners use, but spiritual direction encompasses a differing agenda and stated result.

## Commentary

Spiritual direction and psychotherapy have many similarities but they are fundamentally different in content and intent. Psychotherapy focuses on emotional and mental dimensions such as thoughts, feelings, and moods, while spiritual direction focuses more precisely and specifically on spiritual issues such as prayer and the relationship to God and God's direction and work directly in the life of an individual. The intent of psychotherapy is not to facilitate the growth of persons in their relationship with the Divine, the Holy, or God. Modern psychology is valuable in that it gives hope that individuals can really grow and change. It helps to keep individuals moving in life and relationships, but psychology cannot assist in finding the direction that the directee's growth and change should take to facilitate their spirituality. Another major difference between psychotherapy and spiritual direction is that in spiritual direction, the director must be willing to be known in his or her vulnerability and limitations as a child of God, while the psychotherapist remains safely spiritually and many times emotionally unknown to his or her client.

However, it is important to understand that spiritual as used in spiritual direction is not the guidance of a person's spiritual activities alone nor is it

particularly directive in nature. The spiritual director is not like a dentist who cares for a patient's teeth or a barber who cares for an individual's hair. A spiritual director is concerned with the whole person including those issues of life that affect an individual's relationship with God and others. Spiritual direction spiritualizes all aspects and activities of the spiritual person's life, but modern spiritual directors do not give answers to their directees nor do they discipline them in the classic image of a master teacher and his or her learner.

Spiritual direction and psychotherapy differ in the degree of training and certification required. Therapists must graduate from an approved and accredited graduate program to meet state requirements for licensure. There are no educational or licensure requirements for one to become a spiritual director. Although spiritual directors may be ordained clergy holding advanced graduate degrees, they may also be laypersons or individuals who are spiritual directors as evidenced by others seeking them out for spiritual direction.

An effective and experienced spiritual director will acquire and use tools from the other helping disciplines as well as attending formation and certification programs for spiritual directors to contribute to acquiring the necessary skills that will contribute to their ministry of spiritual direction. Many of the same active listening and reflective skills used in psychotherapy will aid the spiritual director in hearing God's voice in all of the day-to-day noise experienced by the directee.

## Spiritual Ecology

Leslie E. Sponsel

Department of Anthropology, University of Hawai'i, Honolulu, HI, USA

We can hear it in water, in wood, and even in stone.  
We are earth of this earth, and we are bone of its bone.

This is a prayer I sing, for we have forgotten this  
and so

The earth is perishing

(Barbara Deming in John Seed, 1988, *Thinking Like a Mountain*).

Spiritual ecology is a major shift from religions that ignore nature into a growing sense that we participate in nature, realizing and feeling that we do not stand against nature, but are part of it. We do not have dominion over nature, but we depend on it – for air, water, earth, food, and the entire system of life given by the Great Mystery that created all its wonders. It is spiritual when we think at the ontological level, seeing ultimate reality as the ground of being that underlies all existence, and is far grander than our systems of thought. It is psychological when we feel that reality, “thinking like a mountain,” feeling the awesome wonder in 150 billion galaxies, the majesty of the blue oceans, the delicate balance of life systems, and the gift of consciousness to think about and feel ourselves part of life on Earth. It is ethical when we strive to let this spiritual and psychological awakening stimulate efforts to stop dirty energy, air and water pollution, and industrialism’s destructive domination of nature.

Secular approaches since the first Earth Day in 1970 have proven insufficient to resolve the growing ecocrises, from the local to the global levels – growing numbers of floods and rising seas related to global warming. In recent decades, an additional approach has been growing exponentially: spiritual ecology. It may be defined as a complex, diverse, and dynamic arena at the interfaces of religions and spiritualities on the one hand and on the other environments, ecologies, and environmentalisms with intellectual, spiritual, and practical components. Note that each of these subjects is plural reflecting the vastness, variety, and variability of spiritual ecology (Sponsel 2012).

While for some persons spiritual ecology is only an interesting academic pursuit, for others it is a sacred subject touching their deepest concerns, emotions, commitments, and aspirations. Even though usually they do not advertise it, ultimately many environmentalists and conservationists are, to some degree in various ways, spiritual ecologists as well. Usually, they have been profoundly moved by some kind of epiphany or awesome experiences in nature (Wilson 1984).

Ecopsychology, like spiritual ecology, shifts the focus to inner development in relation to nature, instead of economic development, the latter often at the expense of the health of ecosystems, human beings, society, and future generations. For those pursuing spiritual ecology, nature is a grand cathedral of communal beings rather than an unlimited warehouse of mere objects to exploit for profit and greed (Coleman 2006; Macy and Johnstone 2012).

Elsewhere other designations for this arena may be used, although a narrower pursuit is usually involved: earth spirituality, earth mysticism, ecomysticism, ecopsychology, ecospirituality, ecotheology, green religion, green spirituality, nature mysticism, nature religion, nature spirituality, religion and ecology, religion and nature, religious environmentalism, and religious naturalism. The magnitude, complexity, diversity, and dynamism of spiritual ecology, as well as its great interest and promise, can be appreciated by exploring the websites of the Forum on Religion and Ecology at Yale University and *The Encyclopedia of Religion and Nature* (Gottlieb 2006a; Taylor 2010). The Forum advocates the Earth Charter:

For millennia the world’s religious, spiritual and ethical traditions have provided ethical grounding for the shaping of various cultures throughout the world. From the indigenous traditions to the Axial age religions arising in the last 3,000 years, humans have oriented themselves to the mystery of existence, to relations with other humans, and to nature itself (Forum on Religion and Ecology).

The many roots of spiritual ecology are deep, extending back at least some 30,000 years ago to cave paintings of the Upper Paleolithic in France. The most recent interpretation of this prehistoric art is that it reflects shamanic spirit possession. It is one expression of Animism as a belief in multiple spiritual beings and forces in nature, which is by far the oldest and most widespread of all religions. Variants of it are manifest among many indigenous people such as Winona LaDuke and adherents to variants of Paganism such as Starhawk and Graham Harvey. The roots of spiritual ecology also include historical pioneers of many centuries ago like the Buddha as well as Saint Francis of Assisi. Francis was known for taming a wolf that had been killing animals and

people in an Italian village. He spoke to the wolf, who laid down at his feet. Then the people fed him regularly and he no longer caused them harm (Francis). Among the best-known American pioneers in spiritual ecology are Henry David Thoreau and John Muir in the nineteenth century and Rachel Carson and Aldo Leopold in the early twentieth century. These and many other individuals have laid the foundation for the vital rethinking, revisioning, and refeeling of the place of humans in nature that is necessary for restoring some modicum of ecosanity in the future (Kinsley 1995; Sponsel 2012; Taylor 2010).

Lynn White, Jr., ignited heated controversy when he basically blamed the environmental crisis on the application of the prevalent interpretation of selected passages in the Bible regarding human domination and the use of nature (Spring and Spring 1974). Various responses to his thesis by Christian theologians and others in turn generated the field of ecotheology, which remains an important component of spiritual ecology to this day. However, this has been transcended by the cosmic spiritual ecology of Pierre Teilhard de Chardin, Thomas Berry, and Matthew Fox (Bauman et al. 2011; Kinsley 1995; Tucker 2003).

Several outstanding scholars have in various ways further developed the intellectual scope, aims, and substance of contemporary spiritual ecology since the 1990s, especially Steven C. Rockefeller, Mary Evelyn Tucker, John A. Grim, Bron Taylor, and Roger S. Gottlieb. Rockefeller was the principal organizer of the historic interfaith conference *Spirit and Nature* and the resulting book that he coedited with the same title and the PBS film. Tucker and Grim co-organized a series of many books and conferences and established an interdisciplinary graduate program on Religion and Ecology at Yale University. Bron Taylor is editor-in-chief of *The Encyclopedia of Religion and Nature*; founder of the International Society for the Study of Religion, Nature and Culture; and editor of its *Journal for the Study of Religion, Nature and Culture*. He developed the Religion and Nature graduate program at the University of Florida. Gottlieb (2006a, b) authored and edited several major surveys of religion and ecology.

In world religions, pioneering contributions have been made by Seyyed Hossein Nasr in the study of Islam and ecology, Stephanie Kaza on Buddhist environmental ethics, and Satish Kumar, a Jain. Thanks to these and other authors, by now there is substantial literature on each of the world religions and ecology.

Some of the most well-known pioneers beyond academia include ecopoets and essayists Edward Abbey, W.S. Merwin, and Gary Snyder (Felstiner 2009). The Green Patriarch Bartholomew I of the Christian Eastern Orthodox Church is an influential environmental leader. Christopher McCleod's *Sacred Land* Film Project documents sacred sites of Native Americans and others throughout the world, seen on PBS. Marten Palmer heads the Alliance for Religions and Conservation (ARC) in association with the World Wildlife Fund. ARC has hundreds of projects working with about a dozen world religions in numerous countries to conserve biodiversity in relation to sacred places. Rev. Sally G. Bingham's Interfaith Power and Light Project has mobilized thousands of religious organizations in the USA to promote energy efficiency and conservation (Gottlieb 2006a; Sponsel 2012).

The Norwegian philosopher Arne Naess developed "Deep Ecology" to transcend treating only the superficial symptoms of the environmental crisis and instead identify and pursue the underlying causes and ultimate solutions. Principles of deep ecology encompass ecocentrism with an emphasis on the psychological feeling for the intrinsic values of nature (Dregson and Devall 2008).

Spiritual can involve mysticism, rituals, ceremonies, and sacred sites and landscapes. The locus of the spirituality may reside in the individual person and/or in supernatural beings and/or forces in nature, depending on one's belief system and experience. The spiritual is often one of the most important catalysts for environmental activism. [Julia Butterfly Hill](#) was psychologically stimulated by a car crash to deepen her life's commitments to higher spiritual values. So she sat high up on a California Redwood tree for 738 days to protest loggers clear-cutting those trees (Spring and Manousos 2007) (Fig. 1).

**Spiritual Ecology,**

**Fig. 1** Medicine Lake below the sacred Mt. Shasta in California (Photo courtesy of the author)

Ecopsychology overlaps with spiritual ecology as well as deep ecology (Buzzell and Chalquist 2009; Louv 2005). Its working premise is that the health of humans and nature are interconnected and interdependent. The corollary is that restoring human well-being is dependent on restoring the well-being of nature. Such principles have been explored by many ecopsychologists such as pioneers Ralph Metzner and Theodore Roszak (Metzner 1999). Joanna Macy runs workshops to help people cope psychologically with their concern about the degradation of nature and to empower them to engage in effective environmental activism (Macy and Johnstone 2012).

David Cameron's record-breaking 2009 mythic movie *Avatar* captivated a worldwide audience by depicting the contrast between a psychologically cruel, alienated, militaristic, and imperialistic society obsessed with greedy materialism and massively destructive technology, attacking an extraterrestrial indigenous society for a symbolic mineral. By contrast, the indigenous people shared the highest values of spiritual ecology, such as a profound psychological sensitivity to interconnected plants and animals. They bowed, sang, and worshiped around a wondrous goddess tree whose branches glowed with light and could resurrect the dead.

Even atheists can be spiritual ecologists, such as philosopher Donald Crosby, who finds sacredness to be inherent in nature itself. Some scientists who are also theologians find convergences through spiritual ecology. For example, Alister McGrath, with a doctorate in molecular biology and another in divinity from Oxford University, is reworking aspects of natural theology (McGrath 2002). Although not inevitable, the potential danger of militant atheism can be seen in what has been happening with the desacralization and corresponding ecocide of Tibet accompanying the military invasion and colonial occupation by the communist regime from China since the second half of the twentieth century (Sponsel 2012).

Spiritual ecology has generated three types of unprecedented collaboration: among and within religions, between religion and science, and among the natural sciences, social sciences, and humanities (e.g., Carroll and Warner 1998). Examples of this collaboration include the [Forum on Religion and Ecology](#), Canadian Forum on Religion and Ecology, and European Forum for the Study of Religion and Ecology. Beyond academia there is the National Religious Partnership for the Environment in the United States, composed of both Christian and Jewish organizations (Gottlieb 2006a).

There is a revolution in developing a new spiritual and ecological psychology stimulated by many factors, such as the shocking effects of global climate change and the Internet (Bourne 2008; Hartman 1999; Sponsel 2012; Taylor 2010).

There are, however, major obstacles confronting spiritual ecology. It challenges the interests of the powerful establishment and the inertia of the status quo. Spiritual ecology is antithetical to people myopically pursuing scientism or Marxism. Fanatical religious conservatives and extremists fear and even dismiss spiritual ecology as incompatible, even a reversion to Paganism (Gottlieb 2006a; Sponsel 2012; Taylor 2010). Reactionary politics can revert to the most incredible denial and evasion of ecological responsibility in the name of vested interests, such as dirty energy. The urgent problem of overpopulation that keeps overwhelming technological advances, such as cleaner automobiles, is a great challenge to the conservative religions that oppose birth control. The psychology behind this exaggerated sense of purity in some religions and transcendence of nature must be faced.

As a revolution in consciousness, spiritual ecology may be quiet, nonviolent, and decentralized, but it has far-reaching ramifications. If its accelerating momentum and other trends continue, then it has the potential to transform the place of humans in nature and thereby restore a far greater degree of ecosanity. This transformation engages the inner being as well as outer world; hence, it has psychological and spiritual as well as ecological and political dimensions. The main question is whether or not all of this will prove enough and soon enough to avoid a global catastrophe, when human environmental impact reaches some unknown critical threshold or tipping point.

## Spiritual Emergence

Hillary S. Webb  
Goddard College, Portsmouth, NH, USA

The term “spiritual emergence” was coined by Dr. Stanislav Grof and his wife Christina Grof, two leaders in the field of transpersonal theory, as a way of referring to breakdowns of meaning that lead to transformative growth and greater psycho-spiritual health on the part of the individual. It is, as the Grofs describe it, “the movement of an individual to a more expanded way of being that involves enhanced emotional and psychosomatic health, greater freedom of personal choices, and a sense of deeper connection with other people, nature, and the cosmos” (Grof and Grof 1990, p. 34). The term

*spiritual emergence* is often used in conjunction with “spiritual emergency” (also coined by the Grofs), a term used to describe a crisis state in which the process of growth and change stimulated by this “emergence” becomes so overwhelming and unmanageable that the individual is unable to gracefully return to day-to-day functioning.

## From Breakdown to Breakthrough

The concept of the “spiritual emergence” is not a new one. The belief in the need to induce states of consciousness in which the individual experiences an oftentimes frightening psycho-spiritual *breakdown* of meaning in order to achieve an eventual *breakthrough* into higher functioning is the sine qua non of many shamanic and mystical traditions around the world. Within these systems of thought, spiritual seekers are encouraged to disengage themselves from their ordinary state of consciousness through practices such as meditation, fasting, the ingestion of psychoactive substances, ecstatic ritual, and so on. Here, the teacher (“guru”) and community play a fundamental role in helping the individual move through the process gracefully and in a way that helps assure successful integration and transformation.

In contrast, Western psychological paradigms have historically tended to take a pathologizing approach to any mental state that deviates from what is considered “normalcy.” The terms “spiritual emergence” and “spiritual emergency” came about as a response to what the Grofs and others considered to be a failure in the mainstream Western mental health system to distinguish between psycho-spiritual healing crises and actual psychopathologies. They attribute much of Western psychology’s inability to see the positive value in transpersonal crises as the result of a superficial and inadequate model of the psyche used by clinicians and academicians, one that is limited to “postnatal biography” and the Freudian individual unconscious. Because conventional psychology is often unable and/or unwilling to distinguish between a spiritual *breakthrough* and a psychological *breakdown*, individuals going through these experiences are often misdiagnosed.

Says Oscar Miro-Quesada, humanistic psychologist and Peruvian shaman,

As a clinician myself, I have found that about seventy percent of all socio-psychotic states are spiritual emergencies. The other thirty percent are psychopathological illnesses. But in the rest of these cases, if you help the client or the patient interpret his or her experience as a spiritual awakening rather than a sickness, they find purpose and meaning in the experience, rather than condemnation by societal norms (Webb 2004, p. 13).

## Identification and Diagnosis

Misdiagnosis is understandable, as many of the symptoms of spiritual emergence/emergency manifest in ways that are similar to those of chronic psychosis. Symptoms may include disorientation, disassociation, difficulty in communicating, and visual and/or auditory hallucinations. An individual may be disturbed by physical feelings and emotions that are seemingly unconnected to anything. Some experience feelings of pressure, claustrophobia, oppression, tightness, restlessness, struggle, and even a sense of losing all reference points towards the self (Grof and Grof 1990).

Individuals experiencing such episodes may feel that their sense of identity is breaking down, that their old values no longer hold true, and that the very ground beneath their personal realities is radically shifting. In many cases, new realms of mystical and spiritual experience enter their lives suddenly and dramatically, resulting in fear and confusion. They may feel tremendous anxiety; have difficulty coping with their daily lives, jobs, and relationships; and may even fear for their own sanity (Grof and Grof 1989, back cover).

Within the spectrum of crisis, there are various levels of emergency, which range from mild disorientation and fragmentation to a state in which one undergoes a complete loss of connection to ordinary reality. A spiritual emergence/emergency can occur on its own, or it can co-occur with conventionally diagnosed mental disorders that may, in fact, constitute pathology. In order to help clinicians identify some of the characteristic features of a spiritual emergence/emergency, the Grofs compiled what they had observed to be ten “varieties of spiritual

emergency” (Grof and Grof 1990), many of which are named according to the features that they share with emergences/emergencies found within various spiritual systems. These include “the shamanic crisis,” “the awakening of kundalini,” “episodes of unitive (nondual) consciousness” (also referred to as “peak experiences”), “psychological renewal through return to the center” (also referred to as “psychological renewal through the central archetype”), “the crisis of psychic opening,” “past-life experiences,” “communications with spirit guides,” “near-death experiences,” “experiences of close encounters with UFOs,” and “possession states” (Grof and Grof 1989).

## Influence on the Field of Psychology

The Grofs’ contribution to the field of psychology has been considerable. In his early studies of LSD and its effects on the psyche, Stanislav Grof constructed a theoretical framework for pre- and perinatal psychology, which mapped early fetal and neonatal experiences, eventually developing into an in-depth cartography of the human psyche. This presented a new perspective on the healing, transformation, and the evolutionary potential of the human psyche, thus challenging psychiatry’s perspective on states typically seen as psychoses. In 1991, the Grofs’ organization, the Spiritual Emergence Network, petitioned the then-in-development DSM-IV to create a new diagnostic classification that would address issues that involve religio-spiritual content, arguing that such a category would increase the accuracy of diagnostic assessments in cases where religious and/or spiritual issues are involved. The proposal was eventually accepted. Current versions of DSM-IV now include a diagnostic category of “Religious or Spiritual Problems.” This change to the DSM-IV is considered to be evidence of an important and necessary shift in the mental health profession’s view of religion and spirituality as essential aspects of the human experience. The concepts of “spiritual emergence” and “spiritual emergency” have likewise become key components in transpersonal psychology, a field that

considers the spiritual dimensions of human experience.

## Spiritualism

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Broadly defined, spiritualism is a philosophical orientation that embraces extrasensory epistemologies, an all-knowing infinite God, and the immortality of the soul. With the mid-nineteenth-century flowering of interest in the occult, however, the word came to signify a largely unchurched religion which espoused not only belief in life after death but in the ability of mediums to communicate with the departed.

Most authorities agree that the movement first began in the mid-1840s in Hydesville, New York, with the Fox sisters' widely publicized séances which attracted the attention of thousands. Mental phenomena associated with the movement include clairaudience, clairvoyance, and telepathy, while physical manifestations such as levitation, psychokinesis, table rapping, and any

purported supernatural visitations, such as ghosts, are also included.

The writings of Emanuel Swedenborg and Franz Mesmer – although themselves, not spiritualists – informed much of the movement's thought. Largely a phenomenon of the upper and middle classes, spiritualism relied on periodicals and trance lectures for dissemination. Lacking both administrative and canonical cohesion and plagued by the constant ousting of frauds, starting in the mid-1920s, membership drastically declined. Although still extant today – both independently and as absorbed by various syncretic movements – it was never to enjoy such widespread devotion again.

## Commentary

The modern spiritualist movement arose at a particularly turbulent time, the various scientific and technological revolutions of the age calling into question the very meaning-making matrices of the Occident. A novel resolution to the cognitive dissonance pervasive in Victorian culture, spiritualism was a way to fuse both faith and faith in science, although efforts to prove its tenets using the latter's methodologies were met resoundingly with failure.

## Star of David

Paul Cantz<sup>1</sup>, Kalman J. Kaplan<sup>2</sup> and Matthew B. Schwartz<sup>3</sup>

<sup>1</sup>Department of Psychiatry, University of Illinois at Chicago College of Medicine and Adler School of Professional Psychology, Chicago, IL, USA

<sup>2</sup>Departments of Psychiatry and Medical Education, University of Illinois in Chicago, Chicago, IL, USA

<sup>3</sup>Department of History, Wayne State University, Detroit, MI, USA

The Star of David (in Hebrew *Magen David*, literally the “Shield of David”) competes with the menorah (seven-branched candelabra) as the most iconic and recognizable symbol in Judaism. Although the exact origins of this hexagrammic six-pointed star (one triangle inverted over another) remain an open question, scholars generally agree that it does not trace its roots back to the shape or design of King David’s actual shield (Fig. 1).

The original psychological potency of the Star of David, as with numerous geometric figures found cross-culturally in the ancient world, rests in the widespread belief in the protective powers that it possessed. This idea was chiefly popularized by medieval Jewish mystics, though most likely shares genetic roots with the more ancient five-sided pentagrammic variant sometimes referred to as the “Seal of Solomon.” In antiquity, for example, the Pythagorean Pentagram was a well-known symbol representing the agencies of knowledge and understanding. We later find the double-triangle hexagrammic figure frequently appearing in seventeenth-century alchemical literature as a symbol representing harmony between the antagonistic elements of fire and water.

So closely linked were these two symbols that between the years 1300 and 1700, they were used interchangeably until the Star of David eventually gained prominence. The Seal of Solomon was ascribed magical powers by Jews and Gentiles alike and was believed to have been

**Star of David, Fig. 1** The Star of David (This figure is licensed under the Creative Commons Attribution 2.0 Generic license. [http://en.wikipedia.org/wiki/File:Star\\_of\\_David.svg](http://en.wikipedia.org/wiki/File:Star_of_David.svg))

a magical signet ring possessed by King Solomon himself. Although the Jewish Talmud (Talmud 1989–1999, Giṭ. 68a) briefly makes mention of this ring, in Arabic traditions we find embellishments that describe the ring imparting Solomon the power to command demons, genies, and even communicate with animals. Islamic folklore further describes Solomon’s ring being inscribed with “The Greatest Name of God” which was unknown to anyone else and represented the source of the aforementioned mythical powers.

One of the earliest undisputed uses of the Star of David (c. third century CE) on a Jewish tombstone has been located in Taranto, Apulia, in Southern Italy – a city that possessed a sizable Jewish population that had been noted for their Kabbalistic scholarship. The six-pointed star was likewise commonly featured on notarial signs in Spain, France, Denmark, and Germany in the tenth and eleventh centuries. It appeared in Jewish synagogues and was even ornamentally employed in many Byzantine and medieval churches, such as the cathedrals of Brandenburg and Stendal and on the Marktkirche at Hannover (Singer and Adler 1912, p. 252).

The Ḥasidei Ashkenaz of the twelfth-century Eastern Europe are commonly credited with

producing the oldest textual mention of the Shield of David in which they provided an explanation of the magical “alphabet of the angel” “Metatron”; however, it was here that the mystical 72 Names of God were engraved in and around this protective shield along with the name MKBY, thought to represent a magical homage to the Hasmonean Zealot Judah Maccabee. In other texts of the geonic period, the name of the angel Taftafiyah – one of the more magical names of Metatron – was added to the 72 holy names, and subsequently it was an amulet in the form of a hexagram with this one name that became one of the most widespread protective charms of the period. These hexagrams, however, rarely were drawn with simple lines but rather were composed of an elaborate combination of these various written names. Although there can be little doubt that the manner in which these names were patterned to form the star carried significance, efforts at deciphering their meaning have been elusive. Casanowicz (1916), for instance, was of the opinion that the Shield of David, while representing a “medley of names of God and angels, some of them ‘wonderful and fearful,’” they nevertheless defy “. . . rational philological and etymological explanation, written forward and backward and crosswise in all possible permutations and transpositions of letters” (Casanowicz 1916, pp. 156–157).

The mystical themes attributed to the Star of David indicate the psychological intersection between the religious symbolism, the protective qualities, and metaphysical attributes ascribed to the emblem. Some Kabbalists thought that the six points signified God’s absolute rule over the universe in all six directions: north, south, east, west, up, and down. They also believed that the triangles represented humanity’s inherent and paradoxical dual nature – good and evil, physical and spiritual – and through the balancing of these forces, the star could be used as protection against evil spirits (Wolf 1999).

The earliest known piece of Jewish esotericism *Sefer Yetzirah* (“Book of Creation”) – a book of Jewish mysticism that predates the Zohar (the primary source of Jewish mysticism) – observes that the overlapping, interlocking triangles actually create six smaller triangles and is

ultimately composed of a 12 (dodecagram) sides. Accordingly, these 12 sides are likened to the Jewish people, representing the 12 tribes of Israel as well as other esoteric meanings that cohere around the number 12 (Kaplan 1997). The structure of the star, with two overlapping triangles, may also represent the reciprocal, covenantal relationship between the Jewish people and God. The triangle pointing “up” symbolizes our good deeds which go up to heaven and then activate a flow of goodness back down to the world, symbolized by the triangle pointing down. In a similar vein, the triangle that points upward symbolizes God, while the star that points downward represents mankind (Sperling and Simon 1984, p. 73a).

Another Kabbalistic idea that carried mystical currency in the Middle Ages, particularly amongst those who practice Lurianic Kabbalah, is that a six-pointed star receives form and substance from its solid center. This inner core (*yesod*) represents the spiritual dimension, surrounded by the six building blocks of the universe: *Chesed* (Kindness), *Gevurah* (Severity), *Tiferet* (Harmony), *Netzach* (Perseverance), *Hod* (Splendor), *Yesod* (Foundation), and *Malchut* (Royalty) (Oegema 1996).

Apart from appearing in mystical Kabbalistic manuscripts, in 1354 the Jewish community of Prague was the first to use the Star of David as its official symbol (Frankel and Teutsch 1992, p. 161). It wasn’t until the seventeenth century that we find the Star of David emerging as a prominent emblem in Muslim and Christian countries being used an in-group marker amongst its Jewish inhabitants (Trachtenberg 1979). Then the Star of David became an architectural fixture and decorative ornament in European synagogues, Jewish literature, and Jewish artwork. Unlike the mystics of the Middle Ages, however, the Jewish communities of this period did not seem to invest a great amount of religious significance into the star.

## Modern Era

In more modern times, the Star of David has been used as both a symbol of persecution and of

**Star of David, Fig. 2** The Star of Redemption – Franz Rosenzweig (This figure is licensed under the Creative Commons Attribution 2.0 Generic license. <http://en.wikipedia.org/wiki/File:TheStarOfRedemptionEng.svg>)

redemption. In 1897 Theodore Herzl, likely because of its religiously neutral connotations, chose the Star of David to be adopted as the Zionist Nationalist symbol in the First Zionist Congress held in Basel, Switzerland. This redemptive motif was substantially amplified in Franz Rosenzweig's (1912) seminal work, *The Star of Redemption*, where he employed the Star of David to frame his philosophy of Judaism. Each half of the star, according to Rosenzweig, was composed of two conceptual "triads," which, in concert, form the foundation of Jewish belief: Creation, Revelation, and Redemption; God, Israel, and World.

However, beginning in 1939, after the Germans invaded Poland, a shift occurred and the Nazis progressively required Jews to identify themselves in public by affixing a badge of the Star of David with the word *Jude* (German for "Jew") printed onto their clothing. This was, of course, a throwback to the common practice of forcing Jews to visibly identify themselves in public, such as in Portugal where a red Star of David was used as an identifier in the Middle Ages (Piponnier and Mane 1997, p. 137) (Fig.2).

Following the fall of the Third Reich, the Star of David quickly reclaimed its positive,

redemptive symbolism, figuring prominently on the flag of Israel shortly after the founding of the country in 1948. Gershon Scholem (1972), in his erudite treatise on the history of the Star of David, has made a compelling case that the mystical overlay of the Star of David has been negated in modern times by the self-defining redemptive symbolism of this emblem driven by the Holocaust and the founding of the modern State of Israel. The Star of David, Scholem contended, pivoted from a symbol of exclusion to a symbol of redemption, not in a strictly messianic context, but in a nationalistic, existential manner that characterizes the resilient nature and renewed bond of faith between God, the Jewish people, and the land of Israel.

## Stern, Karl

Daniel Burston  
 Department of Psychology, Duquesne  
 University, Pittsburgh, PA, USA

Karl Stern (1906–1975) was born in Bavaria to an assimilated Jewish family and received little formal religious education. After a profoundly alienating experience at his Bar Mitzvah, he repudiated belief in God and became a Marxist and a Zionist. Stern studied medicine and neuropsychiatry in Munich, Berlin, and Frankfurt and underwent a somewhat unorthodox analytic training with a practitioner who blended Freudian and Jungian perspectives but leaned strongly toward a belief in “Spirit.” During this period, he briefly immersed himself in Orthodox Jewish observance but meanwhile cultivated close friendships with ardent Christians, who seemed to understand his religious longings even better than his own relatives. In 1936, Stern and his family fled from Germany to London, where he continued his neuropsychiatric work. Two years later, he arrived in Montreal (via New York). After much study and reflection, in 1943, he finally converted to Roman Catholicism (Stern 1951).

Stern’s first book, *The Pillar of Fire*, was published in 1951 and gives a vivid account of his childhood, adolescence, and early adulthood and the various experiences and events that led to his eventual conversion, including his close friendships with Jacques Maritain and Dorothy Day. Like his younger contemporary, Cardinal

Jean-Marie (Aaron) Lustiger, Stern was unable to understand why most Jews – including many old friends – regarded him as a traitor, a recurrent theme in the literature by “Hebrew Catholics.” Coming as it did on the eve of the Holocaust, Stern’s pain and perplexity on this score seem quite odd or disingenuous to most Jews, since he was quite open about his proselytizing agenda. But regardless of how his actions were experienced and interpreted by his former friends, it is important to note that together with other converts like Edith Stein, Israel Eugenio Zolli, and Aaron Lustiger, Karl Stern worked diligently to overcome anti-Semitism in the Church.

In any case, *The Pillar of Fire* won the Christopher Award, became an international best seller, and is full of illuminating reflections on the political-religious complexion of different Jewish denominations, the differences between Catholic and Nazi anti-Semitism, and of different currents within Nazism, Marxism, and psychoanalysis. In his next book, *The Third Revolution: A Study of Psychiatry and Religion* (1954), Stern explored the relationship between psychoanalysis and religion, arguing that the two are completely compatible. In his third book, *The Flight From Woman* (1965), Stern explored the pitfalls of (male-centered) enlightenment rationalism, with the premium it places on abstract and discursive intellect, to the detriment of empathy and intuition, which he deemed to be women’s ways of knowing and engaging with the world. Unlike Freud, who stressed Oedipal conflicts between fathers and sons, Stern argued for the primacy of the maternal imago and argued that much of Western misogyny – which shows up in philosophers like Descartes, Schopenhauer, Kierkegaard, and Sartre – was rooted in the experience of early maternal deprivation, anticipating the insights and attitudes of attachment theory and some recent feminist theorists who are not in the Catholic orbit.

Like Erich Fromm and Erik Erikson, who were also raised in German-Jewish households, Stern was a psychoanalyst who became a public intellectual. Like them, albeit in different ways, he addressed the relationship between science and religion, issues of gender identity, and the

nature of religious experience. Stern is well known in Catholic circles as a formative influence on psychoanalyst Paul Vitz, whose writings on psychoanalysis and faith are deeply influenced by Stern. Though he wrote from the perspective of a psychoanalytically oriented clinician, Stern's books are informed by a deep knowledge of history, philosophy, and sociology and attest to the yearning for transcendence that persists in the midst of our secular society.

## Stigmata

Charlene P. E. Burns

Department of Philosophy & Religious Studies,  
University of Wisconsin-Eau Claire, Eau Claire,  
WI, USA

## Introduction

From the Greek meaning “to prick; to burn in marks; brand” (Perschbacher 2004). In the ancient Greco-Roman world, stigmata were the brand marks inflicted on slaves by their owners. The term is today most often associated with Christianity and refers to physical wounds, similar to those inflicted on Jesus of Nazareth during his crucifixion, that appear spontaneously on the body of a believer. The first use of the term in connection with Jesus appears in the New Testament, where the apostle Paul refers to his scars from injuries inflicted during imprisonment as “the marks of Jesus branded on my body” (Galatians 6:17); most scholars take his meaning to be that the scars mark him as belonging to Jesus the way a brand marks a slave. This is the sense given to the term in writings of early Christian theologians like Jerome and Augustine. Paul Orosius, a fifth-century Spanish theologian, first used it in reference to the actual wounds inflicted on Jesus. In the thirteenth century an Italian monk, Br. Elias of Assisi, first used the word to refer to spontaneously appearing wounds marking the body of Francis of Assisi (Schmucki 1991).

## Historical Background

A few unsubstantiated instances of stigmata have been reported among Muslims in the form of wounds suffered by Muhammad during his efforts to spread Islam, and at least one Jewish case involving a young man who felt an intense identification with Jesus, but the phenomenon has historically been found overwhelmingly among Catholic Christians (Copelan 1975). The spontaneous appearance of wounds perceived to

duplicate those experienced by Jesus is not reported in historical documents before the thirteenth century. There is some disagreement over whether the first witnessed case was that of a British man, Stephen Langton (1222), or the Italian monk, Francis of Assisi (1224). Since that time, the phenomenon has proliferated. Three to 500 cases have been reported, with peak activity in the nineteenth (20 documented cases) and twentieth centuries (perhaps 100 or more claims). The most famous twentieth-century cases were Thérèse Neumann (1898–1962) and Padre Pio (1887–1968). The majority have been Italian Roman Catholic women who experienced significant trauma (physical or mental) prior to the first appearance of the stigmata. Sixty-two stigmatics have received beatification or canonization by the Catholic Church, although the official position of the Vatican has been that only St. Francis' case is of clearly supernatural origin (Alonso-Fernandez 1985; Carroll 1987; Albright 2002).

Generally, stigmatics experience pain and bleeding intermittently from wounds in the hands or wrists, feet, and one side. Not all experience the same number and type of wounds, not all wounds bleed, and not all are visible; the so-called invisible stigmata cause pain in the hands, feet, and side without the development of wounds or scarring. Appearance of stigmata tends to be periodic, manifesting at times associated with Christ's Passion (on Fridays or during Lent), on church feast days, or when receiving Holy Communion. Many report a drastic reduction in the need and desire for food, with some claiming to ingest nothing but communion wafers after the onset of the phenomenon.

### Religious Interpretations

For many devoutly religious people, the stigmata are a sign of sainthood granted to very spiritual men and women as a sign of God's grace. They are miraculous manifestations of divine love and a foreshadowing of the goal of faith-union with God. For the stigmatic, the experience is intensely humbling and painful. In some cases, individuals report having prayed to share Christ's

suffering or spending long hours in meditation on the crucifixion before onset. St. Catherine of Siena (1347–1380) was very highly revered during her lifetime but prayed that the wounds be invisible so that she could continue to function as an influential figure in papal and Italian politics. She was so highly regarded that her head has been preserved in a reliquary which is kept on the altar of her church to this day.

Given the reverence accorded the phenomenon among religious individuals, it is puzzling that there are no records of stigmatization before the thirteenth century. One possible explanation leads us toward psychology and has to do with the fact that Christians did not commonly depict Christ's bodily suffering in art during the first one thousand or so years of the faith. The cross without Christ's body had become a symbol of the faith during Constantine's (272–337 CE) reign. In the early centuries, when Jesus' body was depicted, it was clothed in a shroud and usually without explicit signs of torture. From the ninth century forward, the body appears more and more often either naked or clothed only in a loin cloth, and with the twelfth century we see an upturn in graphic depictions of blood and suffering. By the late Middle Ages, the representation of Christ in excruciating pain becomes the norm (Illich 1987).

### Scientific Interpretations

The first attempt to explain stigmata scientifically is found in Alfred Maury's *La Magie et l'astrologie dans l'antiquité et dans le moyen âge* (1863). With the advent of scientific investigation during the nineteenth century, a discernable shift in status "from saint to patient" has transpired (Albright 2002). Growing caution regarding the phenomenon is illustrated in the fact that only one stigmatic living in the last two centuries (Padre Pio canonized in 2002) has been declared a saint by the Catholic Church. The church hierarchy's prudence regarding stigmata is a function of the difficult questions raised by scientific investigation of religious phenomena. Medically, the wounds are often

labeled psychogenic purpura or autoerythrocyte sensitization syndrome, which involves easy bruising that spreads to adjacent tissues and causes pain. This condition may be due to auto-immune sensitization or to purely psychogenic causes. Because stigmatics are most often devoutly religious and their wounds mimic those of Christ, the tendency among medical professionals is to attribute the condition to psychological factors.

In some cases, the wounds appear to have been self-inflicted. Wovoka (1856–1932), the Paiute leader of the second-wave Native American Ghost Dance movement, had a vision of God during a solar eclipse in 1889 after which he preached a message of impending resurrection of the ancestors and end of white rule. He also exhibited the stigmata, which are thought to have been self-inflicted in order to more closely identify his message with Christ. Clearly fraudulent cases have occurred often, with wounds and bleeding caused by everything from self-injury to using makeup or the concealing vials of red food coloring and animal or human blood beneath layers of false skin (Krippner 2002). Faking of the wounds was substantiated in the case of Magdalena de la Cruz (1487–1560), a Spanish nun. Whereas Wovoka may have inflicted the wounds to achieve ideological goals, stigmatics like Magdalena may suffer from what is now called factitious disorder (sometimes called Munchausen syndrome), the intentional production of medical symptoms. These sufferers have no discernable external incentives, like political or monetary gain, apparently needing to assume the “sick” role for its own sake (DSM-IV 2000, pp. 471–475).

### Psychological Interpretation

Stigmatics have, since the mid-nineteenth century, most often been diagnosed with hysteria or hysterical conversion – somatoform disorder in today’s terms (DSM-IV 2000, p. 445 or pp. 451–452). In this condition,

recurrent clinically significant physical symptoms cannot be explained by a diagnosable medical condition or as resulting from substances or intentional infliction. Pierre Janet (1859–1947) first noted that hysterics tend to be easily hypnotized, and Karl Jaspers (1883–1969) discovered that stigmata-like wounds could be induced through hypnotic suggestion (Albright 2002). The classic Freudian explanation is that stigmata arise due to sexual and aggressive urges originating in childhood (for an interesting Kleinian interpretation, see Carroll 1987).

Freudian interpretations have been criticized based on the fact that many stigmatics suffered significant physical and/or psychological trauma just prior to the first onset. One argument is that post-traumatic stress disorder (DSM-IV 2000, p. 309.81) may be more accurately descriptive. Thérèse Neumann, for example, suffered a debilitating back injury when putting out a fire at a neighbor’s home when she was 20 years old. Her physical condition deteriorated into temporary blindness, left-sided paralysis, inability to speak normally, and lack of appetite. She was bedridden for 6 years, during which time she suffered a seizure and developed infected bed sores. Her condition dramatically and spontaneously improved on the day her namesake, Thérèse of Lisieux, was canonized. Soon afterward she had a vision of Jesus and developed an open wound on her left side, followed by bloody tears and wounds on her hands and feet. She claimed to have ingested nothing but communion wafers for the next 36 years and experienced the stigmata after entering a trance-like state nearly every Friday through Sunday for the rest of her life. In Albright’s analysis, Neumann suffered post-traumatic stress symptoms expressed in dissociative self-mutilation (Albright 2002). It must be said, however, that even if science can identify underlying psychological mechanisms at work in the lives of stigmatics, the sufferer’s faith that this is a spiritual experience is not thereby disproved. “The fact that an idea satisfies a wish does not mean that the idea is false” (Fromm 1950).

## Stone Circles

Susan Easton  
San Francisco, CA, USA

### Stone Circles: Mysterious Skeletons of Stone-Age Culture

Stone circles are ancient purpose-built rock structures found all over the world. Their origins and uses are a source of continuing research and debate. The number of standing stones in a circle can range from 4 to 60. Some stone circles are concentric. Some are elliptical or oval. Others are recumbent, in which a single stone is laid flat between the highest two upright pillars. The elements of stone circles and stone monuments include a variety of terms including dolmen, cairn, menhir, tumuli, barrow, cromlech, and center stone (Stone Circles of the Gambia). Symbolically they can have many meanings, including the broad Jungian theory of the mandala, an archetypal image of psychological divinity, and the archetypal Self that regulates and balances the various archetypal dynamics (Jung 1959). This appears in many ways, such as reference to stars, the afterlife, and divinities.

The term “henge” refers to Neolithic circular or oval earthworks identified by a ring bank with an interior ditch. Henges sometimes have incorporated stone circles as a part of the earthwork. The study of the origin of stone circles has been somewhat aided by the science of radiocarbon dating; however, the results are often inconclusive. People who built stone circles in the Neolithic era left no written source materials, but legends survive. More reliable dating parameters have been deduced by sifting through what ancient cultures have left behind as clues and by looking into the heavens.

### Stonehenge as an Icon

The stone circle on the Salisbury Plain, Stonehenge, is arguably the world’s best known.

### Stone Circles,

**Fig. 1** Stonehenge on July 30, 2007 (Photo by garethwiscombe. Courtesy Creative Commons 2.0 Generic License. [http://en.wikipedia.org/wiki/File:Stonehenge2007\\_07\\_30.jpg](http://en.wikipedia.org/wiki/File:Stonehenge2007_07_30.jpg))

It began as a henge around 3100 BCE, was then abandoned, and remained untouched for nearly 1,000 years. Construction resumed in 2150 BCE when 82 bluestones from the Preseli Mountains, over 200 miles away in southwest Wales, were brought to the site. These stones weigh 4 t each. Their transport apparently included dragging the stones overland and rafting them on various connecting rivers. In the third building stage of Stonehenge, circa 2000 BCE, the Sarsen stones, boulders of silicified sandstone, arrived. The largest of these stones weighed 50 t and were moved 25 miles overland using sledges and ropes. The final stage took place in 1500 BCE when 60 additional bluestones, a general term for dolerite rock slabs, were used to complete the circle. Only 43 of the original bluestones remain (Fig. 1).

### The Builders of Stonehenge

The official Stonehenge visitor's brochure refers to the builders as "a prehistoric culture now lost to us." DNA analysis suggests that modern *Homo sapiens* arrived in Britain at least 25,000 years ago, some of whom came across a land bridge which then existed between what is now the far southeast coast of Britain and the European

continent. Maritime migrations also added to the mix of residents in Britain during the era of stone circle building. The first known writings about Stonehenge are from the twelfth century by Henry of Huntingdon and Geoffrey of Monmouth. In one British legend, King Arthur asks his court magician Merlin who built Stonehenge. Merlin says that giants moved the great stones from Wales (Wace, 14th century). There are those who believe that sophisticated civilizations with technological skills existed before 12000 BCE, when geologists indicate that a meteor impact changed the face of the earth and its survivors. In truth, the identity of the builders may never be known.

### Why Stonehenge Was Built

Excavations have revealed cremated human bones in some of the chalk mortar fillings at Stonehenge, but it is not thought to be a cemetery as such. The chalk fillings were likely the result of cremations held amid religious ceremonies and then put to both practical and memorial use. Some archaeologists believe Stonehenge was constructed as a burial monument for a very important person, based on the amount of

dedicated work and coordination required to move and assemble the monolithic stones.

Between the late nineteenth and mid-twentieth centuries, three British astronomers, Sir Norman Lockyer (1909), Gerald Hawkins (1965), and Alexander Thom (1971), each argued that Stonehenge and other ancient monuments were aligned to follow the motions of the sun, moon, planets, and constellations and validated the study of archaeoastronomy. Recently two more theories on Stonehenge have emerged. One posits that Stonehenge and other stone circles and monuments were part of an early navigational system for travelers on land and at sea. Building on the concept of ley lines, introduced by amateur archaeologist Alfred Watkins and others spent decades researching stone circles as early navigational tools (David and Davidson 1925/1988). Travelers could have used dead reckoning from one stone circle to another as Neolithic road maps along the coastlines of Scotland, Ireland, Wales, Cornwall, France, and Spain and into the interior of Britain (Davidson, Davidson & Davidson).

### Peace and Reconciliation in Stone

Another theory is that stone circles were part of a vast planetary geo-energy network. The Stonehenge Riverside Project (SRP) (University of Sheffield) proposes that Stonehenge was as a tribal unification project, bringing together the previously separated tribes and cultures from the east and west sides of the land mass. These groups, which had warred over religious beliefs and territorial claims, formed an alliance and built Stonehenge as a symbol of peace and reconciliation. The large standing stones, it is suggested, each represented the various clans that had battled until the end of the Stone Age (Society for the study of peace, conflict and violence).

### Other Worship and Belief Systems

Geomancy, lithomancy, and litholatry are terms used to describe the act of giving special powers

to stones or to the worship of them as symbolic representations of one or more deities. Stone circles are the rough-hewn ancestors of religious icons, which evolved into the status of saints. They are reflected in great cathedrals to modest chapels to the headstones placed above graves. Standing stones infuse religious history and practice. Comparisons of diverse Neolithic cultures suggest that these peoples' beliefs often depended upon their agricultural sophistication driven by various climates and growing seasons. Psychology was based on ecology, infused with spiritual beliefs. The earth was revered and feared, and the gods were seen in the stars. Understanding these celestial movements – used to predict planting and harvesting – was crucial to everyday life and survival. Exhortations to “higher powers” are, arguably, the basis of all religions that followed this era in human history (Eliade 1958).

Psychologists and theologians have reached a consensus that the urge to build sacred structures seems to be embedded in the human psyche. We still mark historical events, and the passing of people, with standing stones, metal monuments, and gravestones.

Studies on primitive religion concur that burials and community ceremonies were widely practiced in all early societies. A strong belief in the afterlife linked to the cosmos is a common thread in many primitive religions and accounts for the astronomical placements of stone circles (Eliade 1958). Twice a year, at the solstice and equinox, heavenly light beams focus through key portals for as few as 7 min. These may have meant to lead the spirits of the departed to the life beyond. Paul Sèbillot detailed various stone circle and large rock cultural myths and practices in France. These included marriage ceremonies, supplications for wealth and health, and love and fertility rites (Sèbillot 1902). D. L. Ashliman, of the University of Pittsburgh, has compiled an online collection of Stone Monument Legends (Ashliman 1996-2012).

Aubrey Burl asserted that Stonehenge was a temple. Using the findings of the archaeoastronomers, Burl suggests that such sites would have been presided over by a group of astronomer

priests. These holy leaders would have led their cohorts through the cycle of rituals that the stone circles were designed to teach and keep alive down through future generations. These priests would have read the heavens to announce planting and harvesting cycles, holding rituals to invoke good weather, good harvests, health, and safety from invasions (Burl 2005a, b, c).

All circles have centers. Many of them are highly symbolic. These are places where the faithful assemble to observe common beliefs. Circles represent the cyclical nature of life and the seasons, of marriage (the exchanging of rings), of birth, and death. Walking in circles around sacred places is a common practice in many faiths. From ancient Labyrinths in Christian sites to Islam's meteorite shrine, the Kaaba, in Mecca, these monuments are circled by the faithful to show religious devotion. Jung saw such circular rituals psychologically as sacred mandalas, pointing to the central sacredness (Jung 1959).

Contemporary Pagans, Wiccans and Druids, see their right to worship at Stonehenge to be sacred to their belief systems. Stonehenge has become a legal religious battleground, as these faith factions ask for tolerance and equal access. In *Sacred Architecture* Humphrey and Vitebsky (2005) note that "humans attempt to bring themselves closer to the divine by creating a special space to hold a powerful and precious contact." The prevalence of stone circles seems to underscore this principle.

## Stone Circles Around the World

Beyond the 1,000 standing stone circles in the British Isles, countless other mysterious stone monuments circle the world. At Carnac, France, pre-Celtic societies raised at least 3,000 Neolithic standing stones between 3300 and 4500 BCE. Legend holds that one set of the standing monoliths was made when a league of Roman soldiers were turned to stone by Merlin, the omnipresent mythical magician (Briard). The lines of stones corresponded with the changes of the seasons, according to the archaeoastronomers. Nabta Playa

in the Egyptian Nubian Desert dates from the fifth millennium BCE and has alignments to astronomical points (Wendorf and Malville 2001).

In Japan, ceremonial stone circles first appeared at the beginning of Jomon era (14000 BCE). They continued to be built through 300 BCE. They were positioned near mountain locations that allowed viewing of the star Polaris. During the equinox and solstice, they served as astronomical calendars. Like many other stone circles, they were often the site of religious ceremonies and social gatherings. The Lo Ah Tsai Circle in the northern part of the Lamma Islands, China, was built 4,100 years ago. In China's Shanxi Province, the Fau Lau Stone Circle, on Lantau Island, was identified as a late Neolithic structure in 1980. There is evidence that it was used as a ritual site. Chinese archaeologists also claim to have discovered the world's earliest observatory in Shanxi Province. It dates back to 45,000 years ago (Megalith).

## Göbekli Tepe Rewrites History

A new discovery in the 1980s has challenged the preeminence of sites such as Stonehenge and has shifted much attention to this very ancient huge site (long misinterpreted as medieval) located in modern Turkey. Göbekli Tepe is a series of circular rings and T-shaped monoliths decorated with animal carvings. It was constructed some 11,500 years ago, or about 6,500 years before Stonehenge. It has 30 acres of pillars, 150 in all, weighing between 7 and 10 t each. The temple of hunter-gatherers living nearby reveals many bones of wild animals (Fig. 2).

Klaus Schmidt has studied Göbekli Tepe for decades. He sees it as the world's first temple, a place of worship built by hunter-gatherers. Schmidt and others assert that erecting Göbekli Tepe laid the groundwork for creating more complex Neolithic societies. Göbekli is astounding for it changes major theories of the development of civilization. It is complex and was built prior to the development of pottery, metallurgy, agriculture, and writing. Apparently it was the social organization behind its construction required

**Stone Circles,**

**Fig. 2** Göbekli Tepe, Şanlıurfa, 2011 (Photo by Teomancimit. Courtesy Creative Commons ShareAlike 3.0 License. [http://en.wikipedia.org/wiki/Göbekli\\_Tepe](http://en.wikipedia.org/wiki/Göbekli_Tepe))

that led to these later Neolithic innovations (Curry 2008; Göbekli Tepe; Scham 2008).

The many uncovered stone monuments, recent theories about Stonehenge, and the discoveries at Göbekli Tepe still hold secrets that deepen our understanding of ancient history and intrigue archaeologists, psychologists, and theologians alike. It seems clear that the sacredness that they perceived around them and in the heavens led to these archaic cultures' intense, difficult determination to build such large monuments.

## Story as Scripture, Therapy, Ritual

Kelly Murphy Mason  
 Psychotherapy & Spirituality Institute,  
 New York, NY, USA

Storytelling is known to be a primal human activity, a ritualized interaction between teller and listener that wove the fabric of earliest societies; yet our contemporary conceptualizations of storytelling have, like our societies themselves, grown considerably more complex and sophisticated. The postmodern impulse has had far-reaching implication across such disciplines as literary criticism, psychology, and religious studies, especially in developing greater awareness of the ways in which the collected stories that are constitutive of history could themselves be considered discrete constructions. Increased appreciation for narrative calls for an interdisciplinary approach that makes literature, psychotherapy, and religion more mutually informative in this era. Because humans are by nature storytellers, constructivist investigations into storytelling can reveal something significant about the various meanings ascribed to the human condition.

Constructivist approaches regard endlessly proliferating narratives as proof positive of the human need for meaning-making (Saleeby 1994). Many people's understanding of themselves and their larger culture has been shaped by the stories that get told frequently enough to become folklore. Even where meaning appears to be lacking – in needless suffering, for instance, or mass destruction – meaning has been devised through and derived from the stories people told to one another.

The Epic of Gilgamesh, believed to contain the oldest written narratives in history, had

Sumerian origins dating to the third millennium BCE, predating the Homeric epics. "It is an old story," the epigraph declares, "but one that can still be told..." In fact, its ancient account of a cataclysmic flood is later retold in the Book of Genesis with the version of the story famously featuring Noah. Across cultures, stories have attempted to describe not only how the world had been created but also how it had been reconstituted. Like Greek mythology, Sumerian mythology proffered explanations about what exactly separated the human from the godly, the mortal from the immortal, imbuing humans with ever greater self-consciousness.

Even as humans developed a deeper appreciation for the extent to which they were subject to circumstances such as earthly finitude, they also tried to exert individual agency within those confines. The struggle inherent in this dual reality gave rise to tension that created the story dynamic, one that poses questions about whether people are autonomous creations or relationally defined, self-determining, or simply the pawns of fate. By the fourth century BCE, Aristotle had already recognized that stories tended to conform to certain poetic expectations in their imitations of reality. He catalogued three distinct genres emerging: the epic, the comic, and the tragic, with the tragic becoming the most developed dramatically.

Tragedy extends a kind of cautionary tale. The didactic functions of story find their expression not only in tragedies but also in fables and parables. Stories seem to be educative in the sense that they are generally perceived as somehow providing a moral (Coles 1989). Those stories that give us our most memorable moral instruction come to comprise a kind of sacred scripture. The scripture presumes a moral universe that requires human participation. The scripture also presumes an arc of action that is purposeful. As narrative-based faiths, Jewish and Christian religious traditions maintain a profound historical sensibility that asks believers to consider themselves players in a larger story, namely, in God's plan for the salvation of the world.

Although psychotherapy challenged the Judeo-Christian emphasis on the collective experience of a shared reality by privileging instead

the role of the individual's inner life, it left unchallenged in the West a fundamentally narrative epistemology. In the early twentieth century, Freud introduced the modality of psychoanalysis through case histories recounting the life stories of his analysands. As the psychological disciplines developed, they framed case histories with a degree of clinical certainty that frequently risked an overdetermined presentation of past events standing in causal relation to present difficulties (Polkinghorne 1988).

Yet as constructivist approaches such as narrative therapy suggest, persons struggling with significant problems frequently have problematic life scripts (Roberts 1999). They may have unconsciously concluded that serious troubles have been scripted for them; their troubled reenactments begin to take on a ritualistically repetitious quality that leads them to play caricatured roles in their own lives. Such persons can operate with the assumption of a tragic outcome unchanged in the face of a changing cast of characters in various stages of their life. They live to tell their tales but again and again. The more regularly these persons tell their tragic tales, the more powerfully they get reinforced as a personal reality.

Storytelling tends not to be an indifferent act. Rather, it evokes certain emotional states for purposive and persuasive effects (Ochberg 1996). Generally, narratives create an internal logic that must be preserved, often at the cost of curtailing scope and perspective. Stories establish what is and what is not relevant to a given course of action. They determine what knowledge is essential to right understanding.

This essentialism helps to explain why so many of the world's religious communities have established which stories will get told and retold in ritual settings by sealing a canon (Schussler 1994). Yet there is a twofold danger in this sealing: first, as stories grow old, they get told so grossly out of context as to be at times almost unintelligible and so are no longer heard in the same spirit as they were originally, and second, newer stories set in familiar contexts that would communicate the proper spirit in intelligible contexts may never be granted a hearing. In the

Christian testament, the Pauline commandment to preserve the spirit and not the letter of religious teachings underscores the importance of appreciating the spirit of story, investigating whether it is sufficiently edifying to merit inclusion in the scripture. Presumably, the scripture offers healing stories that provide people a hopeful glimpse of possible resolutions to their own storied circumstance.

Sometimes sharing life stories provides persons in similar situations the promise of reparative experience by allowing positive identification with others. In recent decades, Alcoholics Anonymous and other Twelve-Step programs have basically provided recovering members the chance to construct a conversion narrative which they then testify to on a regular basis (Kurtz and Ketcham 1992). Members make important corrections in what would otherwise be tales of woe by confessing all their past errors. With the Twelve Steps providing their narrative framework, they learn a new genre of life story that involves being both psychologically and spiritually restored, the ultimate ends of recovery being sanity and serenity.

The potential of storytelling as therapeutic technique lies in its ability not only to provide people with an open hearing and cathartic release but also to cultivate their awareness of the narrative structures they use to organize their existence. People can be encouraged to become simultaneously author and protagonist in their own stories, carefully crafting intersections of meaning around central themes that can be collected in a coherent self-narrative (Peacock and Holland 1993). They can become the authorities on their lives as they are lived, recognizing the power of their ability to make choices in the present tense, shaping a storyline as it progresses.

Psychotherapy is usually a narrative undertaking, with persons telling their therapists the stories they want heard. The therapists have greater latitude in the interpretation of those stories if they recognize them as idiosyncratic constructions as opposed to objective factual accounts. Constructivist approaches resemble cognitive approaches in their exploration of the assumed contexts, perceived motives, causal

connections, and characterological attributions that are then enlisted as narrative strategies (Mishler 1995). Recognizing the story as a strategy enables therapists to reframe situations so that alternate narrations become possible. These revisions frequently become far more serviceable than the original versions in the therapeutic process.

Narrative therapists listen for stories that have been and that have not yet been told. They challenge the unitary truth posited in a dominant narrative by highlighting the exceptional instance when a problem-saturated story has minimized or excluded a unique outcome which can only be accounted for in a broader narrative framework, one that does not require the narrator to subjugate such realities for the sake of an overall expediency or intended effect (White and Epston 1990). Instead of overidentifying with the problems memorialized in the story, the narrator is free to externalize the problematic story in order to investigate its narrative logic more thoroughly and modifying it accordingly. In this manner, the narrator achieves a degree of liberation through both narrative competency and self-mastery.

If such liberation is not possible, the narrator becomes stuck in the story and options suddenly seem to narrow. Lacking a sense of authority, the narrator is no longer able to make meaning in and through the story. Should the interests of the story as artifact start to supercede the uses of it as life script and should the story enlist the teller for its ends instead of the opposite thing occurring, the story itself become inviolate in the imagination and a rigid fundamentalism results. It is the letter and not the spirit that triumphs as a mode of instruction and ultimately becomes a method of indoctrination. Because stories deal with animated individuals interacting, they generally represent complicated formulae that generate more questions than they answer (Bruner 2002). What makes stories useful is their ability to state problems in terms that establish clear analogies.

Story conventions themselves provide people a set of concepts that might otherwise be unavailable. Aristotle recognized that plots turn on both reversals and recognitions, reversals being primarily external occurrences and

recognitions being primarily internal ones. The majority of modern literary work does not have an epic sweep; it betrays less fascination with a series of large-scale external events occurring in a certain sequence, being more preoccupied with the machinations of inner processing by characters themselves. Point of view now figures prominently and decisively. To an extent it never was before, Western literature has become psychologically minded. It has become an unmistakably humanist endeavor.

This humanist orientation does not mean that literature overlooks the sacred dimension altogether. Rather, modern articulation of the sacred tends to be grounded in a particular perspective rather than in disembodied omniscience. As contemporary sensibilities empower them as storytellers, people become more fully engaged not only as author/protagonists but also as listeners. They research scriptures and question canons. Testing the spirit of stories, they begin to expect texts to be inspiring as well as inspired. Some old stories may no longer be told with any conviction, while some may need to be told in novel ways. Others in the canon stubbornly resist revision. Other old stories survive because they still invite the kind of participation that elicits personal identification and renewal on the part of their listeners. Such stories have gained credibility by being capacious; they enable connections to continue to be made today.

## Commentary

The need for story is evident in young children, just as it was in earliest societies. Children, like the cultures they inhabit, exhibit preference for certain stories by urging that they be retold. Childish efforts to learn a story by heart, to have memorized it in its entirety through ritual repetition, imply a desire for mastery, a developmental drive to parse story grammar and discern the range of narrative elements at play. Some constructivists have posited that narrative is the primary mode humans have for giving the larger world coherence. Without narrative, humans

might have difficulty locating themselves in any recognizable context or gaining any sense of direction.

Recognizing stories as fabrications rather than artifacts, people become co-creators capable of restorying their lives in meaningful ways. The decisions people make about how they will regard and meet life circumstance enable them to choose with intention the sort of story they will participate in, be it scriptural or secular, conventional or exceptional. They then tell stories that merit their assent and create a significant sense of community. Like psychotherapy itself, storytelling has long been considered as a shamanic practice, a method of channeling numinous energies in the service of human concerns and the greater good. With narrative awareness, constructivists intimate, people can communicate stories that express a conscious desire to heal themselves and their storied world.

## Substance Abuse and Religion

Gilbert Todd Vance

Department of Psychology, Virginia  
Commonwealth University, Roanoke, VA, USA

Interest in the relationships between substance use and religion/spirituality has a long history. In *The Varieties of Religious Experience*, first published as a book in 1902, William James commented on the relationship between alcohol use and mysticism. In 1961, Carl Jung and Bill W. of Alcoholics Anonymous famously corresponded concerning their perceived relationships between alcohol use, recovery from alcohol addiction, and the search for spirituality.

Certain psychoactive substances are associated with use by specific religions for mystical or

ceremonial purposes. For example, peyote is associated with use by some indigenous people groups in North America. Kava is associated with use for religious purposes by people groups in the Pacific.

In modern research, an inverse relationship between substance use and religiosity (i.e., higher levels of substance use correlate with lower levels of religiosity and vice versa) has generally been observed across many studies. This relationship has been observed for various aspects of religion/spirituality and well as for the various levels of licit and illicit substance use. However, research has also shown that findings regarding the relationships between substance use and religion/spirituality depend on many factors. These include the specific aspect of religion/spirituality being measured (e.g., frequency of religious service attendance, spiritual practices, scriptural study), the specific aspect of substance use being considered (e.g., lifetime use, substance dependence, abstinence, lifetime risk for substance abuse), and the population being studied (e.g., adolescents, older adults, men, women). It must be noted that inverse relationships observed between substance use and religiosity are not merely a reflection of some religions' prohibitions against substance abuse. As Gorsuch (1995) has said, there is no single set of religious/spiritual norms regarding substance use. Precise research on the relationships between substance use and religion/spirituality requires specification of the various dimensions of religion/spirituality as well as the specific aspect of substance use being examined.

Because of the apparent protective effects of religion/spirituality in relation to substance use, some have proposed that the value of incorporating religion/spirituality should be considering in conceptualizing prevention and treatment programs for substance abuse and dependence. The success of spiritually oriented programs such as Alcoholics Anonymous (AA) suggests that religion/spirituality may play an important role for some persons in recovery from substance dependence. However, it is important to note that the overt spirituality of some AA groups can possibly be seen as a barrier to program participation for those persons who do not identify as religious or spiritual.

## Suffering and Sacred Pain

Karen D. Scheib  
Candler School of Theology, Emory University,  
Atlanta, GA, USA

Suffering is an experience of severe distress and pain affecting one or more domains of human experience: physical, psychological, social, and spiritual. To suffer (*sub + fero*) literally means to “bear up under,” to submit, or to be forced to endure conditions that threaten well-being. Suffering is often a profoundly personal experience, and an inability to fully share one’s suffering may compound the distress. Disciplines such as philosophy, religion, medicine, and the social sciences have sought to understand the experience of human suffering and the profound questions raised by its ubiquitous presence. Recent research by medical anthropologists (such as Arthur Kleinman and E. J. Cassell) has sought to distinguish the physiological experience of pain from the subjective experience of suffering. In some religious traditions, including Buddhism and Christianity, suffering is seen as an inescapable dimension of human life.

### Perspectives on Suffering in the Christian Tradition

Multiple perspectives on the purpose of suffering are found in both scripture and tradition.

Suffering may be seen as a time of testing or trial, as an educational or formative process, as the consequence of sin, or simply as mystery. While various reasons why God *allows* suffering are found within the Christian tradition, agreement on one point is clear: suffering is not God’s *intent* for humankind. From the earliest Jewish narratives of origin, incorporated in the Christian tradition, suffering is seen as opposed to the goodness of creation. Suffering that results from violence, injustice, grief, loss, death, self-hatred, and self-destruction is a consequence of the fallen state of humanity and not in accordance with God’s will. Humans exist within this fallen world in tension between the dignity God intended and the reality of finitude.

### Perspectives on Suffering in the Hebrew Scriptures

The multiple perspectives on suffering found in the Hebrew Scriptures must be seen in the context of God’s covenant with Israel. The “law of retribution,” by which the righteous are rewarded and the evil suffer, is a prominent theme in Deuteronomy, as well as the books of Joshua through second Kings. Suffering is also seen as time of trial or testing or as form of education that draws us nearer to God. Lament, in which one cries out God in the midst of suffering while trusting that God receives the plea and continues in faithful presence, is presented as a legitimate response to suffering. The Book of Job provides the most sustained and nuanced treatment of innocent suffering in the Hebrew Scriptures and raises enduring questions about God’s presence or absence in the midst of suffering. The final depiction of God in the Book of Job is as One who draws close to us in the midst of suffering, and though this scripture gives no definitive answers regarding the reason for suffering, this communion with God is itself described as transformative.

### New Testament Perspectives on Suffering

The Hebrew Scriptures served as the first Christian sacred texts and provided the lens through which the suffering and death of Jesus were understood. Yet God is doing something new

through the life, death, and resurrection of Jesus, which leads to a revised view of suffering. In the New Testament as in the Hebrew Scriptures, suffering may be understood as a trial that strengthens the faith of believers. However, the Christian believer's ability to endure trials is made possible through identification with and participation in Jesus' death and resurrection. Christ's resurrection has relegated suffering to a temporary power in this world that will be overcome when God's reign arrives in its fullness at Jesus' return.

At least three overlapping views of suffering can be found in the New Testament. First, Jesus proclaims the *coming reign of God* now breaking into creation but not yet revealed in its fullness. Human beings have resisted and fallen away from God's intention for creation resulting in a world wounded by evil and suffering. Jesus is himself a manifestation of this new reign of God through which salvation – that is, healing, restoration, and the alleviation of suffering – will occur. Second, God most fully enters into human suffering through the *death and resurrection of Christ* breaking that power of death. While suffering will not fully cease in this life, those united to Christ will experience the love and presence of God in the midst of profound suffering. The power of love breaks the hold suffering has on us so that we are no longer defined by suffering alone but transformed by love in the midst of suffering. Third, the Apostle Paul's writing develops the theme of *suffering for the gospel* in which he speaks of his own suffering endured as an apostle of Christ. Believers are encouraged to identify with the crucified and risen Christ for it is through participation in his death and resurrection that suffering Christians find meaning. The New Testament proclaims a God who is present in the midst of suffering and continues to bring life out of death.

### Theological Perspectives on Suffering and Evil

A certain tension exists within the Christian tradition between accepting suffering as an inevitable part of the human condition and resisting it as a form of evil opposed to God's will. This tension

is further nuanced by the distinction between *material* and *moral* evil. Suffering which occurs as a consequence of "acts of nature," such as hurricanes, earthquake, or disease, is considered an occasion of material evil. Such experiences, though not God's intent, are a part of our finite human condition, may provide opportunities for spiritual growth, and are to be accepted. However, the suffering inflicted by other human beings is moral evil and occurs through oppression, dehumanization, and multiple forms of violence. Moral evil is experienced as dehumanization or a loss of one's sense of intrinsic worth as a human being, and it is this form of evil and suffering which is to be resisted.

Material and moral evil may occur simultaneously or separately. Examples of suffering occurring as a consequence of moral evil apart from material evil include feelings of remorse of guilt, brought about by our own actions, or experiences of loneliness, hurt, betrayal, or alienation resulting from the moral evil inflicted on us by others. Moral evil inflicted on self or others can also be mediated through material occasions of suffering, such as self-mutilation, rape, torture, murder, and war. Some forms of suffering may be occasions of material suffering in which no moral evil is present. Examples of this form of suffering are found in natural disasters and illness in its various forms. Still other occasions of suffering are part material evil and part moral evil. Illnesses related to addictions and compulsive behaviors, such as lung cancer from a long habit of cigarette smoking, are examples of mixed types of suffering.

The multiple perspectives on suffering found in the biblical tradition extend through the larger Christian theological tradition. For example, Augustine's privation theory asserts that evil and its attendant suffering occur in the absence of the good. Irenaeus, a second-century theologian, argued that while evil does not have a real existence, the suffering attendant to it provides opportunities for spiritual growth and an increase in charity, courage, and self-discipline. The mystical tradition within Christianity also frames certain forms of suffering as potential occasions for spiritual growth. Suffering is one of the mysteries

of creation and an inescapable part of our human condition. An attempt to flee it often leads us to secure ourselves through material goods, leading to idolatry.

The mystical tradition emphasizes God's presence and profound love in the midst of suffering and asserts that true knowledge of ourselves and of God comes only by embracing suffering. Julian of Norwich, an English mystic, in her work *Showings* describes the immense depth of God's love for us revealed to her through an intense experience of physical suffering. She suggests that the path toward spiritual maturity and wholeness requires a voluntarily reentry into experiences of suffering for the sake of healing and the restoration of wholeness in which the paradoxes of life and death are held in creative tension rather than split into destructive opposition.

In the midst of suffering, the human cry is "Why?" a cry often addressed to God. Theodicy, now a subdiscipline in theology, emerged in the eighteenth century as a philosophical attempt to answer this cry and is associated with Gottfried Wilhelm Leibniz. In the *Theodicy* (1710), Leibniz gives a reasoned attempt to reconcile the existence of an all-good, all-powerful, all-knowing Creator God with evil and suffering. More recently, contemporary theologians have raised objections to the enterprise of theodicy itself. Some argue that while this approach affirms the impassibility or unchanging nature of God and protects God's transcendence, it also mitigates the impact of the tragedy of human suffering and mollifies evil. Theodicy itself thus becomes a source of suffering. Critiques of theodicy increased in the wake of the *Shoah*, the Jewish genocide undertaken by the Nazi regime, as well as more recent experiences of genocide in Rwanda, Burundi, Cambodia, Bosnia, and Darfur. Opponents to classical theodicy argue that it can instill passivity in the face of evil and lead to deafness to the cries of those enduring radical forms of suffering, a position inconsistent with the gospel message. Liberation theologians have pointed out that those most often urged to endure suffering as means of spiritual growth or to benefit the larger, common good are those who have the least access to power and privilege.

Contemporary theologians, including Dorothee Soelle and Jürgen Moltmann, reject God's impassibility and offer the image of the crucified Christ as God's solidarity with us in suffering. Another contemporary theological approach to suffering reframes the question of suffering by embracing a view of human existence and creation as tragically structured. From this view, all suffering is tragic but not all suffering is evil.

## Pastoral Responses to Suffering

Some systematic and practical theologians argue that resisting and transforming suffering is the principal theological task, rather than explaining its presence in the world. One example of this response is found in the work of pastoral theologian John Swinton who rejects theodicy and develops a set of practices to resist and transform suffering. These interlocking practices include lament, forgiveness, thoughtfulness as opposed to mindlessness or unthinking obedience to authority, and a form of friendship that requires radical hospitality. It is through such practices of redemption that the church shows how to continue loving God and other human beings in the midst of evil and suffering.

## Psychological Perspectives on Suffering and Growth

The tension between accepting and resisting suffering in the Christian tradition is also present in some psychological views of suffering. Psychodynamic psychology views the suffering of mental illness as the result of disturbed relationships in childhood, which leads to unconscious internal conflicts. The process of healing requires uncovering these conflicts, which can be painful. Similar to the approach of Christian mysticism, psychodynamic psychotherapy requires the patient to reenter the original suffering so that it may be transformed and healing can occur.

A link between suffering and growth is also found in recent psychological research on resilience which has demonstrated that, contrary to

expectations, the majority of children who experience trauma or grow up in dysfunctional families do well as adults. Protective factors that foster growth even in the midst of trauma and suffering include a strong sense of identity, intelligence, physical attractiveness, supportive caregivers, family cohesion, and external support networks. The resilience literature also suggests that religious and spiritual beliefs are key elements of resilience. Religious beliefs that endow suffering with meaning may offer persons an opportunity to live in the creative tension of accepting and resisting suffering.

## Sufi Psychology

Lynn E. Wilcox  
California State University, Sacramento,  
CA, USA

Sufism is considered the inner dimension of Islam and is based on the teachings of the Prophet Mohammad (pbuh) and the holy Qur'an. Sufi psychology is the application of Sufism. Expressions of the basic concepts vary, sometimes radically, between Sunni and Shi'a Muslims and between the various Sufi orders (See Fadiman and Frager 1997; Geoffroy 2010; Grisell 1983; Lings 1993).

The goal of Sufism and Sufi psychology is unified oneness, in which every aspect of one's being is unified in harmony. It is based on the concept *La ilaha illa Allah*, which means there is only one God. The Prophet taught through his actions that whatever exists in one individual has to come to one point and present itself. When this occurs, the absolute knowledge of oneness with Existence is attained. Called Irfan, derived from the word ma'rifa meaning cognition (Angha 2002b), Sufism is considered the science of the soul.

Amir al Mo'menin Ali (2000), the cousin, son-in-law, and successor of the Prophet Mohammad (pbuh), conceived that this law of Islam works in all aspects, stating: "Whoever sets right his inward self, God sets right his

outward self.” Early examples are Salman Farsi and Oveys Gharani (Uwais al-Qarni). Salman Farsi went from one religion to another before becoming a Muslim, always learning and acting upon, in reaching his goal of cognizing reality. Oveys Gharani (Uwais al-Qarni) never met the Prophet, but by focusing on knowledge and aiming for cognition, became one with Existence, and the Prophet sent him his own cloak to signify his elevated spiritual status.

Sufi psychology sees our identities as formed primarily externally through identification with objects, life experiences, acquired knowledge, expectations of others, and societal roles, standards, and norms. This mental construct becomes our ego and our invented identity. It is our ever-changing, unstable, little “i.” These externally based life purposes and derived life goals constantly alienate us from our true self and true identity, which is our eternal “I,” our connection to Existence, to God. The connection to the spiritual realm, known as the Divine Seed, the Precious Pearl, lies within the physical heart.

Lacking inner awareness and experiencing a state of disconnection with the true self, people experience separation, insufficiency, and feelings of being entrapped. Believing they don’t have what they need, they try to acquire it from the external world by any means possible and become prone to addictions and mental disorders. Symptoms are signs of dissonance between the outer and the inner world.

To combat this estrangement and facilitate the journey of self-knowledge, a sophisticated set of spiritual, educational principles and practices has emerged over the last 1400 years. Sufi psychology teaches each individual the science of exploring his own being and unfolding the inherent, vast, and infinite knowledge within. This, plus the individual supervision of the Sufi Pir (Spiritual Master) has proved highly effective in stimulating positive changes in human behavior. Not everyone can attain unification and at-oneness, but any progress is beneficial.

These teachings historically have been presented in the elegant love songs of numerous poets such as Nizami (1976), Sadi (1979), Rumi (1982), Attar (1984), and Hafiz (1998).

Annemarie Schimmel’s (1985) work provides the most accurate introduction in English to these historic love poets.

In the twentieth century, key Sufi concepts began to be translated into the language of modern science, and the teachings, formerly available only to a handful of carefully selected students, were opened to all sincere seekers by Molana Shah Maghsoud Sadegh Angha. He (1975) stated the human body is equipped with 13 electromagnetic energy centers. Cognition and development of these centers create the required harmony and facilitate discovery of the spiritual dimension of the human being. The most important center resides in the heart. Professor Angha called it the “I,” or the “source of life.” Today Sufi concepts are being explained in terms of physics (Angha 1996).

In *Sufism: A Bridge Between Religions*, Pir Salaheddin Ali Nader Angha (2002a) uses an analogy to explain the developmental process. He states that people love candles and candlelight but have forgotten the true, symbolic meaning. A candle is a model of what a human being should be, for the candle has the same purpose as the true purpose of the human being – to give light to the world.

Sufi psychology presents the methods and techniques necessary to cleanse, purify, unify, and form us like the candle, so that we, too can be illuminated. Wax directly from a beehive is lumpy, uneven, and contains contaminants. For a good candle, the wax must become uniform, smooth, and perfectly clean. So also do the practices of Sufism purify our body. Our physical body is like the wax, but instead of being smooth, concentrated, and purified, we are full of impurities, and our energy is dissipated in many directions, wasted on our desires, reactions, ideas, illusions, and conflicts. The chattering brain reigns.

The central portion of the candle, the wick, is the heart of the candle and is made of cotton fibers, which must also be cleaned and purified, combed and carded, and then twisted together tightly to form a unified whole. The wick represents the innermost yearnings of one’s being, our connection to the spiritual realm. The wick and

the wax are completely different, yet each is necessary for a functional candle, which can give light. It takes the wax and the wick to make a candle that can be lit and will then give light and heat.

The teachings of the prophets, Moses, Buddha, Jesus, Mohammad, etc. (pbut), are delineated in three stages. The first is called *SHARIAT* and includes the obligations and purification necessary for the physical body and nature. This is like the wax of the candle and is concerned with all communication and behaviors toward the world outside ourselves. This is the surface level and involves the basic practices necessary for purification of the physical body. Unfortunately, many people stop here.

The second is *TARIGHAT* and is the inner part of the human, which must be purified, unified, and concentrated so that all our thoughts, emotions, and tendencies should come together as tightly as the fibers are twisted to make a wick. This is the path of the seeker in Sufism.

The third part is *HAGHIGHAT*, which is unifying and receiving the truth of the light. It requires complete and total concentration and unification, focused in one direction for one purpose, as finely as a laser beam.

*SHARIAT* is like the *WAX*  
*TARIGHAT* is like the *WICK*  
*HAGHIGHAT* is receiving the *LIGHT*

The purified, spiritual person receives the flame of love and gives light. The person who attains this level is the Aref. The final goal is receiving and keeping the light. Once that occurs, then all is seen with the light of knowledge. This is also called the second birth. Candles cannot light themselves. When one is purified and ready, then Existence will give the light. The quality of light comes to the candle, and the candle keeps it. Human beings cannot give the light to each other. The flame of love providing light is a gift from God.

In Sufism and Knowledge, Pir Salaheddin Ali Nader Angha (1996) makes it clear that the phenomena of the light are reflected in physics as well as metaphysics. In it he uses the example of a proton and electron to describe how the

“...‘attractive’ force between the electron and proton results in their ‘unity,’ that is the birth of the ‘hydrogen’ atom. The off production of the ‘attraction’ is ‘light.’” In other terms, in Sufism the power of attraction creates an internal revolution in the seeker, until his entire being is submitted to God, just as the electron submits to the proton. Ultimately the seeker “...is annihilated in the Absolute, and none remains but God.”

Symbolically, the goal of discovery of the “I” has been poetically presented in various forms – the moth perishing in the flame, union with the Divine Beloved, the drop of water becoming one with the sea of Existence. The goal may be seen as a “death” which is entirely different from physically dying. The moth becomes one with the flame. The lover is annihilated in union with the Beloved. The drop loses its boundaries in the ocean’s depths.

The first step in readiness is to find and follow the teacher, who is called “The Light of the Path.” The teacher has received the light, knows the perils and pitfalls, and can help others find the way. Rumi (1926–1982) stated: “He who has himself for a guide takes 200 years for a two day journey.” The teacher is introduced from within, through the heart of the seeker, and guides the process necessary for the candle to receive the light.

Application of the following principles of Sufism (Angha, quoted in Wilcox 1995) is essential to the goal.

*ZEKR* (to remember) remembering God at all times

*FEKR* (to think, meditate) being in the state of awareness and wondering

*SAHAR* (to awaken) awakening of soul and body  
*JUI'* (to hunger) having exterior hunger (mind) and interior hunger (heart) to persist in the search to obtain the truth

*SUAMT* (to observe silence) ceasing to think and talk about worthless things

*SAUM* (to fast) fasting of body from food, mind from attachments, and soul from desires

*KHALVAT* (to observe solitude) praying in solitude, externally and internally

*KHEDMAT* (to serve) ultimately dissolving in the Truth of Existence

Tamarkoz<sup>®</sup>, meaning concentration of forces, is an important component of purification. These meditative practices help to reduce distractions and disconnections encouraged by the continual attempts of the material world to stimulate more wishes and wants. They also balance and focus personal energy, enabling one to attain a state of concentration necessary for the healing of the heart and soul. The zekr, or rhythmic chanting in remembrance of God, characterizes Sufi practice and is essential in the process.

The state of disconnection from one's core self and from the Divine is painfully lonely and unsettling. Healing occurs naturally when we are reconnected to our eternal, constant "I". Sufi psychotherapy offers an empowering perspective, reminding people of their infinite potentiality, true identity, and inner resources and strengths. It focuses on the spiritual realm, on rekindling the spiritual flame within each human heart, enabling all the positive attributes that lie within to emerge and expand. The goal of Sufi psychotherapy is healing the soul and union with the Beloved, union with the divine creative energy of the universe that is called God. The outcome is one of deep, permanent transformation.

Know that both your pain and your remedy reside within you (Ali 2000).

Basically the goal of both Sufism and Sufi psychology is self-knowledge, and through self-knowledge, knowledge of the Creator. Sufi psychology does not focus on words or thoughts, which veil the truth. It concentrates on the development of inner, heart cognition guided by the spiritual master, the Pir. The focus is on creative development, leading to recognition of one's true identity and purpose in life. It is called the Way of Love.

To introduce the American public to Sufi psychology, students of M.T.O. Shahmaghsoudi, School of Islamic Sufism<sup>®</sup> founded the Sufi Psychology Association in 1997. They hold four retreats and at least three conferences each year. Their website is [sufipsychology.org](http://sufipsychology.org) and their semiannual journal is titled *Sufism: Science of the Soul*.

God is the light  
Of the heavens and of the earth.  
The parable of His light  
Is as if there were a niche,  
And within it a lamp,  
The lamp enclosed in glass,  
The glass as it were, a brilliant star,  
Lit from a blessed tree,  
An olive, neither of the East nor of the West,  
Whose oil is well nigh luminous,  
Though fire scarce touched it.  
Light upon light!  
God doth guide whom he will to His light.  
God doth set forth parables for men, and  
God doth know all things.  
(Holy Qur'an, 24:35)

## Sufis and Sufism

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

We are the flute, our music is Yours;  
 We are the mountain echoing only You;  
 Pieces of chess, You marshall us in line  
 And move us to defeat or victory. . .  
 (Rumi, cited in Mabey 2002, p. 35).

Sufism is the mystical expression of Islamic faith. Numerous orders or brotherhoods (*tariqa*) have been formed over the centuries, many following well-known spiritual leaders (*shaykhs*). Best known in the West is the Whirling Dervishes or Mevlevi, a path of which Rumi was the founder. Jalal al-din Rumi (1207–1273 CE) was born in Persia and settled in Konya in present-day Turkey. His poetry speaks eloquently of love and surrender to the Divine One and especially of the longing for mystical union (Rumi 1975). The aim of the Sufi is to perfectly reflect the image of God in one's heart, thus to achieve union with the Divine. For 2 years, Rumi's closest soul mate was Shams-i Tabrizi, and after the unexpected departure of this companion, Rumi's grief was expressed passionately as "the dance of the spheres" in which whirling motion served to heighten altered states of spiritual consciousness (Trimingham 1998). In his longing for Shams, his spiritual companion, Rumi wrote some of his most potent poetry. For example, the longing of the soul for God:

O, make me thirsty, do not give me water! Make me your lover! Banish my sleep! (Mabey 2002, p. 21).

Likewise, the willingness to surrender to the Divine One:

My heart has become a pen in the Beloved fingers. . . The pen says, 'Lo, I obey, for You know best what to do.'

Of Rumi, it is written:

Thus the primary goal of the Sufi is to transcend or "naught" the self or ego, which acts as a barrier or "veil" between the human heart and God, distorting our perception of reality and inhibiting our capacity to mature to our full "selfhood" in which we perfectly reflect the attributes of God. The focus is therefore on turning the soul to God; on becoming God-centered rather than self-centered; on the spiritual rather than the material, transitory world; and on inner, spiritual change rather than on the external reality of worldly status and wealth (Mabey 2002, p. ix).

## Sufi Asceticism

Asceticism and a life of renouncement were highly valued spiritual approaches among the Sufis in the medieval period. Many of the early Sufi ascetics were quite extreme in their behavior. Some Sufi ascetics became hermits and wandered around naked or formed communities that used mind-altering substances such as alcohol, cannabis, or hashish. They also followed Islamic law assiduously, fulfilling spiritual duties including prayer, ritual, fasting, and cleanliness of body and spirit.

## Sufi Mysticism

Ibn 'Arabi (1165–1240 CE) was one of the most articulate of the theologians of Sufism. As he pointed out, all Sufis commit themselves to become lovers of God. In Islamic tradition, the 99 beautiful Names of God all refer to the One. So they may describe God, in terms of many attributes, as follows: the Merciful, the Just, the Wrathful, the Powerful, the Active, the Creator, the Author, the Form-Giver, the Bestower, the Patient, the Separator, the Sustainer, the Wise, the Stability, the Keeper, the Gracious, the Forgiver, the Experiencer, the Self-Sufficient, the Encompassing, the Hearing, the Seeing, the Subtle, the Beloved, and so forth. All Names refer to the One who is God.

And that God is infinite Love, infinite Compassion, a feeling-full Person who desires to be known. Following the tradition of the Prophet Muhammad (the *Hadith*), Ibn 'Arabi wrote that God's Mercy is greater than God's Wrath. "His Mercy encompasses everything existentially and in principle. . . . The Mercy of God flows in [all] created beings and courses through the selves and essences" (Ibn 'Arabi 1980, p. 224). In fact, says Ibn 'Arabi, Mercy is inherent in all creation. Not only things and people but also experiences are created by Mercy. Even the experiences we would rather avoid: "Know that Mercy is inherent in all creativity, so that, [even] by the Mercy bestowed on pain, pain was created [brought into existence]" (Ibn 'Arabi 1980, p. 224).

In Ibn 'Arabi's psychology, he divides humans into three classes: (1) the disciples of the *science of the heart*. . . the mystics, and more particularly the perfect among the Sufis; (2) the disciples of the rational intellect. . . the scholastic theologians; and (3) simple believers. The Sufis are disciples of heart; the theologians are disciples of intellect. Never the twain shall meet. For simple believers, he holds out more hope: "Under normal circumstances a simple believer can develop into a mystic through spiritual training; but between mystics and rational theologians there is an unbridgeable gulf" (Corbin 1969, p. 230). What Ibn 'Arabi is saying is that essentially we are all blessed. Because of the blessing of our imaginative function, we are at least potentially capable of receiving the theophanies of God. These glimpses of God manifesting to humanity occur definitely but rarely for ordinary folk. They occur hardly ever or are ignored by intellectualizers who only believe what the rational intellect dictates. But for the prophets, the Sufis, the Shi'ite saints, and the mystics, the door is more widely open to receive the frequent glimpses and the revelations of the Divine. Furthermore, one can cooperate with the Divine Intent by making oneself more capable of receiving these Manifestations. This is done through spiritual practices and especially through the loving prayer of the heart (*himma*).

Today, in working therapeutically with spiritually oriented clients, we can see that Ibn 'Arabi's insights into the difference between heart and intellect can profoundly inform our

understanding of passion versus thought in providing access to spiritual growth and development. Creativity itself is "attributed to the heart of the Sufi. . . here *himma* is defined as the 'cause' which leads God to create certain things, though *himma*, strictly speaking, creates nothing" (Corbin 1969, p. 227). This is the power of prayer. As Ibn 'Arabi says, *himma* is "a hidden potency which is the cause of all movement and all change in the world" (cited in Corbin 1969, p. 228). When we yearn, as the Sufi does, for God and for His Mercy, and when we surrender to God's Will, then the prayers are heard and the Divine response is according to our best interests.

### Sullivan, Harry Stack

Melissa K. Smothers  
Department of Behavioral Sciences, School of Education, Department of Educational Psychology, Mount Mary University, University of Wisconsin-Milwaukee, Milwaukee, WI, USA

Harry Stack Sullivan (1892–1949) was an American psychiatrist who developed a theory of psychoanalysis which focused on the importance

of interpersonal relationships. He grew up in New York State, the son of an Irish-American farmer. His childhood was an impoverished one, in which the Sullivan family often had financial difficulties. Sullivan also may have been isolated at times from other boys during his early years and experienced some degree of loneliness during his childhood. He was brought up in the Catholic faith but left the church in his adulthood. Sullivan went on to study medicine at the Chicago College of Medicine and Surgery and received an MD degree in 1917. It was during medical school that Sullivan first studied psychoanalysis as well as entered into his own analyses. In the 1920s, Sullivan worked with schizophrenic patients at the Sheppard and Enoch Pratt Hospital in Maryland, which inspired him to reevaluate the current approach in working with this population. He used specially trained ward attendants to work with patients in order to provide them with peer relationships that Sullivan believed the patients had missed during the latency period of development. It was during this time that Sullivan worked closely with William Alanson White, who was interested in the influences of social sciences on psychiatry. White, along with Adolph Meyer, was looking to explain mental illness in more than just physical terms.

Sullivan viewed his patients as being acutely aware of other people, and in order to understand a patient's psychopathology, it was important to view the interpersonal field of the patient as well. He branched out from the typical Freudian approach of the time and began to conceptualize patient's distress as more interactional than intrapsychic. Sullivan asserted that human personality and behaviors are created in interactions between individuals, as opposed to something that resides within the individual. This approach of viewing the patient within the context of others was profound at the time, and Sullivan believed that one must focus on the past and present relationships of the patient in order to fully understand the individual.

In 1929, Sullivan left Maryland and moved to New York City, where he began work in private practice of psychoanalysis and psychiatry. He did much to advance the study of psychiatry in the 1930s. Following the death of White in 1933,

Sullivan and some of his colleagues established the William Alanson White Psychiatric Foundation. The foundation was originally developed to train psychiatrists in both traditional medical education as well as the influences of sociocultural factors. He also founded the journal *Psychiatry* in 1938, which he edited until his death. In 1941, Sullivan left clinical practice to work as a consultant to the US Selective Service Commission, which was attempting to improve the psychiatric evaluations of draftees. This experience assisted in the development of a series of lectures, which was published posthumously as *The Psychiatric Interview*. After World War II, Sullivan participated in international mental health seminars and organizations and, in 1948, was active in developing the World Federation for Mental Health. He died unexpectedly in Paris, France, in 1949 of a cerebral hemorrhage. Sullivan's work in examining interpersonal relationships became the foundation of interpersonal psychoanalysis, a school of psychoanalytic theory that focuses on the detailed exploration of the patients' patterns of interacting and relating with others. Sullivan, along with Clara Thompson, Karen Horney, Erich Fromm, Erik H. Erikson, and Frieda Fromm-Reichmann, laid the groundwork for understanding the individual patient based on the network of the patients' relationships. Sullivan was also the first to introduce the concept of the psychiatrist as a participant observer in therapy. Sullivan acknowledged that the psychiatrist's understanding of the current therapeutic interaction stems from his own past experiences. He taught that the psychiatrist must be aware of countertransference feelings within himself. Sullivan credited three well-known therapists with significant influence in his psychiatric approach: Sigmund Freud, Adolf Meyer, and William A. White. While Sullivan never met Freud, he was an avid follower of his writing and credited him with his fundamental orientation. Meyer helped Sullivan to view mental illness as a dynamic pattern of behavior, and White assisted him with the practical aspects of therapy. Although Sullivan published little in his lifetime, he influenced generations of mental health professionals and therapists; many of his ideas and writings were collected and published posthumously.

## Sunyata

Paul C. Cooper  
National Psychological Association for  
Psychoanalysis, Two Rivers Zen Community,  
New York, NY, USA

Sunyata is a Sanskrit term which has been translated into English as “emptiness or voidness.” Along with *pratityasamutpada* (dependent arising, dependent origination), sunyata constitutes the foundational cornerstone of Buddhist phenomenology. By emptiness or voidness, Buddhists mean that all phenomena are empty of, lack, or are void of any “own,” inherent, permanent, or separate existence. All phenomena arise dependently contingent on causes and conditions. Sunyata has been confused with nihilism. This incorrect view has been criticized by both Asian and American Buddhist scholars (Abe 1985; Hopkins 1983). On the contrary, Buddhist scholars describe both nihilism and materialism, being and nonbeing, as dualistic, and as a misguided delusion. For example, D. T. Suzuki notes that “When the mind is trained enough it sees that neither negation (niratta) nor affirmation (atta)

applies to reality, but that the truth lies in knowing things as they are, or rather as they become” (1949, p. 143). Recently, sunyata has been translated as “wondrous being” and “pregnant gourd” to convey both the nature and creative potential in its experiential realization.

American psychologists have also addressed this point of misunderstanding and have raised important implications for psychotherapy. For instance, Jack Engler gives an example of the potential misuse of the notion of sunyata among American students of Buddhism. He writes that “Students may mistake subjective feelings of emptiness for ‘sunyata’ or voidness; and the experience of not feeling inwardly cohesive or integrated for ‘anatta’ or selflessness” (Engler 1984, p. 39). The complimentary teaching of nonattachment is then often misunderstood, according to Engler, “. . . as rationalizing their inability to form stable, lasting and satisfying relationships” (Engler 1984, p. 37).

Mark Epstein (1989) draws attention to the distinctions between the experience of emptiness associated with depression and that requires treatment and emptiness as a core Buddhist experience and religious principle.

The unreality of a nihilistic misunderstanding of sunyata has clinical relevance as exemplified in the following: “For Anna, this unreality of the no-thing that has become reified into an ‘I don’t exist self.’ As she and I look for this ‘I don’t exist self’ what will we find? The no-thing has the same solidity as the some-thing. Ultimately, the no-thing is as insubstantial as the no-thing.” This formulation has demonstrated clinical usefulness (Cooper 2010).

## Superego

Benjamin Beit-Hallahmi  
Department of Psychology, University of Haifa,  
Haifa, Israel

The basic theory of the development of the superego, according to psychoanalytic theory, can be summarized briefly: the child is punished by its parents, either physically or by the withdrawal of love, for indulging in certain behavior, and later experiences anxiety when it does so because of anticipated punishment. The child identifies with the parents and wishes to be like them and conform to their demands. Parental requirements are internalized and the child now feels guilty even if the parents are absent. The psychological structure which represents the parental demands is called the superego. Superego has two parts: the unconscious conscience and the conscious ego ideal.

The conscience, the bigger part, is harsh and irrational, because aggression towards the parents is redirected to the self; this is particularly likely to happen when the parents are kind but frustrating in subtle ways. When physical punishment is used, children feel more able to express their frustration in outward aggression.

Psychoanalysts have postulated that the conscience part of the superego is projected on to the image of a God. This superego projection helps to maintain the adult's typical balance between desire, morality, and action.

It may be that the internalization and formation of conscience occur with the image of God serving as a “portable punisher.” B. F. Skinner observed that an “all-seeing God” is uniquely effective, because escape from the punisher is impossible. In the search for self-control, external supports are often utilized. This psychological reality is reflected in the familiar philosophical debates about whether morality is at all possible without belief in God, and in many cultures, religion is identified with law and morality.

The superego is likely to come into conflict with instinctive desires, particularly sexual and aggressive desires. This conflict is resolved or relieved by projection of the superego which now appears as God. For example, the superego can be projected on to a doctor, teacher, leader, or priest; the repressive demands of the superego are then thought to be prohibitions imposed by the person in question, who is felt to be coercing and looking down on the subject. In J. C. Flugel's formulation, a more radical type of projection is postulated, in which the superego is projected on to the universe as a God, and the instinctive desires similarly as the Devil. Alternatively, the instinctive desires can be projected on to groups of people such as Jews or Africans who are then thought to be highly sexed and aggressive. The gains for the individual are that the conflict is reduced through being no longer an inner one, while he feels that he can deal with the situation by overt action, instead of by changing himself. The presumed role of religion in impulse control is highly relevant to test this hypothesis. Findings on the effects of religion in controlling aggression, sex, and drug use and in promoting pro-social behavior are relevant to this hypothesis.

Related to the notion of superego is the function of religion in relieving guilt feelings. Several psychoanalytic writers have discussed the function of religion in relieving guilt feelings, interpreted as the direction of aggression towards the self, and there is evidence that it is connected with internal conflicts between the self and the ego ideal or the conscience.

## Supervision in Pastoral Counseling

Loren Townsend  
Louisville Presbyterian Theological Seminary,  
Louisville, KY, USA

Contemporary professional pastoral counseling and psychotherapy is deeply anchored in supervised clinical practice. Pioneers of the early twentieth century pastoral counseling movement saw great potential in psychoanalysis and psychology for a clinical ministry to troubled souls. These leaders used psychological and psychoanalytic supervision methods to expand their work, integrate psychology with theology in ministry, and develop theory and skills to train new generations of ministers proficient in psychologically informed pastoral care and counseling. This supervisory tradition shaped clinical pastoral education and professional pastoral counseling.

Prior to the nineteenth century, western Christian pastoral counseling focused on direct moral instruction informed by church tradition and the moral theology of the age (Clebsch and Jaekle 1967). New ministers learned how to provide moral instruction as part of their general preparation for ministry. Historian Brooks Holifield (1983) notes that the North American religious context was particularly sensitive to emerging mental philosophies and psychology. As university-educated pastors integrated these ideas into ministry practice, pastoral counseling focused more on parishioners'

internal psychological life and less on moral instruction. Early innovators like Jonathan Edwards (1703–1758) and Ichabod Spencer (1798–1854) provided rudimentary counseling supervision through their pastoral manuals (Edwards 1743; Spencer 1851) and encouraged pastors to embrace psychologically informed, conversational methods of counseling. In counseling, pastors should be “easy of access... compassionate, tender and gentle” (Edwards 1743).

In the early twentieth century, Sigmund Freud provided a teachable method of psychotherapy. Becoming a psychoanalyst required collaborating with the community of psychoanalysts and completing a definable training process. Oskar Pfister (1853–1956), a Swiss Lutheran pastor who had studied psychology at the University of Zurich and Basil, was one of the first pastors to make full use of supervision and psychotherapy training. He completed training as a lay (nonmedical) psychoanalyst through the Zurich psychoanalytic circle (which included Carl Jung and Eugen Bleuler). A psychoanalytic pioneer in his own right, Pfister is best remembered for his deep friendship and ongoing theological correspondence with Sigmund Freud (1964).

American pastors saw great promise for congregational care through psychoanalysis and the psychology of William James. One early expression was the Emmanuel Movement (1905–1929). Rev. Elwood Worcester, rector of the Emmanuel Church (Episcopal), believed that all pastors, intentionally or unintentionally, provided therapy. He led the church to develop a model of care in which physicians trained in psychotherapy diagnosed parishioners' problems and then oversaw the work of clergy who treated “nervous diseases resulting from defects of character” (Holifield 1983, p. 206). Through what appeared to be an early form of collaborative supervision, church-centered therapists were trained and monitored by physicians in the limited use of psychotherapeutic methods. This approach spread to well-to-do congregations in the United States, Europe, Asia, and Africa. By 1929, it had lost momentum because of conflicts about the authority and role of clergy therapists.

Contemporary pastoral counseling supervision is rooted in the clinical pastoral education movement of the early and mid-twentieth century. In the 1920s, Congregational pastor Anton Boisen gathered a small group of ministers in Boston to learn clinical treatment methods in local hospitals and social agencies. His own struggle with mental illness led him to find better ways to minister to persons with psychological problems. In 1925, Boisen and neurologist Richard Cabot collaborated to train small groups of theological students using medical case study methods. Though Cabot and Boisen parted ways in the mid-1930s over disagreements about the nature of mental illness, their collaboration deeply influenced how pastoral counseling supervision practices developed in the United States. Cabot emphasized training that focused on clergy counselors' persistence, effort, and competence. In contrast, Boisen's psychoanalytic approach introduced "pastoral counselors to deeper motivations of the self experienced in disorder, conflict, and guilt. Insight into one's own pathological motivation modeled on psychoanalysis became the focus of both clinical training and counseling practice" (Townsend 2009, p. 18). While both positions were important supervision methods as they developed in the twentieth century, Boisen's belief that practical skills (*doing*) must be grounded in personal insight (*being*) became a near-universal position for most pastoral counseling supervision. The power of this position reflected the cultural strength of psychoanalysis, Boisen's own success as a trainer and organizer, and the fact that influential theologians (e.g., Paul Tillich and Reinhold Niebuhr) were constructing a theological framework to integrate psychoanalysis into pastoral practice. This emphasis on insight and being reflects "what is essentially a theological judgment – that ministry necessarily involves the whole person of the minister, not just what he or she knows or does" (Patton 2005, p. 1240). It is instructive that pastoral counseling's primary journal of supervision is published as *Reflective Practice: Formation and Supervision in Ministry*.

Supervision is central to personal and professional formation as a pastoral counselor.

Formation itself is understood as a lifelong process that stimulates and defines growth through each stage of a pastoral counselor's career (Bidwell and Marshall 2006). A supervisory relationship facilitates several central formative processes:

- Counselor insight and self-understanding
- Skill development
- Contextual awareness
- Theological/spiritual reflection
- Entrance into professional practice or new stage of an established practice

A developmental model of supervision helps define tasks, processes, and goals in several stages of formation (Stoltenberg and McNeill 2010). Supervision is a contractual relationship. Contracts between supervisors and supervisees define stage-appropriate conditions for supervision (where supervision will take place, how a supervisee's work will be observed, etc.) and goals for skill development, personal insight, use of self in counseling, and progress toward professional certification. Supervision differs from consultation. Consultation typically involves a short-term contract in which an expert provides input about specific aspects of a single case or treatment method. Supervision contracts attend to a supervisee's overall professional development. They require practical, legal, and ethical oversight of a supervisee's work.

In the earliest stages of a pastoral counselor's formation, supervision is usually part of a broader program of training. This includes classes in theory and practice, structured access to clients for experience in counseling (practicum or internship), and an institutional context in a university, seminary, or freestanding training organization that assures safety for both the counselor and client. For beginning students, supervision will focus on foundational skills and self-awareness required to engage clients safely, provide pastoral presence, and offer basic therapeutic interventions. In this stage, the supervisor also helps the student understand the institutional, spiritual, theological, and multicultural context of pastoral counseling. With beginning students, supervisors work to develop an effective supervisory relationship, help supervisees manage anxiety about

their counseling sessions, carefully monitor a supervisee's interaction with clients, and assist students with client assessment and treatment plans. Supervisors are responsible for assuring that clients receive adequate care and that supervisee's behavior meets legal and ethical standards. Most supervisors will require review of a supervisee's actual counseling sessions using video recording, live observation, or co-therapy with the supervisor. This allows supervisor and supervisee to discuss what happened in counseling sessions, explore alternatives, and assure that clients are receiving appropriate help. Viewing and reviewing cases also provides supervisors the opportunity to help supervisees understand their own feelings and assumptions. Supervisors will introduce beginning pastoral counselors to theological reflection on their work and help them examine contextual variables, such as gender, race, class, and religious or spiritual differences. Traditionally, beginning pastoral counselors are required to be in personal psychotherapy while in supervision. This helps supervisees identify and manage personal issues, biases, stresses, and transferences that may affect how they use themselves in therapy and relate to supervisors.

Supervision of intermediate pastoral counselors – those who are no longer novices, but are not yet qualified to work without continuous supervision – concentrates on expanding basic counseling skills, relating specific counseling theories to client assessment and treatment, conducting sessions with increasing independence, and completing requirements for certification or licensure. This stage is a time of concentrated growth. It provides a rich opportunity for personal formation, especially when the supervisory relationship is effective and trustworthy. In the safety of this relationship, supervisees are free to experiment with new techniques and theories. Good supervision helps supervisees examine how they use their own personality in counseling practice, explore their motivation to become a therapist, and develop autonomy in theological reflection and spiritual integration of their work. Supervision goals for intermediate therapists include increasingly nuanced attention to contextual variables such as gender, race, class, sexual orientation, and religious diversity.

Advanced pastoral counselors who are qualified to practice independently often continue in supervision as part of lifelong formation. Most use supervision to help manage difficult transferences, deepen how they use their own personality in counseling, expand their use of theological reflection, gain assistance for difficult case loads, or learn new techniques or models for therapy.

Theological or spiritual reflection is at the heart of supervision in pastoral counseling. Supervisors teach and/or model reflective practices as they supervise students. Townsend (Townsend 2002, 2006) describes four primary methods of reflection used by pastoral counselors and suggests that a supervisor's preferred method of reflection is an important formation variable. A supervisor's preferred reflective method influences how a supervisee interprets the meaning and context of counseling and the theories of therapy they adopt and how one uses oneself in counseling practice and defines the place of spirituality and theology in treatment.

Historically, pastoral counselors became supervisors through a process of apprenticeship based on psychoanalytic training models. Supervision was simply an extension of a particular model of psychotherapy. However, as psychotherapy theory expanded in the mid-twentieth century, supervision became an area of scholarly interest (Ekstein and Wallerstein 1957; Klink 1966). By the time the American Association of Pastoral Counselors formed in the mid-1960s, supervision was a ministry specialty that required a theoretical framework to understand supervision processes and supervised practice as a supervisor. *The Journal of Supervision and Training in Ministry* was founded in 1977 as a vehicle to share supervision practices and theory among seminary field education directors, chaplains, and pastoral counselors. The journal was renamed *Reflective Practice: Formation and Supervision in Ministry* in 2007. In the 1980s and 1990s, the study of psychotherapy supervision developed as a subdiscipline of psychology, professional counseling, and marriage and family therapy (Falender and Shafranske 2004; Liddle et al. 1988; Stoltenberg and McNeill 2010; Todd and Storm 2002). This has benefitted pastoral

counselors by providing a broader empirical foundation to ground pastoral counseling supervision. Like other disciplines, becoming a certified pastoral counseling supervisor now requires both academic study of supervision and supervised practice of supervision.

## Surrealism, Religion, and Psychology

Charlotte Moore

West Chester University of Pennsylvania, West Chester, PA, USA

Surrealism is an artistic and literary movement that began in Europe in the early 1920s. It features fantastic, whimsical, and dreamlike images that express an alternate reality of sorts, which the members of this movement refer to as “surreality” (Breton 1972). Surrealists employ a variety of techniques derived from psychology and alchemy, as well as from previous artistic movements, to induce the inspiration necessary to experience and express this “surreality.” Surrealism is not merely an artistic movement, but is also a way of life with strong philosophical underpinnings. André Breton, author of the *Manifestoes of Surrealism*, cites Sigmund Freud, Karl Marx, G. W. F. Hegel, and prominent figures in the western esoteric tradition such as Franz Hartmann and Cornelius Agrippa among his influences (Breton 1972). Artists associated with this movement are Man Ray, René Magritte, Salvador Dalí, André Breton, Max Ernst, Giorgio de Chirico, Leonora Carrington, Remedios Varo, and Yves Tanguy, among others (Alexandrian 1985; Waldberg 1971).

The Surrealists’ project was to bridge the gap between ordinary wake-state consciousness and those more unconscious processes associated with dreams, imagination, illusion, and madness (Colville 1991). André Breton writes, in the first *Manifesto of Surrealism*, “I believe in the future resolution of these two states, dream and reality,

which are seemingly so contradictory, into a kind of absolute reality, a surreality, if one may so speak” (Breton 1972). Breton further states that one must:

not lose sight of the fact that the idea of Surrealism aims quite simply at the total recovery of our psychic force by a means which is nothing other than the dizzying descent into ourselves, the systematic illumination of hidden places and the progressive darkening of other places, the perpetual excursion into the midst of forbidden territory (Breton 1972).

This inner journey was reported to be conducive to both artistic inspiration and a radical transformation of one’s consciousness. The subsequent artistic expression of the realizations inspired by these inner journeys was intended to awaken and liberate both the individual Surrealist and humanity at large, giving rise to a kind of social and psycho-spiritual revolution.

The Surrealists derived many of their conceptions of the unconscious from the philosophy of Sigmund Freud. Breton writes in his first *Manifesto*, “it was . . . by pure chance that a part of our mental world which we pretended not to be concerned with any longer . . . has been brought back to light. For this we must give thanks to the discoveries of Sigmund Freud” (Breton 1972). In later Surrealism, however, some female Surrealists drew greater inspiration from the conceptions of the unconscious posited by Carl Gustav Jung (Chadwick 1985). While some paintings contain more archetypal and alchemical imagery, for example, others simply provide direct references to key figures in psychology such as Sigmund Freud, Carl Jung, and Alfred Adler (Kaplan 2000).

The way “surreality” is represented also varies from artist to artist. Some paintings are more mimetic in nature, whereas others portray hallucinatory landscapes that are unlike anything experienced in ordinary wake-state modes of consciousness. Some paintings include archetypal images, as mentioned above, while others contain specific magical images, such as magic squares and sigils (Choucha 1992). The techniques used to induce artistic inspiration also varied from artist to artist, despite their common goals.

One of the techniques employed by Surrealists was automatism, a technique inspired by

spiritualism in which the artist places him- or herself in a passive, receptive state, forgets about the usual parameters of one’s creative or artistic abilities, and writes or paints quickly without any preconceived subject in mind (Breton 1972). The goal of automatism was to allow the artist to derive one’s own mythology and unconscious imagery through the archetypes of the collective unconscious (Carrouges 1974).

A similar technique employed by Surrealists was to record one’s dreams and pay special attention to them. Breton writes, “I have always been amazed at the way an ordinary observer lends so much more credence and attaches so much more importance to waking events than to those occurring in dreams” (Breton 1972). The intention of a dreamwork was similar to that of automatism in that it provided a method of accessing unconscious imagery or formulating a kind of personal dream mythology that unites the personal and the collective to give rise to a more holistic perception of reality and to derive artistic inspiration from that unique perspective.

Although these techniques were primarily used as a source of artistic inspiration, biographical studies of some of the artists associated with Surrealism suggest a psychotherapeutic benefit to using them. Jungian perspectives on the relationship between psychoanalysis and alchemy, for example, proved beneficial when dealing with trauma associated with the events of World War II, in addition to providing tools for psychological integration and psycho-spiritual transformation (Aberth 2004; Kaplan 2000).

## Surrender

Fredrica R. Halligan

Mind Body Spirit Institute, Stamford, CT, USA

Surrendering (and/or taming) the ego is an important theme in the mystical traditions of all the major world religions. In the Sanskrit, *saranagathi* connotes personal surrender in terms of acceptance of the Divine Will and devotion to God. It is *not* meant as surrender to another human being or as relinquishment of one's own intellectual discrimination. Like asceticism, surrender fulfills the spiritual purpose of renouncing the cravings of the ego.

Psychologically, ego is important. According to Jung, ego is built up in the first half of life and performs very necessary functions as center of the conscious psyche. Spiritually, however, there comes a time when ego, with its many desires and propensity to control, must let go of the reins. As the slogan in the 12-step programs articulates it, the essence of the surrender process is to "let go and let God." Mystics in all of the world's religions have found that higher spiritual states cannot be reached until ego control is

surrendered; the illusion of separation is renounced; and one's actions are dedicated to God, leaving the results in God's hands. This attitude implies acceptance of all aspects of life as they emerge, while continuing to strive to live a virtuous life, according to one's conscience.

## Swamis

Nicholas Grant Boeving

Rice University, Houston, TX, USA

One of the more ubiquitous word acquisitions from Sanskrit, its meaning can roughly be translated as "he who knows and is master of himself" – or *herself* – as the case may be, for swami is an honorific designation for men as well as women. Often indicative of one who has chosen the path of renunciation, it is more often than not attributed to someone who has achieved mastery of a particular Yogic system or demonstrated profound devotion to a god or gods. While there are a multitude of lineages, with a dizzying array of beliefs, perspectives, and loyalties, swami is a pan-traditional designation that tends to mean, simply, "master."

Perhaps the most well-known representative of Indian religion in the West to bear this moniker is Swami Vivekananda. The chief disciple of the Bengali saint and mystic Ramakrishna, the man born Narendranath Dutt, was one of the early mediators between the religious traditions of the Occident and Orient, appearing before a spellbound audience at Chicago's World's Parliament of Religions in 1893. Vivekananda was instrumental in the founding of the Ramakrishna Order, one of the earliest Vedantic monastic sects to emerge in the West.

Continuing Vivekananda's legacy of spiritual translation to the West was Swami Nikhilananda. Born Dinesh Chandra Das Gupta was instrumental in the founding of the Ramakrishna-Vivekananda Center of New York. He, like Vivekananda, was integral to the process of bringing Eastern spirituality to the West, translating many Hindu holy texts into English, among their number the *Bhagavad-Gita* though perhaps his greatest contribution was the translation of *Ramakrishna Kathamrita* from Bengali into English published under the title *The Gospel of Sri Ramakrishna* in 1942.

The aforementioned religious figures were integral to process of translating Eastern spirituality to West. The Occidental appropriations that naturally unfolded often used psychological concepts and language in making sense of the unfamiliar semantic terrain. The onus of this reinterpretation lay on the first generation of Westerner's to encounter these figures who were part of a larger cultural process of psychologizing religion that continues to this day.

## Symbol

Sharn Waldron  
Bungay, Suffolk, UK

According to Carl Jung, the development of consciousness has meant that within the psychic processes of civilized humanity there is a capacity for reflection upon the differentiation between psychic and external reality, a capacity which is unknown to the instinctive mind of the primitive. Because of this, the psychic system of civilized humanity engenders difficulties that traditional societies never experience. In traditional societies, there is no differentiation between psychic and physical reality. The primitive's relationship to the world is one of "participation mystique," that is, the primitive projects his unconscious onto the external environment. Jung writes:

The fact that all immediate experience is psychic and that immediate reality can only be psychic explains why it is that primitive man puts spirits and magical influences on the same plane as physical events. . . In his world, spirit and matter still interpenetrate each other. . . He is like a child, only half born, still enclosed in his own psyche as in a dream (Jung 1934, para. 682, p. 195.).

For the civilized human being, the primitive's way of existence is no longer a valid option. Because of the development of consciousness, the unconscious is no longer projected onto the external environment.

Jung writes:

The psychic life of civilized man, however, is full of problems, we cannot even think of it except in terms of problems. Our psychic processes are made up to a large extent of reflections, doubts, experiments, all of which are completely foreign to the unconscious, instinctive mind of primitive man. It is the growth of consciousness which we must thank for the existence

of problems; they are the Danaan gift of civilization. It is just man's turning away from instinct – his opposing himself to instinct – that creates consciousness (Jung 1954, para. 388).

The primitive psychic life is concrete and symbolic at the same time. As a consequence, he can speak of having a totem, a bush brother, or see himself as being a relative of the crocodile who protects him and whom he protects.

By contrast, conscious reason always seeks to find answers, to resolve apparent opposites. It takes a stand, assuming that a logical, understandable, and containable answer exists. It can do this because reason is perceived as an unchanging essence. This perspective renders any symbolic view of itself redundant. Objectivity is seen as an inevitable and attainable concomitant of reason. Knowledge is defined by the interest we have in knowing it. For civilized society, knowledge is about controlling the environment, managing its vagaries for the sake of greater prosperity and security. However, reason is always relative, and the concept of an unchanging essence of reason is an illusion. Reason, like the totem system, is a means to an end, a symbolic expression, although different in substance to the symbols of the primitive, of a transitional step in the path of development (Jung 1954, para. 47).

For Jung, the psyche of both primitive cultures and children is closely connected to the unconscious. It was Jung's view that consciousness began in childhood and developed out of the unconscious. "One can actually see the conscious mind coming into existence through the gradual unification of fragments" (Jung 1946, para. 103). This process is comparable to the evolutionary process of humanity that Jung regarded as the evolutionary development of consciousness. He writes:

Consciousness is phylogenetically and ontogenetically a secondary phenomenon. . . . Just as the body has an anatomical pre-history of millions of years, so also does the psychic system. And just as the human body to-day represents in each of its parts the result of this evolution, and everywhere still shows traces of its earlier stages – so the same may be said of the psyche. Consciousness began its evolution from an animal like state which seems to us unconscious, and the same process of differentiation is repeated in every child (Jung 1977, p. 381).

The child lives in a world which is understood through the primal relationship with the mother. This relationship is one of "participation mystique." The world for the infant is the mother's body world. The infant has no initial perception of itself as a separate being. With physical touch and stimulation, the infant begins to encounter physical realities which stimulate its sense of being and otherness. Therefore, when a child expresses the desire to take, to grasp, and to eat, it is attempting to explore and understand the world, and it is in this process that differentiation begins.

Jung argues that if human beings lived by instinct alone, consciousness would be achieved by biological growth and ageing. This is not, however, the experience of all human cultures. It is evident in Jung's analogy of cultural development with early childhood development that Jung, being a creature of his time, perceives culture through the lens of social Darwinism and his language is reminiscent of early Australian explorers who spoke of the Australian Aboriginals as a "child race" (Waldron and Waldron 2004).

Nevertheless, Jung's contention that intention and determination cannot accomplish psychic development is valid. Psychic development needs symbol to express and grasp realities beyond the scope of consciousness if it is to cognitively apprehend and develop those realities.

The unconscious, out of which symbols emanate, is unknowable and cannot be brought to consciousness because its content would overwhelm the conscious mind. It needs the mediation of symbol.

A symbol expresses those aspects of the psyche that are differentiated and primal, conscious and unconscious, and good and evil, the psychic opposites. Whenever such a symbol spontaneously erupts from the unconscious, it dominates the whole psyche. The symbol is a conduit by which the energy generated from the tension of opposites is channelled so that the psyche can move forward (Jung 1948, para. 25).

Jung conjectures that the language of all human beings is full of symbols (Jung 1964, p. 3). For Jung, symbols are language or images that convey, by means of concrete reality, something hidden or unknown. They have a numinous quality only dimly perceived by the conscious mind. These symbols can never be fully

understood by the conscious mind. In symbols, the opposites are united in a form that is “never devised consciously, but [are] always produced out of the unconscious by way of revelation or intuition” (Jung 1964, p. 48).

The function of a symbol is both compensatory and integrative. It is compensatory in that it illuminates something that belongs to the domain of the unconscious. It compensates for that which is hidden from our conscious. It is integrative in that it is a union of opposites, holding in tension the different aspects of the psyche.

Jung posits individual and collective symbols. Individual symbols are peculiar to individuals. They arise out of the individual’s personal unconscious and, as a consequence, have little or no meaning to other individuals. Collective symbols are psychic images that arise out of the collective unconscious of a group, tribe, culture, or nation. As such, they possess a functional significance for the community.

For a cultural symbol to be dynamic, it must relate to an unconscious factor that the individuals within that culture hold in common. For the symbol to be relevant to a culture, it may appear to need to have a functional meaning, and this may be seen to contradict the argument that the symbol only needs to relate to unconscious factors. However, the function of meaning will have significance only because its perceived social function is based on a significance that is apprehended and given value by means of the collective unconscious. The more immediate a symbol is to the unconscious reality common to the collective, the greater the effect on that society.

Jung also perceives a “religious function” operative in the psyche, an instinctual drive for a meaningful relationship of the personal self to the transitional source of power, the reality represented by the symbol. This instinctual drive manifests itself in the spontaneous production of religious symbols or “god images.” God images are characterized by their central function, to reconcile the opposites within the psyche. In order to creatively engage with a god image, it is not required to solve the clash of inner opposites but rather to work with the symbol, to explore its parameters. As we come face to face with the

dark side of God, masculine and feminine, we are more able to come to terms with our own dark side and contra-sexual aspects (Jung 1977, p. 367).

This transcendent function of the symbol enables a transition from one psychic state to another. Thereby, the drive for religion seems to urge the full development of the individual.

The religious symbols thus generated become symbols of totality. The god image is an archetype and as such is a source of inexhaustible meaning and intelligibility. It has a numinous quality and cannot be explained or verified through rationale. Because the god image is a symbol, it can never be reduced to its subjective origins. Like all symbols, the god image emerges spontaneously from the unconscious and is independent of an individual’s religious convictions.

The god image functions as a mediator between the conscious and the unconscious. It is a union within the psyche of male and female, good and evil, and all other opposites. It is comprised of unconscious and conscious components and is an essential element in the process of individuation. The goal of the process of individuation is the birth of the self. The self is symbolized by the mandala, a mystical circle expressing the totality of the individual. The god image is a reflection of this psychic truth.

It seems evident that there are times when the god image ceases to be an integrative image through which the individual or culture moves towards wholeness. The potential exists for the shadow to be suppressed so that a split occurs in the psyche.

When this happens it is possible for the shadow to erupt in symbolic form. The resultant god image is not integrative but rather expressive of the shadow and suppression of aspects of the psyche. Manifest abuse of power and suppression of minorities and the defenseless elements in society or adjacent societies will demonstrate the non-integrative nature of such a split in the god image.

Everybody dreams. We may not remember our dreams, but the psychologists tell us that everyone dreams. The sleep laboratories have described for us the phenomenon of REM sleep. There have been many theories throughout the ages about the purpose of dreams. Postmodern depth psychologists emphasize that dreams are an important way to carry on the dialogue with the unconscious.

Yet there is still the mystery of understanding what the unconscious side of the dialogue is saying. Those little books at the grocery checkout counter tell you this image means so-and-so and

“no question about it” – this is not helpful. Dreams use a symbolic language that has many meanings. So to explore what the symbols in dreams mean may give us a picture of ourselves of which we are unaware. Thus, dreams give us data. That may help us to decide on a different course of action, or we may still choose to continue the way we have been – the dreams do not dictate what action, if any, we take in response to their information. However, this data becomes the possibility of transformation of a previously held opinion or behavior.

In interpreting those symbols, we use C. G. Jung’s theory of dream interpretation, which is what most people use today whether they mention Jung or not (Jung 2012). We have found it helpful to use what we call “the 4 notes of dream interpretation.”

The *first note* is that dreams are usually *compensatory*. They give us a kind of “snapshot” of the psyche. The picture, however, is one that adds to our conscious attitudes, calling our attention to something of which we are not consciously aware. In other words, the picture may hold up for us our “blind spots” – what we are not seeing about ourselves.

Jung himself gives a clear example of this compensatory function in a dream he had about a patient of his (Jung 1961). He says that the analysis was not going well, and he felt that he was not getting at the correct interpretation of his patient’s dreams. He decided to speak to her about this, and the night before he planned to speak, he had this dream:

I was walking down a highway through a valley in late afternoon sunlight. To my right was a steep hill. At its top stood a castle, and on the highest tower there was a woman sitting on a kind of balustrade. In order to see her properly, I had to bend my head far back. I awoke with a crick in the back of my neck. Even in the dream I had recognized the woman as my patient.

Jung realized immediately that if in the dream he had to look up so high to see the patient, he had probably been looking down on her. The distortion was so severe that it was a “pain in the neck.” When he told the patient of his dream and his interpretation, he says the treatment once more moved forward.

In this example, Jung decided that the dream showed him that he had fallen into a one-sided stance which was blocking him from seeing his patient “properly,” even as the dream language suggested. In such dreams, one is likely to speak of the dream as “telling me what to do” but notice that the dream does not give Jung a direct “message” that prescribes his future behavior. It simply tells him, by the compensatory imagery, “how it is” – what his conscious attitude has been. He made the decision, based on that information, that he would modify that conscious attitude, but he might just as well have decided that he did not choose to modify it. He simply had more information than before the dream on which to base his choice.

If our conscious attitude has been rather extreme, the compensatory imagery may be extreme (and we may call it a nightmare). However, if our conscious attitude is only slightly out of line, the dream imagery will be much closer to the outer perception – complementary to consciousness, that is, only adding an additional small perspective.

The *second note* is the consideration of both “*objective and subjective Levels.*” When we dream of a person we know, the dream may well be holding up something for us to see about our relationship with that person, and we can look at that. Regarding the dream this way is to examine it on the “objective level.” Regarding the dream on the “subjective level” means treating the dream figure, even if we know the person, as an aspect of oneself. Unknown people or people with whom we do not have a personal relationship are always to be treated on the subjective level – as an aspect of ourselves.

Other images in the dream, however, are also to be approached on the subjective level to some extent. For example, if we dream about a house – a particular kind of house – it may well represent where, so to speak, “we have been living” or in the jargon of today “where we have been hanging out.” If we dream about some animal, we may need to ask ourselves if some instinct has been intruding in our response to life – we speak of “animal instincts.”

A *third note* is Jung’s suggestion that we may learn something about ourselves by looking at

a whole *series of dreams*. One single dream may not be obvious, but if we notice the same motif occurring in several dreams, then we may see something that we had missed by looking at only one dream. This same motif may not occur in the very next dream, but over a period of time, a pattern might present itself. This entails keeping a dream journal.

A *fourth note* is one of the most important – Jung calls it *amplification*. This entails looking at your *associations* with the particular dream image. You note down your personal associations with an image, which is personal amplification. These are, of course, basic, but you also need to look beyond them. Jung concluded that the symbolic language of dreams sometimes made use of associations from culture in general – even if the dreamer had never been aware of such association. Myths also provide valuable collective associations.

One of the examples of personal association that we gave in our book, *Symbols of Transformation in Dreams*, is particularly helpful in suggesting how one can use a dream in helping one to be a more whole and real person (Clift and Clift 1984).

A woman we know had a dream about Elliott Gould, and when she was asked, “Who is Elliott Gould?” she replied that she knew him only through parts he had played in films (cinematic myths). As she thought of her general ideas about him, she realized that her main association was that he usually played the part of someone who acted as if he were less capable and much dumber than he actually was. With that association, she could then ask herself: do I sometimes act as if I am less capable and much dumber than I actually am? Her rueful laughter was her answer, and then “Elliott Gould” became a handy way to catch herself in that rather destructive pretend game she had played for years, largely unaware that she was doing so. In this way, her own association with the dream figure gave her a continuing, living symbol to tease herself with; when she caught herself behaving that way, she could inwardly chide, “Oh, come on, Elliott.”

Near the end of our stay at the Jung Institute in Zurich (1966), Wallace had a dream that would

be disturbing as well as puzzling if not examined on the subjective level (Clift and Clift 1984). He had previously written his bishop inquiring about a parish appointment, thinking our grant was probably ending, though what he really wanted to do was be a teacher in a seminary. That seemed impossible without getting a Ph.D. This is the dream:

I dreamed that I had killed someone in Israel and that I was going back to Israel to settle it – it would be “paid for” there. The killing seemed impersonal, as I did not remember anything about the person killed. I was sorry that I had, that was all. It seemed that someone would have to die when I went back, though the killing of someone else did not seem to be the way. (The dream ended unresolved.)

The dream presents the matter clearly; “Someone in Israel” is obviously the parish priest in Wallace. To go back to another parish assignment is pictured as “paying for the crime” of having left the parish (or killing the parish priest). The dream points out that this action means the death of someone else. It now seems clear that going back would have meant the death of the student who wanted to be a teacher. Actually, subsequent events led eventually to his being offered a further grant to get a Ph.D. from the University of Chicago and that made possible the teaching career that followed.

If we dream of someone dying that we know or have known, we can ask ourselves what our associations are with that person or what they are like and then ask ourselves if that part of us, that particular kind of attitude or approach to life, is dying or has died in us. What we call “nightmares” may not be so scary when we deal with them symbolically on this subjective level.

## Symbolic Language

C. G. Jung and the theologian Paul Tillich both made a distinction between signs and symbols (Jung 2012; Tillich 1957). Signs point to something. Symbols not only point to something but they participate in the other reality toward which they point. One of the easiest examples of this is a nation’s flag. If you see an American flag on

a building, you may realize that’s the post office, or, in another country, the American consulate. The flag is functioning only as a sign, pointing to some reality. However, when angry crowds burn an American flag, it is also functioning as a symbol, and it participates in the reality toward which it points – toward policies which the crowds deplore.

Approaching any dream image, then, demands that one stay open to not only some obvious external meaning (a sign) but also some unknown, suggestive, internal elaboration of the meaning (the symbol). These inner meanings and elaborations will frequently have an emotional content, the object of which is to get the dreamer’s attention to some unconscious or ignored facet of the dreamer’s life.

We have discovered that interpretation of symbols is a universal process, applying not only to dream images but to religious and literary images. The power carried by the images in all these fields is at the heart of the meaning they carry for the dreamer, the believer, and the reader.

Jungian psychology has also given us a powerful understanding of human imagery in what Jung called the archetypes of the collective unconscious – the universal human experience. He named these archetypes the persona, the shadow, the animus and anima, and the Self, and he saw them as the common experience of us all.

The term “persona” comes from the masks that actors wore in ancient drama, and it refers to the roles everyone plays in everyday life – one’s system of adaptation to each encounter in outer life. It is usually an adaptation between one’s personal sense of identity and a sense of what others are expecting. The most frequent and obvious symbol of the persona is the clothes one is wearing – or not wearing. Inappropriate dress or nakedness indicates an inadequate adaptation, a sense of being too exposed or ill adapted.

The “shadow” refers to the unknown or un-lived part of ourselves. Honest attention to the task of knowing oneself is beneficial, and spiritual guides throughout history have emphasized the need to grow and enlarge our knowledge of ourselves. St. Teresa describes our lives as

moving from one “room” to the next as we develop maturity, leaving the old behind (Teresa 1921). She says the one room we never leave behind (in our interior castle), in life’s growth, is the room of self-knowledge. The shadow is represented in dreams by figures of the same gender as the dreamer.

Jung used the Latin words for soul or spirit to represent our contrasexual aspect – the “anima” for the feminine figure in a man’s unconscious and the “animus” for the male figure in a woman’s dreams. There are two ways of being human – male and female – and every individual has aspects or qualities of both. Figures in dreams of the other gender, particularly persons not in one’s daily life, represent one’s anima or animus.

Gender is one of the most complex areas of dream interpretation, especially because it has both positive and negative aspects. Interpretation in this area can take the dreamer into ever deeper areas of personal development and serves as a pathway to the last and perhaps most profound of the archetypes of the collective unconscious.

This last archetype, the “Self,” is perhaps Jung’s most important insight. He calls the Self the archetype of wholeness and also the “god image” in the psyche, symbolized in many ways, often as the mandala circle. He does NOT mean one’s own conscious self, for which he used the term “ego.” Encounters with the Self have all the qualities associated with the concept of God. The Self is the image Jung observed of the universal need for a sense of meaning in life and the human experience of a response to that need. Thus, with those for whom a traditional religious symbol system still functions, Jung’s concept of the Self accords with their religious experience in which the transcendent has become immanent.

All these archetypal images (and especially the last, Self) are part of what Jung called the process of individuation – the movement toward a conscious process of becoming human and whole. Though it is, of course, possible to get “lost” in this process and become focused purely on one’s own self, Jung taught, along with religious teachers throughout history, that this process of becoming more conscious is a gift not only for the person but also for the

world collectively. Increasing human consciousness can transform not only the individual, but, person by person, the one world in which we all live.

### Synchronicity

Frances Campbell  
New York, NY, USA

As a practicing psychoanalyst, Carl Jung became aware of a process of meaningful coincidence between physical events and the subjective states of his patients. He termed this phenomena *synchronicity*, and he came to believe that the acknowledgement and utilization of synchronous phenomena was a valuable tool in the process of understanding and interpreting the expressions and manifestations of the psyche.

The concept of synchronicity is part of a conceptual triad which Jung conceived of as

essential to the understanding of the experience of the psyche. The first element is causality, best understood through Freud's ideas of how libidinal energy is managed within the psyche. Repressed energy in one area is likely to express itself in another form in order to be released. In this way the psyche maintains a balance of libidinal energy which becomes converted in response to the principles of cause and effect. Jung broadened this concept into the idea of a more generalized psychic energy. He imagined that the expression of this force is particular to the unfolding of the individual psyche. From this emerged a *teleological* view, in which the psyche contains within itself the potential for self-actualization. This forms the second of Jung's developmental triad. This teleological potential for expression is contingent upon opportunities that encompass causality as well as the element of serendipity. Without supporting circumstances, the germ that is the potential of the self may never have the opportunity to develop. It is here that synchronicity plays a crucial role. The element of chance may enhance or eliminate opportunities for actualization of the self. Synchronicity, or meaningful chance, can be defined as a seemingly significant coincidence in time and space of two more events that are related, but not causally connected. An image, thought, fantasy, or symbol presents itself to consciousness, and this is reflected in a meaningful external event that appears to have no causal connection. Synchronicity, then, is the third principle by which the experience of the psyche may be understood or interpreted. Jung considered that a law of synchronicity might contrast with the physical law of causality. Causality propels the objective world, while synchronistic phenomena seem to be primarily connected to conditions of the psyche or processes in the unconscious. Synchronicity takes the coincidence of events in space and time as meaning something more than mere chance, namely, a particular interdependence between objective events with the subjective state of the observer.

Jung's exploration of this concept was based on his belief that an emphasis on the rational aspects of consciousness results in a one-sided view of the psyche. This inhibits understanding of the

unconscious and its expression through dreams, fantasy, and other nonrational experiences. Synchronicity, as a correspondence theory in which inner events occur simultaneously with exterior events, is a reflection of a deeper perspective found across cultures in which there is the philosophical perception that parts are not only aspects of the whole but reflections of it. That is, the microcosm mirrors the macrocosm. For example, Jung recognized this concept as an aspect of early Taoist Chinese thought. Synchronous events may be generated through the activating of archetypes. These are unconscious preexistent primordial images that yield believed to be a part of the deep structure of the psyche and shared collectively and therefore might be a creation of the collective unconscious and perhaps even the psychoid strata. The psychoid strata can be equated with a generative yet undifferentiated source that undergirds the collective unconscious. When archetypes are experienced by an individual, they are often expressed through dreams and fantasies or through a conscious process Jung applied in his practice called "active imagination." In this process, special attention is given to the appearance of archetypal material and the impact of its presentation on the psyche of the individual. An archetype can act as a mediator between the macrocosm that characterizes the collective unconscious and the microcosm which is the individual expression. The value of attention to synchronistic phenomena, then, lies in its ability to illuminate a dimension of the psyche that cannot be reached consciously. For Jung, the fullest potential of the human psyche lies in the integration of unconscious material, both personal and collective, into consciousness. This assimilation expands the individual psyche towards a fuller degree of awareness or a conscious experience of wholeness.

Because synchronicity may seem to involve the observed as well as the observer, there are two possible ways to view synchronous events. In the first, there is a relationship between events that can be observed objectively. In the second, synchronicity involves the participation of the observing psyche which in some way becomes reflected in the objective material. In this case,

synchronicity becomes a type of psychophysical parallelism.

## Expressions of Synchronicity

Two forms of synchronous expression most commonly experienced are (1) the perception that the internal reality of the psyche is being externally manifested in the world through an experience or event. This may take the form of (a) a dream, vision, or premonition of an experience that has not yet happened or (b) two or more external events that appear to be meaningfully, but not causally related.

Synchronous expression appears to serve a significant, if not urgent, purpose, which is to bring attention to a perception or perspective that is needed for the development of the psyche. Synchronous experience may be urgent in presentation, acting as a signpost to bring awareness to the psyche of a situation or state that is in need of attention. In contrast, it may be initially veiled, allowing an idea to be presented to the receiver in a form that will not overwhelm the conscious mind but allow it to assimilate indirectly. Regardless of presentation, it would seem synchronous phenomena serve to bring to conscious awareness concepts of value for self-development.

## Syncretism

Valerie DeMarinis

Uppsala University, Uppsala, Sweden

The term “syncretism” has had different denotations and connotations over time. In current usage in anthropology and religious studies, it generally refers to a mixing of elements from different religious systems or traditions. From the perspective of many religious leaders, such a mixing is often viewed as a negative process, as an abandoning of true religion. From the perspective of many anthropologists, psychologists, and professionals of other academic disciplines, religious syncretism may assist in a positive acculturation process, whereby elements of different systems emerge in a new format allowing an integration of ideas and behaviors. It is important to bear in mind that whatever example of syncretism is in focus, it always takes place in a psychocultural and sociopolitical context, and therefore, the psychological effects of such need to include those levels of analysis. Though a central historical concept, globalization as well as the challenges of voluntary and forced migration have given birth to a reexamination of religious syncretism. As Greenfield and Droogers (2001) point to, there is a reemergence of the concept as a tool for understanding such complex phenomena as ethnicity, postcolonialism, and transnationalism. Three examples of religious syncretism are presented here. They are drawn from different cultural contexts and illustrate the complexities for understanding syncretistic systems and behaviors and their varying psychological effects.

### Example 1: Syncretism as an Act of Survival

Drawing upon his fieldwork in Afro-Brazilian religions, the French ethnologist Roger Bastide (1978) has emphasized two aspects for historically understanding syncretism in this cultural

context. First, attention needs to be given to the systematic way in which elements from different religious sources come together. Second, the role of power mechanisms is emphasized, especially in the contact between two categories of individuals, slaves, and slaveholders. Similarity in worldview structures among African, Catholic, and also Amerindian systems has facilitated this syncretism. In this way African gods could be identified with Catholic saints and with Amerindian spirits. Catholic elements were selectively adopted and adapted through the application of African criteria, without the knowledge of the slaveholders. In practice, as strategic devices, identification with and differentiation from the slaveholders' religion were both used for literal and symbolic survival. Thus, the apparent adoption of a Catholic ritual attitude in Mass could serve as an alibi for the continuation of African ritual practices. Despite this clever illustration of a survival deception, the reality undergirding this example of syncretism is one of supreme oppression. An examination of the legacy of this syncretism in contemporary Afro-Brazilian expressions of religiosity reveals a variety of mixtures of these religious traditions both in terms of meaning structures and ritual practices.

### **Example 2: Syncretism as Competitive Sharing**

A second example of religious syncretism is found in the article by Robert Hayden (2002) linked to the concept of competitive sharing. This concept explains how sacred sites that have long been shared by members of differing religious communities, perhaps even exhibiting syncretic types of mixtures including the practices of both, may at some point be seized or destroyed by members of one of them in order to manifest dominance over the other. Hayden argues that competitive sharing is compatible with a passive meaning of "tolerance" as noninterference but incompatible with an active meaning of tolerance as an embrace of the other. This confusion lies at the heart of a critical weakness of most current

explanations of nationalist conflict in the Balkans and communal conflict in India. Syncretism, in this example, may be fostered by inequality and is actually endangered by equality between the groups. The term, syncretism, is problematical, however, carrying a negative charge for those concerned with analyzing or maintaining putatively "pure" or "authentic" rituals and a positive one for those who criticize concepts such as cultural purity or authenticity or favor the idea of "multiculturalism" (Shaw and Stewart 1994). For the former, syncretism is a matter of violating or contaminating categories. For the latter, since supposed boundaries are inherently flexible, syncretism is universal and therefore not an isolable phenomenon (Werbner 1994). As Hayden notes, the problematical nature of syncretism increases with the growth of the polarizations captured by the word "communalism" in Indian discourse and the comparable "fundamentalisms" elsewhere (Hayden 2002, p. 207).

Understanding and approaching syncretism in any given cultural context is dependent upon the framework used for interpretation. Consider the contrast between the following interpretations. Bayly's analysis (1989) has focused on a situation of "paradox" in South India noting a growing tendency for groups and large corporations to be hostile to one another yet at the same time there are persisting or reinvented overlapping religious beliefs and syncretic religious practices. That of van der Veer, on the other hand, has noted that "'syncretism' in India. . . is a trope in the discourse of 'multiculturalism'" and that scholarly discussion of "syncretic" phenomena such as Hindu worship of Sufi saints usually omits consideration of conflict or of the processes of expansion and contraction of religious communities (van der Veer 1994, pp. 200–201). One of the critical differences in these frameworks is that in Bayly's framework, syncretism represents tolerance, with a presumed stasis, while for van der Veer, time is brought into the analysis thus creating an approach to syncretism as a dynamic expression that assumes no inherent understanding of tolerance. As Hayden notes, when time is added into the analysis, "syncretism seems to be a measure at a given moment

of relations between members of groups that differentiate themselves, and to see it as tolerance instead of competition is misleading” (Hayden 2002, p. 207).

### **Example 3: Syncretism as a Postmodern Choice or Acculturation Survival Tactic**

The third example is that of a functional religious/existential syncretism that can be found in what ostensibly has been labeled one of the most secular cultural contexts, Sweden. In this context, organized religious services, based on the Protestant-Lutheran faith and until 2,000 expressed through the National Church of Sweden, are not well attended. However, participation in different church-based rituals and ceremonies such as baptism, funerals, and weddings is common. From a functional perspective, ethnic-Swedish participation in ritualized activities remains high though not within the context of a faith or belief tradition. Looking at the results from the multi-country World Values Survey, Sweden appears as an outlier in terms of being the most secular and nontraditional country (Inglehart 1996). At the same time, there is a growing body of information pointing to an increasing search for existential meaning in this cultural context. The conscious or unconscious expressions of this search not infrequently result in an interesting pattern of existential behaviors and ritual practices that combine elements from different meaning-making traditions and new or alternative religious movements, a mixed existential worldview (DeMarinis 2003). One illustration of this is an ethnic-Swedish person who may be a member of a Wiccan group and at the same time remain involved in some of the Church of Sweden rituals. Another illustration is of a person with an immigrant or refugee background, involved in both the traditional religious rituals and belief system of the home country and also participating in a religious or other meaning-making system of the new host country.

From the psychological vantage point of postmodernism as defined by Bauman, the individual must create or chose an identity. He also notes that the reverse side of identity choice is that of

identity confusion (Bauman 1998). In this kind of postmodern context, syncretic religious/existential patterns are created as part of the internal choice process and expressed in the external sphere where rituals and practices are enacted and experienced. The degree of social support or negative pressure experienced by the individual from the surrounding society in relation to having a mixed existential worldview can lead to a change in the worldview’s structure. In other words, the process is dynamic and open to change.

### **Psychological Implications of Religious Syncretism**

A classic psychological approach to syncretism as a mental function is reflected in the comparison of syncretism with the process of individual cognition (Burger 1966), in that both create an analogy between the old and the new and thereby facilitate an innovation acceptance. Syncretism modifies but perpetuates the essence of all impacting sectors, thereby reducing the dangers of cultural shock. Symbolic sectors such as religion can syncretize more easily than artifactual sectors. The psychological mechanics of syncretism need to be understood in relation to the psychocultural and sociopolitical dynamics taking place in the given cultural context. This may seem an obvious need when thinking about the three examples provided, as it is this deeper type of understanding that is essential for mapping the different types of psychological effects of syncretism. The analysis necessary for arriving at this type of understanding is not a standard part of the psychological process of investigation. A valuable resource here is a working approach to cultural analysis that has emerged from the field of cultural psychology (Marsella and Yamada 2000). Culture is based on shared learned meanings and behaviors that are transmitted from within a social activity context for the purpose of promoting individual/societal adjustment, growth, and development. Cultural representations are both internal (i.e., values, beliefs, patterns of consciousness) and external (i.e., artifacts, roles, institutions). Changing internal

and external circumstances brings about changes or modifications for shared meanings and behaviors.

Using this approach with respect to understanding a situation involving religious syncretism, the following steps can be taken. First, a cultural mapping needs to be done involving the internal as well as external representations of the syncretistic meanings and behaviors. Such a mapping will provide a means for locating the cultural groups, religious systems, and levels of interaction involved. Second, a historical layer can then be added to this mapping with special focus placed on understanding the power dynamics and sociopolitical circumstances initially leading to the syncretistic expression and what has happened to that expression over time. The third and most important step is assessing the psychological effects, for both individuals and groups, of engaging in the syncretistic behaviors. Such varied syncretistic behaviors may, as in the very varied examples provided, be associated with psychological consequences ranging from individual and group trauma to a stress-relieving and salutogenic outcome. Each case needs to be assessed on its own, in cultural context, and over time. Clearly, religious syncretism has never been and will never be a simple system with a single design. For this very reason, an understanding of the psychological effects of religious syncretism needs to approach with extreme care and with sufficient, multidisciplinary methods.

## Taboo

Morgan Stebbins

Faculty of the New York C.G. Jung Foundation,  
New York, NY, USA

Something that is taboo is so powerful that it must be approached only with the proper attitude and training or not at all. The concept of taboo derives from the Tongan *tapu* or the Fijian *tabu*. In both cultures it carries a double meaning: it refers to what is both sacred and forbidden. That is, it indicates that which is so powerful that it is dangerous unless treated the right way, or by the right person, under the right circumstances. In original usage, taboo could refer to certain foods, to bodies of the deceased, to the resting places of powerful spirits, to tribal rulers and to warriors who have slain others, and often to women's menstrual periods, as well as even mentioning some of the above in conversation (Frazer 1990). Thus, we see that it can apply to words, objects, actions, and concepts (including metaphysical actors such as divinities) and also that there is a temporal aspect; for instance in some warrior cultures we find a taboo on sex but only before battle. In many religious traditions, the complex mythopoeic indications combined in the term taboo have been differentiated into the categories of sacred, protected, holy, ritual, and sin.

Social usage indicates that a taboo action or conversation is likely to cause shame or

embarrassment within a given social group. This is likely only part of the story, since most taboo subjects that are not abhorrent carry an edge of allure or even excitement in the right circumstances, bringing the concept closer to the Tongan sense. Furthermore, there are relatively few things that appear to be repugnant in all societies, these being confined to corpses and incest (and even here, there is some disagreement). So most things that are taboo in one group or society are not taboo in another, showing that something about the dynamic of the taboo must be more important than the particular item, topic, or action (Durkheim 1912).

Evolutionary biologists suggest that taboos originated from a hardwired repulsion of disease vectors (in the case of the dead) or social bonding habits (in the case of patricide); however, this explanation does little to explain the multiplicity and richness of the concept as it is found in practice or in its religious formulation (Pinker 1997).

Sigmund Freud noticed a similarity between obsessive states and the descriptions of taboo. This connection shows that taboos can be understood as "a psychological condition that prevails in the unconscious" and states that the only two "universal" taboos are that of incest and patricide which formed the eventual basis of modern society. This conception is not far from the biological and again does not account for the liminal quality of the concept.

Freud continues with his classic statement about taboo, one which has helped shape a generation of understanding:

Taboos, we must suppose, are prohibitions of primeval antiquity which were at some time externally imposed upon a generation of primitive men; they must, that is to say, no doubt have been impressed on them violently by the previous generation. These prohibitions must have concerned activities towards which there was a strong inclination. They must then have persisted from generation to generation, perhaps merely as a result of tradition transmitted through parental and social authority (Freud 1998).

So, for Freud, the incest taboo keeps the subject from doing the abhorrent, and so a more refined outlet must be found through the process of sublimation.

Jung's view of taboo (and especially the incest taboo) is typically prospective, psychological, and serves to uncover progressively more subtle layers of process. On one hand, it does not settle the question, but on the other, it allows for the mystery, the social importance, the allure, the horror and the psychological complexity, and importance of taboo. Taboo indicates, after all, that which we are inexplicably drawn to and repulsed from at the same time and in certain meaningful ways.

Concepts and impulses that arise from the unknown, regardless of the term used for that other place, are dangerous. Religious symbolic systems, including the forms and laws of the church arise due to the desire of the human subject to avoid revelatory contact with these unconscious forces. Because of this, from ancient times to the present, societies construct ritual and taboo to protect them from the uncanny voices of dreams and the content of the unconscious in general (Jung 1960).

For Jung, the pressure to make some personal psychological change is an automatic response to something in the psyche being stuck, like water building up behind an obstruction in a stream. In cases of stuckness, or libidinal obstruction (including such symptomatic descriptions such as depression and the various neuroses), the conscious mind feels threatened by an invasion from the unconscious, since the unconscious itself is

pressing for a change in conscious attitude. Rather than holding this change at bay, if it is instead possible to be informed by the images that arise (i.e., the symbolic form of the symptoms), then the invasion could be completed on its own terms, and the conscious mind would break free of the inertia and move forward.

A similar situation is detailed in the poetry of Hölderlin – this theme can be seen as central to the theme of the German aesthetic philosophers in general from Kant to Goethe and Schiller and which is now seeing a resurgence in, of all places, the post-Lacanian work of Slavoj Žižek – particularly in his increasing estrangement from reality. “The god/Is near and hard to grasp/But where there is danger/A rescuing element grows as well” (Hölderlin 2004). This indicates that regression is an involuntary introversion, of which depression is an unconscious compensation. The psychological task, in this case, is to make the introversion voluntary, both activating the imaginal realm of the mind and lifting the depression (since it has gotten what it was after). Jung uses psychological material as well as Hölderlin's poems to illustrate that regression is actually a link with primal material. This primal material contains both the energy that is dammed up and the specific form of a new conscious attitude. However, both of these must be assimilated by the conscious mind lest the primal material keeps its chaotic form and produce disorientation or even, in severe cases, schizophrenia.

This very regression, being dangerous to the conscious mind as well as social norms, is the subject of taboo. However, it is clear that the object of desire is rebirth, not (as in Freud's literalist interpretation) incestuous cohabitation. In this conception, incest refers to the draw towards, and horror of, immersion in the unconscious as the source of the conscious subject. The incest taboo indicates the danger of this regression, and religion aids in systematizing the canalization (or routine, even automatic use) of libido into safe and socially acceptable forms. Thus, symbolism and symbol formation are civilizing processes at the collective level (such as found in religious traditions), whereas when the

symbol is engaged personally, it represents an individuating and internal psychological truth (Jung 1967). Taboo can be seen as a form of collective mediation of overwhelming unconscious forces. However, the advent of neurotic symptoms shows that this collective mediation has broken down, such as when religion no longer seems to mean anything. In these cases, a symbolic interaction with the taboo under carefully controlled circumstances (the container of analysis, e.g.) allows the instincts to be mediated in a new and personal way, resolving the neurotic suffering.

Finally, since the canalizations or routines surrounding symbol making and the taboo are collective (i.e., shared by populations), we can see that the evolutionary instinct has as its goal the *making of meaning*. These instincts manifest also as mythological figures born to the unconscious. That is, it was not the incest taboo that forced mankind forward but rather the evolutionary instinct from which this and other taboos came. Certainly, the making of meaning is most safely done in a collective setting, such as a political or religious tradition, since these structures are mediating symbol systems that let only a small amount of the primal libido through to an individual. When a symbol system no longer works, the individual must take special precautions not to become overwhelmed by an unconscious and unmediated flood of affect and imagery. To reiterate, the cultural injunction against introversion has led, in modern times, to the rituals of the analytic container (other responses to this injunction occur as well, from the development of the projection of the numinous out onto UFOs to the various new age attempts to encounter the unconscious) and the methodical withdrawal of projections as a safe way to approach the numinous (life-giving but dangerous) core indicated by the term taboo.

## Talmud

Mark Popovsky

Department of Pastoral Care, Weill Medical College of Cornell, New York Presbyterian Hospital – Chaplaincy, New York, NY, USA

From the Hebrew verb “to learn,” Talmud refers to the central text in the vast corpus of rabbinic literature which serves as a repository of legal discussions, biblical exegesis, theology, philosophy, hagiography, legend, history, science, anecdotes, aphorisms, and humor. The Babylonian Talmud was edited over several generations by the rabbinic authorities of Babylonia, probably attaining a somewhat fixed form in the sixth century. However, individual passages included may be up to several hundred years older having been transmitted orally prior to their inclusion in the text. A second Talmud exists, edited in the land of Israel during the fifth century. Known as the Jerusalem or Palestinian Talmud, it is smaller, more opaque, and less authoritative in later legal debates. The term Talmud unqualified always refers to the Babylonian Talmud which is written primarily in Aramaic though it often cites large passages in biblical or Rabbinic Hebrew.

The Talmud is structured around a second century rabbinic document called the Mishnah or “recitation.” Composed in terse Hebrew, the Mishnah compiles unresolved legal debates among

rabbis on a wide range of subjects including worship, dietary laws, torts, family law, criminal law, agricultural practices, mourning customs, sexual mores, and holiday observance. These legal discussions are often surrounded by related narratives and relevant biblical interpretations. The Mishnah settles very few of the legal debates it presents and frequently suggests no rationale supporting the various opinions cited. The Talmud begins as a commentary on the Mishnah elucidating its cases and alternatively challenging or defending each of its legal opinions.

While the Talmud retains its structure as a commentary on the Mishnah, it functions much more broadly, citing new legal cases, relating stories about rabbinic figures, and opening moral or theological debates unimagined by the Mishnah. The different material included is woven together in a complicated arrangement that is only sometimes topical. Often, connections between Talmudic passages rely on free associations or any number of other nonlinear progressions. The Talmud gives great weight to material from dreams, wordplay, and the exploration of fantasy.

The Talmud's primary method of expression is debate. No legal precedent, biblical passage, or other ostensibly authoritative statement stands immune to challenge. Much like the psychoanalytic process, rather than attempting to avoid or resolve conflict, Talmudic discourse identifies and even elevates disputes among principles, teaching the reader to embrace discord rather than repress it. While the Talmud rarely affirms or rejects one opinion outright, ironically, it often signals its preference for one opinion over another by challenging the favored opinion more extensively. Biblical laws are almost never explicitly repealed, but, with some frequency, problematic biblical passages are interpreted through Talmudic debate to be so narrow in scope as to be practically irrelevant in contemporary society.

The Talmud is traditionally studied in pairs or small groups, reflecting the conversational question-and-answer style of the text itself. Many have argued that the process of studying Talmud parallels the psychoanalytic task as the reader is directed to infer underlying conflicts

from surface level ambiguities or inconsistencies in the text. Some scholars claim that Freud fashioned elements of his therapeutic technique from methods of traditional Talmudic analysis. In modern times, the Talmud is almost always printed together with the commentary of Rashi, an eleventh century scholar from Provence, whose glosses guide the reader through the difficult text which often assumes that its readers know the entire contents already.

## Tantrism

Kathryn Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

Tantrism is a religious and philosophical movement appearing in India around 400 CE that existed within both Hinduism and Buddhism. In medieval India, Tantrism was a common element of all the major religions. Tantrism focuses upon ritual aspects that involve the use of the physical in sacred and worshipful settings to access the supernatural. Tantrism also can be traced to Jainism and Bön, and elements of Tantric practice are also evident in Burma, China, Japan, Mongolia, and Tibet. The word Tantrism originates from the Sanskrit word *Tantra*:

which is translated variously as “weave, warp, or loom,” offering a sense of bringing together or connecting into a whole. Tantrism is comprised of numerous texts referred to as *Tantras*. The primary philosophy and goal underlying the practice of Tantrism is that it promotes spiritual growth and leads to personal freedom.

The concept of evolution and involution is central precepts. Tantric practice leads to an outgoing current of energy as well as the return of the current, which is taken back in toward the source of reality rooted in the consciousness of the human being, revealing the pure being of the infinite. In time, with practice, the outgoing current is changed into the return current. This specific interchange is believed to release the chains created by *maya* (the illusion of the phenomenal world) and to free one from illusory existence. Unlike the more orthodox tenets of the Hindu or Buddhist religions, the Tantric aim is to engage with rather than negate reality by undergoing phases of purification, elevation, and finally reaffirming one’s identity on the plane of pure consciousness.

Tantric bodily disciplines and techniques in ritual settings are combined with the learning of specific doctrine. The practitioner of Tantrism develops a more expansive internal awareness and ideally achieves union with the divine. In Hindu Tantrism, *Shakti* is active female energy and *Shiva* is passive, male consciousness, whereas in Buddhist Tantrism, *Prajna* is the passive female element and *Upaya* the active, male element. In the Hindu tradition, *Shakti*, the active female energy is promoted as the main deity or god worshiped and is personified as the divine active force. In the Tantric tradition, clearly female energy penetrates male essence.

The doctrine of the *Tantras* claims that an individual practitioner can tap the interplay between these two dynamic universal forces, internalize these energies, and apply them in life. It is believed that the human body itself is a symbol of these universal energies. Sexual union between two persons can become a symbol of liberation when symbolically understood as the union of *Shiva* and *Shakti* or of *Prajna* and *Upaya*. *Shakti* is also understood as

a profound force that manifests itself by igniting energy at the base of the spine and winding its way through the chakras (centers of spiritual power in the human body of which there are seven) toward the opening of the third eye – the highest chakra – enlightenment. In many Tantric forms of meditation, such as *Kundalini* yoga, the initiate undergoes a ritual in which he or she receives divine *Shaktipat* through the touch of a master who has achieved a level of union with the divine. This touch ignites the movement of *Shakti* energy. The central object of the Tantric ritual, then, is to awaken *kundalini* energy and to merge with the godhead. To sustain the activation of this vibrant energy in meditation, tantric practices focus upon the breath, or *prana*. Concentrating upon the breath relinquishes the practitioner from worldly distractions and removes obstacles from the chakras. Some tantric forms use mantras, incense, chanting, and singing to activate the breath, followed by silent meditation. Meditating upon a specific *yantra* (a geometrical diagram) or *mandala* (a circular figure symbolizing the universe) associated with a deity is a technique employed for the purpose of subjecting the body to the will. As the progressive phases of enlightenment occur and deepen, the experience becomes a mystical one, and the presence of the divinity grows ever more real as the energies of *Shakti* weave their way like a double serpent around the spine, always moving upwards. To learn these meditative practices, an initiate works the guru or a master teacher. Consistency in practice yields a greater response of the universal vibration of *Shakti*. If one achieves a state of union with the divine, often depicted in symbol as the opening of a lotus, or as an illumination of the third eye, then one is considered to have become the *Ishta-deva* or meditational deity. Developing the attributes of an *Ishta-deva* is an important phase, for it means one is able to visualize oneself as the deity or to achieve *darshan* and experience a vision of the deity.

Tantric practices are also known for the ritual use of wine, meat, and rituals that involve mystical-erotic sexual practices, emphasizing the primacy of divine union. Participants were

prepared in the art of controlled sexual intercourse, *maithuna*, (L., *coitus reservatus*) meaning sex without male orgasm. Through intricate training, the male partner learned to store up his own sexual fluid and to absorb through his penis the fluid engendered by his partner's orgasm. This discipline prolonged the sexual act for an extended period of time. In this way the male partner became similar to *Shiva*, the god in perpetual union with the goddess. The conserved vital fluids were to be stored in the man's spinal column, working their way through the chakras to unfold into the inspiration of divine wisdom.

For both partners, the goal was to awaken the *kundalini* energy culminated in *samadhi* (contemplative rapture). Each of the persons was to be completely dissolved in the unity of the godhead represented on the earthly plane by the energy field created by the synthesis of *Shiva* and *Shakti* in the couple. The male *linga* and the female *yonis* were symbolic of the generative powers of the two coexisting principles of nature (White 2000). The production of fluids represented a sacred offering to Tantric deities and was described as an ambrosia-like nectar that permeated the entire spinal cord, genitalia, and brain.

Tantric sexual practices conflicted with orthodox Buddhism, which promoted chastity and, like Christianity, split the feminine principle into virginal and compassionate or bodily and sexual opposites. Nonetheless, variations of Tantric practices survived in both Eastern and Western civilizations through forms of goddess worship originating from early Pythagorean and Neoplatonic sources. Certain sects such as the Christian Gnostic *Ophites* performed Tantric sexual rites in devotion to the symbol of the Holy Spirit in the orthodox church, *Sophia*. The orthodox church found these practices to be promiscuous and completely unorthodox. Similarly, Islamic religious authorities condemned the Sufi sects who worshiped the feminine principle of love, although Ibn 'Arabi claimed that the most complete union possible was the sexual act between a man and woman, which he associated as a state of bliss beyond pure interior contemplation of God. Thus, Sufism achieved life in sexual mysticism. Sufism was kept alive by troubadours, self-named

"Lovers," who worshiped the feminine principle as the source of divine energy. Eventually, Sufi influence predisposed European troubadours, following the crusades, to found the renowned movement of Courtly Love. Courtly Love appeared in literature, poetry, and song for centuries until the powerful patriarch that was simultaneously branding women as witches and devils condemned such activity as heterodox. Although sexual practices clearly have been an aspect of Tantric rituals, ultimately the *Tantras* stressed sexual ritual more as a conduit to the underlying creative energies of the universe and were practiced by a minority of sects. The ritual sexual practices centered upon harnessing the more mundane human impulses of desire toward higher aims in order to replicate the activity of the divine couple. The sexual acts were less for pleasure and intended as an offering toward higher aspirations. The psychological symbolism of the internal male and female energies was the major focus.

## Psychology

Carl Jung, along with other academics and intellectuals (Heinrich Zimmer and Mircea Eliade), examined the Hindu and Buddhist Tantric teachings. Sigmund Freud tended to interpret all religiously endowed and emotionally significant experience as derived from or a substitute for basic physical sex. Religious and emotional acts were equated as irrational and needed to be sublimated, modified into a cultural higher form. Freud's emphasis was on the biological; thus, sex was primarily a biological function. Unlike Freud, Jung found that there are specific commonalities between the practice of Tantrism and depth psychology. Jung considered sexuality itself to be a symbolic, numinous experience. Analytical psychology complements the aims of Tantrism by performing a soul-seeking or soul-retrieval function within a ritualized setting that invokes the divine and effects the embodiment of imaginal transformation. This union is analogous to the notion of the *coincidentia oppositorum* in analytical psychology in which the *anima* and *animus* (non-gender-specific female soul and non-gender-specific male soul) are united with spirit to form

a whole or oneness. Additionally, the internalization of the universal feminine principle is not unlike internalizing the good mother through which a person can relate positively to a feminine principle, fleshing out and healing the wound of previous emptiness of this aspect of the psyche. Tantrism and Jungian depth psychology offer methods for arriving at a more complex and intimate relationship of self (ego in Western psychological terms) with self. The notion of self in Jungian psychology would find its analog in the Tantric notion of unity achieved through oneness with the divine feminine, in which the essence of female follows the lineage of Shakti, Shiva, Sophia and Courtly Love.

Jung affirmed the nature of the opposites as being bi-gendered. The anima and animus are contained within each human psyche. Like the dual-serpents of *kundalini* energy, these twofold aspects must be set in motion to realize psychic equilibrium. The combination of these opposites does not depend as much upon two opposite genders but is based more upon the achievement of an embodied non-dualistic consciousness. The ultimate image that guided the practitioner of Tantrism was that of a male and a female conjoined in sexual intercourse. The contemplative aspect of the practice required “meditating upon emptiness and emanating supreme immutable bliss – a state of *passionate desirelessness*” (Emery 2005, p. 6), thus, a unified divine consciousness. Analogously, the *conuinctio* of anima and animus does not pertain to sexual gratification but represents an integrated expression of harmonious wisdom that surpasses mundane sexual longings. The capacity of Tantrism to comprehend the efficacy of the symbolic demonstrates how these early practices offer valuable tools to psychoanalysis in terms of working beyond words, a helpful factor with preverbal patients, and dealing directly with the essential being of the person.

Tantric sexual practices more rightly might be compared to the transference between a modern day therapist and patient, although the bodily emphasis is transformed into emphasis upon the imaginal and the symbolic. If desire is ignited in a positive transference, it finds life in the imaginal and sacred realm of the therapeutic space and

the third space shared by the two persons. The process of *conuinctio*, or divine marriage, is a goal much like that of the early alchemists who projected upon matter symbolically to achieve transformative ends.

Tantrism and Jungian psychology place emphasis upon a *temenos*, a sacred container, and both emphasize the numinous and mystical in the physical and phenomenal realm. Tantrism strives toward internalization of the divine imago. Jungian theory likewise seeks this emphasis. The notion of individuation is analogous to the Tantric understanding of the exchange of currents, once internalized, flowing to and from the source with an ongoing reciprocity (ego and self or ego-self axis in analytical terms). Just as the goddess *Shakti* seeks to create an imprint or image in human form, the self of the psyche seeks us, fueled by the divine source that fuels it. The divine intentionally comes into a human form.

Tantrism, like depth psychology, affirms the tumultuousness of the descent that the individual psyche must undergo into the chthonic realm in order to attain higher consciousness. Similar to Tantric practice, analytical psychology understands the role of the healer as one engaged in a liturgical ritual as a priest. Depth psychology presumes that the therapist, like the master in Tantrism, has sufficiently developed an element of the divine within that enables one to guide the patient in bringing an element of the divine into fruition.

Psychoanalysis, in general, mirrors Tantrism, in that it has specific tenets such as the frame (time, place) and an alliance between two persons comparable to the relationship between initiate and guru/master. The authority of the therapist is not derived solely from intellectual theory, any more than the guru's power is a mere derivative of Tantric doctrine. Differences would be that a therapist would not consider himself to be equated with the divine, for this would be an inflation of narcissistic grandeur. Nor does a therapist intend to transform himself into a divinity. The guru, however, is assumed to have achieved a non-dualistic state of being.

In contrast, a therapist will struggle in an ongoing way with various issues of countertransference (individual response to what the patient

induces in him or is already a vulnerable aspect of the therapist's psyche). Unlike the psychoanalyst, for whom the transference can induce potentially negative psychic effects, the guru remains untouched by the initiate's damaging energies, having attained high spiritual awareness.

Depth psychology maintains a very structured system of ethics comparable to Tantric doctrine. Yet, unlike some Tantric practices in which the priest enacted sexual practice with virgins representing the divine goddess, a therapist adheres to a completely different code of ethics. If a therapist were to act out with a patient, this would be considered to be not only unethical, but an abuse of the patient's vulnerability in light of the therapist's authority. Further, as the alchemists would say, the bird has flown out of the vessel, meaning that such an action would entirely disrupt the growth of the patient up to this point and that the patient would need to begin all over again in the process of healing.

The downside of removing the bodily aspect from actual proximity to analytic psychology is that the body, along with the desires (*Shakti*) aroused within certain psychotherapeutic transferences, must find a conduit in life, or these energies will go underground again like a recoiled serpent. The separation of the body from ritual practice has promoted a split between the fields of psychology and "body work." This split has yet to be resolved successfully in our time.

The Tantric ideals of preparation and initiation are equally evident in psychological practice. Initiation might be compared to the power of the positive or negative transference that the patient transfers onto the therapist, which changes over time as the two persons create an energy field. The individual, like the Tantric initiate, comes to the therapist/master with the projection that the person possesses the capability of changing his or her future. The very existence of the transference maintains a specific kind of authority needed by the therapist to impart "insights" comparable to the hidden truths or mysteries of the *Tantras*.

Tantrism arose historically as a movement that developed in reaction against the authoritative high forms of orthodox Hinduism and Buddhism

that neglected the sensation of the body, while also relegating the feminine principle to a secondary or nonexistent status. Psychology emphasizes that instinct and imagination are aspects of the bodily senses and thus necessary parts of the ritual healing. Depth psychology, inclusive of both Freudian and Jungian schools of thought, arose specifically as a humanistic form of healing practice in response to the inability of medicine, theology, and religion to sufficiently address many of the issues of the ailing person.

Analogous to the notion in analytical psychology that both persons in the therapeutic process undergo transformation, in Tantrism, the initiate transfers his or her inborn self-healing potential to the guru. The guru, like the analyst, "holds" this potential until it becomes conscious to the patient/initiate.

Similarly, the guru assists the initiate in realizing images and symbols through the specified preparation and purification processes. Tantrism, with its openness to the instincts and emotions of the body, allows considerable access to potent and numinous symbols, accompanied by the psychic energies that are freed along with making the unconscious conscious. The Tantric mind is analogous to the embodied psyche – the experience of the body being penetrated or infused by spirit.

Perhaps the most essential insight is that, in either case – imaginal or actual – desire in relation to the feminine was not despoiled in Tantric practices but offered multiple levels of conscious spiritual attainment through practices involving mind, body, and psyche. In our contemporary world, how do we embrace the significance of phenomenal experience in relation to spirituality? Is real or imaginal affinity for the feminine figure more significant in the process of spiritual consciousness?

Tantric practice as it informs analytical psychology suggests how feminine consciousness and the inclusion of the body offers a transformational process in spiritual growth that effects the maturation of psychological and spiritual development. We differentiate ourselves through participation with otherness – what is most opposite and other than ourselves – toward a *jouissance* of being that is inclusive of spiritual embodiment.

## Taoism

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

Lao Tzu wrote in the sixth to seventh century: “Every being in the universe is an expression of the *Tao*. . . The *Tao* gives birth to all beings, nourishes them, maintains them, cares for them, comforts them, protects them, takes them back to itself. . . That is why love of the *Tao* is in the very nature of things.” (Lao Tzu in Mitchell 1989, p. 13)

The *Tao* (pronounced “Dao”) is “The Way” of the ancient Chinese philosophers. The central idea is that harmony with nature is the way to live graciously. To live in harmony with the way the universe works is to keep in tune with natural laws.

The concepts of *Yin* (feminine) and *Yang* (masculine) energies flow all through the worldview of the Taoists. The classic text, the *Tao te Ching*, is believed to have been written by the poet and philosopher Lao Tzu. Much of Chinese culture has been deeply influenced by these Taoist ideas, including statesmanship, religion, medicine (e.g., acupuncture), physical exercise (*Tai Chi* or *Qi Gong*), and even auspicious placement of buildings and interior decorations (*Feng Shui*).

Psychologically, a Taoist perspective could be considered to be quite counterculture in the United States today. The emphasis on yielding, for example, would be contrary to the current psychotherapeutic emphasis on assertiveness. Among Asians, however, this Taoist outlook may permeate their worldview, and the influence of Asian culture (including martial arts) has had its impact on the mainstream US culture as well.

## Tara

Ann Moir-Bussy  
School of Social Sciences, University of  
Sunshine Coast, Sippy Downs, QLD, Australia

## Origins

The goddess Tara, one of many female deities, was first found in early Hinduism and later was adopted

by Tibetan Buddhism in the early third century BCE. She is worshiped throughout Tibet, Nepal, and parts of Southeast Asia. Some schools of Buddhism recognize 21 Taras. The Chinese call her Kwan Yin, the Bodhisattva of Compassion, her name meaning “one who hears the cries of the world.” Tara is known as the Mother of Mercy, the Goddess of Compassion, the “mother of liberation,” and the “one who saves.” According to one legend, she emerged from a lotus that grew in a lake made by the tears of Avalokitesvara as he wept for the world’s sufferings. In the early Sanskrit tradition, she was also known as Dhruva, the Pole Star, and so has also been associated with Mary, the Mother of God known as Star of the Sea. There are different forms of Tara represented by different colors, including blue, green, red, yellow, black, and white aspects of White Tara, reflecting her responsiveness to the needs of beings in different circumstances. The colors also represent the many facets of wholeness or balance. The Green Tara is known for her activity of compassion for all beings. Some say the Green Tara represents the night. The White Tara contains all the colors and is also the symbol of compassion, healing, and serenity. The Red Tara is recognized as the fierce aspect of Tara, but the fierceness is not about destructiveness but about magnetizing all good things. Some representations depict her as wrathful, destroying negativity, and overcoming disharmonious conditions. In these pictures, Tara sits in the center of a raging fire destroying the enemies within: all that is delusion and that gets in the way of liberation and enlightenment. The Black Tara is often associated with power, the Yellow Tara with wealth and prosperity, and the Blue Tara with the transmutation of anger (<http://www.crystalinks.com/tara.html>).

The Buddhist tradition has 21 different manifestations of Tara, and there are mantras or songs of praise to each, describing her attributes (for reference to these, see *Praises to the 21 Taras* – <http://www.fpmt.org/prayers/21taras94rdr.pdf>).

### Other Manifestations

Tara can be likened to the Virgin Mary – known also as Stella Maris – Star of the Sea, or to

Aphrodite, also said to be born from water and known as the Morning/Evening Star. In other cultures, there are vibrations of her name. In a Polynesian myth, Tara is a beautiful sea goddess; in Latin, she is Terra or Mother earth; the Druids’ mother goddess was Tara; in Finland the Women of Wisdom were known as Tar; in South America, an indigenous tribe in the jungle called her Tarahumara; and, finally, Native American people speak of a Star Woman who came from the heavens and from whom all essential food grew (<http://www.crystalinks.com/tara.html>). As with many female deities, “Tara governs the Underworld, the Earth and the Heavens, birth, death and regeneration, love and war, the seasons, all that lives and grows, the Moon cycles - Luna - feminine - creation” (<http://www.crystalinks.com/tara.html>).

### Psychological Images

From the standpoint of psychology, Tara is symbolic of the Great Mother archetype, the feminine principle. Embodied in men and women, Jung refers to this feminine principle as the *anima* or *soul* (Jung 1969). It is the principle of relationship and of feeling, eminently expressed in Tara as compassion. The mother is responsible for birth and life, for nurturing and development, and for fertility and fruitfulness. “The place of magic transformation and rebirth, together with the underworld and its inhabitants, are presided over by the mother” (Jung 1982, p. 16). Hence, the task of each individual is the development of all the qualities embodied by Tara, in order to achieve wholeness and completeness and inner wisdom. In Tibetan symbolism, green is considered to be a color that embodies all other colors. Hildegard of Bingen spoke of the “greening of the earth,” implying that all of us need to develop this wholeness and greenness. We can learn from Tara simple and direct means of discovering within oneself the wisdom, joy, and compassion of the goddess as we travel along the path to enlightenment. As a female bodhisattva, Tara combines the spiritual with the human – heaven and earth. Each human being is a potential bodhisattva, learning to bring

into balance, yin and yang, male and female, consciousness and unconsciousness, and the self and no-self. The bodhisattva within each of us challenges us to keep on the journey towards maturation or individuation and to reach out in compassion to all other sentient beings.

## Teilhard de Chardin

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

Many spiritually oriented individuals have as their personal aim the realization of union with the Divine. Many spiritual paths view the sense of union with all humanity as being preliminary or at least concurrent with Divine union. It is to Pierre Teilhard de Chardin, S.J., that contemporary religion owes its increasing capacity to see humanity as an interrelated whole and its will to transform religious thinking into global consciousness. Teilhard wrote:

Across the immensity of time and the disconcerting multiplicity of individuals, one single operation is taking place.... one single thing is being made: the Mystical body of Christ (Teilhard de Chardin 1960, p. 143).

Reflecting on Teilhard's worldview, Catholic scholar Ewert Cousins wrote:

Clearly, the earth is on a trajectory toward unification. That we of the twenty-first century can conceptualize this process spiritually is due in large part to the prophetic vision of the Jesuit mystic-scientist (Cousins 1985).

## Teilhard the Man

Pierre Teilhard de Chardin (1881–1955) was born into an aristocratic family in France, where he acquired both traditional Catholic piety with mystical interests, and scholarly, scientific traits. He was educated by the Jesuits and ordained a priest in 1911. As a member of the Society of Jesus, he briefly taught physics and chemistry but devoted most of his life to the pursuit of scientific knowledge. Evolution was his passionate study. Involved in many archeological digs in China and Outer Mongolia, he was a key member of the paleontology team that discovered *Sinanthropus pekinensis* ("Peking Man"), an important early link in the evolution of humankind (Teilhard de Chardin 1966). Reflecting deeply on the process of evolution, Teilhard brought his contemplative consciousness to bear on what he called the "diaphaneity of matter." In *Hymn of the universe* he wrote:

Blessed be you, mighty matter, irresistible march of evolution, reality ever new-born; you who, by constantly shattering our mental categories, force us to go ever further and further in our pursuit of the truth. Blessed be you, universal matter, immeasurable time, boundless ether, triple abyss of stars and atoms and generations; you who by overflowing and disordering our narrow standards of measurement reveal to us the dimensions of God (Teilhard de Chardin 1961, p. 68f).

## Teilhard's Thought

As a mystic, Teilhard viewed evolution in both scientific and spiritual light. He saw repeated

patterns, with life emerging from the simple to the complex. From atoms to cells to living creatures, he recognized the processes inevitably requiring first differentiation and then unification. Human life, for example, begins with single cells that differentiate into two and then four, then multiple cells, each cell finding its purpose in the development of neonatal life. He saw that the process is one of repeated “complexification.” Extrapolating from the intelligent, complex beings in the human species, Teilhard foresaw the next phase of development wherein humans will first differentiate and then unite into a higher level of being, i.e., humanity as a whole. This will occur, he predicted, when a shell of intellect, or “noosphere,” envelopes the earth. This is an irresistible physical process, the “collectivization” or “planetization” of humanity (Teilhard de Chardin 1964). To Teilhard, the endpoint of this evolutionary unification would be what he called the Omega Point, wherein humanity would be united by the force of love. The “fire of love,” as he called it, is what Teilhard thought to be the power of Christ.

Teilhard’s ideas were so radically new in the 1940s and 1950s that he was prohibited from publishing his *magnum opus*. Although Teilhard’s thoughts seemed new, they are really quite in tune with the unitive insights of the mystics both East and West throughout the ages. In 1955 the Jesuit Order permitted posthumous publication of *The Phenomenon of Man*. Since then, his ideas have had a tremendous impact not only on Catholic thinking but also on scientific thought.

## Global Consciousness

If Teilhard and all the great mystics are right, then there is de facto unity among us, and what is emerging is global awareness of that underlying unity. Today the Internet, which was not yet known in Teilhard’s life, is a manifestation of the “noosphere” or shell of intellect enveloping the earth. When Teilhard foresaw the tide of destructive forces that threaten the planet, he called upon all people to unite in building the earth. With

today’s threats from terrorism as well as climate change, Teilhard’s call remains the same.

Our task, from a psychological perspective, is to deepen our personal awareness of the interconnections among us and to help others to become aware of those deep spiritual interrelationships. In so doing, we participate as co-creators in the evolution of human consciousness. The interreligious dialogue is today a vibrant venue for such deepening awareness, helping humanity first to differentiate, to appreciate diversity, and then to integrate, through comprehending our essential spiritual unity.

Teilhard himself always saw the Omega Point in Christian terms. However, others who follow him have realized that in true global unity, no one religion can dominate all the rest. Thus, a true sense of dialogue must be established wherein mutual respect is engendered. Psychology has a significant role in fostering and facilitating that dialogue. Seen in breadth and depth of perspective, the world religions have not only different theologies and philosophies but also, in essence, vastly different worldviews (Panikkar 1999). Toward furthering cross-cultural understanding and appreciation of religious differences and similarities, psychology has the opportunity to foster understanding with persons from varying cultures and religions. In like manner, in the spirit of Teilhard, psychological understanding can facilitate globalization by dialogue addressing such problems as global warming and combating deleterious climate change.

## Teilhard de Chardin: Cosmic Christ

Steven B. Herrmann  
Oakland, CA, USA

If Western religion can be characterized by a pivotal notion around which it has turned in the last century in anticipation of the new millennium, it might best be encapsulated in a single image: the *Cosmic Christ*. The bold theory of combining the scientific evolution of nature and consciousness that played such a powerful role in ushering in a call by many contemporary writers for a metaphor to unite science with the globe's perennial philosophies and religions had its inception in the writings of the French Jesuit priest and mystical visionary Teilhard de Chardin (1881–1955). He spent 20 years in China doing paleontology, and he had a wide view of history and culture, nature, and spirit. He sought to blend science and religion into a single theory of evolution with the early postmodern insight that a scientific study of nature and psycho-spirituality cannot be separated, because:

... the investigations of science have proved beyond all doubt that there is no fact which exists in isolation, but that every experience, however objective it may seem, inevitably becomes enveloped in a complex of assumptions... (Teilhard de Chardin 1960a, p. 30).

Thus, Teilhard worked to blend physical evolution with the evolution of consciousness moving towards a divine “Omega” Point. The apotheosis

point for the notion of a Cosmic Christ (as distinguished from the historical Christ) may be found later in Matthew Fox's 1988 book *The Coming of the Cosmic Christ*. This vision can be expanded to embrace world religions.

Although Teilhard's writings were suppressed by his Catholic superiors and he was forbidden from teaching and publishing his major masterpieces, many volumes were made available to readers in the years following his death on Easter Sunday, 1955. A new era of a uniquely global vision of transcendent cosmic spirituality emerged within 5 years. Chardin is often rightly seen as a main ancestor of Western religion. Psychologically his vision can be seen as an evolving union of human consciousness with the divine Light. But this is not the same metaphor of the Cosmic Christ we see in New Age spirituality, where it is all about incense and love and a Light that is typically unaware of its own shadow; for Teilhard the divine is the “combined essence of all evil and all goodness,” filled with compassion as well as with “violence” (Teilhard de Chardin 1965, pp. 60, 61).

A similar but broader vision of the divinization of consciousness was coined by Richard Maurice Bucke in his seminal book *Cosmic Consciousness*. It is not Jesus who emerges in *Cosmic Consciousness* as the book's primary exemplar of the type of expansion Bucke felt the world needs to experience in order to know the meaning of divine evolution in the universe. It was America's seminal bard: Walt Whitman and I would not characterize Whitman's spirituality as “New Age” (Hanegraaff 1998) either. Nevertheless, I do see Whitman as a major ancestor of autochthonous American spirituality that has a direct link to shamanism. I think we can trace the image of the Self in the human psyche to the archaic *shamanic* archetype, which is at the center of all religions: from Shaivism to Buddhism, from Zoroaster to Moses, Jesus to Mohammed, and the Goddess to Whitman (see Herrmann below). This gives a psychological grounding to the history of consciousness and the Self's emergence at a critical period of the approximately 30,000–40,000 BCE. As archeologists have

shown, this is the crucial time in human evolution when we see a sudden explosion of consciousness, which we see, for instance, with the proliferation of shamanistic art.

Many spiritual writers have latched onto the idea of a Cosmic Christ. It is essentially a vision of the “divinization” of consciousness throughout all of the universe (Teilhard de Chardin 1965, p. 23). It can be seen as an evolution of nature and consciousness towards a “convergence point” (Omega) that culminates in a grand phenomenon of “cosmogogenesis” and “hominization” of humanity into a “divine *milieu*,” as Teilhard called it, with the Christ image at its center of psychological and spiritual metamorphosis. Teilhard felt the Christ image was large enough and evolved enough, to appeal to everyone. But now the same could be said of a Cosmic Buddha, Cosmic YHWH, or Cosmic Allah, to satisfy the demand of the world’s faithful for a spiritually democratic vision that allows all religions to be embraced as equals.

First of all and perhaps most importantly, Chardin was a visionary mystic, and he was also an archeologist who was one of the first researchers to excavate Peking man in China. All of his writings are an attempt to portray one spectacular picture of physical, psychic, and spiritual evolution in the human species, tending towards an apex of Light. He was dazzled by a grand vision of this in China in 1916. At the center of this powerful pulsating vision is the radiant Light of the cosmos that infused Chardin in China, insofar as that great explosion could be imagined then. At the beginning of Chardin’s theology are cosmic *Fire* (Teilhard de Chardin 1965, p. 21), “*The Whole Universe is aflame*” (Teilhard de Chardin 1965, p. 78), and “Blazing Spirit, Fire. . . This is my Body. . . This is my Blood” (Teilhard de Chardin 1965, p. 22). Chardin’s view of the mystical body of Christ extends from the wafer of the consecrated host to the entire “cosmos itself” (Teilhard de Chardin 1965, p. 14). This is a highly personal, psychological, and mystical vision, one that sees the very purpose of your being, my being, and all of your love and life, and mine, and his, as dependent on an interrelatedness of “the

union between yourself and the universe” (Teilhard de Chardin 1965, p. 36).

In “Hymn to Matter” Teilhard acclaims further the “melodious fountain of water” and the “limpid crystal” from which the “new Jerusalem” or *divine milieu* of the Cosmic Christ springs (Teilhard de Chardin 1965, p. 70) to be a living fountain of our common origination in anthropocentric *cosmogogenesis*. This is also (I would add) a *shaman’s crystal*: an object of clear light that shines at the heart of every religion, in every culture on earth from the radiating heart of spirit and matter. Significantly, Teilhard refers to such a crystallizing prism as a “psychic cosmic center” or “supreme pole of consciousness” towards which all of the “elementary consciousnesses of the world shall converge” towards the “rising of a God” (Teilhard de Chardin 1965, p. 90).

Today a major conceptual confusion in Chardin’s attempts to sketch out the lineaments of a Cosmic Christ rests, at least from a depth-psychological angle, in the exclusively Christian accent of his vision, as opposed to a more universal one, such as we find at apotheosis, for instance, in Matthew Fox’s *The Coming of the Cosmic Christ*. The main questions to ask ourselves here are (1) What is the image of God that is coming? (2) Is the Christ image large enough to subsume the all towards which all religions turn?

Another term that became popular in the 1970s was spiritual “energy” and once again Chardin anticipated this *energy* concept by over 40 years with his concept of “cosmic energy” (Teilhard de Chardin 1965, p. 96), although this is by no means a new spiritual concept, as the Chinese called it *qi* (“chi”) divided and united in Yin and Yang. It may be a reawakened consciousness in industrial society, but most religious traditions have had what one might call spiritual emotion, or “energy,” as part and parcel of their world views, such as in the notions of the Shekinah, Holy Spirit, or Kundalini. In Melanesia the term *mana*, for moreover, is a forerunner of G. G. Jung’s notion of psychic energy. *Mana* has parallels in Native American religions with the notions of *wakan* in the Siouxan language, *wakonda* among the Dakota Indians, *oki* among the Iroquois, and *manitu* among the Algonquins

(Jung 1960, p. 61). The psychological notion of *psychic energy* = *Cosmic Energy* in Teilhard's thought. Such cosmic/psychic energy is in the process of emerging towards an ever-increasing point of spiritual *intensity*: "the bubbling up of the newly-formed life-centre as it explodes upon itself" (Teilhard de Chardin 1965, p. 102). This explosive extension of the global consciousness towards an Omega Point is what Chardin calls the "*critical point of species-formation*" (Teilhard de Chardin 1965, p. 110), and it has been in the process of progressive psychosocial evolution during the "whole process of *hominization*" (Teilhard de Chardin 1965, p. 116). In *The Phenomenon of Man* he points in the chapter "The *Homo Sapiens Complex*" to the Neolithic age of the reindeer, when "a definitely liberated thought explodes, still warm, onto the walls of the caves" of our ancestors (Teilhard de Chardin 1960a, p. 202). This is the central nucleus at the heart of the human psyche that I have called the enduring *shamanic impulse*: the impulse towards poetry, healing, science, and art.

In Teilhard's overall vision "The mystical Christ has not yet attained its full growth; and therefore the same is true of the cosmic Christ" (Teilhard de Chardin 1965, p. 133). The Cosmic Christ is, therefore, a world phenomenon that is in the process of *becoming*. This is not the Christ of the "old cosmos" only "but also of the new cosmogenesis" (Teilhard de Chardin 1965, p. 139). More, the most "cosmic" of sacred Christian writers was not St. Augustine wrestling with evil, but St. John and St. Paul mysticism (Teilhard de Chardin 1965, p. 144). At the end point of Chardin's notion of the Cosmic Christ, finally, is his belief that the "most massive blaze of collective love that has ever appeared in the world burns here and now in the heart of the Church of God" (Teilhard de Chardin 1965, p. 155).

This is the primary point of contention between Chardin's view of the Cosmic Christ at inception and the Cosmic Christ at apotheosis, in Fox's writing. Whereas Teilhard sees the Church as the vehicle for divinization, Fox envisions something much wider that may include all Temples of God, shrines to the great Goddess, and Mosques, as places for the world's spiritual transformation.

And Fox too has been wrongly pegged as a New Age writer. The main question for the history of psychology and religion is the important question of antecedents in the notion of cosmic awareness, as we see, for instance, in the following question asked by him in *The Divine Milieu*: "Could there be a more up to date or more faithful version of St Paul's doctrine of the 'cosmic' Christ?" (Teilhard de Chardin 1960b, p. 41). Yes, certainly there can, given the new cosmology.

Teilhard appears to answer his own question definitively when he says:

Such has been my experience in contact with the earth—the diaphany of the Divine at the heart of the universe on fire... Christ; his heart; a fire; capable of penetrating everywhere and, gradually, spreading everywhere" (Teilhard de Chardin 1960b, p. 46).

This is Chardin's subjective truth, his personal belief, or subjective confession. What is true for Teilhard may not be true for a Hindu or Sufi, where Shiva, or Allah, or Khidr might be formulations for the better consciousness at the center of the cosmos, whether as a Divinity of compassion, blazing annihilation, or love.

The personalization and divinization of the universe is what most writers on the Cosmic Christ agree on: a *vehicle* of "vocation" is the way the Cosmic Christ may be ushered in (Teilhard de Chardin 1960b, p. 46). Central in this vision is the realization that there can be no mention of a divine milieu, anthropogenesis, hominization, or Omega Point without mention of personal *vocations*. The universal divine milieu is the ultimate point upon which "all realities converge" (Teilhard de Chardin 1960b, p. 114) and the reason for the radical spiritualization in the human species is the creative *vocational* channel the Cosmic Christ carved in the collective psyche (Jung) or noosphere (Teilhard):

Christ—for whom and in whom we are formed, each with his own individuality and his own vocation—Christ reveals himself in each reality around us, and shines like an ultimate determinant, like a centre, one might almost say like a universal element (Teilhard de Chardin 1960b, p. 125).

The divine milieu is not a fixed point in the universe, but a moving center that we each, in our

own individual ways, have to follow like a loadstar and to this end: “That star leads each man differently, by a different path, in accord with his vocation” (Teilhard de Chardin 1960b, p. 139). Thus, the soul of each person is not the entire cosmos. Rather, the end point is reached in “the body of him who is and of him who is coming” (Teilhard de Chardin 1960b, p. 155). What is the nature of the Divinity “who is coming”? This remains the main question to many, not to Chardin. For him belief in the second coming of Christ is enough, for it had already occurred in Teilhard.

While Chardin’s notion of the Cosmic Christ began with a vision in 1916 in China, it was not until 14 years later, in 1930, that the idea of the “convergence of the cosmos” and the whole train of consequent ideas evolved in him into “the Law of Complexity-Consciousness, the Confluence of human branches, and existence of an Omega Point at the head of Noogenesis” (Teilhard de Chardin 1978, p. 48). In a section called “The Religion of Tomorrow” he adds: “*In a system of cosmo-noo-genesis, the comparative value of religious creeds may be measured by their respective power of evolutive activation*” (Teilhard de Chardin 1978, p. 97).

What Chardin actually means by Cosmic Christ was stated perhaps most succinctly in one of his last statements written in March 1955, one month before he died: the Truth had to appear only once to begin its spreading effect universally, with the aim of setting “everything ablaze” with a Light that testified that “*sooner or later there will be a chain-reaction*” (Teilhard de Chardin 1978, p. 102). This chain reaction is the spirituality of the earth’s peoples that is coming.

In sum, we all evolved from the massive explosion of a supernova that burst beautifully against a sea of dark energy and dark matter 13.7 billion years BCE, and that incredible blaze of cosmic Light can still be perceived both in the physical world and in the inward mirror reflection of human consciousness, at its dawn state; preserved as it has been, for at least 30,000 years in Paleolithic cave paintings, the first explosions of cosmic thought appeared in portrait representations of shamanistic art and continued, for

example, psychologically in Jung’s hypothesis of the Self, as it appears variously in the world’s religions and now reawakens in the Age of Aquarius (Herrmann 2010).

## Temenos

Ronald Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

*Temenos* [Greek τέμενος] refers to a piece of land set aside or cut off from everyday use and assigned as a special domain for the veneration of

a temporal ruler or a god. It may also be a built structure as in a *temple* that has been consecrated for a sacred purpose, such as a place of sacrifice to a deity or of worship.

A *temenos*, in a narrow sense, is a Greek sanctuary that has been constructed in a specific location that has significance for a ruler or god to be venerated. The temenos dedicated to the chief of the gods at Olympia is called the temenos of Zeus. A temenos may be demarcated by boundary stones possibly erected as a colossal wall or rampart. It is frequently associated with a special tree, such as the Bodhi tree (Sri Maha Bodhi), under which Siddhartha Gautama sat and achieved enlightenment and which was to become the site of the Mahabodhi Temple of Buddhism. The temenos may, itself, take the form of a sacred grove of trees, such as Plato's *grove of Academe* outside of Athens.

The practice of dividing the world into sacred and profane precincts is observed throughout prehistoric, ancient, and civilized societies. The temenos universally represents a sacred place set aside from the secular or profane world. It is an integral part of so-called primitive cultures where the sacred place was seen as the center of the cosmos (the Axis Mundi) and was often marked by a sacred tree which represented death and rebirth and the connection between heaven, earth, and hell. Stone and water were usually also a part of the sacred place – stone for its symbolization of permanence and water for purification.

From Celtic spirituality comes the concept of the *thin place*, an idea that is related to that of temenos. A thin place is a sacred place where the veil or membrane between heaven and earth is thin or where one can pass easily back and forth between the material and spiritual worlds. A thin place may be a specific location where great spiritual energy is experienced by many as being received, such as at Stonehenge, Glastonbury, Luxor, or Mecca. It may be situated on a mountain such as Sinai, Ararat, Machu Picchu, Fuji, or Athos. A temenos or temple is often erected at or near the site of a thin place in response to the presence of spiritual energy that is found there. The temenos serves to facilitate passage between the opposing realms of the

visible and invisible, conscious and unconscious, inner and outer, and spiritual and earthly.

In a certain sense, the work of depth psychology, as experienced in the encounter between analyst and analysand, is soul work. The work of this interaction is benefited by a space that is experienced by both therapist and patient as quiet, safe, and sacred, where it is possible to access the unconscious without fear of distraction from the profane world outside. The therapist's office is a form of holding place or vessel; its walls and ambiance cut it off from the rest of the world, so that the work of healing can be done. The therapy room may be seen to function as a thin place or temenos for the practice of psychotherapy. It might even be thought of as a sacred enclosure where a symbolic journey through death and rebirth can occur.

## Teresa of Avila

Ann M. Rothschild  
Private Practice, New York, NY, USA

St. Teresa was born on March 28, 1515, in Avila, Spain. She joined the contemplative Carmelite order, taking the habit on November 2, 1535. She founded her first monastery, St. Joseph, in Avila, in 1562. She then founded 17 convents, all smaller and simpler and with more discipline than the traditional ones of her times.

Teresa is best known for her three main works. The first was her autobiography, *The Life of Teresa of Jesus*, written when she was in her 40s and completed in 1565. *The Way of Perfection* was written a year later in 1566. Finally, near the end of her life, in 1577, when she was 62 years old, she completed *The Interior Castle*, a work she considered a masterpiece, her best work. She died on October 4, 1582. She was canonized in 1622. In 1970 Pope Paul VI declared her a Doctor of the Church.

St. Teresa suffered from serious illnesses. She was bedridden for years. She had emotional issues as well. From the beginning of her religious life, she faced enormous physical and spiritual challenges. She had to find her way, and she began by exploring herself. Her spiritual/psychotherapeutic journey was typically a slow, arduous journey requiring courage. Yet she was always attentive, constantly and consistently moving toward self-integration. She visited those places we might call mad or unreasonable. She noticed and then abstained from her “old passions,” her neuroses. She prayed, she meditated, she contemplated, and she looked within, all the time. Her journey to God was a journey to herself. She was a strong individual and example of a woman who strived through discipline, through prayer, through contemplation, and through seeking self-knowledge, to actualize herself. We can easily apply these spiritual struggles to a psychological perspective. She has been called a “psychological mystic.” Self-knowledge was very important to her. “This matter of self-knowledge must

never be neglected...” (St. Teresa of Avila, 1960, p. 145).

In *The Interior Castle*, she explores her “interior” self in a journey through seven “mansions.” Consistent with modern psychotherapeutic theory, houses often represent the self. This is a spiritual journey but a psychological one as well. As in therapy, it is a voluntary journey. It is also a heroic journey into the unknown. As in therapy there are stages. In St. Teresa’s first three stages or “mansions,” we are more active. We meet and become aware of our demons. We fight and subdue them. But after the fourth mansion, we can become less active and more receptive. We can go deeper. In the psychological journey, St. Teresa can be a guide to finding and growing an inner self, becoming clearer and deeper room by room. Especially for those with a lack of a sense of self, or those dealing with a narcissist or a schizoid dynamic, reading St. Teresa can be very helpful.

Therapists can find a model in St. Teresa as well. Often a new therapist is very active like the seeker in the beginning mansions. As she notices by exploring her own vices, like the religious person seeing what keeps her away from God, she sees that activity gets in the way. And as she reflects on how her own dynamics contribute to excessive activity, she can become less active, able to use Freud’s suspended, free-floating attention. Few words are required. There is less effort, more listening.

## Thanatos

Nathan Carlin

McGovern Center for Humanities and Ethics,  
University of Texas Medical School, Houston,  
TX, USA

The Greek word Thanatos literally means “death.” Thanatos also can have metaphorical meanings, such as the personification of death (cf. Romans 5.14 and 1 Corinthians 15.26), as well as spiritual meanings, such as eternal death (cf. 2 Corinthians 7.10). Edward Tripp (1970) notes that in classical mythology, “Thanatos was born of Nyx (Night)” and that Thanatos “and his brother Hypnos (Sleep) lived together in Tartarus” (p. 555). He also notes that “Thanatos appears in Euripides’s *Alcestis* to carry off the heroine from her tomb. Heracles wrestles with him, however, and brings her back to life” (Tripp 1970, p. 555). Tripp also directs us to these passages in mythology: *Iliad*, 16.453–455, 16.672–673, 16.682–683; *Theogony*, 211–212 and 758–766. This article will focus on Thanatos as it relates to psychology and religion, focusing in particular on the thought of Sigmund Freud, Norman Brown, and Robert Dykstra.

## Freud on Thanatos

In psychological circles, Thanatos always recalls Freud’s theory of the death instinct (some prefer the translation “death drive”), despite the fact that Freud never used the word Thanatos in his writings. However, Freud all but invites the term when he writes in *Civilization and Its*

*Discontents*: “And now it is to be expected that the other two ‘Heavenly Powers,’ eternal Eros, will make an effort to assert himself in the struggle with his equally immortal adversary. But who can foresee with what success and with what result?” (1930/2001, p. 145). On the other hand, perhaps the omission of the title Thanatos was intentional, as it could intimate that the powers of Eros are more integrated, whereas the powers of the death instincts are more diffuse. Another explanation could be that the term Thanatos was first used by Wilhelm Steckel (Jones 1957, p. 273) and Freud and Steckel had a falling out (Gay 1988, pp. 213–124, 232), perhaps prompting Freud to never use the term in his writings. In any case, in Freud’s thinking, Eros is associated with the sexual and life instincts, instincts that tend to be constructive and have a uniting quality, whereas Thanatos is associated with the death instincts and have a destructive, aggressive, sadist, and even masochistic quality about them.

Freud first put forth his notion of the death instinct in *Beyond the Pleasure Principle*, and he did so first in speculation to make sense of a problem with his theory of dreams. Since Freud earlier argued that all dreams are wish fulfillments, anxiety in dreams was problematic for his theory. How, for example, could recurring traumatic dreams possibly be wish fulfillments? What we normally think of as nightmares, on the other hand, did not pose such a problem, because Freud explained nightmares as repressed wishes coming too close to consciousness. That is, nightmares are revisions of dreams that have come too close to exposing repressed desires. But explaining *recurring* dreams that produce anxiety proved to be much more difficult for Freud, so much so that he eventually postulated the idea of the death instinct. Freud talked of this recurring as a “compulsion to repeat.” And he believed that it was an attempt to gain control over past situations retrospectively. He also likened the death instinct to the property of inertia. He observed that there is a tendency in organic life to return to an earlier state of being – in religious language, “from dust to dust.” Freud famously proclaimed, “*the aim of all life is death*,” and in this sense,

the death instinct can be thought of as a suicidal impulse. But why, one might object, does not all life perish immediately? To this, Freud responded that our life instincts prevent this. And this seems to mean that the death instinct and the life instinct, taken together, guide organic life to die on its own terms. The death instinct also provides an explanation for aggression. Aggression, Freud came to believe, is the projection of the death instinct. The upshot of Freud's notion of the death instinct is that aggression is instinctual and basic to human nature. This means that attempts to eliminate particular aggressive behaviors will not solve any problems, which is why Freud argued that communism could not contain our aggressive impulses, because these impulses are not rooted in property (they are a part of human nature). Aggression cannot be eliminated; it can only be directed or channeled in better and worse ways (cf. Carlin 2009).

Freud's views on aggression and the notion of Thanatos have been debated and applied inside and outside of medical and psychological circles (see, e.g., Afkhami 1985; Arundale 2006; Bennett 2005; Brady 1974; Cho 2006; Groves 1999; Hutcheon and Hutcheon 1999; Marcuse 1966; Menninger 1938, 1942; Percy 1987; Ricoeur 1970; Stepansky 1977).

### Norman Brown on Thanatos

One of the more interesting philosophical and theological interpreters of Freud on the death instinct has been Norman Brown. In *Life Against Death: The Psychoanalytical Meaning of History*, Brown (1959) notes that in 1953 he "turned to a deep study of Freud, feeling a need to reappraise the nature and destiny of man" (p. xi). And in this book Brown argues that "mankind, in all its restless striving and progress, has no idea what it really wants," that "Freud was right: our real desires are unconscious," and that it "also begins to be apparent that mankind, unconscious of its real desires and therefore unable to obtain satisfaction, is hostile to life and ready to destroy itself" (1959, p. xii). Brown further suggests that "the theory of

neurosis must embrace a theory of history; and conversely a theory of history must embrace a theory of neurosis" (1959, p. 13). Brown believed that psychoanalysis "can provide a theory of "progress," but only by viewing history as a neurosis" (1959, p. 18). He elaborates:

If therefore we think of man as that species of animal which has the historical project of recovering his own childhood, psychoanalysis suggests the historical proposition that mankind will not put aside its sickness and its discontent until it is able to abolish every dualism (Brown 1959, p. 52).

The reunification of Life and Death, Brown writes, can be envisioned as the end of the historical process (1959, p. 91). David Greenham has written the first systematic work on the work of Norman Brown. Greenham (2006) notes that "Brown is not writing history from a psychoanalytic point of view—a study in the Oedipal motivations of "great individuals" for example—but he is interpreting the very drives of history using the implications of Freud's late metapsychology" (p. 77). And, in his chapter on Brown's *Life Against Death*, Greenham notes that, "For Brown history has no ontological weight, it is rather only a symptom; it is neurosis pure and simple," for "nature has not history; it just *is*, it does not *become*" (2006, p. 64). He elaborates:

So by the transformation of psychoanalysis into a theory of history . . . he means a theory of the *end* of history, as we find in the Bible, as well as in Hegel and Marx. Brown's history "ends" not with revelation or absolute knowledge or the dictatorship of the proletariat—though in part it is all of those things. His history ends by plunging humanity into the immanence of "nature" (Greenham 2006, p. 65).

It is difficult to imagine what it would mean to plunge humankind back into the immanence of nature. But if one were to be able to imagine it, it would be even more difficult to imagine how this might be possible. But what is clear is that Brown is articulating a critique of western civilization and its denial of death. Greenham writes:

So, according to Brown, humans repress their death and in so doing create history as the history of repression: civilization as neurosis. It is the

human failure to recognize, at the most basic level, that life and death are the “same,” one half of the dialectic; which both fuels history and its meaning. Freud, perhaps, suggests this conclusion when he argues that the goal of all life is death, but he shies away from the truth as Brown sees it, and retains a dualism (2006, p. 79).

Greenham argues that, for Brown, Eros is the key to unlocking—and ending—history (2006, p. 67), and Religion is important for Brown not because he is putting forward any particular faith, but because he sees religion as a half-way house to curing history (2006, p. 66). Again, it is difficult to understand how religion can cure history in the sense that Brown is suggesting, that is, by reuniting life and death. But another author, Robert Dykstra, a pastoral theologian, has written more clearly about how aggression – what, in the context of this essay, we might call Thanatos – ought to be integrated into the lives of Christian men, uniting, in other words, Eros and Thanatos.

### Robert Dykstra on Aggression

In his “Rending the Curtain: Lament as an Act of Vulnerable Aggression,” Dykstra (2005) reflects on God’s own lament over the death of Jesus to address the lives of contemporary Christian men. His central theme, as his title indicates, is what is called “the rending of the curtain.” When Jesus died, Dykstra notes, the biblical text records that the curtain in the temple was torn in two. Dykstra argues that here God not only revealed Himself but also *exposed* Himself. Just as the Son was exposed on the cross, literally crucified naked, God the Father likewise exposed His genitals in the rending of the curtain. Dykstra draws on Howard Eilberg-Schwartz (1994) to suggest that “the veiling of God may serve as a theological legitimation of male hegemony. Unable to identify God’s sex, Israel’s men maintain their status as God’s beloved, while at the same time remaining safe from insinuation of homoeroticism” (Dykstra 2005, p. 61). He elaborates,

If Eilberg-Schwartz’s provocative thesis about ancient Judaism’s prohibitions against speculation about God’s sexual anatomy is correct, I suggest that Gospel accounts of the rending of the temple

curtain change all this, and that the lament is at the very heart of this decisive, even earth-shattering change . . . . God’s own nakedness is at last revealed. In this, God the Father fully identifies with God the Son (Dykstra 2005, p. 62).

Such an interpretation as Eilberg-Schwartz’s regarding God’s body – i.e., God’s body is concealed in the biblical text so as to conceal the implicit homoeroticism of the men of Israel uniting with their male God – accounts, Dykstra believes, for why there seems to be “an enduring underlying anxiety among men that faith somehow threatens masculinity” (2005, p. 62). However,

God’s lament, then, drives God—and this underlying anxiety among men of faith—from the closet; an unbearable grief, shame, and rage in response to Jesus’ death compel God to step out from behind the curtain in all God’s desperate glory. In Jesus’ death, we at last get a full frontal glimpse of God. God’s lament removes the dividing line between the holy and the profane. As the curtain is rent in two, so too the old division between sacred and profane is forever torn apart (Dykstra 2005, p. 62).

For too long, Dykstra rightly notes, “good Christians” have falsely believed that they are not supposed to express or delight in such emotions. Men are to be composed, especially in difficult times, but the result is that men “tend, as a result, to experience a diminished capacity for intimacy, mutuality, and authentic forgiveness with God and one another” (2005, p. 63). But because of the cross, we find “a God now suddenly revealed in lament, angry, and aggressive while naked and vulnerable, a God engaging in a sacred exhibitionism,” and Dykstra’s hope is, as he so eloquently puts it, “Would that those men who have the most to lose could love a God like this, could love God like this, could finally, in the end, simply love like this” (2005, p. 68).

Dykstra offers one way – a compelling way, to be sure – to think theologically about Thanatos: God here is destructive and aggressive, ripping the curtain in two, while also naked and vulnerable, breaking the conventions of public decency. There are surely other ways to think theologically about the vicissitudes of Thanatos. In any case, the theme of Thanatos has persisted since ancient days and haunts us even today. Those interested in psychology and religion cannot afford to

neglect these forces, whatever their ontological status may be, since they are nevertheless real mythologically and emotionally (cf. Menninger 1938, 1942).

## Theodicy

David M. Moss III  
Atlanta, GA, USA

The term “theodicy” was adapted from the French *theodicée* which is a compound of the Greek *theós* (God) and *díkē* (justice). Etymologically it means the “justification of God.” Generally speaking, theodicy refers to the vindication of divine government given the existence of evil.

Whatever else may be said of evil, it is certainly the abuse of a sentient being, a being that can feel pain. It is the pain that matters. Evil is

grasped by the mind immediately and felt by the emotions immediately; it is sensed as hurt deliberately inflicted. Evil is never abstract. It is an existential reality and has to be understood in the personal context of suffering.

In fourth-century Athens, the Epicureans challenged the Stoics with a trilemma: if God could have prevented evil and did not, he is malevolent; if God would have prevented evil but could not, he is impotent; if God could not and would not, why call him God? Here is the primary moral quandary for any monotheism claiming God to be omnipotent, omniscient, and omnipresent. The problem is inescapable as well as profound. *Si deus bonus, vede malum?* “If God is good, why evil?” The insistence behind this question is the concentration of theodicy, a specific dimension of natural theology that attempts to justify or vindicate God’s morality vis-à-vis the evil that infects mankind.

The word “theodicy” was coined by the German mathematician and philosopher Gottfried Wilhelm Leibniz. In 1710 he used it as a theme and title of a book on metaphysics, *Essais de Théodicée sur la Bonté de Dieu*. Leibniz was a “theodician” who believed some error is unavoidable in any creature less perfect than its creator, all possible worlds contain some evil, and evil reveals good through contrast. If goodness was constant, we would take it for granted without realizing the blessings of God. In this life, evil is a necessary element like the shade in a picture, throwing into relief the beauty and harmony of the whole.

There are numerous dogmatic expressions of theodicy from two basic perspectives. The first emphasizes God’s ultimate goodness in spite of the existence of evil. Evil is negative but necessary. It eclipses the good which produces a contrast that ultimately clarifies God’s omniscience. Yahweh, for example, allows Job to be tortured and then rewards him. The second perspective is concentrated more on mankind’s responsibility than God’s because, in creation, the latter endowed the former with free will. The abuse of this freedom originates from within the human psyche. Injustice, cruelty, and

indifference are not divinely enabled but willfully enacted human behavior.

The subject of theodicy rarely appears in psychology texts or mental health journals. It is periodically addressed by grief literature and thanatology studies. The pastoral counseling movement has made some unique contributions to the literature via hospital chaplains who minister to the terminally ill. Pastoral counseling also explores the clinical significance of theodicy and how it can be used to intellectually block the grief process.

Theodicy may be seen as an indirect denial of God’s inconceivable nature or *mysterium*. For the justification of God’s permission of evil requires a comprehension of the incomprehensible. Nevertheless, the belief in an all-good and all-powerful God naturally leads to a faith in providence – *bonum ex nocentibus* – “out of evil good emerges.” Providence is hope that out of even the most negative experience, no matter how evil, as long as one chooses to look with insight, beneficial results will be revealed. To quote Milton’s *Paradise Lost*, “. . .to the height of this great argument I may assert eternal Providence and justify the ways of God to man.”

## Theophany

Emily Stetler

Department of Theology, Mount St. Mary's  
University, Emmitsburg, MD, USA

Coming from the Greek *theophaneia*, “appearance of god,” a theophany is a revelation of god in which the divine is mediated by sensible matter. A theophany, then, is distinct from other mystical experiences in that it involves material, rather than merely psychic, phenomenon. Indeed, in a theophany, the natural world may exhibit characteristics unable to be explained by laws of nature or unable to be replicated and verified by empirical experimentation. Further, while achievement of a mystical state oftentimes depends upon, or is at least facilitated by, entrance into a receptive emotional or psychological state, a theophanic experience does not; it seems to spring from a source external to the visionary. In scriptural accounts, theophanies seem to be an interruption of the visionary's psychic state rather than an outcropping of it.

Nonetheless, a person *can* induce a hallucination that he describes as theophanic through meditation practices or the use of psychedelic drugs.

It must be noted that a theophany specifically reveals the *deity*. A mystical vision of a saint (such as a Marian apparition in Catholicism) does not qualify as a theophany. “Theophany,” thus, is a more restrictive term than is “hierophany,” Mircea Eliade's preferred term for a manifestation of the divine.

Theophanies may be found in any theistic religious tradition and, in modern times, have even been reported by individuals not subscribing to any religion. From both a doctrinal and a literary perspective, though, theophanies often function to make immanent a god who is typically characterized as being transcendent.

The Hebrew Bible recounts several theophanies, including Abraham's reception of the divine visitors at Mamre, where God tells him that he will bear a son by Sarah (Genesis 18:1–15);

Moses' theophany on Mount Sinai, during which God inscribes God's law on the tablets of stone (Exodus 19:16–32:14); and Ezekiel's vision of the four living creatures and the wheels (Ezekiel 1:1–28). Two especially paradigmatic theophanies are Jacob wrestling with God (Genesis 32:22–33) and Moses and the burning bush (Exodus 3:1–4:7). In the former narrative, Jacob's body attests to the contact with God; after the encounter, Jacob's hip is dislocated. In the burning bush account, we see the divine utilizing the material world, yet transcending natural laws: the bush burns, but it is not consumed, as it would be by a merely natural flame.

Although inhabiting the material world, and thus less ephemeral than other mystical experiences, most theophanies are, nonetheless, temporary; after the deity has revealed its purpose to the visionary, the divine presence withdraws, and the natural world assumes its normal workings. The most enduring instances of theophanies are incarnations, in which the god assumes human (or animal) flesh and remains revealed for the duration of its earthly life. For Christianity, the incarnation of the Second Person of the Trinity as the historical Jesus is the ultimate revelation of God. The Eastern Orthodox churches, in fact, observe January 6 as the Feast of the Theophany, commemorating the Baptism of Jesus. (In the Western churches, January 6 is celebrated as the Feast of Epiphany and recalls the visitation of the Magi to the newborn Jesus.) As narrated in the Gospel accounts (Matthew 3:13–17; Mark 1:9–11; Luke 3:21–22), Jesus' baptism portrays a unique theophany in Christianity – one that features the manifestation of all three Persons of the Trinity: the Father speaks, “This is My beloved Son,” as the Son emerges from the waters of the Jordan, and the Spirit descends in the visible form of a dove.

Hinduism, too, has incarnational theophanies in its idea of avatars. In Hinduism, a god may become incarnate more than once through the ages, and each incarnation is known as an avatar (from the Sanskrit *avatāra*, “descent”). The most well-known examples are the ten avatars of Vishnu. The versions vary slightly, but the Garuda Purana provides a standard list: a fish,

a tortoise, a boar, a lion man, a dwarf, the man Parashurama, the man Rama (legendary king of Ayodhya and hero of the Ramayana), the god Krishna, and Siddhartha Gautama (the Buddha). The tenth avatar, Kalki, is anticipated to come at the end of the present age (the *Kali Yuga*) to combat evil and corruption and usher in a new golden age (the *Satya Yuga*). In all cases, avatars become incarnate in order to respond to a specific need of the cosmos.

Although generally Islam eschews theophany in order to safeguard the utter transcendence of God, the notion of theophany appears in the thought of some Sufi Muslims. For instance, the Andalusian Sufi Ibn 'Arabī (1165–1240 CE) developed a cosmology in which all of creation, including humankind, is essentially a theophany. According to Ibn 'Arabī, God desired to know Godself in others who know God. God's being unknown (both to others and, as one who is known, to Godself) caused God sorrow, a creative sorrow out of which God reveals Godself through creation. Creation is an exhalation of God or God's shadow; God creates *within* the space of God's own breath. Ibn 'Arabī's system is panentheistic, a world in which all is in God and is thus not totally other than God. Creation is necessarily theophanic. In particular, according to Ibn 'Arabī, the divine names of God are theophanic; through each name, God reveals to creation (and, therefore, to Godself as well) an attribute of God's own divinity.

## Commentary

In psychoanalytic theory, mystical experience in general can be explained as misdirected sexual feelings, the mystical ecstasy proving for the sexual energy an outlet without directly engaging the sexual. Also, the psychic struggle between a superego and a force placing strictures on it can bring about a theophany when the psyche surrenders to exhaustion.

On the other hand, Jung ascribes theophanies to the unconscious. A theophanic experience, then, could be explained as the active imagination

probing the unconscious and assigning to the "vision" a particular theological significance.

Additionally, theophanic visions can be induced through the use of psychedelic drugs. The use of peyote in Native American ceremonies and references to soma in the Rig Vedas attest the widespread phenomenon of psychedelic theophanies.

Finally, a theophany may also be explained as a symptom of a psychotic or neurotic condition. Schizophrenics, in particular, may experience hallucinations that they describe as theophanic, particularly when the schizophrenia is marked by delusion, as well.

## Theosophy

Robert S. Ellwood

University of Southern California, Los Angeles, CA, USA

“Divine Wisdom,” is a system of thought emphasizing mystical insight into the inner workings of the divine nature. The term is often used more restrictively to refer to the modern movement inaugurated by the creation of the Theosophical Society in New York in 1875. The principal founders were the enigmatic Russian noblewoman Helena P. Blavatsky (1831–1891) and the US lawyer and journalist Henry Steel Olcott (1832–1907).

Blavatsky articulated an ideological basis for modern Theosophy in her writings, especially the monumental *Isis Unveiled* (1877) and *The Secret Doctrine* (1888). Olcott in turn was the first president of the organization. In his inaugural address of 1875, he referred to the conflict between religion and science which so disturbed

many Victorian minds, perceiving both pulpit and laboratory as, in his day, representing shallow, dogmatic views of truth. The real solution, he contended, lays in the rediscovery of an “Ancient Wisdom” known in former times but now nearly forgotten, except to various esoteric lodges and teachers, which could show anew the oneness of matter and spirit and the way to its realization.

Oneness and the Path constituted the essential message of the Theosophical Society. It was indicated in different words in the three objectives stated by the society, agreement with which is the only criterion for membership. Abbreviated and in current wording, they are to form a nucleus of the universal brotherhood of humanity; to encourage the comparative study of religion, philosophy, and science; and to investigate unexplained laws of nature and the powers latent in humanity.

Other teachings, developing implications of these principles and found in the writings of H. P. Blavatsky and other classic Theosophical writings, are also associated with the movement. One is that there are several “planes” or “bodies” in a human being and correspondingly in the cosmos. These embody different aspects of nature, but also in their interrelatedness express the ultimate oneness of reality. They are named and divided somewhat differently in different sources but include the physical, etheric or energy field, the “astral” (roughly emotional and mental-image sphere), mental, “buddhic” or intuitive, and “atmic” or divine.

Each individual is seen as a “monad” or “pilgrim” on a long journey, the “cycle of necessity,” passing through countless aeons, worlds, and lifetimes out from the one into the realm of manifestation, therein to experience it in innumerable ways, finally returning to the one enriched by all experience.

A corollary of this teaching is that some individuals are well ahead of the common run of humanity on the pilgrimage. They serve as guides and instructors to those willing to accept their tutelage. These persons are often called Masters, Mahatmas, or Elder Brethren. It was said that Blavatsky had a close relationship with certain

of them and that they had a role in the establishment of the Theosophical Society.

Modern Theosophy's history has been sometimes colorful, producing several divisions. All Theosophical groups have been relatively small but have had a significant cultural influence through their promulgation of concepts important particularly to modern art, poetry, and the "new age" movement.

## Tillich, Paul

Mark Gonnerman  
Sofia University, Palo Alto, CA, USA

### Tillich's German Years (1886–1933)

Paul Johannes Tillich (1886–1965), a Protestant Christian theologian and philosopher of religion, was born in the village of Starzeddel, East Prussia, a province of the German Empire where his

father, Johannes Oskar Tillich (1857–1937), was a conservative Lutheran minister and church administrator. In 1900, Tillich and two younger sisters, Johanna Marie (1891–1920) and Elisabeth (b. 1893), moved with their parents to Berlin, the city where their father was born and educated. Their mother, Mathilde Düselen Tillich (b. 1860), died in 1903.

After studying Greek and Latin at humanist *Gymnasien* in Königsburg and Berlin, Tillich pursued theological studies at the University of Berlin (1904), the University of Tübingen (1905), and the University of Halle (1905–1907). He completed his Doctor of Philosophy degree with a dissertation on philosophy of religion and Friedrich Schelling (1775–1854) at the University of Breslau in 1911. Tillich earned his Licentiate of Theology at the University of Halle with a thesis titled *Mysticism and Guilt-Consciousness in Schelling's Philosophical Development (1912/1974)*. By the age of 25, Tillich was prepared to lecture in both philosophy and theology at the university level.

Ordained a Lutheran minister in his father's church in Berlin in 1912, Tillich first served a parish in an inner city district of Berlin where he ministered to the working poor (Tillich 1931/1948). He also began to imagine ways to revive the relevance of Christian teachings among members of the educated classes.

In 1913, Tillich began his academic career with postdoctoral work on a *Habilitationsschrift* at the University of Halle, a thesis on philosophy and truth in theologians prior to Friedrich Schleiermacher (1768–1834) which would help him secure university employment. That same year he married Margarethe (Greti) Wever (1888–1968), a union that did not survive Tillich's volunteer service as a German army chaplain on the Western Front from September 1914 to December 1918. At war, Tillich witnessed countless horrific scenes, including the epic Battle of Verdun (February–December 1916), where he was responsible for the care and burial of thousands of combat casualties. Twice he suffered nervous breakdowns in response to what might now be diagnosed as post-traumatic stress disorder (PTSD). The World War, writes Tillich in 1919, "caused a tear

in the deepest foundations for me and my generation so great that it could never be closed up again” (Bayer 2009).

Following the war, Tillich began lecturing at the Theology Faculty at the University of Berlin as an untenured lecturer (*Privatdozent*). There he presented an inaugural address entitled “The Existence of God and the Psychology of Religion” and offered a course on “Christianity and the Social Problems of the Present.” In 1920, he met Hannah Werner Gottschow (1896–1988). They married in 1924, the same year Tillich became Associate Professor of Systematic Theology at the Phillips-Universität Marburg where, for a brief time, he was a distant colleague of Martin Heidegger (1889–1976). In 1925, he assumed a position as Professor of the Science of Religion at the University of Dresden where he produced *The Religious Situation* (1926), a critique of the spirit of capitalist society. In 1929, he was appointed Professor of Philosophy and Sociology at the University of Frankfurt. There he taught with Max Horkheimer (1895–1973) and Theodor Adorno (1903–1969), who arrived at Tillich’s invitation to submit a *Habilitationsschrift* on the Danish existentialist philosopher, Søren Kierkegaard (1813–1855).

With Frankfurt as a base, Tillich became well known through speeches and lectures promoting Christian socialism. His growing public presence brought him into conflict with the National Socialist government. At the end of 1932, he published *The Socialist Decision*, an appeal to the German people to choose socialism over Nazism. In April 1933, Tillich’s name appeared in German newspapers as an “enemy of the state,” and he became the first non-Jewish professor dismissed by a German university after Adolph Hitler (1889–1945) came to power. In May, he witnessed the public burning of his *Socialist Decision* in a scene that reminded him of paintings from the Spanish Inquisition. In December 1933, Tillich emigrated to the United States with his wife and daughter, Erdmuthe (b. 1925). (A son, René [b. 1937], has been a practicing psychologist in Hawaii since 1968.)

### Tillich’s American Years (1933–1965)

At the age of 47 and with rudimentary English skills, Tillich arrived in New York City at the invitation of Reinhold Niebuhr (1892–1971) with the promise of shelter and employment as a lecturer in philosophy of religion and systematic theology at Union Theological Seminary. He entered fully into New York cultural life and was promoted to the rank of Professor of Philosophical Theology in 1940, the same year he became a United States citizen. The sermons, courses, and lectures he offered to Union seminarians, Columbia University graduate students, émigré intellectuals, and the general public were usually oversubscribed.

Until his retirement from Union in 1955, Tillich was especially interested in relating pastoral theology to depth psychology, a project furthered by the New York Psychology Group he began with Erich Fromm (1900–1980), a social psychologist he first knew in Frankfurt. The group met monthly in the years 1941–1945, often gathering in Tillich’s apartment. Members included anthropologist Ruth Benedict (1887–1948), Presbyterian minister Seward Hiltner (1909–1984), psychoanalyst Rollo May (1909–1994), psychologist Carl Rogers (1902–1987), and Jungian analyst Frances G. Wickes (1875–1967) (Stokes 1985; Cooper 2006).

In the autumn of 1955, Tillich became one of four University Professors at Harvard, a prestigious appointment that allowed him to freely explore and integrate various domains of knowledge in relation to what he called the “ultimate concerns” of human beings. His stature as a public intellectual grew during this time to the extent that he was featured on the cover of *Time* magazine in March 1959. In 1962, he left Harvard for the John Nuveen Professorship at the University of Chicago Divinity School. There he lectured on the history of Christian thought and, in a joint seminar with Mircea Eliade (1907–1986), developed his thinking on systematic Christian theology in relation to the history of the world’s religions. He died following a heart attack in Chicago on 22 October 1965 at the age of 79. His ashes were interred on Pentecost in 1966 at

Paul Tillich Park in New Harmony, Indiana, the former site of a community founded by the Welsh socialist reformer, Robert Owen (1771–1858).

### Tillich's Theology and Psychology

Over the course of his American years, Tillich published the three-volume *Systematic Theology* (Tillich 1951, 1957a, 1963) that he began to construct while teaching at Marburg in 1924. This magnum opus is a sustained demonstration of Tillich's *method of correlation*, a question-and-answer approach to theological inquiry that shows how symbols that carry the substance of Christian teachings point toward answers to questions that arise out of particular life situations. This method is an expression of what Tillich calls the *Protestant principle*: a protest against absolute claims for relative realities. The Protestant principle and method of correlation serve as theological defenses against *idolatry*: the substitution of something for God that is not God, a reality referred to by Tillich as *ultimate concern*, *ground of being*, *being-itself*, *the unconditional*, or *God beyond God*.

The Protestant principle thus functions as a constant reminder that human beings are prone to forget or distort their reliance on the contingent circumstances that enable their existence. This leads him to define *sin* as estrangement from the way things actually are, exemplified by the love (*agape*)-centered *New Being* revealed in Jesus as the Christ, the one who bears witness to the New Creation anticipated by the Spiritual Community that is the essential or ideal church. Whether and how one participates in the life of this community is a matter of *faith*, “the state of being grasped by an ultimate concern” (Tillich 1963). As such, *faith* includes the experience of *doubt* and is different from *belief*, important points Tillich elaborates in his *Dynamics of Faith* (Tillich 1957b/2009).

The method of correlation requires that theologians grapple with major issues and ideas of their time, so Tillich turned his attention to Sigmund Freud (1856–1939), whose work he

first encountered in 1912, the year of his ordination. His engagement with Freud led him to conclude that “a religion that does not appeal to the subconscious basis of all decisions is untenable in the long run” (Tillich 1931/1948). As he became more involved with the theology of pastoral care at Union Seminary, he realized it had become impossible to develop a Christian theological anthropology “without using the immense material brought forth by depth psychology” (Tillich 1952b/2000). Moreover, Tillich recognized that the very idea of God was changing under the influence of psychotherapy on pastoral care, for the therapeutic encounter offers a “modification of the image of the threatening father—which is so important in Freud's attack on religion—by elements of the image of the embracing and supporting mother” (Tillich 1960/1984).

Tillich's most sustained psychological investigations concerned the existential status and function of *anxiety* in the history of western thought, especially with regard to the numbness, meaninglessness, doubt, loneliness, and cynicism he thought characterized his age. In his popular 1950 Terry Lectures at Yale, published as *The Courage to Be*, Tillich argues that the psychotherapeutic approach fails to distinguish between existential and neurotic anxiety. For this reason, the psychotherapist needs what the theologian is able to provide: “Only in the light of an ontological understanding of human nature can the body of material provided by psychology and sociology be organized into a consistent and comprehensive theory of anxiety” (Tillich 1952b/2000). Tillich's main contribution to psychology may be that he developed an ontology – a theory about the nature of being – in psychological terms.

A modern spiritual classic, *The Courage to Be* examines and demonstrates qualities of character and intellect that enable resistance to forces of dehumanization through the technical and psychological controls refined in the perpetual wartime economies of the twentieth century. Tillich is particularly interested in the ways “an existentialist revolt in art and literature” informed by depth psychology probes beneath surface-level reality in order “to save life from the destructive power of self-objectivation” (Tillich 1952b/2000).

Artists such as Nietzsche, Sartre, Camus, Kafka, Auden, and Arthur Miller, among others whom he mentions, are courageous because they do not back away from the anxiety of meaninglessness, but take it into themselves so that they might perform and thereby reveal the persistent and creative power of being in the face of the constant threat of nonbeing. “Being,” writes Tillich, “must be thought as the negation of the negation of being” (Tillich 1952b/2000). He concludes these challenging lectures by pointing to a middle way of faith in a “God above God” who experienced the dialectical play of an individual’s mystical participation and self-affirmation.

Tillich assumed that every supposedly secular inquiry is rooted in largely unconscious premises that betray a religious impulse. He wrote, “everything is secular, and every secular thing is potentially religious” (Tillich 1931/1948). Hence, Freud or anyone’s claim to scientific objectivity as an ultimate concern will rest on unscientific, largely unconscious foundations. Tillich puts it this way: “The naturalistic elements which Freud carried from the nineteenth into the twentieth century, his basic puritanism with respect to love, his pessimism about culture, and his reduction of religion to ideological projection are all expressions of faith and not the result of scientific analysis” (Tillich 1957b/2009).

As a preacher and teacher, Tillich reminded his listeners that it takes courage to recognize and accept that *you are accepted in spite of* the uncertainties, ambiguities, failures, demonic forces, and ever-present possibility of nonbeing that threaten to undermine a felt sense of existence as a secure, centered, loving, and free human agent. “You are Accepted” is Tillich’s succinct summary of the Christian gospel and title of his most famous sermon (Tillich 1948).

## Tillich’s Legacy

Tillich’s life and legacy represent a transition from the modern to the postmodern era in Protestant Christian thought. As he entered into a practice of interfaith dialogue in the last decade of his life, Tillich sensed that his heroic effort to

produce a coherent, comprehensive yet relatively isolationist theological *system* would soon be outmoded and thrown onto the “dustheap of the past” (Pauck and Pauck 1974). However, Tillich’s work continues to inspire and inform research in Christian and comparative theology, psychology, and religious studies.

It is, for example, fairly well known that Martin Luther King, Jr., (1929–1968) produced a doctoral dissertation on *A Comparison of God in the Thinking of Paul Tillich and Henry Nelson Wieman* (King 1955/2000), yet scholars are only beginning to explore the relation of Tillich’s theonomous social ethics to King’s thought and the American Civil Rights Movement generally. Second, while Tillich gave more attention to Freud than to Carl Jung (1875–1961) in his published works, recent studies by John Dourley (2009) underscore affinities between Tillich and Jung in their approaches to understanding the power of religious symbols and the sacramental impulse. Third, Jonathan Z. Smith has examined ways Tillich’s theological vocabulary informed the creation of religious studies as an academic field in America of the 1960s. “Tillich remains,” Smith claims, “the unacknowledged theoretician of our entire enterprise” (Smith 2010). Further study of Tillich’s influence may help us better understand some of the biases that inform the academic study of religion.

The passage of time allows for clearer and broader perspectives on Tillich’s contribution, and the recovery, translation, publication, and ongoing study of his sermons and writings further illuminate experiential and academic sources for his thought (there are over 600 items in the Tillich bibliography). Thus we are better able to appreciate the ways Tillich probed, interpreted, and related Christian spiritual truths to the human sciences so that they remain relevant to the many existential challenges of the present age.

## Traditionalism

Marta Dominguez Diaz  
 School of Humanities and Social Sciences,  
 University of St Gallen, St Gallen, Switzerland

Traditionalism is a contemporary esoteric current that develops a philosophy critical of modernity, based on a reinterpretation of the concept of "Philosophia Perennis." The notion is founded upon monotheistic theologies, and it understands the world as a created reality that conceals a system of divine signs. Signs, here, are particular manifestations of the truth; an absolute entity of divine nature manifested in all created things and beings. Perennial philosophers sustain that

everything is divinely created and that an ontological metaphysical essence exists in every created being. That is to say, it has always been and therefore its existence is not historically or culturally framed. Owing to its immutability and eternity, this spiritual essence is regarded as divine. According to Perennialists, human spirituality in its diverse manifested religious forms is the way that humankind has developed to participate of this Eternal Quintessence. Since it is believed that human participation in godly essence is entirely divine, human reasoning is regarded as not interfering in this process of divine apprehension.

From its early formulations in the late antiquity, with thinkers such as the Christian neoplatonists Ficino and Pico, to its flourishing during the Renaissance and its later modern and postmodern adaptations, Perennial philosophy has been expressed in diverse ways while remaining faithful to its driving ideas: Firstly, Perennial philosophy is understood to be both divinely received and beyond human action; secondly, Perennial philosophy assumes a divine original spirit in each being, who is aware of its originality. This process gradually distances the spirit from its source beginning immediately after creation. When people wish to regain the absoluteness of the origin, religious experiences are meant to be open accesses to the Divine, a way of returning to the original standpoint; and, lastly, the created world is ectypal of the primordial essence; there exist various explanations – remarkably, the neoplatonist and the neo-Pythagorean – on how this reproduction process occurs.

## History

Although these tenets have been present in Western esoteric thought since the third century CE, it was not since the Renaissance that the actual term “*Philosophia Perennis*” was literally used. It first appears in Agostino Steuco’s (1497–1548) book “*De perenni philosophia libri X*” (1540), and it was used to describe

scholasticism as the referential core from which all Christian teachings derive. The notion was later employed by the mathematician Gottfried Leibniz (1646–1716) who uses it to designate a universal mystical core, not only existing in Christianity but common to all the world religions. The notion “*Philosophia Perennis*” reappears in the twentieth century in the work of the English novelist Aldous Huxley (1894–1963). In his 1945s “*The Perennial Philosophy*,” Huxley describes it as a divine metaphysical entity existing in all substantial things and beings, connecting the physical, substantial world to the transcendent. Furthermore, for Huxley, this “*Philosophia Perennis*” is something with basics that have been apprehended and incorporated in the wisdom of peoples of every region in the world since the origins of humankind, but has only been more sophisticatedly articulated by what he called “higher religions” – meaning the main world religions: the three monotheistic creeds, Buddhism, and Hinduism. Accordingly, the plurality of religions of the world is, in this view, only a kaleidoscope of diverse manifestations of one unique divine truth, generally referred to – among modern authors – with the term “Tradition.” Tradition is for Traditionalists what the inner spirit was for former Perennialists, eternal, infinite, unaffected by contextual variables, cross cultural, and a historical.

Although Huxley’s work already made use of the term to build up a criticism towards the “modern world,” it was the French thinker René Guénon (1886–1951) who popularized the turned-into-critique term. Thus, it can be suggested that Traditionalism uses Perennialism to elaborate a variety of criticisms towards “the modern.”

In Guénonian Traditionalism, European civilization has progressively distanced itself from the “Tradition” that once was part of. This lack of memory, the forgetting of Tradition, makes European civilization entering a state of dementia, ultimately responsible for the supposed terminal decline in which Europe is in modern times immersed. Since it is only “Tradition” that can produce the foundation of a genuine

civilization, and its wholeness is somewhat quintessentially embodied in “Traditional religions,” only the return to this common wisdom can save Europeans or Westerners, in general, from the debacle. Christianity is generally discredited of being capable of such transformation. Hence, Traditionalists rely on non-Western religious wisdoms with the hope of, individual by individual, return to the West, its original spiritual sense, and with it saving from the moral crisis, if not the whole civilization as such, the souls of those individual spiritually awakened Westerners.

Despite of the fact that Perennialism has a longstanding trajectory, its instrumentalization as a critical discourse is much more recent. Traditionalism as such originates in Europe in the interwar period, taking its inspiration from the writings of René Guénon. The first Traditionalist groups were established before the Second World War, and they were the seed of what was going to become a relevant movement of international dimensions. In 1948–1950, the initial Guénonian school suffered its first division, creating the scission of a group led by one of the most prominent Guénonian disciples, the Swiss Muslim convert Frithjof Schuon (1907–1998). Decades later, Traditionalism has taken three main directions: (1) the one of Schuon, who created the Western Sufi order Maryamiyya, that grew in importance in Europe and North America and uprooted in Iran led by Dr. Seyyed Hossein Nasr (b. 1933); (2) the political orientation of the Italian Julius Evola (1898–1974), who transformed it into a post-Second World War fascist-inclined ideology inspiring some Italian terrorist groups of that time; and (3) the scholarly approach of the Romanian Mircea Eliade (1907–1986), who turned Traditionalism into a hermeneutical perspective to be used for the comparative study of religions.

## In Religion

Since its inception, Traditionalism has been closely connected to Western forms of Sufism.

The first followers of Sufism appeared in the West at the beginning of the twentieth century – writers such as Doris Lessing and Robert Graves. There have been other famous Traditionalist converts, but it is by far the figure of René Guénon, who has been most influential in inspiring many Western Traditionalists’ conversion to Islam. Coming from a catholic family, it is sometimes said, although it has not been proved yet, that Guénon was first initiated into Hinduism through the line of Shankarâchârya. However, he is more famous for moving to Cairo in 1911 – where he did live the rest of his life and where he had entered Sufism, adopting the Muslim name of “Abd al-Wahid.”

Traditionalist thought has also been crucially influential in the academic field of religious studies where instead of Traditionalists are generally called Perennialists. The school initiated by Eliade posed the notion of “mystical experience” at the center of a scholarly debate about the particular/universal nature of religious feelings. Scholars such as Rudolf Otto, Ananda Kentish Coomaraswamy, Walter Terence Stace, Daisetz Teitaro Suzuki, and Robert Forman are outspoken voices of this trend, decisive in the emergence of an academic school specialized in comparative religion. Perennialist authors have supported the idea that mystical experiences are ephemeral but ineffable, unmediated contacts with the Divine. They belong to the “One Core” though find expression in multiple forms, becoming what all Traditions worldwide have in common. Furthermore, in the hermeneutics of religious studies, the concept is commonly used to question the authority of empirical methods seeking objectivity to prioritize the value of the individual pulse and subjectivity. Today, authors such as William Chittick, James Cutsinger, Huston Smith, Harry Oldmeadow, and Seyyed Hossein Nasr use markedly Traditionalist perspectives in their scholarly works.

Critics of the Traditionalist approach suggest that Traditionalists apply Perennialist signifying layers to Sacred Texts, meanings that the text itself does not necessarily contain; critics suggest

that such misinterpretation derives from Traditionalists' *a priori* loyalty to their Traditionalist ideological stance.

## In Psychology

Traditionalism has supposed an important influence in the development of new trends of psychological theory, remarkably Transpersonal psychology. Transpersonal psychology is a modality that takes into consideration some aspects hitherto neglected by the previous schools of psychological thought. Transpersonal authors wanted to promote altered states of consciousness and mystical experiences as effective tools to consummate people's potentialities. The term "Transpersonal" is here used to denote that which goes beyond the self. Hence, for Transpersonal psychologists, psychical cure can only occur by abandoning the perceived as constraining self in order to gain access to an eternal meaningful reality of esoteric nature. This state may eventually help individuals to overcome "negative" feelings such as guilt or unease.

Transpersonal psychology is commonly known as the "fourth force," because it aims to overcome the limitations that Transpersonal psychologists perceive in the so-called first force (Freudian thought), second force (behaviorist school), and third force (humanist approach). It yearns to develop a radical new perspective by conceptualizing a leveled human psyche. Accordingly, it considers that both psychoanalytical Freudian thought and behavioral theorist have approached the lower levels of this scale but have failed to address the higher more sophisticated stages, those of the Transpersonal belonging to the transcendental.

The work of the Greek-Armenian Traditionalist George Ivanovich Gurdjieff (1877–1949) has been of particular relevance for the Transpersonal movement, specifically with regard to the insistence on a need for spiritual awakening and his theorization of "The Fourth Way" notion. Among the most prominent predecessor psychologists of the Transpersonal school are William James

(1842–1910) and Carl Gustav Jung (1875–1961). In his Gifford lecture (1901) at the University of Edinburgh (published in 1902 under the title of the varieties of religious experience), James became the first in supporting the study of religious experience using psychology's hermeneutics. Well versed in a wide variety of religiosities, ranging from Sufism, Buddhism, and Vedanta to the New Church, American Transcendentalism, the Theosophical Society, or some forms of Christian mysticism, James perceived the depth of human psyche as primordially spiritual.

Also attracted by several forms of religiosities was the Swiss Carl Gustav Jung. A former disciple of Sigmund Freud, Jung strongly disagreed with the Freudian conceptualization of religion as an outcome of neurosis. In contrast, he considered religion as genuine expressions of the psyche's universal patterns of human behavior. He typified religious feelings (mystical, philosophical, doctrinal, and so on) in accordance to the existing behavioral models. Further, in line with Perennialism, he suggested that religiosities were outer expressions of a "universal collective unconscious."

Despite these earlier contributions, it was not until the 1970s that Transpersonal psychology properly became a consistent, though controversial trend of psychological thought. The actual term "Transpersonal psychology" was for the first time employed by the Czech Stanislav Grof (b. 1931) who became famous for using LSD with his patients to help them "recover" pre- and perinatal memories. Since the 1970s, Transpersonal psychology has experienced a significant increase in popularity, when ideas of spiritual growth have extended beyond the psychological arena influencing various forms of New Age ethos and other manifestations of new spiritualities (notably, neo-paganism).

Transpersonal psychology is markedly Perennialist in that it assumes a timeless ahistorical dimension common to all human beings, and it proposes a return to the original source – here labeled as "high consciousness." It also shows a notable Traditionalist influence in that it uses a Perennialist perspective to build up its criticism

on modern society in general – its materialist excesses and superficial concerns – and in particular on modern psychological trends. However, Transpersonal psychology differs from Perennialism and Traditionalism alike, in its notorious, sometimes posed as problematic and contradictory, emphasis on the self that contrasts with the claim of abandoning the self to embrace a collective wisdom. Perennial philosophy also attributed a seed of divine nature contained in every individual, but the stress the Transpersonal circles put on self-experience denotes an individualistic shift not present in Perennialist or Traditionalist discourses. Further, even though Transpersonal's higher consciousness entails some kind of spirituality, Transpersonal psychology is in most cases detached from the Perennialist and Traditionalist theistic component. Nevertheless, its nontheistic approach has not exempted it from criticism. Transpersonal psychology's incorporation of Perennialist/Traditionalist principles into psychology has brought about fierce criticism from more secular-oriented psychologist sectors.

## Transcendence

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Transcendence is an experience central to both spirituality and therapeutic transformation. In fact, it may be considered the most important and distinguishing factor in any form of liberation as transcendence is an experience of moving from one mode of existence to another, for various reasons, and done in a myriad of ways. Understanding the nature of transcendence as a phenomenon is essential to any theory of change.

Transcendence originally meant “going beyond or outside” one’s situation. This sense of transcendence is clarified only in relation to what was meant by “immanence.” The differentiation of transcendence from immanence was a theological concern as it became central for theologians to distinguish between the nature, relationship, and place of God in contradistinction to humankind and the rest of the natural world. While these apologists sought to defend God’s existence as immutable and as the uncreated Creator of life, other thinkers took a contrary route than proposed God is immanent within, and as, nature. The latter positions became known as pantheism or pan-en-theism. Either way, the debates, often ending in accusations of heresy, sought to understand and/or explain a metaphysical puzzle of how finite existence comes to know and relate to the infinite.

Part of the difficulty in resolving the puzzle of transcendence and immanence was the presumption that both realities were places in space and time. In other words, transcendence was a state of existence beyond or out of physical existence. Immanence, on the contrary, was finite physical existence. This raised problems for theologians, though, particularly Augustine of Hippo (354–440), who defended the belief that God could not be understood in terms of created existence in time and space because doing so

would result in God’s eventual decay and mutability along with the rest of immanent reality. A decaying god is not a god at all for Augustine and other likeminded thinkers (Augustine 398/1961; Fitzgerald 1999).

Moreover, trying to resolve the finite/infinite dilemma by stating that the ability to understand transcendence is simultaneously professing the grandeur of God and stating that the infinite mystery is simply beyond the grasp of the finite mind left a blatant inconsistency unaddressed: How can a finite person “know” an unknowable transcendent reality? Nevertheless, said other apologists, the very fact that one can even *imagine* a transcendent God was evidence enough of the empirical reality of transcendence.

With the impact of logical positivism and naturalistic empiricism, however, transcendence as an immaterial reality is simply rejected as a viable possibility, and no amount of faith in the unseen was able to squelch the need among natural scientists for observable proof as a prerequisite for assent. Empirical theologians of “The Chicago School” focused their energies on responding to the apparent scientific/religious rift, gaining particular ground with process theology based on Alfred North Whitehead’s thought (Meland 1969). The tradition of empirical theology opened other possibilities of understanding transcendence as a natural phenomenon that is consistent with natural science convictions while remaining meaningful to human significance.

Transcendence is also understood in other ways within various religious traditions. In Judaism, for instance, transcendence has been understood as that which is “hidden” or inexhaustible or, better yet, as the overwhelming power of the numinous. Thus, we hear of the inability to look on the face of God. What is also emphasized in Judaism is the poverty of language to capture and denote what is represented by transcendence. References to the divine are pointed differently in Hebrew or written in transliterated English as G-d. In Buddhism, we experience the possibility of *shunyata*, or emptiness, the void, or no-thing, which transcends attachments and binding

images. This is achieved *within* immanence, which is unlike the Hindu goal of escaping rebirth by transcending material desires. Both Buddhism and Hinduism, therefore, see transcendence as the state of relinquishing attachments, a theme which is present in any ascetic tradition. For Islam, and other traditions emphasizing the absolute transcendence of the divine, however, any link of immanence with God drifts lands us in into idolatrous conditions and should be abandoned.

Another very interesting conundrum in the history of transcendence, a nuance of the finite/infinite dilemma, is the paradox of personalistic relationships with God, when God's transcendence is supposedly beyond any personalistic and/or anthropomorphic representation. Nevertheless, transcendent experiences are related to prayerful and mystical experiences of intimate encounters with God as a person, despite the belief in the Eckhartian-flavored understanding of the experience of God as beyond any conceptualization of God. Understanding God as an enigmatic experience beyond any and all theistic conceptualizations. These challenges to understanding transcendence in theological and religious traditions join other philosophical ones.

Immanuel Kant (1724–1804) stood at the interstices of theology, philosophy, and psychology and defined the transcendent as that which lies beyond what our faculty of knowledge can legitimately know, thus, placing the transcendent beyond the scope of epistemology. At the same time, Kant saw the “transcendental” as the very conditions of the possibility of knowledge itself (Kant, 1781–2008). The father of transcendental phenomenology, Edmund Husserl (1859–1938), borrowing from his teacher Wilhelm Dilthey (1833–1911), understood transcendence as that which is beyond or separate from the constructs of our consciousness (Husserl 1962). Martin Heidegger (1889–1976), Husserl's student and assistant, came to a view of transcendence that reversed his teacher's position. For Heidegger, transcendence is always and already occurring within the context of our finitude and thrownness (Heidegger 1962). States of consciousness, therefore, are not separate from the world but

are contextual and co-constructive of experience in the world.

Transcendence, then, becomes a hermeneutical activity for Heidegger in which the interpretive process unveils authentic ways of being in the world. Jean Paul Sartre (1905–1980), the French existential phenomenologist who saw much of his work as a continuation of Heidegger's project, saw transcendence as describing various relations of the self to the object-oriented world, including our relations with others. For Sartre, the “for-itself” is sometimes called transcendence, as such a state of existence seeks the freedom to create one's meaningful existence. This is opposed, for Sartre, to an unfree existence in which one forfeits one's subjectivity in collusion with the other's objectifying gaze (Sartre 1956). Finally, the Swiss psychiatrist Karl Jaspers (1883–1969) saw transcendence as that which is beyond time and space, or what he called the encompassing, which is ultimate nonobjectivity (no-thing-ness) (Jaspers 1971).

Current discussions of transcendence continue to resolve age-old dilemmas of describing the experience in ways that are respectful of freedom and transformation while attempting to resist reductionism. This is the case in theology, philosophy, and psychology. A few remaining issue merits address, however, for the future of clarifying transcendence.

## Commentary

What is vital in a contemporary understanding of transcendence, particularly as it relates to immanence, is to understand it as a *qualitative* experience and not to equate it with a location in physical space and time or as something that can be measured. We are still squeamish about immaterial realities. The recent debates on reducing transcendence to genetics and/or neuroscience are cases in point (Hamer 2005; Zimmer 2005), although it can be relieving to align with the “hard” scientists in order to receive their kind of evidence as further legitimization of transcendence. At the same time, it very well may be the

inaccurate approach with which to address this matter. Something seems anticlimatic about knowing that God's name is "Gene VMAT2!" Again, the perpetuated mistake in approaching transcendence in this way is in misunderstanding transcendence as a person, place, or thing. Transcendence is an *experience of liberation*, a type of qualia that is invisible, immeasurable, and incomparable, because not substantial.

Is the relationship between transcendence and immanence oppositional? Can one hold a respectable postmodern position without fusing transcendence with immanence? If transcendence is immanence, then how can we discern one experience from the other? These questions presume a faulty assumption, which is that immanence and transcendence are antagonistic polarities. The morphing of our understanding of transcendence has shown the contrary to this conclusion. The relationship between transcendence and immanence is a dialectical one, and, moreover, one in which each one cannot be understood without presuming the other. Tom Driver (1985) noted how transcendence is radical immanence. As Jean-Luc Nancy (1993) has proposed, we understand freedom only in light of "thrownness."

Finally, although discussions of transcendence as ascendance, as escape, as dissociation, or as a Gnostic extrication of our physicality mitigate against an existential conviction of transcendence within immanence, these experiences are nonetheless popular understandings of transcendence. The desire to escape one state of existence for another is at the heart of trance induction and other religious rituals. Opening ourselves to "other worlds" can give perspective to this one. Dissociating during the horrors of physical and sexual abuse can be the only freedom one may have during such a tragic time. Imagination of other worlds, other compartments, and other possibilities is perhaps the most powerful form of transcendence available to any of us and can be considered an existential. On the other hand, transcendence as escape is the project of the suicidal candidate, though a project carried out through a narrowed attunement to possibilities. Moreover, encouraging otherworldliness as a solution to confronting the complexity, pain,

and suffering in this existence can lead to a lack of concern for this life at least, and a hatred for it at best, much like Friedrich Nietzsche (1844–1900) predicted. Agreeing with the sentiments of Nietzsche, Erich Fromm (1900–1980) noted that the pull away from life and toward a Freudian return to inorganicity is more appropriately driven by an escape from freedom. Contrary to common assumption, we often fear the freedom from which and to which transcendence delivers us (Fromm 1941).

In fact, what may fuel the pain of this life may be the perpetual desire to transcend-as-escape it. The remedy to our unnecessary suffering, then, may be to give oneself over to another kind of immanent transcendence, which lives out life all its pathos, as Michel Henry (1922–2002) advised, and experience the paradox of transcendence: We transcend existence when we enter it (Henry 2002). This is not an invitation to ignore oppression or deafen calls for liberation and deliverance. On the contrary, an invitation to live life in its fullness and uniqueness can very well inspire a more vivid respect and sensitivity to creating free, meaningful, and fulfilling lives for each and every person and/or sentient creation.

other way around. In analysis, the analyst can mediate the transcendent function for the analysand through the transference, and in this way, the patient experiences the analyst as indispensable. Jung defined his approach to transference as “constructive” which is based on evaluating the symbol via dreams and fantasies. It is the symbol that is “the best possible expression for a complex fact not yet clearly apprehended by consciousness” (Jung 1960, p. 75).

In his paper on the transcendent function, Jung writes about his constructive approach to dream analysis. In order to exemplify this, he cites the dream of a woman patient in which someone gives her a wonderful, richly ornamented, antique sword dug up out of an ancient burial mound. He interpreted this as her need for the inner father she needs to relate to in order to help her disidentify with remaining in a perpetual passive childlike state. Her actual father was a passionate, energetic man, and it is this energy that the patient needs to find in her inner father in order to live life fully.

According to Jung, the self-regulating function of the psyche can be helped through dreams but more importantly through fantasy which enables unconscious material to become activated through activating the transcendent function. In order to do this, he advocates the use of active imagination via drawing, painting, or sculpting which can give expression to unconscious material which may be expressed in a mood. Critical attention must be eliminated during this process and creative formulation allowed to break through. The second, more important stage of *active* imagination is for ego not to be overwhelmed by unconscious contents. An important way forward is the development of an inner dialog in bringing together the opposites for the production of the third, which is the symbol. Through this transcending of opposites, consciousness is widened by confrontation with unconscious contents, and the transcendent function proceeds not without aim and purpose but can enable an individual to move beyond pointless conflict and avoid one-sidedness.

As Jung says, truth, law, guidance is said to be nowhere save in the mind. “Thus the unconscious

---

## Transcendent Function

Ann Casement

British Jungian Analytic Association,  
London, UK

*Transcendent Function* is a term that first appears in a paper Jung wrote in 1916 where he states it is neither mysterious nor metaphysical but is, instead, a psychological function “comparable in its way to a mathematical function of the same name, which is a function of real and imaginary numbers. The psychological ‘transcendent function’ arises from the union of conscious and unconscious contents” (Jung 1960, p. 69). As Jung states, the unconscious behaves in a *compensatory* or complementary manner to consciousness and vice versa. If consciousness is too one-sided, the unconscious may break through via slips of the tongue.

The transcendent function is so called because it enables the transition of contents from the unconscious to consciousness as well as the

is credited with all those faculties which the West attributes to God... the transcendent function... the phenomenon of spontaneous compensation, being beyond the control of man, is quite in accord with the formula 'grace' or the 'will of God'" (Jung 1958, p. 506).

The mediatory process of the transcendent function forms the material of construction "in which thesis and antithesis both play their part. . . in the shaping of which the opposites are united (in) the living symbol" (Jung 1971, p. 480). This symbol formation through the mediation of the transcendent function in the conflict of opposites is to be found in the struggle between Jesus and Satan, Buddha and Mara, or the regeneration of Faust through the pact with the devil.

### **Transference, the Transcendent Function, and Transcendence**

The analytical psychologist, Ann Ulanov's paper of the above title illustrates how transference, like dreams and symptoms, inevitably introduces the transcendent function in the course of analytic treatment. "The transcendent function is part of the compensatory function of the transference" (Ulanov 1997, p. 125). The analyst and analysand consciously take up what the psyche does spontaneously in producing opposite points of view in order to reach its goal of individuating or broadening consciousness. The analysand is dependent on the analyst's involvement and Jung's approach to the analytic process "consisted essentially in a dialogue and a mutuality requiring the emotional involvement of the analyst for change to occur" (Casement 2001, p. 79). Ulanov also alerts to the dangers of analyst and analysand "bumping around in the psyche" together which can take the form of inflation, seduction, power plays, and defensive intellectualizing.

"The transcendent function inaugurates transition to arrival of the new" (Ulanov 1997, p. 126). This initiates the arrival of a third point of view which surpasses the conflicting opposites and creates a space between consciousness and the unconscious wherein symbols arise. "In the

process of the transcendent function we not only struggle with opposites in ourselves, we also inhabit the opposites of our historical time" (Ulanov 1997, p. 137).

Ulanov relates the transcendent function and transference to transcendence which is not an abstraction but exists in the here and now. "Spirit and body go together. Transcendence always effects a striking conjunction of the particular and the universal, the awe-inspiring and the humdrum, the vast and the concrete." She quotes Jung as follows: "Analysis should release an experience that grips or falls upon us as from above, an experience that has substance and body . . . . It must be organically true, that is, in and of our own being. If I were to symbolize it I would choose the Annunciation" (Jung 1925/1989, p. 80).

### **Jung and Hegel**

The analytical psychologist, Hester Solomon, states that the schema of psychological functioning that Jung developed in the *Transcendent Function* has a parallel in the philosophical vision of Hegel's dialectic. In the immediacy of the disintegrating psychological experiences that he went through in the years between 1912 and 1916, Jung swung from one pole of experience to the other. Through this dynamic interplay, he was able to achieve a personal synthesis, a position of relative integration between the conscious and unconscious attitudes. So Jung himself was living the dialectic (Solomon 2007).

As Solomon goes on to say:

Hegel's grand design is an attempt to understand reality as constructed historically in pairs of opposites that are not dichotomous but are rather in intimate, dynamic, albeit oppositional relation to one another. The dialectical model allows for a twofold view of reality, on the one hand in terms of bipolar opposites in dynamic relation to each other, and on the other hand a unity of opposites towards which each strives. . . The task of dialectical philosophy is to strive for greater and greater comprehension until a kind of totality of understanding is achieved. This is what Hegel called 'absolute reason' (Solomon 2007).

The tripartite structure of the dialectical process, like the transcendent function, expressed as thesis/antithesis/synthesis reflects an archetypal pattern with the third position consisting of a resolution that has the capacity to hold two apparent opposites together. It is through the tension and conflict created by the dynamic relationship that a creative, forward-moving resolution is achieved between, for example, self and another whether it be mother/infant or analyst/analysand. This is also to be met in the “Christian idea of the threefold nature of God as Father, Son and Holy Spirit; Spinoza and Descartes’ threefold vision of reality as consisting of three different kinds of substance (thought, nature and God); the Socratic dialectic whereby rigid positions are confronted and thereby changed by adroit questioning. . .all attest to the ubiquitous, deep structural nature of the tripartite dialectical vision” (Solomon 2007).

Solomon’s conclusion is as follows: “Jung’s concept of the transcendent function and Hegel’s dialectical vision both seek to address similar understandings of psychic reality and as such demonstrate a remarkable similarity of structure” (Solomon 2007).

## Transcendent Function and Reflective Function

The analytical psychologist, Jean Knox, explores Jung’s concept of the transcendent function in relation to research on the reflective function in attachment theory. She states: “The concept of reflective function has emerged to explain the vital role that the parent plays in facilitating the child’s capacity to relate to other people as mental and emotional being with their own thoughts, desires, intentions, beliefs and emotions” (Knox 2003, p. 10).

Jung was using the term transcendent function to describe an individual’s capacity to tolerate difference in others and also in oneself. “In attachment theory it is the development of this capacity which defines reflective function, in that reflective function depends upon the awareness that other people have minds of their own

with beliefs and judgments that may differ from one’s own. . .Both transcendent function and reflective function are descriptions of the capacity to relate to other people as psychologically as well as physically separate” (Knox 2003, p. 164).

She goes on to say:

There would seem to be sound neurophysiological support for Jung’s model of the transcendent function as a dialog between conscious and unconscious processes of appraisal. Allan Schore draws on empirical research to support his view that the right hemisphere is predominant in “performing valence-dependent, automatic, pre-attentive appraisals of emotional facial expressions” and that the orbito-frontal system, in particular, is important in assembling and monitoring relevant past and current experiences, including their affective and social values. Crucially, he extends this appraisal function of the orbito-frontal cortex to underpin reflective function itself. (Knox 2003, p. 198)

It is this capacity for integrating opposites, emotional appraisal, and psychological separateness that Jung was pointing to in his concept of individuation in which the transcendent function plays such a major role. If “the ego is too unstable and weak to moderate impulsivity enough to allow for the constellation of the transcendent function. . .Shadow roles and impulses are acted out, without the appearance of a transcendent function to bring about an integration of opposites” (Stein 1998, p. 124).

## Transcendental Meditation

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Transcendental Meditation, popularly known as TM, was introduced by Maharishi Mahesh Yogi (1917–2008) in 1958. Today, its programs and related initiatives are represented on six continents, claim upwards of six million adherents, and boast campuses in the United States, Mexico, England, India, and China.

It was not until the Beatles went to India and met with its founder, however, that TM made its appearance on the Western stage. Subsequently, many artists followed suit and brought with them into the Maharishi's fold innumerable devotees. Such widespread – if fleeting – fervor was enough to win the Maharishi the cover of *Time* Magazine in 1975.

The techniques of meditation are claimed by its founder to be “a path to God.” To follow this path, however, TM does not require any change in either faith or belief.

TM has, since its inception, invited and encouraged scientific investigation of its claims.

Because of this remarkable openness, a wealth of studies has been conducted on the salutary effects of which practitioners of TM claim to be in receipt. The first wave of these studies was published in the early 1970s and found that the techniques utilized by practitioners of TM led to a state of “restful alertness.” Subsequent studies have investigated TM's role in reducing blood pressure, obesity, depression, and a host of other afflictions – somatic and otherwise. These results, however compelling, are far from being undisputed, however.

This scientific turn, while relatively new in the history of religions, is certainly not restricted to TM, though it *is* emblematic of the trend to psychologize religion and in particular spiritual praxes. TM is a particularly salient example of how the religious and psychological horizons can be imperceptibly fused in a single tradition.

Criticism of TM has been harsh – even vituperative. Former members have come forward alleging that it is a cult, entangling the unsuspecting in the insidious web of its rhetoric. Adherents, on the other hand, hail the triumph of TM as the first truly universal spiritual practice scientifically proven to aid in evolution. In any event, TMs reception in the United States has irrevocably altered the landscape of the American religious imagination.

## Transference

Benjamin Beit-Hallahmi

Department of Psychology, University of Haifa,  
Haifa, Israel

The idea of transference is at the center of the classical psychoanalytic theory of object relations. Early object relations patterns, formed by our experiences within the family, become consolidated and remain relatively fixed throughout adult life. They are revealed as emotional reactions in interpersonal situations which are highly intense and realistically speaking quite improper. Any strong emotional reaction formed quickly in an interpersonal encounter, such as love or hate at first sight, represent a transference reaction, i.e., a reaction to a present object which is in reality an acting out of a childhood reaction to one's parents or other close figures.

Sigmund Freud claimed to have discovered transference through the practice of psychotherapy according to his/her technique of psychoanalysis. He reported that those being analyzed by him were not ready to regard the analyst merely, and realistically, as a helper and adviser. The analysand sees in the analyst "the return, the reincarnation, of some important figure out of his/her childhood or past, and consequently transfers on to him feelings and reactions" (Freud 1940, p. 192). These feelings and reactions are ambivalent, comprising both positive and affectionate and negative and hostile attitudes towards the analyst, who is put in the place of the analysand's parents, either father or mother. The transference is made conscious by the analyst and is handled by showing that the transference is a reexperiencing of emotional relations which had their origin in the earliest object relations in childhood.

Positive transference serves to create an attachment to the analyst, as the analysand seeks to please the analyst and win his/her applause and love. In Freud's phrasing, it becomes the true motive force of the patient's collaboration, his/her weak ego becomes strong, under its

influence he achieves things that would ordinarily be beyond his/her power, and he leaves off his/her symptoms and seems apparently to have recovered – merely for the sake of the analyst. Another advantage of transference is that the analysand produces and acts out a life story, with the earliest attachments at its center.

But the transference phenomenon exists outside the analytic situation. As described by Freud, it is a universal phenomenon of the human mind, which dominates the whole of each person's relations to his/her human environment. In other words, early object relations are acted out in every instance of human contact and in every instance of interpersonal fantasy.

Transference is a particular form of the more general mechanism of projection, and as we know projective hypotheses explain the contents of religious beliefs as reflecting specific human experiences and fantasies. In psychoanalytic writings, projection may be a general perceptual mode, externalizing internal processes or needs. In both cases the result is perceptual distortion. Psychoanalysis suggests an iconic correlation between the internal world and religious ideas, so that these ideas are a reflection of the internal psychic landscape. Psychoanalytic theorists have provided us with various content hypotheses, specifying what is projected. Psychoanalysis also specified the recapitulation mechanism of transference, through which early experiences in the family are recreated as cultural products. The presumably projected humans are the "significant others": father, mother, family relations, and dynamics.

Because of the centrality of family dynamics in early childhood, psychoanalysis suggests that all religious traditions would contain projective fantasies which construe the cosmic environment in the shape of the family drama. Parental care varies in different cultures; the child's concept of the parents will similarly vary and so will the resultant image of the deities. Not only are the images of the gods likely to vary in accordance with early concepts of the parents, but also the means of communicating with them and soliciting their help. A more complex view of the projection process notes that religious images

come before us ready-made as part of social learning, but then we as individuals project our personal, unique experiences on them. What a religious tradition teaches is an ambiguous stimulus, and we develop it in the image of our own private history and our own parents.

## Transfiguration

Kathryn Madden  
National Institute for the Psychotherapies,  
New York, NY, USA

The word transfiguration derives from the Latin *trānsfigūrāre* and refers to transformation and change in form or appearance. The term is specifically used in reference to the change of appearance in Jesus Christ as narrated in the Christian biblical accounts of Matthew 17:2, Mark 9:2–3, and Luke 9:28–36.

The gospels report the transfiguration event as Jesus taking three of his disciples – John, James, and Peter – to pray with him on a mountain top. Going up on the mountain (*óros*) is significant in that it is the place set aside for prayer. While he was praying at the top of the mountain, Jesus was

transfigured. “The appearance of his countenance was altered, and his raiment became dazzling white” (1952, RSV).

### Exegetical Origins

The original Greek term for this phenomenon was *metemorphothe*. Metamorphosis refers to a conspicuous physical and rather sudden change in one’s form or structure. In the biblical event, the disciples witnessed Jesus’ face shining like the sun and his garments a brilliant white which they described as “light,” or “glory.” In his altered form, Jesus speaks with Moses and Elijah who also “appear in glory.” Glory stresses the concept of visible light (Luke 2:9; 9:31), the divine presence as a luminous manifestation and God’s glorious revelation of God’s person as borrowed from the Old Testament concept of *kabod*.

In the gospel narrative, the disciples were “heavy with sleep but kept awake.” They witness a conversation between Jesus, Moses, and Elijah. Luke tells us that they discussed what Jesus was to accomplish at Jerusalem – his death.

Then “a cloud came and overshadowed them [the disciples], and they were afraid as they entered the cloud; and a voice came out of the cloud” (1952, RSV) proclaiming Jesus to be the Son of God. The voice instructed the disciples to listen to Jesus as the “Chosen one” of God. The disciples are to tell no one of what they have witnessed.

In the image of cloud, (*nephélē*, *néphos*), we find a cross-cultural commonality in meaning drawing from the Hellenistic and Greek worlds and in biblical literature. The cloud was an image of religious significance, a theophany, God’s visible manifestation.

God indwells the cloud as indicated by the voice arising from it and invites participation. The disciples do not merely observe; they “enter the cloud,” even if only as a foretaste of the eschaton (the final event of the divine plan), the resurrected state in the afterlife, and the suffering and struggle which is to precede the resurrection with Jesus’ death on the cross.

## Synchronous Literacy Motifs and Influences

The transfiguration story is influenced both by Hellenistic categories, as well as by the genre of the Old Testament which also bears Egyptian and Persian influences by virtue of the exile of Israel into Babylon. Biblical scholars Helmut Koester and W. G. Kümmel place the transfiguration story in analogy with an epiphany story – Kümmel in association with the Hellenistic motif (1990, p. 122) and Koester, with the Old Testament genre and Jewish apocalyptic literature.

Although Hellenistic literature often pursued a more Gnostic strain which rejects the material embodiment of the divine and speaks of the miraculous transformation of a mythical figure, nonetheless, many examples of literature in the Hellenistic religions concerned a metamorphosis. In the story of Apuleius, we find persons and deities experiencing transformation and release as a first prediction before a process of suffering.

Thematic similarities also exist in early hermetic literature, in the literature of the mystery cults, in literature informed by Plato, and in parallel themes in other biblical literature. The mystery religions offered an analogous genre to the Christian biblical narrative offering stories of salvation on the basis of divine revelation.

Other literature that may have informed the transfiguration story was Hermes Trismegistus. Written between 100 and 200 CE, this series of tractates were astrological or magical. Some tractates contained writing that was religious which demonstrates literary connection with the Greek Old Testament. Hermes, a god, taught secret knowledge about salvation to a disciple. Those who recorded these documents believed that they had received revelation of a gospel, the difference being that the material or physical order is discounted. In *Poimandres*, powers appear before a disciple's eye, and Poimandres receives supreme vision. Receiving the benefaction of Poimandres, the disciple rejoices, for "the sleep of his body had become watchfulness of soul," and he "moves into life and light" (Barrett 1989, p. 89).

Literary fragments from the Egyptian magical papyri were also comparable to the definitive style and ethos of Hellenistic magic and, in turn, analogous to themes in the transfiguration: "once purified, the body is fit to receive a ritual vestment. . .the true new body of immaculate whiteness" (Jacq 1985, p. 37).

The Jewish apocalyptic literature and Wisdom literature have narrative similarities: the isolation of a special place, an extraordinary appearance (i.e., a bright, luminous light), and the self-revelation of divinity, followed by a description of the reactions of those who are present, and finally a command (Koester 1980a, p. 64).

## Social Need and Spiritual Longing

Clearly the narrative accounts of the Christian gospel did not arise in a religious-philosophical vacuum. The people of these times sought forms of knowledge and alternative channels of power in a situation that was dominated by Rome. Philosophers emphasized the theme of negotiating in a world that was disoriented.

Epictetus, a lame slave who was a philosopher contemporaneous to the gospel writer Luke, writes of the "universal" phase: an effort to define the free, moral persona as one who has freedom to speak freely regardless of oppressive threat. There was a collective desire for a new disposition of mind and heart. For those who felt marginalized, there was a turning inward, a relativizing of political and social circumstances. By retreating inward, one could discover being part of a principal work, "a fragment of God himself" (Barrett 1989, p. 67).

Persons pursued the mystery religions seeking a personal faith that would bring them into immediate contact with deity and would promise them salvation. The inability to negotiate their outer world increased their interest in astrology, fate, mysticism, and esotericism. Many of the mystery religions and cults contemporary to the writing of the gospel literature had existed for centuries. Mostly they were of Eastern origin before Hellenized.

The mystery cult of Cybele, the Great Mother, had come from Asia, the cult of Isis and Osiris from Egypt, and Mithraism from Persia. These cults shared the characteristic of being centered about a god who had died and had been resurrected. An initiate was inducted by specific rituals and secret symbols and participated in mystical union through sacramental means to share in the experience of the god to achieve immortality.

When Mark, the earliest of the gospels was written, the tradition of Jesus had already become saturated with the outlook of Hellenistic magic. The early stages of the interpretation of the miracles of Jesus, particularly his exorcisms and healings, were understood to be magical. Jesus was understood to have entered into the central conflict of the magician's art – the struggle with evil powers.

Informed by the collective psyche of the time, the spiritual world was understood as divided into two realms of power. A battle ensues between Jesus and his foes analogous to a battle between spiritual forces and magic. The folk belief was that Jesus overcame evil by his greater power as indwelt bodily by mana, a charge of divine energy, a vital substance that emanated from the spirit world. This power could be passed from one person to another (Brown 1978, p. 560). Those who received this power would undergo an initiation that would come to them as a Pentecostal event, an "inrush of God's kingdom." Christ was the vessel in the event of the transfiguration, the intermediary from whom the disciples received mana directly. A foretaste of the future glory was now *in* them.

Without hesitation, the early church attacked such magical beliefs and stressed that evil power yields to the superior power of God. Jesus was different from the magicians who were concerned with the control of the supernatural by techniques to further their own desires. He desired to do the will of the Father and to teach others to submit to that will.

### **Spiritual and Psychological Impact**

Jesus was fully aware of God's will for him. The intention behind the transfiguration event was to

show to the disciples that he would embody the reality of "glory" in the resurrection. He demonstrates that glory is more than a temporary contact to the divine presence. Glory is a reality that is revealed as a divine mode of being but a reality that is not visible to itself. It is a reality that must be witnessed by an "other." This perception is analogous to the belief in the practice of psychotherapy that healing is most efficacious in that two persons form a relationship in which healing occurs.

Jesus' inclusion of the disciples as witness to the event of the transfiguration indicates the potential of metamorphosis inherent in each person. Analogous to the long years one undergoes psychoanalytic or analytic reflection in the process of therapy, Jesus teaches that the transfiguration is a culmination of a long process and that we have to awaken from our "sleep," our dullness of "seeing and hearing," and recognize the light of the invisible source – the eternal life of the soul in a transfigured reality.

The manifestation of common images in the oral and written traditions points to how these images represent universal motifs that arise within the human psyche. When a people in history find themselves in a disenfranchised state in which their personal identity is in question or depersonalized, the human psyche reacts by development of a common theme of divine manifestation. From the depths of the human psyche, a healing, guiding presence makes itself known and offers the potential for efficacious change.

The deepest, most far-reaching change possible for human beings is expressed by the word metamorphosis. When we undergo metamorphosis, we are changed at the depths of our being and completely. Psychoanalysis, at its best, works at this level. The deeper psyche becomes the transformative ground for the original unity of soul and spirit. We know that we are in the terrain of deeper psyche when primal archetypal images and symbols grasp us and startle us beyond what we typically know and experience. Aspects of human existence replete with both light and dark sides begin to penetrate our personal consciousness,

analogous to the experience of persons in the first century and in all centuries.

From a psychological perspective, in metamorphic change, the ego may feel displaced as it changes experientially into new form informed by new knowledge emerging from the psyche as the unconscious becomes conscious. The ego may feel distraught, uncomfortable, as if it is dying unto its new role and existence.

Like the disciples' realization in Jesus' transfigured form, the ego in psychological analysis comes to recognize two layers of being. What the ego has known as self is not all that it is. This realization is accompanied by the profound awareness that archetypes and archetypal images do not veil the eternal world. They lead to it. An archetype can arrest us in a mood or a state of biophysical seizure as it announces the new, taking hold of our entire personality, as if, like the disciples, we were entering a cloud. Such inbreakings of the unconscious can transcend the injuries of our childhoods and fuel us with an experiential faith, one that convinces us with impenetrable faith that some precious aspect of our being is impenetrable to death. The psychological movement we make between each image, each point of being, each glimpse of transfigured reality, leads us eventually to a world beyond mere material surfaces.

### Transfigured Transfiguration

As the ego surrenders to this process of awareness, we come to realize that an archetype can present itself only in a numinous way if it is clothed in an adequate symbol: a cloud, a mountain top, a cross, for instance. Symbolic expression originates in the body and presents itself as a self-portrait of instinct. As we begin to relate to the unconscious products of dreams, waking imagination, and symbols, our consciousness is ignited into motion. Dreams point to that which is not yet ready to be born but also to the advent of new birth and the eternal.

In modern depth psychological terms, the notion of transfiguration and metamorphosis translates into the goals of the fully individuated

individual which emerges in the self-ego relationship, a psychological reality that finds an analog in religious terms with Christ as exemplar and internal guide. The disciples proclaimed such lived experience and accepted revelation as an ongoing unfolding of divine presence in their lives. They discovered that through the mysteries of the transfigured Christ, there is spiritual character that may be embodied in the conscious and visible world that transcends the manifest.

Similarly, the reflective and sacred space of therapy can become the transformative vessel for reaching toward the divine. Human deficiency and lack, as it appears in our most cast off and vulnerable parts, may be the source of our greatest offerings. Our depletion may be the stable of incarnation, life that translates into more life in contrast to evil which can translate only into poverty. Therapy is analogous to a parent communing to a child whose healing is greatly aided in feeling "chosen" by a loving, attentive presence.

The transfiguration event attests to the fact that a transformation mystery exists in which the vessel character of the archetypal layer of the psyche houses a creative principle. By means of receptivity, we are enabled to bridge the two worlds of consciousness and unconsciousness. Our receptivity is the only thing that can recover to some form of healing human suffering and despair and give meaning to the inevitability of tragedy, death, dissociation, and developmental traumas. Love has the power to break through our defenses. As the great story teller Ovid once said of metamorphosis, "let me die loving and so never die" (Maidenbaum 1993, pp. 679–724).

## Transgender and Gender Identity

Brenda Ibutu and Elizabeth Maynard  
Pastoral Counseling & Spiritual Care, Loyola  
University Maryland, Columbia, MD, USA

Most children and adults develop a gender identity – an intrinsic sense of being male, female, or an alternative gender. Some individuals develop gender dysphoria, distress caused by a sense of disconnection between an individual's gender identity and their sex assigned at birth. For example, an adolescent

girl who feels that her true self is really male may experience gender dysphoria. Gender identity disorder is diagnosed when an individual experiences a strong and persistent cross-gender identification, a persistent discomfort with his or her own sex, or a sense of inappropriateness in the gender role of that sex which causes clinically significant distress or impairment in social, occupational, or other important areas of functioning. Gender identity disorder is currently a formal diagnosis in the Diagnostic and Statistical Manual of Mental Disorders (American Psychiatric Association 2000, p. 96). The term transgender refers to all gender-variant persons, including cross-dressers (who are often heterosexual males who cross-dress for pleasure or relaxation), and intersexed persons (those who have both male and female physical sex characteristics) (Lev 2004). Transsexual individuals are those who realize that their physical bodies do not reflect the inner understanding of who they are, and who may use both hormonal and surgical therapy to augment or otherwise alter their bodies (Newfield et al. 2006). Transition refers to the outer and inner process of moving from one's birth sex to one's psychological sex. For example, a person who was assigned as male at birth (born with male sex characteristics) but who is changing or has changed his/her body and/or gender role from birth-assigned male to a more female body or role has pursued a male-to-female (MtF) transition.

The World Professional Association for Transgender Health (WPATH) is a multidisciplinary professional organization “whose mission is to promote evidence-based care, education, research, advocacy, public policy, and respect for transgender health” (WPATH 2012, p. 1). The accepted standards of care for transgender adolescents and adults developed by WPATH include a period of psychotherapy, living as the other gender for a period of time, hormone replacement therapy, and often undergoing reconstructive surgery to alter the individual's anatomy (Lawrence 2002). Mental health professionals often assist transgender adults in exploration of identity, making decisions about gender transitions, and ongoing adjustments

when an individual has elected to transition either wholly or in part. Religious professionals are less often involved in these processes for transgender adults.

The cultural and religious history of transgender communities show that, over time, there has been a dichotomy of opinions surrounding the acceptance of this group. Some Native American groups have held the idea of “two-spirited people” to describe those who are gender-variant, and those in this group are often respected and honored within their tribes. The use of cross-gender terms in indigenous cultures has been documented in over 155 tribes throughout North America, and “two-spirited people” are often considered prized caregivers and mates, as well as the tribes’ most gifted visionaries (Laframboise and Anhorn 2008).

Several other cultural groups have also shown some level of acceptance for individuals who differ from traditional gender expectations. For example, Myanmar has a group of people called the Acault who are feminine males possessed by the female spirit Manguedon. The Maa Khii in northern Thailand are primarily female-to-male persons, possessed by the spirit, Phii, who act as mediums for the family to help with well-being, health, and harmony. European history also includes gender-variant persons, such as Joan of Arc (1412–1431), a Roman Catholic saint who was sentenced to death for cross-dressing. Joan’s followers revered her for her virginity and her manly dress which portrayed power, and they considered the men’s clothes she wore to be sacred. Chevalier D’Eon (1728–1810), a French diplomat who lived the second half of his life as a woman, reportedly believed his transformation to be a religious experience (Bockting and Cesaretti 2001).

Western religious institutions, as a whole, tend to struggle significantly with gender-variant persons and tend to promote gender conformity. Within Judaism, Christianity, and Islam, particularly the mainline denominations, transgender persons have, in the past, often become disenfranchised, dehumanized, and suffered from discrimination. Some have reported a tremendous loss of their spiritual selves. However, that is beginning to change. As transgender

persons feel more able to seek help from mental health and spiritual professionals, they often gain a sense of a deeper connection with others in their lives and their God or higher power in a way that had been closed to them previously (Bockting and Cesaretti 2001, p. 8). Further, some religious groups have begun to accept transgender clergy, though this change appears to be slower than the changes made to accept gay, lesbian, and bisexual clergy.

The National Center for Transgender Equality (NCTE) estimates that between 0.25 % and 1 % of the population is transsexual; however, accurate statistics on the transgender population are unknown because many individuals are not public about their identities and no organization is systematically collecting data (NCTE 2009, p. 1). Based on estimates from an international survey, the number of elder (65 and older) transgender-identified people worldwide is projected at 4.1–12.3 million (Kidd and Witten 2008). Given that these figures do not include those under 65 nor any number of culturally variant transgender identities, it is clear that there is a need for counselors, therapists, and others in the helping professions to be familiar with this group (Kidd and Witten 2008). According to WPATH, those in the counseling field are likely to encounter gender-variant clients in unexpected ways. Among gender-variant individuals, mood, dissociative, and sexual disorders, as well as substance abuse and borderline personality disorders are believed to be common. Additionally, two groups who are often invisible are those transgender persons in the gay and lesbian communities and biological females (WPATH 2001).

Little research into the levels of religiosity and spirituality in the transgender community has been conducted. Current findings suggest that, as with other populations, the transgender community associates religion with construction of meaning, wisdom development, and a commitment to living a good life (Halkitis et al. 2009). Many transgender individuals have felt forced out of their religious communities or otherwise dislocated from their spiritual or religious traditions. The challenge for mental health professionals is to be willing to accept this community and learn about the

struggles and resources that are part of the transgender experience, including meaningful exploration of the transgender individual's spiritual and religious experience.

## Transitional Object

Philip Browning Helsel

Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

The term, first coined by analyst D. W. Winnicott, refers to the object that a child might confer with special significance, such as a piece of string, a teddy bear, or a blanket. A popular representation of the transitional object is the “security” blanket that the character Linus always carried in the Peanuts cartoon. In the treatment of this object, the child enacts the love and rage that results from the bond with and inevitable separation from the mother. Thus, the object can be the treatment of abuse, affection, or idealization and role play, with the function of allowing the child to create, in a liminal space, a relationship that is reciprocal with and at the same time a working-through of the original mother-child environment. The liminal space in which the object is created by the child is neither the mother-child environment nor the child separate from the mother but is the intersection of both settings in the space of play (Winnicott 2005, p. 3). The fact that the child chooses the object, uses it, and abuses it, but the object continues to exist, represents the child's creativity and the endurance of the earliest bond in spite of inevitable frustration and separation.

Winnicott argued that the space in which the transitional object is chosen, and thereby “created” by the child, is the same space in which culture is developed in adult life. It is not coincidental that Linus, in the Peanuts cartoon, is the character who is the most capable of philosophical reflection. The realms of art, religion, and

literature reflect the play of imagination and the “holding” space which is necessary for this play (Winnicott 2005, p. 4).

Religion is grasped in a manner similar to that which a child grasps and manipulates the earliest object. Frequent metaphors of “wrestling” or “struggling” with religion are reflective of the child’s testing of the object in the liminal space, in which the object’s permanence ensures that it will outlast even the rage of the infant. This permanence is reflected in forms of religion which tolerate doubt and even hatred of the deity, reflecting the fact that even after such a powerful struggle with the object, the object will remain.

While the believer may grasp religion as the child holds onto the transitional object, she may simultaneously have the sense of being grasped in relationship to her religion. This reflects the manner in which the psychic object echoes the earliest relations. Forms of Christian Platonism reflected how God seemed familiar to the soul and seemed to be “recalled” by it even in its encounter with God (Turner 1995, p. 70). While religion might be “used” by the adult in a similar manner to which a child uses a transitional object, it also has the quality of an encounter, especially in its mystical forms. In religion, when one may feel enveloped by or chosen by an object which has connotations of fascination, desire, or the uncanny, this sense of resonance with something “beyond” may be reflective of the prehistory of the person, in which mother and child existed in a relationship which predates the historical awareness of the person or personality (Bollas 1987, pp. 24–25).

## Transpersonal Psychology

Nicholas Grant Boeving

Rice University, Houston, TX, USA

Often referenced as the fourth force of psychology (the previous three being behaviorism, psychodynamism, and humanism), transpersonal theory refers to the intellectual movement and its attendant therapeutic praxes that attempt to redress the perspectival imbalance of its predecessors by integrating the insights of the world’s wisdom traditions with the psychological concepts, theories, and methods of the West. Whereas traditional theoretical orientations tend toward the reductive end of the interpretive continuum, transpersonal psychology seeks to include within its purview those regions of the human experience overlooked and unexplored (or utterly reduced/collapsed) by other models. These “higher” states – for curiously, the lower ones are only rarely engaged – are the primary domains with which it is concerned. Transpersonal psychologists are explicit in their mission to unite under one rubric both psychology *and* religion, or, more accurately, psychology and spirituality, however, nebulously defined and protean in character the latter may be.

Fueled by the American (read Californian) counterculture of the 1960s, the transpersonal turn was part of a wider cultural process of turning away from the perceived-to-be crumbling occidental edifices of church and state. Still, the project was essentially an extension of enlightenment ideals, its earliest incarnations attempting to wed the methodologies of science to the experiential epistemologies described in various mystical (read Eastern) literatures. The consequence of this spiritually positivistic stance (e.g., there is one unitive ground of all being that can be

accessed/realized by practitioners following the various prescriptive technologies described in the various non-dual systems) was the effluence of all-encompassing meta-theories replete with competing ontological claims. These theories subsumed, into one ultimate or another, the insights of orthodoxy, eastern spirituality, indigenous traditions, contemplative prayer, holistic medicine, non-ordinary states of consciousness, ecstatic dance, shamanic trance, yogic breathwork, and spiritual emergencies – to name but a few – as they have arisen in the historical pageant of the world's religious systems.

Transpersonal psychology draws heavily from the hermeneutics of the humanities, such as existentialism, phenomenology, humanism, ethnopsychology, and anthropology, and is characterized by its kaleidoscopic inclusion of differing scholastic orientations. Such a promiscuous intermingling of ideas and epistemologies from both psychology and religion has led many to erroneously conflate it with the New Age, although admittedly, there is much overlap.

Much of transpersonal theory is indebted to the pioneering work of William James and Carl Jung, though as a discipline, it did not emerge until the late 1960s as a unique efflux within the humanistic school of Carl Rogers and Abraham Maslow, the latter whom, in conjunction with Stanislav Grof, founded, in 1969, the first academic journal devoted exclusively to the exploration of the aforementioned themes, *The Journal of Transpersonal Psychology*.

The two towering pillars of the tradition, however, are undoubtedly Ken Wilber and Stanislav Grof, although Wilber has since distanced himself from the movement in favor of his own epithetical integral psychology.

Wilberian theory views the cosmos, and by extension the development of consciousness, as a series of unfolding stages, with higher levels superior to lower levels arranged in a progressive paradigm of transcendence and inclusion. His most significant contribution to the field has been his non-dually based spectrum of consciousness.

Grof's model, in counterpoint to Wilber's, is a more laterally oriented approach and arose from his research experiences as one of the first experimenters with LSD. Regression to pre-egoic states is understood in his model to facilitate psychological integration of the individual. At first, these states were encountered with the aid of entheogens, but later with Holotropic Breathwork, a trademarked technique of posturing and breathing designed to activate the same non-ordinary states as its chemical counterparts.

Other theorists of note include Ralph Metzner, Michael Washburn, Roger Walsh, Frances Vaughan, Robert Assagioli, and Jorge Ferrer. Ralph Metzner's pluralistic model eschews all linearity, while Washburn's calls for a helical process of graduated integration culling insights from both Jungian and psychoanalytic thinking. Jorge Ferrer has reevaluated the entire transpersonal project and is believed by many to have liberated it from the tyranny of any one metasystem, calling for a plurality of intersubjective epistemological grounds instead of the various intrapersonal models to which previous theorists had wholeheartedly subscribed.

Criticisms from outside the movement have typically taken several different forms, chiefly among them (1) that transpersonal theorists are guilty of sloppy scholarship; (2) that in selectively privileging certain religious systems over others, they unfairly skew the data to support their individual models; and that (3) its continued lack of engagement with the problem of evil impoverishes any attempt to comprehend the psyche as an integrated whole.

Perhaps most damaging of all, however, is the unfortunate fact of its being mostly ignored by both the academy and the general populace, although evidence is beginning to emerge that this may, indeed, be changing.

## Commentary

Although couched as an academic discipline, transpersonal psychology really signifies the dawning of a new species of religiosity – psychology *as* religion.

This alternative expression of the numinous seeks to expand our understanding of the individual outside of the egoic insularity of previous psychological systems. In doing so, it dually uses psychology to read religion and religion to read psychology, neither reductively nor dogmatically collapsing one into the other.

## Trauma

Todd DuBose

The Chicago School of Professional Psychology,  
Chicago, IL, USA

Trauma is the description given to an overwhelming, uncanny, or absurd experience, usually involving some kind of violence, abuse, or loss that threatens death of injury to oneself or another and that resists one's capacities to process, make meaning of, or schematize the occurrence in typical or familiar ways. Traumatic experiences can

be short lived and acute or chronic and seemingly unending. Often accompanied by various experiences and compartments of fear, worry, anger, and crises of meaning, traumatic experiences are encounters with the overwhelming and the overpowering.

Traumatic experiences are often considered experiences that “shatters assumptions” (Janoff-Bulman 2002; Kauffman 2002) or belie expectations of how life events should occur. We naturally personalize traumatic events in our lives as we operate from a web of meaning that presumes life is ordered, fair, and benevolent. We live out our existence viewing chaos, chance, random destruction, and absurdity as flaws in life rather than as experiences inherent to the very composition of life. The etymology of the word “traumatic,” in Greek, means “to incur or inflict a wound or injury.” Traumas, or traumata, can be physical, psychological, environmental, and/or spiritual and can be immediate, acute, chronic, or delayed in their impact. The Diagnostic and Statistical Manual of Mental Disorders-IV-TR describes a traumatic experience as evoking feelings of being overwhelmed and helpless (2000).

It is important to note, though, that a trauma is not only the event itself that occurs but is shaped as well by how the event is understood by those undergoing it and how one is cared for before, during, and after such events. Any imposing of generic templates on others of what is considered traumatic should be critically analyzed (Bracken 2002). What is traumatic for one person may not be so for another. Developmental levels of vulnerability, exposure to life-world situations, meaning-making skills, and cultural sensitivities are all aspects to consider in assessing the nature and intensity of traumatization. Due to its imposing and intimidating nature, traumata evoke our needs to organize, categorize, and make sense of them, even though traumata are by definition experiences that resist these processes. This point testifies to our nature as meaning-making creatures. For instance, habitual ways of defining traumata as horror laden, such as war trauma, rape, physical violence, accidental dismemberment, and so forth, often enframe our definitions of trauma such that we inattend to

“positive traumas,” such as winning the lottery, being proposed to, finding out your pregnant with triplets, and other experiences.

Psychological perspectives on trauma have included Sigmund Freud’s (1856–1939) explications of hysterical neurosis and repetition compulsion (Freud, 1895/2000, 1920/1990) and Otto Rank’s (1884–1939) views on birth trauma (Rank 1929/1994). Much of the field of trauma studies has focused on the neurophysiology of traumatic and post-traumatic reactions as well as on multicultural issues within traumatic experiences and situations, particularly in regards to displacement and torture among refugees. Standard of care for psychological treatment of trauma includes post-traumatic stabilization, integration, and post-integration or reinvestment in relationships and projects in life.

It is the liminal characteristic of traumatic experience, though, that lends itself to comparisons with religious experience. Mircea Eliade (1907–1986) noted how experiences of hierophanies, or the “inbreaking” of the holy, often leave one disoriented, feeling threatened, and “thrown” into an encounter with limitlessness (Eliade 1959). Rudolf Otto’s (1869–1937) descriptions of encounters with the numinous as wholly other include a mixture of awe-filled fascination and terror (Otto 1917/1958). Gerardus van der Leeuw’s (1896–1950) description of the divine as “power,” in the sense of profound, impressive, and exceptional confrontation with incomparable otherness, concurs with these other phenomenologists of religious experience (van der Leeuw 1933/1986).

These descriptions of numinous experiences are nearly verbatim of what others have said about traumatic experiences. The traumatic experience is also numinous in its ultimate, encompassing, and boundary oriented in nature, to use Karl Jaspers’ language, or “peak experience,” to use Abraham Maslow’s phrase (Maslow 1970). For Jaspers (1883–1969), boundary situations, namely, guilt, chance, suffering, conflict, and death, are experiences in which everything is unstable and in flux (Jaspers 1919/1997; Schlipp 1981). Traumatic experiences are also apophatic encounters with radical

otherness in that one often finds attempts as description ineffable. When undergoing a traumatic experience, one’s very ground of meaning is deconstructed, as evidenced by alienation, guilt, irrevocable loss, and the loss of identity. During the meaning-making crises created by trauma, it is hard to determine the level of existential loss of faith operative. Yet, Stanislov and Christina Grof (1989) have provided extensive scholarship on differentiating spiritual emergencies from spiritual emergence and how care for each respective phenomenon is different.

Ritual abuse explicitly links traumatic experiences with religious symbolism and ritual in such ways that the religious artifacts and activities are themselves traumatic. In classifying post-traumatic experiences, spiritual abuse is often overlooked, dismissed, or renamed and can range from sexually and physically violent ritual abuse to proselytizing and theological battery, resulting in devaluation of one’s worth and well-being at one’s core and banishment from the rejecting community. Although the most overlooked traumatic experience, spiritual abuse may indeed be the most devastating, necessitating a most unique and compassionate response.

## Commentary

*How* one becomes traumatized, *what* is considered traumatizing, and *how* one cares for traumatized individuals remain central to any discussion about trauma. Several issues embedded in these concerns are often overlooked or at least tacked on as supplementary to standard of care protocol regarding traumatic experience. Survivors of traumatic experience often refer to how their spirituality helped them cope. Although researchers such as Kenneth Pargament (2001) have so aptly shown the benefits of religious rituals and beliefs as coping mechanisms, equating spirituality with coping mechanisms can often miss the phenomenology of religious experience on which such coping mechanisms are predicated. Numinosity is inherent in the experiential structure of traumatic phenomenon

and not merely a consolation tool that can be chosen or not on an as-needed basis.

Another unanalyzed aspect of traumatic experience is a tendency to explain such experiences solely in terms of neurophysiology and cognitive schemas, rather than disclose the phenomenology of the experiences themselves through descriptive analysis of its significance as lived by those undergoing or having undergone such experiences. The field has tended to generically template, categorize, and collate what is counted as a traumatic experience and how someone should react to it. For instance, a traumatizing experience is not just “caused” by a prior happening in one’s immediate or distant past. For an experience to be traumatic, multiple factors have to occur and situations have to provide an arena for traumatic experiences to come into existence, including much that is chance, random, unsolicited, and undeserved. The genericizing of traumatic events and reactions runs the risk of missing the unique and incomparable meaning making that resists classification. Moreover, addressing trauma requires more than challenging globalizing cognitive distortions. An encounter with the traumatic, much like an encounter with the numinous, is “irrational” in Otto’s language (1917) and “absurd” in Camus’ (1955) language, and neither experience is a distortion of reality. Life, at times, does not make sense and sideswipes us in undeserved ways. Thinking otherwise is actually the distortion needing correction.

A final point often minimized or not thought about in therapeutically working through traumatic experiences for persons is how prevalent the problem of evil is for traumatized persons, including the often disenfranchised group of traumatized persons: the traumatizers. Whether or not one is theistic, atheistic, or nontheistic, traumas raise the question of the justice, fairness, and benevolence of existence, particularly for the one undergoing the trauma, and therapeutic care must face this often unspoken issue upfront. To do so requires much of the therapist, and given so, one must attend to the perils of vicarious traumatization (Nouwen 1979; Steed and

Downing 1998). Yet, the model of the wounded healer has guided us through these dark valleys long before the field of trauma was formally conceived. It is often that in caring for those who have survived the undeserved and unexpected visitation of unmitigated destruction that an antidote is offered to soothe the horror. The antidote does not deny that suffering is a part of life, and at the same time, it, too, is undeserved, unexpected, and uncoerced. The antidote may very well be simply the grace of having one’s resilient capacities borne witness to and celebrated in order to not only cope but also to thrive.

## Trickster

David A. Leeming

University of Connecticut, Storrs, CT, USA

The trickster is a common character in mythology and in certain religious traditions, especially, but not exclusively the animistic – spirit-based – religions of Africa and Native North America. Typically male, the trickster usually has extreme appetites for food and sex. He is immoral, or, at least, amoral, and he is, more often than not, a thief. Yet he often uses his inventiveness to help human beings and is sometimes, in effect, a culture hero. Often his inventiveness interferes with creation, however, and causes such realities as pain and death. The trickster is a shape shifter. He can change shapes at will and, in that sense, is perhaps a mythological relative of the shaman.

In the ancient Greek religion, Hermes, as a child, has trickster aspects, as, for instance, when he steals Apollo's cattle. In India, the great man-god Krishna, the most important of the avatars of the god Vishnu, constantly plays tricks – some of a sexual nature, as when he steals the clothes of his bathing female followers. In these cases, however, the trickster aspect seems to reflect essential inventiveness and creativity and points to later more important achievements. The same is true of stories of tricks played by the boy Jesus in some of the apocryphal gospels.

More typical tricksters are those such as the Native American Coyote and Raven and the African Ananse (the Spider). The fact that these figures take animal forms coincides with their unbridled appetites. Coyote is an expert seducer of women and he constantly steals food from others more needy than himself. The West African Ananse even steals the high god's daughter. Like Hermes and Krishna, these tricksters are highly creative, but their creativity almost always causes trouble for themselves or others.

Tricksters such as Erlik in Central Asia are often close to the creator and manage, while pretending to help, to undermine creation,

allowing evil in. In this sense, Satan, in the Abrahamic tradition, is a trickster. A fallen angel, once close to God, he enters the new creation – Eden – as a serpent and uses his natural guile to infect that creation with sin – sin immediately associated with sexuality.

The trickster is a clear representative of an id-dominated ego un-tempered by superego. He is the narcissistic child, whose physical appetites are uppermost in importance. Jung saw the trickster as “an earlier, rudimentary stage of consciousness” (1969: 141) and an expression of shadow, the primitive, irrational “dark side” of the unconscious, but also, in his creativity and inventiveness, as a hint of a later positive figure who takes form, like the Great Hare of the Native American trickster tradition, as a culture hero-savior.

### Tulku

Paul Larson  
The Chicago School of Professional Psychology,  
Chicago, IL, USA

In Tibetan Buddhism, a tulku is an individual who is sufficiently advanced spiritually to be

able to direct their reincarnation and be able to guide their followers to find their next physical embodiment. Reincarnation is a core belief of both Hinduism and Buddhism and is found in many Western esoteric traditions as well. The general view of Buddhism is that all sentient beings are on a wheel of life, endlessly living lives, dying, and becoming reborn in another body. There is a broad assumption of an evolutionary process where greater spiritual accomplishments result in moving up the scale of beings. The Mahayana concept of “bodhisattva” is relevant here, since they postpone their complete enlightenment in order to continue to work for the enlightenment of all sentient beings. The tulku, as a bodhisattva, continues their life stream across particular incarnations in order to facilitate the enlightenment of all. In Tibetan Buddhism, the god realm exists, but enlightenment can only come through a human reincarnation, making it a precious gift. The specific Tibetan twist on this general doctrine of reincarnation involves this special ability of highly developed spiritual leaders; they can direct their own reincarnation and have prescience as to the circumstances so as to be able to guide their followers in finding their next form.

The most widely known of such lineages of lamas is the Dalai Lama, currently held by the 14th lineage holder, formerly known as Tenzin Gyatso. The oldest such lineage line, however, is the Karmapa (head of the Kagyu lineage) which is one of the four major lineages within the monastic community (in order of origination, they are Nyingma, Kagyu, Sakya, and Gelug). Each of those lineages, as well as many early teachers within each lineage, has now recognized lineages of tulkus who are the thread of continuity in spiritual leadership.

Until recently only Tibetan children were recognized as instances of a lineage line, but there are several young Western children who have now been recognized and whose parents have allowed them to enter monasteries to receive training in Tibetan Buddhism and the specific traditions of their lineage. Individuals who are recognized as reincarnated lamas are

generally referred to with the honorific title “rinpoche,” or “precious teacher.” But this title is also granted to other significant teachers who are not recognized as part of a reincarnated lineage.

These tulku are themselves manifestations of other transcendental beings. The Dalai Lama, for example, is viewed as an embodiment of Chenrezig, the Tibetan equivalent of the Sanskrit Avalokiteshvara, the Bodhisattva of Compassion. All of the great teachers and initiators of lineages are seen as tied to these transcendental Buddhas and Bodhisattvas. The doctrine which provides the theology for understanding this is the “trikaya” (Skt), or three bodies theory. The transcendental Buddha has the capacity to be in three types of bodies: the Dharmakaya body is the truly transcendent realm beyond duality; the Sambhogakaya body, or “enjoyment body” is the realm of high bliss as one would experience in the god realm; and the Nirmanakaya body is the “body of transformation,” which is how the Buddha manifests in earthly human form. The Buddha’s most recent embodiment was the Indian prince Siddhartha Gautama, or Shakyamuni Buddha. Tibetan Buddhism shares the deep involvement in the reality of a pantheon of transcendental Buddhas and Bodhisattvas with the Mahayana tradition found in East Asia.

## Twelve Steps

Jennifer Amlen

The Second Wind, New York, NY, USA

The 12-step program was founded in Akron, Ohio, in 1935 by Dr. Bob Smith (known as Dr. Bob) and Bill Wilson (known as Bill W.). It is based on the 12 steps and 12 traditions of Alcoholics Anonymous. It is an anonymous (using first names only) self-help program based on the goal of attaining sobriety from alcoholism.

The 12 steps are:

1. *We admitted we were powerless over alcohol, that our lives had become unmanageable.*
2. *Came to believe that a Power greater than ourselves could restore us to sanity.*
3. *Made a decision to turn our will and our lives over to the care of God as we understood Him.*
4. *Made a searching and fearless moral inventory of ourselves.*
5. *Admitted to God, to ourselves, and to another human being the exact nature of our wrongs.*
6. *Were entirely ready to have God remove all these defects of character.*
7. *Humbly asked Him to remove our shortcomings.*
8. *Made a list of all persons we had harmed, and became willing to make amends to them all.*
9. *Made direct amends to such people wherever possible, except when to do so would injure them or others.*
10. *Continued to take personal inventory and when we were wrong promptly admitted it.*
11. *Sought through prayer and meditation to improve our conscious contact with God as we understood Him, praying only for knowledge of His will for us and the power to carry that out.*
12. *Having had a spiritual awakening as the result of these steps, we tried to carry this message to alcoholics and to practice these principles in all our affairs.*

The 12-step program aims at helping individuals achieve sobriety by modifying the dysfunctional patterns and defenses of behavior, developing and strengthening their adaptive coping mechanisms, building new supportive social networks through telephone calls and meetings, and utilizing community resources. It teaches individuals to address the feelings that they have avoided through the use of alcohol. It is a nonprofit organization based on fellowship of members who share the same goal, a desire to stop drinking.

Total abstinence, in combination with utilizing the tools of the program, is the program's goal for recovery. The tools require one to make a thorough process of working through the 12 steps by obtaining a sponsor (one who has more experience in the program, has long-term abstinence, and acts as a mentor/primary support). The program stresses the need to help others in order to maintain one's own sobriety. In addition, there is a wide variety of literature that members are encouraged to read daily. Meetings are a strong part of the program, ranging from topic (i.e., serenity, honesty, forgiveness), steps (any one of the 12 steps), and qualification (usually a 20 min description of one's story focused on sharing experience, strength, and hope with fellow members). In the meetings, each member is encouraged to share for 3–4 min, keeping the focus on the solution rather than dwelling on the problem.

According to Carl Jung, alcoholism in Latin is "spiritus" and one uses the same word for the highest religious experience as well as for the most depraving poison. Before Alcoholics Anonymous was established, doctors and psychiatrists did not have any cure for the alcoholic. It was suggested that many doctors referred to William James statement that religiomania is the only remedy for dipsomania (Cheever 2004).

In 1931, it is written that Carl Gustav Jung, the Swiss psychiatrist, told his patient Mr. Rowland H. that the only solution for his recovery from addiction would have to be a religious or spiritual experience. Jung refers to craving for alcohol, on a low level, of the spiritual thirst of our being for

wholeness, expressed in medieval language: the union with God. Jung further elaborated that the only cure for alcoholism is a full-fledged religious experience. Rowland H. joined the Oxford Group, led by an old Episcopal clergyman, Dr. Samuel Showemaker, in England. The Oxford Group was a nondenominational evangelical movement, accepting the simple common denominators of all religions that would be potent enough to change the lives of men and women.

The practices of the Oxford Groups were:

1. *Admission of personal defeat (you have been defeated by sin)*
2. *Taking personal inventory (List your sins)*
3. *Confession of one's sins to another person*
4. *Making restitution of those harmed*
5. *Helping others selflessly*
6. *Praying to God for Guidance and the power to put those precepts into practice*

One of the most important requirements of the Oxford Group was to recruit more members to the group. It was only through helping others selflessly that one was cured. This doctrine was adopted by Alcoholics Anonymous. It was Ebby Thacher that carried the message of the Oxford Group to Bill Wilson in 1934, depicting that a spiritual awakening in combination with the spiritual principals could cure the alcoholic. Bill Wilson teamed up with Dr. Bob Smith and wrote the book for Alcoholics Anonymous, known as the "Big Book." Originally, there were 6 steps of Alcoholics Anonymous, similar to the 6 steps of the Oxford Group's, which were later developed into 12 steps along with the 12 traditions. The 12-step programs stayed true to the tradition of the Oxford Group, remaining nondenominational, using terms as "higher power" and "God," as we understand him.

Although the 12-step programs are rooted in American Protestantism, it is not exclusive to Christian or theistic belief. Eastern spiritual practice such as transcendental meditation; Native American spirituality, such as sweat lodges; and rituals of singing and medicine circles are widely practiced, as well. All these spiritual models share a belief that the path to recovery lies in the first 3 steps, which emphasize a belief and

a readiness to turn one's will over to a higher power. Other groups have been founded throughout the world based on the same principles: Narcotics Anonymous, Gamblers Anonymous, Debtors Anonymous, Nicotine Anonymous, Al-Anon, Overeaters Anonymous, etc.

## Commentary

The most common theoretical approach to curing addiction at the early stages in psychotherapy has been cognitive therapy, behavioral therapy, and cognitive behavioral therapy (CBT). The theory involves adapting new behavior from old behavior, adjusting one's irrational and faulty thinking to a healthier thought process. It is achieved by setting up a schedule and a contract with a therapist, developing new activities, and keeping a journal of feelings and behaviors, cravings, and/or triggers. It also involves using positive reinforcement and addressing negative consequences of destructive behavior (Cooper and Lesser 2002). In the later stages of recovery, ego-supportive and ego-modifying work can be undertaken. Many people with substance abuse lack certain ego functioning, such as a state of identity, impulse control, good judgement, frustration tolerance, and object constancy (Goldstein 1984). Like the ego psychological perspective, the 12-step program promotes growth in ego functioning and ego synthesis, even though the language may be different.

Sigmund Freud's structural theory of the id, the superego, and the ego refers to drives by the id's need for immediate gratification, the superego's often punitive and moral perspective of society and the parent, and the ego which acts as the mediator of both the id and the superego. Freud's theories address the treatment of addiction in his discovery of the early defense mechanisms, such as denial, projection, and rationalization. In the 12-step program, steps 1 through 3 address these early defenses of denial and require a willingness and belief in a source (higher power) outside of one's own self. Steps 4 through 9 require the review of one's impulses (id drives), address the consequences to oneself and

to others, and require taking responsibility for one's actions. This step process requires awareness (observing ego) with a willingness to be able to adapt and modify one's thinking and behavior. Step 10 is a constant review requiring the ego to regulate these drives on a daily basis and to continue to take responsibility for one's actions. Step 11, prayer and meditation, continues to remind the ego to practice further self-awareness. Step 12 provides a moral structure for helping others, resisting the potential for grandiosity and narcissism, by focusing on one's strength in order to benefit newcomers to the program who are in need of help.

## Twice Born

John Pahucki

Department of Humanities, SUNY Rockland,  
Suffern, NY, USA

Categorical term in the psychology of religious experience developed and described by William James in his classic work *The Varieties of Religious Experience*. The description is obviously rooted in the exchange between Jesus and Nicodemus in the Gospel of John (3:1–21) where Jesus comments that a man must be “born again” in order to enter the Kingdom of God, although James seems to have directly appropriated the term “twice born” from Francis

W. Newman's *The Soul; Its Sorrows and its Aspirations* (1882). The twice-born type is the counterpart of the firstborn personality, who represents an instance of what James describes as “the religion of healthy-mindedness.” These individuals are characterized by a shallow optimism in regard to religious belief and, in extreme cases, an almost pathological aversion to the reality of suffering and evil. In contradistinction to this type, the twice born has passed through the experience of what James describes as “the sick soul,” where the individual's greater awareness of manifest evil forestalls the formation of religious conviction. The twice-born type has successfully navigated the challenge of religious pessimism, represented by the sick soul, proceeding to an affirmation of life and development of a religious outlook that fully retains its experience of the darker aspects of existence. The twice-born personality, therefore, never represents a relapse into the religion of healthy-mindedness, which is characteristic of the first-born type, but indicates a more comprehensive and integrated religious perspective. In this sense, James' description of the twice born bears some resemblance to the successful integration of the shadow in Jungian analytical psychology.

## Ulanov, Ann Belford

Felicity Kelcourse  
Doctor of Ministry Program, Christian  
Theological Seminary, Indianapolis, IN, USA

Ann Belford Ulanov, theological educator, pastoral psychotherapist, and Jungian analyst, is the author of twenty books, including six coauthored with her late husband, Barry Ulanov (1918–2000). She is widely recognized in psychology and religion circles for her original 1971 publication, *The Feminine in Jungian Psychology and Christian Theology*, inaugurating themes that appear as red threads throughout her work, namely, the dialogue between spirituality/theology/religion, depth psychology, and the distinctive voice of the feminine. Since 1967 she has taught at Union Theological Seminary where she is Christiane Brooks Johnson Professor of Psychiatry and Religion and Director of the Psychiatry and Religion Doctoral Program. She further serves as a teaching and supervising Jungian analyst in private practice. Steeped in psychoanalytic thought as well as analytical psychology, Professor Ulanov writes from a Trinitarian theological perspective as an Episcopalian. Additional themes addressed through her teaching and research in the field of psychiatry and religion include prayer and the spiritual life, aggression, anxiety, imagination, dreams, and identity.

Dr. Ulanov received her B.A. from Radcliffe College in 1959. While still an undergraduate,

she engaged in private study with Paul Tillich (1886–1965). She completed both her Master of Divinity degree (1962) and her Ph.D. in Psychiatry and Religion (1967) at Union Theological Seminary in New York City where she studied with theologian Daniel Day Williams. Between 1959 and 1967, Ann née Belford was also engaged in clinical training: a unit of Clinical Pastoral Education (1962) and the Pastoral Psychotherapy Residency at Blanton-Peale Graduate Institute of Religion and Health (1962–1965), culminating in training at the New York Jung Institute for Analytical Psychology (1963–1967) as a Certified Jungian Analyst. She became a diplomate member of the American Association of Pastoral Counselors in 1967, qualified to offer supervision of supervision. Continuously engaged in clinical work as an analyst since 1965, her ministry as healer and supervisor contributes primary research material for her writing.

Upon completion of her doctorate and clinical training, Dr. Ulanov joined the Union faculty in 1967 and was tenured in 1971. In 1968 Ann Belford married Barry Ulanov, a professor in the English department of Barnard College, Columbia University. Barry Ulanov had three children from his first marriage, Anne (23), Nicholas (12) and Katherine (11). A son was born to Ann and Barry in 1970, Michael Alexander Gregory.

While raising four children, the Ulanovs enjoyed a productive intellectual collaboration as coauthors of six books, *Religion and the Unconscious* (1975/1985), *Primary Speech:*

A *Psychology of Prayer* (1982/2000), *Cinderella and Her Sisters: The Envied and the Envy* (1981/1998), *The Witch and the Clown: Two Archetypes of Human Sexuality* (1988/2000), *The Healing Imagination: The Meeting of Psyche and Soul* (1991/1999), and *Transforming Sexuality: The Archetypal World of Anima and Animus* (1994). As these titles suggest, some of their collaborative works are more heavily weighted to theological concerns, others more steeped in Jungian archetypal dimensions of the psyche, but all honor the distinctive voices of Christian theology and analytical psychology as these are brought into creative dialogue. Barry Ulanov's contribution as a scholar of jazz, comparative literature, the arts, and medieval spirituality surfaces through manifold literary, artistic, and historical allusions.

Ann Ulanov's single-authored works since 1971 include *Receiving Woman: Studies in the Psychology and Theology of the Feminine* (1981/2002), *The Female Ancestors of Christ* (1993/1998), *The Wizards' Gate* (1994), *The Wisdom of the Psyche* (1994), *Finding Space: Winnicott, God, and Psychic Reality* (2001a), *Attacked by Poison Ivy* (2001b), *The Unshuttered Heart: Opening to Aliveness and Deadness in the Self* (2007), and *Madness and Creativity* (2013 forthcoming). Of these, *Receiving Woman*, *The Female Ancestors of Christ*, and *The Wisdom of the Psyche* are readily accessible to the general reader. *Finding Space* and *The Unshuttered Heart* reward those engaged in the practice of psychotherapy, whether as recipients or practitioners, based on moving illustrations of the ways that head, heart, and spirit conjoin to effect personal transformation.

Included in Ulanov's oeuvre are four volumes of collected papers: *Picturing God* (1986/2002), *The Functioning Transcendent* (1996), *Religion and Spirituality in Carl Jung* (1999), and *The Spiritual Aspects of Clinical Work* (2004). In 2008 she collaborated with Alvin Dueck to publish a monograph that serves as an introduction to her work *The Living God and Our Living Psyche: What Christians Can Learn from Carl Jung*, including three seminal articles, "The Christian Fear of the Psyche," "Where to Put the Bad?

Where to Put the Feminine" (answering Jung's proposal that evil and the feminine be added to the Trinity as a Quaternity), and "God Images in the Life of Faith." A detailed bibliography of her publications, including numerous translations of her work, can be found in *Healing Wisdom: Depth Psychology and the Pastoral Ministry* (Greider et al. 2010).

Dr. Ulanov is a recipient of numerous awards for her pioneering work to further dialogue between Christian theology and Jungian psychology, including the Oskar Pfister Award from the American Psychiatric Association for Distinguished Work in Depth Psychology and Religion (1996), the Distinguished Contribution Award from the American Association of Pastoral Counselors (2001), The Distinguished Alumna Award from the Blanton-Peale Graduate Institute (1992), the Vision Award from the National Association for the Advancement of Psychoanalysis (1992), and the Gravida Award for Best Book in Psychiatry and Religion (*Finding Space: Winnicott, God and Psychic Reality*) from the National Association for the Advancement of Psychoanalysis (2002). In addition to recognition from her fellow counseling professionals, she has received honorary degrees from Virginia Theological School (1985), from Loyola College, Graduate Department of Pastoral Counseling (1993), and from Christian Theological Seminary (2007).

In her writings and public presentations, Ulanov frequently returns to the idea of "the gap," a potential chasm between aspects of our being and experience into which we may fall. The gap exists between "our conscious and unconscious, between ourselves and others, between our personal and social existence" (1991/1999, p. 20) and between our "pet gods" and God in Godself, God beyond God. Because we fear otherness, both without and within, the temptation is to deny it, denigrate it, or attempt to control it. Fear of the gap can account for many things: patriarchy's rejection of the feminine, heterosexual anxieties in relation to GLBTIQ (gay, lesbian, bisexual, transgender, intersex, questioning) individuals, Christian intolerance of other faiths, or conscious resistance to the

wisdom and creativity of the unconscious. Following John Sanford and Morton Kelsey as earlier interpreter of Jung for Christian audiences, Ulanov presents a nuanced and balanced dialogue between Christian theology and Jungian psychology, giving each language its due. Following Jung, Ulanov is sensitive to the “gap between our symbols and the transcendent reality they convey,” the gap between ego and Self, *Imago Dei*, that of God in us (2007, p. 207). As “America’s foremost theological interpreter of Jung” (Ulanov and Dueck 2008, p. 5), she brings to current social concerns the breadth of vision that arises from the depths of the psyche.

A careful reading of Ulanov’s work reveals her concern for the feminine as an aspect of consciousness and way of being accessible to all persons as a necessary antidote to the overly rational, linear “objective” scientism that continues to dominate our current age. Much of Ulanov’s writing, particularly her single-authored work, exemplifies a way of thinking, that is, fluid, rife with image, and metaphor, standing in stark contrast to the dryly rational style of much theological reflection. Her work invites readers to join her in bridging the cultural and experiential divides between psychological theories on the one hand and religious or “primordial” experience (1985) on the other. While the breadth of her interests and research, not easily categorized within an enlightenment understanding of theological education, make it difficult to assess the current scope of her influence as a theological educator, students responsive to her way of thinking consistently find it enlivening.

Depth psychology that takes seriously the reality and significance of unconscious knowing as it impinges on conscious awareness through symptoms, fantasies, and dreams is itself suspect in some theological circles. Those who, like Ulanov, are dually credentialed as theologians and clinicians cannot help but appreciate the poignant particularity of the many clinical vignettes that grace her writing. But even among pastoral counselors, psychoanalysis is generally more accepted than analytical psychology. Phillip Rieff’s *bon mot* is apt: “Better an outright enemy [Freud] than an

untrustworthy friend [Jung]” (1966, p. 91, cited by Ulanov and Dueck 2008, p. 4). Jung’s writings on the Trinity, the Mass, Christ, and especially his *Answer to Job* are troubling to persons of faith, not least because of Jung’s insistence that all symbols are bivalent and that God and Christ must therefore each contain both good and evil. Ulanov does not blindly follow Jung at these junctures. She notes that Jung is not at his best as a theologian, a role he disavowed even when tackling matters of Christian doctrine. In opposition to Jung’s insistence on theological dualism, Ulanov claims Augustine’s doctrine of evil as *privatio boni* – absence of the good – while affirming Jung’s point that to deny evil or to project evil onto “the other” only serves to give power to the shadow.

However certain feminists (discounting the significance of embodiment) may assess Ann Ulanov’s understanding of the feminine, one may say of her work as one might say of Jung himself, “by their fruits you shall know them.” Jung has been castigated for his affairs and misogynist elements in his writing. Yet in his own lifetime and through his celebration of individuation, Jung has inspired women, including Ann Ulanov, to find and express their own unique experiences of ego and self, as center of the psyche with affinities to Christian understandings of soul. Students reading Ulanov’s work and those who have known her as analyst, supervisor, or theological educator find through her words and her vibrant presence permission to imagine a life in which loving companionship, parenting, professional excellence, and creativity are all possible and fully lived. As in the Quaker adage “Let your lives speak,” Ann Ulanov’s life speaks fortitude, resilience, imaginative vision, and integrity of personhood to the lives of women and men still striving to realize abundant life. Individuation serves more than individuals, for through “aliveness that has the scent of joy (w)e contribute to a wholeness we share” (Ulanov 2007, p. 208).

## Unconscious

Nicholas Grant Boeving

Rice University, Houston, TX, USA

Whether structured like a language (Lacan), the submerged base of an iceberg (Freud), or the ocean upon which the iceberg itself is afloat (Jung), the unconscious is that vast “region” of mind that operates below (or para to) the limen of awareness, interacting with, affecting, and determining, to a certain degree, both our actions and our experience of consciousness in a myriad of ways only subtly perceived.

The discovery of this chimerical “entity” and the term which describes it has often been credited to Sigmund Freud, though articulator is perhaps a more fitting distinction. Innumerable authors have described and foreshadowed what we today call the unconscious, among their number Paracelsus, Schopenhauer, Leibniz, Spinoza, and Shakespeare, but it was Freud who first gave us a language and latticework with which to both read and describe it in the form of psychoanalysis.

In the history of psychology, it was this integral insight that shaped the discipline’s

theoretical orientation(s) and made therapy possible. Much of therapy consists of the seemingly Sisyphean task of unraveling the private mysteries of neurotic conflict, unearthing their roots and exposing these sources to the light of consciousness, and ideally, via the process of therapeutic engagement, successfully working through them.

In the psychology of religion, it is equally important.

Freud's reductive view was rooted in his hydraulically based psychodynamic understanding of the unconscious, believing the entirety of humankind's religious expression to be the glorious, though illusory, processes of projection, psychosexual conflict, and sublimation. This model has since been applied to virtually every god(dess) and his or her religion that scholars have come in contact with. Freud undoubtedly drew heavily from the work of the German theologian Ludwig Feuerbach, whose cataclysmic pronouncement was that the essence of Christianity (and by natural extension *all* religion) was simply our collective projections of all that is best in us as a species onto the intrinsically nonexistent cipher of "God." Although writing long before Freud and the coining of the term "unconscious," the concept is clearly operative in Feuerbach's analysis. Object-relations theory further developed these ideas in the context of idealized parental figures, while Jung believed the dazzling infinitude of religious expression could be read as permutations of a pantheon of archetypes.

The reception of these theories has historically been reductive, but recent reworkings of the psychoanalytic method have since seen that this unconscious process known as sublimation is precisely that – sublime. And that the erotic, which so often acts as both medium *and* message in the realm of the unconscious, cannot be collapsed into sex any more than three dimensions can be collapsed into two. And as embodied beings, it is the erotic dimension through which we seem to contact and express our experience of numinosity in its arborescent unfolding throughout the play of time.

## Urantia Book

Daniel E. Tyler  
Nashville, TN, USA

The Urantia Book was published in 1955 by the Urantia Foundation in Chicago, Illinois. Urantia (you-ranch-ya) is the name assigned by the book to planet Earth, and the book purports to describe the physical and spiritual history of this world and the greater universe. By its own admission, the book claims to be a revelation. The 196 chapters that constitute the 2,093-page text are credited to a variety of angelic and celestial

authors. The exact process by which the book was created is a mystery though much is known about the people involved with the publication of the *Urantia Book*. The central figure in the book's long (by some accounts, almost 50 year) gestation was a prominent Chicago physician and author, William S. Sadler (1875–1969). Sadler; his wife, Lena Kellogg Sadler, also a medical doctor; his son, William, Jr.; and his adopted daughter, Emma Christensen formed the core "contact commission" to whom the contents of the book were first manifested. According to Sadler, a fifth person whose identity has never been revealed was utilized as the agent through whom the information was transmitted by a process never explained. Much of the information imparted by the celestials was in response to questions posed by people associated with the Sadler family, a group known as the "forum." The forum met on a weekly basis for many years to formulate questions and study the material.

The book is organized in four sections: the central and superuniverses, the local universe, the history of *Urantia*, and the life and teachings of Jesus. The first chapter is titled "The Universal Father" and the book emphasizes the personal and parental nature of God. Consistent with Christian theology, the book is also trinitarian. Jesus is identified as the human incarnation of a divine creator son, Michael of Nebadon. According to the book, Michael incarnated on *Urantia* as Jesus for many reasons, chief of which was to reveal the nature of God to man. Upon completion of his mission on *Urantia*, Michael assumed full authority as the supreme ruler of the universe of his creation (Nebadon) which consists of more than three million inhabited planets. From a psychological perspective, the book stresses the unique quality of each person and the evolutionary nature of mortal development. Human beings are ascending creatures on a long journey back to God. Spiritual progress comes as the individual discerns and accepts the will of God. To assist in this process, God has given each human a fragment of Himself called the thought adjuster, which guides a person toward perfection. When an individual has progressed sufficiently to have

accepted God's will as his or her own, then the soul and personality fuse with the thought adjuster and the individual attains immortality.

Personality is also a gift from God and every person is a unique and unrepeatable expression of the divine personality, fully endowed with free will. The soul is the product of the personality and thought adjuster working together; human beings create their own souls as they choose to express the divine will, the essence of which is love. The book describes seven psychic circles of advancement a person must attain to achieve immortality, which equates to an eternal existence of learning and service in worlds beyond. Upon mortal death, a person is resurrected on another world consistent with the person's spiritual development. The *Urantia Book* has been translated into a dozen languages and several hundred thousand copies have been printed.

## Uroboros

John Eric Killinger  
The Intermundia Press, LLC, Warrenton,  
VA, USA

### Introduction

Uroboros (often *ouroboros*, sometimes *ourovoros*) is a transliteration of the Greek

ούροβόρος (ούρηβόρος). It has appeared in Latin as *ourovorax*. Uroboros is a composite word meaning “devouring its tail.” It is also synonymous with δράκων (*dragon*) and occasionally ὄφις (*ophis*). Whereas the gnostic Ophites and even contemporary snake handling sects within Pentecostal Christianity (originating in Appalachia) continue to exist sporadically throughout the Southern United States, these are perhaps more derivative of Minoan snake goddess cultic worship than uroboric devotion.

### A Powerful Primordial Symbol

Uroboros means “tail devourer.” Devouring the tail indicates the eating of one’s own flesh (without swallowing – yet). Tertullian (1989) and Chrysostom (1989) remark of the “autocannibalism” within the Eucharistic meal, the Lord’s Supper, wherein Jesus instituted the bread and cup of wine as his body and blood which his followers are to take, eat, and drink in anamnesis of him. Not only this, but he himself eats his own flesh and drinks his own blood and applies the alpha and omega (the first and the last letters in the apocalypse of John) to himself.

The uroboros is the most dynamic and primitive of all symbols representing the self-sufficient primordial deity. There is a connection between the uroboros and *khut*, the sacred snake that coils around the sun and marks the travel of the solar disk across the heavens in hieroglyphic representations of Ra within Egyptian theology and mythology. Uroboros as a sun depiction in Egyptian papyri is considered a *lemniscate*, or figure eight, the symbol for infinity. In such depictions, the uroboros appears in double and indicates volatility, is associated with the magician card in the Tarot deck, and has affinity with the one-sided Mobius strip that came to symbolize anxiety for Lacan (2004) because of its non-orientability. Representations of the lemniscate uroboros also appear in alchemical texts.

It is a round element, not unlike the Greek  $\alpha$ , and because it is a round element, the uroboros is also omega ( $\Omega$ ). The eat and be eaten aspects (life and death) are the hallmarks of the uroboros’

sustaining of the cosmic process. Not only has it affinity with the Eucharistic meal, but the uroboros is equivalent to the Holy Spirit because it is both actor and the acted upon and producer and product simultaneously.

There are incidences of triple uroboroi, as well. Charbonneau-Lassay (1991) includes a woodcut depicting such a symbol from a sixteenth-century Italian shield. This insignia is a good ancestor of the Borromean knot *matheme* in Lacan’s psychoanalytic theory of the interconnection between the Real, Imaginary, and Symbolic – this despite the lack of the fourth ring (the *sinthome* or  $\Sigma$ ) that would hold the entire knot together should a piece of it be cut. Lacan points out that in the traditional Borromean knot of three interlocking rings, cutting any one of the rings would undo the knot entirely. The presence of the *sinthome* (etymological ancestor of the *symptom*) would keep this from happening. It is worth noting that with this fourth ring, we would have not only a quaternity symbol, a squaring of the circle, but also the fourth within the alchemical axiom of Maria Prophetissa (one becomes two, two become three, and out of the third comes the One as the fourth).

Throughout the Septuagint (LXX), the Greek translation of the Old Testament or Hebrew bible, the uroboros appears in various guises as δράκων (*dragon*): There is the serpent in the Garden of Eden; there are epithetical comparisons of the uroboros/dragon to Babylon in the prophets; the uroboros is synonymous with Leviathan whom God tames, makes of it a plaything, and eventually destroys; uroboros/dragon is also epithetically used to describe the pharaoh king of Egypt using the metaphor of the Nile crocodile; and it appears even in apocryphal texts of the prophet Daniel in the stories of Bel and the dragon to be slain as a means to attempt a paradigmatic faith shift in the serpent cults of Babylon.

Interconnections have been made between the triad Leviathan-uroboros-Christ, since the uroboros is viewed as being a *homousia*. That is, it is of one substance, as Christian creedal statements have attempted to clarify in the relationship between God, Christ, and the Holy

Spirit in Trinitarian formulae. This is, of course, a throwback to the archetypal incest motif associated with the uroboros. Father, mother, son, and daughter are of the same substance, so that what happens to one happens to all. This ties in with the understanding noted in the *Chrysopoeia* of Cleopatra in the Egyptian *Codex Marcianus* (Berthelot and Ruelle 1888) wherein a light and dark uroboros surrounds the Greek phrase “en to pan” (ἐν τὸ πᾶν), “the One, the All.” This is indicative of the uroboros being at one and the same the sacrificer and the sacrificed (i.e., God and Christ), alchemically represented by the spirit Mercurius and his role as both uniter and divider.

In the New Testament, the imagery of the uroboros/dragon appears specifically in the apocalypse (Revelation) of John. In Revelation 12 (Aland et al. 1998, pp. 654–656), this dragon has been observed to be analogous to the mythologems of Apollo killing the Pythian dragon at Delphi and Zeus’ immobilization of Typhon as though to indicate the commonality of the need to overcome/overthrow/imprison/slay the dragon as offending beast. Indeed, it became a common practice in the Middle Ages to dub a knight in the name of God, St. Michael, and St. George as a symbol of Yahweh’s overthrowing the great sea serpent Leviathan and making it a plaything – not to mention the obvious affinities with the subduing of Satan by Michael in the Revelation of John. Such imagery also denotes the links the uroboros has with twinship, for example, the story of Castor and Pollux, the pillars of Hermes (Mercurius!) and Hercules (and the Kabbalah’s Jachin and Boaz columns), the Mithraic Cautes and Caupartes, as well as the Hero Twins in Pueblo lore: monster slayers and transformers of the old to the new. Bion (1950/1967) alludes to the poisonous nature in the swallowing of the analytic twin. Ode 22 of the pseudepigraphal *Odes of Solomon* (Charlesworth 1985, p. 755) recalls the “poison” of the dragon which is its dark half.

The uroboros motif is also present in the third chapter of the Johannine gospel wherein Jesus and Nicodemus broach the subject of the serpent lifted up by Moses. This is an overt allusion to the

lifting up of the Christ on the cross, the sacrifice by the sacrificer for the renewal and redemption of human beings. In this same chapter of John’s gospel, the uroboros image first appears in the call to be born from above (water and the spirit). Uroboros is associated with water (as in the Genesis story of creation), and it is affiliated with Okeanos, which has the dual meaning of life (*zoē*) and death (*Thanatos*). That the uroboros is capable of fragmenting, separating, and dividing is indicative of life, since *zoē* is an epithet for Dionysos, divine archetypal symbol of fragmentation. But the uroboric dragon is also a symbol of perpetual renewal, which is also indicative of *zoē* as rebirth follows death.

### Uroboros in Gnosticism and Mystical Judaism

In gnostic writings, such as the *Pistis Sophia* (Mead 1921/2005), the body of the mysterious serpent is divided into 12 aeons, corresponding to the 12 months of the solar year. Within the dialogue with the resurrected Christ, Mary Magdalene inquires about the nature of outer darkness. Jesus’ response is that the outer darkness is a great dragon with its tail in its mouth outside the whole world and surrounding the whole world. This may well be the same outer darkness into which the improperly attired guest is cast in Jesus’ parable of the marriage feast in Matthew 22. Thus, the light and dark attributes of the uroboros correspond to the *agathodaimon* (spirit of good) and the *kakadaimon* (spirit of evil), respectively. This is because as serpent, the uroboros gives and sustains life as well as removes and destroys life.

It is important to consider the issue of emanations when speaking of the uroboros. The gnostic texts that comprise the Nag Hammadi codices contain a number of references to the uroboric nature of the creation and dissolution of the cosmos which spring from emanations of the great serpent. These are, psychologically speaking, projections. Whether we put up barriers ( $\beta$ -screens) to block or repress these projections is something worth taking into consideration.

As knowledge of the uroboros is eventually related to the squaring of the circle (which allows us to discern God), contains the union of the opposites (tying it to the hieros gamos [q.v.]), and is, all in all, immune to injury, it is analogous to W. R. Bion's epistemological notion that knowledge leads to absolute reality, which he designates as "O." Put another way, knowledge respectfully leads to the indescribable ultimate reality, godhead (not *imago Dei!*), or "O," remembering that knowledge and ultimate reality are not synonymous.

Referring to Torah, Rabbi Yochanan ben Bag (Ben Bag Bag in the Babylonian Talmud) urges in *Pirke Avot* 5:22, "Turn it and turn it again, for everything can be found therein." It is the uroboric nature of Torah to reach out and draw the world into itself and project it. The same could be said of Kabbalah, since the uroboros is synonymous with Leviathan and this same tamed sea serpent and plaything of God is therein the name for *Yesod* and *Tifereth*.

## Uroboros in Psychology

With the uroboros, there is still turbulence, for it encircles the Void or abyss of chaos. This bears on Bion's (1977/2000) concept of emotional turbulence in the analytic encounter – indeed, within any encounter between human beings. This turbulence/chaos holds events that are discernible, and it is up to us to pick our way to them and draw them out. Films (e.g., *Stargate*) have capitalized on the uroboric interconnectedness between other galaxies and times, aeon fluxes, and the like. Joyce (1939/1967) produced an exceptional uroboric text in his *Finnegans Wake*.

The uroboros is the one that devours, fertilizes, begets, slays, and brings itself, like the phoenix, to life again. It is hermaphroditic and the container of the opposites: poison and panacea, as well as basilisk and savior. As a sexual symbol, the uroboros in fertilizing itself is thus related to hieros gamos. Charbonneau-Lassay (1991) mentions the existence of a gold ring in the form of a uroboros. A wedding band in gold (the highest

not-color color both symbolically and alchemically) is already a uroboros, further connecting it with the hieros gamos, or sacred marriage, acted out within the wedding rite.

Despite its lemniscate and Borromean emanations and derivatives, the uroboros is usually depicted as a serpent devouring its tail, ring shaped, a circle without beginning and without end. It is a symbol of infinite time, of death and rebirth, regeneration, dying in order to be born anew. Geometrically, the topology of the uroboros is that of a torus, a donut defined by two circles – one revolving about an axis coplanar with the other. Lacan used the torus to speak of the effect of the irruption of the Real into everyday life. With the torus, there is no inside or outside: only two voids by which to articulate request and desire which never quite find fulfillment and end up creating a spiraling chain of veiled originary remembrance. Because our lives and the world form a continuous order within the toroidal uroboros, when the Real irrupts, it does so everywhere at once, subjecting everything to change. Since the uroboros serpent not only signifies emanation/projection and dissolution but also life-giving and life-taking, such an irruption is threatening because of the potential for the dissolution of everything in its presence. The uroboros is thus a sublation (progress, qualitative change), the sort of *Aufhebung* used in Hegelian terminology. Nevertheless, whatever change occurs is essentially an enantiodromia. There is a return to the originary and the movement is not static but dynamic.

## Vatican

Anthony J. Elia  
The Burke Library, Union Theological Seminary,  
Columbia University, New York, NY, USA

The Vatican is a 108-acre territory and independent city-state located in the center of the Italian capital of Rome. It is headed by the Pope, as supreme governor, and administered through the Pontifical Commission. It has its own legal system, based upon the *2000 Fundamental Law of the Vatican City-State*, which was promulgated by Pope John Paul II, as well as a penal system, two jails, a post office, electric plant, bank, and publishing house. Canon law also presides, and in the cases where canon law does not apply, the laws of the city of Rome are employed. Originally, the term “Vatican” referred to the area of Rome called “mons vaticanus,” which was a hill sloping away from the center of the ancient city near the Tiber, and a location that was sacred for early Christians, who believed it to be the burial place of St. Peter (Allen 2004).

In common usage, the terms *Vatican*, *Holy See*, and *Roman Curia* are often interchanged imprecisely. Whereas the Vatican refers specifically to a physical location, the *Holy See* and *Roman Curia* refer to authoritarian and administrative roles. The *Holy See* is the centrality of authority, power, and jurisdiction, coming from the Latin *sedes*, or seat. It indicates the “proper term for designating the authority of the papacy

to govern the Church. It is a non-territorial institution, an idea rather than a place” (Allen 2004, p. 23). The *Roman Curia*, which originally referred to a seat in the ancient Roman Senate, is the “bureaucratic instrument through which the Pope administers the Holy See and carries out his function both as supreme governor of the Catholic Church and as a sovereign diplomatic actor” (Allen 2004, p. 28). This said, the use of the term “Vatican” continues to function in media and general discussion as a catchall for references to the central authority of the Roman Catholic Church.

## Freud, Lacan, and the Vatican

Freud visited the Vatican Museum and was positively enamored by its wealth of art. As Ernest Jones, Freud’s biographer, writes “he [Freud] was . . . in the Vatican Museum and came away from it exhilarated by the beauty of what he had seen” (Jones 1955, p. 20). But his feelings about the Vatican as a representative of the New Rome, which he recognized as the empire of Christian Rome, were negative. Unlike Lacan, who is sometimes described as “un cattolico non ortodosso” and a great admirer of Baroque Rome and its Catholic trappings, Freud was greatly conflicted over this new Christian Rome localized in the Vatican, especially as a tension rooted in his vision of Judaism in conflict with the Church (Amati 1996).

## Psychology and the Vatican

In the late nineteenth century, individuals such as Hermann von Helmholtz, Wilhelm Wundt, Pierre Marie Félix Janet, and Sigmund Freud were introducing experimental and clinical methods into the discipline of psychology. It was most significantly Freud, whose writings and psychoanalysis were to become anathema to the Catholic world (Gillespie and Kevin 2001). In a 1952 TIME magazine article entitled “Is Freud Sinful?” there is clear consternation from some Vatican officials, but these assertions are notably neither official nor dogmatic. One of the most vocal opponents of Freud was Monsignor Pericle Felici, an official of the Sacred Congregation of the Sacraments, who “loudly attacked ‘the absurdity of psychoanalysis.’ He stated flatly that anyone who adopts the Freudian method is risking mortal sin” (TIME 1952). The general concern of most critics, though, had to do with any Freudian issues of sex and sexuality. The Vatican’s official status on psychoanalysis in 1952 was expressed in the statement: “should psychoanalytic treatment be judged harmful to the spiritual health of the faithful, the church would not hesitate to take adequate steps to brand it as such. Nothing, so far, indicates that such steps are about to be taken” (TIME 1952). Felici continued to criticize the role of psychology and his assertion that “the psychoanalytical school can easily become a school of corruption” resulted in controversy (Gillespie and Kevin 2001, p. 19). The official response to the storm over psychoanalysis came when Pope Pius XII spoke at the First International Congress on the Histopathology of the Nervous System, where he vigorously cautioned against “psychotherapeutic treatments that seek to unleash the sexual instinct for seemingly therapeutic reasons” (Gillespie and Kevin 2001, p. 19). The following year, on April 13, 1953, Pius XII addressed the Fifth International Congress of Psychotherapy and Clinical Psychology, saying

be assured that the Church follows your research and your medical practice with her warm interest and her best wishes. You labor in a terrain that is very difficult. But your activity is capable of

achieving precious results for medicine, for the knowledge of the soul in general, for the religious dispositions of man and for their development (Pius XII 1953).

In more recent times, there have been attempts at mollifying the historically tenuous and misunderstood relationship between psychology, psychiatry, and the Vatican. In 1993, Dr. Joseph T. English, then president of the American Psychiatric Association, led a delegation of prominent psychiatrists to meet with Pope John Paul II. The New York Times noted that there was a time when such an event “would have seemed unlikely, if not absurd” (Steinfels 1993). Some of the issues that were considered in this encounter dealt with the belief by some Catholics that psychological ills are simple moral failings and, thus, find psychotherapy something to be shunned (Steinfels 1993). Five years after this discussion, Pope John Paul II referred to psychoanalysis and psychotherapy in a message on the sacrament of Penance, where he indicated that “the confessional is not and cannot be an alternative to the psychoanalyst’s or psychotherapist’s office. Nor can one expect the sacrament of Penance to heal truly pathological conditions” (John Paul II 1998). In the twenty-first century, the Vatican has become more involved in the psychological disciplines, primarily through the work of pastoral care and counseling.

## Vedanta

Fredrica R. Halligan  
Mind Body Spirit Institute, Stamford, CT, USA

A philosophy of classical Hinduism *Vedanta* means “the culmination of the *Vedas*,” referring to the *Upanishads* as the final portion of that scripture. In essence, *Vedanta* is theology, with its main concern focused on divine power. In the past 100 years, *Vedanta* has been popularized in the West, a movement initiated by Swami Vivekananda who carried the teachings of Sri Ramakrishna from Calcutta to Vedanta Society centers in many major cities of the world.

Principal teachings embody the harmony of all religions: “As many faiths, so many paths.” With its aim to experience the oneness of all creation, *Vedanta* preaches kindness to all, nonviolence and service to others (*seva*). God (*Brahman*) can be known as form or formless. In form, for example, God can be found in Divine Incarnations (*Avatars*) and as the Indweller of every human heart (*Atman*). As formless, God is perceived as all-pervading and as pure consciousness.

## Vestments

David A. Leeming  
University of Connecticut, Storrs, CT, USA

Vestments are the garments worn by priests and other religious leaders in the performance of sacred rites. The term is used especially by Christian denominations which place particular emphasis on the sacrament of Holy Communion, the liturgy of the Eucharist. Thus, priests of the Orthodox, Roman Catholic, Lutheran, and most of the Anglican Communion wear vestments while celebrating the “Mass” or “Great Liturgy.” Vestments of various types and colors, depending on the liturgical season of the church year, are worn. The most common and most visible Eucharistic vestment is the chasuble, a poncho-like garment that originated in Roman times.

The psychology behind vestments would seem to have to do with the priest’s need during the sacred liturgy (service) to cover his particularity and individuality behind a “uniform” – a recognizable symbolic garment – so that he (or she in some traditions) may become the representative of his church as a whole. It is not Father X saying Mass; it is a representative of Christ and His Church, as the vestments indicate.

## Via Negativa

Philip Browning Helsel

Pastoral Care and Counseling, Boston College  
School of Theology and Ministry, Chestnut Hill,  
MA, USA

The Latin term, which means the “way of negation,” refers to the stream of Christian theology which emphasized the unknowability of God and the inability of positive theological attributes to define God. Also known as apophatic (literally “denial”) theology, this way of thinking can be seen in the writings of those who would later be known as mystics. The *vianegativa* paradoxically uses language to describe what is indescribable but prefers adjectives of cancellation to those of positive attribution, claiming that positive attributes drawn from human experience cannot reflect the divine. This stream of thought, far from being divorced from what preceded it in Christian theology, was present throughout Christian theology and could be seen as a direct reflection of a strong emphasis on the transcendence of God (Turner 1995, p. 1). Rejecting the positive naming of God found in Bonaventure and Aquinas, apophatic theologians emphasized the ineffability of God. Drawing from Pseudo-Dionysus, who in the fifth century described God as “dazzling darkness,” thinkers such as Meister Eckhart and the anonymous author of *The Cloud of Unknowing* describe God in terms of negation, reflecting in their language the inexpressibility of God. However, it is important that the *via negativa* not be objectified by a discussion of it, since it resists fixation and attachment upon it as a particular “correct way.” Apophatic theology is also an important stream in Islamic theology, which states the names of Allah, not as direct analogies to Allah but as “veils put on the mystery of God” (Borrmans 1993, pp. 63–64).

If, in theistic religions, the *via negativa* is a reflection of the otherness of God, in a nontheistic religion such as Buddhism, the *via negativa* could be thought of as a radical immanence. Especially in Zen, the *via negativa* is strongly exemplified in the use of the prefix “not” in such phrases as “no-mind” and “no-self” and in the tendency to cross out even sacred terms such as *sunyata* (“emptiness”), emphasizing the limitations of language (Abe 1995, p. 51). In Buddhism, the *via negativa* resists being put into the service of higher goals, or transcendence. In the Zen koan, the paradoxical approach of negation reflects the fact that the practitioner must grapple with the negation and senselessness of the riddle in order to approach meaning which is not positive or negative but transcends dualities (Suzuki 1927, p. 250).

The *via negativa* is not merely semantics, but it points to something central to mysticism, the overcoming of dualities and all notions of the pursuit of sense or purpose. The challenge of apophatic theology is a challenge that is directed against both religion and language but also inseparable from them.

## Commentary

Just as Freud’s discoveries unseated the omnipotence of the will and conscious thought, and therefore caused people to look deeper for the complexities of meaning, the *via negativa* also involves suspicion for the potential of positive language to clearly point to reality. The illuminating character of *parapraxes* echo negative theology in both the slipperiness of language and the sense of a deep reality being glimpsed. Jung built his theory of opposites upon a valuing of the supposedly paradoxical and contradictory sides of experience. His formulations emphasized mystery and resonated with the *via negativa* in their suspicion that there may be something more true than language can explain. The *via negativa* could be seen as a corollary to depth psychology in its attempts to seek to understand deeper aspects of experience, in its emptying of categories with an openness to what is beyond.

At the same time, the *via negativa*, in the Christian tradition, seems to rely upon the distance of God and thus could be seen to imply the distance of the believer from the object of worship. Feuerbach critiqued all expressions of a *via negativa* as really implying a failure of faith (Feuerbach 1957, p. 220). Negative theology could be analyzed as implying doubt or disappointment with a faith object in which one attempts to trust, and thus placing that object beyond all reach. Psychologically, this could be understood as reflecting failure in the earliest environments in which the psychic potential of faith is established for the child. However, apophatic theology should not too quickly be identified with disappointment or loss, or with what John of the Cross called “the dark night of the soul,” since it cannot simply be equated with an experience of depression or a purgative stage of faith through which one passes. It is best understood, in theistic settings, as an important stream of thought alongside positive mysticism. In nontheistic traditions, it is the relativity of language in service of non-duality. In either case, it refers to something which certainly has psychological components but retains its own religious logic and should not be flattened to fit psychological categories.

## Vicarious Traumatization

Lori B. Wagner-Naughton

Western Connecticut State University, Danbury, CT, USA

Defined as the indirect transmission of distressing symptoms following exposure to an individual who has directly experienced a traumatic event. After empathic and spiritual engagement with a traumatized individual, the listener may experience symptoms consistent with posttraumatic stress disorder (PTSD). These responses can include distressing imagery or reexperiencing of the event; persistent avoidance and numbing of stimuli, thoughts, or feelings reminiscent of the trauma; increased physiological arousal; somatic ailments; and significant impairment (DSM-IV-TR). In essence, the listener functions as the “container” for the uncomfortable thoughts and feelings that are elicited through exposure to another individual’s recollections of traumatic material. The listener may attempt to alleviate these distressing emotions through spirituality or religious affiliation. Shaw et al. (2005) describe how “religious beliefs may provide a framework to aid reappraisal of threatening situations as less of a threat and more of a challenge” (p. 3). After reframing the trauma

within a different context, the listener can begin to process existential conflicts and seek alternate meanings about life experiences (Frankl 1984).

## Violence and Religion

James W. Jones  
Department of Religion, Rutgers University,  
New Brunswick, NJ, USA

All the religions of the world contain storehouses of symbols and metaphors of war and violence. At the beginning of the sacred history of the Bible – the fountainhead of Judaism, Christianity, and Islam – God “Himself” hardens Pharaoh’s heart to set the Egyptians up for slaughter. The firstborn child of every Egyptian family is slain until every Egyptian knew death. Bloody stories of warfare, pillage, rape, and conquest fill the opening books of the *Torah*. Such texts lay the basis for the Holy War tradition in Judaism, Christianity, and Islam. The New Testament contains bloody portrayals of Jesus’ suffering on the cross, Paul’s metaphors of continual spiritual warfare, and the horrific images in the *Book of Revelation* so dear to apocalyptic Christians. The crusades, the inquisition, and the European wars of religion following the Reformation are all part of the history of

Christianity. Islam tells and retells the stories of the Prophet’s battles and conquest and there is the history of Islam’s bloody sweep across the Middle East and North Africa. The Pali chronicles contain many tales of the wars and conquests by Buddhist kings, tales that are told and retold among the Buddhists of Sri Lanka in their campaign to subdue the Tamil population there. In 1959, a Sri Lankan Prime Minister was assassinated by a Buddhist monk. Tibetan Buddhism also has many stories of warfare and its divine pantheon contains countless images of blood-thirsty deities and semidivine beings. And there is a long lineage of warrior Buddhist monks in China and Japan. The Hindu epics like the *Ramayana* and the *Mahabharata* are full of epic battles and warrior heroes. No world religion is without a storehouse of more than enough texts and tales to justify any and all acts of brutality, bloodshed, and terrorism. Historically and textually there are many, many connections between religion and violence. In the sweep of human history, there is no evidence that any one world religion is bloodier than any other (Juergensmeyer 2000; Stern 2003).

No serious contemporary psychological study has found any evidence for diagnosable psychopathology in those who commit acts horrific violence in the name of religion (see, e.g., the review in Horgan 2006). Most extraordinary acts of inhumanity are committed by very ordinary people. Theologians have said this for centuries; many social psychologists are coming to the same conclusion.

Most contemporary psychological investigations of the connections between religion and violence are done by social psychologists, often in the context of more general investigations into violent behavior. Such studies almost always locate the causes of violent behavior in the dynamics of groups. The two most widely cited social-psychological experiments in the literature of genocide – Milgram’s obedience to authority and Zimbardo’s prison experiments – illustrate this. In the early 1960s, Stanley Milgram recruited a cohort of 40 ordinary men from New Haven, CT, and told them to inflict increasing electric shocks on a subject, in response to the

subject making mistakes on a word association test. The subject was, in fact, part of the experiment and did not receive any actual shocks. In response to the experimenter's requests, the majority of the participants inflicted increasingly severe shocks on the subject as a punishment for his wrong answers to questions. Even when the subject portrayed signs of severe distress, participants were willing to inflict that what they were told was a near-fatal shock to the subject in obedience to the experimenter's commands (Milgram 1974).

In 1971, at Stanford University, Philip Zimbardo recruited a cohort of typical college male undergraduates and randomly assigned one group to play the role of prisoners and the other to play the role of prison guards. He set them up in a mock prison setting. Anyone with noticeable psychological problems was screened out. Within days, a third of those assigned to be guards became increasingly cruel, sadistic, and tyrannical towards the prisoners, whom they knew were really just fellow undergraduates like themselves. This brutality escalated so rapidly that the 2-week-long experiment was stopped completely after 6 days (Zimbardo et al. 1999). These experiments demonstrate the ease with which violent groups can elicit cruel and sadistic behavior even from those not otherwise inclined in that direction.

Waller (2002) suggests four social-psychological factors that permit ordinary people to become perpetrators of extraordinary evil. The first factor claims that all of us have certain genetic predispositions shaped by natural selection that make us susceptible to committing vicious deeds. Religious leaders and institutions are particularly adept at manipulating these inherited inclinations towards ethnocentrism and us-versus-them thinking. Waller's second factor refers to the ways in which these inherited traits are shaped by culture to make us even more potentially available for heinous actions. Among the significant "cultural belief systems" are religious beliefs about the role of authority, about the dichotomy between the in-group and out-group, and the demonizing of those considered outside the true fold. Religious beliefs also serve as

justifications for killing. By reinforcing ethnocentrism and scapegoating outsiders, religion can facilitate a "moral disengagement," through which we cease to see a horrific deed as immoral, and may redefine and relabel otherwise abhorrent actions into something justified and even meritorious (Bandura 2004). The third factor is "a culture of cruelty" in which individuals, already predisposed in this way by genetic inheritance and religious and cultural training, are directly trained as killers. Through escalating commitments (in which an individual is gradually introduced and desensitized to more heinous acts) and a ritual initiation, the individual's conscience is gradually numbed or repressed. Initiation into such violent groups allows for a diffusion of responsibility, creates an ethos of "deindividuation" in which individuals can act with anonymity, and makes them subject to an almost irresistible peer pressure. Religious groups can become cultures of cruelty in this sense. Waller's fourth factor concerns the way in which potential victims are dehumanized, labeled as beyond the pale of human compassion and empathy. Religion has many powerfully effective ways to dehumanize and delegitimize opponents. Religion may be, in fact, one of humanity's most powerful means to the "social death" of the other (Waller 2002).

Bandura emphasizes that people need a moral justification before they will engage in reprehensible actions. He argues that "the conversion of socialized people into dedicated fighters is achieved not by altering their personality structures, aggressive drives, or moral standards. Rather it is accomplished by cognitively redefining the morality of killing" (Bandura 2004, p. 124). Bandura points out that "religion has a long and bloody history" as one of the major vehicles for providing that moral justification of mass bloodshed (Bandura 2004, p. 125).

The current psychological discussion of the origins of violence is mainly located here. Most recently published, psychologically oriented articles focus on the group processes and induction procedures by which individuals are recruited to perform violent actions (cf., Miller 2004). However, not every member of a society

from which religious violence arises joins a violent group and not every member of such a group actually commits a violent act. This suggests that the psychology of religious violence cannot completely ignore individual factors.

The clinical question is why certain individuals resonate with the messages of religious violence. In a study of religious violence across three traditions (Muslim jihadist, the Japanese Buddhist group Aum Shinrikyo, American apocalyptic Christianity), I argue that religions give rise to violent actions when they emphasize shame and humiliation, when they dichotomize the world into warring camps of the all-good against the totally evil, when they demonize those with whom they disagree and foment crusades against them, when they advocate violence and blood sacrifice as the primary means of purification, when their devotees seek to placate or be unified with a punitive and humiliating idealized figure or institution, when they offer theological justifications for violent acts, and when they promote prejudice and authoritarian behavior (Jones 2008). Psychological dynamics such as splitting, the rage for purification, the need for absolute certainty, the drive to externalize aggression, and demonizing an out-group – dynamics historically investigated by clinicians – may predispose individuals to find violent theologies meaningful (Jones 2002).

From a clinical perspective, religion leads to violence when universal religious themes such as purification or the search for reunion with the source of life or the longing for personal meaning and transformation – the classic instigators of spiritual search and religious conversion – become subsumed into destructive psychological motivations such as a Manichean dichotomizing of the world into all-good, all-evil camps or the drive to connect with and appease a humiliating or persecuting idealized patriarchal Other. The result is the psychological precondition for religiously sponsored violence. Some factors that might serve as warning signs that a religious group has a high potential for violence are (1) profound experiences of shame and humiliation either generated by social conditions outside the group and potentiated by it or generated from

within the group (Gilligan 1996); (2) splitting humanity into all-good and all-evil camps and the demonizing of the other; (3) a wrathful, punitive idealized deity or leader; (4) a conviction that purification requires the shedding of blood; and (5) often a fascination with violence (Jones 2008).

In a book whose title *Violence and the Sacred* says it all, Rene Girard offers an account of religion arising out of acts of violence (Girard 1977, 1996). In tribal societies, violence threatens the entire social order. The solution arrived at by our ancestors, Girard suggests, is the whole society coming together and channeling the urge for violence onto an object, person, animal – the scapegoat – who is then rejected, exiled, and killed. With the scapegoat sacrificed, the community is again reconciled, at least temporarily. The sacrificed victim, bringer of a new order of peace and harmony, is now regarded as a savior, a god. Scapegoating and sacrifice acquire the penumbra of the sacred by their power to contain and mute the devastating possibilities of violence. Because of the scapegoat, we are reconciled. Thus, the scapegoat comes to be worshiped. So, religious ritual develops. For Girard, religious ritual comes after the sacrificial deed, not before it. Religion develops out of the sacrificial action rather than sacrificial rituals being an expression of some religious impulse.

The sacrificers, now bound together by this bloody act, vow not to repeat the violent crime that led to the escalation of violence that only a sacrifice could stop. Thus, prohibitions – “thou shall not kill” (unless it is a ritual sacrifice) – arise and become established. Eventually this process must be explicated; it must enter into language and so a narrative grows up to explain the ritual. Thus, myth arises and it is established. Here then are the core processes of religion – ritual, prohibition, and myth – all arising out of what Girard calls the “scapegoating mechanism.” Religion becomes the major way of containing violence, that is, its first and most basic function. So religion and violence are inextricably linked.

A complete psychology of religion must include the psychology of religious violence. Psychological processes such as shame and

humiliation, splitting and seeing the world in black-white terms along with the inability to tolerate ambivalence, the dynamic of projection, and demonizing the other all contribute to violence apart from religion. But the history and psychology of religion make clear that such dynamics are not only central to the evocation of violence they also lay close to the heart of much religious experience. By demanding submission to a deity, text, institution, group, or teacher that is experienced as wrathful, punitive, or rejecting, religions inevitably evoke or increase feelings of shame and humiliation that are major psychological causes of violent actions. By continually holding before the devotee an overly idealized institution, book, or leader, religions set up the psychodynamic basis for splitting and bifurcating experience. By teaching devotees that some groups are inferior, evil, satanic, and condemned by God, religions encourage the demonizing of others and their “social death,” making their slaughter seem inconsequential, justified, or even required. For these reasons, any turn to violence is not accidental but is rather close to the heart of much of the religious life (Jones 2002, 2008).

### Virgin Birth

Jeffrey B. Pettis

Department of Theology, Fordham University,  
New York, NY, USA

In myth and religion, virgin birth is central to the life and coming into existence of the divine child. The Buddha, for example, descends from the higher realm into the womb of his mother the Great Queen Maya. He appears in the shape of a milk-white elephant. The conception in her womb occurs without defilement, as he is born coming forth from her side under the shining constellation of Pushya. The birth is miraculous, like those of other Hindu heroes such as Aurva and Prithu, for he does not enter the world in the usual manner. Similarly, Jesus is conceived through the Holy Spirit in the womb of Mary. The conception and birth are acknowledged and celebrated by the cosmos, the Magi from

the East, and by Mary herself (Matt. 1.18–2.11; Luke 1.26–58). The virgin as divine bride is set apart from the collective element as a preparation and requirement for divine conception. *The Gospel of Pseudo-Matthew* tells of Mary who as a child was in constant prayer and that the angels of God spoke with her often. She is called “blessed among women, and blessed is the fruit of her womb” (9). The mother of the Buddha is also marked as having special qualities. According to Buddha legend, she is the Great Queen Maya, splendid, steadfast, and having the beauty of a goddess after whom she is named. She seeks seclusion in the pure woods where she meditates continuously, and she suffers no discomfort during the birth of the Buddha child. In these examples, both virgin and child are trans-relational and have double-sided natures. The mother, having conceived through *pneuma*, now herself has a sacredness which exists along with her body which gestates, nurtures, and contains the infant child. Likewise, the child conceived as *pneuma* takes on flesh, becoming mortal and collective along with all human beings. This dual nature creates an implicit tension between the divine and human natures which may get played out in the external world. Mary the mother of Jesus is to be divorced by her betrothed Joseph and liable to death by stoning as an adulteress (cf. the Vestil Virgin of Rome who is buried alive for being unchaste). The divine-figure Jesus will be mocked by the mob and executed as “King of the Jews.” The Buddha will realize Nirvana only by entering into the suffering and poverty of the collective, mundane world. Virgin birth may be understood ultimately to occur as an act of divine imperative. The virgin’s womb becomes the means – the vessel – of divine will and purpose. A spiritualization of matter and the maternal takes place through/by *patēr*-animus. Virgin birth alternately may be seen to be pre-patriarchal in nature, not relying upon sexual intercourse and male human initiative. The virgin mother occurs as the “Great Mother,” the “Earth Goddess.” She is the true creator, as becomes the Egyptian goddess Isis who re-creates her dismembered husband Osiris and begets her son Horus to whom she gives the elixir of life.

## Virgin Mary

Anthony J. Elia

The Burke Library, Union Theological Seminary, Columbia University, New York, NY, USA

The Virgin Mary (Heb: *Miryam*; Grk: *Maria*) is the mother of Jesus Christ in the New Testament texts (most notably, the gospels of Luke and Matthew). Throughout history, the importance of the mother of Jesus Christ has been interpreted broadly by religious traditions, including Roman Catholicism, Orthodox Christianities, and Protestant denominations as well as theologians within each of these traditions. Each has contributed to a deep hermeneutical tradition of Marian studies. The Virgin Mary is often referred to as “Maria” (*Ave Maria*), “Mother of God,” “The Blessed Virgin,” “Mater Dolorosa” (mother of Jesus providing maternal care at crucifixion) (Pelikan 1996, pp. 14–15), “The Second Eve,” and “Mother of the People.” In Eastern Christian traditions, Mary took on the title of “Theotokos,” which has often been understood in translations from the Greek as “Mother of God” (Latin: *Mater Dei*; German: *Mutter Gottes*) but is more precisely translated as “the one who gave birth to the one who is God” (Slavic: *Bogorodica*; Latin: *Deipara*) (Pelikan 1996, p. 55).

## Mary in Islam

In Islam, there is favorable discussion about the Virgin Mary (Arabic: *Maryam*) in the Qur’an where she is seen as one of the holiest women to walk the earth. References to the Virgin Mary

occur prominently in suras 3 and 19, though the earlier sura 3, which is considered part of the prophet's Medina period, appears to focus on the negation of Jesus's divinity. In contrast, sura 19 strongly draws parallels between the prophet Muhammad and the Virgin Mary as each being bearers of the word of God (Pelikan 1996).

## Cult of Mary

The cult of Mary is relatively absent in the church until about the fourth century CE. Some scholars (Ashe, Carroll) have noted the rise in the cult at this time to be attributed to changes in the social strata of Roman society. The emergence of the cult of Mary in the fourth century has been partially attributed (in psychological terms) to an increase of proletarian Christians coming from father-ineffective families, which are marked by a "strongly repressed desire for the mother" (Carroll 1986, p. 83). The psychoanalytic origins of the cult of Mary have been explained by Freud as a compromise where unconscious desires are redirected through an activity representing disguised fulfillment of the unconscious desire (Carroll 1986).

## Mariology

The scholarly and theological study of Mary, most often through Catholic perspectives, is called *Mariology*. The history of Mariology dates back to late antiquity and includes works by Irenaeus of Lyons, Ambrose of Milan, St. Bernard of Clairvaux, and St. Thomas Aquinas. Mariology developed in a more Thomistic vein in the sixteenth and early seventeenth century, specifically beginning with Jesuit scholar Francis Suarez (1548–1617). Francis de Sales (1567–1622), Robert Bellarmine (1542–1621), and St. Lawrence of Brindisi (1559–1619) also contributed to the development of philosophical and highly erudite Mariological texts in the Thomistic tradition.

Of the major theological aspects of Mariological history, there are four dogmas of the Catholic

Church which underscore the Mariological narrative and its importance. These are (1) the Perpetual Virginity of Mary, (2) Mary as Mother of God, (3) the Immaculate Conception of Mary by her mother St. Anne, and (4) Mary's Assumption into Heaven. Mary's *Perpetual Virginity* was discussed in Patristic literature (notably Augustine, in his *De Virginitate, Augustine*) and continually reasserted Mary's virginity throughout her entire life. The role of *Mother of God* emphasizes a divine maternity and the unity held between Mary and Christ incarnate. This was first defined ecclesiastically at the Council of Ephesus in 431. The *Mother of God* Feast Day is January 1st. The doctrinal understanding of the *Immaculate Conception* of Mary is not to be confused with the *Virginal Conception* of Jesus. The *Immaculate Conception* is the belief that the Virgin Mother was always without original sin and, specifically, that her mother (traditionally St. Anne) conceived Mary without sin. On December 8 (*Immaculate Conception* Feast Day), 1854, Pope Pius IX solemnly put forth this dogma in a constitution titled *Ineffabilis Deus*. The fourth dogma, the Assumption, was executed in 1950 by Pope Pius XII and defines that the Virgin Mary was assumed in body and in soul into heaven at the time of her death. August 15th is the Day of Assumption. An additional Feast Day of Marian importance is Annunciation Day, which is March 25th, commemorating the day when the angel Gabriel visited the Virgin Mother.

## Jung's Interpretation

The Assumption of Mary is an important aspect of the Marian narrative, which effectively explicates the death of Mary (often referred to as the *dormition* or "falling asleep") and her ascent into heaven. In this context, Mary is often given the title "Queen of Heaven" (Pelikan 1996). Carl G. Jung's assessment of the Marian Assumption, published in 1952, was in basic agreement with Pius XII's 1950 apostolic constitution *Munificentissimus Deus*, which defined the dogma of Assumption (Pelikan 1996). For Jung, Mary is "the pure vessel for the coming birth of God"

but also both the daughter, bride, and mother of God, who is free from all original sin. As the bride of God, Jung establishes Mary as the incarnation of her prototype, Sophia, also being a mediatrix, or the one who leads humanity to God and assures immortality (Jung 1954). Jung also describes the relational aspect of Mary to her son as a closeness where they are not real human beings, but gods. In the twentieth century, the role of Mary as the *co-redemptrix*, or one who has an “active collaboration with Christ in the redemption of the world,” has been central (Miegge 1955, p. 155). These theological roles as *mediatrix* and *co-redemptrix* emphasize the *mother as divine* character.

### Psychoanalytic Interpretation in Art

Glorification of the Virgin Mary through art has been popular for over a millennium. Marian art has been assessed by the prominent psychological traditions, notably Freudian and Jungian analyses, and includes both analyses of the artists themselves and analyses of symbolism, for example. Psychological interpretations of Renaissance art depicting both Mary and the holy family, including St. Anne, are prominent. Images of the Virgin Mary can be seen in works as varied as Byzantine, Romanesque, Gothic, Renaissance, and Baroque art. Prominent artists, who depicted the Virgin Mary, include Jan van Eyck (ca. 1390–1441), Lucas Cranach the Elder (1472–1553), Hans Memling (ca. 1433–1494), Raphael (1483–1520), Michelangelo (1475–1564), Titian (ca. 1485–1576), Leonardo da Vinci (1452–1519), Peter Paul Rubens (1577–1640), Rembrandt (1606–1669), El Greco (1541–1614), as well as more modern artists, such as Paul Gauguin (1848–1903) and Salvador Dali (1904–1989).

Freud himself touched upon Marian studies in his attempt to explicate the painting of the Virgin Mary with Child and St. Anne by Leonardo da Vinci. In this work (entitled *Leonardo da Vinci and a Memory of His Childhood*, 1910), Freud analyzed the painter through da Vinci’s depiction of the Virgin Mary (Freud 1957, p. XI). Scholars

have studied Freud’s own analysis as the first application of psychology to art and interpreted his study with insight into Freud’s inferences that Leonardo depicted two mothers of the Christ child, the biological mother and the stepmother. Other scholars have commented that Freud’s mistakes in his analysis of the da Vinci painting are equally as important as the initial analysis itself, because these errors underscore the role of the analyst in making observations (Thanopolous 2005).

### Marian Apparitions

Apparitions of the Virgin Mary have been numerous and recognized for several centuries. These include apparitions in Guadalupe, Mexico (1531), the French Alps (by Benoite Rencurel) from 1664 to 1718, Paris (1830), La Salette (1846), Lourdes (1858), Knock, Ireland (1879), Fatima, Portugal (1917), Beauraing (1932–1933) and Banneux, Belgium (1933), Necedah, Wisconsin (early 1950s), Garabandal, Spain (1961–1965), Zeitoun, Egypt (1968–1971), Bayside, NY (1970), Cuapa, Nicaragua (1980), and Medjugorje (1981).

The study of practitioners of the cult of Mary ranges from Freudian analyses of worship (*latría*), veneration (*dulia*), and hyperveneration (*hyperdulia*) – reserved strictly for the Virgin Mary – to Protestant explanations of visions in psychological terms and Samples (Miller 1992). Psychoanalytic hypotheses have detailed aspects of the relation between the *machismo* complex and the prevalence of the cult of Mary in southern Italy and Spain. Additionally, the concepts of *identification* (defined as “the process of adopting the characteristics of someone else, including only in one’s mind”) and *sexual attachment* are considered part of the hypothetical schematic for some Marian worship (Carroll 1986, p. 52). This continues in the vein of Oedipal frameworks and the sexual explications of both male and female relationships with the Virgin Mary (Carroll 1986). In the case of excessive Marian devotion by men, some scholars (including Freud) have suggested an association between this excessive

devotion and masochism, though evidence is not strong (Carroll 1986).

Psychological explanations of apparitions range from intentionally fraudulent claims to those manifested by illness. The reasons provided by modern psychiatry include psychological projection, hallucinations, and hysteria (Miller and Samples 1992). Other explanations of such apparitions, which scholars have deemed illusions, include feelings of anxiety induced by war, such as with the case of the Pontmain, France, apparition of 1871, which contextualized and has been understood as a family's deep anxiety produced around its three sons going off to fight in the Franco-Prussian war. The nineteenth-century novelist Émile Zola considered the future saint Marie-Bernarde Soubirous (the visionary at Lourdes) to be an exceptional case of hysteria, who suffered a degenerate heredity (Perry and Echeverría 1988). The example of Zeitoun, Egypt, is considered to be an illusion, as an unusual visual stimulus was detected by a large number of observers (Carroll 1986), while in other cases with fewer observers, the designation has been given as hallucination.

## Feminist Perspectives

Freudian analysis of theology and symbolism in contemporary Catholicism through a feminist perspective has yielded an interpretation of Marian femininity as inhibitory to psychological development and a continuation of the dominant patriarchal social structure (Harrington 1984). The spectrum of feminist approaches to Mariology has been broad and includes such scholars as Elisabeth Gossmann, Daphne Hampson, Elizabeth Johnson, Patricia Noone, Rosemary Radford Ruether, and Catharina Halkes. The underlying and central themes in these perspectives are the issues of passivity, sexuality, gender, and dynamics of hegemony and power (McDonnell 2005).

## Vishnu

David A. Leeming

University of Connecticut, Storrs, CT, USA

For many Hindus, especially those of the Advaita school of Vedanta, the god Vishnu, along with Shiva and Brahma, the other members of the great Hindu triad of deities, is an emanation of the ultimate absolute, Brahman, the transcendent but immanent source of the universe. Brahman is expressed in the individual soul as Atman, total consciousness or self-identity, the embodiment of the realization that one's true inner self is the same as the transcendent self. If Brahma is the creator of the universe and Shiva is the force that destroys or changes it, Vishnu is its preserver or sustainer. Vishnu contains the whole universe within himself, a universe made real by his consort or Shakti, Lakshmi, the manifestation of his divine energy. Vishnu takes particular worldly forms as required to sustain life. These forms, or *avatars*, serve at various stages in human history to preserve a balance between the forces of nature and the universe. The two most important avatars are Rama, the hero of the epic the *Ramayana*, and Krishna, best known for his explanation of the nature of the universe—that is, the nature ultimately of Vishnu and of Brahman—in the *Bhagavad Gita*. In that work Krishna reveals himself to the hero, Arjuna, as Vishnu, the container of every aspect of existence, including the gods.

Vishnu might be said to be a metaphor for the process of individuation or full identity. His avatars are the stages we experience on the way to that identity. From the first avatar, the fish, the creature of the maternal waters, we move gradually by way of animal, animal-human, and human incarnations to the great Krishna, whose conversation with Arjuna in the *Gita* reflects the psychological struggles we all face in the decisions that life demands.

A crucial myth in the Vishnu cycle suggests a further psychological meaning of the god. It is said in one ancient creation story that Vishnu and Lakshmi slept on eternity itself, embodied in the

primal serpent Shesha or Ananta. While the great couple slept, the world was unformed, existing only in Vishnu's inner self. It was only when he awakened and began to meditate that creation began to occur. A lotus emerged from the god's navel, producing the creator god Brahma, who could then give form to Vishnu's thoughts. In this myth Vishnu was for Carl Jung the embodiment of a positive concept of introversion and ultimately of the unconscious as an intelligent and productive entity of the human psyche. Whereas for Freud the unconscious, expressed by introversion, was a breeding ground for the damaging fantasies of the libido, for Jung the unconscious was a source of higher intelligence than consciousness could provide. The image of Vishnu luxuriating in ecstatic sleep was the image of creative introversion, the process by which the unconscious could illuminate essential memories, understandings which could heal and preserve.

<i>Ate wiohpeyata</i>	Father, to the West
<i>nawwajin yelo.</i>	I am standing.
<i>Waayanka yo!</i>	Behold me!
<i>Ite Otateya nawajin yelo</i>	The wind blowing in my face.
	I am standing.

Vision Quest Song (Lakota Ceremonial Songs 1983).

## Introduction

The term “vision quest” describes a psychological metaphor based upon or inspired by the spiritual practice among Native American Indians. As a psychological metaphor, the “vision quest” has been used by some clinicians to illustrate the journey of understanding one’s dreams and experiences in terms of archetypal symbols related to self-understanding and individuation (see Temagami Vision Quest Program, <http://www.langskib.com/outdoor-programs-for-adults>). However, as the indigenous, American Indian practice, “vision quest” is what the traditional Lakota call the *Hanbleceya* or “crying for a vision” ceremony (see Black Elk 1953; Lame Deer (Fire) 1972; Lame Deer (Fire) 1992). Elsewhere, this ceremony is also called a “pipe fast” since the individual faster seeking to complete the vision quest often does so holding a “loaded” pipe, filled with a tobacco mixture that has been prepared by the individual

(often a medicine man or holy man; see Black Elk 1953, p. 45) who has agreed and committed to assist the individual complete his or her commitment to undergo this ordeal. Native Americans have used ceremonies to encounter the spirit world for thousands of years, and the *Hanbleceya* (pronounced han-bi-lech-ia) is such a ceremony.

## Hanbleceya: Crying for a Vision

“Are you ready to die?” was the question posed to the first author when he spoke to a medicine man about his desire to complete a *Hanbleceya*. That question reflects the traditional indigenous perspective that the “vision quest” or *Hanbleceya* is not something one undertakes lightly or casually. It is something one does under the careful supervision of a recognized medicine man or shaman or spiritual advisor (*Wicasa Wakan*) who serves as one’s spiritual guide and interpreter of the spirits (Little Soldier, 1998, personal communication). Traditionally, only males conduct the *Hanbleceya* ceremony. No “fees” are charged for the ceremony – although a star quilt is generally given to the medicine man in gratitude for the ceremony and there is often a *wopila* or thanksgiving feast which concludes the ceremony where everyone is fed a meal, often comprised of meat (beef or buffalo) soup, fry bread, and chokecherry or berry sauce (*wojape*) by the faster. Traditional beverages offered at the meal include mint tea, coffee, Kool-Aid, or Gatorade.

One does not enter into a *Hanbleceya* without proper guidance and preparation. Generally, the preparation requires a year, during which time the individual faster (as he or she is called) gathers all of the materials required for the fast, which includes hosting a feast or closing meal for all those who helped with the ceremony or served as supporters and assistants, as well as prepares spiritually for the ordeal. It is important to note that completing a *Hanbleceya* ceremony does not make one a medicine man.

The *Hanbleceya* may be done by anyone; traditionally, it was only done by males, and this has changed in recent years where women also fast. Generally, the vision quest or pipe fast

ceremony is undertaken by an individual who is drawn by a dream or a spiritual inclination to undergo this ceremony which incorporates a rather strenuous physical ordeal – a total solitary fast from food and water which may last anywhere from a half day or night up to 4 days and 4 nights. The medicine man chooses the location of the ritual site because of the spiritual significance or value rather than “natural beauty” of the place. Typically, such sites are often in a remote place without the intrusion of any outside interruptions or distractions. There are some well-known sites in North America where indigenous people seek visions; however, because of extensive exploitation of indigenous rituals, one should not journey to those locations unless accompanied by a recognized spiritual leader from an indigenous community. The individual faster’s own vision or dream is also taken into consideration in selecting the appropriate site for the fast. For example, one may dream of praying inside the earth, in a pit – close to the Unci (grandmother, Earth) or on a hill close to the Tunkasila (grandfather, Sky). So, all of this is discussed with the medicine man who then prepares the suitable place for the fast.

Often, people will refer to the entire experience as “going up on the hill” or “going up to pray” which reflects the common location for the *Hanbleceya* as a high elevated point. However, the site or location may also be in a pit or a hole dug into the ground which is then covered with tarps and earth so that the space is completely darkened. One may also complete the fast in an *Inipi* or sweat lodge, which is a small, low-lying dome-like structure. So, there is considerable variation here (Little Soldier, 1999, personal communication; Lame Deer 1992, pp. 190–200). The *Inipikaga* or purification ritual (also called a sweat lodge ceremony) is usually conducted prior to and after the *Hanbleceya*.

After the faster has decided to undergo the *Hanbleceya* or crying for a vision ceremony, he or she seeks out a medicine man-shaman, or spiritual leader (*Wicasa Wakan*), who is willing to take on this responsibility – it is important to note the relational quality to this ceremony. The medicine man who accepts the commitment of

a faster also assumes a very serious responsibility for them, and to the spirits, as also, opens himself up to the spiritual consequences of such a commitment. If the faster is not sincere or undergoes the ceremony for the wrong reasons or is not prepared, negative consequences could result. Fr. William Stolzman has prepared an excellent instructional book, *How To Take Part in Lakota Ceremonies* (Stolzman 1995), which has a detailed description of the vision quest ceremony (pp. 23–39). The book is a non-Indian view of the ceremony and provides helpful advice to the non-Indian interested in learning more about the ceremony or if ever asked to assist in such a ceremony. Of course, this does not replace the instruction provided by the medicine man or spiritual advisor, who will give very specific instruction on the way he conducts the ceremony. It is very important if one is taking prescribed medications to inform the medicine man so that this can be taken into consideration in the preparations.

The *Hanbleceya* is often repeated; the second author has participated in numerous vision-seeking ceremonies: on the hill, in an *Inipi* (sweat lodge) and in isolated locations for periods of time up to four days. Having a vision is important for most Native Americans in the Plains of North America, but having a vision does not make one a shaman or medicine man (Benedict 1922; Little Soldier, 1999, personal communication). The vision quest is often the precursor to participate in the *Wiwang Wacipi* or Sun Dance (Standing Cloud, 1987, personal communication; Little Soldier, 1999, personal communication).

The *Hanbleceya* has the capacity to be a powerful adjunct to psychotherapy (Hawk Wing 1997), but should not be facilitated by anyone not properly sanctioned to do so. Native American medicine men are the psychologists, psychiatrists, and social workers of their communities. The responsibility of facilitating these rituals often involves as much training as is involved with the training of a sanctioned clinicians, and it would be irresponsible to practice or lead Indian rituals without obtaining the proper training and permission to lead them.

It may be very difficult for non-Indians or individuals not familiar with the traditional

ways of native people to comprehend this and other ceremonies. The ceremony is not a “show” or an adventure or some other kind of “personal enrichment experience.” It is a real spiritual encounter, which has concrete effects. “Are you prepared to die?” sums up the seriousness of these effects. There have been instances where the spirits “came for the individual” where the faster actually died while undergoing this ceremony (Little Soldier, A. 2001, 2006, personal communication), so the ordeal of the vision quest is very sobering and needs to be understood as such. One does not enter into this without due consideration of the possibility that one may not come back or that one may come back changed by their vision – it may not be the vision that one wanted. Archie Fire Lame Deer discusses this, how he went on a vision quest and when he told his visions to the medicine man learned that he was *heyoka* or a contrary, a thunder dreamer, which meant he would have to do the opposite (1992, p. 193).

It is important for the non-Indian to be aware of the profound spiritual significance of the vision quest ceremony for traditional American Indians, particularly if it is used or appropriated without proper authorization or permissions and preparation as a clinical method or metaphor – realizing the depth of tradition associated with this ancient ceremony.

## Visions

Nicholas Grant Boeving  
Rice University, Houston, TX, USA

Metaphorically, visions are often evocations of a scene – whether sordid or sublime. Whether they be of syphilitic agony, paradise, or bliss, the word is wedded to an infinitude of metaphor. More prosaic still, visions may refer to nothing more than mere hallucinations or the faculty of sight itself. But in the history of religions, visions are inspirational renderings, often experienced by shamans or prophets, that serve to guide and gild communities of faith.

The Bible is replete with descriptions of visionary encounters. Ezekiel dramatically recalls his experience of witnessing the Lord as a chariot wrought of living creatures with four faces and calf's feet. *The Apocalypse of Saint John* (canonically known as the *Book of Revelation*) describes in phantasmagoric detail the final struggle and apotheosis of the faithful. The previous two examples, along with Paul's vision of

Christ while on the road to Damascus, are but three of many visions recorded in the canonical Old and New Testaments.

In later theological developments, the concept of the Beatific Vision came to be of central importance. First expounded upon in painstaking detail in the thirteenth century by St. Thomas Aquinas in his *Summae Theologiae*, the Beatific Vision is understood to be the undistilled perception of the unrefracted light of God.

Visions suffuse the literary legacy of Western Esotericism as well. Emanuel Swedenborg's complex theology was both born from and unfolded through a series of visions in which he vividly witnessed the wonders of Heaven and the horrors of Hell. Jakob Bohme (another central figure in the history of Western Esotericism) similarly experienced an ecstatic vision of light reflected in a pewter dish that led him to construct his own mystical philosophy.

Vision Quests are integral to the mechanics of shamanistic societies; in many tribal cultures, they herald one's transition from boy- or girlhood into the arena of adults. Often, this unfolds along the following axes: He or she, upon reaching puberty, sets off into the wilderness to seek a vision, a vision that will direct his or her path for the duration of the life course. Frequently, these visions appear in the form of animal teachers, or totems, that become private spiritual guides and shape, in effect, the future of their charges. Once the newly minted man or woman reintegrates him or herself into the tribe, they are seen as extensions of the vision they experienced, and their life's work will unfold accordingly.

Various theoretical apparatuses have been advanced within the field of psychology to account for the occurrence and persistence of visions. Psychoanalysis tends to view them as externalizations of neurotic conflict or simply wish-fulfilling fantasies. Cognitive theories hold them as aberrations of normal mental functioning. Jungian psychology views archetypal images that are regarded as visions crucial to the process of individuation. Newer non-reductive psychoanalytic approaches view visions as transformative and psychically integrative within the interpretive paradigm of psychodynamism.

## Vivekananda

James H. Stover  
Department of Philosophy, Wheeling Jesuit  
University, Wheeling, WV, USA

Swami Vivekananda (1863–1902), born Narendranath Datta, became the most influential disciple of Sri Ramakrishna Paramahansa. He carried the torch of his guru and established the Ramakrishna Order as well as the Ramakrishna Mission. Arguably the biggest hit of the 1893 World Parliament of Religions in Chicago, he introduced Hinduism to America. As a great reformer and spiritual teacher, he has been called the “patriot saint of modern India.”

Living only 39 years, Vivekananda remains one of the most influential people in the history

of India and the history of religion. His journey, though brief, was deep and varied. He joined the Brahma Samaj in college, dedicating himself to its social reforms. Although his interest in social action never waned, he left the Brahma Samaj, seeking a more spiritual path, ultimately taking Ramakrishna as his guru. Trained in Western history and philosophy and passionate in his search for God, Vivekananda portrayed a keen duality of rationality and spirituality. He often challenged his master who, notwithstanding, appointed him as his spiritual successor. Today, the Ramakrishna Order and Ramakrishna Mission provide charitable, educational, and spiritual services in India and almost 50 other countries. These centers carry out the social and spiritual mission of Vivekananda, with special focus on the teaching of Vedanta.

The basis of Vivekananda's teachings has been characteristically grounded by four themes: the understanding that ultimate reality is non-dual, the soul is divine, existence is unified, and religions are really in harmony with each other. Vivekananda proffered both spiritual freedom and spiritual democracy as ideals to be lived by. He saw the various religions as all sharing the same goal – an experience of God. Replacing secular humanism with spiritual humanism, he taught that serving others was coterminous with serving God, who is visible in all beings. Humanity is one (Adiswarananda).

As a writer he is most recognized by his four classics of Hindu philosophy: *Jnana-Yoga*, *Raja-Yoga*, *Karma-Yoga*, and *Bhakti-Yoga*. However, he has an immense collection of lectures and other writings. Throughout both his works and his life, he displayed a rich connection between service to man and contemplation of God. Besides Sri Ramakrishna, he publicly praised Buddha, Christ, Mohammed, and many others. He has been honored by such people as Gandhi, William James, and Max Mueller (Nikhilananda).

## Commentary

The challenge of Vivekananda is the challenge of Vedanta – realizing unity and tolerating diversity. He invites us to see the divinity within each

individual and therefore relinquish the fear and ignorance caused by differences. From Vivekananda we can learn to give up our attachment to things, realize the need for community, and find a basis for genuine love and service to humanity and God. Jealousy and selfishness become obstacles to be overcome in the realization that injury to others is also injury to oneself. With Vivekananda, the differences are given less attention than the oneness that unites us.

## Vocation

Carol L. Schnabl Schweitzer  
Pastoral Care, Union Presbyterian Seminary,  
Richmond, VA, USA

## Career or Calling?

A brief examination of dictionary entries for “vocation” reveals almost immediately the absence of any religious connotation that was once associated with the term. It is associated with a chosen career, trade, or profession which *may* include a call or summons to a religious profession or one of public service. Nevertheless,

the emphasis is placed upon a paid profession or career track. How one determines precisely what that call to a paid profession is in twenty-first century North American culture is largely determined by a combination of self-interests: strengths, which may be considered gifts, abilities, or personality traits; salary or compensation packages (which include benefits and paid time off); and the prestige associated with the profession (Schuurman 200, p. xii). There are personality inventories and aptitude tests administered to those with uncertainty, or those experiencing a life transition seeking a new career. The focus is on career as opposed to a call or vocation, and, as Masterson observes, “[m]ost people who come to therapy with problems relating to career decisions fall into three categories” (Masterson 1988, pp. 9–10). In short, they are individuals who are (1) indecisive about what they want to do; (2) successful but don’t enjoy their work; and (3) are able to decide what they want to do, have reason to believe they would be successful but are unable to take the initiative. A shortcoming of vocational testing, meant to identify strengths and abilities, is that it often becomes determinative instead of descriptive; thus, testing becomes restrictive rather than liberating, and as Masterson demonstrates, testing will not provide motivation or tell those who engage the process what they *want* to do.

### Discernment or Pursuit?

Individuals with a strong sense of self (Kohut), ego (Freud), or identity (Erikson) and a clear sense of purpose frequently *pursue* a vocation with determination. Yet this very act of pursuit is often determined to be an act of violence against the self because one cannot pursue what was given as a birthright from God. One needs to listen to the self or seek guidance from within (Palmer 2000, pp. 4–10). Here, one begins to witness the tension between work and career as a pursuit and work as a vocation or calling, which is discerned by careful listening to one’s inner voice. This inner voice may be understood as the unconscious, a stranger, innate talents, identity,

or the mark of one’s baptism. If one accepts Palmer’s thesis that pursuit of wealth and success or career is what jeopardizes the soul because the pursuit itself wreaks violence against the soul, then by analogy, one can draw comparisons with Freud’s work on “uncanny strangeness” (Freud 1919, p. 220) or Kristeva’s on the “stranger” (Kristeva 1991, pp. 181–188). The act of striving for success may silence the “stranger within” or set us at odds with our true self. We may live with what Palmer calls a dividedness that becomes part of our personal pathology because we don’t acknowledge our own identity while attempting to affirm another’s (Palmer 2004, pp. 3–11). This is an indication that we have not learned to make peace with the stranger or foreigner which is our unconscious. There is a strange familiarity when we meet an other who reminds us of the hidden self that lives in conflict with our public role or paid profession. The result of this meeting with the other who is strangely familiar may be that the other is now viewed as enemy. Why? We project our discomfort upon the other so as not to have to acknowledge our own inner conflict.

### Faith and Vocation

This is not to argue, however, that wealth and success are necessarily in conflict with vocation but if the pursuit of these things is a denial of true self, the cost may be untenable leading to the undermining of personal “morale, relationships, and the capacity for good work” (Palmer 2004, p. 17). The cost of living this way leads to an individual’s inescapable feelings of disingenuity, depletion, emptiness, loneliness, and despair. These feelings may then become the source of our projections which lead to further isolation. In order to manage living a divided life, one may put on a mask which inevitably becomes a sign or symptom of a deeper personality disorder. Even within Protestantism, as Shuurman asserts, there is no univocal agreement upon the meaning of vocation. He cites Christian theologians and ethicists who contend that it is unbiblical and “wrong” to bestow religious meaning or significance upon

a secular life (Schuurman 2004, p. xii). The point of conflict here is between vocation as a calling solely to a church-related occupation and the meaning of vocation as a calling to one's work whatever the occupation or career may be. Those who concur with Schuurman contend that "[v]ocation sets the obligations of one's social locations within larger ethical frames, such as God's revealed law, natural law, and the common good" (2004, p. xii). Schuurman sees "evoking a sense of God's call" for Christians in all aspects of their lives as a central task in pastoral ministry. Thus, Christians discern God's call in their lives "when the heart of faith joins opportunities and gifts with the needs of others" (2004, p. 4). One may want to raise the question: Are faith and vocation mutually exclusive of paid profession? Or, may life itself be interpreted as vocation? Paul Pruyser, in a discussion of alienation and religious beliefs, sees a convergence particularly when one is speaking of those who are called to a religious profession in that "the actual occupational role one plays in everyday life is one way through which to help realize the kingdom of God on earth" (1974, p. 35). If one takes the position that all career choices, paid or volunteer, religious or secular, are vocations, then all of life may indeed be interpreted as vocation. This would be to conclude with Schuurman that all of life is vocation and infuses the everyday and mundane with religious significance.

## Von Franz, Marie-Louise

Vivianne Crowley

Cherry Hill Seminary, Columbia, SC, USA

The lectures of Dr von Franz were brilliant and inspiring. I will never forget the first time I heard Dr von Franz lecture (on the *puer aeternus*). It was a numinous experience. I thought God was speaking. She seemed to know everything (Stein 2006).

Born some 40 years after Carl Gustav Jung, the founder of analytical psychology, Marie-Louise (Marlus) von Franz (January 4 1915–February 17 1998) outlived her mentor and many of his closest collaborators, including his wife Emma and mistress Toni Wolf. Her career evolved from acting as Jung's research assistant through to becoming a major figure in the community of Jungian analysts and a founder of the Zürich Institute for training analysts. In Jung's later years, she became closer to him than almost anyone outside his family (Anthony 1990, p. 67) and "perhaps his closest collaborator and friend" (Freeman 1964).

Von Franz is frequently referred to by Jung's biographers (e.g., McLynn 1996, pp. 331–332) and by historians of psychology as an exponent of the Classical School of Jungian analysis, comprising those first-generation analysts who underwent analysis with Jung and propagated his work without making major contributions of their own. This underestimates her influence, which was considerable. Andrew Samuels (Samuels 1985, pp. 15–21) describes three

“schools” that have emerged from Jung’s work – the Classical, Developmental, and Archetypal. Marie-Louise von Franz is a transitional figure. She was a “Classical” exponent, who was at the same time a major source of inspiration for post-Jungian archetypal psychology, which builds on Jung’s later writings on alchemy and addresses cultural, spiritual, and religious issues.

### Early Life

Marie-Louise von Franz’s father, Baron Erwin Gottfried von Franz, served as a member of the Joint Chiefs of Staff in the Austro-Hungarian army during the First World War. Her mother Margret Susanne (née Schoen) was German (Kennedy-Xypolitas 2006, pp. xxxv-xxxvi). In the unsettled years following the war, the family moved to Switzerland where her father set up a lumber business, but the worldwide slump of the 1930s affected family finances and von Franz needed to support herself at university through paid writing and research (Ribi 2006).

Von Franz first met Jung in 1933 when she was an 18-year-old student. She was invited as one of a small group of young people to lunch at his country retreat, a stone tower he built at Bollingen on the shores of the Obersee basin of Lake Zürich. For von Franz, the meeting was a turning point that determined the course of her life. Although her major was in classical philology, she began to attend Jung’s psychology lectures at the Swiss Federal Institute of Technology and entered analysis with Jung. He provided free analysis and in return she translated the Latin and Greek texts that he needed for his researches. Subsequently, she completed a Ph.D in classical philology, as well as training as an analyst.

Acknowledged as one of the most intellectually brilliant of Jung’s pupils (Anthony 1990, pp. 66–67), von Franz was Jung’s principal collaborator in his later years and helped him develop his most esoteric thinking, published in later volumes of his *Collected Works – Aion, Psychology and Alchemy, Alchemical Studies, and Mysterium Coniunctionis*, and elsewhere. Von Franz was also a prolific writer and some

40 of her works on dreams, myth, fairy tales, alchemy, and individuation are available in English.

### Fairy Tales

Von Franz’s first writing, as research assistant to Hedwig von Beit, resulted in three volumes of fairy tales written by von Franz, but von Beit as commissioner of the research took credit and published the work under her own name (von Beit 1952–1957). Von Franz’s interest in fairy tales lay, like Jung’s, in the idea that they represented archetypes in their purest form, emerging directly from the collective unconscious (von Franz 1970a).

### Puer Aeternus

Jung coined the term *puer aeternus* (literally “eternal boy,” who could also be a *puella aeterna* – eternal girl) to refer to the immature personality that refused to grow up. J. M. Barrie’s character Peter Pan and the eternal youths of vampire movies are fictional examples. Von Franz’s landmark book *The Problem of the Puer Aeternus* (von Franz 1970/1981) was a major influence on Jungian and post-Jungian thought.

For Von Franz, the “Peter Pan” syndrome typified the problems of psychological adjustment of the “Flower Power” Hippie generation of the late 1960s and 1970s. The *puer* focuses not on the mundane reality of the now, but on a yet unrealized future:

If this attitude is prolonged, it means a constant inner refusal to commit oneself to the moment. With this there is often, to a smaller or greater extent, a saviour complex, or a Messiah complex, with the secret thought that one day one will come to save the world; the last word in philosophy, or religion, or politics, or art, or something else will be found. . . . There is a terrific fear of being pinned down, of entering space and time completely, and of being the one human being that one is (von Franz 1970/1981, p. 2).

The *puer aeternus*’s yearning for what lies beyond the ordinary can lead to drug taking,

a love of exploration or dangerous sports, or a religious and spiritual longing for exotic spiritual experience. This yearning took the generations of the 1960s and 1970s eastwards to embrace Hinduism and Buddhism and led to the explosion of Buddhist practice in the west. These were also the years of the growth spurt of occultism, paganism, Wicca, shamanism, and other western esoteric practices.

## Alchemy

Another of Marie-Louise von Franz's major intellectual contributions was her translation of the alchemical text *Aurora consurgens* (von Franz 1966), in which she argues definitively for the author of the work being St. Thomas Aquinas. The *Aurora consurgens* concerns the creation of the Philosopher's Stone rather than gold. For von Franz, the Stone represents a transformation of the psyche that is at the same time the *Sapientia Dei*, a female personification of Divine Wisdom. Von Franz's translation has influenced all subsequent interpretations of the work. Von Franz often quoted the famous axiom of the legendary female alchemist Maria Prophetissa:

Out of the One comes Two, out of Two comes Three, and from the Third comes the One as the Fourth (von Franz 1974, p. 65).

For von Franz, the one, two, three, and four are the four personality functions that must be integrated into ego consciousness in order to accomplish the work of personal transformation that leads to individuation (Samuels 1985, p. 88).

## Image, Archetype, and Individuation

As a practitioner and teacher of Jungian analysts, von Franz was an exponent of the Jungian techniques of dream analysis and active imagination. Dreams were important because they reveal the slow process of psychological growth that is individuation, the process by which a wider and more mature personality emerges around an organizing center—that of the Self, which is the totality of the

psyche rather than the ego (von Franz 1964). Active imagination involves dialoguing with the images that arise out of one's dreams and fantasies in order to understand their meaning.

For von Franz, Jungian analysis was a deep process of personal transformation. The analyst was a mediator between the collective unconscious and everyday reality, and, in order to be effective, a training analyst must experience the equivalent of a shamanic initiation and a "breakthrough to the collective unconscious" (Kirsch 1982/1995).

## The Feminine, Religion, and Spirituality

Many of von Franz's most important writings were about the feminine (e.g., *Problems of the Feminine in Fairytales* (1972), *Animus and Anima in Fairy Tales* (2002), *The Cat: A Tale of Feminine Redemption* (1999), *The Golden Ass of Apuleius: The Liberation of the Feminine in Man* (1970b)). She argued that a greater understanding and integration of the feminine was important for women and men. Liberation of women would come about only if men changed too.

Much of von Franz's writing focused on religious, mythical, and spiritual symbols, but she was not conventionally religious, and her interest in the feminine emerges here too. When Emma Jung died, she was still working on her book about the symbolism of the quest for the Holy Grail. Carl Jung asked Marie-Louise von Franz to complete it. It is not possible to conclude how much *The Grail Legend* (Jung and von Franz 1970) is von Franz's and how much Emma Jung's, but von Franz's interest in the Divine Feminine is evident. The Grail is seen as symbolic of the unification of the Divine Masculine and Divine Feminine, "...the blood contained within it signifies the Three Persons of one Godhead, and the vessel can be compared to the Mother of God" (Jung and von Franz 1970, p. 339). The rapid development and immense popularity of the Grail mythology during the Middle Ages was due to the psychological need "... to complete the Christ-image by the addition of features which had not been taken sufficiently

into account by ecclesiastical tradition” (Jung and von Franz 1970, p. 104). Through the Grail symbol, the troubadours of Medieval Europe were attempting unconsciously to integrate the polarities of good and evil, masculine and feminine, and spirit and nature that had been split apart in institutional Christianity (Jung and von Franz 1970, p. 315).

Von Franz perceived a conflict between Christianity and the reality of our human urges. In a 1991 interview with Danish broadcaster Gorm Ramussen, she commented that in Northern European culture in particular:

We have been Christianized too soon; in the Mediterranean worlds paganism was tired and worn out, and Christianity superseded it at the right moment . . . But we of the north were still barbarians and paganism was a meaningful way of life . . . The missionaries called it devil worship and superstition, and Christianity was forced upon people. . . (Ramussen 2006).

Her early life was spent in a rural environment and she had a great love of nature and animals (Maguire 2006). She considered that Christianity had suppressed the feminine, both the Mother Goddess and Mother Earth:

. . . it’s the patriarchal religions that habitually spoil nature, take profit from nature, and are inextricably coupled to the problems of the environment and pollution (Ramussen 2006).

## Dreams, Death, and Dying

Dreams were for von Franz an important source of insight not only into past and present conflicts but also into future potential. In later life, von Franz suffered from Parkinson’s disease. A few weeks before her death, she dreamt that her disease had vanished, leaving her completely healed. This dream brought her great joy (Kast et al. 1998).

Towards the end of her life, she wrote *on death and dying*, in which she turned her skills in dream analysis to the dreams of the dying and intimates that she believes in some form of afterlife:

All dreams of people facing death, indicate that the unconscious, that is our instinct world, prepares

consciousness not for a definite end, but for a profound transformation and for a kind of continuation of the life process which, however, is unimaginable to everyday consciousness (von Franz 1987, p. 156).

One significant dream she had after Jung’s death featured a rare and expensive Chinese carved frog that she had given him as a gift. Jung wanted the frog to be returned to her on his death, which it was. A few weeks afterwards, she dreamt that she saw in a brook something that she took to be human excrement, but on stepping closer realized that it was the Chinese frog. Suddenly it lifted its foreleg and waved. She saw this as a sign that Jung’s life had continued after death and she died holding the frog in her hand (Isler 2004).

Von Franz was greatly admired as an inspiring teacher who mixed erudition with her sharp intellect, intuition, and a healthy portion of “down-to-earthness.” She demanded the best but could also accept the inevitable shortcomings and her students (Kast et al. 1998). Daryl Sharp, Jungian analyst and founder of Inner City Books, who attended her memorial service at the Swiss Reform Church in Küsnacht along with 600 others described it as a “joyful occasion” which included a sumptuous buffet and seemingly endless supply of wine, paid for in advance by von Franz herself:

In the midst of all this, I had a sudden realization. This dearly departed old woman, a self-professed thinking type who had often publically confessed her difficulty with her inferior feeling function – to the extent of having to memorize collective expressions of sympathy, congratulations on weddings, etc. – had done *this* for *us* (Sharp 2006).

## Contribution

In her collaboration with Carl Gustav Jung, von Franz was a major contributor to and catalyst of his thought. After his death, she ensured that his more obscure writings were transmitted to the world and was instrumental in the publication of his most popular book *Man and His Symbols* (Jung and von Franz 1964). Yet, her contribution

is often unacknowledged. Biographers concentrate on the more public relationship with Freud, often seeing Jung's relationships with female collaborators, which were more or equally important in the development of his thought, as simply sexual relationships. Marie-Louise von Franz was not his lover. Indeed, she has been described as the "spiritual daughter of C.G. Jung" (Jung 2006). Looking back on her work as writer, teacher, and analyst, she also emerges as a significant figure in her own right. Her work on individuation, the role of dreams as pointers to unfolding of the individuation process, and the role of myths and fairy tales in conveying the promise of individuation were an inspiration for post-Jungian psychology.

## Voudon

Alexander (Alejandro) V. Gonzalez  
Strayer University, Piscataway, NJ, USA

*Voudon* (Haiti), also known as *Voodoo*, or *Voudou*, is the national folk religion of Haiti. *Voudon* is practiced in Haiti and the Haitian diaspora and is distinct but not inseparable from United States *Louisiana Voodoo*, also known as *New Orleans Voodoo*, which it is often confused with, especially as both share strong West African Dahomeyan roots that became synthesized with Francophone culture and Catholicism. A form of *Voudon* is also practiced in the South Carolina low country. *Voudon* religion should not be confused with Hoodoo, or root work, a folk magical tradition that is a loose amalgam of Congo with Christian and indigenous American elements that uses *gris-gris*, or magical ingredients, to elicit specific results, such as luck, protection, love, or revenge (Fig. 1).

Besides Haiti, *Voudon* is practiced in the neighboring Dominican Republic and central and western Cuba, along with a variation known as *Arará*. Haitian *Voudon* was brought to Cuba by slaves whose French masters were fleeing the Haitian slave rebellion of 1791. Additionally migration has brought Haitian *Voudon* to

Montreal, Canada, France, and the United States. In the late 1960s and early 1970s, *Voudon* gained a considerable foothold in the United States due to waves of Haitian immigrants who came to such places as Miami, Florida, Chicago, and Brooklyn and Queens, New York, as well as other urban centers, escaping the oppressive rule of "Papa Doc" François Duvalier and his Tonton Macoute paramilitary force.

*Voudon* is the national folk religion of Haiti, while Roman Catholicism is officially recognized as the state religion. Although more than 80 % of the Haitian population claims to practice Catholicism, most *Voudoun* practitioners also consider themselves Catholic and believe that both practices can peacefully coexist. However, the Roman Catholic Church discourages *Voudoun* practices but has brought *Voudoun* drums and melodies into the mass in an attempt to divest these of their *Voudoun* context. However, Protestant Haitians tend to take an even more uncompromising position against *Voudoun* practices, especially the growing population of Evangelical Protestants, who denounce *Voudoun* practices as satanic, and blame Haiti's economic and social woes on the existence of these practices.

As with other colonies, such as Cuba and Brazil, that were held by Catholic Spain and Portugal, historically French slaveholders were Catholic and baptism was mandatory for slaves in Haiti and Louisiana, a situation that resulted in individuals who were nominally Catholic. *Voudon* rituals were outlawed by the French in colonial Haiti, although sometimes dances were permitted, which unbeknownst to the slaveholders were actually *Voudoun rituals*. Slaveholders had a narrow sense of what comprises worship and belief. And unlike Christian belief, the West African religious worldview shared by the newly baptized slaves who arrived to Haiti and the Americas is one that did not exclude other beliefs and continued to maintain that the primal force that holds the cosmos together is accessible through different religious vehicles.

This West African spiritual orientation holds that a primal force animates all things and that there is a supreme albeit distant being who is

**Voudon, Fig. 1** Voudon ceremony preparations in Jacmel, Haiti, 2002. Public domain (<http://en.wikipedia.org/wiki/File:JacmelVodou.jpg>)

above a pantheon of semi-divinities. These semi-divinities are said to interact with humans and sometimes depend on them for sustenance. Ancestor veneration is often inseparable from and on equal footing with semi-divinities, and animal sacrifice and herbal preparations and foods are used to elicit divine protection, obtain a boon, or appease a semi-divinity or an ancestor. Spiritual rites of passage are employed and consecrated drums are used to invite spirits to possess followers. Indeed this animistic African spiritual orientation does not readily fit into Western categories, such as the separation between secular and religious practice or between the spiritual and the material. Its concept of time is understood as communal rather than historical (Mbiti 1969) and the soul is not a singular phenomenon.

Family spirits are inherited both through paternal and maternal lines, and spiritual practices are blended with daily existence and the material world. African ancestor worship is central and pleasing family spirits is of paramount importance as these can aid and offer guidance when tended but can also cause disease or ill fortune if neglected. As with other West African-derived religious practices such as *Lukumí* and *Candomblé*, Christian images and rites, such as saints, were incorporated into *Voudon*, while African religious sensibilities,

such as ancestor worship, ethnobotany, and divination, were preserved.

*Voudon* is primarily an oral tradition whose teachings are communicated verbally from initiate to initiate. The language of *Voudon* is Haitian Creole (*Kreyol*), which is the common parlance of the Haitian people; it is employed along with extant West African phrases during religious ceremonies. The word “*Voudon*” is derived from the Dahomey Fon language and means “spirit,” “god,” or “deity.” Although the term properly refers to the important ceremony where spirits are called upon to come down and possess the devotee’s body, “*Voudon*” is now commonly used informally to denote all ritual practices, spiritual beliefs, philosophy, and ethics in what Wade Davis has characterized as “*Voudon* society” (Davis 1985). *Voudon*, however, is more properly referred to as “African service,” or *Sevis Gineh*, and *Voudon* practitioners prefer to refer to themselves as “they who serve the spirits.”

*Voudon* shares many elements in common with other Yoruban- and Dahomeyan-influenced African diaspora spiritualities. For example, *Voudon* has many cognate deities and practices with Brazilian *Candomblé* and Cuban *Lukumí*. Due to slavery, a similar pattern of clothing *Voudoun* semi-divinities as Christian saints emerged. While non-Christian spirit names can

often be traced back to their African counterparts, many spirits-deities have undergone change to reflect the exigencies of slavery and New World fauna and flora, such as the use of tobacco and rum in ceremonies as well as the creation of the category of *Rada* spirits. This is especially evident when it comes to offerings to these spirits or level of importance accorded each. If Christian iconography functions more as visual tradition and rite than at the level of intrinsic *Voudon* belief, some Catholic liturgy was borrowed to replace lost African elements, and Catholic saints easily became assimilated as loa, or spirits, the saints continued to also be venerated in the context of *Voudon*. After the Haitian revolution of (1771–1804), the Catholic Church was expelled from Haiti for 50 years, and during this time a veneration of the saints that was unmonitored by the Church continued.

Beyond Dahomeyan, Yoruban, other West African beliefs, and Christian influences, *Voudon* synthesizes Central African Bakongo, Masonic, and indigenous Caribbean Arawak elements. The *pierre tonnerre*, or “thunderstones,” of Arawak origin became repurposed by the *Voudonist*, and the medicinal uses of native non-African flora were learned by slaves from their Arawak neighbors and added to Bakongo botanical knowledge. Masonic imagery such as the all-seeing eye, the pyramid, skull and crossbones, pick, shovel, and top hat are prevalent in imagery evoking the *Gedes*, or ancestral dead, and the *Bawon Samdi*, or loa of the dead.

*Bondye* is adapted from French “bon dieu” and means “the good God” in Haitian Creole; he is the supreme *Voudon* being. *Bondye* is the creator and embodies the highest principles of universal order and is the origin of all life but is never directly invoked for aid. Similarly to other West African concepts of the godhead, such as the Yoruban *Olodumare*, *Bondye* is all powerful but also distant and aloof. One does not contact *Bondye* directly nor does one ever become possessed by him. For this reason practitioners see themselves as believing in one god and resist characterizations of their beliefs as polytheistic.

*Voudon* believes in reincarnation, but upon death, part of the deceased spirit is said to return

to *Bondye* and part to *Ginen*, or *Guinea*, signifying both Africa, and an inner earth mythical African island homeland of the spirits. As such the *Voudon* concept of the soul differs from Christianity in that it has two parts, the *ti-bon-ange*, or “little good angel,” which functions more as “conscience,” and the *gros-bon-ange*, or “big good angel,” which stands before *Bondye*. *Voudon* reincarnation and the nonmonolithic soul are similar to other West African diaspora conceptions of the soul, such as the Yoruban *Lukumi Eleda*.

Instead of directly invoking *Bondye*, or God, practitioners call upon the *loa* (also known as *lwa*). The *loa* are a category of not always clearly distinguishable divinities or spirits, who act as intermediaries between humans and *Bondye*. It is the *loa* through whom *Bondye* manifests his will. The *loa* embody natural forces such as the air, ocean, and sweet water and include African divinities, deified ancestors, and Roman Catholic saints; the *lemo*, the Dead, which include deceased family members; *lemiste*, the Mysteries, or various African spirits/deities; and *lemarasa*, or the Sacred Twins. The three main families of *loa* are known as the *Rada*, *Petro* and the *Ghede*. The *Rada*, in contrast to the *Petro*, are peaceful, much calmer, and cooler and are derived from Dahomeyan worship. They are an ancient class of spirits or deities brought to Haiti with the first slaves. Although they can behave aggressively and harsh at times, *Rada* loa are generally benevolent and associated with the color white. The *Petro* in contrast are a younger class of spirits who are much wilder, aggressive, and restless, since they embody the New World Haitian religious experience. *Petro* loa are associated with the color red. *Ghede* loa are associated with the dead and carnality; they are said to transport the spirits of the dead. Their color is black and their behavior is often bawdy.

The most important *loa* are the *lemarasa* and include *Ezili* and *Dambala*. *Ezili*, a *Petra* loa, who is clothed or dissimulated variously as Our Lady of Mount Carmel, Our Lady of Czestochowa, and Our Lady of Lourdes, among others, is motherhood personified. *Ezili Danto* functions as the nurturing mother, who, when occasionally

a disciplinarian, will with little prompting go to extreme measures to protect her devotees. *Dambala*, the Serpent, is the Sky God who is the creator of life and carries the souls of the departed back to *Ginen*. *Dambala* embodies order and the intellect; he is a *Rada loa*, who is often portrayed as St. Patrick with snakes, Christ the Redeemer, and sometimes Moses, among others. Drumming is ceremoniously used to invite the *loa* to come down and possess the practitioner. *Rada* drumming tends to be measured and on beat whereas *Petro* drumming is offbeat and harsh.

The *loa* are said to mount or possess participants during these drumming. *Veve*, or patterns unique to a specific *loa* whose ritual is being performed and who is being called upon, are drawn with flour or cornmeal on the floor or ground. The primary goal of the *Voudon* ritual involves sufficiently intensifying or heating up – *chofe* – the situation through drumming, dancing, and chanting so that the *loa* will come down and possess individuals who become entranced. Someone who is possessed is referred to as a *chwal* or horse. When the *loa* manifest themselves during a drumming, they may demand ritual service such as animal sacrifice or certain foods and/or offer advice. The *loa* can attach themselves to individuals or families and function as protectors and guides. It is said that *loa* protect their “children” from misfortune and in return must be fed. In addition to drumming *Voudoun* utilizes initiation, divination, animal, food, and vegetative offering as a way of communicating with the *loa*.

Strictly speaking, there is no organized priesthood in *Voudon*, so individuals and families can “serve the spirits” without recourse to professionals. However, there is a loosely organized priesthood comprised of both women and men. A male *Voudoun* priest is called a *houngan*, and a female priest is called a *mamba*, and servants of both sexes are called *hounsi*. Priests are involved in the initiation of new priests, the preparation of potions, and the casting of spells, such as for protection against known and unknown enemies. “Voodoo dolls” that were popularized by Hollywood have no ritual value in *Voudon*. Practices differ throughout various regions in Haiti and also

from urban to rural settings. In urban settings, practices and community tend to center around a “temple,” whereas in the countryside it is extended families and family spirits, spirits of the dead, which are primary. An urban *Voudon* temple is called a *houfour*; its central *poteau-mitan* pole serves as a vehicle for the deities to communicate with participants. In the countryside, rituals tend to take place outdoors in small houses on family land specifically set aside for the spirits.

The *Voudon* worldview centers around healing and service to the spirits. The practicing psychologist and the scholar of psychology and religion should pay close attention to the extent to which the people with whom she or he is working engage in their ancestor’s social protocols and rituals. In studying or helping followers of African diaspora spiritualities such as *Voudon*, it should be noted that for reasons of economy and purported efficacy, adherents of these traditions often seek the advice of a priest or herbalist before or instead of seeking the advice of a physician, psychologist, or financial adviser. Priests or herbalists may recommend the use of herbal concoctions to remedy an ill. As with other African and African diaspora religions, ethnobotany has an important place in ritual healing, and botanicals are either individually picked from nature or purchased singularly or premixed at shops that cater to practitioners. Individuals’ communication with and reliance upon spirit entities must be considered during treatment since these inform the *Voudon* practitioner’s basic orientation toward reality, whether for good or ill. Indeed Métraux has noted when looking at ritual possession in *Voudon* that:

An important fact emerges from the study of these different methods of communication with the divine: whether basically possessions or chamans’ trances, . . . all try to reproduce psycho-pathological states. Hysteric crises and hallucinations are considered to be privileged situations which permit the comprehension and domination of nature. The artificial reproduction of these disorders is the basis of the techniques of ecstasy and possession. Among the agents of the supernatural are true neurotics as well as normal individuals. Thus are constituted those unprecise zones in which theological speculations mix with pathological experiences (Métraux and Labadie 1955).

## Waiting

Ann M. Rothschild  
Private Practice, New York, NY, USA

Our current uses of the word “wait” carry derogatory meanings. Words used to define waiting, delayed, stopped or slowed down, postponed, and put off, all seem at odds with our Western preoccupation with doing, getting done, and action. Holding patterns are a waste, time that doesn’t count. Passively receiving or being available rather than achieving diminishes one’s dignity. There is discomfort in the ambiguity and disorientation of transitional periods involved in waiting. But in religion and psychology, waiting has not only been necessary and valued, it has been promoted. It is admired and considered a courageous state. Not that it is easy or even wished for, but all major religions and most psychological theories agree that waiting is usually needed and a respected aspect of the search that growth, faith, and change require.

Often in the spiritual search as well as the psychological one, the changes we are trying to make require that we wait. Making change is never easy. Unless we take time, we repeat patterns, use excessive will, and find counterfeits. Religion and psychology suggest we honor the process by waiting. In a new study, psychologist

Walter Mischel found that children who can wait, who can delay gratification, are more likely to be successful adults.

Every religion promotes waiting. Often we hear about the “slow work of God,” the work of the spirit. In the Bible, we read “Wait for the Lord; be strong and take heart and wait for the Lord” (Ps. 27:13–14). St. John of the Cross is writing about the difficulty of waiting when he describes the Dark Night of the Soul. Jews wait for Elijah at Passover. Every week in silent meeting Quakers “wait in the light.” The East has developed techniques for waiting. Buddhists sit in silent meditation. The Tao Te Ching asks “Who can wait quietly while the mud settles?” (Lao Tsu 1989). Sufis wait for God. References to waiting abound in Islam. In the Qur’an, 2:153 says, “Surely Allah is with the patient.” 2:155 admonishes, “Give good news to the patient.” And 3:200 says, “Be patient and excel in patience.” Great saints and heroes have always waited. Their “arrested” lives have inspired the world. Pauses can be divine gifts not to be avoided.

All therapies promote waiting by both patient and therapist. Self-realization, discovery, and exploration of one’s path share the common thread of waiting through all such inquiry. One must stay in the uncomfortable “in between” and wait. Hurrying through the process seems to defeat it and fosters not only mediocrity but a false answer. Haste implies

lack of interest and compromise. Waiting honors and implies caring and hope.

In Spanish, the verb to wait, *esperar*, is the same as to hope. Hope and waiting are intertwined. Waiting is required of both patient and therapist. Is it a coincidence that clients are called patients and that they often come through “waiting rooms?”

Therapists too must wait. D. W. Winnicott talks about waiting for the patient to make the interpretations. Otherwise, it is “stealing something away.” As therapists, it seems that we regret taking action more than we regret waiting. Waiting for things to emerge, the patient is able to reach for a more profound awareness. Waiting creates the time and space so necessary for this work.

## Water

Andrew J. P. Francis

Division of Psychology, School of Health Sciences, RMIT University, Bundoora, VIC, Australia

Water is an essential element for life and of deep spiritual and religious significance. It is an integral part of the ritual practice and symbolic structure of religions throughout the world. Used since antiquity for physical, psychological, and spiritual regeneration, water is sustaining, cleansing, and rejuvenating. Consistently in creation myths, water is the first principle and *prima materia* from which all else derives or is given birth. As such, it also provides a common and useful metaphor for the origins, evolution, and processes of human mind and consciousness, at the level of individual and species. Humans have developed complex relationships with water as natural resource, commercial commodity, and religio-spiritual symbol, and there is often conflict between the needs and aims of groups and individuals differentially invested in these various relationships. Most centrally, with respect to its spiritual and psychological significance, water is not only a mirror to our own nature but also a Levinasian *Other* with which to interact.

## Elemental Properties

Along with, variously, earth, fire, air, aether, metal, and wood, water is one of the five classical elements present in classical Greek, Hindu, and Buddhist philosophies, among others. Water is unique as an element because it may exist (sometimes simultaneously) in multiple states or “phases”: liquid, gaseous (vapor), and solid (ice). As such, it is commonly characterized as the most mutable of the classical elements.

In its liquid state, it is flexible, flowing, and malleable, taking on the shape of whatever contains it. The surface of liquid water is often

translucent or mirrored, reflecting the viewer and concealing much that lies below. In a gaseous state, water takes on an ethereal, transitory, and insubstantial quality, able to move into confined spaces and range freely over wide expanses. As ice, water becomes fixed and solid, brittle and sharp. Toward theological and psychological points of reference, it is water in its liquid state which most commonly forms the basis for themes of correspondence, metaphor, and symbolism and will be the primary focus for discussion here.

In many theological frameworks, in addition to its physical properties, water is also vital and alive, containing “elemental force” and some varied properties of consciousness and selfness. As an elemental force, water has been the subject of worship and deification from prehistory to current day.

### **As Part of Ritual Practice and the Symbolic Structure of Religions**

Water is the most common physical solvent and cleansing agent. In many religious and spiritual contexts also, water is cleansing and purifying. Water is sprinkled over objects, people, and places in order to bless and purify them. Among its many ceremonial uses, immersion of individuals in water (or the washing of water over some part of the body) to symbolize a renewal, rejuvenation, or rebirth of the self into a new spiritual status is one of the oldest, most familiar, and powerful of water rituals.

In Christian faith, the central sacrament of baptism washes away the stain of original sin and opens the gateway to spiritual life; in the New Testament, Jesus begins his ministry following his cleansing by John the Baptist. The ancient Celtic goddess Cerridwen would immerse fallen warriors into her magical cauldron (also known as “the grail of immortality”) to restore them to life. For Indian Hindus, ritual bathing in the Ganges River (a goddess deity itself) washes away sin and lessens the karmic burden for the next life. For Jews, the mikvah bath is used for a range of purification purposes, some pertaining

to ritual practice (e.g., consecration of priests, conversions to Judaism) and others, for example, to cleansing following menstruation, sex, or the eating of certain foods. Also in Islam, Shinto, Taoism, Rastafarianism, and other major faiths, ritual washing and ablutions are an important part of regular ritual practice.

At a symbolic level, immersion in water is initiation, regeneration, death and rebirth, and spiritual and psychological renewal. In immersion (or a token thereof), we return and regress to the waters from which we were born, to the sea, the briny abyss, and undifferentiated chaos from which life itself first stepped forth. As such, a ritual immersion and emergence reenacts creation mythology.

Creation myths and cosmologies, describing how the universe came into being and humanity’s relationship to the universe, are cultural artifacts which reflect the most essential theological framework of a collective. Since these myths are ultimately the projected products of human minds, they may be considered to reflect in a very real sense the structure of human nature at its most basic level. Thus, in the cosmologies of ancient and contemporary civilizations, we see versions of a theory of human nature, a description of how it is that the human psyche has arisen and is structured; we see in creation myths the emergence of human consciousness and self-awareness from the undifferentiated unconsciousness of the animal mind.

One of the most ancient creation myths is that of the Babylonians, transcribed in the *Enuma elish* approximately 2000 BCE, and recording a much older oral tradition. In this myth, Tiamat (also known as the Deep) is the originator deity: darkness and primordial chaos, the watery abyss and cosmic sea, and the womb from which all else has come. Personified as a sea dragon, she battles with her progeny, the Gods, in Babylonian myth. Leading the host of younger gods against her is Marduk, principle of light and order. Marduk ultimately slays Tiamat, forming from her body the dome of the heavens, and the other half he lays down to make a floor over the deep. Thus do the younger gods mount of an order of creation, including humanity.

In its essential form, as an archetypal struggle between order and chaos, there is clear parallel in the Babylonian creation myth to the Hebrew account of creation later recounted in Genesis and many others from cultures across the globe. The hidden depths of water – dark, mysterious, chthonic, and destructive – are typically associated with the unconscious roots of the human psyche and instinctual energies, in contrast to the *en-light-ened*, celestial, and manifesting qualities of a rational and differentiated consciousness.

In Jungian terms, the struggle between these forces, and the eventual victory of Logos over Eros, represents a fundamental ontogenetic process. In each of us, as we progress through cycles of individuation, there is a natural and necessary emergence and further development of individual consciousness and selfness from the undifferentiated abyss of unconscious material. So too does this inner human struggle between light and dark, mythologized in ancient, watery cosmologies of creation, also represent the phylogenetic progression of mind evolution (and which ontogeny recapitulates). Thus does the animal mind, instinct-driven, largely unconscious, and undifferentiated, evolve into a human, differentiated, directing, and self-aware consciousness.

### **As a Mirror to Human Nature and as a Levinasian Other with Which to Interact**

Mirrors are a common symbol for self-realization and knowledge of self. In everyday living, the reflective surface of water provided a tool for early humans to engage in self-examination, fostering self-awareness and the development of self-consciousness.

In becoming self-aware, our most basic human attribute, we develop a realization of separateness and duality – person from environment, individual consciousness from undifferentiated unconsciousness, self from universe and deity. With this separation can also come estrangement and alienation, and in certain spirito-religious and psychological paths of development and therapy,

we find the means to “reconnect” these separated parts once more, to experience the divine within and to communicate between the different levels of a multilayered psyche. This conflict between the human drive to individuate on the one hand and the pull to reconnect with that from which we have separated is reflected in many myths from antiquity, with water again providing the symbolic narrative.

Narcissus of Greek mythology, for example, boasted a watery lineage: born from the dark river nymph Liriope who had been ravished by the river Cephissus. Narcissus is most beautiful, and his mother keeps from him any mirror or reflective surface lest he might see himself and become vain from his own beauty. When Liriope asks of the prophetic seer Tiresias whether her son would live to a ripe age, he answers “yes, if he does not come to know himself” (Ovid 1955, p. 83). Narcissus, in his pride, scorns all and sundry amorous advances from boy and girl alike until, one day, separated from his companions in a forest hunt, he finds his way to a pool of water deep in the forest. It is a place, Ovid relates, undisturbed by bird or beast – a place of seclusion and aloneness. There, quenching his thirst in the heat of the day, he catches sight of and is enraptured by his own reflection in the pool. At first he does not realize that it is his own reflection he sees and attempts time and again to embrace and kiss the ravishing beauty he sees before himself, but eventually he recognizes the reflection for his own self and despairs. By the pool he eventually dies of unrequited love and starvation, unable to draw himself away from his own reflection, even for the talkative nymph Echo. In coming to know himself, Narcissus thus fulfills the prophecy of Tiresias.

At the surface of this myth is a moral tale warning young boys against the dangers of scornful vanity. But it is also a metaphor for the journey taken toward self-discovery and transformation. Born from the waters of the abyss, and being in a state of “not knowing of his self,” Narcissus represents the undifferentiated and unindividuated unconscious. In coming to know himself through seeing his own reflection, he undergoes the transformational process

which is the defining moment of all humanity – differentiation, individuation, and consciousness. Immediately thereupon he yearns for that which he has lost and finds oblivion in the further transformational process of death (of the conscious self).

In this way water reflects our own nature, allowing us to see our self. But from a religious perspective, water also has its own nature and vitality and has been deified and worshipped in various forms throughout human history. Extending Emmanuel Levinas' theory of "the face," water can thus be understood as an Other with whom humans interact. More than projection and reflection, water also has its own selfness and divinity.

## Watts, Alan Wilson

Robert S. Ellwood  
University of Southern California,  
Los Angeles, CA, USA

Alan Wilson Watts (1915–1973) was an Anglo-American writer and lecturer on religion, spirituality, and psychology. Born in Chislehurst, Kent, England, Watts married an American woman, Eleanor Everett, in 1938, moving to New York the same year. He was ordained a priest in the Episcopal Church in 1944, but left that vocation in 1950 to pursue the study and practice of Eastern mysticism. During his Episcopalian years, he had written *Behold the Spirit* (1947), an uneven but sometimes profound synthesis of Eastern and Christian mysticism, and *The Supreme Identity* (1950), articulating a highly monistic mystical philosophy. In 1951–1957, Watts was a member of the faculty of the American Academy of Asian Studies in San Francisco and, under a grant from the Bollingen Foundation, in 1956 published *The Way of Zen*, perhaps his best-known book.

With this influential study as a launching pad, Watts became an independent writer and speaker

or, as he liked to call himself, “philosophical entertainer.” He produced an unceasing series of lectures, radio addresses, and articles, together with such popular books as *Nature, Man and Woman* (1958), *“This Is It” and Other Essays* (1960), *Psychotherapy East and West* (1961), *The Joyous Cosmology* (1962), *The Two Hands of God* (1963), *Beyond Theology* (1964), *Myth and Ritual in Christianity* (1968), and *In My Own Way* (autobiography; 1972). Serendipitously flourishing in the years that the “Beats” of the 1950s and the celebrated “counterculture” of the 1960s were rediscovering the mystic East and going some ways to revolutionize the American spiritual quest, Watts quickly emerged as a major figure in popular culture. Whether speaking or writing, his flow of words was polished and elegant, with never an awkward phrase, and generally informed by just the right metaphor or image to make the piece sing.

Watts knew how to make hearers or readers feel he was letting them in on a great cosmic secret, something sacred hidden behind the scenes that turned the universe and one’s life as a part of it into a great and joyous dance. To be sure, in his later books he was sometimes repetitious from one work to another, and his depictions of the God of personal monotheism, whom he clearly disliked, often amounted to caricature. But many found his sparkling evocations of the divine within, realizable in moments of timeless mystical awareness and making all of life holy, to be wonderfully liberating.

Watts’ basic ideas were few and simple. Drawing from Hinduism, Zen, and perhaps above all Taoism, he emphasized over and over that we are all parts of the universe, like waves rising and falling on the sea. The universe itself, unceasingly flowing and changing though not “going” anywhere, is expressing itself through us; minds and bodies alike are natural parts of nature. The dualistic Spirit and Matter of philosophical Idealism and Materialism are mere abstractions. The cosmos in its wholeness cannot be reduced to either, but is what the Buddhists call “Suchness,” that indefinable, infinite reality enveloping both consciousness and form. It is known best not by words but, on the human

level, in wordlessly joyous activities like meditation, swimming, or dancing, wherein one can feel its flow. All these exercises are rightly done just to be doing them, not for the sake of any extraneous idea of “growth” or of attaining some outside goal. The swimmer does not swim just to get to other side of the pool or lake or the dancer dance only to reach the end of the number, but for the joy of the activity itself. Meditation too should not be thought of as a task or technique, but as pleasant way of attaining deep and quiet consciousness disconnected from bondage to past or future, and thereby one with the consciousness of the universe.

The good life, then, maintains a sense of joyous wonder toward the unfathomable mysteries of the universe, while enjoying good things as they come. The gift of spontaneity, and of living in the moment, is greatly to be prized. A way of life such as this must steer carefully between true freedom and the deceptive “freedom” of undisciplined self-indulgence. Watts had his inner demons and was not always responsible in family and other relationships or in the use of alcohol. But at his best he manifested the exuberant liberty and spiritual excitement of which he could write and speak so eloquently. He died at his home in Marin County, California. His books have remained in print long after his death.

Tisha B'Av, the ninth day of the month of Av, commemorates the destruction of the temple and is a Jewish religious day of mourning. The temple is supposed to be remembered in times of joy, too. For example, a traditional Jewish wedding ceremony includes the breaking of a glass, which among other things symbolizes the destruction of the temple. The temple represents irreplaceable joy, an idealized vision of past perfection.

## Western Wall

Lynn Somerstein  
Institute for Expressive Analysis, New York,  
NY, USA

The Western Wall, in Hebrew, *HaKotel HaMa'aravi*, is the remaining wall of the Jewish Second Temple, the most sacred building in Judaism. It was built on the site of the first temple, also called Solomon's Temple, which was erected in the tenth century BCE. The Gate of Heaven is said to be located directly above *HaKotel*. Because it is so near to heaven, people inscribe prayers and wishes on pieces of paper and place them in the cracks in the walls in the hopes that their requests will be granted.

The Dome of The Rock, built in 691 CE, is directly above *HaKotel*. It contains the rock which is considered the foundation from which God created the universe and, later, where Abraham prepared to slay Isaac. Jacob is said to have slept on this rock and dreamt of a ladder leading to heaven, with angels going up and down on it. In Islamic belief this is the rock from which Muhammad ascended to heaven.

*HaKotel* is also sometimes referred to as "the Wailing Wall," a derogatory term that refers to Jews wailing about the loss of the temple and other many hardships.

## Whitman, Walt

Steven B. Herrmann  
Oakland, CA, USA

Walt Whitman is widely known as the father of American poetry, a radical abolitionist, sexual liberator, poet of the common people and democracy, and he has a remarkably positive perception of a strong creative global religion, which he called Spiritual Democracy. Many today probably share his criticisms of conventional religion and are seeking positive alternatives. Whitman's shamanistic vision is an experiential contrast to the world's major religions. This contribution is important, because it anticipates modernity. Whitman viewed his visions of democracy as equal to, not greater than, anyone else's, since equality for him forms the basis of the religious democracy that he has faith in and hopes will help to develop the spirituality of the future. Whitman's visions of Spiritual Democracy include therefore all

religions. One of the ways he accomplished this was through his access to shamanism, which is deeply archaic, thus deep in the collective soul, and powerful. At the age of ten, Whitman had an opportunity to listen to the Quaker spiritualist Elias Hicks give a sermon with his parents, and I think this was the first time he was transported by the ecstasy that came upon him while listening to this preacher, who happens to have been half Native American, half Black. So there was this cross-cultural influence, you see, through an earth-based wisdom tradition, coming through Elias Hicks that deeply spoke to him and carried him shamanistically forward; he also saw Native Americans on his home base on Paumanok, the Indian name for Long Island, where he grew up as a boy.

As a poet-shaman, Whitman put forth his own personal vision of religion and his aim, as we shall see, is to lead readers to experience the soulful roots of all poems, by stopping to read him: “Stop this day and night with me and you shall possess the origin of all poems” (Whitman 1992, p. 189). The origin of all poems as the starting point of world religion is ultimately what he teaches. In Section 43 of “Song of Myself,” Whitman sings:

I do not despise you priests, all time, the world  
over,  
My faith is the greatest of faiths and the least of  
faiths,  
Enclosing worship ancient and modern and all  
between ancient and modern, / . . .  
Dancing yet through the streets in a phallic proces-  
sion, rapt / . . .  
beating the serpent-skin drum,  
Accepting the Gospels, accepting him that was  
crucified, knowing assuredly  
that he is divine (Whitman 1992, pp. 236–237).

The “origin of all poems” is found in shamanism, and Whitman *beats his serpent-skin drum* for Spiritual Democracy here, where the “greatest of faiths and the least of faiths” are each placed on an equivalent level together, side by side. This is Whitman speaking at the inception of American poetry and as a poet-shaman. The drum is his driving instrument that sets his rhythm, like the rhythms of the sea, the breath, and the human heart.

Whitman never sought to destroy institutions. He sought to open readers up to the sound of the drum, to heal us from our industrialized disconnection from the Cosmos and Nature, Earth and Sky. The new religious attitude that can help heal our Global Village is what he offers; he calls it Spiritual Democracy:

I say to you that all forms of religion, without  
excepting one, any age, any land, are but mediums,  
temporary yet necessary, fitted to the lower mass-  
ranges of perception of the race—part of the infant  
school—and that the developed soul passes  
through one or all of them, to the clear homoge-  
neous atmosphere above them—There all meet—  
previous distinctions are lost—Jew meets Hindu,  
and Persian Greek and Asiatic and European and  
American are joined—and any one religion is just  
as good as another (Whitman 1984, p. 2089).

We may not know what the new religion is, but Whitman says we are each building on it, in our own ways. We each have a part to play. When he calls the religions “infant schools,” however, we have to ask: what is he getting at here? As we have seen, Whitman is attempting to enclose “ancient and modern” to make the world more democratic. Like Emerson before him, Whitman provides a *method* for achieving transcendence, regardless of one’s religion, whether Deist, theist, or atheist. This method is widely known today as American free verse, which he helped create. Through poetry creation, Whitman brought religion down to the physical domain of sex and the body for cosmopolitan society. And not only did Whitman divinize the body as the temple God dwells in, he embraced it, in “all ranks, colors, races, creeds, and the sexes” (Whitman 1992, p. 318).

The cross-cultural objectivity Whitman achieves is what makes him so shamanistic. This spiritually crowned athlete’s trance – striding towards transcendence – is rooted in shamanism. Whitman never sought to replace the world religions with a new foundational ontological vision for society. He sought rather to jolt the churches, mosques, synagogues, and temples of the world with his own athletic spirit, to electrify them with living energy of the Bi-erotic soul and body he stood for, the scented herbage of his breast, his tongue, and his breath. He sought to broaden our views of philosophers, theologians, and priests of

the world, to open us all to the wisdom body. As a shamanic seer, visionary, and *healer* of the human tribe, Whitman arrives at the origin of all poems and therefore all religions; beating his serpent-skin drum, he serves as transport to broad vistas of spiritual seeing. “Why has it been taught that there is only one Supreme?” he asks. “I say that there are and must be myriads of Supremes” (Whitman 1984, p. 2043).

Whitman’s theology is not theistic; it is shamanistic in its instinctive (downward) and spiritual (upward) Ground/Sky. Shamanism is for him the divinizing factor in man. Whitman puts it this way: “There is nothing in the universe more divine than man. All gathers to the worship of man” (Whitman 1984, p. 2043). Not God, but man, is his final Spinal thought on the subject of religion:

The whole scene shifts.—The relative positions change.—Man comes forward, inherent, superb.—the soul, the judge, the common average man advances,—ascends to place.—God disappears.—The whole idea of God, as hitherto, for reasons, presented in the religions of the world, for the thousands of past years, or rather the scores of thousands of past years fifteen or twenty thousand past years of lands disappears— (Whitman 1984, p. 2097).

While this may appear to contradict my earlier idea that his intention was not to replace religious traditions, here he means to supersede all creeds with a new revelation of his own that is based on science. Whitman does not attempt to achieve an upward ascension of the soul and hover above the body in Bliss alone; he sinks down into the bodily regions of soul, where body and soul cannot be distinguished: where soul *is* the body and body *is* the soul, and he speaks out of this oneness of the soul’s body—*out of the language of the body which is the soul language*. Listen:

The smoke of my own breath,  
Echoes, ripples, buzz’d whispers, love-root, silk-thread,  
crotch and vine,  
My respiration and inspiration, the beating of my heart, the  
Passing of blood and air through my lungs,  
.....  
The feeling of health, the full-noon trill, the song of me rising from  
bed and meeting the sun (Whitman 1992, p. 189).

This is Whitman’s greatest teaching as a man in whom the Bi-erotic imagination is fully integrated, in whom spirituality is not divorced from sexuality, nor sexuality from spirituality, nor religion from athletics; for in “Song of Myself,” body, soul, and spirit are integrated as one. This oneness of a dynamic spiritual force thrusting evolution of the human species forward towards increasing consciousness, or superconsciousness, is Whitman’s greatest achievement.

And not only humans have a soul, in Whitman’s view. More, in “Song of the Redwood Tree,” Whitman chants: “I swear I think now that everything without exception has an eternal soul! / The trees have, rooted in the ground! the weed of the sea have! the animals!” (Whitman 1992, p. 557) Whitman writes further:

After the noble inventors, after the scientists, the chemist,  
the geologist, ethnologist,  
Finally shall come the poet worthy that name,  
The true son of God shall come singing his songs  
(Whitman 1992, p. 534).

Whitman’s contributions to world religion and modern psychology are spiritually relativistic. His vision is an outgrowth of shamanism; yet it cannot be limited to shamanism or any established religion, for it is essentially contemporary, democratic, post-scientific, and new. He provides for us a *living* bridge between East and West. “Joyous,” he says “we too launch out on trackless seas, / Fearless for unknown shores on waves of ecstasy we sail, . . . / Ah more than any priest O soul we too believe in God, . . . / Bathe me O God in thee, mounting to thee, / I and my soul to range in range of thee” (Whitman 1992, p. 537).

Whitman’s extension of shamanism is not a “new” religion, in the formal sense of the word. It’s a method of ecstasy and visioning which may lead to an *eclaircissement* of the way we suppose religion might evolve in the future. By wedding traditional world religious with the nontraditional vision of a feminine Deity, Santa Spirita, Whitman intuited a Masculine-Feminine Divinity as our “base and finale too for all metaphysics” (Whitman 1992, p. 275), “One common indivisible destiny for All” (Whitman 1992, p. 348). This is the final meaning of his term for his religion: “Spiritual Democracy.”

## Wicca

David Waldron  
 Department of Social Science and the  
 Humanities, University of Ballarat, Ballarat,  
 VIC, Australia

Primarily the formation of Wicca, as a subcategory of pagan revivalist movements emerging in the nineteenth and twentieth centuries, is the product of the efforts of Gerald

Gardner's attempts to construct an authentically "English" religious system that could revive the traditional religious and cultural practices of England's rich and diverse pagan heritage. It is also a religious tradition replete with archetypal forms, mythological structures, and appropriated alchemical models of ritual and religious practice that closely correlates with the analytical psychology of Carl Jung and, in this sense, is extremely significant to the development of psychological theory.

## Gerald Gardner and the Origins of Wicca in British Romanticism

Being heavily influenced by nineteenth-century Romantic representations of "merry England," Gardner integrated the ideas surrounding pagan beliefs and practices into a coherent, structured, and practical format. Particularly pertinent in his research was the theory of pagan survivals as propagated in the methodology and historical analytical practices of the Folklore Society in which the rituals, legends, and folklore of rural England represented cultural fossils of a primordial pagan past. Similarly, in creating the rituals, symbols, and practices of his Wiccan belief system, Gardner drew upon a broad range of established lore and ritual from the occultist and ritual magic traditions of English society. He integrated these strains of English culture within the ideological and cultural matrix of English Romanticism and, so doing, created a body of religious and magical practice that celebrated the Romantic idealization of the countryside, opposition to Enlightenment industrialism and the ideal of an authentic and eternal English national culture. Particularly important in Gardner's Wiccan religion was the centrality of the divine feminine as manifested by a triple-aspect lunar goddess of Maiden, Mother, and Crone set in symbiotic duality of a nature God, usually associated with the Saxon deity Cernunnos (Crowley 2002; Hutton 1999; Gardner 1959).

In the formative period of the 1940s, Wiccans, like their predecessors in the nineteenth-century

pagan revivalist movements, legitimized their beliefs by appropriating a variety of romanticist histories and interpretations of folklore. Writers such as James Frazer, Jules Michelet, and Margaret Murray were perhaps the most principal exponents of this approach. In this context, Gerald Gardner claimed that Wicca was a linear descendant of a pre-Christian pagan fertility cult, persecuted during the witch hunts of the Late Middle Ages. This model of witchcraft and Wiccan history, as postulated by Gardner, was an almost literal reconstruction (albeit with some significant departures) of the model of witchcraft persecutions presented in Margaret Murray's *Witch Cult in Western Europe* (Murray 1921) and manifested in a wide array of English folklore (Bishop and Bishop 2000; Gardner 1959, 1954).

### **Wicca and Jungian Analytical Psychology**

While there is little evidence that psychological theory influenced the construction and evolution of Wicca during its formative phase, the imagery, rituals, and religious expressions of Wicca resonated with powerful psychological symbolism. From the eternal duality of the sacred God/Goddess (anima/animas) duality to the use of powerful archetypes developed in romantic literature, folklore, and mythology, Gardner's Wiccan movement profoundly illustrated examples of archetypes associated with Jung's collective unconscious. Similarly, the rituals and religious practices of Wicca drew extensively on alchemical traditions relating sacred numbers, geometry, and mythology in forms and patterns that closely paralleled that of Carl Jung's use of alchemy as a representation of the search for psychological wholeness (Adler 1986/1979; Crowley 2002).

### **Jungian Archetypes and Wiccan Historicity**

While the parallels with Jungian thought are very evident in the powerful and pervasive imagery, ritual, and mythology associated with Wicca, the

practices and analysis of Wicca only became directly associated with analytical psychology at a much later date. The collapse of the historical and anthropological claims associated with Wicca in the 1970s was closely linked to the perception that empirically verifiable historical antecedents were peripheral to the experience of being a Wiccan. In this context, many Wiccan writers, most notably Starhawk, Vivianne Crowley, and Margot Adler, inspired by the increasing popularity of Jung's work in the 1960s and 1970s, took an alternative approach. Using Carl Jung's theories as a tool for understanding the role of the symbolic and the spiritual in human experience and relying on his concept of the collective unconscious, they described witchcraft history as representative of universal psychic truths, independent of empirical history. From this perspective, the increasingly problematic fixation on empirical history as the primary legitimizing factor in religious belief could be eschewed, and the rich network of symbolism, mythology, and spiritual belief could be explored in terms of psychocultural resonance of religious archetypes and mystical experiences (Adler 1986/1979; Crowley 1989; Starhawk 1989/1979).

Jungian understanding of the nature and function of the symbolic has proved to be an invaluable model for the legitimation of Wiccan rituals, mythology, and historical narrative as well as profoundly enriching the understanding of its religious practice and mythology. By giving priority to the psychic significance of symbols that have arisen from the collective unconscious, Wicca had attained a means of legitimating ritual outside of empirical history, while at the same time ensconcing itself within the framework of a coherent and relatively respectable psychological and epistemological framework. In this, it has found a contemporary authentication for pagan beliefs and practice. From this perspective, the rituals and symbols of the neo-pagan tradition are not so much valued in terms of their indexical relationship to a particular pagan tradition of the past but rather as indexes of a development into psychological maturity. If radically different cultural traditions are integrated together, such as those of Native Americans and pre-Roman

Celts, it is not perceived as a violation of cultural authenticity but rather, recognition of the common source of mythological symbolism in the collective unconscious and the universal search for psychological development.

### **The Use of Jungian Analytical Psychology in Wiccan Practice**

Vivianne Crowley's textbook for witches, *The Old Religion in the New Age*, is a particularly pertinent example of Jung's impact on the neo-pagan movement. While the book is certainly based on Gerald Gardner's Wiccan movement and the history of Murray's *Witch cult in Western Europe*, Crowley also incorporates Kundalini meditational practices and Hindu rituals into the practice of witchcraft. As a practicing Jungian psychoanalyst, she bases the rationale for her work firmly in Jungian theory. She argues that the capacity to integrate the practice of Wicca with the symbols, mythology, and rituals of other traditions is a metaphor of a person's rise to self-fulfillment through the attainment of psychological integration. For Crowley, the growth of neo-paganism is intrinsically linked with its appropriation of Jungian discourse, even as one's struggle to find religious expression is intrinsically linked to a search for psychological wholeness, Jungian discourse readily translates into the language of magic and mythology, and the language of Jungian analytical psychology flows naturally for practicing neo-pagans because it "reflects back to them their own spiritual experiences." She also argues that from a neo-pagan perspective, the central issue in Jung's model of religious experience is that of *religare* or rejoining. Through mythology and the embracing of the unconscious, as manifested through deeply resonant archetypal symbols, one can find wholeness and a sense of reconnection in a fundamentally alienated and disconnected world (Crowley 2002).

From the perspective of the Wiccan appropriation of Jung, the collective unconscious is a common, shared symbolic heritage to all human beings that gives meaning to people's

experience. There are certain shared symbols or archetypes that are perceived to represent universals in all human psychic experience. Perhaps the most common example is the concept of anima and *animus*, the masculine and feminine components of the human mind, possessed by both men and women. In Jung's analysis there are certain aspects to social and cultural behavior that can be ascribed to universal masculine and feminine qualities that are distinct from gender. These represent unique universal qualities common to both men and women. Crowley illustrates the use of the archetypes of masculine (animus) and feminine (anima) from a neo-pagan perspective as the underlying psychological truth of the Wiccan postulate that divinity is manifested in a symbiotic God and Goddess, representing universal masculine and feminine qualities intrinsic to both the psyche and the natural world (Crowley 1989). This is particularly well illustrated in Wiccan author Cassandra Carter's, comment on the significance of pagan ritual in terms of its capacity to explain Jungian models of psychic development.

In Jungian terms the descent of the Goddess teaches the need for a woman to go on her own quest in search of her *animus* – not waiting for the knight on a white charger who will rescue her from the need to make her own choices, but going to confront the Dark Lord and solve his mysteries – going of her own choice and will into the kingdom of the unconscious mind. For a man, he has been successful, with the help of the Goddess, his anima, in exploring and winning the battles within his own unconscious, and he and she are happily reunited in the underworld of the unconscious (Carter 1992, p. 6).

### **Wicca and the Search of Psychological Wholeness**

For many Wiccans the struggle for psychological wholeness and connectedness is a struggle against the enlightenment definition of progress and universal taxonomization, rationalization, and industrialism. It is, at the same time, a reshaping of the psychic experience of the

present as a means to progress. Similarly, Wicca, as a religious tradition tends to be intensely focused on representations of the past and the mythological as a means of coming to a sense of integration of aspects of the self and the *imago dei*. In this context, is not surprising that Wiccans have recognized aspects of Jungian theory with which they could identify and, consequently, incorporate into their own religious framework. This identification and incorporation has also provided the neo-pagan movement with a teleological orientation, a vehicle that enables their existence to span both the past and the future with intellectual and conceptual integrity.

## Wilber, Ken

Leon Schlamm

School of European Culture and Languages,  
Religious Studies Section, University of Kent,  
Canterbury, Kent, UK

## Wilber's Integral Psychology

Ken Wilber (1949) is the most influential writer in the field of transpersonal psychology (Wilber 1977, 1980, 1981a, b, 1983a, b, 1991, 1995, 1996, 1997, 1998, 1999, 2000a, b, 2002, 2006), having for more than two decades been widely acclaimed as its preeminent theoretician. Working self-consciously in the tradition of such systematic philosophers as Hegel, Schelling, and Habermas, he has presented his readers with a cartography of *the spectrum of consciousness* which, in spite of much elaboration on his original speculative model of the development of consciousness, has continued to be one of the defining features of his *integral psychology*. Drawing upon an impressive variety of sources from the world's mystical traditions (particularly Hindu and Buddhist contemplative traditions, as well as twentieth-century Indian mystics such as Ramana Maharshi and Sri Aurobindo), developmental psychology (e.g., Alexander, Arieti, Broughton, Graves, Kegan, Kohlberg, Loevinger, Lowen, Piaget, Sullivan, Wade), psychoanalysis (principally Freud and Erikson), analytical psychology (Jung and Neumann), humanistic psychology and psychosynthesis

(Maslow and Assagioli), the history of Western philosophy, anthropology (e.g., Beck, Gebser, Lenski), and physics (e.g., Bohm, Capra, Jeans, Pribram), Wilber has consistently argued that human consciousness possesses a hierarchical structure. There are many different psychological and spiritual levels of development, and each level both integrates the properties and achievements of the lower level and transcends its limitations. Identifying an underlying metaphysical pattern assisting integration of the natural and human sciences with the spiritual perspective of the perennial philosophy (e.g., Coomaraswamy, Guenon, Huston Smith), Wilber introduces the concept of the *holon* which is simultaneously both a whole (in relation to the parts that are at developmentally lower levels) and a part (of a greater whole that is at a higher developmental level). According to Wilber, all human experience (individual and collective) is evolving through a hierarchically organized great chain of holons (or “Great Chain of Being”) toward the self-realization of spirit in non-dual mystical experience, although evolutionary fixation can occur at any developmental level (Cortright 1997; De Quincey 2000; Reynolds 2006; Rothberg 1998; Visser 2003; Wilber 1977, 1995, 1996, 1997, 2000a, b, 2006).

### Wilber’s Cartography of the Spectrum of Consciousness

It is this vision of *holarchical integration* and the evolution of consciousness (including the correlation of ontogenetic with phylogenetic stages of development) which shapes Wilber’s assessment of the relationship between psychological and spiritual development. Wilber identifies many universal, *deep* structures (distinguished from *surface* structures) of consciousness which transcend all cultural conditioning: the prepersonal, prerational, preegoic (fulcrums 0–4: *primary matrix* [pleromatic, uroboric non-differentiation], *sensoriphysical* [autistic, symbiotic, psychotic], *phantasmic-emotional* [identification of the ego with the body, typhon, Freudian primary process, sexual energy, libido, *prana*,

magical worldview, narcissistic borderline], *representational mind* [impulsive, self-protective, punishment/obedience, preconventional, mythical worldview, psychoneuroses], *rule/role* [concrete operational, conformist, conventional, approval of others, law and order, mythical worldview,]); the personal, rational, egoic (fulcrums 5 and 6: *formal reflexive* [formal operational, individualistic, conscience, postconventional, identity neuroses], *centaur* [*vision logic*, integration of mind and body and of conflicting points of view, planetary consciousness, gateway to transpersonal]); and the transpersonal (or spiritual), transrational, transegoic (fulcrums 7–9: *psychic* [nature mysticism, body-based spiritual practices as in shamanism and *kundalini yoga*, paranormal abilities], *subtle* [deity or theistic mysticism, as in Christian mysticism, Sufism, and Indian *bhakti*], *causal* [formless mysticism celebrated by Hindu and Buddhist canonical literature]), beyond which lies the *non-dual* ground of all experience, of unmanifest formlessness and manifest form (often identified as level 10 and typically associated with the *sunyavadin* tradition of Mahayana Buddhism).

Moreover, he argues that by integrating the materials of Western depth psychology and developmental psychology with those of the Hindu and Buddhist contemplative traditions, he can delineate the different developmental competences and pathologies of each level of the spectrum of consciousness. Wilber claims that competing schools of psychotherapy and spiritual emancipation (with their different treatment modalities) address different levels of the spectrum and different developmental problems. Since depth psychology and developmental psychology address the prepersonal and the personal structures of consciousness and mystical traditions are concerned with the transpersonal levels, no school of psychotherapy or spiritual liberation is marginalized. Each is understood to convey partial and complementary truths about human consciousness (Cortright 1997; De Quincey 2000; Ferrer 2002; Reynolds 2004, 2006; Visser 2003; Wilber 1977, 1980, 1981a, 1995, 1996, 1997, 2000a, b, 2006).

## The Role of the Ego in Transpersonal Development

It is Wilber's claim that all types of psychotherapeutic and spiritual practice can be graded by being integrally embraced within the holarchical spectrum of consciousness, which has provoked such intense controversy among transpersonal psychologists. The issue at the heart of this controversy is Wilber's understanding of the role of the ego (the personal self) in transpersonal development. Wilber argues that the ego (fulcrum 5), with its capacity for detached witnessing of the conventional world, is not dissolved but preserved, and typically strengthened, by transpersonal structures. Although exclusive identification of consciousness with the ego is transcended (and thereby dissolved) during spiritual development, the ego, with its rational competences and its scientific worldview, is included within, and utilized by, all transpersonal levels of consciousness. This means, for Wilber, that the acquisition of the ego, as well as modern rationality and science, should not be viewed as an obstacle to spiritual development (the cause of alienation of consciousness from spirit), but rather as a very significant spiritual achievement, a necessary, evolutionary step toward spiritual maturity, a movement of spirit toward spirit. Accordingly, Wilber argues that the spiritual function of science and modern rationality is to strip us of our infantile and adolescent, prerational views of spirit, to dismantle the transitional, *archaic*, *magical*, and *mythic* worldviews associated with the prerational or prepersonal fulcrums, in order to make room for the genuinely transrational insights of authentic mystical traditions. Such a critique by modernity (and postmodernity, as in the *vision logic* of fulcrum 6) of premodernity enables us to realize that mysticism is evolutionary and progressive, not devolutionary and regressive, and thus lies in our collective future, not our collective past (Cortright 1997; De Quincey 2000; Grof 1998; Kremer 1998; Reynolds 2006; Rothberg 1998; Visser 2003; Walsh 1998; Washburn 1988; Wilber 1981b, 1983b, 1991, 1995, 1996, 1997, 1998, 2000a, 2006).

## Wilber's Pre/Trans Fallacy

Moreover, it is this linear model of psychological and spiritual development and the pivotal role of the ego in spiritual transformation which leads Wilber to another defining feature of his integral psychology: his persistent disjunction of spiritual evolution from psychological regression. He criticizes many contemporary writers who confuse or equate spiritual development with regression, by obscuring the differences between prepersonal and transpersonal states and stages of development. Because prepersonal and transpersonal states and stages appear to share certain characteristics (e.g., the quality of fusion or union and the lack of a primary focus on rationality), these writers confuse or equate them, and thereby commit what Wilber calls the *pre/trans fallacy*. The pre/trans fallacy can assume two forms. The first (ptf-1) claims that transpersonal, mystical experiences are nothing but a regression to prepersonal, infantile states. It is Freud and his followers who are charged with ptf-1: the fallacy of reductionism. However, Wilber engages more passionately and persistently with ptf 2 than ptf 1: the fallacy of *elevationism*. He argues that Jung and the Romantic movement (and more recently much of New Age and countercultural spirituality) are responsible for the elevation of prepersonal, infantile fusion states (in which a stable personal ego has not yet emerged) to the transegoic and transrational "glory" of mystical union (in which the personal ego has already been transcended). More specifically, Wilber charges Jung with several types of elevationism leading to the misidentification of psychological regression with spiritual evolution: (1) the confusion of primary matrix (fulcrum 0) with causal level, formless mysticism (fulcrum 9); (2) the confusion of magic (fulcrum 2) with psychic level, nature mysticism (fulcrum 7); and (3) the confusion of mythic images (fulcrums 3 and 4) with subtle level archetypes (fulcrum 8). Wilber has repeatedly censured Jung for his failure to adopt a linear, evolutionary perspective which differentiates between the "ape side" and the "angel side" of human nature, the prepersonal and the transpersonal levels of the collective

unconscious. For Wilber, this elevationism is particularly evinced by Jung's assumption that archetypes are images of instincts and by Jung's failure to discriminate between experiences of prepersonal mythic images (which are more self-centric and narcissistic than egoic experiences) and those of transpersonally located archetypes. Wilber concludes that Jung's archetypes are actually a pre/trans fallacy mixture of divine and primitive psychic contents, which "wobble between transrational glory and prerational chaos" (Cortright 1997; Grof and Grof 1989, 1998; Odajnyk 1993; Reynolds 2004, 2006; Visser 2003; Washburn 1988, 1998; Wilber 1983b, 1991, 1995, 1996, 1997, 1998, 2000a, 2002, 2006).

### Challenges to Wilber's Integral Psychology

Many transpersonal psychologists have challenged the metaphysical, soteriological, and psychotherapeutic assumptions of Wilber's *integral psychology*. Wilber's Neo-Perennialism, in particular his reification and elevation of deep structures of consciousness to transcendental status, has been questioned because it is not susceptible to empirical verification and falsification but rather appears to depend on Wilber's experience of meditation for its authority. The essentialism and subtle objectivism of Wilber's metaphysical perspective, which perpetuates false dichotomies between universalism and postmodernism, impose severe constraints on the variety of forms of spiritual evolution, leading to a misleading homogenization of religious traditions and an unjustifiable privileging of nondualistic religious traditions. Wilber's claim that progress through the transpersonal levels or fulcrums of consciousness is sequential and unalterable (from psychic to subtle to causal to nondual) has been challenged, because it is supported neither by clinical materials nor by those of the world's mystical traditions. In the spiritual domain a single invariant sequence of development does not appear to exist. Moreover, some transpersonal psychologists have insisted,

contrary to Wilber, that regression can be a powerful tool for spiritual transformation; spiritual evolution typically does not follow a direct linear trajectory, but involves a combined regressive and progressive movement of consciousness. Because the therapeutic process addresses the prepersonal (including the biographical) and the transpersonal bands of the spectrum of consciousness simultaneously (rather than progressively), it is impossible to clearly delineate between psychotherapy and spiritual development (Cortright 1997; De Quincey 2000; Ferrer 2002; Grof 1998; Heron 1998; Kremer 1998; McDonald-Smith and Rothberg 1998; Rothberg 1998; Washburn 1988, 1998).

## Winnicott, Donald Woods

Jaco Hamman

The Divinity School, Vanderbilt University,  
Nashville, TN, USA

Donald Woods Winnicott (1896–1971) was a prominent British pediatrician and analyst who came to prominence, especially in North America, only after his death. Using understandable terms, he introduced concepts and phrases such as “the good-enough mother” (Winnicott et al. 1987), “the true and false self” (Winnicott 1994), “holding environment” (Winnicott 1993; Winnicott et al. 1994), “the transitional object

and transitional phenomena” (Winnicott 1993), and “there is no such thing as a baby” (Winnicott 1994). Winnicott never established a school of thought, but his ideas inform especially psychoanalytic thinking about the pre-Oedipal child and the importance of the parent/infant relationship.

## Object Relations Theory

As an object relational theorist, he joined others (most notably Margaret Little, W.R.D. Fairbairn, Charles Rycroft, and Masud Kahn) to form the Middle or Independent Group within the British Psychoanalytic Society. This group argued that seeking relationships, and not intrapsychic drives, constitute the fundamental building blocks of mental life.

Described as the master of the in-between (or paradox), Winnicott found a home between the opposing viewpoints of Anna Freud and Melanie Klein. Winnicott’s in-between character and especially his interest in transitional objects, transitional phenomena, and the intermediate area of experiencing led him to dialogue extensively with culture.

## Area of Faith

Winnicott grew up in a Christian (Methodist) family but, as a self-identified nontraditionalist, showed little interest in religious doctrine. Rather, he stated that tradition and doctrine are things persons should grow out of. Scholars have identified an “area of faith” (Eigen 1981) in Winnicott’s thought. The area of faith is the transitional space between objectivity and subjectivity from which music, art, and religion receive their power to transform. It is an area where transitional experiencing takes place, and it speaks to difference and aliveness amidst patterns of destructiveness and survival which lead to new psychic awareness. The area of faith addresses the capacity to project the existence of a god and to experience relationship with that god.

## Capacities and Maturity

Winnicott identified six developmental capacities, each enriching our understanding of maturity and the area of faith. Achieving these interrelated capacities requires a nurturing holding environment and is for most persons a lifelong maturational process: (1) *The capacity to believe* (Winnicott et al. 1986) speaks to being trustful and loving, being able to engage the world confidently with one’s complete being – body, mind, and spirit. (2) *The capacity to imagine* (Winnicott 1993) describes the ability to address realities that are neither purely subjective nor purely objective, but transitional in nature. Seeing imaginative activity as healthy, Winnicott distinguished himself from the classic psychoanalytic tradition and seeing religious belief as infantile or neurotic. (3) *The capacity for concern* (Winnicott 1994) addresses the integration of one’s constructive and destructive potential. It describes an individual that cares or minds and both feels and accepts responsibility. (4) *The capacity to be alone* (Winnicott 1994) in turn, speaks to being alone in the presence of others while experiencing significant emotional, spiritual, and relational anxiety. It is overcoming loneliness and experiencing solitude without fleeing into false relationships. (5) *The capacity of object usage* (Winnicott et al. 1994) is the ability to discover others for who they are, resisting projection and other projective mechanisms as ways of knowing. In usage, an object becomes valuable when it survives our destructiveness. (6) Lastly, *the capacity to play* (Winnicott et al. 1994) indicates entering a sacred space where a person can effortlessly move into the intermediate area of experiencing.

Achieving these capacities implies becoming an emotionally, spiritually, and relationally mature person who can live life with hope and creativity. For Winnicott, a mature person can engage all aspects of culture as forms of play of the imagination. This includes participating in a religious tradition and experiencing religious symbols and recognizing the relationship between transitional phenomena and religious experience.

## Winnicott, Donald Woods, and Religion

Kathryn Madden

National Institute for the Psychotherapies,  
New York, NY, USA

## Being and the Feminine Ground

Winnicott grounds his theory on the female element of being as the center of gravity in the relationship between mother, child, and environment. “Holding” is important in that it helps the baby to integrate experience and prepares the foundation for what becomes a self-experiencing “being.” Holding, for Winnicott, refers to the mother’s capacity for identification with her infant as well as the literal physical holding of the child – feeding, bathing, and dressing – in the phase of “absolute dependence,” which includes the mother’s empathy, touch, and attentiveness to the infant’s sensitivity to falling.

Winnicott also believes that the mother should embrace the infant figuratively in her own being to prevent holding from becoming a mechanical act. Without this experience of being, the infant can feel quite empty. The baby may experience unthinkable anxiety, primitive agonies, or the experience of falling and annihilation. The baby's subjective experience of being merged relies upon the mother's flexibility, which promotes a continuity of being. This merger or unintegration offers a state of rest crucial to creativity and play. As the child integrates the experiences of unintegration and being, these contribute toward doing.

Even before the merger of subject and object, Winnicott speaks of "being" as antedating the merger state because the infant "is" before it feels. Thus, having a good holding environment gives the infant an ability to "be," an experience that contains the child during the period of "absolute dependence." The mother being in a state of "primary maternal preoccupation" provides the ground for this complete dependence. Most important in the early experience of feeding is being and the female element. When a mother offers her breast, and the baby responds to this offering, they share in this element. If the mother does not or cannot provide the baby with a breast that "is" but only with a breast that "does," the child may develop with a crippled capacity to be. The early mother-infant container of unintegration and merger lays the foundation for projective and/or introjective identification and leads to a healthy separation between subject and object, "me" and "not me" in which the object-mother becomes more objective: an "objective-object." As the infant matures, it moves out of the world of subjective-objects, recognizes objects as external to itself and as outside its "omnipotent control." From this sequential development, the child becomes a self who feels real and who can experience empathy based upon the experience of being at the beginning of his or her own life.

The female element that Winnicott stresses as a crucial container of being for an infant from the beginning moments of life lays the foundations for a strong sense of self. Undergoing human

development within a good-enough mother and a sensitive "facilitating environment" gives us access to the creativity that contributes to the formation of culture. In contrast, those who have not known the freedom of healthy omnipotence within the transitional space of early life may experience life as empty compliance to an external reality that is devoid of value and meaning.

### **Dependence as a Concept of Being**

Winnicott's concept of being and the feminine principle has specific developmental shifts or stages through which an infant evolves. In the first to second stage – from absolute dependence to relative dependence – the infant adapts to the failures of the mother in gradual, manageable increments. Provided there is good-enough environmental provision, these first two stages usually are negotiated adequately toward the third stage of independence. This stage lasts roughly into adolescence and adulthood. The external world begins to reflect the person's internal life of external-others. Ideally, the individual develops a sense of confidence in his or her maternal environment and has introjected these memories, which has allowed him to take over part of the mother's function.

The concept of dependence and its stages offers the infant the opportunity to get what he needs because he has *created* it. This function provides the necessary omnipotence to grow and move beyond the subjective-object stage of merger, followed by the psychological ability to use the object ruthlessly (objective-object), and the development of the capacity for creativity and play.

### **Being and Doing**

The facilitating environment also refers to the id and its instincts, and the ego defenses that relate to the instincts but are developmentally important only in the context of the overall relationship with the mother. The infant has to have gone through absolute dependence and the successful negotiation of the subjective-object stage for the

instinctual demands to become experienced as part of the self. This successful negotiation gives the infant a strong-enough ego to house the id instincts. Otherwise, the growing child can feel that something is coming “at-it” from outside, which transforms from id-excitement and is experienced as traumatic and without meaning.

In Winnicott’s view, being informs doing, the drives as male elements, which come later than being. The male element comes into play as the infant begins to separate from the mother. With the process of separation, there also comes the experience of instinct-backed drives and with this, frustration and anger when the child’s id satisfactions are not met. The male element evolves along with the formation of the objective-object and how the child internally is or is not able to bring together the two aspects of mother.

### **The Developmental Sequence in the Use of the Object: Two Mothers**

Winnicott addresses the development of what happens in infancy in terms of the use of the object. His idea of the facilitating environment includes maternal care as well as the instincts and ego defenses. In this dual context, he originated the theory of “two mothers.” The mother of the holding environment is the “environment mother” and the mother of the drives, and the objective-object stage is the “object-mother.”

The environment mother is experienced by the infant when he is in an unintegrated state, a state associated with rest, being, quiet, and an environment that is safe and empathic. The mother receives the infant and is one with himself/herself.

The object mother is experienced as the one who the infant knows in his excited states. The mother is fully present to him, as she is in the unintegrated state but now becomes the target for his crude instinctual-tension, his raw aggression, and his ruthlessness. Both of these aspects of “mother” are needed to modify each other intrapsychically. The mother of eros, resting, and

feeding is not sufficient enough to empower the child with all the aggressive energies needed for life.

The object mother introduces the masculine element. The goal, for wholeness and health, is for the infant to achieve fusion internally while separating from the real mother. Fusion represents the primary unity that Winnicott believes precedes the development of infant ego. To acquire fusion—to have both aggression and eros—the baby has to become aware that the two mothers in his fantasy experience are the same mother.

Winnicott conceptualizes how fusion plays out in infantile life by speculating upon what happens internally for the baby during its feeding time at the breast. The infant ego experiences an instinctual id impulse which is spontaneous and impersonal, imaginal and physical: the nipple is in front of the baby, and he feels the urge to bite it. The actual breast is not destroyed. Both parties may experience destructive impulses but mostly in fantasized (although sometimes actual) attacks. The mother’s survival from these “attacks” helps the infant to separate fantasy from objective reality. The mother is placed outside the arena of projections, outside of the infant’s omnipotent control. This separation helps the child to develop an external arena in the sense of relating to objects outside his subjective world.

Further, after the ruthless biting-sucking feed, he not only becomes apprehensive about the hole he has created, he grows anxious about what feels good and what feels bad. An adult example of this anxiety might be going to the grocery store and filling a cart with mounds of incredible food and then, suddenly, feeling really empty, anxious, and awful at the checkout stand. Such a feeling relates back to infantile anxiety: “I am feeding, I am fed, I feel good, but there is this hole. I think I feel good, but maybe I feel bad. Now there is stuff coming up from my stomach, and I really feel bad. Or, do I feel good? I am being held. I am being, I am. I think I am?”

An infant has to surrender to his environment. The body is totally hooked into the internal psychic process and vice versa. To assist with this perceived hole and the struggle which becomes

overly personified at the adult level, the mother needs to hold, receive, and accept whatever gifts, “good and bad,” that the baby gives: his burping, elimination of food, and his cries. What is going on in his body is an important part of the development of a psyche-soma unity.

This maternal acceptance is crucial in the joining of the two mothers, aggression and eros. The mother’s receiving helps to heal the imagined hole he made in her breast. If she accepts his biting as a gift, no matter how messy, or sloppy it is, this facilitates his gift gesture in being reparative in terms of lessening his anxiety. As with the other instinctive gestures, his anxiety is accepted and tolerated so that he can join the two mothers inside, in fusion, eventually to see the mother as outside, external. This developmental achievement informs the child’s capacity to give because he has been helped to sort out the good and bad in the struggle with anxiety that he has experienced within himself. He can tolerate the imagined holes he creates with his instinctual impulses and yet, there is reparation available because these energies have been housed as acceptable. The mother’s tolerance enables him to be able to imagine that something can be done about the hole he has created.

In the evolution of this early ruthlessness and aggression, as associated with the fusion of the two mothers, comes a stage of concern. If the mother has been good-enough, the infant comes to experience concern for her even while he becomes aware of his aggression toward her. A healthy guilt begins to form in relationship to his aggression and destruction toward his mother. He learns how to repair when he bursts out with impulses of excitement by giving in social situations.

If the mother is perceived as not surviving, for instance, punishes the baby, the infant can experience her reaction as impingement. The infant fantasizes that his spontaneous impulse-energies have destroyed his source of sustenance and, in its place, he has created a hole. At a baby level, this induces raw anxiety. If the growing ego cannot house this impulse, the infant experiences its own impulses as assaults, which leads to the establishment of a compliant, false self. The false self develops out of what a child is punished

for – what is bad or wrong – and this badness is internalized.

Thus, infant development first begins with the subjective-object world and then the objective world which is destroyed but survives. The infant’s aggression serves a developmental purpose. His developing ability to use her as an object fuses instinctual love (aggression) and erotic love (appetite) in him in the act of dependency at the breast. The infant is not aware of his ruthless, destructive intent toward his mother during the first 2 years or so, but at this stage of primitive ruthlessness is simply expressing and releasing instinctual tension.

The importance of aggression is that if there is no space for housing aggression and the destructive, the bad gets split or dissociated. This is extremely difficult to work out in one’s body. In adult life, without aggression at the ego’s disposal, one has to keep thinking up instances to keep the other person bad. This necessity for projective living is exhausting and uses up energy that could be used more constructively. Without the good-enough mother and environment, primitive ruthlessness and aggression can become antisocial. The child, and later, the adolescent can become destructive in reaction to frustration based upon what he did not receive in terms of mothering.

The ego space of early childhood needs to grow big enough to house these destructive impulses so they do not become permanently unhoused. In such cases, one day one’s id impulse might arise in a therapy session. This impulse will need to be received as a spontaneous gesture to help repair the dissociation. Only when attention has been given to the destructive impulses in both love (erotic) and aggression (hate, destruction, instinctual love) can the aggressive drives (masculine) become wedded to vulnerable eros (feminine) and become circulated more consciously into a whole-object existence.

### **Social and Religious Implications of Being and Doing**

How do Winnicott’s stages of dependence relate to religious concerns and social issues? For us to

be able to give continuity of being to another, we have to have experienced it ourselves. If we have not experienced this connection, Winnicott emphasizes that we need to go back to the place of original hurt and suffer through the feelings and images of loss and relive the missed part in the present for the first time.

If we are to engender and pass on an embodied image of a world that “mothers others,” we need to internalize the capacity for being. Then, without resentment or envy, we can pass it on and give it to others. Without accepting our needs for dependence, we miss the healing efficacy of gratitude. Gratitude is acknowledged dependence. Our ability to introject unconditional love enables us to mature into a fourth stage: interdependence, a mutuality of giving.

Winnicott’s stages of dependency with the added fourth – interdependency – is a ground for thinking about how to work our way in and out of experiences of resentment within our communities. For clergy persons, faith communities, educators, and caregivers in the psychoanalytic and psychotherapeutic field, the issue of dependence and being informs our means of survival. If we deny our dependence on God and each other and pretend to be able to hold ourselves, our “false self” independence can result in all sorts of disasters, in the body, or in the psyche as a result of our pride. When we cannot get our dependency needs met, we are left frightened. One of the best defenses against fear is pride.

Winnicott’s emphasis upon being as an inherited potential has implications for religion if we consider the human individual to be created in the image of God. As we grow and develop toward living in the image of God, we are dependent upon a quality of transcendent being that makes it possible for us to develop outward from an internal reality. For example, a seed finds incarnation because it has been housed by being in the first place. Otherwise it has no life.

With religious concerns such as mission and outreach, Winnicott’s “without being, doing is irrelevant” is a pertinent phrase: who do we include and exclude in social justice concerns? Do our motivations toward fairness arise from being or from doing?

The concept of being pertains to the depth of prayer. Do we pray for things to be done for us, to be on earth as they are in heaven? We cannot do to our neighbor unless we first have been done to. Offering acts of reparation and compassion that are not rooted in being can make our actions superficial and lacking in integrity. If we “are” before we “feel,” we can act out of a subjective reality that proceeds to objective reality and then extends to otherness in the world. Thus, “doing unto our neighbors as we would have done unto ourselves” means we do because we have “been,” not because we have been “done to.”

Winnicott’s notion of fusion and the two mothers pertains not only to our relationship to God but our images of the divine. Prayer is not just passive. Relating to God through prayer, which often includes imagery, expands to become both erotic and aggressive. We begin with whatever images we have and, suddenly, the free-flow of instinct-backed impulses can carry us into the most fleshly, tangible places, infusing the wounded body with long-lost energies.

In faith communities, clergy persons might include some healthy aggressive impulses in their sermons and not just tip-toe through the tulips. If a pastor cannot house aggression and eros, such a split can lead to watered-down programs and ineffective sermons: God with no sex appeal. Clergy needs to recognize the constructive need for opposition. Conflict plays an important role in objective-object differentiation. We need a certain amount of resistance or disagreement to develop our aggressive potential and for healthy aggression to then lead to a community of concern. Sometimes we have to hate and create a hole in the breast before love can occur.

Too much opposition, however, may prevent fusion, in that it can be received as impingement, a disruption of being. Then we get reactivity instead of responsiveness. Ideally we should be able to use our neighbor for some good and healthy opposition in an interrelated network of dependency.

On an even larger scale, pride, as it is informed by fear, can play into big political systems. Instead of working through our inner fantasies

of fear of merger, we instead buy into some autocratic or authoritarian mode of political control. For certain groups and individuals, the energies of ruthless aggression needed for healthy development have been forcibly held down by nations, other groups, hierarchies, and/or governments. For those who never had the opportunity to have this stage negotiated, to just forgive may mean a recapitulation of centuries of compliance.

Hostility, anger, and their consequences have roots in maternal/environmental frustration. The mother helps the infant to house aggression, assisting the transformation of this instinct into reparative functions (guilt, giving). In adulthood, if this developmental function is absent, the gap can lead to a defensive splitting of love and hate creating further polarization. The result is that love has less aggression and hate gains more destructiveness. Hostility (racial and relational) can become perpetuated endlessly. We see the unfortunate results of such splitting in Iraq, Afghanistan, North Korea, Palestine, in gangs clustered around urban environments, and in hundreds of other national and global situations. Most unfortunately, if negotiating the ruthless-aggression phase failed, we cannot say, "I'm so sorry that you are deprived. Here, take this hundred dollars and buy yourself a pair of Nikes, or take this welfare check, or accept this affirmative action job and now go get your destructive aggressive energies together." This action does not work and relies upon understanding a much more complex intrapsychic insufficiency.

Winnicott believed that the fear of dependence, specifically absolute dependence, is behind the fear of women and discriminatory acts against them. This fear can pertain to the feminine in either sex and arises in the phallic phase of development according to classical psychoanalytic theory. Dread of the feminine arises particularly in persons who never passed through the stage of absolute dependence successfully with sufficient trust of the primary parent. Or, perhaps the mother was depressed or physically absent for the early months of the child's life because of her own life-traumas. Such a gap can leave a residual apprehension rooted in the primordial fears of our early years.

Winnicott speculates that there exists a male envy of the feminine based upon the fantasy that women possess the female element and can take it for granted. Envy, however, has to do with failure in being and failure in the maternal environment. Both sexes need both elements. Either sex suffers when we lack being and the feminine because being fuels and informs profoundly grounded doing.

Within the context of depth psychology, much could be done to enable people to better house instinctual impulses and aggression toward fusion within the various maternal/environmental containers we have available in the way of faith communities, social services, therapeutic containers, and social institutions. Both polarities must be housed: eros and aggression. Otherwise, we might buy into a graduate educational institute or a psychoanalytic training institute that needs to dominate the psyche based upon secular modes of doing while interpreting feminine modes of being, passion, and creativity as unresolved preOedipal needs.

If we can tolerate our destructive impulses, we can learn to enjoy ideas, creative projects – religious, social, personal – which include destruction. The body is involved because the bodily excitements that belong to destructive id impulses get activated and add gusto to a person's creative endeavors. This kind of ruthless commitment in the passionate, creative act, receiving and destroying and allowing things to break, carries over to many other creative enterprises in life. Different from Freud's pleasure-seeking principle, the sexual act is considered not so much the erotic desire that needs an object but more the aggressive destructive element of the impulse toward fusion. In mature love, there needs to be enough space for aggressive penetration, and we need to know that the object survives our ruthlessness.

This experience of being leads to a continuity of generations. Being is passed on between generations through the female element of both men and women. We hold as we were once held. Our ability to bring these two elements together provides us with the potential for living creatively. If either of these elements is split off, this

dissociation interferes with the resources that inform productivity. We do not want to miss the fullness of experience that feminine being has to offer.

## Wisdom

Kelly Murphy Mason  
 Psychotherapy & Spirituality Institute,  
 New York, NY, USA

Wisdom is a virtue that combines proper understanding with the prudent application of knowledge; it is often believed to be a product of right relation with the Divine. In psychospiritual terms, wisdom melds both acceptance and insight and thereby results in judicious action. Often, wisdom is characterized as having a feminine dimension. It has also been associated with elders at the end of life. Throughout the ages, wise ones have been revered not only by

their peers but also by successive generations who recognized the wisdom of previous generations as timeless wisdom.

Personifications of wisdom have abounded for millennia. In the Greek pantheon, Athena was the embodiment of wisdom; her totem was the round-eyed owl that was able to see through darkness and at wide angles (Warner 1985). In her nativity myth, Athena springs fully formed from Zeus' head, suggesting the relation of wisdom to flashes of insight. She is a feminine archetype of good counsel, sound strategy, clear thinking, and practical solutions, all of which have frequently assumed to be masculine aspects (Bolen 2004); rather revealingly, she is the only of the Olympian goddesses to ever be depicted wearing armor.

In the Hebrew scriptures, Wisdom makes several appearances as a goddess-like figure (Cole Ronan and Taussig 1996), most notably as Hokma in the Book of Proverbs. "Is not Wisdom calling? Is not Understanding raising her voice?" (Ps 8:1). Throughout Proverbs, Wisdom is simultaneously inviting and insistent. "All the words from my mouth are upright, nothing false there, nothing crooked, everything plain, if you can understand, straight, if you have acquired knowledge," she proclaims. "Accept my discipline rather than silver, and knowledge of me in preference to finest gold" (Ps 8:8–10).

Preciousness and primacy alike are repeatedly stressed as characteristics of Wisdom. She declares, "Yahweh created me, first-fruits of his fashioning, before the oldest of his works. From everlasting, I was firmly set, from the beginning, before the earth came into being." Essentially, Wisdom represents the thought that is first creation; a consort of the Creator God, she knows the ways of God and the children of God who constitute humanity (Schroer 2000).

Proverbs is classified with other "Wisdom books" in the Bible as part of a larger sapiential tradition, including Job, Psalms, and Qoholeth/Ecclesiastes (Crenshaw 1998), as well as Ecclesiasticus/Ben Sira and the Book of Wisdom contained in the Septuagint. In the Book of Wisdom, King Solomon, the greatest sage of ancient Israel and its purported author, exclaims,

“Wisdom is brilliant, she never fades. By those who love her, she is readily seen, by those who seek her, she is readily found. She anticipates those who desire her by making herself known first” (Wis 6:12). Her accessibility and nurturing spirit again make Wisdom a maternal figure who is glad to take into her tutelage those who remain educable.

In the Greek New Testament, in the Gospels of Luke and Matthew, Jesus identifies himself as child student of Wisdom in the Jewish tradition (Fiorenza 1994). He understands Sophia to be the lost mother of Israelites who have tragically forgotten their parentage. “Yet,” Jesus concludes, “Wisdom is justified by all her children” (Lk 7.35). His Sophia bears less resemblance to a Hellenic oracle than to those Hebrew prophets who promulgate teachings that ultimately prove countercultural and occasionally counterintuitive.

Biblical scholars have noted that Sophia subsequently receded from early Christian writings, becoming a more esoteric figure, almost a theological obscurity. Despite the metaphors depicting Wisdom as mother and sister, bride and wife, Wisdom represented knowledge that refused to be domesticated for convenience or to conform to conventional thought. What has been termed Sophiology quickly became submerged. In the dominant Christian religious discourse, Sophia was replaced with Logos, popularly translated as “the word” but perhaps more aptly rendered as “the reason.” Effectively, a masculine principle of knowledge supplanted a feminine one.

Medieval mystics such as Hildegard of Bingen exhibited an attraction to the Divine Feminine they saw expressed through Sapientia (Newman 1987). They understood Wisdom to midwife the manifestation of God’s intention, in many senses to actually be the mother of/to God. In Orthodox churches, devotion to Ouisa-Sophia, the Spirit of Wisdom, was once open and institutional (Bulgakov 1993); icons of her were venerated and Hagia Sophia built in her honor. Only recently have feminist theologians begun to reclaim these stands of thought from the weave of historic Christianity (Camp 1996; Johnson 1999).

The recognition of major world religions as “wisdom traditions” has come greater permission to translate more freely what those traditions might have to say to people in the modern era. Wisdom is still heard speaking through various religions, Eastern as well as Western, and seeking after it is seen as a powerful antidote to the existential anxiety that pervades contemporary society (Watts 1951). Indeed, one of the ten Buddhist perfections is panna; in allowing its practitioners to witness events with great detachment, panna curbs human affliction.

Perhaps those who most explicitly seek after wisdom in America today are members of a movement that bills itself as spiritual and not religious, members of the programs of 12-step recovery modeled after Alcoholics Anonymous. In a redaction of a longer prayer authored by theologian Reinhold Niebuhr during the Second World War (Sifton 2003), those in 12-step programs pray: “God, grant me the serenity to accept the things I cannot change, courage to change the things I can, and the wisdom to know the difference.” The Serenity Prayer has become formative in both popular and psychospiritual formulations on the meaning of wisdom.

What the Serenity Prayer seems to recommend is that people become reconciled with those things they must reconcile themselves to and resist those things they ought to, either for their own good and for the greater good (Alcoholic Anonymous 1952). Wisdom becomes grounded in a radical acceptance of a sometimes stubborn reality. The challenge is one of discernment: how can divine guidance be channeled to direct (or at times, correct) the course of human events?

Ultimately, Wisdom occupies the intersection of horizontal and vertical concerns, where the highest human ideals meet the most immediate demands of the here and now. In her Biblical personifications, Wisdom is hard working and intimately engaged, calling out to listeners busy with the activities of daily life. Wisdom remains quite distinct from either contemplation or resignation.

In his schedule of virtues, psychoanalyst Erik Erikson positions wisdom as the terminal virtue,

maintaining that its antithesis is disdain. In a life review of insights gained, Erikson contends, persons have the choice of adopting an attitude of disgust or a philosophical outlook that leads to deeper understanding of the human condition. The last of the major stages in psychosocial development allows adults to develop into “elders,” those defined by being both older and wiser, not merely aged (Erikson 1982).

According to Erikson, not all elderly persons are able to master this final developmental task and attain wisdom. They are asked to fulfill a demanding grand-generative role, to teach successive generations to live with integrity and die with dignity. This involves a willingness to acknowledge the life cycle itself as somehow purposive, despite the considerable hardships encountered the later years of life, the losses that must be endured. Wisdom is marked by a capacity to vigorously construct some unifying meaning of what may at times appear to be disparate events and experiences; in the end, it serves an integrative function.

Borrowing from Eriksonian schema, psychologist James Fowler posits that wisdom emerges in the penultimate stage of his six theoretical stages of faith development over the life span, the stage which he terms “conjunctive.” Conjunctive faith is sensitive to the organic interrelatedness of things in a dialogical reality (Fowler 1981). It blurs boundaries, recognizing how context dependent and provisional much of human knowledge is, how dimly it apprehends the scope of that which is truly transcendent. Wisdom contains both a comprehension and appreciation for all that is not currently known and may never be known. It may even question what is knowable, humbled by its acquaintance with mystery, simultaneously tolerant and aware of its limits.

Recent psychological research has tried to operationally define and quantify wisdom, but has not yet succeeded in standardizing any metrics or even in delimiting its subject matter satisfactorily. The field of positive psychology has exhibited special interest in wisdom as a “core virtue,” exploring material that once seemed to be the purview of transpersonal psychology and

acknowledging the possibility of transcendent experience (Cloninger 2005). Research has suggested that wisdom seems to involve maintaining a sense of perspective, especially in the face of adversity, and maintaining a degree of emotional equanimity; it does not necessarily appear to be an age-related trait, although people can be educated by experiences that accumulate over a lifetime.

## Commentary

Personifications and definitions of wisdom appear to share commonalities, mirroring the affective and cognitive aspects alike. Wisdom generally reflects a highly relational way of thinking, one that has stereotypically feminine features. It is often characterized as an experiential mode of knowing.

In sacred scripture, Wisdom is intimately acquainted with the Divine and always desirous of connecting with humanity on a deeper level. The work of Wisdom is to speak some eternal truth in a vernacular that can be easily understood in context, some truth that bears repeating to others. Wisdom simultaneously recognizes and dignifies the human predicament.

In psychological terms, wisdom is demonstrated by a higher comfort level with mixed emotions and ambiguous situations. Those whose sagacity is noted by others are able to put their knowledge base to pragmatic use. They serve a larger cause than narrow self-interest, exhibiting a capacity to take a long-range view of matters, often taking into consideration the welfare of future generations. They have the power to facilitate moral uplift in others.

By exercising empathy, wise persons are able to be tutored by others’ experience, as well as their own. For this reason, in many spiritual traditions, the wise are commonly directed to keep the company of the wise. As a religious concept, Wisdom is often represented as somehow accounting for the compendium of all human experience and, in doing so, achieving ultimate consciousness. Presumably, even the wisest people can only glimpse this.

## Witch, The

Ruth Williams

Association of Jungian Analysts, London, UK

The witch is a character or image of a spell-caster associated with night and death which has manifestations in every world culture and epoch.

Examples include (*inter alia*) Euripides' *Medea* in Greek Mythology and Shakespeare's triumvirate in *Macbeth*; cinema has innumerable versions, notably *The Witches of Eastwick* (Dir. George Miller II, 1987), *The Wizard of Oz* (Dir. Victor Fleming, 1939), and *Batman Returns* (Dir. Tim Burton, 1992) where in modern guise the witch has been merged with her "familiar" and becomes "Catwoman." Pearson (2002) provides an impressive review of (*inter alia*) a raft of artistic and cultural variants.

There are likewise copious fairy-tale witches which help children cope, psychologically with feelings of envy and hatred (e.g., Hansel and Gretel, Cinderella).

Witches feature in certain religious traditions such as Voodoo, of which there are several geographical variants.

The images and emotions associated with the witch are generally repellent.

## In Mythology and Fairy Tale

The Greek moon goddess Hecate (goddess of witches) is sometimes depicted as having three heads: one of a dog, one of a snake, and one of a horse. Cerberus, the three-headed hound of Hades, is said to have belonged to Hecate. Mythologically witches are often depicted in groups of three. Hecate is said to hold dominion over heaven, earth, and under the earth, and this triune quality is often represented in statues showing her as a threefold woman (Harding 1935/1955, p. 218) (see, e.g., the frontispiece to Harding (1935/1955) depicting the "Hectarian of Marienbad" from Pausanias, *Mythology and*

*Monuments of Ancient Athens*, 1890). A Classical Jungian amplification of this image (a method whereby an image is filled out by exploring the mythical/fairy tale and archetypal associations to it) might go on to think about this threefold nature as pointing towards the *Moirai*, or Fates, which might suggest there is something *fated* about such a connection, linking also to “past, present, and future” and Karma (Harding 1955/1971, p. 218). Hecate is also usually seen with two ghost hounds that are said to serve her. Hecate is sometimes known as “sender of nocturnal visions” (Harding 1955/1971, p. 114).

Classical Jungian writers explore the witch in the guise of her many mythical and fairy-tale manifestations (e.g., Birkhäuser-Oeri 1977; von Franz 1995, 1999, see also Koltuv 1986). The most significant Jungian work in this area has been done by Ann and Barry Ulanov in *The Witch and the Clown* (1987).

The witch is seen as appearing in a gap in time. Until the Middle Ages the witch was known as a “hagazussa,” meaning the one riding on the fence (Duerr 1978/1985, p. 243, n14). According to Duerr (German anthropologist), “the witch is born on the boundary” is a Dinka (African) saying (Duerr 1978/1985, p. 243, n14). (Hecate is known (inter alia) as a goddess of thresholds).

## Psychological Exploration

Dykes’ (1980) hypothesis is that the witch occupies the most remote aspect of the psyche making it difficult to access in any psychological exploration. Dykes describes the mental paralysis associated with the witch’s menace as less destructive than aimed at the *prevention* of life (1980, p. 52). This connects with the witch’s mythological solitude (perhaps the source of her loneliness which may fuel her negativity) when she malevolently broods on the objects of her envy and hatred, hatching plans for revenge and retribution. Her bile and envy are represented symbolically in certain examples of witch (e.g., Wizard of Oz) by a green face. She is seen as irritable, power-hungry, malevolent, and greedy.

Jung describes the Shadow, under which rubric the witch would be categorized, as “the thing a person has no wish to be” (1946, par. 470).

Büßmann makes a link to depression (1987b, p. 276). Büßmann reports that the victims of witchcraft feel that life is being crushed out of them and they are facing complete annihilation (1987a, p. 142). This corresponds to the problem when dealing with the witch as an intrapsychic phenomenon in that, during possession, there is similarly a feeling of *metaphorically* being crushed and annihilated.

## In Psychoanalysis

Heinemann (2000) provides an excellent psychoanalytic deconstruction of the phenomenon of the witch trials of the sixteenth and seventeenth centuries, arguing against Freud’s “hysterical” formulation. She sees the witch as both a “phallic mother” and an early superego imago.

In witchcraft transmission of the witch is seen as being inherited through the maternal line.

In a paper looking at (1) the witch/vampire, (2) the spider, and (3) the shark, the images are seen from a psychoanalytic perspective as “three symbols of overwhelming terror” (Lane and Chazan 1989, p. 326). Theoretically the images are seen by Lane et al. as symbols deriving from “the earliest levels of human development [c.f. Dykes 1980], originating in the preoedipal phases of life. Each symbol expresses a dimension of oral sadism. The witch/vampire bites, the spider stings, and the shark devours its victim totally. All three symbols rely heavily on the use of splitting mechanisms and the polarization of principal identifications (e.g., parasite/host, victim/attacker, idealized/demonic)” (c.f. Dykes 1980).

The witch is also, more usually, seen as a phallic image: “with a pointed, peaked nose, sharp long fingernails, and a broom between her legs; she is capable of flying or of going up. She struggles to be like a man and engages in mannish behavior, rivaling and threatening men, argumentative, controlling, casting spells over the potency

of men, and the fertility of women. Her evil deeds are carried out by the devil, *the man who resides within her*. Her dark and dirty side is this masculinity” (c.f. Dykes 1980) (emphasis added).

Further papers in the psychoanalytic literature which talk of a witch mother are Fenichel (1931), Dahl (1989), Lawson (2000), and the witch as nightmare figure (Jones 1931, 1949).

## And Sexuality

The image of the witch carries vital characteristics of dark sexuality (her voracious and aggressive appetite, her insatiability and love of control as opposed to vulnerability and intimacy) and for a woman’s place in society as an aging crone or shrew with all that implies about her viability as a sexual being.

Brinton Perera views engagement with this “dark” aspect of femininity as being of profound importance in retrieving repressed values (1981, p. 15). She discusses the feminine by amplifying the Sumerian myth of Inanna whose process into the underworld metaphorically parallels the psychological individuation process. Brinton Perera concludes that it is only by embracing the full, even demonic, range of affects associated with the “dark” feminine that a woman can truly individuate and make a soul connection in her partnerships on an equal footing (1981, p. 94).

## Mythology

Baring and Cashford (1991) like Neumann (1955) elaborate in exhaustive detail accompanied by copious images, the “eternal feminine” in her many historical manifestations from Paleolithic times. They amplify the image of the witch in her many guises from Ereshkigal (Inanna’s “dark” sister and Queen of the Underworld in Sumerian mythology) to Hecate (Queen of the night in Greek mythology), to Lilith (their counterpart in Hebrew mythology) (1991, p. 192) as well as to Medusa (who quite literally petrified).

## Jungian Shadow

De Castillejo places importance on taking responsibility for the Shadow. She believes that, with all women, if you scratch the surface, you would find a witch. She sees the witch in terms of a power complex which perhaps paradoxically often manifests in women in the guise of giving (De Castillejo 1973, p. 42).

In her study of *Athene* in tracing the heritage of the feminine, Shearer highlights the importance of the psychological work and regards the need to understand the dual nature of the feminine as being an inescapable task: “in the great cycle of creation we now live in the Kali Yuga, an age as dark as the age of iron” (1996, p. 52). The Kali Yuga refers to the Hindu goddess Kali (Yuga meaning age or era in Sanskrit) and invokes the dark goddess who is depicted as a destroyer:

[s]he stands on a corpse and wears a necklace of skulls . . . She is devourer: her long tongue thrusts out to lick up the blood of sacrifice, her fearsome laughter shows her dreadful teeth, her maw receives all that is created. . . . In one of her hands she wields a sword and in another she carries a severed head. She is always young, bursting with blood, and always ancient, an emaciated hag, whose hunger will never be satiated. She stamps on the body of Lord Shiva (1996, p. 54).

Shearer tracks the denigration of women and their so-called wickedness which linked them to witchcraft down to the very Fall of Man and her creation from a bent – defective – rib (1996, p. 165), as did Roberts (1985).

## Medusa

Shearer goes on to discuss Medusa (whose severed head Athene wore on her breast) who forms part of yet another triumvirate, the Gorgon sisters:

They are a manifestation of the ancient moon goddess (as the Orphics knew when they called the moon ‘the Gorgon’s head’). The sisters’ names honor their power - Stheino means ‘strength’, Euryale ‘the leaping one’, and Medusa herself is ‘Mistress’, ‘Queen’, ‘Ruler’ and ‘the Cunning One’

... they have great brazen wings, staring owl-like eyes, serpents for hair and sometimes for girdles as well, tusks like boars and long lolling tongues (1996, p. 64).

Neumann (in his *magnum opus* *The Great Mother*) links the negative pole of the feminine with all the dark mythological witch characters so that snake-haired Medusa is seen as belonging to this realm in that “to be rigid is to be dead” (1955, p. 266), with blood-drinking slayer-of-men, Kali (1955, p. 72) who is also represented as having three eyes, said to symbolize past, present, and future (“Kala” in Sanskrit meaning time), “mad”-making Hecate” (see above) and licentious Ishtar. These are placed in direct opposition to “mother” and “virgin”: Mary, Demeter, and Sophia. Although each of the former category is seen as “negative,” there is also a transformational quality inherent in the symbol. For instance from Medusa’s dead body the giant Chrysaor and the winged horse Pegasus (her son by Poseidon) sprang forth; the blood from Medusa’s severed head was given to Asclepius (god of healing), and while blood from the veins on the Gorgon’s left side brought harm, that from her right side could raise the dead (March 1999); Kali’s usual proximity to cremation grounds where all worldly attachments are dissolved points to the cycle of birth and renewal.

### Mother, Depression, and Aging

Jung, with his own problematic relationship to his personal mother as described in *Memories, Dreams, Reflections* (1963), was himself only too aware of the dual aspects of woman:

Not in vain are little children afraid of their own mothers in the night. Primitive mothers can kill their children. It is absolutely incompatible with the daytime, for then they are most devoted mothers. But in the night they take away the mask and become witches (Jung 1984, pp. 144–145).

On a more ordinary level, a depressive mother may be seen along a continuum which leads to the “Terrible Mother” which links to the witch, particularly in the aging process and menopause.

Bührmann makes the connection between the Terrible Mother and depression when she records:

This regressive pull of the elementary feminine is also seen in serious depressions. The ego suffers marked loss of libido, lacking drive or will power, inability to concentrate on work . . . It can be said that the ego is drained of energy, that it is being submerged in the negative world of the elementary feminine in its terrible or devouring aspect (1987a, p. 151).

Aging women in certain circumstances tend to take on characteristics which are associated with the archetype of the witch. (This has been a cliché in popular culture but perhaps has more serious ramifications.) This can occur when the lacunae associated with this stage of life mean that one is left alone, or children leave the nest, or disappointments build and death comes into one’s thoughts. This can be associated with lack of sexual fulfillment, perhaps metaphorically connected to the witch’s remoteness from society and engagement with life.

There are also neo-pagan “white” witches influenced by Wicca.

The nearest equivalent to the witch for men is the vampire, devil, sorcerer, wizard, or warlock.

## Witchcraft

David Waldron

Department of Social Science and the Humanities, University of Ballarat, Ballarat, VIC, Australia

## The Politicization of Witchcraft History

Witchcraft and its associated imagery is one of the most powerful, pervasive, and multifaceted symbols in Western culture. That being said, evaluating the complex webs of representations associated with the image of the Witch and Witchcraft is an enormous task. The issues raised by the historical experience and study of Witchcraft further compound the bewildering array of symbols and themes associated with it. Of particular importance in establishing the links between representations and symbols of Witchcraft with the historical phenomena is the intensely Anglocentric domination of Witchcraft studies and literature, not least of which is the broad association of multiple divergent themes, images, ideas, and mythic forms under the category of Witch. This is despite the radically different cultural and historical contexts and localized meanings associated with the diverse network of terms which come together under the English term “Witchcraft” (Ankarloo and Henningsen 1990). Similarly, studies of Witchcraft in both its historical context and as a form of archetypal representation, have long served as a battleground between different sectors of society according to a wide array of ideological agendas and religious beliefs (Purkiss 1976).

Despite this problem of over generalization and politicization, representations of Witchcraft do share certain common themes that link both the term and archetypal image of the Witch together. Essentially, the Witch represents an iconic form of the feminine other and as such lies at the center of a network of social forms, morality, constructions of gender, and social order, thus serving as the focal point of a wider array of social projections. Typically, the Witch is associated with the organic, the feminine, and

the disorder, and there is a close association with the anti-rational and the supernatural in the social, natural and supernatural world, (Purkiss 1976). In this sense, the Witch is both reviled as threat to the social order and associated with anti-human practices and vices yet at the same time can be held up as an iconic antidote to the social ills wrought by sources of authority and social structures symbolically associated with patriarchal control (Briggs 1996). Similarly, the association of Witchcraft and Witchcraft beliefs with the anti-rational and the supernatural has served as a rallying point for enlightenment models of social structure, warning of the dangers of religious thinking overwhelming the rational/scientific worldview with the shadow side of unrestrained superstition and mass hysteria. This contrast is very evident in anthropological interpretations of Witchcraft, especially in the African and Polynesian contexts where the superstition of Witchcraft beliefs is unfavorably contrasted with white rationalism, and Witchcraft is used to label magical practices associated with organic or endemic powers applied emotionally distinct from the learned skills of the sorcerer (Marwick 1970).

### **The Witch as a Symbol of Genocide and Oppression**

Another important model of Witchcraft is the use of representations of the Witch trials of the early modern period as a vehicle to understand the contemporary experiences of genocide via the work of Norman Cohn (1975) and of the patriarchal oppression of women, primarily through the work of Mary Daly and Robin Morgan (Daly 1979; Morgan 1977). In both cases, while the historical parallels are extremely dubious in empirical terms and are subject to much criticism, they have both become pervasive mythologies in contemporary Western culture, holding significant emotional appeal and symbolic resonance. Indeed, the images of martyrdom and sexualized tortures implied to both have had a deeply powerful visceral and psychological impact which has afforded this construction of Witchcraft-

significant popular appeal. Similarly, the model of Witchcraft as a surviving pre-Christian fertility cult, established by Margaret Murray and popularized into modern Wicca and Witchcraft revival movements, also has enormous visceral impact and popular appeal despite the theory being largely discredited in historical terms. In these cases Witches, as the ultimate manifestation of the feminine other, have served as both the projected shadow of mainstream culture and a rallying point for those disaffected by the mainstream social order and patriarchal systems of authority (Purkiss 1976). Additionally, in much psychological literature and recent anthropological analysis, Witchcraft, as a form of demonization and persecution, is interpreted as a social feedback phenomenon created out of social anxiety, rumor, and gossip akin to phenomena like the satanic ritual abuse panic of the 1980s, McCarthyism of the 1950s, and recent panics over suspected terrorists (Stewart and Strathern 2004; Hicks 1991).

### **The Witch in Western Culture**

The Witch is a particularly unique figure in Western symbolic construction as it is the iconic symbol that stands astride the romantic/enlightenment divide of Western culture. For some sectors of society, the Witch represents superstition, evil, irrationality, and the primitive, i.e., that which limits the potential for human progress and autonomy from nature. To others, the Witch represents beauty, nature, freedom, and cultural autonomy from the corrupting and limiting influences of scientific rationalism, commodification, and industrialization. In both constructs the Witch serves as the iconic underbelly or shadow side of Western enlightenment associated with femininity, the tribal other, religious superstition, the anti-rational, the magical, sexuality, and our organic relationship with nature. As such its psychological impact is enormous, and its emotional and archetypal significance is one of the most pervasive and powerful of contemporary symbols emerging from the underbelly of the past.

## Women and Buddhism

Ellison B. Findly  
Trinity College, Hartford, CT, USA

The Buddha warns against “walking in the jungle of opinion,” suggesting that all concepts of the self are nothing but cultural constructs imposed on various experiences of the mind-body continuum. In this way, then, as Buddhism moves from country to country, the Buddhist view of the human condition derived from early experience sheds its old “constructs” or cultural trappings and, in its accommodative mode, takes on new ones.

In exploring the place of women in Buddhism, there is canonical evidence that the Buddha held a positive view of women as potential beings of enlightenment but that this view came to be

reframed within more negative Brahmanic constructs contemporary to the canon's compilation (Findly 1999). Thus, the self-understanding and self-esteem of women engaged in Buddhist practice has varied considerably from culture to culture and is at high “therapeutic” levels in environments like that of the North America where women are [theoretically] free and religiously efficacious beings.

The negative views about women found in the Brahmanic setting of early canonical texts focus on women's character, ability, and polluting nature. Women were imagined to be unclean because of the blood of menstruation and childbirth and therefore to be kept physically at bay during certain periods. They were often portrayed as seductive, irresponsible, and of diminished intellectual capacity. Monks were not allowed to be in close proximity to women for fear of being led astray, and women were not allowed to guard the storage of goods because they were thought to be untrustworthy. Worse, women were closed out of the educational system due to the Indian caste system and views about early marriage for women to prevent unwanted pregnancy.

Despite this, it seems that the Buddha's aunt led a group of clanswomen desiring to become nuns to the Buddha and asked if they could go forth into the homeless life. The Buddha said “no” each of the three times the question was asked. In despair, the aunt came upon one of the Buddha's favorite disciples, his cousin Ananda, and asked him to intervene. He did, first, by asking thrice if women could go forth and thrice being denied. He then took a new tack: if, he queried, women were to *already have gone forth* might they then be able to experience enlightenment? To this question, the Buddha answered “yes” (Findly 1993). This suggests that the first question (Can women leave their homes to wander?) is a question about cultural mores, while the second (Can women experience enlightenment?) is a question about the nature of women that they are equal to men in being able to experience enlightenment. The Buddha's permission to allow women to go forth, however, depended upon their willingness to live under

the Eight Rules, which stressed the submission of nuns' monastic lives to those of monks.

Although the Eight Rules required that women seek higher ordination from both male and female orders and that nuns be disciplined for important offenses by both orders, there were numerous cases, for example, where nuns were taught solely by other nuns. Some of these teaching nuns, in fact, like Patacara, became quite famous in a period in which women philosophers in Brahmanic society were concurrently well known. In early canonical texts, in fact, it is said that the Buddha had a number of female Arhats (a renunciant who had experienced *nibbana*) in the congregation of his followers, though, unlike male Arhats, they appeared nameless. Women Arhats do not start being named until much later in the tradition.

While, in the early years of Buddhist development in India, women were not only well known as generous donors and important supporters of the community – e.g., Visakha and Ambapali (Findly 2000; Horner 1990) – but could also achieve high status of seniority within the community by becoming a Theri, or senior nun. Later, the Buddhist nuns' order died out in India, probably due to the harshness of the Hindu social structure for women, especially around the issue of pollution – encouraging a donor to Buddhism not to give to a nun whose body, polluted by the possibility of menstrual blood, would weaken the amount of merit due to a donor who gave food and support to her.

An excellent example of the problem appears in the two texts, the *Theragatha* and the *Therigatha* (Murcott 1999; Norman 1971). Taken on face value, these verses reflect why the renunciants chose the Buddhist path, their cognizance of the transitoriness of experience and of suffering in the face of that transitoriness, and their recognition that nonattachment relieves that suffering. Both senior monks and senior nuns experienced *nibbana*: they underwent the annihilation of the fetters, the transcendence of death with no renewed existence, and an attainment of the triple knowledge. The experience for both monks and nuns was one of quenching, cooling, stilling, peacefulness,

fearlessness, sorrowlessness, loss of ignorance, loss of desire, contentment, and the release from causally determined states.

There are, however, some *differences*. While senior monks wrote more abstractedly about their experiences with lots of references to Buddhist doctrine, senior nuns wrote more personally and intimately, detailing the troubles they encountered along the way and the encouragements they received from others. While monks focused on the mental states of mindfulness and meditation, of having concentration and skill in calming the mind, nuns were aware of mental deficiencies and inabilities to find peace of mind. In this respect as well, nuns were exceptionally mindful of the weaknesses of their own bodies; of its being diseased, impure, rotten, smelly, and foul; and of the visible decay in thinness, gray hair, sagging breasts and earlobes, wrinkled skin, yellow teeth, and faltering voice. While monks were intensely aware of the natural world and its wonders, making references to their isolated life in the forest and the details of their wandering lives, nuns made references to their families; to how they had abandoned their fathers, mothers, husbands, sons, and daughters; and to how they had watched each of these die. Finally, while monks used images of conquering, taming, and striking down and refer to chariots, armies, bows and arrows, battles, and heroes, nuns used images of homes, houses, kitchens, cooking pots, mortars and pestles, vegetables, and weaving.

These texts are good examples of locally specific self-understandings among Buddhist women as, on the one hand, they reflect cultural details of women's lives in given settings, and, on the other, they clearly affirm the equality of women with men in the search for enlightenment. Each of these are constructs of self-understanding, but the second, more positive one, is more likely to lead to the abandonment of *all* such constructs in seeing the true nature of the "self."

Today, one of the great marks of North American Buddhism is the visible presence of women as nuns, teachers, laywomen, donors, and scholars across the range, for example, of Theravada, Tibetan, and Zen Buddhism. American Buddhist women are not likely to denigrate their birth

as women, but rather to celebrate it as part of human diversity, allowing full Buddhist experience across all divides. The result of this is the development of self-understandings that are clear and strong and mindful of the particularities of the American context where, in theory, the values of equality, fairness, and justice prevail.

Currently, there are new opportunities for ordination as a *bhikshuni*, nuns. While *bhikshuni* life varies widely in the forms of robe color, language, dietary habits, mendicant status, meditation practice, involvement in the work force, and leadership roles in the temple, ordination as a nun is now more fully available. In Theravada's past, women's ordination died out in India, Sri Lanka, and Burma and was never established in Cambodia, Laos, and Thailand. Now, however, there is a sizeable community of nuns in Sri Lanka as well as development towards full ordination for women in Thailand. In the historical Mahayana tradition, the lineage of nuns was transmitted from Sri Lanka to China and then to Korea, Japan, Taiwan, and Vietnam. And today, nuns in countries that have no ordination tradition for women receive precepts from Chinese, Korean, Taiwanese, and Vietnamese nuns, and this practice has resulted in the reinstatement of *bhikshuni* ordination in Sri Lanka. Ordination in these Mahayana traditions is practiced by women in North America, and there is hope that the Dalai Lama's interest in full ordination for Tibetan nuns will come to fruition someday soon.

Opportunities for Buddhist women in North America are plentiful. Academic life as a scholar of Buddhism has been possible for some time, and today women can also be recognized as high-ranking teachers of the Buddhist *dharma* in many of the traditions. Buddhist women, like Ayya Khema, Pema Chodron, Thubten Chadron, and Joan Halifax, run monasteries, dharma centers, meditation retreats, "engaged Buddhism" programs in prisons and hospitals and, on behalf of the environment, against human rights abuses, and against war (Fig. 1). Buddhist women can live solitary lives of contemplation, can take up writing and *dharma* teaching, can be chaplains at colleges and universities, and can design buildings for Buddhist practice and create art of all kinds.

**Women and Buddhism, Fig. 1** Joan Halifax and Tenzin Gyatso (Photograph owner: Joan Halifax. This figure is licensed under the Creative Commons Attribution 2.0 Generic license [http://en.wikipedia.org/wiki/File:Joan\\_Halifax\\_and\\_the\\_Dalai\\_Lama.jpg](http://en.wikipedia.org/wiki/File:Joan_Halifax_and_the_Dalai_Lama.jpg))

While concepts of "female self" are constructs (positive and negative) imposed upon human experience, these constructs, nevertheless, shape what opportunities are available for women's spiritual development and how women respond to them. To the degree, then, that the constructs for self-understanding are more positive in contemporary times for women practicing Buddhism, they are likely to become more fully therapeutic in promoting a self-understanding that is consonant with the early intent of Buddhist practice: in which the "self" is seen as a constructed identity – an understanding that brings calm, insight, and equanimity.

## Women and Religion

Benjamin Beit-Hallahmi  
Department of Psychology, University of Haifa,  
Haifa, Israel

## The Basic Findings

The greater religiosity of women, demonstrated in numerous and consistent research findings over the past 100 years, is arguably the most important fact about religion. Most research on religion is in reality research about women, who are the backbone of religion globally, and are actively supporting, maintaining, and sometimes keeping alive religious establishments, institutions, and organizations everywhere. If we do some basic ethnographic observations, and visit churches in Rome, Paris, New York City, or Moscow, we will immediately realize that (older) women make up the majority of those in attendance. Anthropological observations in India indicate that women make up the majority of those attending Hindu temples. Only in those traditions where ritual attendance by women is discouraged, such as Islam and Judaism, the majority of those attending will be men.

In the Islamic world, while women are discouraged from attending mosque services, they dominate among those who follow various popular practices, such as pilgrimages to saints' tombs. In these sanctuaries, a popular "women's religion" is practiced, but men are not officially excluded. Television rituals are the perfect opposite to pilgrimage, but we know that among viewers of US televangelists, women are quite overrepresented.

When we look at data on levels of religiosity for men and women in all cultures that have been looked at, women are more likely to describe

themselves as religious, as compared with men. When it comes to beliefs, the differences between men and women in belief are not always large, but they are the most consistent. Women are more conservative or orthodox; they more often say they hold rather firmly to the central and traditional beliefs in any religion. The differences are especially striking in cultures with an overall low level of religiosity, such as post-Communist Russia. When we look at those with little or no religious beliefs, agnostics and atheists, the probability of finding women among them is extremely low.

The generalization is statistical, which means that not all women are more religious than all men, but any woman chosen randomly anywhere in the world will be more religious than a man similarly chosen. The findings are clearly not tied to Christianity or Western culture, and are just as pronounced in such cultures as India, Japan, China, Israel, Ethiopia, and Turkey.

Research has supported the notion of differential meanings in religion, with women holding different images of deities. For them the gods are seen more as supportive rather than instrumental and as loving, comforting, and forgiving, while males see him as a supreme power, a driving force, a planner, and controller.

Activities which are often noninstitutionalized, but nevertheless express a belief in a world inhabited by spirits, invisible powers, and miracles, do not differ psychologically from officially recognized religiosity. This view is increasingly found among contemporary theorists.

When it comes to popular and para-religious beliefs, the differences between men and women are even more robust than those relating to institutional religions. Women are the majority of customers for all magical coping practices. The global, thriving, business of fortune-telling, miracle drugs (alternative medicine), spiritualism or "spiritual channeling," etc. caters mostly to women. They are the customers of practices which offer unofficial contacts with the world of the spirits or claim to operate with the help of invisible powers and energies. Women are much more likely to report beliefs in "telepathy,"

"psychic healing," and "fortune-telling," as well as being readier to believe in various "miracle drugs."

## Explaining the Findings

The greater religiosity of women is often viewed as a puzzle and a paradox. That is because religious organizations, institutions, and traditions are developed and controlled by men. Cross-culturally we can say that women are rarely in positions of power and influence in religious institutions and organizations, and in many cases they are formally excluded from positions of liturgical and clerical leadership.

Religious pantheons, which include gods, angels, saints, demons, founders, prophets, priests, and mystics, have little room for women. It is the creation of men, reflecting their wishes and fantasies. When it comes to what religious doctrines everywhere say about women, the content and nature of male fantasies is clear and uniform. Women are the target of taboo and derision in many traditions, described as evil and impure. If the world of religious figures and ideas was created by men, reflecting their wishes, why are women so willing to adopt this masculine universe and commit themselves to it? Attempts to create an alternative female pantheon (Goddess religions) have clearly failed to attract women. If religion is created by the male psyche, does it reflect the male psyche or the human psyche (which should be more female than male)? Our challenge is to explain the significant receptivity of women to messages of the miraculous in various guises, where the common denominator is the illusion of control or understanding.

The most common explanation for female religiosity refers to the reality of deprivation and victimization. Most women in this world are poor and powerless and have little or no education. We should keep in mind that a 7-year-old illiterate Dalit (untouchables) girl in India, already working from dawn to dusk to help her family, is a true representative of womanity and of humanity, rather than a woman with a Ph.D.

living in the United States. When we speak of women's religiosity, the Dalit girl is the one we have to understand.

It is clear that while both men and women share the human condition, their location, real and imagined, in human power structures is far apart. Men control all human institutions and organizations, and the status of women in religion, both in the imagined pantheon and in real organizations, reproduces the lot of women in most human collectivities.

Sexuality is the area where women are most deprived and victimized. Women in all cultures suffer from predatory male sexuality. Coercive sexual experiences create lifelong suffering. Early childhood sexual abuse is a relatively common occurrence in the life of too many girls. This is a shattering experience, leading to depression and other problems. This victimization naturally leads to increased fear and insecurity, reinforcing any earlier dispositions.

Religion sometimes offers women a shelter from the male way of defining and controlling sexuality, which views women as sex objects and regards unattached women as easy prey. Religion sacralizes maternity, which is another shelter from male advances. We know that in some religious movements founded or dominated by women (see the Shakers), chastity becomes the rule, and sexuality is avoided. Such groups will have few male members.

Women are more commonly diagnosed as suffering from disorders of internalized conflict, such as anxiety and depression, cyclothymic disorder, panic disorder, attempted suicide, and phobias, with men suffering from acting-out disorders, such as completed suicide, substance abuse or schizotypal, narcissistic, and antisocial personality. Women are more than twice as likely as men to suffer from stress-related disorders, including major depressive disorder, post-traumatic stress disorder, and several anxiety disorders. The lifetime prevalence of PTSD for women, about 10.4 %, is more than twice that for men. Females are more prone than males to panic disorder with agoraphobia and to phobias about animals. Data from large-scale epidemiological surveys

indicate that panic disorder is 2.5 times more common in women than in men.

There is much evidence for significant personality differences between men and women; some of which may be relevant to the differences in religious activity. Men and women differ in emotion processing, including perception, experience, and expression. Women clearly are readier to express feelings and admit dependence. They are also readier to demonstrate interpersonal caring, sensitivity, and warmth. In all cultures males are less nurturant and less emotionally expressive, while women are more submissive and passive, anxious, and dependent. Empathy, defined as the vicarious affective response to another person's feelings, is more prevalent in females. The greater empathy of women acts to reduce critical thinking, and female neurohormones lead to the suppression of negative emotions or judgments. Love is the enemy of critical judgment and creates acceptance, especially when there is a yearning for consolation, reassurance, and some hope for the relief of suffering.

Studies of the reported contents of dreams have consistently found females to be significantly more interpersonally oriented than men. Women's dreams involve relationships and loss, while men are likely to dream about fighting, protecting, and competing, almost always with other men. And when ready-made fantasies are consumed, as in watching television, women constitute the audience for soap operas, while men watch aggressive sports (or follow political and economic news, which are often far from fantasies). In popular romance novels, women vicariously live family and relationship conflicts, as well as happy endings.

David Bakan described the dichotomy of orientations in females and males as communion versus agency. Communion is the tendency to be concerned about closeness to others, while agency is the tendency to be self-interested and assertive. Evolutionary psychologists have observed that women feel threatened by isolation and diminished intimacy, while men feel threatened by anything that smacks of diminished prestige and authority.

Looking at the involvement of adult women in the world of spirits, invisible powers, and miracles, we find that many of their activities have little to do with eternal damnation or bliss but with counter-sorcery ideas such as the removal of the evil eye and securing good fortune for one's family. The human condition puts us all in situations of risk and insecurity. Our anxiety and helplessness leads to coping through ritual and fantasy, rather than instrumental action. Men do engage in such acts sometimes, but the challenge is to explain why women do it more often.

Most personality differences seem to be innate, such as greater male aggressiveness, verbally and physically, and risk-taking. Males are much more likely to die violently and to commit homicide and suicide at any age. They are responsible for 90 % of violent acts in all cultures. Males exceed females on physically risky forms of sensation seeking, and these in turn correlate significantly with a variety of physically dangerous activities such as involvement in crime, dangerous sports, injury proneness, and volunteering for drug experiments and hazardous army combat. The difference in aggressive tendencies together with the greater conformity of women is reflected in the large differences that have been noted in the occurrence of antisocial behavior, which is so much rarer among women.

The feminine coping strategy may be characterized by anxiety, risk avoidance, and a search for real or imagined security, using comforting others. The male psyche, on average, will be dominated by developmental vulnerability, risk-taking, aggression, independence, and relative skepticism, showing the effects of masculine neurohormones. Reacting to distress men will react by externalizing, sometimes harming all involved. In the female psyche, fear, which leads to aggression in males, will lead to attachment, internalization, and help seeking. Low aggression, empathy, suggestibility, guilt, and sympathy will lead to love, but taking care of children and men, and tending to their needs, rather than one's own, is a heavy burden, growing with the victimization of women by violent men.

Turning to the world of supernatural agents and miracles fits with many "feminine" traits

and conditions. Women's people orientation leads to dependence on real and imaginary objects, from fortune-tellers to angels. Those who nurse and nurture humanity seek their compensation in imaginary objects in the absence of real support and the presence of much deprivation. We should think again of Dalit females in India, who may hope for a future incarnation as a male Brahmin (the official version of their own "Pascal's Wager") but will settle for much less than that, protection from evil spirits for their own children. Any illusion of control will serve to relieve their constant desperation, as the world of spirits and miracles expresses indeed the sigh of the oppressed creature.

## Women in Chinese Religions

Mayfair Yang

Department of Religious Studies & Department of East Asian Studies, University of California, Santa Barbara, CA, USA

In traditional Chinese culture, or late imperial times before modernity in the early twentieth century, the gender division of labor had men in the public sphere, working in the fields, pursuing

trade, or sometimes serving in bureaucratic office. The vast majority of Chinese women were illiterate, and they worked in the domestic sphere, engaged in child-raising and housework. Women could not inherit property nor sit for the imperial examinations that would endow only men with official positions in the state bureaucracy. In the patriarchal kinship system, the birth of a girl was a great disappointment, as women could transmit neither kinship identity nor property to their children, and they could never go out into the public sphere and bring fame or wealth to their family or lineage. Instead, women were married out to live with their husband's family, thus benefiting another lineage with their labor and childbirth. The dominant Confucian tradition enjoined women to be self-effacing, filial, chaste, and obedient to their husbands and in-laws and to stay at home. Indeed, in late imperial China, they were often banned from going to worship in the temples (Goossaert 2008). The historical record generally shows that although there are many examples of female piety and goddess cults, there were very few women who were ritual experts or religious leaders or had roles as temple managers or festival organizers (Overmyer 1991). Thus, the systematic cultural suppression of women's voices, social ambitions, and sexuality all suggest that perhaps more than men, women had more reasons to turn to the divine world of gods for solace and escape from their worldly sufferings and frustrations.

Two apparent exceptions to this patriarchal pattern can be found in the shamanistic and early religious Daoist traditions. Ancient Chinese texts such as the third-century BCE *Discourses of States* (*Guo Yu*) talk about female (*wu*) and male shamans (*xi*) as if they were equal. Their bodies served as hosts to gods and ancestors who descended and spoke through them, and they sometimes served in royal courts as ritual leaders. The enigmatic text, *Dao De Jing* or *The Way and its Power*, supposedly written by Laozi in the sixth or fifth century BCE, is full of exhortations to adopt the ethos of the feminine, passive, or the weak, as opposed to the hard, strong, willful, or militaristic. Feminine metaphors are scattered throughout the text, such as the enjoinder to

imitate the softness of water or the descent into deep river valleys, which is the "return to the mother's womb" or the return to the simplicity of infancy. With the Celestial Masters' religious Daoist movement (*Tianshi Dao*) of the third through fifth centuries CE, there are references to women priests and female religious officials with rank, leading local parishes along with men. However, later Daoist development seems to have succumbed to the stronger patriarchal tradition (Overmyer 1991).

The Chinese Mahayana Buddhist tradition was also strongly patriarchal and dominated by male leaders and monks. Except for the rare female emperor Wu Zetian of the seventh century CE, who was a great patron of Buddhism and built some major Buddhist monuments and temples, women rarely appear as major players in the history of Chinese Buddhism. Women figure mainly as pious lay followers, pilgrims to holy sites, or humble nuns. From the perspective of Buddhist monks, women were a constant threat to their vows of celibacy and their pursuit of detachment and enlightenment. Thus, in Chinese Buddhism, women were associated with the secular, profane, and the imperfect, while the sacred is associated with men (Paul 1979). Indeed, Mahayana texts say that in order to attain the exalted status of a bodhisattva (a being who attains enlightenment but comes back to earth to save others), women must first change their sex to male.

However, the image of the Bodhisattva Avalokitesvara underwent a major gender transformation in the opposite direction in China, from his original masculine image in Indian Buddhism to a female image of gentle maternal compassion sometime in the twelfth century CE (Sangren 1983; Yu 2001). This cult to Guanyin as the feminized Bodhisattva Avalokitesvara is known in China, is the most influential and pervasive worship of a Buddhist deity in China from the late imperial era to the present. Within the patriarchal culture of Chinese Buddhism, the cult of Guanyin has carved out an important space for female worshippers, who appeal to her motherly kindness and solicitousness for help in their difficult lives, especially around issues of fertility and childbirth. The hagiography of the life of

Guanyin has its genealogy in the Chinese legend of Princess Miaoshan, dating to the tenth century CE or earlier. Miaoshan was a devout Buddhist and resisted marriage, defying her father in refusing to marry the man he had chosen for her. In anger, he had her killed, but she came back to life and selflessly gouged out her eyes and cut off her hands to feed him her flesh as medicine when he became ill. When he realized her sacrifice, he repented and had his whole family convert to Buddhism, while she became the apotheosis of the thousand-eyed, thousand-handed Bodhisattva Guanyin.

While motherly images and filial self-sacrifice do not threaten patriarchal culture, marriage resistance *does* represent a challenge to it, since in marriage, a Chinese woman leaves her natal family and her usually close relations with her mother to enter an alien family and come under the authority of her husband and in-laws. It is interesting that Mazu (meaning “mother and ancestor”), a maritime goddess worshipped up and down coastal China, also resisted marriage and died single. Like many gods in Chinese popular religion, Mazu was once a human being, and through her good deeds and miracles saving drowning sailors and fishermen, she became a goddess after death, and a large cult grew up around her that spread to Taiwan and even Japan and Vietnam (Watson 1985; Yang 2008). Another coastal goddess named Chen Jinggu, known in Fujian Province as the Lady of Linshui (Baptandier 2008) and in Zhejiang as Mother Chen the Fourteenth, did get married and pregnant, but in order to conduct exorcism rituals to beg the gods for rain and save people from a terrible drought, she aborted her 3-month fetus. Chen Jinggu was skilled in martial arts and regularly did battle with different demons, slaying two white snake demons to avenge her brother’s death and defend the people. The births of both goddesses are said to have resulted from their mothers’ immaculate conception through the Bodhisattva Guanyin. The deep emotional appeal of these three goddesses to Chinese women, who form the great majority of their worshippers today, may be due to a number of psychological factors. First, their maternal images of nurture and protectiveness invoke the usually close relationships

**Women in Chinese Religions, Fig. 1** Goddess Mazu greeting her Taiwan “daughter” Mazu goddesses visiting her on Meizhou Island, Fujian Province (2000). (photo taken by the author)

between mother and daughter in Chinese families. Second, the marriage resistance and self-abortion may appeal to women as female assertiveness and autonomy from the patriarchal family and kinship system, although this female desire is seldom expressed explicitly. Third, all three goddesses exhibit female prowess, whether through the performance of rituals or miracles, upholding justice and punishing wrongdoers, or saving people, especially helpless men, from drowning, from demons, or from disasters. Thus, through seeking solace with these powerful goddesses, Chinese women may also come to identify with and yearn to model themselves after them (Fig. 1).

With the May Fourth Movement of cultural reform in the 1920s and the Communist Revolution of 1949, with its stated project of “women’s liberation,” the situation of women in contemporary Chinese society is much better than premodern times. However, traditional

patriarchal thoughts and practices still plague rural and small-town areas, and there are new exploitations of women, in employment discrimination and the commodification of women and sex, making the situation for Chinese women today complex. The goddess cults continue to draw female worshippers, although men also join in. Now women have no problems in going to temples to worship, attending public rituals or church services if they are Christians, helping to conduct rituals, becoming Buddhist or Daoist nuns, or organizing the activities of small local temples (Cao 2010; Kang 2009). However, the general pattern is that they form the bulk of devout worshippers, temple helpers, and religious festival workers. Major decision-making roles, such as temple and church organizers and managers, religious leaders, ritual masters who head ritual performances, and the abbots of large Buddhist or Daoist monasteries, are still usually in the hands of men. There are some exceptions to this rule, such as the Buddhist nun Master Cheng Yen in Taiwan, who founded the globally influential Buddhist lay organization Tzu Chi Merit Foundation, with its many branch temples, charities, hospitals, disaster relief, and universities in different countries (Huang 2009). At this writing, there are a few other women religious leaders in China, such as the Head of the Chengdu City Daoist Association in Sichuan, a Daoist nun, and the Abbot of the Taiping Buddhist Temple in Wenzhou.

Three developments for women and religious participation can be detected. One is that in different parts of China, shamanism is becoming more feminized. This may be due to the fact that shamanism and spirit mediumship in the modern era is looked down upon as “superstitious” and low class, and men tend to have more opportunities for upward social mobility. Or men tend to have more secular pursuits and better education; thus, their bodies and tongues are less receptive as the vessels or voices of deities or ancestors. Another gendered religious phenomenon is that women tend to be the majority of those who go on long-distance pilgrimages to sacred sites. Finally, in rural and small towns, most sutra-chanting groups performing in temples, Christian church choirs,

and lay Buddhist volunteers who chant sutras and comfort dying patients tend to be women. Women are said to be more sensitive to the presence of spirits and believed to be more compassionate and self-sacrificing.

Now that the first generation of China’s one-child policy (in rural areas, two children if the first is a girl) has come of age, there is a growing problem in recruiting men into the Buddhist and Quanzhen Daoist clergy. When families have only one son, they are very reluctant to allow their son to become a monk, for that would mean that their descent line will be ended and they will have no one to support them in old age. Increasingly, new recruits are women or men from poor families. This new development may mean the gradual feminization of the Buddhist sangha or Daoist priesthood, as we already see in Taiwan’s Buddhism (Huang et al. 2011:118).

status of women. In the same way that religion and culture are inextricable, cultural variables must be taken into consideration along with location in religious tradition. A primary example is the Gospel New Testament story of the woman caught in adultery in John 7:53–8:11.

Early in the morning [Jesus] came again to the temple. All the people came to him and he sat down and began to teach them. The scribes and the Pharisees brought a woman who had been caught in adultery; and making her stand before all of them, they said to him, “Teacher, this woman was caught in the very act of committing adultery. Now in the law Moses commanded us to stone such women. Now what do you say?” When they kept on questioning him, he . . . said to them, “Let anyone among you who is without sin be the first to throw a stone at her” . . . When they heard it they went away. . . Jesus. . . said to her, Woman, where are they? Has no one condemned you?” She said, “No one, sir/Lord.” And Jesus said, “Neither do I condemn you. Go your way, and from now on do not sin again.”

The consideration of religious participation, as well as any other social and cultural activity and agency, is an integral part of the ongoing psychological debate of nature versus nurture. People are born into a religious or nonreligious environment, family, society, and religious tradition and practice and are imprinted and impacted by their environment with all of its variable influences. Religion is one major aspect of the nature/nurture continuum, influenced by all of the other factors. Gender psychologically is first weighted heavily on the nature side of the scale, but over the life course, gender experience is weighted more and more heavily on the nurture side of the scale. The gender balance on the nature/nurture scale shifts with life experiences and the psychological imprint and social influence of religion can have enormous effect on the balance. The role of women in Christianity has changed drastically and evolved greatly, from the women in the life of Jesus throughout the tradition over time and continuing into sweeping changes today and toward the future.

## Women in Christianity

Peggy Kay

Department of Religion, The George Washington University, Washington, DC, USA

### Introduction: Considering Women in the Christian Religious Tradition

The consideration of women in Christianity is a broad consideration, so it is given broad treatment here, including Jesus and women, particular women in scripture and in the tradition, roles of women in various denominations and over time, theological developments, and changing roles today including ordination and priesthood. It must be kept in mind that the consideration of women in Christianity should include social location of time, geographic location, society, culture, economic, and political factors. Such factors as these social conditions and social organization of the family are contextually integral to understanding the roles and

### Jesus and Women in Christian Scripture

The way Jesus related to women during his lifetime is described in the New Testament Gospels:

Matthew, Mark, Luke, and John. Jesus in his ministry taught that the mystical inner relationship of the person to God exists by spiritual nature in everyone. The spiritual, mystical teachings of the Cosmic Christ are central to Christianity and culminate in the final, prophetic book of Revelation. The deepest spiritual nature and mystical process is psychological more than physical, so it is not gendered. Jesus was well aware that ancient social stature, role, and context had much to do with the way people of both genders differed in manifesting themselves in society. He always went to the internal spiritual core of the matter yet always understood the external cultural context. Jesus in the resurrection story appears to women first, they are receptive to what he tells them, and they spiritually understand.

His mother, *Mary of Nazareth*, had accepted God's calling to be the mother of Jesus as delivered by the Archangel Gabriel. She was receptive to the overshadowing of the Holy Spirit and kept faith that God would put her family and social situation right in the world to reflect the spiritual rightness on which it was based. "Here am I, the servant of the Lord; let it be with me according to your word." Then the angel departed from her" (Luke 1:38). Psychologically, she was able to be spiritually receptive to the Spirit of God and was willing to transform herself and her life accordingly, an extraordinary feat of self-willed psychosynthesis. Mary began her famous Song of Praise, now known as the Magnificat, by saying, "My soul magnifies the Lord, and my spirit rejoices in God my Savior, for he has looked with favor on the lowliness of his servant" (Luke 1:46–48). She was a devoted mother to Jesus throughout his life and supported him emotionally and spiritually in his growth, life, and untimely death, standing by him even through the crucifixion (Fig. 1).

Some other prominent women in Christian scripture include *Elizabeth*, who was a blood relative of Mary the mother of Jesus. Elizabeth was the wife of priest Zacharias and the mother of John the Baptist and prophetically and intuitively understood the significance of Mary's pregnancy.

**Women in Christianity, Fig. 1** Mary holding baby Jesus. Library of Congress (<http://publicdomainclip-art.blogspot.com/2008/12/virgin-mary-holding-baby-jesus-christ.html>)

Blessed are you among women, and blessed is the fruit of your womb. . . For as soon as I heard the sound of your greeting, the child in my womb leaped for joy. And blessed is she who believed that there would be a fulfillment of what was spoken to her by the Lord (Luke 1:42–45).

*Anna* was a Jewish prophetess who prophesied about Jesus at the Temple (Luke 2:36–38). *Martha of Bethany* was known for her hospitality, self-discipline, and devotion (Mark 14:3–9, Luke 10:38–42, John 11, John 12:1–8). The poor widow gave 2 *lepta* ("mites") at the Temple at Jerusalem and Jesus exalted her gift because with it she had given all she had (Mark 12:41–44). Mary Magdalene was loving, devoted, and faithful throughout Jesus' life and resurrection (Matthew 27:55–61, Matthew 28:1–10, Mark 15:40–16:11, Luke 8:1–3, Luke 23:49–24:12, John 19:25, John 20:1–18).

Many women were also there [at the crucifixion], looking on from a distance; they had followed Jesus from Galilee and had provided for him. Among them were Mary Magdalene and Mary the mother of James and Joseph (Matthew 27:55–56). . . . Mary Magdalene and the other Mary were there, sitting opposite the tomb (Matthew 27:61). . . . After the Sabbath. . . . Mary Magdalene and the other Mary went to see the tomb. . . . the angel said to the women. . . . “He is not here; for he has been raised. . . . go quickly and tell his disciples” . . . . Then Jesus said to them, “Do not be afraid; go and tell my brothers to go to Galilee; there they will see me” (Matthew 28:1–10).

*Mary, the mother of John also called Mark*, held a prayer vigil for Peter in her home, to which he fled after his delivery from prison (Acts 12:12–17). *Dorcas* of Joppa, also known as Tabitha, a “disciple,” was known for her charity and her companionship to widows, and Peter raised her from the dead (Acts 9:36–43). *Lydia of Thyatira* was a wealthy merchant who was the first convert to Christianity in Europe. She opened her large home to meetings of Christians, was visited by Paul and Silas when they left prison, and she was instrumental in establishing the church at Philippi (Acts 16:11–15, 40).

Characteristic activities, gifts, and ministries of women in Jesus’ times included prayer, in church gatherings, homes, and personal prayer lives; prophecy as a gift of the spirit; and spiritual mentoring – older women passed on religious values and training and encouraged psychological gifts of the spirit in daughters and in raising of children. Prominent women gave personal, financial, and other supports of ministries in society as well as in homes. Hospitality of all women of all social strata was an outstanding virtue of generosity and loving activity characteristic of women, often Jewish in heritage and tradition, as followers of Jesus. Witnessing and testifying were ongoing activities of faithful women in whatever sphere they moved. These characteristics and ministries have persisted over time and are integral to activities of women in Christianity today.

## Women in Various Denominations and Over Time

The evolution of Christianity since the Christian Scriptures has been the development of

denominations. The Roman Latin tradition grew next to the Greek and other Eastern Orthodox traditions, after a schism divided them in 1054 CE. The Eastern Church allowed priests to marry. John Wycliffe (1330–1384) translated the Bible into English as a primary step toward the Protestant Reformation, followed by Martin Luther (1483–1546), Ulrich Zwingli (1484–1531), and sixteenth-century reforms in England by King Henry VIII, King Edward IV, and Queen Elizabeth I. Queen Elizabeth I (1533–1603) is one of the most well-known and pivotal women in the history of Christianity. At the beginning of her reign, she codified beginnings of the autonomous Church of England and spent her lifetime and reign struggling to balance Protestant Reformation with Catholic tradition. Post-Reformation Protestants also accepted clerical marriage.

Throughout the history of Christianity, there have been well-known women prophets and mystics. Among the most well known are:

- 1098–1179 Hildegard of Bingen, Benedictine nun and mystic
- 1193–1254 *Clare of Assisi*, founder of the Poor Clares
- 1208–1282 *Mechtilde of Magdeburg*, Beguine mystic
- 1303–1373 *Birgitta*, Swedish mystic
- 1342–c.1416 Julian of Norwich, English mystic and anchoress
- 1347–1380 *Catherine of Siena*, Italian mystic (Fig. 2)
- 1515–1582 Teresa of Avila, Spanish mystic and reformer of Carmelites

Some of these women, such as Catherine of Siena, came to prominence and influence because of their profound spiritual lives, great teachings, and complete devotion to the Church and to Jesus and God. Known for her letters, in her earliest letter to Pope Gregory XI at Avignon in 1376, she gave advice to him.

Don’t be afraid, for divine help is near. Just attend to spiritual affairs, to appointing good pastors and administrators in your cities, for you have experienced rebellion because of bad pastors and administrators. Do something about it! And take heart in Christ Jesus and don’t be afraid.

**Women in Christianity, Fig. 2** Catherine of Siena. From Church of Santa Maria del Rosario in Prati, Rome ([http://en.wikipedia.org/wiki/File:Catherine\\_of\\_Siena.jpg](http://en.wikipedia.org/wiki/File:Catherine_of_Siena.jpg))

Psychologically, the mystical and spiritual processes are internal, intrapsychic processes, so there are countless numbers of people who have been deeply engaged in mystical divine union and spiritual meditation through the ages, about whom we will never know. Those who have become well known, particularly women, are those who have been writers, spiritual teachers, and reformers engaged in social justice as manifestation of spiritual principles or in some way have been noticed and remembered for their outward behaviors, achievements, and legacies. This is especially true for women, because historically the primary domain of women has been the home and the convent or monastery. As women's roles in society and literature have increased, more women have come to prominence in Christianity.

Today there is a range of women's traditions, ministries, and practices within each denomination – Catholic, Eastern Orthodox, and

Protestantism, which includes Baptists, Congregationalists, Methodists, and Quakers. Within each denomination, women's roles continue to evolve and transform, such as in the long-standing debate over ordination of women, which varies from denomination to denomination. Most Protestant denominations now ordain women as clergy, and the Roman Catholic *Womenpriests* are a part of movement within Catholicism to ordain women as priests. In Christian denominations that ordain women, the percentage of women clergy has grown into double digits, and growth continues to increase, according to the Hartford Institute for Religion Research.

Major women's ministries have grown into modern and contemporary times in areas such as human rights, women's rights, social justice, economic justice, women's entrepreneurship, women's health, and more. Pioneers include Joan of Arc; Elizabeth Cady Stanton and her *Woman's Bible* of 1895; Antoinette Brown Blackwell, first woman minister ordained 1853; St. Bernadette of Lourdes; Mother Teresa; Dorothy Day; and Barbara Harris, first woman Episcopal Bishop of 1989.

Recent theological trends include womanist theology as an outgrowth of liberation theology and feminist Christian theory. In psychology, Christian feminist scholars have made contributions to what is known today as Christian feminism, with prominent theorists such as Mary Daly and Sallie McFague, forging new directions in theory, research, and practice. Christian feminist theory and practice is integral to feminist theory and practice, which is integral to and at the leading edge of women's psychology.

## Women in Hinduism

Karen Pechilis  
Drew University, Madison, NJ, USA

Hindu definitions of the nature and role of women are rooted in classical images from philosophy

and mythology. Such images have held cultural authority as ideals for centuries in Hinduism's 3,000 years of literate tradition. Today, they serve as touchstones for the appreciation, critique, and transformation of traditional ideals of womanhood in the modern world (Pechilis 2012). The study of women in Hinduism contributes to our understanding of the psychology of cultural paradigms and expectations of women and their transformation.

## Classical Paradigms

The ancient philosophy of Samkhya, one of the six orthodox schools in Hinduism, describes two principles that interact with each other to produce everything in the universe: *purusha*, which is associated with spirit, stasis, and maleness, and *prakriti*, which is associated with matter, energy, and femaleness. The necessity of these principles and their complementary relationship informs Hindu ideas on the nature and relationship of man and woman. Traditionally, the social value of women centers on marriage: "From the orthodox point of view the only rite of passage (*samskara*) that is particularly marked for women is marriage" (Findly 1999, p. 418). In revealing contrast, the key *samskara* for men was their initiation into studenthood with a guru (teacher), which preceded marriage.

The role of wife in the household context was the dominant social identity for women, and girls were married prior to puberty, though only resided with their husbands after its onset. The *Laws of Manu (Manusmriti)*, which was probably composed between 200 BCE and 200 CE and was cited as authoritative by later texts purporting to systematically discuss social duties and responsibilities (the *Dharmashastra* genre of texts), located women as necessarily under male supervision throughout her lifespan:

I will tell of the eternal duties of a man and wife who stay on the path of duty both in union and in separation. Men must make their women dependent day and night, and keep under their own control those who are attached to sensory objects. Her father guards her in childhood, her husband guards

her in youth, and her sons guard her in old age. A woman is not fit for independence. A father who does not give her away at the proper time should be blamed, and a husband who does not have sex with her at the proper time should be blamed; and the son who does not guard his mother when her husband is dead should be blamed (*MS* 9.1–4; Doniger and Smith 1991, p. 197).

This text can be viewed as both empowering and oppressive: The woman is protected, yet ever supervised; she is due parental care, sex from her husband, and support from her son, yet she lacks independent recourse.

Wives are a cultural icon in Indian tradition, being likened to Lakshmi, the goddess of wealth and good fortune. Wifhood is *the* auspicious status for women: “They are the creators and the maintainers of life, the sources of prosperity, well-being, and pleasure. Furthermore, they are the ones upon whom a man’s fulfillment of the three aims of life—*dharma*, *artha*, and *kama*—depend” (Marglin 1985, p. 299). Classically, a wife played a supporting but essential role at the performance of the fire sacrifice (Young 2002, pp. 6–9). The conservative eighteenth-century *Stridharmapaddhati* (“Guide to the Duties of Women”) repeats classical codes for the modern era, emphasizing that marriage for women is the equivalent of the *upanayana* (initiation) for men and that a wife’s primary duties are to be devoted to and obey her husband (wife as *pativrata*) and produce sons (Leslie 1989, pp. 29–37).

## Modern Hindu Women

The modernization of Hindu women’s roles was self-consciously attempted by nationalist male reformers in the context of high British colonialism in the late nineteenth and early twentieth centuries. Changes included an emphasis on educating women, permitting the remarriage of widows, the emergence of women’s organizations, advocacy for women’s rights, and opportunities for women’s professional employment (Forbes 1996; Young 2002, pp. 19–22).

Today, more influential than the proscriptive texts on *dharma* is the beloved classical epic story

of the *Ramayana*, in which the marriage of Sita to Rama plays a starring role: “It is a very important source of values for familial interactions and marital relationships” (Sherma 2005, p. 23). Sita is understood to capture concerns and realities of Indian women today:

There are several practical reasons why Sita-like behaviour makes sense to Indian women. The outcome of marriage in India depends not just on the attitude of a husband but as much on the kind of relationship a woman has with her marital family and extended kinship group. If, like Sita, she commands respect and affection from the latter, she can frequently count on them to intervene on her behalf and keep her husband from straying, from behaving unreasonably. Similarly, once her children grow up, they can often play an effective role in protecting her from being needlessly bullied by her husband, and bring about a real change in the power equation in the family, because in India, children, especially sons, frequently continue living with their parents even after they are grown up. A woman can hope to get her marital relatives and her children to act in her favour only if she is seen as being more or less above reproach (Kishwar 2001, p. 305).

The moral power of fulfilling the role of obedient wife (*pativrata*) permits women to take a stand, yet such stories of female role models “assimilate the power of the female within the framework of rules for everyday living . . . a fundamentally compromised attempt, for it must co-ordinate submission and transgression within a single agenda” (Bose 2004, p. 115).

Many challenges face Hindu women today. Marriage and procreation is a universal expectation for both women and men. The tradition of bridal dowry may have begun as a trousseau for the bride that provided her with a safety net, which was then transformed into a vulnerability for women by the British colonial system (Oldenburg 2002); in present-day India and the Indian diaspora, it has for many become an onerous obligation on the bride’s family and even one fraught with danger if the groom’s family decides to take physical revenge on the bride for what is perceived to be an inadequate dowry. Such problems persist even though the practice was prohibited under Indian Civil Law in 1961, as well as subsequent sections of the Indian Penal Code. The burden of the bridal dowry and ritual customs invested in the son

contribute to the preference for a son. The 2011 Census of India, similar to the 2001 Census, shows that there are 940 females per 1,000 males, strongly suggesting election to abort female babies; Amartya Sen has called this “natality inequality” (Sen 2005, pp. 226–232). Not bearing children, especially sons, is also a danger, and this is indexed in the gendered language of terms of abuse, in which “to be sonless” and “to be a widow” are insults specifically directed at women and without parallel in terms directed at men (Shabadi 2005, pp. 260–264).

Ethnographic studies of women who enact traditional definitions and ideals indicate that they use tradition not to conform but to respond to such challenges. For example, ethnographies of women’s rituals today discuss women performing vows (*vrat*) and fasts with the explicit aim to promote long life for their husbands and for the health of their families, which support traditional constructions of women’s *dharma*, but these studies also foreground the space such performances allow women for discussion and social exchange. In such discussions, they may make their own claims, including validation of the feminine as positive, women’s liturgical authority, and connections rather than opposition between private and public space (Knight 2011; McDaniel 2002; Pintchman 2005). Ethnographies of women’s traditional performance of folksongs disclose the women’s awareness of the received structures of gender and power and their criticisms of it. Examples include songs as women’s celebrations of their own sexual pleasures and motherhood as well as their voicing of their perspective that patriarchal structures are obstacles to maneuver around (Rahejia and Gold 1994) and in women’s use of song to reflect on everyday relationships (Jassal 2012).

## Psychological Aspects

“What psychoanalysis offers to the larger project of the interpretation of Hinduism is an additional perspective, another point of reference, an exploration of possible subtexts of Hindu texts and practices” (Courtright 2008, pp. 311–312).

Scholars have undertaken analysis of a variety of Hindu myths and cultural stories; those that focus on women have explored the relational aspects of their roles. Sudhir Kakar, the foremost psychoanalytical clinician and theorist of Hindu culture in terms of psychology, has explored women on several levels. He has discussed the “inner world” of feminine identity, emphasizing the distinctive Hindu promotion of goddess traditions, with reference to the Sita as an “ego ideal” and the mythological images of “good” and “bad” mother (Kakar 1978, pp. 52–112). He has explored the “selfobject” of lower-class women’s ideals of marriage (Kakar 1989, pp. 65–84). He has also discussed the strong impact mother-goddess traditions have on the development of male children (Kakar 1997, pp. 72–99). Other scholars have built on Kakar’s foundation. The many myths about the doubled and split nature of Sita as both sexual and chaste reveal tensions in perceptions of female sexuality (Doniger 1999, pp. 9–28). The images of women and goddesses as revered “mother” reveal the primacy in Hindu culture of an extended family context in fostering self-development rather than a nuclear family (Kurtz 1992). The conflicting desires of fusion and separation between mother and son find “therapeutic expression” in the mythology of Krishna and the cow-herd women (Jain 2010).

## Women in Judaism

Hadar Schwartz  
Subprogram in Clinical Psychology,  
The Graduate Center, City University of  
New York (CUNY), New York, NY, USA

Women's current position within Judaism is multi-determined, a synthesis between the views of women in the Hebrew Bible and its interpretations within the Oral Law and the influence of cultural and sociopolitical factors. Within every denomination of Judaism, the status of Jewish women represents a dialectic between the respect for tradition and the pull to adopt modern values. Even Jewish tradition is conflicted. Throughout much of Jewish history, women within Judaism suffered limited rights under the law, had fewer religious obligations than men, and were not counted as equal members of a religious or legal community. Yet, women were simultaneously glorified. Modern Jewish tradition has responded by creating countless creative solutions.

## Women in the Hebrew Bible

The Hebrew Bible includes representations of women as devout, pious, and God-fearing but

also as seductive, wily, and deceitful. Eve, the archetype of woman and the starting point for a discussion of womanhood in the Judeo-Christian tradition, epitomizes the latter description, while Sarah and Ruth are models of the former. The struggle within Judaism between these conflicting images infuses the entirety of Jewish writing on women. As the second telling of Creation is generally understood, women are an afterthought, fashioned from Adam's rib for his benefit (Gen. 2:20–21). Later, in the Ten Commandments, the tenth commandment (Exodus 20:17; Deut. 5:21) prohibits coveting your neighbor's possessions and lists your neighbor's wife alongside your neighbor's ox and ass. Wives were described as little more than men's chattel (though there were biblical prohibitions against selling wives). Even one of the Hebrew words for husband, "ba'al," means both husband and master, explicitly signaling a gendered power hierarchy within the infrastructure of marriage.

Alternatively, women were praised and deeply respected. Cursing one's mother (or father) was punishable by death (Lev. 20:9; Deut. 27:16). An oft-quoted section of Proverbs (31:10–31) enumerates the qualities of a woman of valor (*ishet chayil*). She works hard for her family and for her community, she is wise and kind, her actions enable her husband's success, and she is praised accordingly.

Women during the Biblical period suffered limited rights in divorce (Deut. 24:1–4), the courts (Deut. 1:13), and inheritance (Num. 27). However, women were also protected from men (e.g., Deut. 21:14), and their assertiveness and leadership was at times presented quite favorably (e.g., Bathsheba, Deborah). Women were obligated to observe many of the positive commandments ("thou shall") to which men were obligated, such as dietary laws and the Sabbath, and were commanded to observe the negative commandments as well ("thou shall not").

## Women in Rabbinic Law

The canon of Jewish law was interpreted and established almost exclusively by male Rabbinic

scholars and recorded within the first six centuries CE. Women were thus passive receivers of their tradition, and with men as their mouthpieces, women remained silent even as Rabbinic law provided greater protections for them in certain domains. For example, in order to make women's legal and financial rights in marriage binding, the *ketubah*, a written document of marriage, was established. However, in legal discussions, women were often placed in the same legal category as children and Canaanite slaves, a clear example of how women were seen as the other and even as categorically inferior. Even within this category, women were at a disadvantage; unlike children and slaves, women were the only individuals who could not alter their lesser status (Adler 1973).

Rabbinic law curtailed women's obligatory religious involvement as well. Women were exempt from positive commandments that must be performed at specific times (Babylonian Talmud, Tractate Kiddushin, Folio 29a), including the three daily prayer services at their respective times and donning phylacteries, and were exempt from other non-time-bound commandments (Babylonian Talmud, Tractate Eruvin, Folio 96b). There are three exceptions to women's exemption from time-bound positive commandments: *challah* (removing a piece of the dough from the Sabbath bread as a reminder of the priestly tithing), *niddah* (observing laws of family purity), and *hadlakah* (lighting the Sabbath candles). Women were also exempt from studying religious texts. The Babylonian Talmud expressed disdain for female religious education, stating that teaching one's daughter *Torah* is akin to teaching her lasciviousness (Tractate Sotah, Folio 21b); the Jerusalem Talmud was no kinder, stating that it would be better for the *Torah* to be burned than for a woman to study it (Tractate Sotah, 3:4). Therefore, women were placed at a perpetual disadvantage in a religion that consistently values learning above all else. Additionally, since religious-legal decisions are made by the most learned and engaged in the community, women have been excluded from the decision-making process even in communities that would accept female

decision-makers (*poskim*). Interpretations of these exemptions vary slightly. Whereas most commentators have understood them as akin to forbiddance, others have allowed women to disregard these exemptions and make these commandments binding. These Jewish texts have had profound implications for women's status, but women's role and place in Judaism has varied dramatically depending on the customs and mores of the societies in which Jews have lived (e.g., Jewish women in Muslim lands were more home bound and dressed more modestly than women in Europe).

### Women in the Enlightenment

The Jewish Enlightenment (*Haskalah*) spread from Germany to Western Europe beginning in the late eighteenth century and by the end of the nineteenth century, this receptivity to modernity and European culture had spread to Eastern Europe as well. The leaders of the *Haskalah* insisted that acculturation and traditional Judaism were compatible and that Jewish religious, political, and social life could be enhanced rather than corrupted by modernity. As Judaism was influenced by the Enlightenment, the positions of Jewish women were transformed. For much of Jewish history, women's lives revolved around rearing Jewish children, keeping a Jewish home, and assisting the family economically. However, as women in Central Europe began receiving formal education, Jewish girls were educated at unprecedented rates. During the nineteenth century, liberal women entered Jewish and state-supported elementary and secondary schools, and Jewish women in Germany and Austria made up an extraordinarily high percentage of the early generations of women who sought university education. As women received secular education, many rabbis feared that, without providing women with a complementary substantive religious education, these women would assimilate. Communities mobilized to offer serious educational options for girls.

For example, in the Orthodox community, Sarah Schenirer founded *Bais Ya'akov* in 1917

to provide religiously influenced secular and strictly religious education to girls. *Bais Ya'akov* quickly spread throughout Europe, North America, and Israel, clearly serving an educational, economic, and spiritual need.

Jewish women, even before they were formally educated, had a rich inner religious life. Already in the sixteenth century, women recited prayers of supplication (*tkhines*) that were voluntary and not time bound and, by the seventeenth century, read popular religious literature such as the *Tsenerene*, an adaptation and discussion of the weekly *Torah* portion, popularly known as the "women's Bible." By the modern period though women wanted to engage with texts that required greater formal Judaic knowledge and were written in the original language, and education provided them with these opportunities.

### Women and Identity

Throughout Jewish history and among many Jews still today, Jewish identity was transmitted through the maternal line exclusively: you were a Jew if your mother was a Jew, regardless of your father's religion. Moreover, women, particularly in the modern period, were charged with cultivating and sustaining Jewish peoplehood as the primary educators of their children in the home and as key transmitters of ethical values. Yet, whereas Jewish boys and men were commanded to participate in identity rituals – ritual circumcision and the *bar mitzvah* – girls and women were neither commanded nor permitted to publicly attest to their Jewish identity within a religious context. In fact, throughout most of Jewish history, women's Jewish experience was confirmed not through public displays but through private, primarily domestic, rituals. Many felt that this conformed with the natural order. Citing a verse from Psalms (45:14) in which the princess' honor comes from within, rabbis interpreted women's glory as originating in the home. Historically, women's Jewish identity was also inseparable from their roles as wives and mothers. Within Judaism, marriage is considered sacred and essential. The Talmud notes

that a life without marriage is joyless and devoid of blessing (Babylonian Talmud, Tractate Yevamot, Folio 62b), and the Code of Jewish Law (*Shulchan Aruch*) even states that marriage is an obligation for men (Even Haezer, 1:1). Not only can marriage provide women with a means of personal fulfillment, but it also affords them a means of observing rituals vicariously, the husband performing certain commandments that the wife can observe by proxy. Single and lesbian women within traditional Judaism must then continue to rely on their fathers, regardless of their age, to serve as their proxy.

Jewish women's bodies are also remarkable canvasses for expressing identity. Modest behavior within Judaism is dictated for both men and women, but the requirements have fallen primarily upon women. Women's bodies, hair, and voices have been considered forms of sexual enticement, and thus, it has become incumbent upon traditional women to cover their hair when married, to cover their legs and arms in dress, and to guard against singing in public so as to curb men's sexual desire. Distinct from these religious considerations, different modes of modesty exist in different communities – the length of the skirt or the type of hair covering – and women are communally identified and defined by these observable expressions of identity. By far the most intimate way in which women's bodies are used is through the laws of family purity (*niddah*). The woman is obligated to observe the laws of family purity – the prohibition against union with a menstruating woman until she, 12 days from the start of her menstrual cycle, immerses in a ritual bath (*mikveh*) (Babylonian Talmud, Tractate Niddah, Folio 66a). The proper observance for the couple falls to the woman, and even as it is a means of religious self-expression for many women, *niddah* has defined parts of women's reproductive identity as being inherently impure. Therefore, while many Orthodox Jewish women (and some women of other denominations) continue to strictly observe the laws of family purity, others have reimagined this ritual, seeing it as a way to provide purification and healing after miscarriage, serious

illness, or rape or to mark other milestones in a woman's life, such as menopause, that are not traditionally ritualized.

## Women in the Twentieth and Twenty-First Centuries

Modern Jewish women have fashioned a variety of ways of expressing their Jewish individuality. In Israel, there has been limited change because the Orthodox rabbinate has the exclusive claim over religious doctrine, including laws of marriage and divorce. In the United States and Europe though, second-wave feminism heightened women's consciousness about their second-class status within Judaism. Blu Greenberg (1981), Cynthia Ozick (1979), Judith Plaskow (1990), and others gave voice to this fury and to the rage of other observant Jewish women. Each provided a similar account of sitting in synagogue and understanding that she was not considered a full member of the Jewish community. In response to women's frustration with traditional Judaism, modern Jewish religious movements have initiated changes in women's education, ritual, leadership, theology, history, and Jewish law. Many of these changes involve extending male religious opportunity and access to women. For example, in many liberal communities, either in mixed-gender or in women's-only prayers, women are counted in the quorum of ten required for public prayer and are called up to the *Torah* as are men during prayers. Gradually, new traditions have emerged as complementary identity rituals for women and girls; while boys must be circumcised and then have a *bar mitzvah* at the age of 13, many liberal Jews mark their daughter's birth and coming of age with a *simchat bat* [celebration of the daughter] and the *bat mitzvah*. Additionally, women have reimagined and reformed other traditions, such as *Rosh Chodesh*, the celebration of the New Moon, as a way for them to connect to Judaism. Women were always connected to the cycles of the moon as they were reminiscent of their own menstrual cycles, but since no standard form of celebration existed outside of special liturgical additions, modern

women in various communities created uniquely female religious rites. Women have also chosen to create new traditions that give voice to the female experience. In some homes, a cup of water accompanies the traditional cup of wine that is placed on the Passover seder table for the guest, the Prophet Elijah. The cup of water represents Miriam, Moses' sister, a spiritual leader for the Jews, and according to lore, the maintainer of a well that provided water for the Jewish people throughout their time in the desert.

## Women in Shi'ism

Bridget Blomfield

Religious Studies, University of Nebraska at Omaha, Omaha, NE, USA

Shi'a Muslims are the second largest sect of Islam, following the Sunni majority. Unfortunately a number of disputes following the Prophet Muhammad's death disagreed about who should be the rightful successor to Islam. Shi'a believe that Muhammad appointed his first cousin and subsequent son-in-law, Ali, to be his successor. Sunnis believe that the companions of the Prophet were the appointed leaders. The assassination of Ali's son and successor, Imam Husayn and followers in 670 CE in Karbala, Iraq, provoked a long-lasting split and the psychology of lamenting Husayn's death by Shi'a. The women's role in this is psychologically and spiritually interesting.

Shi'a women's rituals secure an important dimension in developing and sustaining their personal and community psychology, allowing these women spiritual and religious agency and authority. Although men and women practice devotional rituals, this entry pertains exclusively to women's ritual participation. Although the Quran argues for women's rights, these rights are often overlooked or oppressed in certain cultures. Shi'a women, however, have been afforded the opportunity to facilitate their own, segregated religious rituals. Many of these rituals are practiced during the month of Muharram and commemorate the *ahl al-bayt* (people of the house), the Prophet Muhammad's immediate family. This family consists of his first cousin Ali, his daughter Fatima who married Ali, and their children Husayn, Hassan, and Zaynab. Zaynab was, in fact, the first to lament their martyrdom and has since been emulated by Shi'a women for centuries.

The role models Fatima, daughter of the Prophet Muhammad, and her daughter Zaynab are extremely important in the development of Shi'a women's spiritual and psychological lives.

For centuries, Shi'a women have respected Fatima as the exemplary female role model of the *ahl al-bayt*, the true descendants of Islam. Fatima, known as *al-Zahra* (the radiant) and the "Mother of Sorrow and Celestial Light," holds a position most highly regarded by Shi'a Muslims because her father, the Prophet Muhammad, bestowed the greatest honor upon her as a girl (Shariati 1996), so that his lineage would be created through her (Hosayni 2003). Her daughter Zaynab embodies the same outstanding qualities, which were passed to her as a birthright. Zaynab, who not only offered the first *majlis* (the mourning ritual of Muharram) but also fought for her family and for what she believed to be the true Islam (Hyder 2005). Her strong and powerful roles as angered sister, outraged mother, and daughter of Fatima and Ali led Zaynab to assume a majestic defiance of the limitations assigned to her by her culture and religion; to betray their political, social, and religious agenda; and to transcend gender expectations and regulations (Thurkill 2002).

In the very process of immersing their lives in the pursuit of these transcendent qualities, Shi'a women find authority, agency, and empowerment in their own lives, particularly in times of suffering and oppression. Beyond the strength that Shi'a women gain for facing the challenges of daily life, their devotion to Fatima and Zaynab bestows on them psychological and spiritual confidence. Salutations addressed to Lady Fatima and Zaynab will be graded in heaven on the Day of Judgment, and each person will receive credit or debit according to Allah's judgment. When they stand at the gates of paradise, they can be assured of Fatima's intercession, which will win them full pardon for any offenses against God that remain unforgiven. They participate as Muslims through ritual action not merely through a profession of faith (Winter 1995). Psychologically they are able to idealize the martyrs memorializing them into heroes. The fact that the holy family sacrificed their lives for all Shi'a creates a psychologically redemptive function for the believer (Fields 2004).

The religious gathering called *majlis* (plural *majalis*) is held year-round, but during the lunar

months of Muharram and Safar in the Arabic calendar, Shi'a commemorate the deaths of the Prophet Muhammad's family and most notably the martyrdom of his grandson Imam Husayn, who died in Karbala. The first 10 days are the most intense, when *majalis* are offered daily. From the first to the tenth of Muharram, the practitioners reenact the suffering of the family and members of the Shi'at Ali (followers of Ali).

The fundamental ritual of the Ashura rituals is the *azadari*, which means sorrow. By enacting the *azadari* ritual, women are able to express individual sorrow and put their own suffering into context, giving their personal struggles meaning. During the month of Muharram, the sorrow over the deaths at Karbala is grieved until the tenth day called Ashura, the day Imam Husayn was murdered. Multiple times each day, women gather to grieve and commemorate the *ahl al-bayt* as they participate in the *azadari* ritual. Covered in black, the participants retell the narrative of how and why the holy family was martyred, as they recreate the suffering at Karbala. The ritual space is created in homes, or special centers dedicated to the rituals and small altars are created with flowers, *alams* (standards), and other memorabilia. These symbols psychologically help to negotiate loss and death (Kristeva 1987). Women, young and old, recite prayers, laments, and stories about the events at Karbala. Often women move in a circle chanting and weeping as they offer salutations to members of the family. Rhythmic physical movements accompany most of the rituals as the participants chant, poetic elegies depicting the suffering of the Prophet's family. Special food is prepared for the event commemorating the thirst and hunger of the martyrs. Water is passed to the participants in honor of those who died of dehydration. Among the rituals practiced is the ritual pounding of the chest. The ritual culminates as the women sit and weep. These ritual gestures are familiar and common to all Shi'a differing slightly between cultures.

Reenacting such sorrow bonds the practitioner to the suffering family and hence washes away her presumed sins. Through the weeping and wailing inspired by the *azadari*, the suffering is

made real and is embodied in the female participants. Whether the tears are shed for the symbolic loss of the past or current sorrows in their lives today, the lamenting process allows women to express the emotion of grief, to shed sympathetic tears that are healing for self as well as the community (Blomfield 2010a, b). Shi'a women define themselves through these powerful rituals every time they are reenacted, giving voice to historical and current oppression and suffering. The women's bodies are ultimately the sites of the rituals embodying the piety of their role models. They protest against oppression and injustice, and the tears they weep are considered to be spiritually and psychologically cleansing. Women's lives are made meaningful through participating in the *azadari* ritual as each woman gives voice to her religious convictions. Themes that emerge are piety, intercession, sacrifice, redemption, relationship through ritual to the *ahl al-bayt*, and the spiritual and emotional cleansing properties of the rituals (Blomfield 2010a, b).

Through the development of the Ashura rituals in the Shi'a community, there is not a fixed ritual that is always identically practiced, and there are nuances in each community that create rich spiritual lives and a template in which to live and function. By participating in the Muharram rituals, women develop identities that empower and nurture them as they create sacred space externally in their homes and centers and internally through the use of their own bodies. Their bodies express the lamentation process, in which agency and authority are found in their commitment to piety. Through the use of their bodies as the ritual site upon which the ritual is performed and through which it is experienced, they embody the qualities and attributes of the *ahl al-bayt* while they create a set of religious behaviors that are culturally accepted. Through the weeping and wailing inspired by the *azadari*, the suffering is made real and is embodied in the female participants. Their formalized crying has been a form of commemoration and is deemed worthy of accruing spiritual merit.

Psychologically these rituals have grown out of a need for personal and collective expression

so that they can have a context for their own suffering as well as the suffering of their ancestors. The suffering is made real in the participant's body rather than just conceptualizing the idea of suffering (Cooney 1994). Because martyrdom plays a key role in the history of Shi'ism, women today can still commemorate the martyrs while giving themselves space and time to acknowledge their personal and collective sorrow and grief. By emulating these martyrs, especially the female members of the Prophet's household, Fatima and Zaynab, Shi'a women petition them for intercession. By enacting the *azadari* ritual, women are able to express individual sorrow and put their own suffering into context. This gives their personal struggles significance, transforming the self, an encounter between suffering and hope giving voice to meaning (Csordas 2002). By implementing such rituals they also continue to fight the cosmic struggle between good and evil, demonstrating and resisting oppression and injustice. These rituals address historical and current suffering of these women as they have sometimes escaped war torn environments or regimes that have persecuted Shi'a practitioners. With them come psychological issues that their religion can address (Blomfield 2010a, b). The rituals psychologically intensify the relationship between the living and the deceased, rather than separating them (Lutzky 2008).

By observing the ritual each participant does her part to keep herself, her family, and her community intact spiritually. Through merit gained in performance of the ritual, she ensures redemption. The rituals and the participants become markers of the never-ending cycle of humanity's relationship to the divine. Through their religious commitment these women build a bridge between heaven and earth on which there is safety for them in this world and the next.

Passed from generation to generation, Shi'a women use collective images from the past organizing the rituals and melding them into current affairs. The ritual, therefore, creates and maintains an identity. Reproducing and valorizing this religious tradition keeps it alive and active, allowing it to dominate the present and honor

the past. The expression of psychological suffering, pain, and grief is addressed in the rituals using the body as a site to access the divine (Grimes 1982). Reenacting the suffering is a choice. Beyond the narrative of Karbala, their suffering is imagined. They believe that their reenactment of suffering spiritually and psychologically bonds them to the martyrs offering hope in the afterlife.

## Women, Sex, and Religion

Mary E. Hunt<sup>1</sup> and Patricia Beattie Jung<sup>2</sup>

<sup>1</sup>Women's Alliance for Theology, Ethics and Ritual (WATER) in Silver Spring, Silver Spring, MD, USA

<sup>2</sup>St. Paul School of Theology, Kansas City, MO, USA

Sex and religion have long been masculinist purviews. As women come increasingly into ownership of their own bodies, and as their voices increasingly shape religious discourse, judgments about what are healthy, good, natural, and holy expressions of sexuality are in flux. What women understand as “good sex” is beginning to emerge thanks to feminists in many religious traditions who have made it a research and action priority (Jung et al. 2001).

Feminism as a worldwide movement is largely responsible for this change. Feminism is the theory and practice of overcoming sexism as a part of larger efforts to dismantle the complex interstructured forms of oppression that include racism, economic injustice, ageism, ableism, and colonialism, as well as unjust discrimination based on sexuality and gender identity. Feminists in religion bring this analysis to their respective traditions, in order to reshape moral discourse within them. They also seek to reform public policy on the basis of the well-being of all men, women, and children, supplanting as decisive the validation given to some men's power over and control of everyone else's sexuality. They put the focus on the health and safety, agency (especially bodily integrity), and pleasure of everyone.

For instance, currently in the United States, new coalitions between conservative Catholics and their evangelical Protestant colleagues are lining up in strong backlash against previously debated and, for many people, settled moral and policy matters regarding contraception. Under the guise of protection for the religious liberty, Roman Catholic bishops are resisting health-care proposals that would make public funding for contraception widely available, with only limited religious exemptions. Feminists, including many women religious, bring to the debate about what constitutes legitimate religious exemptions from such regulations many additional considerations, including a woman's body right to determine when, if ever, and whether to carry a pregnancy to term (Maguire 2001).

Sex is a public as well as a personal matter from a feminist perspective. It is as much about decisions made in state legislatures and police headquarters as in the bedroom. Should public policy target prostitutes or those who profit from the global trafficking of women and children into sexual slavery? How can the business side of Internet pornography be addressed?

Across the globe, the list of such "hot" political topics is wide ranging. Feminists seek to engage debates over marriage equality, as well as arguments about whether and how best to eliminate domestic violence, honor killings, dowries, female genital cutting, anti-lesbian activities, date rape, compulsory pregnancy, and the like. All such practices shape the common good or what for many women is experienced as the "common bad." Especially in light of the HIV/AIDS pandemic and the upsurge in venereal diseases, it is clear that the tendency to treat sexual conduct as a purely private matter rests on a lie and can be dangerous for everyone's health. Sexual practices involve a public wider than one's individual partner(s). They either form or deform the whole social fabric.

If religious communities wish to help their members make informed decisions as citizens about such matters, then sex education programs based in religious communities need to address these realities in their full breadth (Unitarian Universalist Association 2012). To continue only to

wage internal struggles over matters such as the ordination of women or to address these issues with parochial arguments that fail to address our religiously plural context is problematic. Feminists argue that if faith communities do not build on the values we may hold in common, then religions will inevitably simply end up blessing the status quo in the political sphere.

To date, feminist work on sex and religion focuses on three areas: erotic desire, its potential costs, and the ethical rethinking of pleasure's relation to other important sexual values. For example, consider the Roman Catholic Church's neglect of women's sexual delight (Jung 2001). The Church's official teachings elevate the heterosexual penile erection as the sine qua non of morally good sex. Along with other morally important features, this leaves the matter of women's sexual pleasure irrelevant to the determination of what makes for good sex. And yet, important as it is to emphasize the value of women's pleasure, to uphold it alone would prove inadequate from a feminist perspective.

The creation of desire takes place in specific socioeconomic, cultural, and religious contexts. The results are exported and imported like other commodities in a globalized economy. So even the recent feminist emphasis on women's pleasure, traditionally a much-neglected concern across Christian denominations, needs to be held in balance with other important goods related to sexuality. From a feminist perspective, the embrace of pleasure ought to be woven into a collective embrace of rights to food, clothing, shelter, bodily integrity, and meaningful work. Otherwise, the celebration of sexual pleasure will play into the hands of those who market sex tourism and the sexual exploitation of women, girls, and boys. Severed from this larger framework, the sanctification of women's pleasure could give birth to further injustice (Jantzen 2001).

Sex and gender are often socially constructed in ways that burden women. These become major religious issue as well. Among some Muslim women, for example, the economic and political conditions that shape marriage, reproductive decisions, bride price, polygamy, and child and

forced marriages are all part of the high cost of being female (Ilkkaracan 2008). In some contexts, Christian women are particularly burdened by denominational teachings that sanctify the prohibition of contraception or remarriage following divorce.

Very few countries have laws based on women's well-being. Only as women and girls are educated about their options can violations of their human rights be prevented. Sexual mores are culturally sensitive matters that require that women in each setting be taken seriously as protagonists of their own lives capable of and legally able to make decisions about their bodies. While it is important to recognize how it is that cultural and religious forces can reinforce one another in such matters, it is crucial to note as well that religious women from around the globe – including many women religious and their communities – are courageously challenging the wisdom of such traditional judgments. Consider as representative of such prophetic efforts the commendation by a Sister of Mercy of “just love” as an ideal for sexual ethics that presses beyond both some traditional Catholic teachings and the minimal, though crucial, feminist effort to establish relationships that “do no harm” (Farley 2006).

Feminists have for a long time recognized the ways sexism and heterosexism reinforce one another, hinging as they both do on unsubstantiated and distortive claims about what is natural in a normative sense for women and men. The civil recognition and religious blessing of the rights of same-sex loving persons to express themselves sexually as well as legally in domestic partnerships and marriages are part of the feminist approach to the renewal of sexual ethics (Salzman and Lawler 2012). This is especially crucial for many lesbian, bisexual, and transgender women who, like all women, are disadvantaged economically and socially.

In some countries those who engage in homosexual activity face criminal prosecution, even execution, while other countries – including Argentina, Canada, and Sweden – already permit same-sex marriage, though even in these latter contexts, virulent religious opposition to such expressions of equality can be found. Affirmation

of the moral legitimacy of same-sex love is a relatively new phenomenon. This work is still in its infancy, as marriage equality is but one of the rights that LGBTIQ people want. Fairness in regard to housing, jobs, adoption, inheritance, and other areas are all part of the often heated discussion, which leads away from the validation of only heterosexual forms of house holding.

While there is no social or religious consensus about what sexual lifestyles are virtuous, there is a great deal of constructive discussion, which serves to widen the options for women. Congregation Beth Simchat Torah is the largest “inclusive” synagogue in the world with a lesbian rabbi, Sharon Kleinbaum, as its senior pastor. Presbyterian, Lutheran, Episcopalian, United Church of Christ, and Unitarian congregations have openly LGBTIQ clergy. More will follow. Here too, women religious have been prominent among Roman Catholics' voices challenging that communion to grant full membership and leadership rights to same-sex loving persons (Rick 2006).

Reconstructing sexual ethics is a major task. Feminist scholars believe that it cannot be done adequately on the basis of a single religious tradition. Rather, insights gleaned from solidarity with communities of resistance and accountability beyond one's own community are thought to strengthen resistance to and criticism of the oppressive aspects of one's own tradition and to encourage its reimagining (Plaskow 2005).

There are female-friendly strands in most religious traditions – like the monastic movements in Christianity led by women – that are being reclaimed for this work of reimagining. Consider how the mikveh or purifying ritual by immersion has been returned by many Jewish women into a way to enjoy women's company and draw upon one another's wisdom and strength. It is on those strands that religious feminists hold while charting new territory in the expansion of their religious traditions.

What is it that women want in terms of sexual ethics? One feminist concludes “just good sex.” This formulation weaves together sexual delight and women's moral agency with other parts of a justice-seeking agenda (Hunt 2001). Safety is first when it comes to a feminist sexual ethics.

This includes choice about birth control and disease prevention, as well as freedom from coercion and commercialization. Mutual consent is critical. Sexual decisions should be made in light of the common good. The commoditization of love and desire, à la the wedding industry, that plagues the vision of both same and opposite sex couples requires closer ethical scrutiny.

Also valued are the friendship and fidelity, sometimes called “fierce tenderness,” that may mark just expressions of sexual love (Hunt 1991). However, many if not most women still do not even know that they can choose what they want sexually. Efforts to claim sexual rights for homosexual men, women, and children as human rights are still nascent; much work remains to be done to move these concepts from the academy to the streets (Ellison 2012).

Many and diverse voices are part of feminist religious ethical discussion on sex. Virtually every tradition is undergoing a thorough revision of teachings that cast women into inferior, only receptive, submissive positions with regard to sexuality, both figuratively and literally. Exciting egalitarian approaches conform to contemporary religious teachings about the created equality of women and men. Moreover, data on the fluidity of sexual identity over a lifetime and the variety among people in terms of sexual choices point to what will focus future feminist conversations on sexuality with the religions of the world.

## Wong Tai Sin

Mark Greene  
Counselling and Psychotherapy, Mercury Pier  
Publishing, Hong Kong Special Administrative  
Region of the People's Republic of China, North  
Point, Hong Kong

Known in Hong Kong as Wong Tai Sin (the Great Immortal Sage Wong), where his cult of worship

has been flourishing since the 1950s, Wong Chopping was born in Zhejiang Province, China, in the late third century. Legend has it that under the tutelage of a mountain-dwelling Taoist deity, he mastered the alchemical process of refining cinabar into a drug which when ingested conferred immortality. Although temples dedicated to Wong Tai Sin exist in Canada, the United States, and Mainland China, it is the Wong Tai Sin Temple in Hong Kong – after which the surrounding neighborhood is also named – that annually attracts over five million visitors who seek the god's blessings, proffer donations, and thank him for previous kindnesses. The Cantonese pronunciation of his name is Wong Tai Sin (黃大仙) whereas in Mandarin, it is pronounced Huang Daxian.

In the early 1890s, when both Guangzhou and Hong Kong were beset with outbreaks of the bubonic plague, a group of seekers made contact with Wong Tai Sin by means of spirit writing. The god's early messages indicated his original intention was to save humanity. Worshippers believed that the spirit of Wong Tai Sin prescribed combinations of herbs that would invariably cure those who sought his help. Availing themselves of the free prescriptions and traditional Chinese medicine provided by the temple, a large following of commoners who could not afford to see a doctor when ill began to form in his name. From several reported healings, Wong Tai Sin's reputation grew.

The legendary miracle attributed to Wong Tai Sin is his having transformed an outcropping of rocks on the side of a hill into a flock of sheep after his older brother – who had spent years trying to locate him – inquired as to the whereabouts of the flock entrusted to the younger Wong as a teenager. After witnessing his powers, the elder brother became Wong Tai Sin's pupil and eventually also attained immortality.

Within this modern day cult of worship can be found a rich legacy of alchemical imagery that thematically informs worshippers' requests for transformation across spectra including luck, riches, and health. The cult of Wong Tai Sin has enjoyed a recent surge in growth on the Mainland since 1990. Due to the mass destruction of most

Wong Tai Sin temples and shrines in the 1950s (some dating back 1,000 years), it is interesting to note that images of the god in most of the new and reconstructed Mainland temples are emblematic of the Hong Kong version of the cult.

### Worcester, Elwood (Emmanuel Movement)

Curtis W. Hart  
Weill Cornell Medical College, New York,  
NY, USA

### Worcester's Life

The Reverend Dr. Elwood Worcester, an Episcopal priest, was the inspirational force and prime mover behind the Emmanuel Movement

located at the Emmanuel Church in Boston's Back Bay neighborhood where he was rector from 1904 to 1929. Worcester was born in Massillon, Ohio, into a clerical family. He was educated at Columbia College in New York after which he attended the General Theological Seminary where he completed the 3-year-course of study leading to ordination in 1 year as opposed to the normal 3 years. Beyond his theological training, he received a Ph.D. in psychology at the University of Leipzig in Germany. There he studied under the great experimentalists Wilhelm Wundt and Gustav Fechner. After returning to the United States, he took up a position at St. Stephen's Church in Philadelphia where one of his congregants was the eminent neurologist Weir Mitchell. Worcester records in his autobiography, *Life's Adventure*, (1932) that it was in conversations with Mitchell that he became stimulated to think intentionally about the church's role in the care of the mentally ill or sick of soul. Upon coming to the Emmanuel Church in Boston, he became acquainted with Richard Cabot, M.D., then Chief of Medicine at the Massachusetts General Hospital and Isador Coriot, M.D., his psychiatrist colleague who endorsed his idea of a clinic for treatment to be housed at the church. With the support of his clerical colleague at Emmanuel, the Reverend Dr. Samuel McComb, who, like Worcester, was both a priest and a psychologist, the doors opened of Emmanuel for treatment in November of 1906. On the first day there were 198 persons awaiting consultation. The numbers grew as did public interest and use of the clinic. Its success far exceeded any expectation. Worcester wrote and spoke to both professional and lay audiences about the Emmanuel experiment, and its program was replicated in several cities across the United States. Its prestige and success were such that it drew heavy criticism from the psychiatric establishment most notably in the person of James Jackson Putnam, M.D. who questioned the use of nonmedically trained persons in the provision of treatment. In spite of these objections the Emmanuel Movement continued successfully until Worcester's retirement in 1929.

## Worcester's Achievement

Worcester and Emmanuel's accomplishments and contributions were wide and varied. He was ahead of his time by at least a generation in the area of pastoral counseling where he employed a variety of therapeutic techniques that demonstrated his resourcefulness, skill, and familiarity with psychoanalysis. He was able to utilize the processes and perspectives of uncovering, dream analysis, and catharsis as well as more short-term approaches to therapy in the case of treatment for grief reactions. The Emmanuel Movement appropriated small-group techniques that resemble contemporary modes of psychoeducation. And the Emmanuel Movement became the scene for use of small groups for addressing issues in alcoholism several years before the founding of Alcoholics Anonymous in 1935. The Emmanuel Movement and Worcester in particular also took a dynamic interest in public health matters related to prevention and treatment of tuberculosis in their urban environment and an open interest in and concern for non-Western religion, most particularly Buddhism, and what they might have to say regarding religion and health.

## Emmanuel's Legacy

Worcester and the Emmanuel Movement are largely forgotten in the contemporary world. Their legacy emphasizes the importance of the cooperation between clergy and other health care professionals and the potentially beneficial role of religious institutions and clergy in relation to issues of both mental health care and public education. Palpable signs of their historical influence may be best seen in the way numerous pastoral counseling centers, and 12-step groups find a home for their activities within the walls of churches and other religious institutions. Though it is unfortunate that the Emmanuel Movement could not survive without Elwood Worcester's inspired leadership, its symbolic importance and actual contributions should never be forgotten or overlooked.

## Worldview

Naji Abi-Hashem  
Independent Scholar, Seattle, WA, USA, and  
Beirut, Lebanon

Worldview is the outlook one has about life. It is a paradigm by which the individual or group interprets reality and acts upon life. It is how we normally view and conceptualize the world. It can be a personal-subjective endeavor or a communal-collective enterprise, depending on the social context and subculture – whether it is predominantly individualistic or collectivistic. Worldview represents our pragmatic framework on existence and shapes our beliefs, attitudes, actions, and philosophies.

The term worldview is used broadly to entail a collection of impressions and phenomena and has roots in anthropology, sociology, morality, spirituality, mortality, and cosmology.

The scope and nature of worldviews can be general or specific, reflecting a global perspective (transnational-multicultural) or local heritage (indigenous-monocultural). Worldviews can be informed by religious thoughts and teachings or by scientific persuasions and premises. In addition, their orientation can be Eastern or Western, heterogeneous or homogeneous, simple or complex, naturalistic-atheistic or theological-theistic, etc. In most cases, a worldview is multilayered and has a combination of views, spheres, and realities, which constantly interact and overlap with each other.

At times, worldviews clash significantly creating further tensions and divisions. Depending on the people involved in sorting out their similarities and differences, discussions can result in a mutual understanding and bridge building or in stereotyping and complete divorcing. Therefore, the underlying sociocultural heritages and religious-ideological beliefs can be complimentary – enhancing reconciliation and cooperation or contradictory – polarizing relationships and coexistence.

This concept of worldview has its roots in old German word *weltanschauung* which means a system of thought or an extensive ideology. It refers to how people perceive and conceive the world. Somewhat, worldview has a specific quality which characterizes a particular group living in a certain space in time. It is how people view time, nature, self, society, history, and the universe (Toelken 1996). Virtually, no one can claim a totally correct, comprehensive, or holistic worldview that summarizes all timeless realities.

Mainly, a worldview refers to people's set of broad assumptions and ways of life. It represents a cluster of approaches and an underlying description how things fit all together and how they construct the temporal and historical existence. The way we view ourselves often shapes the way we act upon the world and, in return, the way we act upon the world shapes the way we view ourselves. Eventually, this process has an impact on how we classify and relate to others.

A certain worldview may be constructed of several integrated components, categories,

terminologies, schemes, and experiences. According to Koltko-Rivera (2004), it is a set of assumptions about the physical and social realities, which may have a powerful effect on cognitions and behaviors. Although there is no one comprehensive definition or psychological dimension of worldview, it is possible to construct a collated model. The author also distinguished between worldviews and schemas and promoted an integrated theory relating worldview as a concept and a function of personality traits, motivation, affect, cognition, behavior, and culture. Inspirations from positive and peace psychologies can be utilized to modify a personal or a communal worldview.

Johnson, Hill, and Cohen (2011) tried to formulate a psychology of worldview as an integrative framework for the study of culture and religion. They proposed six aspects or dimensions, each influenced by national and religious cultures (Johnson et al. 2011, p. 137): ontology, existential beliefs; epistemology, what can be known and how one should reason; semiotics, language and symbols used to describe the world; axiology, proximate goals, values, and morals; teleology, ultimate goals and the afterlife consequences of action; and praxeology, proscriptions and prescriptions for behavior. The authors suggested giving more attention to the concept of worldview in order to help remedy the lack of awareness to the following (p. 137): (a) mutual influences of the different kinds of cultures, including social, national, and religious; (b) transnational religious groups; (c) nonreligious belief systems; and (d) psychological predictors of cultural conflicts.

Most people are not aware of their own worldview(s) until they meet another person or party with a different set of assumptions and perceptions. Suddenly, they become aware of the similarities and differences between them. Therefore, worldviews can complement or contradict each other. They can provide a more nuanced understanding of religious-cultural phenomena and provide an ideal platform for constructive interdisciplinary, interfaith, and international dialogues (cf. Johnson et al. 2011).

According to Kuhn (1996), the notion of worldview is related to a variety of ideas and structures. One of the key concepts is *paradigm*, which is a shared collection of beliefs and approaches to problems. Paradigms can be shared on an inter- and intragroup level (tribes, families, teams, scientists, etc.). Kuhn emphasized the priority of paradigm patterns and argued that *paradigm shifts* do occur, even though rarely. This happens when an existing paradigm is replaced by a new one and when an existing worldview is replaced by another. An example would be when a person or a group shifts from an Aristotelian to a Newtonian scholarly position. Kuhn cautioned against overuse of the term “paradigm shift” and emphasized that it does not occur too frequently. However, if and when it occurs, it is not usually in a sudden, exhaustive, or conclusive manner. All mental maps, social structures, and religious cultures dynamically overlap since by nature they are not totally exclusive (Chopra and Mlodinow 2012; DeWitt 2010; Smart 1999). Other social thinkers argue that a complete alteration of belief systems, mental operations, and fundamental paradigms is practically possible. Examples are drawn from the dynamics of establishing sects and cults, street gangs, radical religious conversions, fanatic political parties, indoctrinating mentalities, and militant groups (cf. Abi-Hashem 2007, 2012a, b).

There are several levels and depths to a worldview, but many social analysts recognize three main ones: philosophical-theological, scientific-empirical, and social-cultural. The first level reflects the religious beliefs, existential frameworks, and spiritual practices of people. The second is informed by people’s exposure to natural science, physics, mathematics, and technology. And the third is informed by people’s cultural backgrounds, generational experiences, and societal heritages (Abi-Hashem 2013a, b). These three spheres are certainly interconnected and interdependent. They mutually and reciprocally inform, influence, and feed into each other.

The process of discovering and understanding a different worldview can actually be a cross-cultural experience. Such encounter requires empathy skills and cultural sensitivity

as well as a wide and creative imagination. Culture and interactive communication are closely related. Inter- and intra-cultural communications are essential for people to relate meaningfully and to understand each other adequately, especially in our diverse and transnational world. These skills are vital for the counseling and therapeutic services and for all helping, teaching, and caregiving professions (Abi-Hashem 2013a; Chung and Bemak 2002; Gerstein et al. 2009; Perdersen 2009; Smart 1999).

Currently, the process of globalization and digital revolution are changing human relationships and local subcultures. Identity formation and social bonding are taking different meaning. Communities and nations alike are experiencing the stress of change and are struggling with psychological and existential adaptation. The level of stress and the speed of transformation are noticeably overwhelming individuals and families across all boundaries. Digital technology is contributing to the growing complexities of our times. In addition, people are trying hard to cope with the overload of information, the exceeding multiple choices, and the acceleration of change (Heylighen 2000). These new trends and developments are altering one's sense of self (intra-psychically) and one's broader view of reality (socioculturally). Thus, the worldviews of individuals, groups, and societies are being constantly revised, redefined, and reconstructed over and over again. Some people enlarge and modify their perceptions and cultural maps to include others, who are diverse and different from them, thus broadening their views and attitudes toward balanced realism. Other people embrace total changes and enjoy riding the waves of acceleration with no safety guards so they end up with less boundaries or foundational roots and find themselves adopting extreme modernism, secularism, and materialism. Yet others tend to react with strict caution and take rigid self-protective measures, therefore they move toward severe traditional values, emotional inflexibility, and mental legalism.

Developing and maintaining a healthy worldview is actually an art and a challenge,

which is eventually much needed in our culture today. It is a skill that requires time and effort on the part of the individual or group and a willingness to check their actions and perceptions against the emerging realities. It is also an ability to learn from wise mentors and experienced figures along the way. Finally, a healthy, balanced, and integrated worldview ultimately reflects a seasoned personality, a rich journey, and an attitude marked by humility, thoughtfulness, and maturity.

## Wounded Healer, The

Bonnie Smith Crusalis  
Albuquerque Psychiatry and Psychology  
Associates, Albuquerque, NM, USA

In 1972, a Catholic priest and psychologist, Henri Nouwen, wrote a book that urged ministerial counselors to make their own emotional wounds a source of healing for those they counseled. He called this book *The Wounded Healer*. While the concept of the wounded healer wasn't new, the book's title captured, in a phrase, a perspective of the therapeutic relationship that crosses counseling theories and treatment modalities. Research of the literature suggests that regardless of the counseling theory or technique in play, a therapist who is aware of, and has worked to accept his own wounds, has much to offer a client.

## Historical Framework

The concept of the wounded healer is quite old. Seen throughout ancient Greek mythology, healers are portrayed as inseparable from their own persistent wounds. The figures of Chiron and Asklepios are especially prominent as Greek gods and healers who themselves are wounded. Chiron, a centaur and master of the healing arts, was hit with a poisoned arrow by Heracles. He could not heal himself and thus gave up his immortality. Asklepios is struck by lightning while trying to raise the dead; Asklepios' son is wounded in battle while striving to heal others (Kirmayer 2003). The concept of the wounded healer appears in medieval Europe in the myth of Parsifal and the Fisher King. The Fisher King, who despite possessing the Holy Grail which can cure all ills, cannot cure his own wound until the Holy Grail is liberated (Miller and Baldwin 2000). In many primitive societies, the concept is visible in the tradition of the shaman, a healer and often a priest, who represents the wounded healer. In Shamanism,

being wounded is linked to knowledge, and the display of wounds represents an authenticity of skills (Miller et al. 1998). According to Miller and Baldwin (2000), the shaman might be referred to as the “ultimate” wounded healer because he is viewed as actually taking on himself the wounds and illnesses of his people. One of the first of the modern healers responsible for advancing the wounded healer paradigm was Carl Jung. “Only the wounded doctor can heal” (Jung, 1951, as cited in Miller and Baldwin 2000, p. 246). In 1985, psychologists Remen, May, Young, and Berland described wounded healers as those with resolved emotional experiences that sensitized them to working with others (as cited in Gladding 2004).

## Polarities

Fascination with the polarities of life, along with attempts to resolve and connect them, is as old as recorded time. Many cultures created single deities to name opposites, such as *Kali* in India, the goddess of both pox, and the healer (Miller and Baldwin 2000).

The bridging of these polarities in one’s personality is of central importance in the wounded healer model. Jung suggests the critical nature of these bridges often, especially in his writings referring to embracing the “shadow,” the distinct, and the “bad/ineffective/wrong” part of one’s personality. According to Jung, it is necessary to accept and embrace the shadow as a step toward self-actualization (Dunne 2000). In considering the bridging of polarities as a facet of healing, it is useful to mention the origin of the word “heal,” which derives from the Anglo-Saxon word *hal*, meaning whole. To heal is to make whole through a process of unifying all of the elements in a person, good and bad, sick and well (Miller and Baldwin 2000). Gestalt therapy, with its emphasis on unification, and alcohol and drug counseling, where often the most effective counselors are those who have themselves survived addiction, are examples of this process (Miller and Baldwin 2000).

Environments in the counseling setting that support wholeness in healers, however, are often

difficult to come by. A survey of 229 nurses who experienced depression revealed that 30 % did not disclose their condition to their colleagues even though as individual nurses, they expressed the importance of healing from within as having great potential to make an impact on the healing of patients (Jackson 2004). In a study by Cain (2000), 10 psychotherapists with a history of psychiatric hospitalization reported the stigma associated with their psychiatric histories as the reason for not revealing their illnesses. According to the study’s participants, reduced stigma would encourage the disclosure of one’s problems and thereby increase the possibility for therapists to explore their own wounds as a means of self-healing and as a technique to use in their professions.

## The Inner Healer Archetype

Another concept that emerges in the wounded healer paradigm is that of inner healer. This is the concept that describes a part of the process that promotes healing in either a patient or a therapist. It is labeled an archetype because it implies an elemental or universal quality that reflects basic human patterns (Kirmayer 2003). The archetype of the inner healer is activated whenever a person becomes ill, and healing occurs only if the patient gets help from his inner healer (Guggenbuhl-Craig, 1978, as cited in Miller and Baldwin 2000). This does not always happen, however, according to Grosbeck (1975, as cited in Miller and Baldwin 2000), because the discomfort of his wounds blocks the patient from reaching an awareness of his healer within. The patient instead projects the responsibility of healing onto the therapist. The task of the therapist, then, is to help release the inner healer in the patient, a process characterized as “activating dormant or malfunctioning mechanisms of healing and resilience” (Kirmayer 2003, p. 250). He says alternately the healer can acknowledge his own wounds as a way of helping the patient to mobilize his inner healer. However, activated functioning inner healers are vital in both the patient and therapist (Miller and Baldwin 2000).

## Wounded Healers

Cain's study (2000) of psychotherapists with personal histories of psychiatric hospitalization reports that Carl Jung was just one of several mental health theorists who sought help in a quest for mental well-being and relief from suffering. Others include Sigmund Freud, Alfred Adler, and Henry Stack Sullivan. Jung might be considered the classic example of the wounded healer, because much of his work was devoted to describing his life struggles or wounds and how he used these struggles to develop his skills as a healer (Dunne 2000). In her recent biography of Jung, Dunne (2000) describes the wounds and later the healing associated with Jung's troubled childhood, his break with Freud who had designated Jung as his heir apparent, and Jung's efforts to establish his own psychological theories. Albert Ellis (2004) describes himself as "anxious" in an essay entitled "Why I (really) became a therapist." He says that while he wanted to help others and in so doing create a better world, foremost in his choice of psychotherapy as a career was to study and experiment with techniques to help himself. He describes a childhood and adolescence rife with phobias about speaking in public and rejection by girls. He says that having figured out how to solve these phobias in himself, he was able to develop a theory and techniques that could be applied in the healing of others.

### On "Wounded" Healing

Carl Jung's view that only wounded doctors can heal is shared by Miller and Baldwin (2000), who say that only healers deeply touched by personal experience of illness can truly heal and that vulnerability is an integral part of this process (Miller and Baldwin 2000). They say that an awareness of one's own wounds or conflicts leads to a state of vulnerability which in turn connects the patient and therapist. According to Kirmayer (2003), that connection, and the woundedness and healing in both the patient and therapist, serves as a mechanism for mobilizing the all-important inner healer of each.

It is intuitive that someone who has been afflicted and survives is in the best position to understand illness and cures (Kirmayer 2003). Kirmayer describes five stages in the development of wounded healers. The first is the healer who will not, cannot, or does not confront his own woundedness and instead identifies with the power of healing, seeing himself as different from the patient. The second stage brings the healer into contact with his own problems. The third describes an overwhelming and dark stage where the healer sees himself only as his wounds, loses his identity as healer, sees himself as incurably wounded, identifies with the patient, and seeks help. The fourth stage describes the acceptance of the wound which invokes the inner healer. In the fifth stage, the healer realizes that wounding can only be partly healed and that he must descend again and again into his suffering. He realizes that his strengths and weaknesses are one and the same. It is important to note that healing does not occur as a result of the healer describing his own pain or stories about illness and pain to the patient (Nouwen 1972). Nouwen says healing happens when healer and patient are able to *share the depth* of pain and together experience the action of rising from it. It is this connection, at its deepest level between therapist and patient that is responsible for healing the wounds universally caused by alienation, separation, isolation, and loneliness. "I recognize some of the same issues that I grapple with for myself and I discover our shared human condition, even though it is lived somewhat differently by each of us" (van Deurzen 2001, p. 49). Thus, a clinician's willingness to remain in contact with the parts of self that are wounded or in pain allow him to meet the patient where the process of true healing may begin (Kirmayer 2003).

### Implications of the Wounded Healer in Counseling

A major concept, which must be emphasized when discussing the wounded healer in the counseling setting, is that of self-knowledge. Miller and Baldwin (2000) describe a medical resident who had grown up with an alcoholic father and who was unsuccessful in counseling an alcoholic patient

because of his own anger. Mander (2004) says that self-awareness, evidence of the ability to empathize, and life experience are major qualities sought in candidates applying for professional counseling training programs. Mander (2004) notes that while on the surface there seems to be a recognizable difference between those wanting to study to be therapists and those who want to enter into therapy, both groups are in fact quite similar because both express a desire to understand the psychic process, to explore internal conflict, and to repair life wounds.

In the counseling setting, if the wounded side of the healer is devalued, the clinical experience is likely to be distorted (Kirmayer 2003). Thus, it is vital that counseling training and practice environments encourage safety for the expression of a clinician's wounds and vulnerabilities (Mander 2004) and that practitioners regularly be not only encouraged, but required, to engage in regular self-care behaviors (Jackson 2004).

Another side of the wounded healer which must be attended to is that of unresolved conflict. A healer's own neglected wounds can result in an inability to activate the inner healer in both the therapist and the patient and in the pathologizing of a patient by the therapist (Kirmayer 2003). In addition, therapists must always be watchful for their own motivations in the counseling relationship and recognize whether a wish to help is really motivated by immature narcissism (Mander 2004). The great challenge for healers is to learn to live with their brokenness as a blessing rather than a curse (Nouwen 1972).

Study findings clearly support the value of "wounded healers" in the field of counseling because consumer/professionals have the potential for modeling collaborative treatment and recovery (Cain 2000) and because an acceptance by the therapist of his own wounds, through conscious awareness of his own vulnerability, leads to wholeness, which enables a patient to achieve wholeness too (Miller and Baldwin 2000).

Kirmayer (2003) paraphrases a Pablo Neruda poem when he says that to accept the power of the archetypes of inner healer and wounded healer, we must turn inward to our darkest place and experience confusion until that which hides in us comes out.

A bough of fruit falls from the sun on your dark garment.

The great roots of night

Grow suddenly from your soul

And the things that hide in you come out again

(Neruda, 1969, as cited in Kirmayer 2003).

## Yahweh

Lee W. Bailey  
Department of Philosophy and Religion,  
Ithaca College, Ithaca, NY, USA

“Yahweh” is the English pronunciation of the Hebrew YHWH, with vowels added. This is the holy name of the Hebrew divinity that is too sacred for many Jews to picture or pronounce. So the name “Adonai” (“My great Lord”) replaces it in Jewish readings, or G-d in writing. Some texts trace the earliest use of the name to Genesis 4:26, but others attribute the first use to Moses in Exodus 6:2–3, where it is translated “I am the Lord.” The meaning of the name is debated, but some say it means: “He causes to be what exists” (Browning 2009). But in order to avoid a gender reference, we could say: “The source of all existence,” or in Greek philosophical tradition, “Being” (Fig. 1).

The history of Yahweh is in the story of the struggle of the ancient escaping slaves who fled Egypt about 1250 BCE. Moses led these tribes out of Egypt into the Sinai desert, when they became the Hebrews. They slowly made their way north, according to the book of Exodus, with Moses receiving the Ten Commandments from Yahweh at Mt. Sinai, destined to shape a new religion and society. He had to struggle against his people, who wanted to retain Egyptian religions like that of the Golden Calf (probably the Egyptian goddess Hathor). Psychologically,

even though relieved of evils like slavery, people may refuse to abandon familiar customs, especially if they believe that they are images of absolute reality, in the face of an uncertain future in Moses’ Promised Land.

They ended up in the lands of Canaan and other tribes, and their prophets fought for centuries for the land and to replace the existing archaic polytheistic gods with their monotheistic, patriarchal divinity: Yahweh, a single God of Law, not nature. But the Hebrew people were more casual, and absorbed both the languages around them, and the gods and goddesses. Monotheism was a rare type of religion then, known before as a solar god Aten, briefly in Egypt under Pharaoh Akhenaten (1379–1362 BCE).

So Yahweh’s struggle against the older religions was long and slow. Ancient Near Eastern goddesses such as Isis, Ishtar, Anat, and Astarte were common and especially worshipped by women. Ashtoreth was a Canaanite goddess of nature’s growth, called “Yahweh’s wife” at times, and symbolized by sacred trees that even appeared in Hebrew temples. In the Hebrew Holy Scrolls, or Tanakh, people’s reluctance to adopt Yahweh is given. They like their queen of heaven and feel secure:

...we will do everything that we have vowed, burn incense to the queen of heaven and pour out libations to her, both we and our fathers, our kings and our princes, in the cities of Judah, and in the streets of Jerusalem, for then we had plenty of food, and prospered, and saw no evil (Jeremiah 44:17).

**Yahweh, Fig. 1** Creation of the sun and moon by Michelangelo, face detail of God (imagined as a man). Sistine Chapel Ceiling, the Vatican. Public domain. This figure is licensed under the Creative Commons Attribution 2.0 Generic license ([http://en.wikipedia.org/wiki/File:Creation\\_of\\_the\\_Sun\\_and\\_Moon\\_face\\_detail.jpg](http://en.wikipedia.org/wiki/File:Creation_of_the_Sun_and_Moon_face_detail.jpg))

The Canaanite Baal, son of the bull-god El (“Him”), was one of the many dying and rising gods symbolizing the life-giving ultimate spirit in plants and animals (Pritchard). Appearing as both life and thunder and lightning, Baal required, like most gods of the time, blood sacrifices to feed the process of dying and rising life-forms. Baal and Ashtoreth both were long believed to make the wheat and sheep flourish only if they received sacrificial rituals. This bloody theme in religions was a practical give-and-take exchange psychology of serving gods who returned to them needed food. But the widespread theme of sacrifice was too much for Yahweh’s priests. Some ancient gods, such as the Canaanite Moloch, required the sacrifice of children to pacify the gods. This horrible demand was apparently intended psychologically to ask people to give off their most treasured

possessions, their own children, in exchange for food and peace. But the Jewish Holy Tanakh responded firmly: “You shall not give any of your children to devote them by fire to Moloch, and so profane the name of your God” (Lev. 18:21).

The Hebrew prophets were horrified at this practice and urgently struggled against this with Yahweh on their side. The prophet Isaiah taught that Yahweh wanted justice in a court of Law, not bloody sacrifice (Isaiah 1). Psychologically, this humanizing of religion by rejecting human sacrifice was a great step in religious history, but a difficult one. The story of Abraham about to sacrifice his son Isaac, but stopped by God, is the Hebrew testament of the will of Yahweh to stop human sacrifice (Genesis 22).

In the ninth century BCE, queen Jezebel (Hebrew “Izavel”), a priestess of Baal from Phoenicia, married Ahab, king of Northern Israel. She had many Hebrew prophets killed and angered the Hebrew prophet Elijah, who, in the Hebrew account, challenged prophets of Baal to a contest, which Yahweh won, so Elijah had the Baal prophets and Jezebel killed (I Kings, 18).

This kind of conflict illustrates the difficult psychological struggle that Yahweh’s monotheism had against older polytheistic nature gods. Women resisted giving up their familiar goddess religions, who understood women’s needs (Daimant). The Hebrews continued to offer blood sacrifice to heaven, but only the blood of animals. The prophets, such as Elijah, Isaiah, and Jeremiah, had long been trying to persuade the Hebrews that Yahweh was allowing their conquests by major imperial armies, such as Babylon, as punishment for their loyalty to other gods. Yet this punishment psychology was long ignored.

But this denial finally stopped when Jerusalem was destroyed by the Romans about 70 CE, after which the Yahweh tradition was continued by the Rabbinic tradition of synagogue teaching, rather than temple sacrifices. This was a major elevation of Near Eastern religion from polytheistic, bloody sacrifices to a valuable intellectual focus. And the goddesses, which had served women’s needs, as well as nature’s, were pushed aside for a patriarchal God. But to force this change psychologically, it seems that it took the total destruction of

Israel and the beginning of the diaspora – the spreading of Hebrews, now called Jews, around Europe, until their return to Israel in 1948.

This tradition of monotheism developed into major world religions – Judaism, Christianity, and Islam. When Christianity adopted the Jewish Bible, added the New Testament, and spread as Rome collapsed, Yahweh's monotheism became a more widespread religion. The psychology and theology of monotheism is that God is the highest principle of truth and goodness in the universe, unlike polytheistic gods, each of which had their own varying principles of good and evil. Yahweh "elevated the absolute" of goodness to a single divinity of Law who ruled all the universe. This clarification of ultimate goodness in one God's dominion helped spread Christianity and, over time, though sometimes by force, unified many diverse cultures. Muhammad established the monotheistic tradition under the Arabic God Allah in his lifetime, by 632 CE, also unified many diverse tribal cultures and suppressed polytheism.

This major theological shift served to support another major psychological development in the west. Yahweh's separation of religion from nature opened a gap that was, by the Renaissance, formulated by Descartes' subject/object dichotomy and the development of science, when nature came to be seen as stripped of spiritual forces, and thus left available for technological exploitation and domination, which has now developed into a very serious ecological crisis. Furthermore, since Yahweh is portrayed as male, now feminists are having difficulty with this and are challenging the psychological and political preference that Yahweh's monotheism gave to men for millennia. Some are reawakening the goddess traditions. These two trends are bound to have major future impacts on monotheistic religions.

## Yoga

Magda Schonfeld  
Hudson Holistic Health Care, Cold Spring,  
NY, USA

As yoga has swept the west, it is now estimated that nearly 20 million people in the United States

practice some physical aspect of yoga. But beneath yoga's modern popularity lies an ancient tradition that illuminates knowledge of the self.

## Definition of Yoga

Yoga deals with the most profound of mysteries, the essential nature of the human being in relation to the universe. The term Yoga has its root in the Sanskrit word "yuj" which means to yoke, unite, and integrate. What is being united? Yoga is the union between the individual soul and the universal soul. It is the split between the two that is viewed as the root of all sufferings.

Many paths evolved in the yoga tradition, originating in India. These include bhakti yoga, the yoga of devotion, karma, the yoga of selfless service, jnana yoga, the yoga of wisdom, and raja yoga, also known as the "royal union." Within the umbrella of raja yoga is the Eightfold Path (astanga yoga) outlined by the great sage, Patanjali, in the Yoga Sutras of Patanjali, a treatise written about 200 BCE. Astanga Yoga, the eight-limbed path offers a systematic way of cultivation of the mind so as to ultimately achieve liberation. The first four limbs guide the seeker on a path toward evolution of consciousness, including yamas, ethics, and morals that teach about living in relationship, niyamas, individual practices necessary to build character, asana, physical postures, and pranayama, breath control. The second four limbs teach the path of involution and relate to the true state of Yoga. These include pratyahara, withdrawal of the senses, dharana, concentration, keeping the mind collected, dhyana, meditation, and samadhi, profound meditation or complete absorption.

It is interesting to note that Patanjali pays only passing attention to the practice of asana, the third limb of yoga, also known as hatha yoga. Yet, it is hatha yoga, the practice of postures, or asana that has so gripped modern attention. Many individuals are initially drawn to hatha yoga for truly tangible benefits such as stress reduction, increased flexibility, stamina, improved concentration, and overall health and well-being. Hatha yoga also refers to the yoga of willpower. It is the

way toward realization through rigorous discipline. The power aroused by this discipline clears the energy centers of the body/mind so that union with the supreme is possible.

Patanjali defines yoga more specifically as *yogas citta vritti nirodah*; yoga is the cessation of the fluctuations of the mind. What are these mind fluctuations? All the stuff of the mind, memories, thoughts, feelings, beliefs, judgments, and the many objects of awareness. It is identification with these objects of awareness that causes suffering. In his yoga sutras, Patanjali shows us a way to free ourselves of this suffering.

## Is Yoga a Religion?

Is Yoga a religion? BKS Iyengar (1979), master teacher of hatha yoga, whose book *Light on Yoga* has been a foundation text for the practice of Yoga, says the following:

Yoga is a subject which cultures the mind and the intelligence of the individual to develop religiousness through practice. It has nothing to do with the man-created religious order; yet it is a religion of human beings, a religion of humanity, as it is filled with the message of goodwill to one and all.

Instead of prayer to a particular god, Patanjali's sutras offer a pathway toward opening to the divine. This divine is referred to as Ishvara, the Universal Soul. This divine essence is not bound by place, space or time, not subject to cause and effect, and not subject to suffering or the seeds of suffering. This divine nature is, however, not of this religion or that. It is instead a universal truth understood by all religions.

## Yoga and Psychology

Patanjali, in a clear, systematic way put forth a treatise to help us understand the nature of mind, its many pitfalls, and misidentifications that are the roots of day to day suffering. In modern psychology, we try to comprehend the impact of trauma, archetypal defenses, and dissociation as a form of survival, projection, individuation, etc. We have on the other hand, an examination

of the mind written centuries ago that sheds light upon the nature of the psyche. But Patanjali takes us beyond psychology to a path of freedom from the entanglements of the mind.

## The Five Afflictions

Patanjali enumerates five afflictions (*klesas*) that disturb the equilibrium of consciousness and perpetuate a state of bondage or suffering.

The first is ignorance, *avidya*, which is the root cause of all afflictions. This is the ignorance of our own true nature. We make the mistake of identifying that which is impermanent as permanent. It is taking the day to day self we know, the self that works each day, the self that raises children, the self that succeeds in the world or fails it, the self that takes pride in great accomplishment, and the self that feels defeated; it is believing that all these various selves are more real than that which unites them into wholeness.

The second affliction is *asmita*, or pride, ego, which is called an affliction when we misidentify with the ego. A sense of confidence and belief in who you are is essential to accomplish anything in the world. But ego can trap you into “you’re not good enough; you don’t deserve to be here,” or “you’re so great, they don’t know anything.” The ego can ensnare you in the “greatness” of your accomplishments, or minimize you into a small suffering being, and lead you into endless comparison between you and the rest of the world. Patanjali warns us not to get ensnared by these voices of ego, for these voices affirm separateness rather than wholeness.

The third and fourth afflictions, *raga and dvesa*, attachment and aversion, likes and dislikes, can easily rule our lives and utterly exhaust us. We run toward what we like and run from what we don’t like. Once we attain the possessions we long for, we fear losing them. In order to avoid the pain of what we don’t like, or avoid the pain of past suffering, complex defense systems might surface, like acting aggressive when you feel vulnerable, dissociating, disappearing when threatened, and turning to addictions like food or alcohol when life doesn’t offer what you long for.

Chasing after what we long for and running from what we wish never came keeps us in a state of agitation, restlessness, and yearning. Yet, if we can practice stillness, witnessing mind with its potent pull in one direction and another, if we can, as referred to in Jungian psychology, hold the tension of the opposites, freedom from misidentification, freedom from suffering is possible.

The fifth and final affliction, *abhinivesah*, is clinging to life or fear of death. It is the subtlest of all afflictions. Even the wisest of beings are plagued by this affliction and naturally so, it is our instinct to stay alive at all costs. “While practicing Yoga, the aspirant penetrates deep within himself and realizes the life-force, active while one is alive, merges with the universe when it leaves the body at death. Through this understanding, the aspirant can lose his attachment to life and conquer the fear of death” (Iyengar 1996).

In summary, Patanjali discusses the false identification of thoughts and Self. He teaches that false identification is at the root of all misery. He further teaches that the practices of yoga are about dissolving this false identification.

## Asana Practice or Hatha Yoga

Since the Western world has embraced yoga as a mainstream activity, it is worthwhile to examine the nature of asana practice. How can the practice of asana teach us about false identification? Often as we move into a pose, the various tight and resistive places in the body reveal themselves. These places of resistance can easily stay hidden from us, if not challenged by touch, movement, or some method of conscious awareness. The body, connected to matter, to earth, readily houses our struggles in patterns of tension. These patterns deepen over time and if left unaddressed (unconscious) long enough, will ultimately lead to disease. The body is an extraordinary reflection of the mental/emotional patterns of mind. Yogic practice can help heal the split between the two.

Tightness and resistance can come from many sources and often interweave with one another:

(1) physical – structural tightness, injury, repetitive wrong actions, habit patterns, and overdoing; (2) chemical – improper diet, drugs, and environmental toxins; (3) emotional – distressing thoughts, feelings, memories, and anxieties; and (4) spiritual – disconnection from the source of one's being.

Whatever the source of resistance is, the body will attempt to express it, often in the manifestation of pain. Whenever we resist the present moment and try to deny what we are experiencing, a split occurs. This split holds energy. It holds tension. It manifests as suffering. By connecting to the body, by witnessing the split, this cutoff energy can return to us as wholeness. Asana practice offers us the opportunity to return to ourselves.

Sometimes in practicing an asana, we want to come out of the pose, to jump away from the discomfort that might rise. Or we use too much willfulness and harden the body so that we overdo. Here lies a marvelous analogy to Jung's "holding the tension of the opposites." This has to do with the willingness to be in the pose, the willingness to be with the difficulty or ease and not identify with either. "If we are able to be with what rises, that is, remain still long enough to perceive the discomfort, rather than react to it, we can begin the path toward union, Yoga" (Lasater 2001).

Asana practice can change physiology, brain chemistry, and organic function. Backbending poses open the heart, forward bending poses support the digestive organs, twists ring out toxins from the liver and kidneys, inversions support circulation, clear the mind, and rejuvenates one from fatigue. "Yoga was invented by our sages in order to overcome bodily impediments, emotional and environmental disturbances of the mind and the wavering qualities of the intelligence, so that the practitioner comes closer and closer to the Self" (Iyengar 2001).

How can asana bring one closer to the Self? For example, we can look at *adho mukha virasana*, (downward facing hero's pose, sitting with legs folded under you, and forehead to the floor); if done with full presence of being, this pose evokes a sense of humbleness. The pose has its own offering.

Another pose, *Virabhadrasana II* translated as warrior pose, where one stands with legs wide apart, arms fully extended, legs firm, chest and heart open, and expansive. The pose itself invokes a sense of power, extension, and stability, the feet rooted and core of body centered over the pelvis. When fully entering this pose, empowerment manifests, inertia is shed, and a sense of energy and will to go forth into the day with vitality rises up.

The notion that poses generate particular patterns in the mind is a more modern interpretation of the powers of yoga. Such ideas are not mentioned by Patanjali. Yet, as asana practice has evolved in modern times, we can see that each asana has the capacity to teach us the art of silence. Silence in the brain allows for effortless work. If the effort offered to a pose is done wholeheartedly, effortless practice manifests.

## Yoga and Jung

Our past experiences, perceptions impact the nature of our practice. These experiences, instincts, and hidden or subliminal impressions make up what is known in Sanskrit as *samskaras*. If these imprints are good, they act as stimuli to maintain the high degree of sensitivity necessary to pursue the spiritual path. If the imprints are not good, rooted in trauma, abuse, or neglect, the seeker has a more complicated journey of learning to see, to perceive habitual reactions to life's events. This might be paralleled to Jung's notion of the "complex," which when activated, triggers an individual to react in a way similar to the initial imprint of wounding. The process of integrating past impressions, so that they no longer trigger unconscious behavior, is an important goal in psychotherapy. The yogic tradition understood this long ago. As long as one stays rooted in reactivity to life's phenomena, one is caught in the wheel of "dharma," or an existence bound in cause and effect.

But through practice, these imprints can be transformed. Practice involves the eight limbs of yoga discussed earlier, asana practice being the third limb. Practice, *abhyasa* involves repeated,

committed, devoted effort. Patanjali points out that one must not only practice but also practice with detachment, “vairagya” the discarding of ideas which obstruct progress. Vairagya is a practice where one learns to gain freedom from desires and to cultivate non-attachment to things which hinder pursuit of union with the soul.

It is important here to clarify the difference between the psychological term dissociation and the use of detachment in the sutras. Sometimes withdrawing sense awareness, turning inward, practicing yoga, meditation, and silence can appear as if one was withdrawing from the world at large, retreating from society. This withdrawal, this penetration into silence is necessary to hear the internal voice, the voice of the soul.

But if one gets so captivated by that silence, or so dependent upon it that withdrawal becomes the end of the journey rather than a pathway, the seeker has then cultivated withdrawal as an end rather than the means of realizing the Self.

Practice and detachment are the means to still the movements of consciousness. This sutra brings us back to Patanjali’s earlier definition of yoga. Yoga is the cessation of the fluctuations of the mind. Whenever the mind is fully focused, one pointed, and one is acting in harmony with the nature of all things, one is practicing yoga. Life is filled with moments to enliven this practice.

## Yoruban Religion in Cuba

Alexander (Alejandro) V. Gonzalez  
Strayer University, Piscataway, NJ, USA

Cuban slavery has a long history that spans from 1517 until its abolishment in 1880. During this time the greatest number of African slaves was Yoruba brought from what is now mostly southeastern Nigeria. Cabildos helped to preserve the roots of Yoruba belief and cosmology in Cuba. Cabildos were nation-specific mutual aid societies for Africans that were run under the auspices of the Catholic Church and modeled on European ones already operating in Cuba. A priest was assigned to oversee each cabildo. As early as the 1700s, African tribes were allowed to form cabildos, and by the mid 1700s there were already more than 20 cabildos operating outside the Cuban capitol city of Havana. Cabildos served as the locus for celebrations, the practice of medicine as ethnobotany, and the practice of ritual.

Lukumi religion emerges out of a cultural milieu where Roman Catholicism is the official state religion, yet tribal identity is preserved to a great degree through membership in a cabildo, while there is ongoing contact with other African nations. Lukumi believes in an elemental principle called Ashe that is in all things throughout the universe yet is specific to each thing. The human soul also has a unique Ashe, a destiny that it seeks to fulfill through multiple lifetimes. Using various divination techniques that may involve a quartered coconut, cowry shells, or an oracle, the individual is able to ascertain what their destiny is and what

obstacles are in the way. Lukumi holds spiritual and blood ancestors in very high regard and divination techniques are employed to learn both what they desire and would like to communicate to the individual. Also, for good or ill, spirits can become attached to one and can make demands of the individual. To protect one in life, clear obstacles, and help one attain one's destiny, a patron Orisha, or semi-divinity, is assigned to each individual before birth. If the individual is ordained, this Orisha must be cared for as a living entity and fed its favorite foods and the blood of animals when called for by, for example, the cowry shells. Animals ordinarily sacrificed include barnyard animals such as chickens, goats, roosters, guinea hens, and also turtles, doves, hutia (a Cuban rodent), among others. There is no central governing body in this oral tradition, and the specific manner in which ritual is carried out depends on each Ile or what was preserved and handed down through a spiritual lineage. This mostly Yoruba belief system became indigenized to Cuba as Lukumi and has noticeably spread to Mexico, Puerto Rico, and the United States.

As noted, Lukumi (loo-koo-mE) refers to Yoruba (YO-roo-bah) religion in its Cuban form. Other names including Santeria (san-teh-rE-ah), Ayoba (ah-yo-bah), Regla de Osha (reg-la deh Osha), and affectionately La Religion (reh-lee-hE-On), or "the Religion," are also used to refer to Lukumi. "Santeria" is a misnomer that properly refers to the unrelated Spanish cult of the veneration of saints; the term was adopted when Yoruba slaves in Cuba dissimulated their outlawed practices by clothing their Orishas (oh-re-chAhS), or semi-divinities, in the guise of Catholic saints. Catholic priests derisively tagged as "Santeria" the slaves over preoccupation with the saints, as there seemed to be little concern for Jesus. Because of name recognition, practitioners often informally use the term Santeria to refer to their beliefs, but quickly point out that it is a pejorative term and that their beliefs are neither borrowed from nor dependent on Christian theology. Non-practitioners often erroneously refer to all Cuban African-based religious practices as "Santeria." Regla de Osha loosely translates as "Orisha worship." According to oral tradition the term Ayoba

names a Yoruba tribe who were the first to practice the religion in Cuba, and Ayoba, along with Lukumi, are the terms preferred by adherents of the religion. "Lukumi" is the abbreviated form of the traditional Yoruba salutation "Olukumi," meaning, "we are friends" – a necessary greeting among slaves who had often been tribal enemies in West Africa. Lukumi also refers to the liturgical tri-tonal Yoruba language used in Lukumi rituals, greetings, chants, botanicals, and the naming of artifacts. Some practitioners also hold that oral tradition has it that Lukumi hearkens back to Ulkumi, a part of the Niger River in West Africa.

Lukumi is primarily a Yoruba-based religion that also incorporates elements of belief from other West and Central African peoples, such as Araras, Carabalies, Congos, Dahomey, Fon, Mandingas, and Macuas, as well as adapting, to a lesser degree, beliefs from Kardecian-based Spiritism and Catholicism. The two main entangled strands in Lukumi are Orisha (oh-rE-chah) worship and Egun (eh-gOOn) worship. Orishas, literally meaning "owners of the head," refers to hundreds of Yoruba tribal deities of which only a fraction survived the Middle Passage to slavery in the New World, although some practitioners hold that the various paths of Orisha signal a time when each path was a separate deity. Primary Lukumi Orishas are Obatala (oh-ba-ta-lAh), Eleggua (eh-le-guAh), Chango (shan-gO), Ochun (oh-chOOn), Yemaya (yeh-ma-yAh), and Orunmila (oh-rOOn-me-la), followed by Ogun (oh-gOOn), Oya (oh-yAh), Osain (oh-sa-een), and Ochosi (oh-sho-si). Orishas also represent the forces of nature. Each Orisha has specific colors, number(s), plants, and animals it "owns," and during ordination a Lukumi priest has their head, the seat of the soul, consecrated to a specific Orisha for protection. Egun is a general term for the dead, who take precedence over the Orishas when they are either an individual's deceased blood relatives or spiritual ancestors who must be appeased.

### **Ashe (ah-chEh)**

Central to Yoruba-Lukumi belief is the ineffable pantheistic concept of Ashe, which collectively

refers to a divine generative force, essence, existence, grace, knowledge, wisdom, and destiny. Oral tradition holds that it is Ashe which coalesced as the Godhead Olodumare (oh-loo-da-ma-rAy) and in turn gave rise to all the universe, the Orishas, and humans. Ashe is the presence of the divine in all things. It is a gift of the sky god Olorun (oh-low-run), who is the personified aspect of the Godhead Olodumare, also known as Olofin (oh-low-feen). Although practitioners ordained to a specific Orisha must care for their Orisha, adherents consider themselves monotheists and appeal to Ashe in its aspect of Olodumare as the governing principle for their religion. A priest must possess Ashe as both knowledge and wisdom to properly execute their office when they take on the role of diviner or have ahijados (Sp., “godchildren”) who seek guidance in Lukumi. Olorisha (oh-low-re-sha), and not santero or santera, is the proper appellation for someone ordained to Lukumi. Olorishas are considered Alashes (a-la-shAys), persons entrusted with the care and revitalization of Ashe whenever it is required. A competent Olorisha must have the requisite knowledge to properly interpret and then provide wise advice after reading el Meridilogun (el merry-de-low-gOOn), or the 16 cowry shells used in one form of divination. Similarly an Oriate (oh-ree-ah-tAy) must understand the shells, and the machinations and deeper meaning of rituals in their role as master of ceremonies. An Italero (ee-ta-leh-rO) is an Oriate in the role of master of the shells. If specifically ordained to the Orisha Orunmila, then the priest is called a Babalao (baba-la-oh), or “father of the faith,” and instead of the shells works the Oracle of Ifa (ee-fA) and the Opele (oh-peh-IEh), or nut (or concave shell) divination “necklace.” Olorishas can be male or female whereas Babalaos are always male. Babalaos do not refer to themselves as santeros or Lukumi practitioners although they clearly subscribe to and are within the Lukumi belief system. Iyawo (ee-ya-wO), or bride, is the designation for a newly consecrated Lukumi priest. Iyawos spend a year dressed all in white and with their heads covered; the white garments are thought to deflect negative energy and keep bad spirits from

**Yoruban Religion in Cuba, Fig. 1** Cuban *Babalao* (priest of the Orisha Orula), consulting the Oracle of Ifa, Cuba, 2009 (This figure is licensed under the Creative Commons Attribution 2.0 Generic license <http://commons.wikimedia.org/wiki/File:Babalawo-of-cuba-consulting.jpg>)

becoming attached, while the head must especially be protected as it is the seat of Eleda, or “the soul.” Ashe, like wisdom or knowledge, is said to accrue. Ashe as destiny signals that before reincarnation an Eleda (eh-leh-dAh), or soul, is said to kneel before Olodumare and given its patron Orisha to protect it in a journey to earth that is beset with peril and then to continue protecting it throughout life. More specifically, oral tradition, Patakies (cosmogonic myths), and Odu (oh-doo, teachings) relate that before incarnation the Eleda is informed of its destiny and seeks out a patron divinity to help accomplish this destiny on earth and safeguard it from obstacles and potential enemies (Fig. 1).

Ashe is said to give rise to all things. In another sense, an animistic system of beliefs, Lukumi holds that both animate (e.g., flora,

fauna) and inanimate (e.g., stones, water) things possess a piece of the divine, possess Ashe. For example, “Otan” (oh-tAn) is the Lukumi word for stone. In a ritual that employs Obi (O-be), a quick form of divination using a quartered coconut, Otanes (pl.) collected from a riverbed for certain characteristics are then tested for their Orisha-specific Ashe. These stones are then used as a primary component in a soup tureen, along with certain plant life, sometimes water, where it is considered the personified Orisha and cared for as alive, including being fed sacrificial animal blood to recharge Ashe, when required. However, Christian artifacts have no ritual value in Lukumi. The presence of Catholic statuary in Lukumi households is traditional and used as visual stand-in for the Orishas and as a way to celebrate the saints’ Ashe for helping to preserve the religion. Lukumi holds that all religions have Ashe and so have truth. Lukumi has no proscription against practicing other faiths. Many Lukumis also consider themselves Catholic but do not mix the two faiths. Christian artifacts, or Budhas, or, indeed, relics from any religion may also be present due to the need to appease the Ashe of a non-Lukumi attached spirit or spirit guide. It must be understood, though, that although the artifact may not be Lukumi per se, its reason for display is Lukumi.

Lukumi cosmology does not posit a struggle between good and evil, and Ashe can be redirected for good or ill. Misfortune, disease, difficult interpersonal relationships, or economic hardship are often attributed to an imbalance of Ashe. This imbalance can exist for numerous reasons and manifest itself as physical, spiritual, or emotional malady in the individual. An imbalance of Ashe can be caused either through one’s actions, such as by not being true to one’s roles in life or by causing physical or emotional harm to others and thus not possessing good moral character, Iwa Rere (ee-wAh-reh-rEh), or through not observing good speech, Afudashe (ah-foo-da-shAy). This imbalance may also be traced to an Idembe (ee-dem-beh) or spell cast by another individual. An

Idembe can be neutralized or sent back to the initiator, but care is always employed because Ashe establishes an eternal bond between both parties. Lukumi belief in reincarnation means that an imbalance of Ashe can also be attributed to one’s actions or the actions of others in a previous lifetime. Blood relatives, alive or deceased, can be the cause of an imbalance in the individual arising from negative things they engaged in the past, such as abortion or suicide, or, if deceased, because they desire something from the individual and their needs have not been met. Spirits in one’s Ile (ee-laY, literally “house”), or spiritual lineage, can also require something, and an imbalance is maintained until their wishes are fulfilled. A spirit, such as an Iwin (Ee-win), considered the evil spirit of someone who died through sorcery or suicide, can become attached to one in Lukumi. One of the functions of Lukumi Elekes (E-leh-ques), or Orisha color-specific necklaces, is to provide protection to the wearer either from the evil eye, against Idembe, or from spirits becoming attached. Good or evil attached spirits can serve to help or hinder the individual, but in either case they may make demands that if not met can have negative manifestations ranging from vivid dreams and nightmares to angst or physical disease, even death. “Ashe” is also used as a greeting and to bid one farewell.

## Eledda

*Eledda*, or the Lukumi soul. Lukumi practitioners often refer to Eledda in Spanish as “el angel de la guardia,” or one’s guardian angel. Although one of its functions is to protect one from harm, it is more closely akin to the Christian notion of the soul as something incorporeal and unique. Yet Christian nomenclature fails to capture what is at stake in this specific Lukumi concept. If unique to every person and what is said to define the individual, unlike the Christian soul, practitioners understand the Lukumi Eledda as a composite and symbiotic phenomena having at least two distinct

parts that function together and that must be considered as a whole. The seat of Eleda is said to be one's Ori, which is the Yoruba/Lukumi word for head. Renowned Lukumi elder Oba Ernesto Pichardo characterizes the Eleda as the "vital self" and as "one source that is split in two": Eleda Orinu and Eleda Oriche. Eleda Orinu signals the specific incarnate vital essence (Ashe) of the person. Eleda Oriche refers to vital essence (Ashe) as held by the Godhead, Olodumare; it is that Ashe which is held in "heaven" and connects with the individual person's Ashe. An individual's personal Ashe, Eleda Orinu, in turn is understood to include an Ashe unique to the individual while at once being an extension of a specific Orisha's Ashe. Like every person, every Orisha also has an Eleda with a unique Ashe. In other words, the universal vital energy of Ashe is captured by the term Eleda Oriche, while the Orisha component in Eleda Orinu signals the component of self-preservation and individual destiny. In addition to Eleda Oriche and Eleda Orinu, there can be spirit guides and attached spirits who inform one's Eleda. Taken together, the Eleda is understood as the embodiment of Ashe as a unique individual, with unique spiritual requirements and with an individual destiny. There are no blanket prescriptions or proscriptions for ritual action or diet in Lukumi. If ordained, the ritual of Ita (ee-tAh) that is performed on the third day of ordination and which involves the reading of the cowry shells of the seven main Orishas is what determines what foods one must eat or abstain from, if alcohol consumption is permitted, and what daily rituals one must practice or what further initiations one must undergo. Lukumi holds that one does not have to be a practitioner to have a patron Orisha and that in fact everyone has an Eleda and a patron Orisha "assigned" before they were born. For Lukumi the ceremony of the identification of a patron Orisha is done soon after birth in a rite that involves a reading of the cowry shells. For non-Lukumi practitioners, this ceremony can be done at anytime during life.

## El Meridilogun

*El Meridilogun* (or, shortened to, *el Dilogun* [*de-low-gOOn*]) refers to the 16-cowry shell form of divination. Dreams, visions, Orisha possession, and strange occurrences are all regarded as sources of knowledge or advice from deceased blood relatives or spirit guides, but, if important, must be checked against a reading of the shells for legitimacy. El Dilogun, along with the less sought out Oracle of Ifa, is the premier diagnostic tool used in Lukumi to ascertain the source of spiritual or physical malady, economic hardship, as well as a means for the dead to communicate their wishes. Cowry shell reading (and the Oracle of Ifa) is a structured practice that specifically examines the unique spiritual frame of the Lukumi practitioner or the non-practitioner who seeks a reading. The shells interrogate the spiritual, emotional, physical, and financial requirements for the well-being of the individual. El Dilogun prescribes ritual action to rectify any imbalance found and offers guidance to the individual regarding how to live in terms of their unique spiritual requirements. It can take several readings of the shells to establish a clear spiritual picture of any imbalances. Advice from a reading is specific and far ranging and can include performing an Ebbo (eh-bow), or offering to an Orisha, or offering to appease an ancestor, to desisting from certain behaviors, to using botanicals, and to seeking Western medical advice. If a profound imbalance is found, and the Orishas ask for it, the individual may need to receive the necklaces, which, followed by receiving the warriors, and then Kariocha (ka-re-oh-sha, "seating Oricha," or, ordination), is the first formal step to becoming a Lukumi practitioner. Anyone can seek a reading of the shells without being considered a Lukumi practitioner.

## Yoruba-Lukumi in the United States

The landmark decision by the Supreme Court of the United States on June 11, 1993, in favor of the

Church of the Lukumi Babalu Aye in Hialeah, Florida (Church of the Lukumi Babalu Aye v. City of Hialeah), legitimized Lukumi practices, such as animal sacrifice, before the law and made it possible for Olorishas and Babalaos to be recognized as clergy. Lukumi remains primarily an oral tradition without any central governing body. Care should be taken when consulting a priest. Unscrupulous individuals have been known to perform unneeded expensive ceremonies for financial gain. There are also individuals claiming to be Lukumi clergy who have never been formally trained or ordained. A good reputation and an established Ile help individuals choose priests for divination and any resulting ceremonies. For reasons of economy and purported efficacy, individuals in the Latina/Latino community, both Lukumi practitioners and non-practitioners, often go for a reading of the shells before or instead of seeking the advice of a physician, psychologist, or financial adviser. The fee for a cowry shell reading is around 25 US dollars. Ethnobotany plays an important role in Lukumi practice.

## Zen

Paul C. Cooper  
National Psychological Association for  
Psychoanalysis, Two Rivers Zen Community,  
New York, NY, USA

I need to repeat that Zen refuses to be explained,  
but that it is to be lived (Suzuki 1949, p. 310).

### Limitations of Explanation

Keeping the limitations of explanation and the value placed on the primacy of experience in mind, the following will provide an outline sketch of Zen Buddhism. Zen is the Japanese translation of the Sanskrit term, *dhyana*, which means concentration meditation or meditative absorption. However, this linguistic definition is not completely accurate. *Dhyana* is typically associated with meditation on a specific object, sound, or image and implies a transcendent state. *Zazen*, the basic generic term for Zen meditation, functions differently depending on the specific sect and understanding of religious realization.

For instance, *shikantaza* (just sitting, nothing but sitting) serves as the central practice of the Soto Zen lineage founded by Eihei Dogen during the thirteenth century in Japan based on teachings that he received in China. This practice is an all-inclusive practice that functions through a choiceless awareness of “being-as-it-is” (Suzuki 1970). In contrast, The Rinzai tradition is centered on *kanna-zen* (koan concentration). This technique, developed by Ta-hui during the twelfth century in China, requires that the practitioner concentrate on a specific word or phrase of a koan.

It is important to keep in mind that differences of emphasis on particular techniques or religious activities do not define the entire sect. Historically, the inaccurate exaggeration of differences between sects served to fuel disputes. A more accurate approach would be to view these different sects as “equivalence classes” or sets with differences, similarities and identities. Variations between individual groups are often determined by the emphasis, interest and personality of a given Zen teacher.

Zen is also known as C’han (Chinese), Thien (Vietnamese), and Seon (Korean). However, as Zen is not a monolithic structure, it is important to keep in mind that while there is a historical continuity between C’han and Zen, and that the terms are typically used interchangeably, there are many fundamental sociocultural and doctrinal differences between these systems as they developed regionally and that integrated various influences of indigenous religions. For example, C’han incorporates elements of Taoism and

Confucianism. Recently, a rapidly expanding “interfaith Zen” movement in the United States has integrated many Christian elements (Johnston 1976; Kennedy 1996).

## History

Historical accounts attribute the Indian monk Bodhidharma with the introduction of C’han into China during the sixth century. Bodhidharma taught what has been described as a mind-to-mind transmission, outside scriptures, that does not rely upon words or letters. His teachings were then transmitted through a series of Chinese patriarchs. Given this emphasis on direct transmission, the role of the teacher is essential and supercedes the study of the scriptures. This direct teacher-to-student “dharma transmission” follows a lineage that can be traced back to preceding generations to the historical Buddha. Thus, not unlike psychotherapy, Zen is interpersonal, experiential, and relies on direct dialog.

## Practice and Religious Salvation

The primary experiential activities of Zen are zazen (sitting meditation), dialogues with a teacher, koan study, and moment-to-moment mindfulness during all daily activities and chores. Zen practices engender a liberating awareness of reality through an alteration of perception that includes the derailment of cognitive linear thought, which engenders access of our capacity for prajna (quick knowing, intuition, intimate knowing). From the Zen perspective, this liberating awareness can be known or intuited experientially, but not known in the cognitive sense. This salvational intention, expressed in the notion of *satori* (enlightenment, literally: “to understand”) and engendered through personal experience, qualifies Zen as a religious endeavor. However, it is not a religion in the sense of the word that religion is typically understood in a Western civilizational context. On this point, Masao Abe writes, “In one sense, Zen may be said to be one of the most difficult religions to

understand, for there is no formulated Zen doctrine or theological system by which one may intellectually approach it” (1985, p. 3).

This soteriological intention along with supporting practices defines Zen as a religion. The striving for *satori* (enlightenment) in the Rinzai tradition reflects this salvational goal and has resulted in an emphasis on the wisdom or insight aspect of meditation. Similarly, in the Soto tradition, practice awakens the student to the reality that practice and realization are one. This emphasis has generated a critique of quietist leanings among certain Buddhist sects. Without an emphasis on the wisdom aspect of zazen, such critics assert that meditation becomes an empty and useless endeavor that can be equated, for example, as “polishing a brick to make a mirror.”

Regarding salvation, the Zen scholar D. T. Suzuki notes: “As I have repeatedly illustrated, Buddhism, whether primitive or developed, is a religion of freedom and emancipation, and the ultimate aim of its discipline is to release the spirit from its possible bondage so that it can act freely in accordance with its own principles” (1949, p. 74).

## Zen and Psychoanalysis

The influence of Zen has run through psychoanalysis for over a half of century as a result of D. T. Suzuki’s involvement with Eric Fromm (1950, 1956), Fromm et al. (1960), Karen Horney (1945), Harold Kelman (1960), and others. This group of psychoanalysts approached Buddhist religious experience and associated meditation practices with the true spirit of open-minded inquiry distinctive of the psychoanalytic dialog that Freud fathered and began to look eastward in a search for expanding their psychoanalytic vision. Karen Horney, for example (1945, p. 163) discusses the “impoverishment of the personality” and refers to the Buddhist notion of “wholeheartedness” or “sincerity of spirit.” Susan Quinn (1987), Karen Horney’s biographer, chronicles a close association between Horney and D. T. Suzuki.

Harold Kelman, a close colleague of Horney, argued in his paper “Psychoanalytic Thought and Eastern Wisdom” (1960) that psychoanalysis is experientially “eastern.” While deriving from fundamentally different theoretical assumptions, Kelman observed that Buddhist thought and technique can deeply enhance psychoanalytic technique, particularly regarding the analyst’s attentional stance.

Erich Fromm, who was deeply interested in Zen Buddhism, also shared a close association with D. T. Suzuki. He included detailed meditation instructions in his very popular book, *The Art of Loving* (1956). Fromm believed that meditative experience can expand the psychoanalytic process through a positive conceptualization of human potential that goes beyond addressing symptoms. When asked about the benefits of Zen meditation in relation to mental health, Fromm reportedly responded that “It’s (Zen) the only way to enduring mental health” (quoted in Kapleau 1989, p. 14). He viewed both systems as potentially mutually enhancing. A thirst for expanding their vision and looking eastward to do so forms a common thread that ties together the above representative psychoanalysts. They thus paved the way for contemporary contributions, which has expanded to include a wide range of applications from a Zen-influenced short-term crisis intervention (Rosenbaum 1998), a depth psychoanalytic approach that integrates basic Zen principles with contemporary Intersubjectivity theory and Self-Psychology (Magid 2000), and more recently, to in-depth studies of Zen influenced by Wilfred Bion’s ideas (Cooper 2010), and Zen and Lacanian psychoanalysis (Moncayo 2012).

An examination of the “foundational” (Nagao 1989) Buddhist principles of emptiness and dependent-arising reveal parallels to the “totalistic” (Kernberg 1976) understanding of countertransference and can serve as a link between classical and totalistic models. This means that all experience, including the psychotherapeutic encounter, emerges contextually, subject to causes and conditions.

Eihei Dogen’s notion of *gujin* or “total exertion” holds important treatment implications for

the psychotherapist who is informed by Zen practice (Cooper 2011). That is, as the philosopher Joan Stambaugh writes, “Looked at from the standpoint of the situation itself, the situation is totally manifested or exerted without obstruction or contamination” (1999, p. 6). With regard to the psychoanalytic situation, the notion of goal or a stance of removed passivity both contaminate the situation and interfere with presence. Stambaugh asserts that “The person experiencing the situation totally becomes it. He is not thinking *about* it; he *is* it. When he does this, the situation is completely revealed and manifested” (1999, p. 6). Thus, total exertion refers to an opening that calls for a response that “... is never anything passive but can be quite strenuous” (Stambaugh 1999, p. 7). From this perspective, the psychotherapist’s activity becomes decisive, clean, clear, and precise, not encumbered by guilt, anxiety, convention, or goals.

In recent years, the conversation between Zen and psychotherapy has been continuously expanding and holds promise for a mutually beneficial cross-fertilization through the open-minded spirit of inquiry that characterizes present studies.

## Zionism

Kate M. Loewenthal  
Psychology Department, Royal Holloway,  
University of London, Egham, Surrey, UK

What is Zionism? Does psychology of religion have anything to offer to the understanding of Zionism?

### What Is Zionism?

The term Zion has traditionally been viewed as synonymous with Jerusalem (Roth and Wigoder 1971). The most commonly understood use of the

term Zionism is the belief that the land of Israel is the homeland of the Jewish people, and every effort is to be made to return Jewish people to the land. There is a detailed biblical definition of the territory in Numbers 34: 1–15, and the territory was then expanded in the time of David and Solomon.

The historical precursors of Zionist ideology are to be found in Jewish history from biblical times, including promises that the descendants of Abraham, Isaac, and Jacob (Israel) will inherit the land of Canaan, the process of Jewish settlement of the land, and various persecutions and forced movements of population. Despite the destruction of the second Temple in 70 CE and the creation of diaspora Jewish communities in the former Roman Empire, there continued to be Jewish communities in Israel (called Palestine by the Romans) until the present. This included the retention of important Jewish intellectual centers.

Thousands of Jews in Jerusalem were killed by the Crusaders in 1099, who accused them of helping the Arabs. During the later Middle Ages, the holy sites in the land and particularly Jerusalem were the focus of pilgrimages, and the Jews who lived in Palestine were supported by charitable donations from diaspora communities. References to Israel, Jerusalem, and Zion, and the hoped for return, occur prolifically throughout Jewish liturgy and sacred texts, and the direction of prayer has been towards Jerusalem following a verse in Daniel (6: 11).

In the sixteenth century the northern city of Safed became an important intellectual center, with leading scholars of all traditionalist aspects of Jewish thought among its inhabitants, and this became a significant model for later Cultural Zionism. In the late eighteenth and early nineteenth century, the pace of Jewish return to Israel speeded up with the expansion of the settlements of pious Jews (Hasidim and also followers of the Vilna Gaon), particularly in Safed, Tiberias, and Jerusalem. The Hibbat Zion (Love of Zion) movement was prominent in supporting such settlements philanthropically. Later in the nineteenth century, in the face of persistent pogroms and other persecution in the European diaspora, Zionist passion assumed a new, politicized form, sometimes

known as “synthetic” Zionism, with active attempts to achieve a political solution and to develop and support Jewish agricultural settlements. “Cultural” Zionism developed Jewish national awareness and support for the Jewish homeland among diaspora Jews. Landmarks in the history of modern Zionism include the first Zionist congress in 1897 in Switzerland; the Balfour Declaration (1917), asserting the support of the British government for a national home for the Jewish people in Palestine; the founding of the Hebrew University in Jerusalem in 1925; the UN vote to partition the land between Arabs and Jews (1947), followed by war since the Arabs did not accept the partition; and the declaration of the state of Israel (1948). This beleaguered state remains the focus of Jewish immigration from all parts of the diaspora and also of hostility and repeated attacks from surrounding Arab neighbors. Zionist philosophy has continued to develop pragmatically in response to these developments (Seliktar 1983).

Secular forms of Zionism, sometimes with a socialist flavor, sometimes purely nationalist, proposed that Jewish religious observance was needed to preserve Jewish identity and longing for Zion only while in the diaspora. But once in the Jewish state, Jews were said to no longer need religious observance in order to maintain their identity as Jews. Some observers of the contemporary Israeli scene believe that secular Zionism is no longer the force that it once was, and love of the land is tempered by the complex political difficulties with Arab neighbors, particularly the urgent need to keep peace and survive. Thus, modern secular Zionism may entail a willingness to make territorial concessions for the sake of peace. Religious Zionism is based on the philosophy of Rabbi Kook (e.g., 2005) and involves settlements in territories that fall within the biblically defined boundaries of Israel. Religious Zionism is associated with the view that national security is best served by preserving the biblical boundaries.

## Zionist Attitudes

Anti-Zionist attitudes have been noted among Jews. Some strictly orthodox Jews, mainly

associated with the Satmar group of Hasidim, believe that the time for the establishment of the Jewish state of Israel is premature and can only happen after the coming of the Messiah. At another point on the religious spectrum, early Reform Judaism eliminated references to Jerusalem, Israel, and Zionism from its liturgy in an attempt to produce truly acculturated citizens of Germany. However, the founding of the State induced a contrary trend. Attitudes which are generally consistent with Zionism have been reported among the majority of Jews. In Seliktar’s (1980) study, 75–81 % of the 700 young Israelis surveyed were committed to each of the five aspects of Zionist ideology (enumerated below). The majority of American Jews in Cohen and Kelman’s (2007) survey considered that “attachment to Israel is an important part of being Jewish,” though the percentages agreeing with this statement varied with age, being higher among older Jews: 80 % of the over-65s and 60 % of the under-35 s agreed.

The themes and concepts of Zionism have had a strong impact outside Judaism. In the United States, Zionism is an important feature of fundamentalist Christianity, in which it is held that the settlement of Jews in Israel is foretold by biblical prophecy and is a precursor to the coming of the Messiah. This in turn has impacted on foreign policy attitudes (Cummergen 2000). In sub-Saharan Africa, particularly in Swaziland, Zionism is widely practiced as a religion. African Zionism was based originally on Christianity but incorporates many indigenous practices and beliefs including animism (Guth et al. 2000).

There has been much debate about whether anti-Zionism is a form of anti-semitism: Wistrich (2004), for example, has argued that the delegitimization and defamation of Israel in the Muslim world, and among sections of both the political Left and radical Right, has promoted a revival of anti-semitism worldwide, leading to a rise in anti-semitic attacks.

## Zionism and Psychology

What light can the psychology of religion throw on Zionism? There has been negligible study of

Zionism as such by psychologists of religion. Nevertheless, there are psychological perspectives which may be brought to bear on Zionism among Jews.

Territorial claims are often strongly bound up with national and religious identity: social identity theory offers important discussions on this theme (e.g., Hewstone and Stroebe 2001).

Band (2005) has discussed the dilemmas faced by religious Zionists in relation to their identities, amid the political complexities of twenty-first-century Israel. For example, their pragmatic and religiously founded wish for peace conflicts with their pragmatic and religiously founded need to maintain the boundaries of Israel.

The frequent Jewish liturgical and textual references to Israel and Zion reinforce the package of Jewish identity, spirituality, and love of the land. In Jewish sacred texts, the land of Israel is given to the Jews and said to be imbued with a special level of holiness (e.g., Genesis 15:18; 2 Chronicles 6: 5–6; Shneur Zalman of Liadi, 1796–1973) and given by God to the Jewish people. There are many specific religious commandments associated with the land, for example, relating to its agricultural produce, such as observance of the sabbatical year, specific blessings to be pronounced on fruits for which Israel is renowned, and the priestly blessing, recited daily in Israel, and only on festivals in the diaspora. The quantity and spiritual force of biblical and other references to the sacredness of Israel deserve closer study, perhaps using discourse or other linguistic analysis, particularly with the view to the question of the uniqueness of Zionism as a form of nationalist philosophy.

The possible impact of liturgical and religious textual references was supported in a careful study in political psychology examining the socialization of Zionist ideology among young Israelis: Seliktar (1980) studied the cognitive and affective aspects of five features of Zionist ideology – loyalty to the state of Israel, continuity (of Israel) across time; unity of the Jewish people; Israel as a Jewish national center; and the integrative role of the State of Israel (in absorbing new immigrants). Respondents indicated extent of agreement and of emotional commitment to

statements relating to these five features (e.g., “We should always think of Israel as a continuation of the ancient kingdom of Judea”). There were significant effects of family religious observance, and of religiosity of the school attended, on strength of commitment to Zionist ideology.

## Conclusions

In conclusion, it can be seen that Zionism in all its forms contains powerful ideas about the sacred status of the land of Israel. Although the psychological and spiritual impact of Zionism has not been studied by psychologists of religion, there are conceptual frameworks – for example, in social identity theory, attitude theory, and forms of linguistic analysis – which may facilitate closer study.

## Zoroastrianism

Sam Cyrus  
International Academy of Positive  
Psychotherapy, Wiesbaden, Germany

Zoroastrianism, also called Zarathustrism, Mazdeism, or Parsism, is the religion founded by Zoroaster in Ancient Persia, with approximately 150–250 thousand believers worldwide, mainly concentrated in India and Iran. It is in the *Zend-Avesta*, which literally means *Commentaries on Knowledge*, the holy book of Zoroastrianism, that one can find the principle assertions of this faith. The *Avesta* is divided in the three parts: *Yasna* (sacred *Liturgy* chapters), *Visperad*, *Vendidad* (constituted of purifications laws), and *Khorda*.

### Zoroaster's Early Life

Zoroaster (or Zarathustra, as He is known in the West or Zartosht in Persian) is the founder of Zoroastrianism, considered one of the first non-panteistic and monotheistic religions. Zoroaster apparently lived in ancient Persia, at an uncertain time in the first millennium before Christ. Joseph

Campbell (1991) describes Zoroaster as “the earliest prophet” (7–8). According to Fatheazám (1972), even at the age of 15, He was respected by His fellow countrymen because of His charity work and His kindness to the poor and to animals. At 20, He left His house, spending 7 years in solitude in a cave in the Persian mountains. His family origin, lineage, and the context of His birth are unknown; nonetheless, it is said that He was born of a virgin mother, like Krishna and Jesus. Campbell pinpoints the mythological birthplace of Zoroaster beside the river Daiti, in the central land of the “seven lands of the earth.”

### Zoroastrian Cosmology

Arguing that tradition stagnates and knowledge is movement, Zoroaster preached doubt and the need for inquiry to attain knowledge. At the age of 30, he received divine illumination through seven visions that confirmed Him as a demiurge. After 10 years of preaching, miracles, cures, and only one confirmed disciple (His own cousin), Zoroaster was incarcerated for disturbing tradition and for the influence and confusion His laws and spiritual and scientific principles caused among the people. Among these laws was the concept of spiritual duality or cosmic dualism, between the spirit of good Ahura Mazda (or Ormuzd) – meaning Supreme Knowledge – and the spirit of evil Ahriman, both preexistent spirits (according to Dual Theology), or twin brothers born of Zurvan (according to Zurvanism). From this dualism comes the “complete freedom of choice exerted by spirits and the consequent responsibility that corresponded entirely to this choice” (Ling 2005, pp. 87–88). It is this concept that would distinguish Zoroastrianism from Judaism, Christianity, and Islam, inasmuch as individuals in Zoroastrianism were not mere receptacles of superior decisions, but the lords of their own destinies, free to act before life’s conditionings, what could be seen as “a vision of intentionality” (Frankl 2002, p. 214), “without the fundamental supposition that man, simply, ‘is’, but that he always decides what he is going to be at the

next moment” (Frankl 2001, p. 73). Decisions are individual responsibilities; hence, it is this individual responsibility that permits his spiritual, mental, and psychic growth.

Possibly the concept of duality is Zoroastrianism’s greatest contribution to modern civilization, manifesting itself in the manifold areas of human knowledge. It is, nevertheless, interesting to note that, perhaps due to Persia’s geographical and historical position, we have now what we could speak of as two forms of dualism: oriental dualism, characterized by the intrinsic relationship of good and evil, as in the case of yin and yang, the idea that inside good there is evil, and vice versa, according to the principles of mutations; and occidental dualism, in which evil and good are inter-excluding, until, for instance, the final victory of God over the Devil. In the field of psychology, one can find examples of human duality in such concepts as Rotter’s internal and external loci of control, Freud’s principle of pleasure vs. principle of reality, Piaget’s symbolic and logical thoughts, Jung’s anima and animus, Nuttin’s object-mean and object-end, and Roger’s ideal and real self, among others. It is important to underline, however, that these examples are not mere replicas of Zoroastrian dualism. Rather, they are simply useful to illustrate that human thought structure appears to be rooted in the concept of categorization by opposition, a reflection of Zoroastrian cosmology.

## Human and Social Progress

Another traditional Zoroastrian element, as quoted here from the *Zend-Avesta*, is the need of three things for human progress: “I celebrate my praises for good thoughts, good words, and good deeds. . . . With chanting praises I present all good thoughts, good words, and good deeds, and with rejection I repudiate all evil thoughts, and words, and deeds” (Mills 1898, Chap. 11, No. 17). In short, the three elements – thoughts, words, and actions – should be coherent and congruent. This idea can be found in the lines of Rogerian psychological thought, which postulates the principle of congruence as based on the

need of the therapist to feel and express these feelings to the client, as in the work of Messer and Winokur (1980) whose objective is to be able to help the patient to convert *insight* into action.

In Christianity, in the words of Saint James (2:17) “Even so faith, if it hath not works, is dead, being alone” and, in the Bahá’í religion in a text that Bahá’u’lláh forwards to a Zoroastrian, “Words must be supported by deeds, for deeds are true test of words. Without the former, the latter can never quench the thirst of the yearning soul.”

The effect of Zoroaster’s vision was stupendous in human history. It allowed the moral, agricultural, and economic development of Persian society, inasmuch as its assumptions were based on logic and ethics. Zoroastrianism’s best known symbol is fire, an example of the articulation between the material and the immaterial spheres: fire symbolizes true human integrity, in which Zoroastrian psychology is rooted. It is by observing the virtues of fire, the symbol of constancy, purity, and sustainability of life created by Ahura Mazda, endowed with movement and creative capacity, that human beings can obtain a true example to follow.

In this sense, hell could not be a place dominated by fire, but by a state of pain:

On the very first time when that deed has been done, without waiting until it is done again, down there in hell. The pain for that deed shall be as hard as any in this world: even as if one should cut off the limbs from his perishable body with knives of brass, or still worse; down there the pain for that deed shall be as hard as any in this world: even as if one should nail doubtful his perishable body with nails of brass, or still worse; down there the pain for that deed shall be as hard as any in this world: even as if one should by force throw his perishable body headlong down a precipice a hundred times the height of a man, or still worse; down there the pain for that deed shall be as hard as any in this world: even as if one should by force impale his perishable body, or still worse (Darmesteter 1898a, Fargard 4, IVb, No. 49–53).

Hell is a state and not a place, because it is a consequence of incorrect thoughts, words, and actions that should be prevented before they happen again:

The first step that the soul of the wicked man made, laid him in the Evil-Thought Hell; the second step that the soul of the wicked man made, laid him in

the Evil-Word Hell; the third step that the soul of the wicked man made, laid him in the Evil-Deed Hell; the fourth step that the soul of the wicked man made, laid him in the Endless Darkness (Darmesteter 1898b, [2], No. 33).

A wise person, therefore, is defined as one who chooses the path of good thoughts, says good words and practices good actions, and does not possess useless thoughts, speak lies, or practice unjust actions.

At the social level, Zoroastrianism is perhaps the first religion to recognize total equality among all, regardless of creed, race, or gender. Zoroaster was also the author of a chart of animal rights and taught that forests should be open and lands cultivated. At an individual level, He also implemented five daily obligatory prayers, preceded, each one, by ablution.

### Zoroastrian Influence in the West

Zoroastrian cosmology, philosophy, and faith have had definite historical influence. In Christian culture, besides the previously described confluence, we find in a brief passage in Matthew (2:1–13) the figure of the wise men or three kings, possibly members of the sacerdotal order of Magi who, according to some historians, were looking for the “Holy Saoshyant” (Visperad, 22:1), an awaited prophet. Historical sources would mention different versions, describing the Magi as being from Persia, Arabia, Chaldea, Yemen, China, and other oriental regions, but the term “Magi” itself suggests the astronomically oriented sacerdotal/philosophical order that articulated, syncretically, Zoroastrianism with its preceding paganism. Ancient paintings and mosaics depicted the Magi in Persian outfits, as in the cases of the Basilica of San Vitale and the Basilica of Sant’ Apollinare Nuovo in Ravenna, the Nativity Church in Jerusalem, and Rome’s subterranean catacombs.

During the first century of the Christian era, another development of Zoroastrianism resulted from a meeting of Persian and Roman traditions. The result was a form of Mithraism, in which Mithra and Ahura Mazda seemed to be associated

with the Gods Apollo and Zeus, respectively. This new movement became popular among the Roman soldiers who propagated it, through their legions, in Britain, Germany, and elsewhere (Zeppegno 1980). The sense of fraternity, hope for a new and better life, and equality among all humans before one single God of love seems to have captivated parts of the Roman population (Spoto 1995). For Romans, Mithra was a divinity born from immaculate conception, on December 25th, the day of the winter solstice, the same day that, later on, was defined as the birthday of Jesus. Thus, Zoroastrianism possesses influence, even if indirect, in the context of the yet-to-be-born Christian theology.

In the Hellenic and Greek world, it has been suggested that Socrates was in contact with Zoroastrian clergymen, and also with Hebrews in Palestine, assimilating, there, the principles of divine unity and the soul’s immortality, concepts foreign until that period to his own cultural background. In his turn, Heraclitus defined *arché* (world’s constituent element) as fire and described both divine reality and human existence as possessing dual vision by affirming that *we descend and don’t descend in the same rivers* or that *God is day-night, winter-summer, war-peace, satiety-hunger*.
